To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: http://www.renesas.com

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (http://www.renesas.com)

Send any inquiries to http://www.renesas.com/inquiry.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: "Standard", "High Quality", and "Specific". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as "Specific" or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is "Standard" unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.

   "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.

   "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.

   "Specific": Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

To all our customers

Regarding the change of names mentioned in the document, such as Mitsubishi Electric and Mitsubishi XX, to Renesas Technology Corp.

The semiconductor operations of Hitachi and Mitsubishi Electric were transferred to Renesas Technology Corporation on April 1st 2003. These operations include microcomputer, logic, analog and discrete devices, and memory chips other than DRAMs (flash memory, SRAMs etc.) Accordingly, although Mitsubishi Electric, Mitsubishi Electric Corporation, Mitsubishi Semiconductors, and other Mitsubishi brand names are mentioned in the document, these names have in fact all been changed to Renesas Technology Corp. Thank you for your understanding. Except for our corporate trademark, logo and corporate statement, no changes whatsoever have been made to the contents of the document, and these changes do not constitute any alteration to the contents of the document itself.

Note : Mitsubishi Electric will continue the business operations of high frequency & optical devices and power devices.

Renesas Technology Corp.

M35071-XXXSP/FP

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

DESCRIPTION

The M35071-XXXSP/FP is a character pattern display control IC can display on the CRT display the liquid crystal display and the plasma display. It can display 2 pages (24 characters × 12 lines per 1 page) at the same time. It uses a silicon gate CMOS process and it housed in a 20-pin shrink DIP package (M35071-XXXSP) or a 20-pin shrink SOP package (M35071-XXXFP).

For M35071-002SP/FP that is a standard ROM version of M35071-XXXSP/FP respectively, the character pattern is also mentioned.

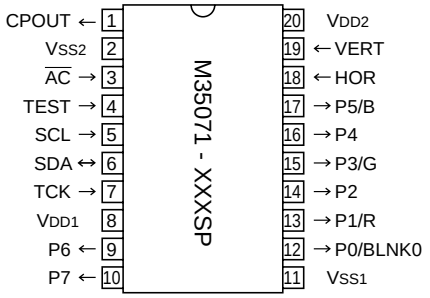
FEATURES

- Screen composition ..... 24 characters ×12 lines × 2 pages
- Number of characters displayed ..... 288 (Max.) × 2 pages
- Character composition ..... 12 × 18 dot matrix
- Characters available ..... page 0 : 256 characters
  page 1 : 128 characters
- Character sizes available ..... 4 (vertic al) × 2 (horizontal)
- Display locations available
  Horizontal direction ..... 2007 locations
  Vertical direction ..... 1023 locations
- Blinking ..... Character units
  Cycle : division of vertical synchronization signal into 32 or 64
  Duty : 25%, 50%, or 75%
- Data input ..... By the I²C-BUS serial input function
- Coloring
  Character color ..... Character unit
  Background coloring ..... Character unit
  Border (shadow) coloring ..... 8 colors (RGB output)
  Specified by register
  Raster coloring ..... 8 colors (RGB output)
  Specified by register
- Blanking
  Character size blanking
  Border size blanking
  Matrix-outline blanking
  All blanking (all raster area)
- Output ports
  4 shared output ports (toggled between RGB output)
  4 dedicated output ports
- Display RAM erase function
- Display input frequency range ..... F_{OSC} = 20MHz to 90MHz
- Horizontal synchronous input frequency
  ..... H.sync = 15 kHz to 130 kHz
- Display oscillation stop function

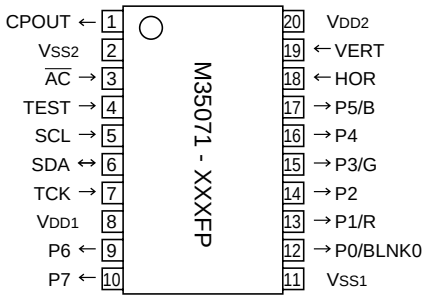
APPLICATION

CRT display, Liquid crystal display, Plasma display

PIN CONFIGURATION (TOP VIEW)



Outline 20P4B

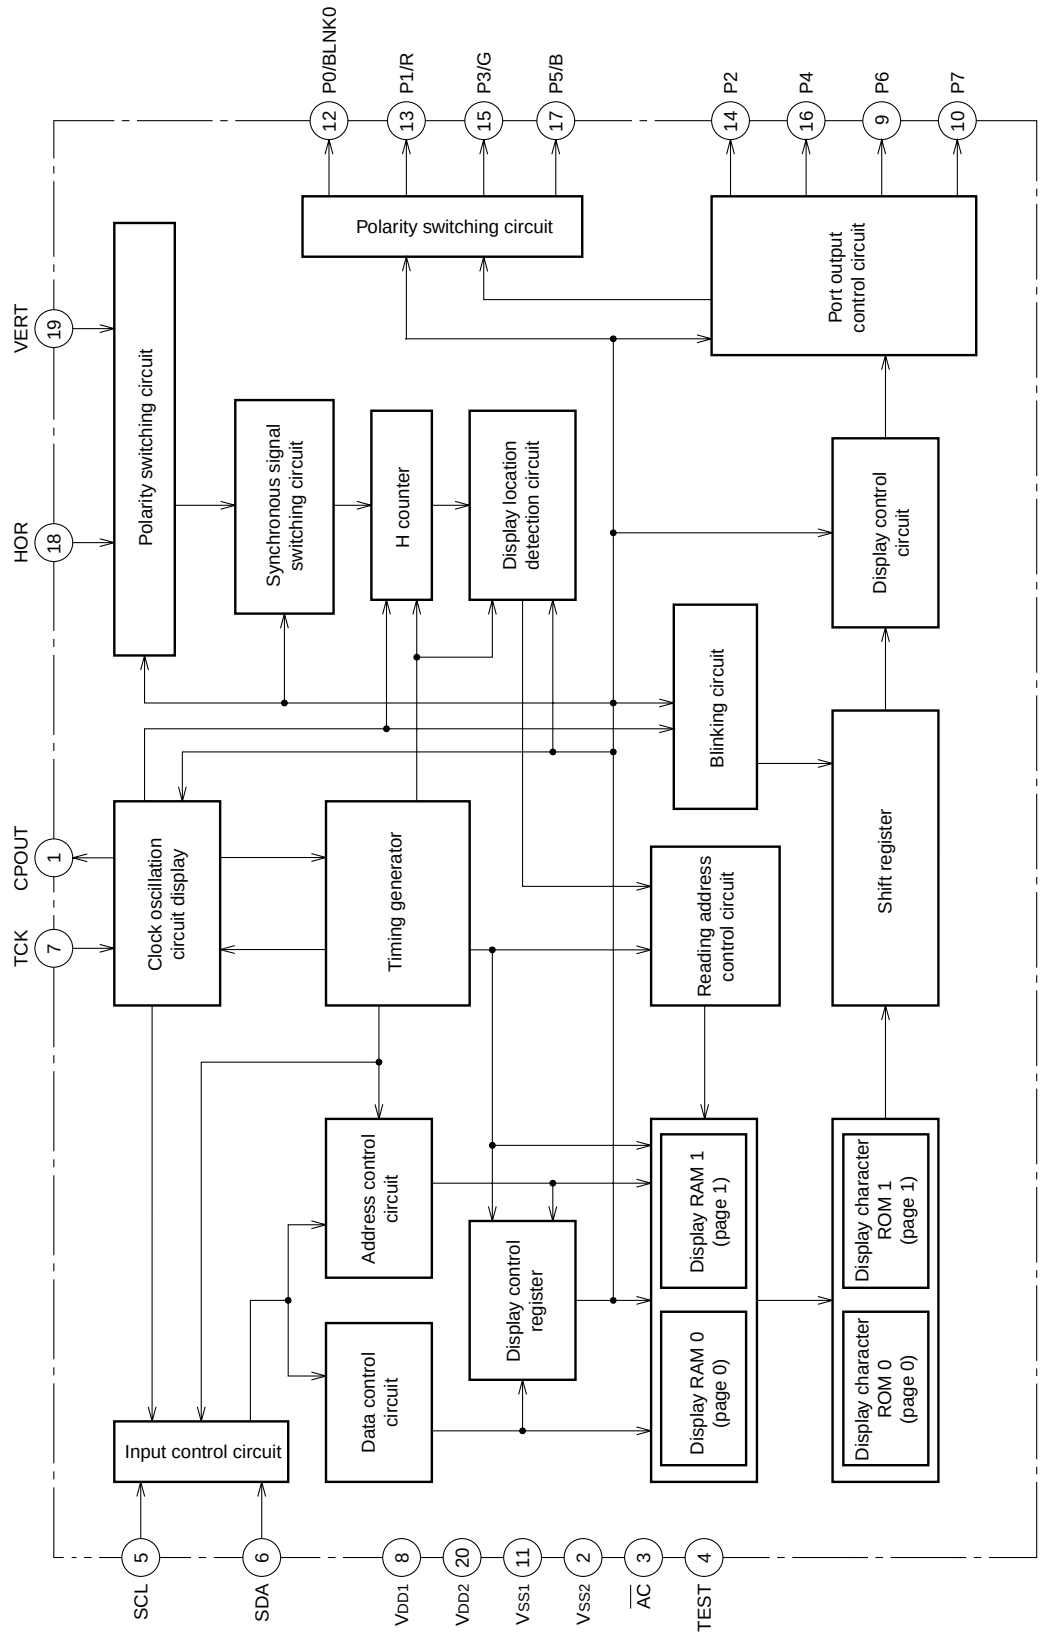


Outline 20P2Q-A

PIN DESCRIPTION

Pin Number	Symbol	Pin name	Input/ Output	Function
1	CPOUT	Filter output	Output	Filter output. Connect loop filter to this pin.
2	V_{SS2}	Earthing pin	–	Connect to GND.
3	$\overline{AC}$	Auto-clear input	Input	When “L”, this pin resets the internal IC circuit. Hysteresis input. Built-in pull-up resistor.
4	TEST	Test input	Input	Test pin. Connect to +5V.
5	SCL	Clock input	Input	SDA pin serial data is taken in when SCL rises. Hysteresis input.
6	SDA	Data I/O	I/O	This is the pin for serial input of display control register and display RAM data. Also, this pin output acknowledge signal. Hysteresis input. Nch opendrain output.
7	TCK	External clock	Input	This is the pin for external clock input.
8	V_{DD1}	Power pin	–	Please connect to +5V with the power pin.
9	P6	Port P6 output	Output	This is the output port.
10	P7	Port P7 output	Output	This is the output port.
11	V_{SS1}	Earthing pin	–	Please connect to GND using circuit earthing pin.
12	P0/BLNK0	Port P0 output	Output	This pin can be toggled between port pin output and BLNK0 signal output.
13	P1/R	Port P1 output	Output	This pin can be toggled between port pin output and R signal output.
14	P2	Port P2 output	Output	This is the output port.
15	P3/G	Port P3 output	Output	This pin can be toggled between port pin output and G signal output.
16	P4	Port P4 output	Output	This is the output port.
17	P5/B	Port P5 output	Output	This pin can be toggled between port pin output and B signal output.
18	HOR	Horizontal synchro-nous signal input	Input	This pin inputs the horizontal synchronous signal. Hysteresis input.
19	VERT	Vertical synchro-nous signal input	Input	This pin inputs the vertical synchronous signal. Hysteresis input.
20	V_{DD2}	Power pin	–	Please connect to +5V with the power pin.

BLOCK DIAGRAM



MEMORY CONSTITUTION

Address 000_{16} to $11F_{16}$ are assigned to the display RAM, address 120_{16} to 128_{16} are assigned to the display control registers. The internal circuit is reset and all display control registers (address 120_{16} to 128_{16}) are set to "0" when the $\overline{AC}$ pin level is "L". And then, RAM is not erased and be undefinited. This memory is consisted of 2 pages : page 0 memory and page 1 memory (their addresses are common), page controlled by DAF bit of each address when writing data. For detail, see "Data input". Memory constitution is shown in Figure 1 and 2.

Addresses	DAF	DAE	DAD	DAC	DAB	DAA	DA9	DA8	DA7	DA6	DA5	DA4	DA3	DA2	DA1	DA0

Fig. 2 Memory constitution (page 1 memory)

Note: Page 0 and page 1 registers are found in their respective pages. For example, HP10 to HP0 of the page 0 memory sets the horizontal display start position of page 0, whereas HP10 to HP0 (same register name) of the page 1 memory sets the horizontal display start position of page 1. Also, registers common to both page 0 and page 1 are found only in the page 0 memory. For example, PTC0 is the control register of the P0 pin and is found only in the page 0 memory.

SCREEN CONSTITUTION

The screen lines and rows are determined from each address of the display RAM (page 0 and page 1 are common). The screen constitution is shown in Figure 3.

Row / Line	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24

Notes 1. The display RAM is undefined state at the $\overline{AC}$ pin.
2. The display RAM consists of 2 pages, page 0 and page 1 (common address). The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.
3. However, set "1" only when using the "FF_{16}" blank code as the text code.

3. Registers marked with (Note 3) are found only in page 0, therefore the register value does not change when the DAF bit is set to "1".

REGISTER SUPPLEMENTARY DESCRIPTION

(1) Setting external clock input and display frequency mode

Setting external clock input and display frequency mode (by use of EXCK0 (120_{16}), EXCK1 (123_{16}) and DIV10 to DIV0 (120_{16}), as explained here following.

(a) When (EXCK1, EXCK0) = (0, 0) .....External synchronous 1 (External clock display) … Fosc = 20 to 70 MHz

Input from the TCK pin a constant-period continuous external clock that synchronizes with the horizontal synchronous signal. And input from HOR pin a constant period continuous horizontal synchronous signal.

Never stop inputting the clock while displaying.

Do not have to set a display frequency because the clock just as it is entered from outside is used as the display clock.

(b) When (EXCK1, EXCK0) = (0, 1) .....Internal synchronous… Fosc = 20 to 90 MHz

Clock input from the TCK pin is unnecessary. The multiply clock of the internally generated horizontal synchronous signal is used as the display clock.

The display frequency is set by setting the multiply value of the horizontal synchronous frequency (of the display frequency) in DIV10 to DIV0 (address 120_{16}). Also, set the display frequency range. (See the next page.)

Display frequency is calculated using the below expression.

Display frequency = Horizontal synchronous frequency x Multiply value

(c) When (EXCK1, EXCK0) = (1, 0) ..... Setting disabled

(d) When (EXCK1, EXCK0) = (1, 1) .....External synchronous 2 (Internal oscillation clock display) … Fosc = 20 to 90 MHz

Input from the TCK pin a constant-period continuous external clock that synchronizes with the horizontal synchronous signal. And input from HOR pin a constant-period continuous horizontal synchronous signal.

Never stop inputting the clock while displaying.

An internal clock which is in sync with the external input clock is used as the display clock.

Because the display frequency equals the external clock frequency, set N1 (division value) that satisfies the below expressions to DIV10 to DIV0 (address 120_{16}) for make the display frequency is equal to the external clock frequency.

N1 = external clock frequency / horizontal synchronous frequency

$$N1 = \sum_{n=0}^{10} 2^n DIV_n$$

Also, set the display frequency range. (See the next page.)

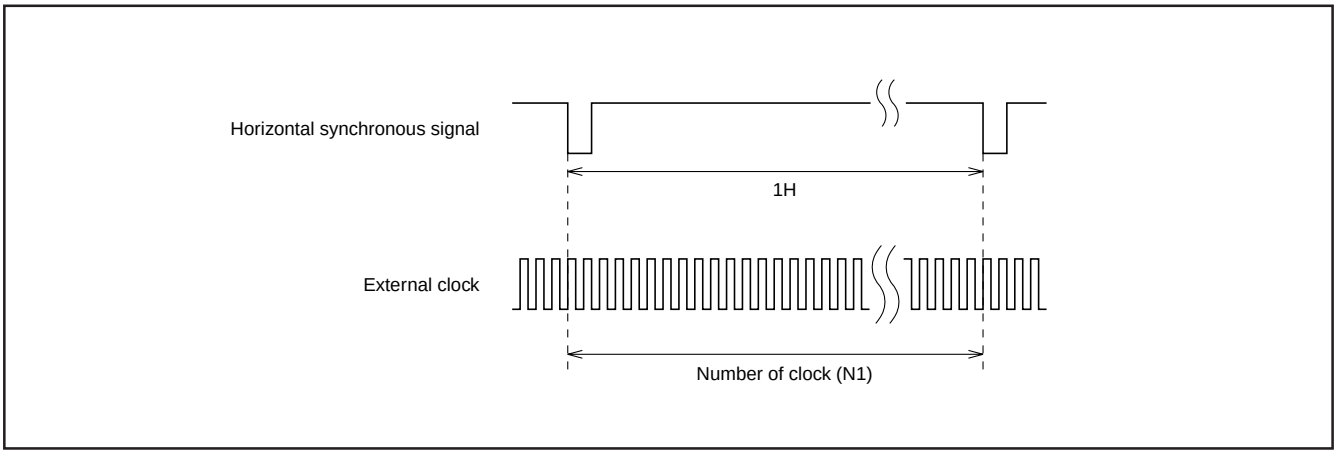

Fig. 4 Example of external clock input

(2) To set display frequency range

Whenever setting display frequency (when EXCK1 = "0", EXCK0 = "1", or EXCK1 = "1", EXCK0 = "1"), always set the display frequency range in accordance with the display frequency. This range is set from DIVS0, DIVS1 (address 120_{16}), RSEL0 address 121_{16}) and RSEL1 (address 122_{16}). Frequency ranges are given here below.

RSEL1	RSEL0	DIVS1	DIVS0	Display frequency range (MHz)
1	1	0	0	87.0 to 90.0
1	0	0	0	67.0 to 87.0
0	1	0	0	54.0 to 67.0
1	0	0	1	47.0 to 54.0
0	0	0	0	40.0 to 47.0
1	0	1	0	34.0 to 40.0
0	0	0	1	30.0 to 34.0
0	1	1	0	26.0 to 30.0
1	0	1	1	23.0 to 26.0
0	0	1	0	20.0 to 23.0

(3) Notes on setting display frequency

To change external clock (display) frequency or horizontal synchronization frequency, always use the following procedures.

To set EXCK1 = "0", EXCK0 = "1"

(a) Turn the display OFF. … DSPON (address 128_{16}) = "0"
(b) Set the display frequency. … Set from DIV10 to DIV0, DIVS0, DIVS1 (address 120_{16}), RSEL0 (address 121_{16}) and RSEL1 (address 122_{16}).
(c) Wait 20 ms while the horizontal synchronization signal is being input.
(d) Turn the display ON. … DSPON (address 128_{16}) = "1"

To set EXCK1 = "1", EXCK0 = "1"

(a) Turn the display OFF. … DSPON (address 128_{16}) = "0"
(b) Set the display frequency. … Set from DIV10 to DIV0, DIVS0, DIVS1 (address 120_{16}), RSEL0 (address 121_{16}) and RSEL1 (address 122_{16}).
(c) Wait 20 ms while the horizontal synchronization signal and external clock are being input.
(d) Turn the display ON. … DSPON (address 128_{16}) = "1"

DISPLAY FORM 1

M35071-XXXSP/FP has the following four display forms.

(1) Blanking mode

Character size

: Blanking same as the character size.

Border size

: Blanking the background as a size from character.

Matrix-outline size

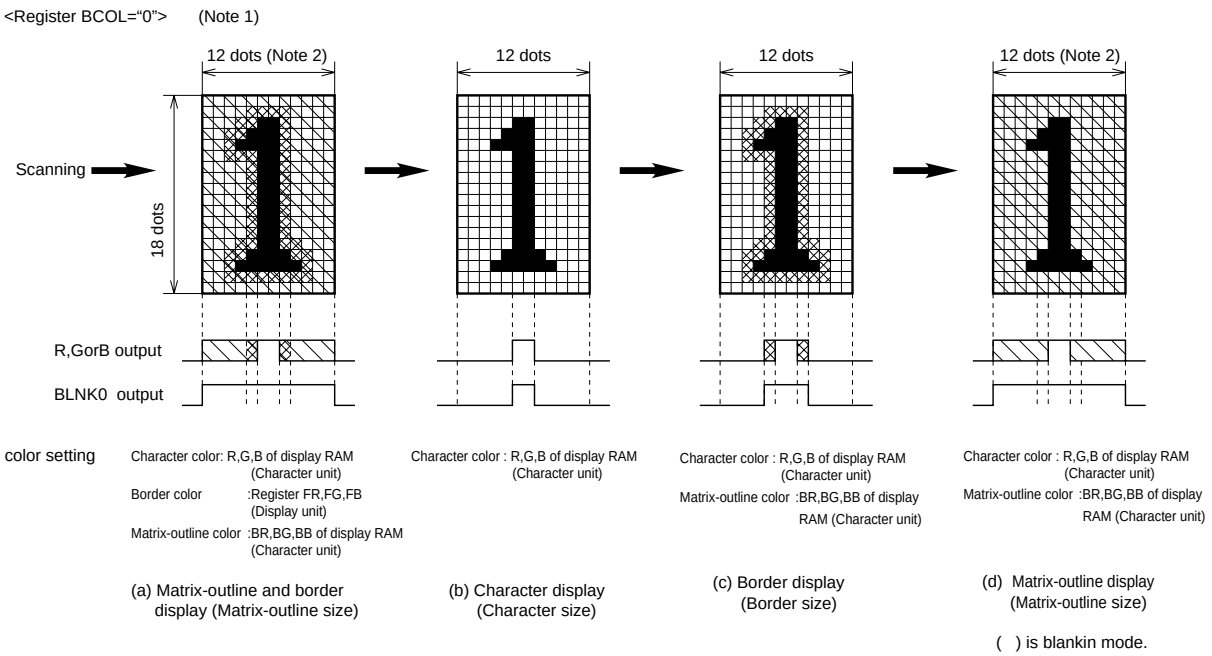
: Blanking the background 12 × 18 dot.

All blanking size

: When set register BCOL to "1", all raster area is blanking.

The display mode and blanking mode can be set line-by-line, as follows, from registers BCOL, BLK1, BLK0 (address 128_{16}), DSP0 to DSP11 (address 124_{16}).

BCOL	BLK1	BLK0	Line of DSPn = "0"		Line of DSPn = "1"	
			Display mode	Blanking mode	Display mode	Blanking mode
0	0	0	All matrix-outline border display	All matrix-outline size	All matrix-outline display	All matrix-outline size
	0	1	Character display	Character size	Border display	Border size
	1	0	Border display	Border size	All matrix-outline display	All matrix-outlinesize
	1	1	All matrix-outline display	All matrix-outline size	Character display	Character size
1	0	0	All matrix-outline border display	All blanking size	All matrix-outline display	All blanking size
	0	1	Character display		Border display	
	1	0	Border display		All matrix-outline display	
	1	1	All matrix-outline display		Character display	



Note 1. When register BCOL is set to "1", the raster range of the display modes set respectively by BLK1 and BLK0 are colored by registers RR, RG, and RB (address 127_{16}). And the blanking mode is set all blanking size (all raster size) regardless of the BLK1 and BLK0 settings.

Note 2. The horizontal size of the full matrix-outline size can be set to 14 dots by register BETA14 (address 127_{16}). BLNK0 can also be output at 14 dots.

Fig. 5 Display form

(2) Shadow display

When border display mode, if set SYAD (address 128_{16}) = “0” to “1”, it change to shadow display mode.

Border and shadow display are shown below.

Set shadow display color by BR, BG or BB of display RAM or by register FR, FG and FB (address 127_{16}).

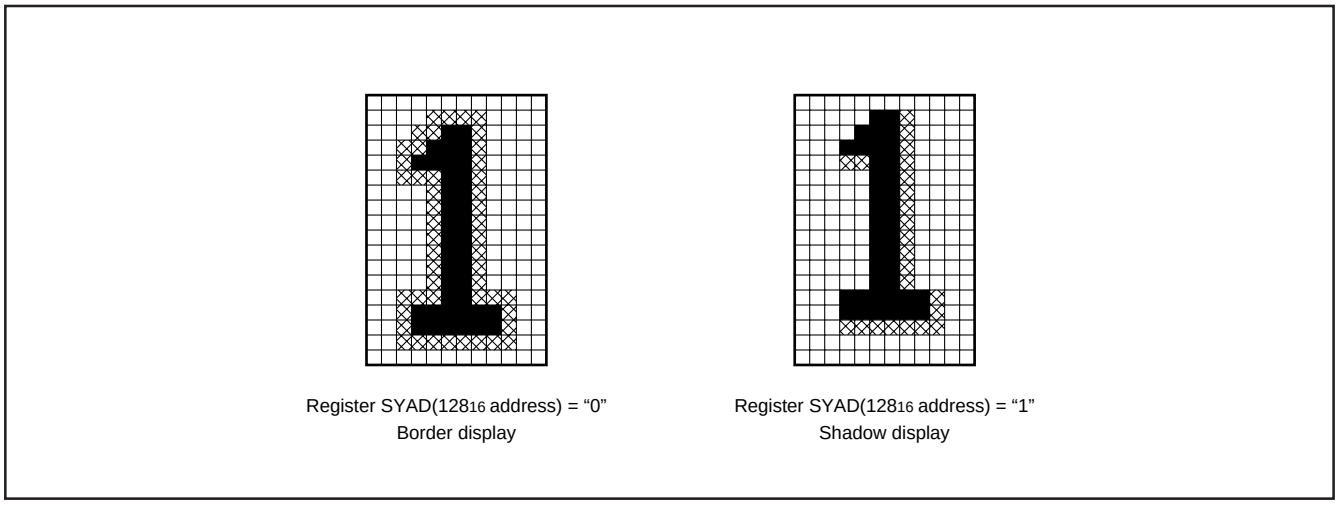


Fig. 6 Border and shadow display

DISPLAY FORM 2

This IC can display both page 0 and page 1 at the same time.

Page 0: Set the DAF bit in each addresses to "0".

Page 1: Set the DAF bit in each addresses to "1".

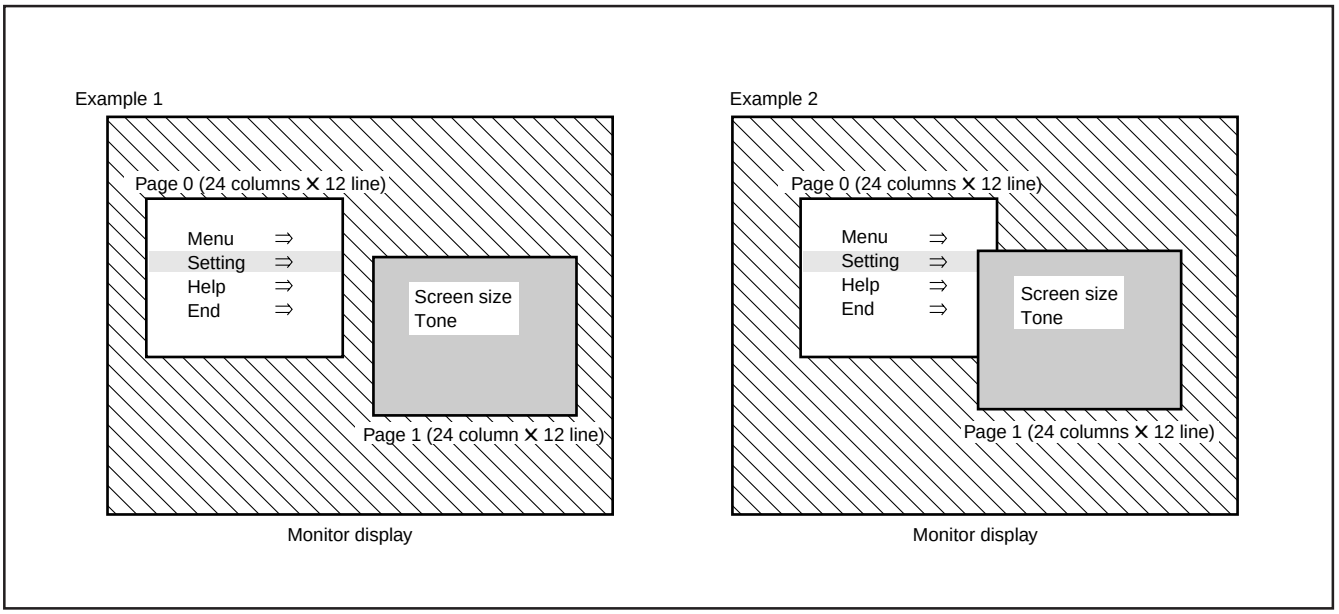

Fig. 7 Example of 2 pages display

Example 1: Display position, display size, color, etc., can be freely set for each page, and the 2 pages can be displayed on top of each other or side-by-side.

Example 2: When the display range of the 2 pages overlap on the monitor screen, they can be displayed in the 5 below ways using registers MODE0 (address 127_{16}), MODE1 (address 128_{16}) and POPUP (address 126_{16}). (The POPUP register is effective only when MODE0 = "0" and MODE1 = "0".)

MODE1	MODE0	POPUP	Display mode
0	0	0	Standard (Page 1 priority)
		1	Standard (Page 0 priority)
0	1	—	AND
1	0	—	EXOR
1	1	—	OR

(1) Standard (page 1 priority) … Page 1 has priority in overlapping areas. Page 0 is not displayed in those areas.
(2) Standard (page 0 priority) … Page 0 has priority in overlapping areas. Page 1 is not displayed in those areas.
(3) AND ..... In overlapping areas, the RGB output of the 2 pages is AND processed and output.
(4) EXOR ..... In overlapping areas, the RGB output of the 2 pages is EXOR processed and output.
(5) OR ..... In overlapping areas, the RGB output of the 2 pages is OR processed and output.

CHARACTER FONT

Images are composed on a 12 × 18 dot matrix, and characters can be linked vertically and horizontally with other characters to allow the display the continuous symbols.

Character code FF_{16} is fixed as a blank without background. Therefore, cannot register a character font in this code.

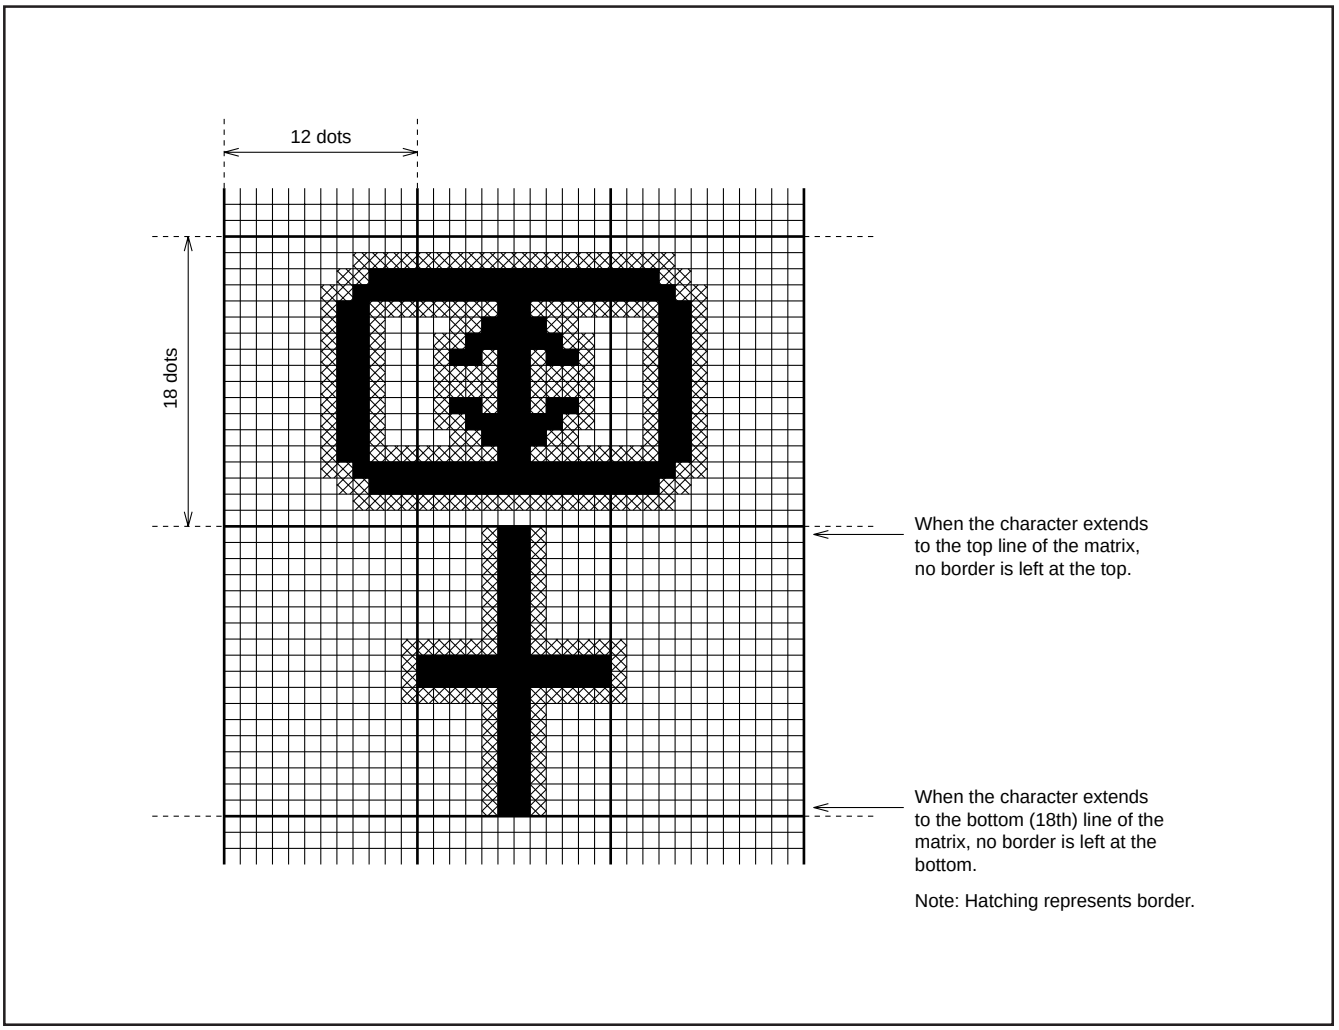

Fig. 8 Example of border display

DATA INPUT EXAMPLE

Data of display RAM and display control registers can be set by the I²C-BUS serial input function. Example of data setting is shown in Figure 9 (at EXCK0 = “1”, EXCK1 = “0” setting).

Notes 1 : The page in which data is written is controlled by the address. To write data into page 0, set "0". To write data into page 1, set "1".
2 : Input a continuous clock of constant period from the TCK pin. Also, input a horizontal synchronous signal into the HOR pin and a vertical synchronous signal into the VERT pin.
3 : Matrix-outline display in this data.
4 : Secure the waiting time of 200ms after releasing AC, and set data from setting the display frequency (setting of the register).

Fig 9. Example of data setting

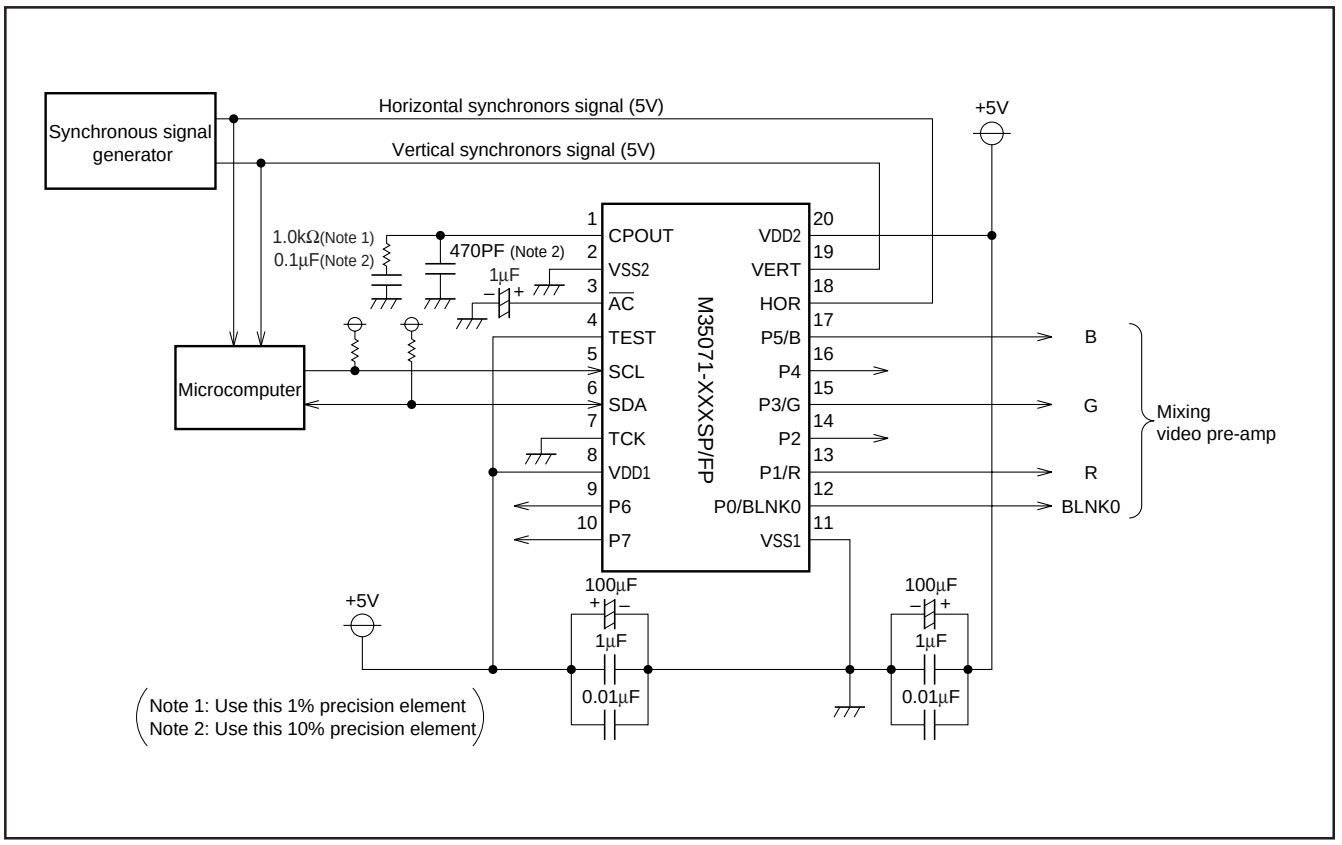

Fig. 10 Example of the M35071-XXXSP/FP peripheral circuit (Internal synchronous. At EXCK1 = “0”, EXCK0 = “1”)

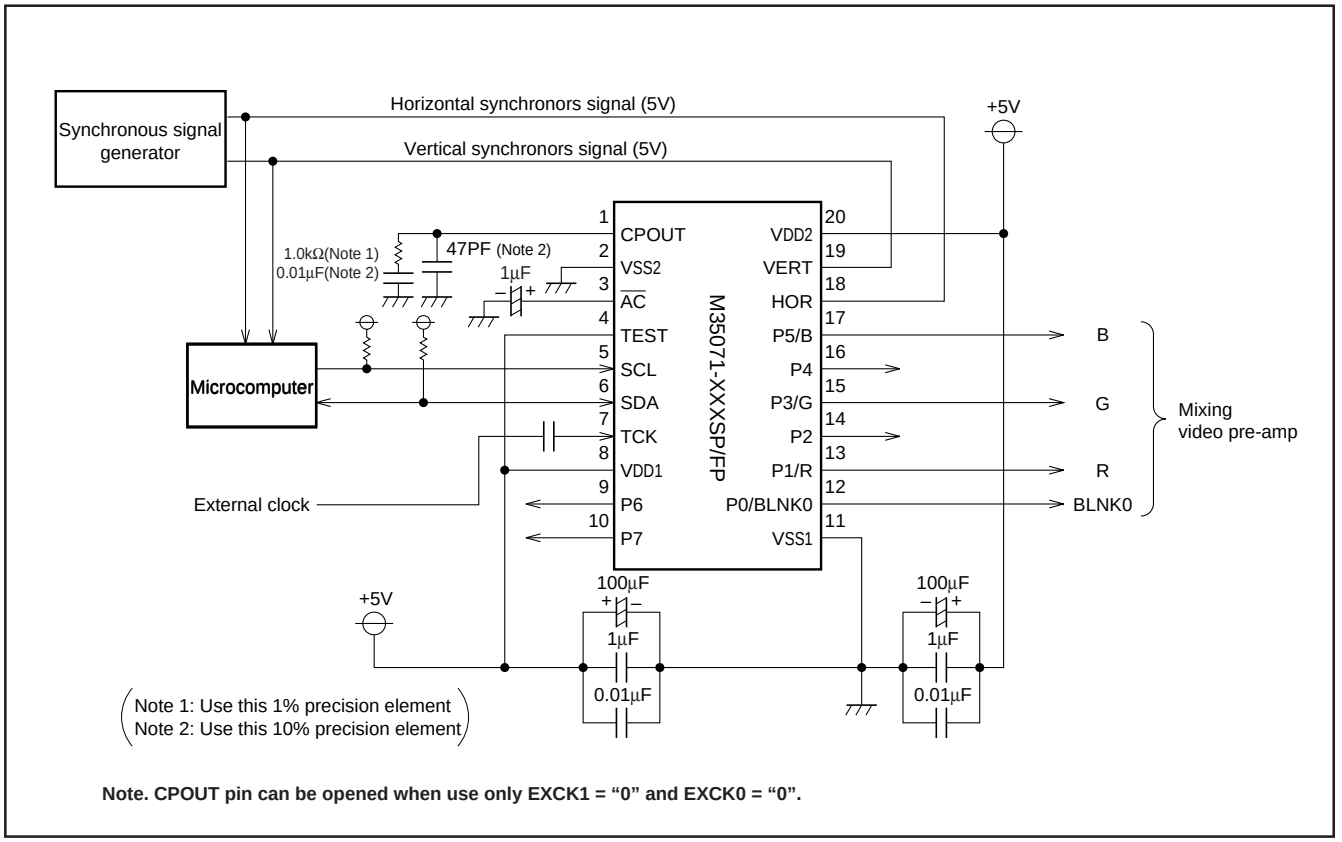

Note. CPOUT pin can be opened when use only EXCK1 = “0” and EXCK0 = “0”.

Fig. 11 Example of the M35071-XXXSP/FP peripheral circuit (External synchronous. At EXCK1 = “1”, EXCK0 = “1”)

DATA INPUT

(1) I²C-Bus communication function

This IC has a built-in data transmission interface which utilizes 2 unidirectional buses. In communications, this IC functions as a slave reception device.

The IC is synchronized with the serial clock (SCL) sent from the master device and receives the data (SDA). Communications are controlled from the start/stop states. Also, always input the control byte after attaining the start state.

The below chart shows the start/stop state and control byte configuration.

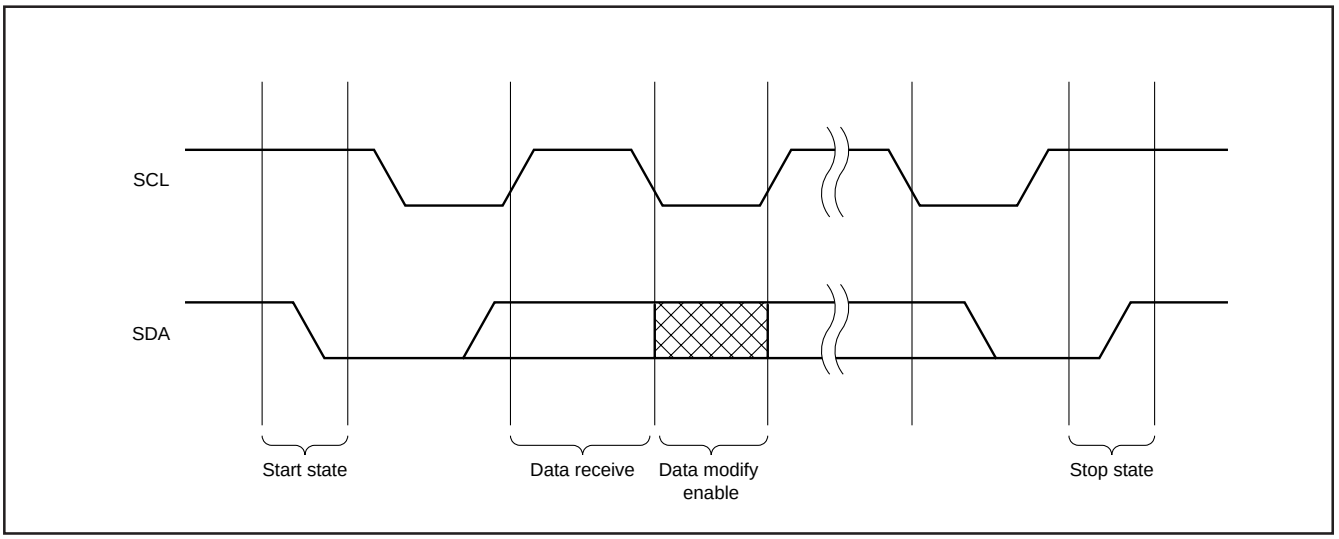

Fig. 12 Start state / Stop state

Fig. 13 Control byte configuration

(2) Data input (Sequence)

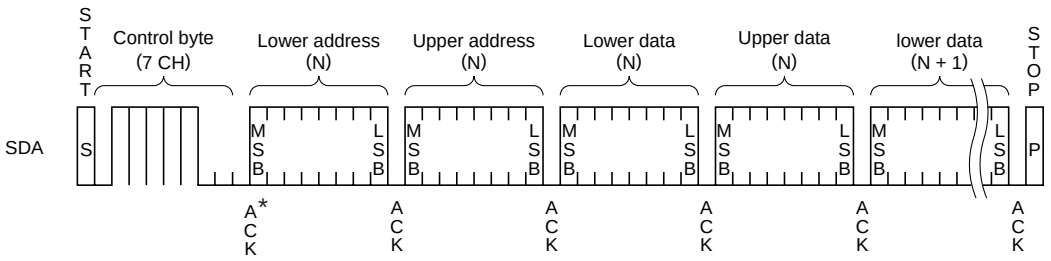
(a) Addresses are consists of 16 bits.

(b) Data is consists of 16 bits.

(c) Addresses and data are communicated in 8-bit units. Input the lower 8 bits before the upper 8 bits. Make input from the MSB side.

(d) After the start state has been attained and the control byte (7CH) received, the next 16 bits (2 bytes) are for inputting the address. Addresses are increased in increments for every 16 bits (2 bytes) of data input thereafter. As a result, it is not necessary to input the address from the second data.

Note: During external synchronous, stop the external clock input from the TCK pin while inputting data.



ACK* (Acknowledge) : Output the acknowledge signal whenever one byte input after the start state. Output the acknowledge signal and recieve the data thereafter when mach the slave address (7CH).

Fig. 14 Data input sequence

TIMING REQUIREMENTS

Data input

Symbol	Parameter	Limits				Unit	Remarks
		Typ. mode		High-speed mode			
		Min.	Max.	Min.	Max.		
f_{CLK}	Clock frequency	0	100	0	400	KHz	
t_{HIGH}	HIGH period of Clock	4000	–	600	–	ns	
t_{LOW}	LOW period of Clock	4700	–	1300	–	ns	
t_R	SDA & SCL rise time	–	1000	20+(Note) $0.1C_B$	300	ns	
t_F	SDA & SCL fall time	–	300	20+(Note) $0.1C_B$	300	ns	
t_{HD} : STA	Hold time at START status	4000	–	600	–	ns	
t_{SU} : STA	Set up time at START status	4700	–	600	–	ns	Only at START state repeating generation
t_{HD} : DAT	Data input hold time	0	–	0	–	ns	
t_{SU} : DAT	Data input setup time	250	–	100	–	ns	
t_{SU} : STO	Set up time at STOP state	4000	–	600	–	ns	
t_{BUF}	Bus release time	4700	–	1300	–	ns	Time must be released bus before next transmission
t_{SP}	Input filter / spike suppress (SDA & SCL pin)	N/A	N/A	0	50	ns	

Note. C_B = total capacitance of 1 bus line.

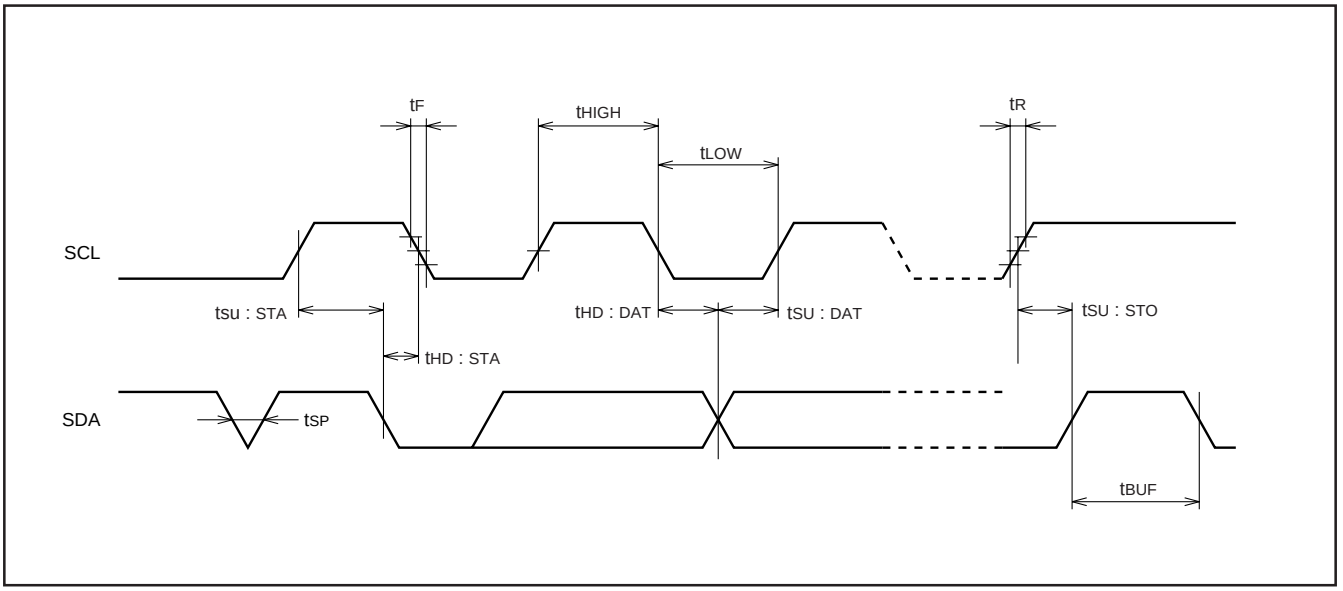


Fig. 15 Data input timing

ABSOLUTE MAXIMUM RATINGS (V_{DD} = 5.00V, Ta = –20 to +85°C, unless otherwise noted)

Symbol	Parameter	Conditions	Ratings	Unit
V_{DD}	Supply voltage	With respect to V_{SS}.	–0.3 to +6.0	V
V_I	Input voltage		V_{SS} –0.3 ≤ V_I ≤ V_{DD} +0.3	V
V_O	Output voltage		V_{SS} ≤ V_O ≤ V_{DD}	V
Pd	Power dissipation	Ta = +25°C	+300	mW
Topr	Operating temperature		–20 to +85	°C
Tstg	Storage temperature		–40 to +125	°C

RECOMMENDED OPERATING CONDITIONS (V_{DD} = 5.00V, Ta = –20 to +85°C, unless otherwise noted)

Symbol	Parameter		Limits			Unit
			Min.	Typ.	Max.	
V_{DD}	Supply voltage		4.75	5.0	5.25	V
V_{IH}	"H" level input voltage	$\overline{AC}$ HOR, VERT	0.8V_{DD}	V_{DD}	V_{DD}	V
		SCL, SDA	0.7V_{DD}	V_{DD}	V_{DD}	V
V_{IL}	"L" level input voltage	$\overline{AC}$ HOR, VERT	0	0	0.2V_{DD}	V
		SCL, SDA	0	0	0.3V_{DD}	V
Fosc	Oscillating frequency for display		20.0	—	90.0	MHz
H.sync	Horizontal synchronous signal input frequeney		15.0	—	130.0	kHz

ELECTRICAL CHARACTERISTICS (V_{DD} = 5.00V, Ta = 25°C, unless otherwise noted)

Symbol	Parameter		Test conditions	Limits			Unit
				Min.	Typ.	Max.	
V_{DD}	Supply voltage		Ta = –20 to +85°C	4.75	5.0	5.25	V
I_{DD}	Supply current		V_{DD} = 5.00V	—	40	60	mA
V_{OH}	"H" level output voltage	P0 to P7 (Note1)	V_{DD} = 4.75V, I_{OH} = -0.4mA	3.5	—	—	V
		CPOUT	V_{DD} = 4.75V, I_{OH} = -0.05mA				
V_{OL}	"L" level output voltage	P0 to P7 (Note2)	V_{DD} = 4.75V, I_{OL} = 0.4mA	—	—	0.4	V
		CPOUT	V_{DD} = 4.75V, I_{OL} = 0.05mA				
		SDA	V_{DD} = 4.75V, I_{OL} = 3.0mA				
R_I	Pull-up resistance $\overline{AC}$		V_{DD} = 5.00V	10	30	100	kΩ
V_{TCK}	External clock input width		4.75V ≤ V_{DD} ≤ 5.25V	0.6V_{DD}	—	0.9V_{DD}	V

Notes 1. The current from the IC must not exceed – 0.4 mA/port at any of the port pins (P0 to P7).
2. The current flowing into the IC must not exceed 0.4 mA/port at any of port pins (P0 to P7).

NOTE FOR SUPPLYING POWER

(1)Timing of power supplying to $\overline{AC}$ pin

The internal circuit of M35071-XXXSP/FP is reset when the level of the auto clear input pin $\overline{AC}$ is "L". This pin in hysteresis input with the pull-up resistor.

The timing about power supplying of $\overline{AC}$ pin is shown in Figure 16.

After supplying the power (V_{DD} and V_{SS}) to M35071-XXXSP/FP and the supply voltage becomes more than $0.8 \times V_{DD}$, it needs to keep V_{IL} time; tw of the $\overline{AC}$ pin for more than 1ms.

Start inputting from microcomputer after $\overline{AC}$ pin supply voltage becomes more than $0.8 \times V_{DD}$ and keeping 200ms wait time.

(2)Timing of power supplying to V_{DD1} and V_{DD2}.

Supply power to V_{DD1} and V_{DD2} at the same time.

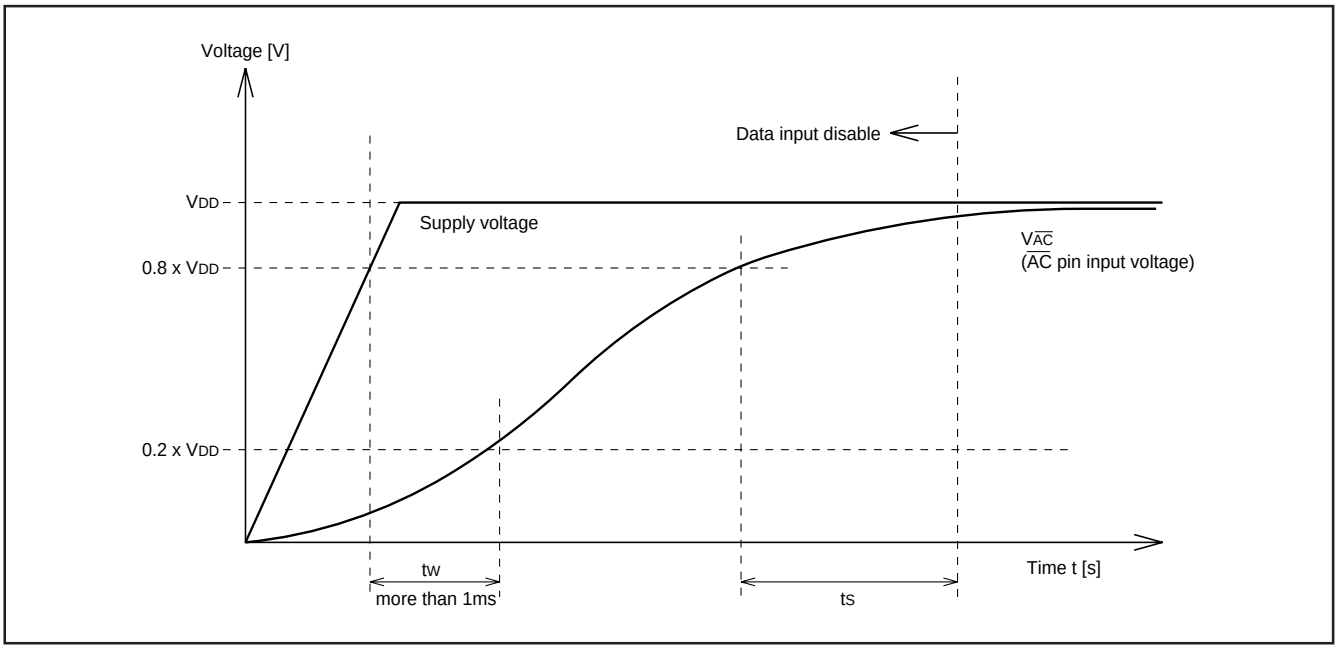

Fig. 16 Timing of power supplying to $\overline{AC}$ pin

PRECAUTION FOR USE

Notes on noise and latch-up

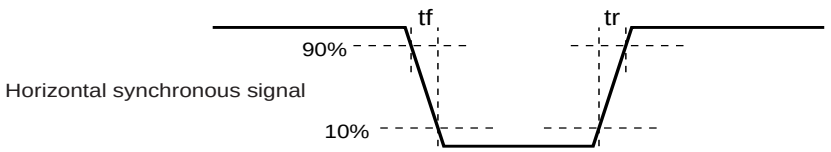
In order to avoid noise and latch-up, connect a bypass capacitor (≈0.1µF) directly between the V_{DD1} pin and V_{SS1} pin, and the V_{DD2} pin and V_{SS2} pin using a heavy wire.

Note for waveform timing of the horizontal signals to the HOR pin

Set horizontal synchronous signal edge* waveform timing to under 5ns and input to HOR pin.

Set only the side which set by B/$\overline{F}$ register waveform timing under 5ns and input to HOR pin.

*: Set front porch edge or back porch edge by B/$\overline{F}$ register.



DATA REQUIRED FOR MASK ROM ORDERING

Please send the following data for mask orders.

(1) M35071-XXXSP/FP mask ROM order confirmation form
(2) 20P4B mask specification form
(3) 20P2Q-A mask specification from
(4) ROM data (EPROM 3 sets)
(5) Floppy disks containing the character font generating program + character data

STANDARD ROM TYPE : M35071-002SP/FP

M35071-002SP/FP is a standard ROM type of M35071-XXXSP/FP. The character patterns for 0 page are fixed to the contents of Figure 17 to 20, the character patterns for page 1 are fixed to the contents of Figure 21 and 22.
