

RX671 Group

Initial Settings Example

Introduction

This application note describes the settings that must be made after a reset of a RX671 Group microcontroller, including clock settings, disabling of peripheral functions still running after a reset, and nonexistent port settings.

Target Devices

- RX671 Group 145 and 144-pin versions, ROM capacity: 1 MB to 2 MB
- RX671 Group 100-pin versions, ROM capacity: 1 MB to 2 MB
- RX671 Group 64-pin versions, ROM capacity: 1 MB to 2 MB
- RX671 Group 48-pin versions, ROM capacity: 1 MB to 2 MB

When using this application note with other Renesas MCUs, careful evaluation is recommended after making modifications to comply with the alternate MCU.

Revision History 48

1. Specifications

The sample code makes settings to disable peripheral functions still running after a reset, nonexistent port settings, and clock settings. The description in this application note applies to the processing that occurs following power-on (cold start).

1.1 Disabling Peripheral Functions Still Running After a Reset

Some peripheral functions start operating immediately after power-on, and some have the module stop function disabled. The processing covered under this item disables the following functions:

EXDMAC^{*1}, DMAC, DTC, standby RAM, and RAM

Note that the above processing is not performed by the sample code. As necessary, overwrite the corresponding constants to execute the processing.

Note 1. EXDMAC is function used only with device having 100-pin and above.

1.2 Nonexistent Port Settings

The pins corresponding to nonexistent ports must be set to the output mode. The sample code of this application note contains initial setting values suitable for 144 pin products.

Overwrite the constants as necessary to accommodate the actual target device.

1.3 Clock Settings

1.3.1 Overview

The procedure for making clock settings is as follows:

1. Sub-clock settings
2. Main clock settings
3. HOCO clock settings
4. PLL clock settings
5. System clock switching

By making changes to the constants defined in `r_init_clock.h`, the sample code described in this application note can be used to change the various clock settings.

The sample code sets the PLL clock as the system clock and does not use a sub-clock. Overwrite the constants as necessary to match the clocks you wish to use.

1.3.2 Clock Specifications Assumed in Sample Code

Table 1.1 lists the clock specifications assumed in sample code.

Table 1-1 Clock Specifications Assumed in Sample Code

Clock	Oscillation Frequency	Oscillation Stabilization Time	Remarks
Main clock oscillator	24 MHz	—*2	Crystal
Sub-clock oscillator	32.768 kHz*1	—*2	For standard clock
PLL clock	240 MHz (main clock $\times 1/1 \times 10$)	—*3	
HOCO clock	20 MHz*1	—*3	

Note 1. Oscillation disabled by the sample code.

Note 2. The oscillator's stabilization time will differ due to factors such as the wiring pattern and oscillation constant of the system. To obtain the oscillation stabilization time, request an evaluation by the oscillator manufacturer of the system in which the oscillator will be used.

Note 3. See Electrical Characteristics in User's Manual: Hardware.

1.3.3 Clock Selection

By making changes to the constants defined in `r_init_clock.h`, the sample code described in this application note can be used to select settings such as the clock source of the system clock and whether each clock is oscillating or stopped.

To determine which constants can be changed, see the listing of (user changeable) constants used by the sample code in Table 3.11 (1/3), Table 3.12 (2/3) and Table 3.13 (3/3).

Table 1.2 lists clock selection examples. The sample code sets the PLL clock as the system clock and does not use a sub-clock (No. 1).

Table 1-2 Clock Selection Examples

No		1	2	3	4
System clock		PLL	PLL	PLL	PLL
PLL clock		Oscillating	Oscillating	Oscillating	Oscillating

No		12	13	14	15
System clock		Main clock	Main clock	Main clock	Main clock
PLL clock		Stopped	Stopped	Stopped	Stopped
Main clock		Oscillating	Oscillating	Oscillating	Oscillating
HOCO clock		Stopped	Stopped	Stopped	Stopped
Sub-clock		Stopped	Oscillating (using RTC)	Stopped	Oscillating
External sub-clock		Stopped	Stopped	Oscillating (using RTC)	Oscillating (using RTC)
Operating mode		Low-speed operating mode 1	Low-speed operating mode 1	Low-speed operating mode 1	Low-speed operating mode 1
ROM wait cycles*1		0 wait cycles	0 wait cycles	0 wait cycles	0 wait cycles
Constants	SEL_SYSCCLK	CLK_MAIN	CLK_MAIN	CLK_MAIN	CLK_MAIN
	SEL_PLL	B_NOT_USE	B_NOT_USE	B_NOT_USE	B_NOT_USE
	SEL_MAIN	B_USE	B_USE	B_USE	B_USE
	SEL_HOCO	B_NOT_USE	B_NOT_USE	B_NOT_USE	B_NOT_USE
	SEL_SUB*2	B_NOT_USE	B_USE	B_NOT_USE	B_USE
	SEL_RTC*2	B_NOT_USE	B_USE	B_USE	B_USE
	SEL_EXT_SUB *3	B_NOT_USE	B_NOT_USE	B_USE	B_USE
	REG_OPCCR	OPCM_LOW_1	OPCM_LOW_1	OPCM_LOW_1	OPCM_LOW_1
	REG_ROMWT	ROMWT_0WAIT	ROMWT_0WAIT	ROMWT_0WAIT	ROMWT_0WAIT

Note 1. Set the REG_ROMWT to ROMWT_1WAIT(1 wait) if the ICLK frequency is 60 MHz or higher.

Note 2. Set SEL_SUB to B_USE (use) when the sub-clock is used as the system clock, and set SEL_RTC to B_USE when the sub-clock is used as the RTC count source. The sub-clock oscillates when either SEL_SUB or SEL_RTC, or both of them, are set to B_USE.

Note 3. Set SEL_EXT_SUB to B_USE(use) when use an external sub-clock.

2. Operation Confirmation Conditions

The operation of the sample code referenced in this application note (No. 1 to 15 in Table 1.2) has been confirmed under the following conditions.

Table 2.1 lists the operation check conditions.

Table 2-1 Operation Confirmation Conditions

Item		Contents
MCU used		R5F5671EHDFB (RX671 Group)
Operating frequency	PLL clock selected as system clock (No. 1 to 7 in Table 1.2)	Main clock: 24 MHz PLL: 240 MHz (main clock $\times 1/1 \times 10$) System clock (ICLK): 120 MHz (PLL $\times 1/2$) Peripheral module clock A (PCLKA): 120 MHz (PLL $\times 1/2$) Peripheral module clocks B to D (PCLKB to PCLKD): 60 MHz (PLL $\times 1/4$) Flash interface clock (FCLK): 60 MHz (PLL $\times 1/4$) External bus clock (BCLK): 60 MHz (PLL $\times 1/4$)
	HOCO clock selected as system clock (No. 8 to 11 in Table 1.2)	HOCO: 20 MHz System clock (ICLK): 20 MHz (HOCO $\times 1/1$) Peripheral module clock A (PCLKA): 20 MHz (HOCO $\times 1/1$) Peripheral module clock B to D (PCLKB to PCLKD): 10 MHz (HOCO $\times 1/2$) Flash interface clock (FCLK): 10 MHz (HOCO $\times 1/2$) External bus clock (BCLK): 10 MHz (HOCO $\times 1/2$)
	Main clock selected as system clock (No. 12 to 15 in Table 1.2)	Main clock: 24 MHz System clock (ICLK): 750 kHz (main clock $\times 1/32$) Peripheral module clock A (PCLKA): 750 kHz (main clock $\times 1/32$) Peripheral module clock B to D (PCLKB to PCLKD): 750 kHz (main clock $\times 1/32$) Flash interface clock (FCLK): 750 kHz (main clock $\times 1/32$) External bus clock (BCLK): 750 kHz (main clock $\times 1/32$)

3. Software

After disabling peripheral functions still running after a reset and making nonexistent port settings, the sample code makes clock settings.

3.1 Disabling Peripheral Functions Still Running After a Reset

The sample code disables peripheral functions still running after a reset.

Only the peripheral modules listed below are not in the module stop state after a reset is canceled. To transition a module to the module stop state, set the corresponding module stop bit to "1" (transition to module stop state). Putting modules into the module stop state can reduce the power consumption of the device.

In the sample code the value of the constant `MSTP_STATE_<target module name>` is "0" (`MODULE_STOP_DISABLE`), so the target module does not transition to the module stop state. To transition one or more modules to the module stop state on the target system, set the corresponding constant(s) to "1" (`MODULE_STOP_ENABLE`) in `r_init_stop_module.h`.

Table 3.1 lists the peripheral modules that are not in the module stop state after a reset.

Table 3-1 Peripheral Modules Not in Module Stop State After a Reset

Peripheral Module	Module Stop Setting Bit	Value After Reset	Setting When Not Using Module
EXDMAC ¹	MSTPCRA.MSTPA29 bit	0 (module stop state canceled)	1 (transition to module stop state)
DMAC/DTC	MSTPCRA.MSTPA28 bit		
Standby RAM	MSTPCRC.MSTPC7 bit		
RAM	MSTPCRC.MSTPC0 bit		

Note 1. EXDMAC is function used only with device having 100-pin and above.

3.2 Nonexistent Port Settings

3.2.1 Processing Overview

The bits in the PDR registers corresponding to nonexistent ports are set to “1” (output). When writing in byte units to PDR or PODR registers containing nonexistent ports after this function has been called, set the direction control bits corresponding to the nonexistent ports to “1” and the port output data storage bits corresponding to the nonexistent ports to “0”.

Table 3.2, Table 3.3, Table 3.4 and Table 3.5 list the nonexistent ports setting corresponding to 144/145 pin, 100 pin, 64pin and 48 pin device.

Table 3-2 Nonexistent Ports (145- and 144-pin)

3.2.2 Pin Count Setting

The setting in the sample code of project (PIN_SIZE=144) is for 144-pin products. The other pin counts supported by this project are 145, 100, 64 and 48. If the pin count of the target device is other than 144, change the value of PIN_SIZE in r_init_port_initialize.h to match the target device.

3.3 Clock Settings

3.3.1 Clock Setting Procedure

Table 3.6 lists the steps in the clock setting procedure, the processing performed in each step, and the default settings of the sample code. Using the default settings, the sample code sets the PLL clock as the main clock and turns off the HOCO and sub-clock.

Table 3-6 Clock Setting Procedure

Step	Processing	Details of Processing		Sample Code Settings
1	Sub-clock setting*2	Not used	Initializes the sub-clock control circuit.	The sub-clock is not used.
		Used	Initializes the sub-clock control circuit, sets the drive capacity, and sets in SOSCWTCR the waiting time until output of the sub-clock to the internal clock starts; then starts oscillation by the sub-clock. After this, waits for the clock oscillation stabilization waiting time*1.	
2	Main clock setting*2	Not used	This setting is unnecessary.	The main clock is used.
		Used	Sets the main clock drive capacity and sets in MOSCWTCR the waiting time until output of the main clock to the internal clocks starts, then starts oscillation by the main clock. After this, waits for the clock oscillation stabilization waiting time*1.	
3	HOCO clock setting*2	Not used	Turns off the HOCO power supply.	The HOCO is not used.
		Used	Sets the HOCO frequency, then starts oscillation by the HOCO clock. After this, waits for the clock oscillation stabilization waiting time*1 using hardware.	
4	PLL clock setting*2	Not used	Turns off the PLL power supply.	The PLL clock is used.
		Used	Sets the PLL input division ratio and frequency multiplication factor, then starts oscillation by the PLL clock. After this, waits for the clock oscillation stabilization waiting time*1.	
5	CLKOUT setting*3	Not used	This setting is unnecessary.	The CLKOUT is not Used
		used	Selects the clock source output on the CLKOUT pin and sets the clock division ratio. After this, enables output on the CLKOUT pin.	
6	Operating power control mode setting	Sets the operating power control mode according to the operating frequency and operating voltage used.		High-speed operating mode is selected.
7	Clock division ratio settings	Changes the clock division ratios.		• ICLK and PCLKA: $\times 1/2$ • PCLKB to PCLKD, BCLK, and FCLK: $\times 1/4$ • BCLK: Output stopped
8	System clock switching	Switches according to the system used.		Switches to PLL clock.

Note 1. Confirms that the appropriate bit in the oscillation stabilization flag register (OSCOVFSR) is set to "1".

Note 2. Change the values of the constants in r_init_clock.h as necessary to match the selection of the clocks you wish to use or not use.

Note 3. The sample code only makes the CLKOUT settings. To actually output this clock, refer to I/O Ports and Multi-Function Pin Controller (MPC), in RX671 Group User's Manual: Hardware, and make settings appropriate for your system.

3.4 Section Composition

Table 3.7 lists the section data changed in the sample code. For details on adding, changing, and deleting section, refer to the RX Family C/C++ Compiler Package User's Manual.

Table 3-7 Section Data Changed in the Sample Code

Section Name	Change	Address	Function
End_of_RAM	Addition	0005 FFFCh	Last address of On-chip RAM

3.5 File Composition

Table 3.8 lists the files used in the sample code. Files generated by the integrated development environment are not included in this table.

Table 3-8 Files Used in the Sample Code

File Name	Outline	Remarks
main.c	Main processing routine	
r_init_stop_module.c	Disable peripheral functions still running after a reset	
r_init_stop_module.h	Header file of r_init_stop_module.c	
r_init_port_initialize.c	Initial nonexistent port settings	
r_init_port_initialize.h	Header file of r_init_port_initialize.c	
r_init_clock.c	Initial clock settings	
r_init_clock.h	Header file of r_init_clock.c	
r_init_rom_cache.c	Initial ROM cache settings	
r_init_rom_cache.h	Header file of r_init_rom_cache.c	

3.6 Option-Setting Memory

Table 3.9 lists the option-setting memory configured in the sample code. When necessary, set a value suited to the user system.

Table 3-9 Option-Setting Memory Configured in the Sample Code

Symbol	Address	Setting Value	Contents
OFS0	FE7F 5D04h to FE7F 5D07h	FFFF FFFFh	IWDT stopped after a reset WDT stopped after a reset
OFS1	FE7F 5D08h to FE7F 5D0Bh	FFFF FFFFh	Voltage monitor 0 reset disabled after a reset HOCO oscillation disabled after a reset
MDE	FE7F 5D00h to FE7F 5D03h	FFFF FFFFh	Little endian, linear mode

3.7 Constants

Table 3.10 shows constants (user changeable) used by sample code (1/3). Table 3.11 shows constants (user changeable) used by sample code (2/3). Table 3.12 shows constants (user changeable) used by sample code (3/3). Table 3.13 shows constants (non user-changeable) used by sample code.

Table 3.14 shows constants for 145- and 144- pin products (PIN_SIZE 145 or 144). Table 3.15 shows constants for 100-pin products (PIN_SIZE 100). Table 3.16 shows constants for 64-pin products (PIN_SIZE 64). Table 3.17 shows constants for 48- pin products (PIN_SIZE = 48).

Table 3-10 Constants (User Changeable) Used by Sample Code (1/3)

Constant Name	Setting Value	Contents
SEL_MAIN* ¹	B_USE	Main clock enable/disable selection B_USE: Used (main clock enabled) B_NOT_USE: Not used (main clock disabled)
MAIN_CLOCK_HZ* ¹	24,000,000 L	Main clock oscillator frequency (Hz)
REG_MOFCR* ¹	00h	Main clock oscillator drive capacity setting (setting value of MOFCR register)
REG_MOSCWTCR* ¹	53h	Setting value of main clock wait control register
SEL_SUB* ¹ * ²	B_NOT_USE	Sub-clock usage selection (used as system clock) B_USE: Used B_NOT_USE: Not used
SEL_RTC* ¹ * ²	B_NOT_USE	Sub-clock usage selection (used as RTC count source) B_USE: Used B_NOT_USE: Not used
SEL_EXT_SUB	B_NOT_USE	Select the clock source for each module (including RTC) in the backup area and Remote Control Signal Receiver (REMC) B_NOT_USE: Internal sub-clock oscillator B_USE : External sub-clock oscillator
SUB_CLOCK_HZ* ¹	32,768 L	Sub-clock oscillator frequency (Hz)
REG_SOSCWTCR* ¹	21h	Setting value of sub-clock wait control register
REG_RCR3* ¹	CL_STD	Sub-clock oscillator drive capacity selection CL_STD: Drive capacity for standard CL CL_LOW: Drive capacity for low CL
SEL_PLL* ¹	B_USE_PLL_MAIN	PLL clock enable/disable selection B_USE_PLL_MAIN : Used (main clock) B_USE_PLL_HOCO: Used (HOCO) B_NOT_USE: Not used (PLL clock disabled)
REG_PLLCR* ¹	1300h	PLL input division ratio and frequency multiplication factor settings (setting value of PLLCR register)

Note 1. Change the settings values in r_init_clock.h to match the target system.

Note 2. The sub-clock oscillates when either SEL_SUB or SEL_RTC, or both of them, are set to B_USE (use).

Table 3-11 Constants (User Changeable) Used by Sample Code (2/3)

Constant Name	Setting Value	Contents
SEL_HOCO* ¹	B_NOT_USE	HOCO clock enable/disable selection B_USE : Used (HOCO clock enabled) B_NOT_USE: Not used (HOCO clock disabled)
REG_HOCOCCR2* ¹	FREQ_20MHZ	HOCO clock frequency selection FREQ_16MHZ: 16 MHz FREQ_18MHZ: 18 MHz FREQ_20MHZ: 20 MHz
SEL_SYSCLK* ¹	CLK_PLL	System clock clock source selection CLK_PLL : PLL CLK_HOCO : HOCO CLK_MAIN : main clock CLK_SUB : sub-clock
REG_OPCCR* ¹	OPCM_HIGH	Operating power control mode selection* ⁴ OPCM_HIGH : High-speed operating mode OPCM_LOW_1: Low-speed operating mode 1* ² OPCM_LOW_2: Low-speed operating mode 2* ³
SEL_CKOUT* ¹	CKOUT_NOT_USE	Clock output enable/disable selection CKOUT_USE : Enable clock out CKOUT_NOT_USE: Disable clock out
CKO_CLK* ¹	CKO_LOCO	Clock output source selection CKO_LOCO: LOCO CKO_HOCO: HOCO CKO_MAIN : main clock CKO_SUB : sub-clock CKO_PLL : PLL
CKO_DIV* ¹	0h	Clock output divisor selection 0h : 1/1 1h : 1/2 2h : 1/4 3h : 1/8 4h : 1/16
SEL_HOCO_TRIMMING* ¹	B_NOT_USE	select the HOCO trimming function B_USE : Used (HOCO trimming function enabled) B_NOT_USE: Not used (HOCO trimming function disabled)
REG_HOCO_TRIMMING* ¹	0	Set the frequency trimming value for the HOCO. 0(Frequency: Low) - 511(Frequency: High)
SEL_HOCO_FLL* ⁵	B_NOT_USE	Select the FLL function B_USE : Used (HOCO FLL function enabled) B_NOT_USE: Not used (HOCO FLL function disabled)

Note 1. Change the settings values in r_init_clock.h to match the target system.

Note 2. It is not possible to select low-speed operating mode 1 when the PLL clock is set to oscillate.

Note 3. It is not possible to select low-speed operating mode 2 when the PLL clock or HOCO is set to oscillate.

Note 4. The operating frequency range and operating voltage range differ depending on the operating mode. For details, see RX671 Group User's Manual: Hardware.

Note 5. When using the FLL function, the sub-clock must be enabled. However, the external sub-clock cannot be used.

Table 3-12 Constants (User Changeable) Used by Sample Code (3/3)

Constant Name	Setting Value	Contents
MSTP_STATE_EXDMAC* ¹	MODULE_STOP_DISABLE	EXDMAC module stop state selection MODULE_STOP_DISABLE: Disable module stop MODULE_STOP_ENABLE: Transition to module stop
MSTP_STATE_DMADCDC* ¹	MODULE_STOP_DISABLE	DMAC and DTC module stop state selection MODULE_STOP_DISABLE: Disable module stop MODULE_STOP_ENABLE: Transition to module stop
MSTP_STATE_STBYRAM* ¹	MODULE_STOP_DISABLE	Standby RAM module stop state selection MODULE_STOP_DISABLE: Operating MODULE_STOP_ENABLE: Stopped
MSTP_STATE_RAM* ¹	MODULE_STOP_DISABLE	RAM module stop state selection MODULE_STOP_DISABLE: Operating MODULE_STOP_ENABLE: Stopped
PIN_SIZE* ²	144	Pin count of target device
REG_ROMWT* ^{3*4}	ROMWT_1WAIT	ROM wait cycle selection ROMWT_0WAIT: 0 wait cycles ROMWT_1WAIT: 1 wait cycle
SEL_ROM_CACHE* ⁵	CACHE_ENABLE	ROM cache operation enable/disable CACHE_ENABLE: Operation enabled CACHE_DISABLE: Operation disabled
SEL_NON_CACHEABLE_AREA0* ⁵	SEL_NON_CACHEABLE_AREA_DISABLE	Non-cacheable area 0 enable/disable SEL_NON_CACHEABLE_AREA_ENABLE: Enabled SEL_NON_CACHEABLE_AREA_DISABLE: Disabled
SEL_NON_CACHEABLE_AREA1* ⁵	SEL_NON_CACHEABLE_AREA_DISABLE	Non-cacheable area 1 enable/disable SEL_NON_CACHEABLE_AREA_ENABLE: Enabled SEL_NON_CACHEABLE_AREA_DISABLE: Disabled

Note 1. Change the settings values in r_init_stop_module.h to match the target system.

Note 2. Change the settings values in r_init_port_initialize.h to match the target system.

Note 3. Change the setting values in r_init_clock.h to match the target system.

Note 4. When ICLK is faster than 60 MHz, set it to 1 waits cycle.

Note 5. Change the settings values in r_init_rom_cache.h to match the target system.

Table 3-13 Constants (Non User-Changeable) Used by Sample Code

Constant Name	Setting Value	Contents
B_NOT_USE	0	Not used
B_USE	1	Used
B_USE_PLL_MAIN	2	Used the PLL clock (clock source : main clock)
B_USE_PLL_HOCO	3	Used the PLL clock (clock source : HOCO)
CL_LOW	02h	Sub-clock: Drive capacity for low CL
CL_STD	0Ch	Sub-clock: Drive capacity for standard CL
FREQ_16MHZ	00h	HOCO frequency: 16 MHz
FREQ_18MHZ	01h	HOCO frequency: 18 MHz
FREQ_20MHZ	02h	HOCO frequency: 20 MHz
CLK_PLL	0400h	Clock source: PLL
CLK_HOCO	0100h	Clock source: HOCO
CLK_SUB	0300h	Clock source: sub-clock
CLK_MAIN	0200h	Clock source: main clock
ROMWT_0WAIT	0h	ROM wait cycles: 0 wait cycles
ROMWT_1WAIT	01h	ROM wait cycles: 1 wait cycle
REG_SCKCR* ¹	21C2 1222h (PLL selected) 10C1 0111h (HOCO selected) 55C5 5555h (other than the above)	Internal clock division ratio and BCLK/SDCLK pin output control settings (setting value of SCKCR register)
OPCM_HIGH	00h	Operating power control mode: High-speed operating mode
OPCM_LOW_1	06h	Operating power control mode: Low-speed operating mode 1
OPCM_LOW_2	07h	Operating power control mode: Low-speed operating mode 2
SUB_CLOCK_CYCLE	(1,000,000,000L / SUB_CLOCK_HZ)	Sub-clock cycle (ns)
FOR_CMT0_TIME	121212L	Count cycle (ns) of timer for RTC software wait cycles (CMT0) = 1/LOCO (264 kHz) ×32 (LOCO = 264 kHz (max.), PCLKB ×1/32)
MODULE_STOP_ENABLE	1	Transition to module stop state
MODULE_STOP_DISABLE	0	Cancel module stop state
CACHE_ENABLE	1	ROM cache enabled
CACHE_DISABLE	0	ROM cache disabled
NON_CACHEABLE_AREA_ENABLE	1	Non-cacheable area enabled
NON_CACHEABLE_AREA_DISABLE	0	Non-cacheable area disabled
CKOUT_USE	0	CLKOUT used LOCO selected, division ratio 1/1, CLKOUT pin output enabled
CKOUT_NOT_USE	1	CLKOUT not used LOCO selected, division ratio 1/1, CLKOUT pin output disabled
CKO_LOCO	0h	CLKOUT clock source: LOCO
CKO_HOCO	1h	CLKOUT clock source: HOCO
CKO_MAIN	2h	CLKOUT clock source: main clock
CKO_SUB	3h	CLKOUT clock source: sub-clock
CKO_PLL	4h	CLKOUT clock source: PLL

Note 1. The setting value differs depending on the clock source of the selected system clock.

Table 3-14 Constants for 145- and 144-Pin Products (PIN_SIZE=145 or PIN_SIZE=144)

Constant Name	Setting Value	Contents
DEF_P0PDR	0x50	Port P0 direction register setting value
DEF_P1PDR	0x03	Port P1 direction register setting value
DEF_P2PDR	0x00	Port P2 direction register setting value
DEF_P3PDR	0x00	Port P3 direction register setting value
DEF_P4PDR	0x00	Port P4 direction register setting value
DEF_P5PDR	0x80	Port P5 direction register setting value
DEF_P6PDR	0x00	Port P6 direction register setting value
DEF_P7PDR	0x00 ^{*1}	Port P7 direction register setting value
DEF_P8PDR	0x30	Port P8 direction register setting value
DEF_P9PDR	0xF0	Port P9 direction register setting value
DEF_PAPDR	0x00	Port PA direction register setting value
DEF_PBPDR	0x00	Port PB direction register setting value
DEF_PCPDR	0x00	Port PC direction register setting value
DEF_PDPDR	0x00	Port PD direction register setting value
DEF_PEPDR	0x00	Port PE direction register setting value
DEF_PFPDR	0xDF	Port PF direction register setting value
DEF_PHPDR	0xF9	Port PH direction register setting value
DEF_PJPDR	0xD7	Port PJ direction register setting value

Note 1. For TFLGA (PTLG0145JB-A) 145-pin, P71 and P72 is nonexistent port, set the value to 0x06.

Table 3-15 Constants for 100-Pin Products (PIN_SIZE=100)

Constant Name	Setting Value	Contents
DEF_P0PDR	0x5F	Port P0 direction register setting value
DEF_P1PDR	0x03	Port P1 direction register setting value
DEF_P2PDR	0x00	Port P2 direction register setting value
DEF_P3PDR	0x00	Port P3 direction register setting value
DEF_P4PDR	0x00	Port P4 direction register setting value
DEF_P5PDR	0xC0	Port P5 direction register setting value
DEF_P6PDR	0xFF	Port P6 direction register setting value
DEF_P7PDR	0xFF	Port P7 direction register setting value
DEF_P8PDR	0xFF	Port P8 direction register setting value
DEF_P9PDR	0xFF	Port P9 direction register setting value
DEF_PAPDR	0x00	Port PA direction register setting value
DEF_PBPDR	0x00	Port PB direction register setting value
DEF_PCPDR	0x00	Port PC direction register setting value
DEF_PDPDR	0x00	Port PD direction register setting value
DEF_PEPDR	0x00	Port PE direction register setting value
DEF_PFPDR	0xFF	Port PF direction register setting value
DEF_PHPDR	0xF9	Port PH direction register setting value
DEF_PJPDR	0xF7	Port PJ direction register setting value

Table 3-16 Constants for 64-Pin Products (PIN_SIZE=64)

Constant Name	Setting Value	Contents
DEF_P0PDR	0xDF*1	Port P0 direction register setting value
DEF_P1PDR	0x33	Port P1 direction register setting value
DEF_P2PDR	0x3F	Port P2 direction register setting value
DEF_P3PDR	0x0C	Port P3 direction register setting value
DEF_P4PDR	0xF0	Port P4 direction register setting value
DEF_P5PDR	0xF7	Port P5 direction register setting value
DEF_P6PDR	0xFF	Port P6 direction register setting value
DEF_P7PDR	0xFF	Port P7 direction register setting value
DEF_P8PDR	0xFF	Port P8 direction register setting value
DEF_P9PDR	0xFF	Port P9 direction register setting value
DEF_PAPDR	0x29	Port PA direction register setting value
DEF_PBPDR	0x1F	Port PB direction register setting value
DEF_PCPDR	0x0C	Port PC direction register setting value
DEF_PDPDR	0x03	Port PD direction register setting value
DEF_PEPDR	0x38	Port PE direction register setting value
DEF_PFPDR	0xFF	Port PF direction register setting value
DEF_PHPDR	0xF9	Port PH direction register setting value
DEF_PJPDR	0xFF	Port PJ direction register setting value

Note 1. For TFBGA 64-pin, P05 is nonexistent port, set the value to 0xFF.

Table 3-17 Constants for 48-Pin Products (PIN_SIZE=48)

Constant Name	Setting Value	Contents
DEF_P0PDR	0xFF	Port P0 direction register setting value
DEF_P1PDR	0x33	Port P1 direction register setting value
DEF_P2PDR	0x3F	Port P2 direction register setting value
DEF_P3PDR	0x0C	Port P3 direction register setting value
DEF_P4PDR	0xF0	Port P4 direction register setting value
DEF_P5PDR	0xF7	Port P5 direction register setting value
DEF_P6PDR	0xFF	Port P6 direction register setting value
DEF_P7PDR	0xFF	Port P7 direction register setting value
DEF_P8PDR	0xFF	Port P8 direction register setting value
DEF_P9PDR	0xFF	Port P9 direction register setting value
DEF_PAPDR	0xA9	Port PA direction register setting value
DEF_PBPDR	0x1F	Port PB direction register setting value
DEF_PCPDR	0x0F	Port PC direction register setting value
DEF_PDPDR	0xC3	Port PD direction register setting value
DEF_PEPDR	0x3F	Port PE direction register setting value
DEF_PFPDR	0xFF	Port PF direction register setting value
DEF_PHPDR	0xFF	Port PH direction register setting value
DEF_PJPDR	0xFF	Port PJ direction register setting value

3.8 Functions

Table 3.18 lists the functions.

Table 3-18 Functions

Function Name	Outline
main	Main processing routine
R_INIT_StopModule	Disable peripheral functions still running after a reset
R_INIT_Port_Initialize	Initial nonexistent port settings
R_INIT_Clock	Initial clock settings
R_INIT_ROM_Cache	Initial ROM cache settings
CGC_oscillation_main	Main clock oscillation enable
CGC_oscillation_PLL	PLL clock oscillation enable
CGC_oscillation_HOCO	HOCO clock oscillation enable
CGC_oscillation_sub	Sub-clock oscillation enable
CGC_disable_subclk	Sub-clock disable
oscillation_subclk	Sub-clock oscillation enable
resetting_wtcr_subclk	Sub-clock wait control register resetting
init_rtc	Initialize RTC
cmt0_wait	Software wait cycles using CMT0
set_ad_conversion_time	A/D sequential conversion time setting
enable_clkout	Clock signal output setting

3.9 Function Specifications

The following tables list the sample code function specifications.

main	
Outline	Main processing routine
Header	None
Declaration	void main(void)
Description	Calls the settings function for disabling peripheral functions still running after a reset, the initial nonexistent port settings function, the initial clock settings function, and the initial ROM cache settings function.
Arguments	None
Return Value	None
R_INIT_StopModule	
Outline	Disable peripheral functions still running after a reset
Header	r_init_stop_module.h
Declaration	void R_INIT_StopModule(void)
Description	Makes settings to transition to the module stop state.
Arguments	None
Return Value	None
Remarks	In the sample code, no transition to the module stop state occurs.
R_INIT_Port_Initialize	
Outline	Initial nonexistent port settings
Header	r_init_port_initialize.h
Declaration	void R_INIT_Port_Initialize(void)
Description	Makes initial settings to the port direction registers corresponding to the pins of nonexistent port.
Arguments	None
Return Value	None
Remarks	The setting in the sample code (PIN_SIZE=144) is for 144-pin products. When writing in byte units to PDR or PODR registers containing nonexistent ports after this function has been called, set the direction control bits corresponding to the nonexistent ports to "1" and the port output data storage bits corresponding to the nonexistent ports to "0".
R_INIT_Clock	
Outline	Initial clock settings
Header	r_init_clock.h
Declaration	void R_INIT_Clock(void)
Description	Makes initial clock settings and specifies the number of ROM wait cycles.
Arguments	None
Return Value	None
Remarks	In the sample code processing is selected that sets the PLL clock as the system clock, specifies one ROM wait cycles, and does not use a sub-clock. The function set_ad_conversion_time, which is called by R_INIT_Clock, must be called when the value of the PSW.I bit is "0" and the value of the ADCSR.ADST bit is "0". Therefore, clear the PSW.I bit to "0" (interrupts disabled) and the ADCSR.ADST bit to "0" before calling R_INIT_Clock.

R_INIT_ROM_Cache

Outline	Initial ROM cache settings
Header	r_init_rom_cache.h
Declaration	void R_INIT_ROM_Cache(void)
Description	After specifying the non-cacheable areas, enables the ROM cache.
Arguments	None
Return Value	None
Remarks	In the sample code, this function only makes it possible for the ROM cache to operate. It is assumed that this function will be called while the ROM cache is in the disabled state after the system starts. To specify non-cacheable areas after the ROM cache has been enabled, first disable the ROM cache and then call this function.

CGC_oscillation_main

Outline	Main clock oscillation enable
Header	r_init_clock.h
Declaration	void CGC_oscillation_main (void)
Description	Sets the drive capacity of the main clock and sets the MOSCWTCR register, then starts oscillation of the main clock. After this, waits for the main clock oscillation stabilization waiting time.
Arguments	None
Return Value	None

CGC_oscillation_PLL

Outline	PLL clock oscillation enable
Header	r_init_clock.h
Declaration	void CGC_oscillation_PLL (void)
Description	Sets the PLL input division ratio and frequency multiplication factor, then starts oscillation of the PLL clock. After this, waits for the PLL clock oscillation stabilization waiting time.
Arguments	None
Return Value	None

CGC_oscillation_HOCO

Outline	HOCO clock oscillation enable
Header	r_init_clock.h
Declaration	void CGC_oscillation_HOCO (void)
Description	Sets the HOCO frequency, then starts oscillation of the HOCO. After this, waits for the HOCO oscillation stabilization waiting time.
Arguments	None
Return Value	None

CGC_oscillation_sub	
Outline	Sub-clock oscillation enable
Header	r_init_clock.h
Declaration	void CGC_oscillation_sub (void)
Description	Makes settings for using the sub-clock as the system clock or as the RTC count source, or for both.
Arguments	None
Return Value	None
CGC_disable_subclk	
Outline	Sub-clock disable
Header	r_init_clock.h
Declaration	void CGC_disable_subclk (void)
Description	Makes settings for when the sub-clock is not used as the system clock or as the RTC count source.
Arguments	None
Return Value	None
oscillation_subclk	
Outline	Sub-clock oscillation enable
Header	None
Declaration	static void oscillation_subclk (void)
Description	Makes settings to start sub-clock oscillation.
Arguments	None
Return Value	None
resetting_wtcr_subclk	
Outline	Sub-clock wait control register resetting
Header	None
Declaration	static void resetting_wtcr_subclk (void)
Description	Resets the wait control register when returning from software standby mode. In this case the wait control register is set to the minimum value.
Arguments	None
Return Value	None

init_rtc	
Outline	Initialize RTC
Header	None
Declaration	static void init_rtc (void)
Description	Makes initial settings for the RTC (clock supply setting and RTC software reset).
Arguments	None
Return Value	None
cmt0_wait	
Outline	Software wait cycles using CMT0
Header	None
Declaration	static void cmt0_wait (uint32_t cnt)
Description	Used when waiting before writing to the RTC register.
Arguments	uint32_t cnt Wait time cnt = Wait time (ns) ÷ FOR_CMT0_TIME* ¹
Return Value	None
Remarks	Note 1. The duration of FOR_CMT0_TIME is calculated based on LOCO = 264 kHz (max.). The actual wait time will differ depending on the LOCO frequency.
set_ad_conversion_time	
Outline	A/D sequential conversion time setting
Header	None
Declaration	static void set_ad_conversion_time (void)
Description	Sets the sequential conversion time of S12AD unit 1 to medium speed.
Arguments	None
Return Value	None
Remarks	The ADSAM register, which is manipulated by this function, must be overwritten when the value of the PSW.I bit is "0" and the value of the ADCSR.ADST bit is "0". Therefore, clear the PSW.I bit to "0" (interrupts disabled) and the ADCSR.ADST bit to "0" before calling this function.
enable_clkout	
Outline	CLKOUT setting
Header	None
Declaration	static void enable_clkout (void)
Description	Configure the setting when the CLKOUT is used.
Arguments	None
Return Value	None

3.10 Flowcharts

3.10.1 Main Processing

Figure 3.1 shows the main processing.

Note 1. Clear the PSW.I bit to 0 (interrupts disabled) and the ADCSR.ADST bit to 0 before calling this function. The default value of the ADCSR.ADST bit is 0, so the setting of ADCSR.ADST is not checked by the program accompanying this application note. If it is possible that the ADCSR.ADST may be manipulated before the R_INIT_Clock function is called, add appropriate processing to clear the ADCSR.ADST bit to 0.

Figure 3.1 Main Processing

3.10.2 Disable Peripheral Functions Still Running After a Reset

Figure 3.2 is a flowchart of the processing for disabling of peripheral functions still running after a reset.

- Note 1. In the sample code the module stop state is canceled. To transition to the module stop state, set the corresponding constant #define MSTP_STATE_<target module name> to 1.
- Note 2. EXDMAC is function used only with device having 100-pin and above.

Figure 3.2 Disable Peripheral Functions Still Running After a Reset

3.10.3 Initial Nonexistent Port Settings

Figure 3.3 is a flowchart of the processing for making initial nonexistent port settings.

Note 1. No processing of settings is performed for registers in which all bits correspond to existing pins (omitted during compile).

Figure 3.3 Initial Nonexistent Port Settings

3.10.4 Initial Clock Settings

Figure 3.4, Figure 3.5, and Figure 3.6 are flowcharts of the processing for making initial clock settings (1/3), (2/3), and (3/3).

Note 1. Change the values of the relevant constants to match the characteristics of the target system.

Figure 3.4 Initial Clock Settings (1/3)

Note 1. Change the values of the relevant constants to match the characteristics of the target system.

Note 2. The setting values differ depending on the system clock selected by the constant.

Note 3. The setting values differ depending on the operating power control mode selected by the constant.

Figure 3.5 Initial Clock Settings (2/3)

Note 1. Change the values of the relevant constants to match the characteristics of the target system.

Figure 3.6 Initial Clock Settings (3/3)

3.10.5 ROM Cache Setting

Figure 3.7 is a flowchart of the processing for initial ROM cache settings.

- Note 1. Set the non-cacheable areas to match the characteristics of your system.
 In the sample code it is assumed that this function will be called while the ROM cache is in the disabled state after the system starts.
 To specify non-cacheable areas after the ROM cache has been enabled, first disable the ROM cache and then call this function.

Figure 3.7 Initial ROM Cache Settings

3.10.6 Main Clock Oscillation Enable

Figure 3.8 is a flowchart of the processing for starting oscillation of the main clock.

Note 1. Change the values of the relevant constants to match the characteristics of the target system.

Note 2. The sample code accompanying this application note uses the initial value of the register.

Figure 3.8 Main Clock Oscillation Enable

3.10.7 PLL Clock Oscillation Enable

Figure 3.9 is a flowchart of the processing for starting oscillation of the PLL clock.

Note 1. Change the values of the relevant constants to match the characteristics of the target system.

Figure 3.9 PLL Clock Oscillation Enable

3.10.8 HOCO Clock Oscillation Enable

Figure 3.10 is a flowchart of the processing for starting oscillation of the HOCO clock.

Note 1. Change the values of the relevant constants to match the characteristics of the target system.

Note 2. In this sample code, 0 is set as the default value.

Note 3. When using the FLL function, the sub-clock must be enabled. However, the external sub-clock cannot be used.

Figure 3.10 HOCO Clock Oscillation Enable

3.10.9 Sub-clock Oscillation Enable

Figure 3.11 and Figure 3.12 are flowcharts of the processing for starting oscillation of the sub-clock.

- Note 1. Use the formulas in Sub-Clock Oscillator Wait Control Register (SOSCWTCR), in RX671 Group User's Manual: Hardware to calculate the waiting time. Note that the sample code accompanying this application note uses the initial value of the register.
- Note 2. Change the value of the constant to match the characteristics of the target system.
- Note 3. When returning from software standby mode with the sub-clock selected as the system clock, supply of clock signals to the internals of the microcontroller starts after the time specified by bits SSTS4 to SSTS0 in SOSCWTCR has elapsed following generation of the return source. However, the sub-clock does not stop operating in software standby mode if value of the RTCEN bit in RCR3 is 1 (operates), in which case no oscillation stabilization time is needed for the sub-clock when returning from software standby mode. Therefore, bits SSTS7 to SSTS0 in SOSCWTCR are reset to 00h to minimize the sub-clock oscillation stabilization wait time.
- Note 4. The sample code accompanying this application note uses the initial value of the register.

Figure 3.11 Sub-clock Oscillation Enable (1/2)

Note 1. The sample code accompanying this application note selects the calendar count mode. Change the values of the constants to match the characteristics of the target system.

Figure 3.12 Sub-clock Oscillation Enable (2/2)

3.10.10 Sub-clock Disable

Figure 3.13 is a flowchart of the processing for stopping the sub-clock.

Figure 3.13 Sub-clock Disable

3.10.11 Software Wait Cycles Using CMT0

Figure 3.14 and Figure 3.15 are flowcharts of the processing for implementing a software wait using CMT0.

Figure 3.14 Software Wait Cycles Using CMT0 (1/2)

Note 1. When the watchdog timer (WDT) and independent watchdog timer (IWDT) are counting, use processing loop to refresh the WDT and IWDT.

Figure 3.15 Software Wait Cycles Using CMT0 (2/2)

3.10.12 A/D Sequential Conversion Time Settings

Figure 3.16 is a flowchart of the processing for making A/D sequential conversion time settings.

Figure 3.16 A/D Sequential Conversion Time Settings

3.10.13 CLKOUT Settings

Figure 3.17 is a flowchart of the processing for making CLKOUT settings.

Note 1. The initial settings example only makes operation settings. To actually output this clock, it is necessary to also make settings to the pin function control register and port mode register of the corresponding pin. Refer to section I/O Ports, and section Multi-Function Pin Controller(MPC), in RX671 Group User's Manual: Hardware, and make settings appropriate for your system.

Note 2. Overwriting CKOSTP while the clock is oscillating may cause glitches in the output.

Figure 3.17 CLKOUT Settings

4. Importing a Project

After importing the sample code, make sure to confirm build and debugger setting.

4.1 Importing a Project into e² studio

Follow the steps below to import your project into e² studio. Pictures may be different depending on the version of e² studio to be used.

Figure 4.1 Importing a Project into e² studio

4.2 Importing a Project into CS+

Follow the steps below to import your project into CS+. Pictures may be different depending on the version of CS+ to be used.

Figure 4.2 Importing a Project into CS+

5. Sample Code

Sample code can be downloaded from the Renesas Electronics website.

General Precautions in the Handling of Microprocessing Unit and Microcontroller Unit Products

The following usage notes are applicable to all Microprocessing unit and Microcontroller unit products from Renesas. For detailed usage notes on the products covered by this document, refer to the relevant sections of the document as well as any technical updates that have been issued for the products.

1. Precaution against Electrostatic Discharge (ESD)

A strong electrical field, when exposed to a CMOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop the generation of static electricity as much as possible, and quickly dissipate it when it occurs. Environmental control must be adequate. When it is dry, a humidifier should be used. This is recommended to avoid using insulators that can easily build up static electricity.

Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors must be grounded. The operator must also be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions must be taken for printed circuit boards with mounted semiconductor devices.

2. Processing at power-on

The state of the product is undefined at the time when power is supplied. The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the time when power is supplied. In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the time when power is supplied until the reset process is completed. In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the time when power is supplied until the power reaches the level at which resetting is specified.

3. Input of signal during power-off state

Do not input signals or an I/O pull-up power supply while the device is powered off. The current injection that results from input of such a signal or I/O pull-up power supply may cause malfunction and the abnormal current that passes in the device at this time may cause degradation of internal elements. Follow the guideline for input signal during power-off state as described in your product documentation.

4. Handling of unused pins

Handle unused pins in accordance with the directions given under handling of unused pins in the manual. The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of the LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible.

5. Clock signals

After applying a reset, only release the reset line after the operating clock signal becomes stable. When switching the clock signal during program execution, wait until the target clock signal is stabilized. When the clock signal is generated with an external resonator or from an external oscillator during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Additionally, when switching to a clock signal produced with an external resonator or by an external oscillator while program execution is in progress, wait until the target clock signal is stable.

6. Voltage application waveform at input pin

Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between V_{IL} (Max.) and V_{IH} (Min.) due to noise, for example, the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between V_{IL} (Max.) and V_{IH} (Min.).

7. Prohibition of access to reserved addresses

Access to reserved addresses is prohibited. The reserved addresses are provided for possible future expansion of functions. Do not access these addresses as the correct operation of the LSI is not guaranteed.

8. Differences between products

Before changing from one product to another, for example to a product with a different part number, confirm that the change will not lead to problems. The characteristics of a microprocessing unit or microcontroller unit products in the same group but having a different part number might differ in terms of internal memory capacity, layout pattern, and other factors, which can affect the ranges of electrical characteristics, such as characteristic values, operating margins, immunity to noise, and amount of radiated noise. When changing to a product with a different part number, implement a system-evaluation test for the given product.

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall be responsible for determining what licenses are required from any third parties, and obtaining such licenses for the lawful import, export, manufacture, sales, utilization, distribution or other disposal of any products incorporating Renesas Electronics products, if required.
5. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
6. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.

"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.

"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.

Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.

7. No semiconductor product is absolutely secure. Notwithstanding any security measures or features that may be implemented in Renesas Electronics hardware or software products, Renesas Electronics shall have absolutely no liability arising out of any vulnerability or security breach, including but not limited to any unauthorized access to or use of a Renesas Electronics product or a system that uses a Renesas Electronics product. RENESAS ELECTRONICS DOES NOT WARRANT OR GUARANTEE THAT RENESAS ELECTRONICS PRODUCTS, OR ANY SYSTEMS CREATED USING RENESAS ELECTRONICS PRODUCTS WILL BE INVULNERABLE OR FREE FROM CORRUPTION, ATTACK, VIRUSES, INTERFERENCE, HACKING, DATA LOSS OR THEFT, OR OTHER SECURITY INTRUSION ("Vulnerability Issues"). RENESAS ELECTRONICS DISCLAIMS ANY AND ALL RESPONSIBILITY OR LIABILITY ARISING FROM OR RELATED TO ANY VULNERABILITY ISSUES. FURTHERMORE, TO THE EXTENT PERMITTED BY APPLICABLE LAW, RENESAS ELECTRONICS DISCLAIMS ANY AND ALL WARRANTIES, EXPRESS OR IMPLIED, WITH RESPECT TO THIS DOCUMENT AND ANY RELATED OR ACCOMPANYING SOFTWARE OR HARDWARE, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE.
8. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
12. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
13. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
14. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
