Rev.1.00

e² studio Integrated Development Environment V6.1.0

Oct. 16, 2017

Outline

We have revised the e² studio integrated development environment from V6.0.0 to V6.1.0.

Refer to the URL below for an overview of the product.

<https://www.renesas.com/e2studio>

1. Product and Version to Be Updated

➤ e² studio V6.0.0

Check the version number of your copy of e² studio in the dialog box opened by selecting [About e2 studio] from the [Help] menu of e² studio.

2. Items Revised

The major revision points are as follows. Refer to the release note for details.

This information will be available from October 18.

<https://www.renesas.com/search/keyword-search.html#genre=document&q=r20ut4191ee>

2.1 Description of Revision

The problems regarding the points below have been fixed.

- (1) The contents of sections 1 and 3 in Outline in RENESAS TOOL NEWS Document No. R20TS0196EJ0100 have been fixed. (Note that the contents of section 2 in Outline are concerned with problems with devices that are not supported by e² studio.)

Outline 1. When Using Projects Created by the Previous Version of the Code Generator in V6.00.00 of CS+ for CC and V6.0.0 of e² studio (RL78 Family)

Outline 3. When Changing the Creation Destination Folder of Source Files by the Code Generation Tool (For e² studio, the RL78 family is applicable.)

For details about the problems, refer to the URL below.

<https://www.renesas.com/search/keyword-search.html#genre=document&q=r20ts0196>

- (2) The contents of the problem informed in RENESAS TOOL NEWS Document No. R20TS0212EJ0100 have been fixed.

For details about the problem that occurs when the E1 or E20 emulator is used for the RX family, refer to the URL below.

<https://www.renesas.com/search/keyword-search.html#genre=document&q=r20ts0212>

2.2 Improvements to Functionality

➤ Support of RZ/G Linux Platform V2.0

- The RZ/G application debugging environment will support the compilers of RZ/G Linux Platform V2.0 and GCC Linaro 5.2.
RZ/G Linux Platform V2.0 will be available in October.

3. Updating Your Product

Download the e² studio installer from the URL below.

V6.1.0 will be available from October 18.

https://www.renesas.com/e2studio_download

Note 1: You cannot perform overwrite installation by updating the e² studio from V5.4.0 (or earlier) to V6.0.0 or V6.1.0. Create another folder and newly install e² studio.

2: There are two installers: one for online use (Web installer), and one for offline use.

Only the latest revision of the installer for online use can be applied. Check the download page indicated above before installation.

Use the installer for offline use in environments which are not connected to the Internet.

Refer to the download page indicated above for details.

Note: V6.1.0 will be installed by using the V6.0.0 Web installer once V6.1.0 is released. Use the V6.0.0 installer for offline use if you need to install V6.0.0.

3: Do not open a workspace that was used by a different version of e² studio by using a newly installed version of e² studio. Specify a newly created folder as a workspace and import projects from the previous workspace.

4. Supplement

Projects created for GNUARM-NONE Toolchain have a different project format from that of projects created by V6.0.0 or later. Therefore, even if projects are imported, original settings (such as options) might not be inherited. When you develop projects for RZ in V6.0.0 or V6.1.0 of e² studio, you need to create a new project or modify the settings of the imported projects.
