

## DA9131-A

High-Performance, Dual-Channel DC-DC Converter for Automotive Applications

DA9131-A is a power management IC (PMIC) suitable for supplying CPUs, GPUs, DDR memory rails in single in-line pin package (SIPP) modules, vehicle infotainment systems, ADAS, automotive navigation, centre console and telematics.

DA9131-A integrates two single-phase buck converters, each phase requiring a small external 0.22  $\mu$ H inductor. Each buck is capable of delivering up to 5 A output current at a 0.3 V to 1.9 V output voltage range. The 2.8 V to 5.5 V input voltage range is suitable for a wide variety of low-voltage systems.

With remote sensing, the DA9131-A guarantees the highest accuracy and supports multiple PCB routing scenarios without loss of performance.

The pass devices are fully integrated, so no external FETs or Schottky diodes are needed.

A programmable soft start-up can be enabled, which limits the inrush current from the input node and secures a slope-controlled rail activation.

The Dynamic Voltage Control (DVC) supports adaptive adjustment of the supply voltage dependent on the processor load, via either a direct register write using the communication interface (I<sup>2</sup>C-compatible) or with a programmable input pin.

A configurable GPI allows multiple I<sup>2</sup>C address selection for multiple instances of DA9131-A in the same application.

DA9131-A has integrated over-temperature and over-current protection for increased system reliability, without the need for external sensing components.

## Key Features

- 2.8 V to 5.5 V input voltage
- 0.3 V to 1.9 V output voltage
- Up to 5 A output current per channel
- 4 MHz nominal switching frequency
- Dual-channel
- 220 nH inductor per channel
- 20  $\mu$ F output capacitor
- $\pm 1$  % output voltage accuracy (static)
- $\pm 5$  % load transient (dynamic)
- Programmable GPIOs
- Programmable soft startup
- I<sup>2</sup>C-compatible interface (FM+)
- Voltage, current, and temperature supervision
- 24-pin FCQFN package, wettable flanks (nom. 3.3 mm x 4.8 mm)
- 218 mm<sup>2</sup> total solution area
- -40 °C to +105 °C ambient temperature range
- AEC-Q100 Grade 2 qualified for Automotive applications

## Applications

- Vehicle infotainment systems
- ADAS
- Automotive navigation
- Automotive center console
- Automotive cluster
- Telematics
- SIPP modules (SoC, DRAM)
- SoC/FPGA based, high performance, automotive Electronic Control unit (ECU) requiring efficient, high current, power delivery delivery

## Benefits

- High Efficiency buck converters deliver outstanding thermal performance
- Fully integrated switching FETs means no external FETs or Schottky diodes are required
- Remote sensing guarantees the highest accuracy and supports multiple PCB routing scenarios without loss of performance.
- Fully programmable soft-start limits the inrush current from the input to give a slope-controlled output voltage.
- Dynamic voltage control (DVC) enables adaptive adjustment of the device output voltage depending on the load. This increases efficiency when the downstream circuitry enters low power or idle mode, resulting in power savings.
- Configurable GPIOs support a range of features including I<sup>2</sup>C, DVC and Power-Good indicator.
- Optimized BoM cost and footprint: Each output requires a very small inductor and capacitor delivering parts and cost savings
- Cycle by cycle current limiting for superior over-current protection

### 3. Specifications

#### 3.1 Absolute Maximum Ratings

Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, so functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specification are not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

**CAUTION:** Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions can adversely impact product reliability and result in failures not covered by warranty.

**Table 3: Absolute Maximum Ratings**

Parameter	Description	Conditions	Min	Max	Unit
T <sub>STG</sub>	Storage temperature		-65	150	°C
T <sub>J</sub>	Junction temperature		-40	150	°C
V <sub>SYS</sub>	System supply voltage		-0.3	6.0	V
V <sub>PIN</sub>	Voltage on pins		-0.3	6.0	V

#### 3.2 Electrostatic Discharge Ratings

**Table 4: Electrostatic discharge ratings**

Parameter	Description	Conditions	Rating	Unit
V <sub>ESD_HBM</sub>	ESD protection, human body model (HBM)		2	kV
V <sub>ESD_CDM</sub>	Maximum ESD protection	Charged device model (CDM)	500	V

#### 3.3 Recommended Operating Conditions

**Table 5: Recommended Operating Conditions**

Parameter	Description(Notes 2)	Conditions (Note 1)	Min	Typ	Max	Unit
V <sub>SYS</sub>	System supply voltage		2.8		5.5	V
V <sub>PIN</sub>	Voltage on pins		-0.3		V <sub>SYS</sub> + 0.3	V
T <sub>J</sub>	Junction temperature		-40		125	°C
T <sub>A</sub>	Ambient temperature		-40		105	°C

**Note 1** Within the specified limits, a lifetime of 10 years is guaranteed. If operating outside of these recommended conditions, please consult with Renesas Electronics.

**Note 2** V<sub>SYS</sub>, V<sub>IN</sub>, P<sub>VDD</sub>, A<sub>VDD</sub> should be connected together. The pin names are different for routing purposes.

### 3.4 Thermal Specifications

Table 6: Package Ratings

Parameter	Description	Conditions	Min	Typ	Max	Unit
$\theta_{JA}$	Package thermal resistance	Note 1		21.21		°C/W
$\theta_{JB}$	Thermal resistance junction to board	Note 1		12.37		°C/W
$\theta_{JC}$	Thermal resistance junction to case	Without PCB		32		°C/W

**Note 1** Obtained from package thermal simulations, JEDEC 2S2P four layer board (76.2 mm x 114 mm x 1.6 mm), 70  $\mu\text{m}$  (2 oz) copper thickness power planes, 35  $\mu\text{m}$  (1 oz) copper thickness signal layer traces, natural convection (still air), see section 9.1.

#### 3.4.1 Power Dissipation

Table 7: Power Dissipation

Parameter	Description	Conditions	Min	Typ	Max	Unit
$P_{D\_Twarn}$	Power dissipation	@105 °C ambient, $T_{J\_WARN}$		0.94		W
$P_{D\_Tcrit}$	Power dissipation	@105 °C ambient, $T_{CRIT}$	1.18	1.65		W

### 3.5 Buck Characteristics

Unless otherwise noted, the following is valid for  $T_J = -40\text{ }^{\circ}\text{C}$  to  $+125\text{ }^{\circ}\text{C}$ ,  $V_{SYS} = 2.8\text{ V}$  to  $5.5\text{ V}$ .

Table 8: Single-Phase Buck Electrical Characteristics

Parameter	Description	Conditions	Min	Typ	Max	Unit
<b>External electrical conditions</b>						
$V_{IN}$	Input voltage	$V_{IN} = V_{SYS}$	2.8		5.5	V
$C_{OUT}$	Output capacitance, including voltage and temperature coefficient		-40 %	20	+30 %	$\mu\text{F}$
$ESR_{COUT}$	Output capacitor series resistance	$f > 100\text{ kHz}$		1		$\text{m}\Omega$
$L$	Inductor value, including current and temperature dependence		-50 %	220	+20 %	nH
$DCR_L$	Inductor DC resistance			8	13	$\text{m}\Omega$
<b>Electrical performance</b>						
$V_{OUT}$	Output voltage, configurable in 10 mV steps	$I_{OUT} = 0\text{ mA}$ to $I_{MAX}$ at $25\text{ }^{\circ}\text{C}$ ambient $2.8\text{ V} < V_{OUT} + 1\text{ V} < V_{IN} \leq 5.5\text{ V}$	0.3		1.9	V
$I_{LIM}$	Current limit, configurable per phase <a href="#">Note 1</a> <a href="#">Note 2</a>	$CHx\_ILIM = 1010$	-20 %	8	+20 %	A
$I_{MAX\_0V7}$	Output current <a href="#">Note 3</a>	$V_{IN} \geq V_{OUT} + 0.7\text{ V}$	2			A
$I_{MAX\_1V0}$	Output current <a href="#">Note 3</a>	$V_{IN} \geq V_{OUT} + 1.0\text{ V}$	5.6			A
$V_{OUT\_ACC}$	Output voltage accuracy, including static line and load regulation	$V_{OUT} < 1\text{ V}$	-10		10	mV
$V_{OUT\_ACC}$	Output voltage accuracy, including static line and load regulation	$V_{OUT} \geq 1\text{ V}$	-1		1	%
$V_{THR\_PG\_HYS}$	Power-good voltage threshold hysteresis	$V_{OUT} = V_{THR\_PG\_DWN}$	60	80	100	mV
$V_{THR\_PG\_DWN}$	Power-good voltage threshold for falling	$V_{OUT} = V_{BUCK}$	-160	-130	-80	mV
$V_{THR\_HV}$	High $V_{OUT}$ voltage threshold	$V_{OUT} = V_{BUCK}$	100	150	200	mV
$V_{OUT\_TR\_LINE}$	Line transient response	$V_{IN} = 3\text{ V}$ to $3.6\text{ V}$ $I_{OUT} = 0.5 * I_{MAX}$ $dt = 10\text{ }\mu\text{s}$		15		mV
$f_{SW}$	Switching frequency			4		MHz
$t_{ON\_MIN}$	Minimum turn-on pulse 0 % duty is also supported		5	7	11	ns

Parameter	Description	Conditions	Min	Typ	Max	Unit
t <sub>BUCK_EN</sub>	Turn-on time	CHx_EN = high			20	μs
R <sub>PD</sub>	Output pull-down resistance at the LX node, see CHx_PD_DIS	V <sub>IN</sub> = 3.7 V V <sub>OUT</sub> = 0.5 V	145	150	161	Ω
R <sub>ON_P MOS</sub>	On resistance of switching PMOS	V <sub>IN</sub> = 3.7 V	17	25	37	mΩ
R <sub>ON_N MOS</sub>	On resistance of switching NMOS	V <sub>IN</sub> = 3.7 V	6	10	16	mΩ
<b>PWM Mode</b>						
I <sub>Q_P WM</sub>	Quiescent current	V <sub>IN</sub> = 3.7 V No load		16		mA
η <sub>P WM</sub>	Efficiency	V <sub>IN</sub> = 3.6 V V <sub>OUT</sub> = 1 V I <sub>OUT</sub> = 10 % (I <sub>MAX</sub> ) to 80 % (I <sub>MAX</sub> )		85		%
<b>AUTO Mode</b>						
V <sub>OUT_TR_LD</sub>	Load transient response	V <sub>OUT</sub> = 1 V I <sub>OUT</sub> = 1.25 to 3.75 A at 25 °C ambient dI/dt = 2.5 A/μs	-30		55	mV
<b>PFM Mode</b>						
I <sub>Q_P FM</sub>	Quiescent current in PFM	1-phase V <sub>IN</sub> = 3.7 V No load No switching		88		μA
η <sub>P FM</sub>	Efficiency	V <sub>IN</sub> = 3.6 V V <sub>OUT</sub> = 1 V I <sub>OUT</sub> = 10 mA		80		%

**Note 1** t<sub>ON</sub> > 40 ns

**Note 2** The value is configured by OTP and should not be modified while the buck is active.

**Note 3** For short durations to meet peak current requirements, I<sub>OUT</sub> can be operated at up to 10 % higher than the specified maximum operating condition. The part should not be operated in this mode for extended periods and is not guaranteed for continuous operation.

### 3.6 Performance and Supervision Characteristics

Table 9: Electrical Characteristics

Parameter	Description	Conditions	Min	Typ	Max	Unit
<b>Electrical performance</b>						
V <sub>THR_POR</sub>	Power-on-reset threshold	Threshold for AVDD falling		2.1	2.25	V
V <sub>THR_POR_HYS</sub>	Power-on-reset hysteresis			200		mV
T <sub>WARN</sub>	Thermal warning temperature threshold		115	125	135	°C

Parameter	Description	Conditions	Min	Typ	Max	Unit
T <sub>CRIT</sub>	Thermal shutdown temperature threshold		130	140	150	°C
I <sub>IN_OFF</sub>	Supply current	OFF state T <sub>A</sub> = 27 °C IC_EN = 0		0.1	1	μA
I <sub>IN_ON</sub>	Supply current	ON state T <sub>A</sub> = 27 °C IC_EN = 1 Buck off	5	10	20	μA

### 3.7 Digital I/O Characteristics

Table 10: Digital I/O Electrical Characteristics

Parameter	Description	Conditions	Min	Typ	Max	Unit
<b>Electrical performance</b>						
V <sub>IH_EN</sub>	Input high voltage, IC enable		1.2		AVDD	V
V <sub>IL_EN</sub>	Input low voltage, IC enable				0.4	V
t <sub>IC_EN</sub>	IC enable time				1000	μs
V <sub>IH_GPIO_SCL_SDA</sub>	Input high voltage GPIO, SCL, SDA		1.2		AVDD	V
V <sub>IL_GPIO_SCL_SDA</sub>	Input low voltage GPIO, SCL, SDA				0.4	V
V <sub>OH_GPIO</sub>	Output high voltage GPIO	Push-pull mode I <sub>OUT</sub> = 1 mA	0.8*AV DD		AVDD	V
V <sub>OL_GPIO</sub>	Output low voltage GPIO	Push-pull mode I <sub>OUT</sub> = 1 mA			0.2*AV DD	V
V <sub>OL_SDA</sub>	Output low voltage SDA	I <sub>OUT</sub> = 3 mA		0.24		V
R <sub>PD</sub>	GPIO pull-down resistor	V <sub>SYS</sub> = 3.7 V Note 1	9	15	24	kΩ
R <sub>PU</sub>	GPIO pull-up resistor	V <sub>SYS</sub> = 3.7 V Note 1	28	45	70	kΩ

**Note 1** Resistance may have greater variation, depending on voltage and temperature.

### 3.8 Timing Characteristics

Table 11: I2C Electrical Characteristics

Parameter	Description	Conditions	Min	Typ	Max	Unit
<b>Electrical performance</b>						
t <sub>BUS</sub>	Bus free time between a STOP and START condition		0.5			μs
C <sub>BUS</sub>	Bus line capacitive load				150	pF
f <sub>SCL</sub>	SCL clock frequency		20 Note 1		1000	kHz
t <sub>LO_SCL</sub>	SCL low time		0.5			μs
t <sub>HI_SCL</sub>	SCL high time		0.26			μs
t <sub>RISE</sub>	SCL and SDA rise time	Requirement for input			1000	ns
t <sub>FALL</sub>	SCL and SDA fall time	Requirement for input			300	ns
t <sub>SETUP_START</sub>	Start condition setup time		0.26			μs
t <sub>HOLD_START</sub>	Start condition hold time		0.26			μs
t <sub>SETUP_STOP</sub>	Stop condition setup time		0.26			μs
t <sub>DATA</sub>	Data valid time				0.45	μs
t <sub>DATA_ACK</sub>	Data valid acknowledge time				0.45	μs
t <sub>SETUP_DATA</sub>	Data setup time		50			ns
t <sub>HOLD_DATA</sub>	Data hold time		0			ns

**Note 1** Minimum clock frequency is limited to 20 kHz if I2C\_TIMEOUT is enabled

## 4. Typical Performance Graphs

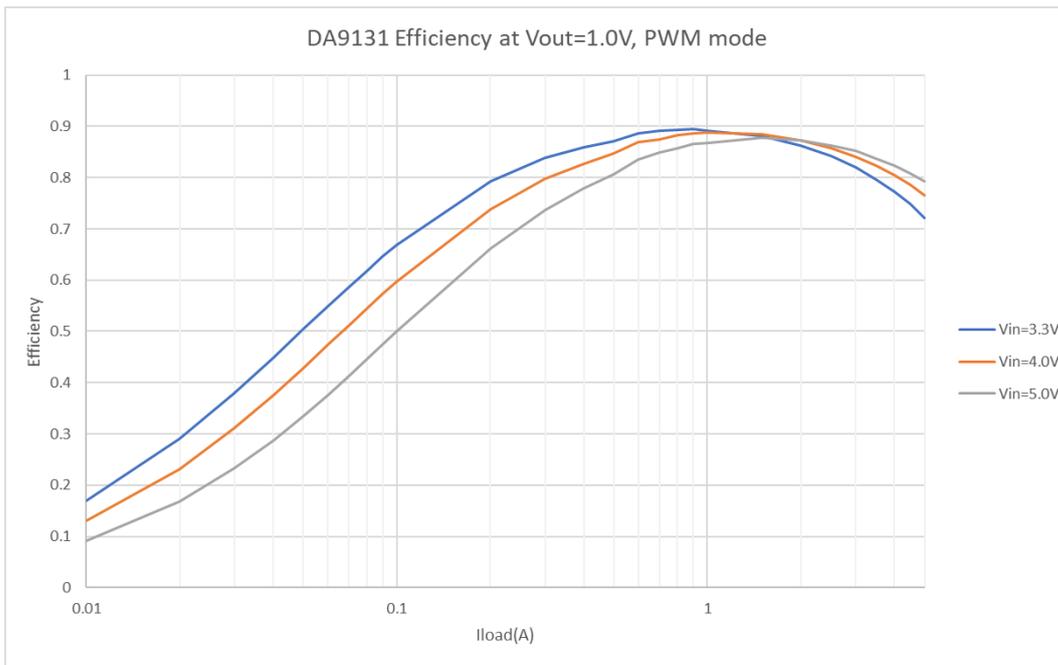

Figure 6. DA9131-A Efficiency at VOUT = 1.0 V, PWM Mode

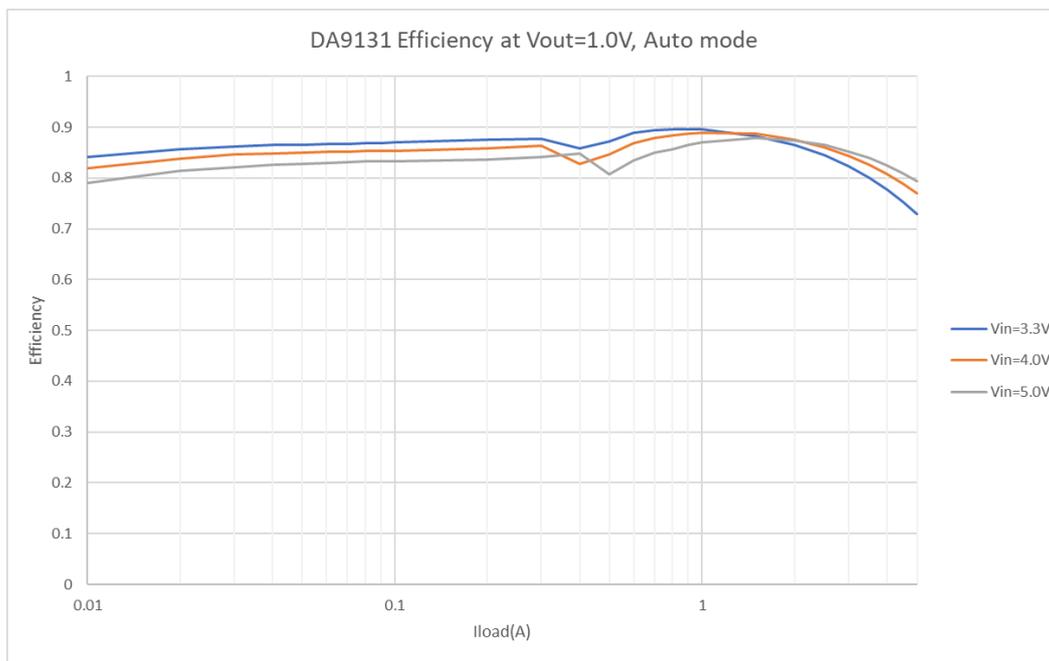

Figure 7. DA9131-A Efficiency at VOUT = 1.0 V, Auto Mode

## 5. Functional Description

### 5.1 DC-DC Buck Converter

DA9131-A contains two buck converters, Buck1 and Buck2, each capable of delivering up to 5 A output current at a 0.3 V to 1.9 V output voltage range.

Buck1 and Buck2 have two voltage registers each. One defines the normal output voltage, while the other offers an alternative retention voltage. In this way, different application power modes can easily be supported. The voltage selection can be operated either via GPI or via control interface to guarantee the maximum flexibility according to the specific host processor status in the application.

When a buck is enabled, its output voltage is monitored and a power-good signal indicates that the buck output voltage has reached a level higher than the  $V_{THR\_PG\_HYS}$  threshold. The power-good status is lost when the voltage drops below  $V_{THR\_PG\_DWN}$  or increases above  $V_{THR\_HV}$ . For each of the buck converters the status of the power-good indicator can be read back via I<sup>2</sup>C from the PG1 and PG2 status bits. It can be also individually assigned to any of the GPIOs by setting the GPIO mode registers to either PG1 or PG2 output.

The buck converters are capable of supporting DVC transitions that occur when:

- the active and selected A- or B-voltage is updated to a new target value
- the voltage selection is changed from the A- to B-voltage (or B- to A-voltage) using CH<x>\_VSEL

The DVC controller operates in pulse width modulation (PWM) mode with synchronous rectification.

The slew rate of the DVC transition is individually programmed for each buck converter at 10 mV per (8, 4, 2, 1) $\mu$ s, or 0.5  $\mu$ s in register bits CH1\_SR\_DVC and CH2\_SR\_DVC.

A pull-down resistor (typically 150  $\Omega$ ) for each phase is always activated unless it is disabled by setting register bits CH<x>\_PD\_DIS to 1.

#### 5.1.1 Switching Frequency

The buck switching frequency, nominally 4 MHz, can be tuned using register bit OSC\_TUNE. The internal 8 MHz oscillator frequency is tuned in  $\pm 160$  kHz steps. This impacts the buck converter frequency in steps of 80 kHz and helps to mitigate possible disturbances to other high frequency systems in the application.

#### 5.1.2 Operation Modes and Phase Selection

The buck converters can operate in PWM and PFM modes. The operating mode is selected using register bits CH1\_<A or B>\_MODE and CH2\_<A or B>\_MODE.

If the automatic operation mode is selected on CH1\_<A or B>\_MODE or CH2\_<A or B>\_MODE, the buck converters automatically change between synchronous PWM mode and PFM depending on the load current. This improves the efficiency across the whole range of output load currents.

#### 5.1.3 Output Voltage Selection

The switching converter can be configured using the I<sup>2</sup>C interface.

For each buck converter two output voltages can be pre-configured in registers CH<x>\_<A or B>\_VOUT. The output voltage can be selected by either toggling register bit CH<x>\_VSEL or by re-programming the selected voltage control register. Both changes will result in ramped voltage transitions. After being enabled, the buck converter will, by default, use the register settings in CH<x>\_A\_VOUT unless the output voltage selection is configured via the GPI port.

Registers CH<1 and 2>\_VMAX limit the output voltage that can be set for each of the respective buck converters.

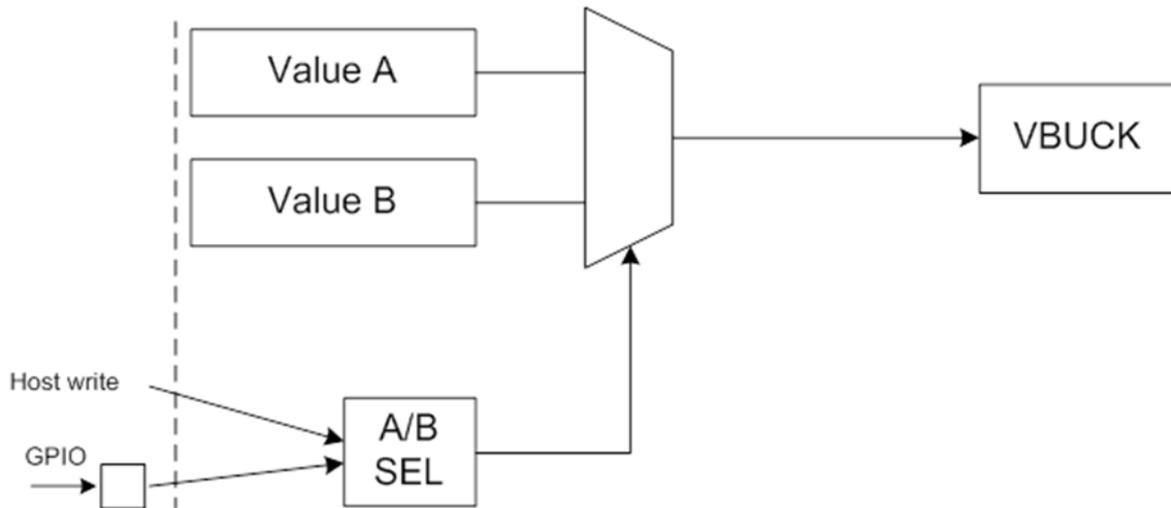

Figure 8. Buck Output Voltage Control Concept

### 5.1.4 Soft Start-Up and Shutdown

To limit in-rush current from  $V_{SYS}$ , the buck converters can perform a soft-start after being enabled. The start-up behavior is a compromise between acceptable inrush current from the battery and turn-on time. Individual ramp times can be configured for each buck converter in registers CH<1 and 2>\_SR\_STARTUP respectively. Rates higher than 20 mV/ $\mu$ s may produce overshoot during the start-up phase, so they should be considered carefully.

A ramped power down can be selected in register bits CH<1 and 2>\_SR\_SHDN. When no ramp is selected (immediate power down), the output node will be discharged only by the pull-down resistor, if enabled in registers CH<1 and 2>\_PD\_DIS.

### 5.1.5 Current Limit

The integrated current limit protects the power stages and external coil from excessive current. The buck current limit should be configured to at least 40 % higher than the required maximum output current.

When the current limit is reached, each buck converter generates an event and an interrupt to the host processor unless the interrupt has been masked using register M\_OC<x> in SYS\_MASK\_1. Register bits OC\_DVC\_MASK is used to mask over-current events during DVC transitions.

### 5.1.6 Resistive Divider

DA9131-A can support output voltages higher than 1.9 V using an external resistive divider shown in Figure 9. To calculate the output voltage with an external divider, use the following equation

$$V_{OUT} = V_{SEL} \times \left(1 + \frac{R1}{R2}\right)$$

Equation 1

V<sub>SEL</sub> is the device buck output voltage setting.

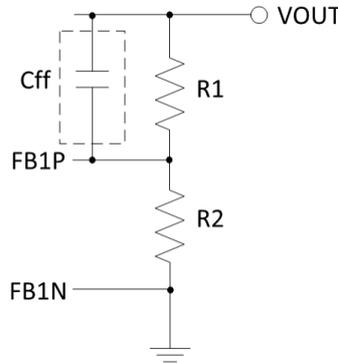

Figure 9. Resistive Divider

For example, to program the output voltage to 3.3 V, set V<sub>SEL</sub> to 1.65 V, and use a 2.2 kΩ resistor for both R1 and R2, with C<sub>ff</sub> = 1 nF.

**NOTE**

The resistors need to be properly selected since the output voltage accuracy will be directly affected by any errors on the resistors. The voltage across FB1P and FB1N (V<sub>SEL</sub>) is guaranteed, but not the output voltage accuracy.

**CAUTION**

The followings are important notes that need to be considered before using resistive divider on DA9131-A:

1. Please contact your region's Renesas representative when adopting the resistive divider technique. Renesas need to prepare a special OTP because incorrect OTP settings may result in a different output voltage than expected.
2. The total resistance (R1+R2) is less than 40 kΩ.
3. It is recommended that the device is operated in PWM mode only.

### 5.1.7 Thermal Protection

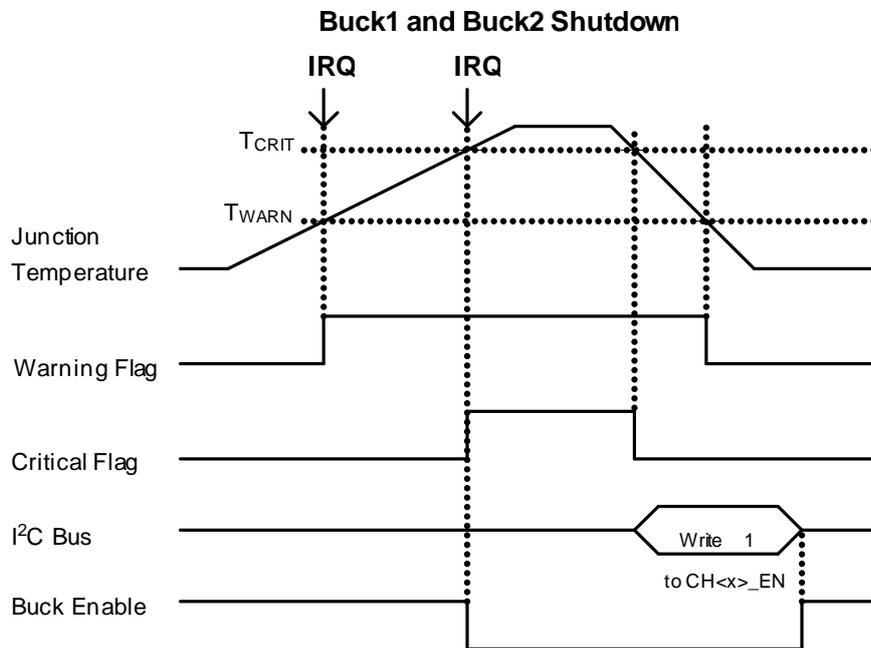

DA9131-A is protected from internal overheating by thermal shutdown.

DA9131-A uses two flags for thermal protection. When  $T_J > T_{WARN}$  meaning that the chip is running close to its thermal limits, an IRQ is raised and an event is set, although the chip continues working.

When  $T_J > T_{CRIT}$ , another IRQ and event are set, and the bucks are immediately shut down.  $T_J$  needs to be below  $T_{WARN}$  and the event flags need to be cleared before starting the bucks.

**Table 12: Thermal Protection Control Registers**

Category	Register Name	Description
Status	TEMP_WARN	Asserted as long as the thermal warning threshold is reached
	TEMP_CRIT	Asserted as long as the thermal shutdown threshold is reached
IRQ event	E_TEMP_WARN	TEMP_WARN caused event
	E_TEMP_CRIT	TEMP_CRIT caused event
IRQ mask	M_TEMP_WARN	TEMP_WARN event IRQ mask
	M_TEMP_CRIT	TEMP_CRIT event IRQ mask
	M_VR_HOT	TEMP_WARN status IRQ mask

**Figure 10. Thermal Protection Operation**

## 5.2 Internal Circuits

### 5.2.1 IC\_EN/Chip Enable/Disable

IC\_EN is the chip enable/disable control input. When IC\_EN = 0, all blocks except for low I<sub>Q</sub> POR are powered-down and the buck output is pulled-down.

### 5.2.2 nIRQ/Interrupt

The interrupt triggers events. Trigger conditions and control registers for each interrupt event are listed in [Table 13](#).

Some of these events are categorized as fault events and affect device operation (for example, buck disable), see section [5.1.7](#).

**Table 13: Interrupt List**

Name	Trigger	IRQ Status Register	IRQ Mask Register	Deglintch Period
Thermal warning (event)	T <sub>J</sub> rising above T <sub>WARN</sub>	E_TEMP_WARN	M_TEMP_WARN	0 s
Thermal critical (event)	T <sub>J</sub> rising above T <sub>CRIT</sub>	E_TEMP_CRIT	M_TEMP_CRIT	0 s
System good (event)	Buck1 or Buck2 PG power-good event	E_SG	M_SG	0 s
Buck1 power-good (event)	Buck1 V <sub>OUT</sub> is in power-good voltage range (not under- or over-voltage)	E_PG1	M_PG1	0 s
Buck2 power-good (event)	Buck2 V <sub>OUT</sub> is in power-good voltage range (not under- or over-voltage)	E_PG2	M_PG2	0 s
Buck1 over-voltage (event)	Buck1 V <sub>OUT</sub> rising above over-voltage threshold (target voltage + 150 mV)	E_OV1	M_OV1	Rise: 8 μs Fall: 8 μs
Buck2 over-voltage (event)	Buck2 V <sub>OUT</sub> rising above over-voltage threshold (target voltage + 150 mV)	E_OV2	M_OV2	Rise: 8 μs Fall: 8 μs
Buck1 under-voltage (event)	Buck1 V <sub>OUT</sub> falling below under-voltage threshold (target voltage - V <sub>TH_PG</sub> )	E_UV1	M_UV1	0 s
Buck2 under-voltage (event)	Buck2 V <sub>OUT</sub> falling below under-voltage threshold (target voltage - V <sub>TH_PG</sub> )	E_UV2	M_UV2	0 s
Buck1 over-current (event)	Buck1 current rising above over-current threshold	E_OC1	M_OC1	0 s
Buck2 over-current (event)	Buck2 current rising above over-current threshold	E_OC2	M_OC2	0 s
Buck1 power-good (status) (Note 1)	Buck1 V <sub>OUT</sub> is in power-good voltage range (not under- or over-voltage)	PG1	M_PG1_STAT (Note 2)	0 s

Name	Trigger	IRQ Status Register	IRQ Mask Register	Deglintch Period
Buck2 power-good (status) (Note 1)	Buck2 $V_{OUT}$ is in power-good voltage range (not under- or over-voltage)	PG2	M_PG2_STAT (Note 2)	0 s
System good (status) (Note 1)	Buck1 power-good or Buck2 power-good is active	SG	M_SG_STAT (Note 2)	0 s
Thermal warning (status) (Note 1)	$T_J$ above $T_{WARN}$	TEMP_WARN	M_VR_HOT (Note 2)	0 s
GPIO0 change (event)	Detect GPIO0 change for active trigger selected GPIO0_TRIG register	E_GPIO0	M_GPIO0	100 $\mu$ s/ 1 ms/ 10 ms/ 100 ms
GPIO1 change (event)	Detect GPIO1 change for active trigger selected GPIO1_TRIG register	E_GPIO1	M_GPIO1	
GPIO2 change (event)	Detect GPIO2 change for active trigger selected GPIO2_TRIG register	E_GPIO2	M_GPIO2	

**Note 1** Interrupt outputs the status as is. I<sup>2</sup>C write is not required for interrupt clear.

**Note 2** OTP load value defined by CONF pin setting if CONF\_EN = 1, see section 5.2.3.3.

Table 14 and Table 15 show the interrupt registers structure. See section 7.1.1 for bitfield descriptions.

**Table 14: Interrupt Registers Except for Power-Good Status**

Register	Description
E_<name>	Read-only interrupt event register 0: No interrupt 1: Interrupt occurred <b>Cleared after being written to I<sup>2</sup>C. Set until IRQ is removed.</b>
M_<name>	Interrupt mask register 0: Not masked 1: Masked. No IRQ signal sent. Event register (E_<name>) is updated.

**Table 15: Interrupt Registers for Power-Good, System Good, and Temp Warning Status**

Register	Description
PG<x>	Buck<x> power-good status. Asserted as long as the buck<x> output voltage is in range (under-voltage threshold < buck output voltage < over-voltage threshold) 0: Not power-good 1: Power-good
M_PG<x>_STAT	Power-good status interrupt mask register 0: Not masked 1: Masked. No IRQ signal sent. Power-good status register (PG<x>) is updated
SG	System good status 0: Not system good

Register	Description
	1: System good
M_SG_STAT	System good status (SG) interrupt mask register 0: Not masked 1: Masked. No IRQ signal sent. System good status register (SG) is updated
TEMP_WARN	Asserted as long as the thermal warning threshold ( $T_{WARN}$ ) is reached 0: Junction temperature is below $T_{WARN}$ 1: Junction temperature is above $T_{WARN}$
M_VR_HOT	Temperature warning status (TEMP_WARN) interrupt mask register 0: Not masked 1: Masked. No IRQ signal sent. Temperature warning status register (TEMP_WARN) is updated

It is possible to route interrupts to a GPIO by setting the bitfield GPIO<x>\_MODE = 0xC on the relevant GPIO. nIRQ's behavior is shown in Figure 10. If GPIO\_n\_POL = 0, nIRQ will be high under normal operation, when system-good status is high, and pulled low if an event listed in the Table 13 occurs.

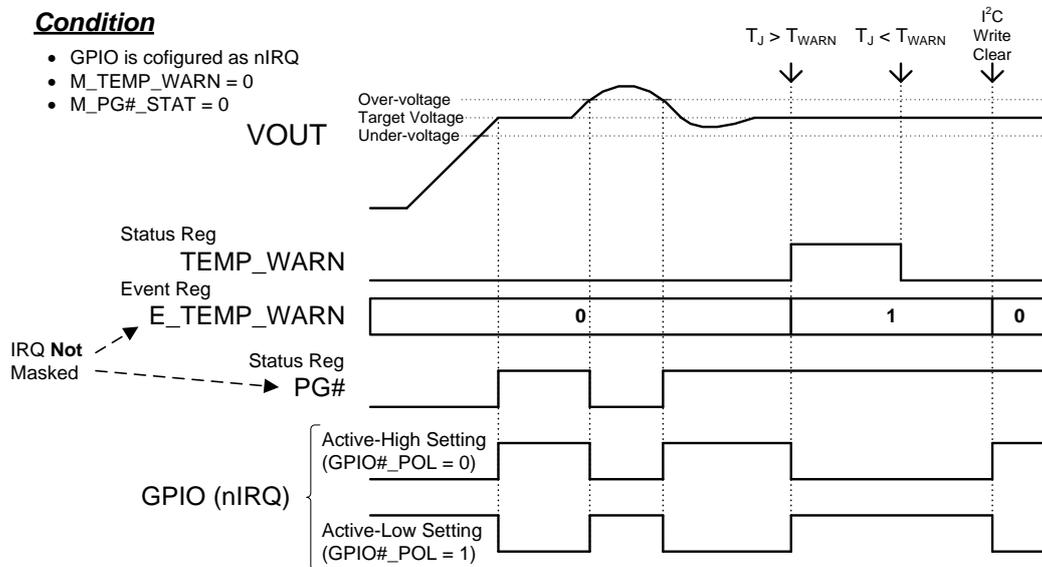

Figure 11. Interrupt Operation Example

**Condition**

- GPIO is configured as nIRQ
- M\_VR\_HOT = 0
- M\_PG1\_STAT = 0
- M\_PG2\_STAT = 0

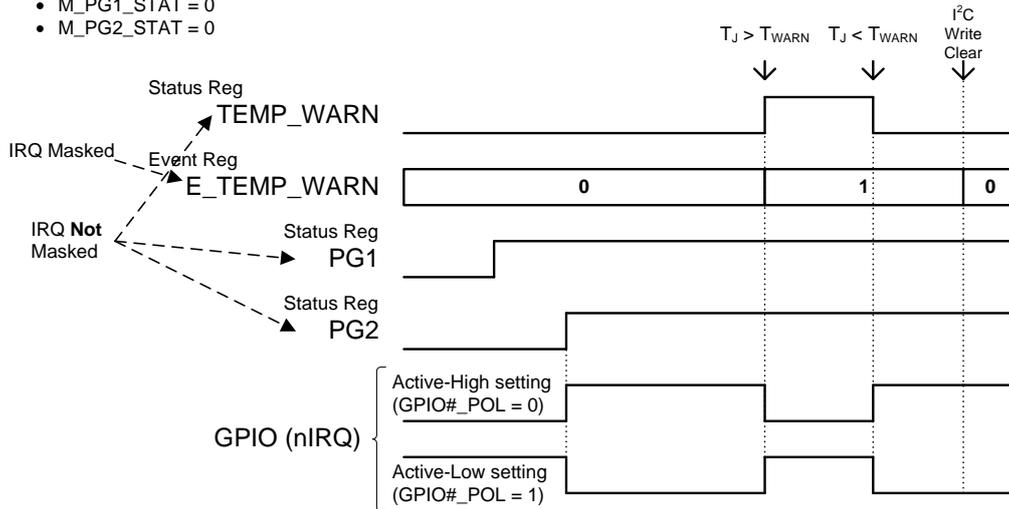

Figure 12. Interrupt Operation Example 2

**Condition**

- GPIO is configured as nIRQ
- M\_SG = 0

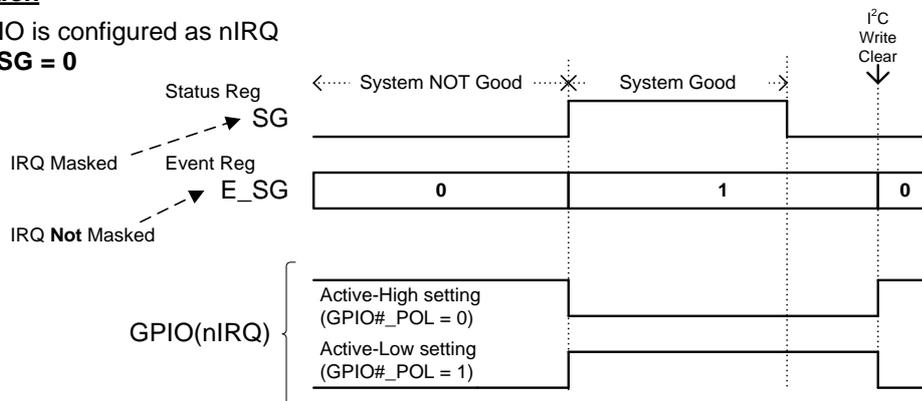

Figure 13. Interrupt Operation Example 3

**Condition**

- GPIO is configured as nIRQ
- M\_SG\_STAT = 0

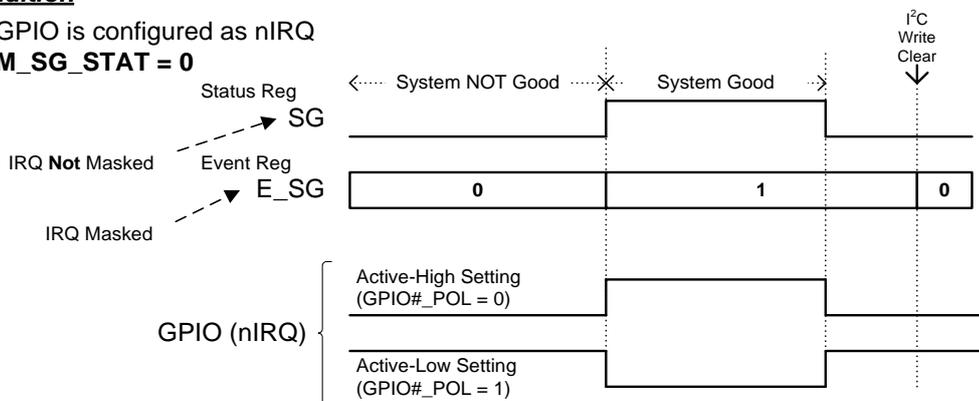

Figure 14. Interrupt Operation Example 4

## 5.2.3 GPIO

### 5.2.3.1 GPIO Pin Assignment

The DA9131-A provides up to five GPIO pins, three if the I<sup>2</sup>C is enabled, see [Table 16](#). These registers are OTP programmable. When CONF\_EN = 1 GPIO0 can be used for chip configuration.

Any register settings for GPIO3 and GPIO4 are ignored and GPIO3 and GPIO4 function as SCL and SDA respectively if I2C\_EN = 1.

**Note:** GPIO3 and GPIO4 functions are limited only to output features if I2C\_EN = 0.

**Table 16: GPIO Pin Assignment**

OTP Option		GPIO Pin					Available GPIOs
I2C_EN	CONF_EN	CONF/ GPIO0	GPIO1	GPIO2	SCL/ GPIO3	SDA/ GPIO4	
1'b0	1'b0	GPIO0	GPIO1	GPIO2	GPIO3	GPIO4	5
	1'b1	CONF	GPIO1	GPIO2	GPIO3	GPIO4	4
1'b1	1'b0	GPIO0	GPIO1	GPIO2	SCL	SDA	3
	1'b1	CONF	GPIO1	GPIO2	SCL	SDA	2

### 5.2.3.2 GPIO Function

The GPIOs pins are configurable as the following functions in register GPIO<x>\_MODE (x = 0 to 4):

- Buck1 enable input (EN1)
- Buck2 enable input (EN2)
- Buck1 and Buck2 enable input (EN1 & EN2)
- Buck1 DVC control input (DVC1)
- Buck2 DVC control input (DVC2)
- Buck1 and Buck2 DVC control input (DVC1 & DVC2)
- Buck1 and Buck2 OTP setting reload input (RELOAD)
- Buck1 power-good output (PG1)
- Buck2 power-good output (PG2)
- Buck1 and Buck2 power-good output (PG1 & PG2)
- System good output (SG)
- Interrupt output (nIRQ)

**Table 17: GPIO Function Configuration**

GPIO<x>_MODE[3:0]	Function	IO Condition
4'h0	GPIO disable	HiZ
4'h1	EN1	In
4'h2	EN2	In
4'h3	EN1 & EN2	In
4'h4	DVC1	In
4'h5	DVC2	In
4'h6	DVC1 & DVC2	In
4'h7	RELOAD	In
4'h8	PG1	Out
4'h9	PG2	Out
4'hA	PG1 & PG2	Out

GPIO<x>_MODE[3:0]	Function	IO Condition
4'hB	SG	Out
4'hC	nIRQ	Out
4'hD	Reserved	HiZ
4'hE	Low level	Out
4'hF	High level	Out

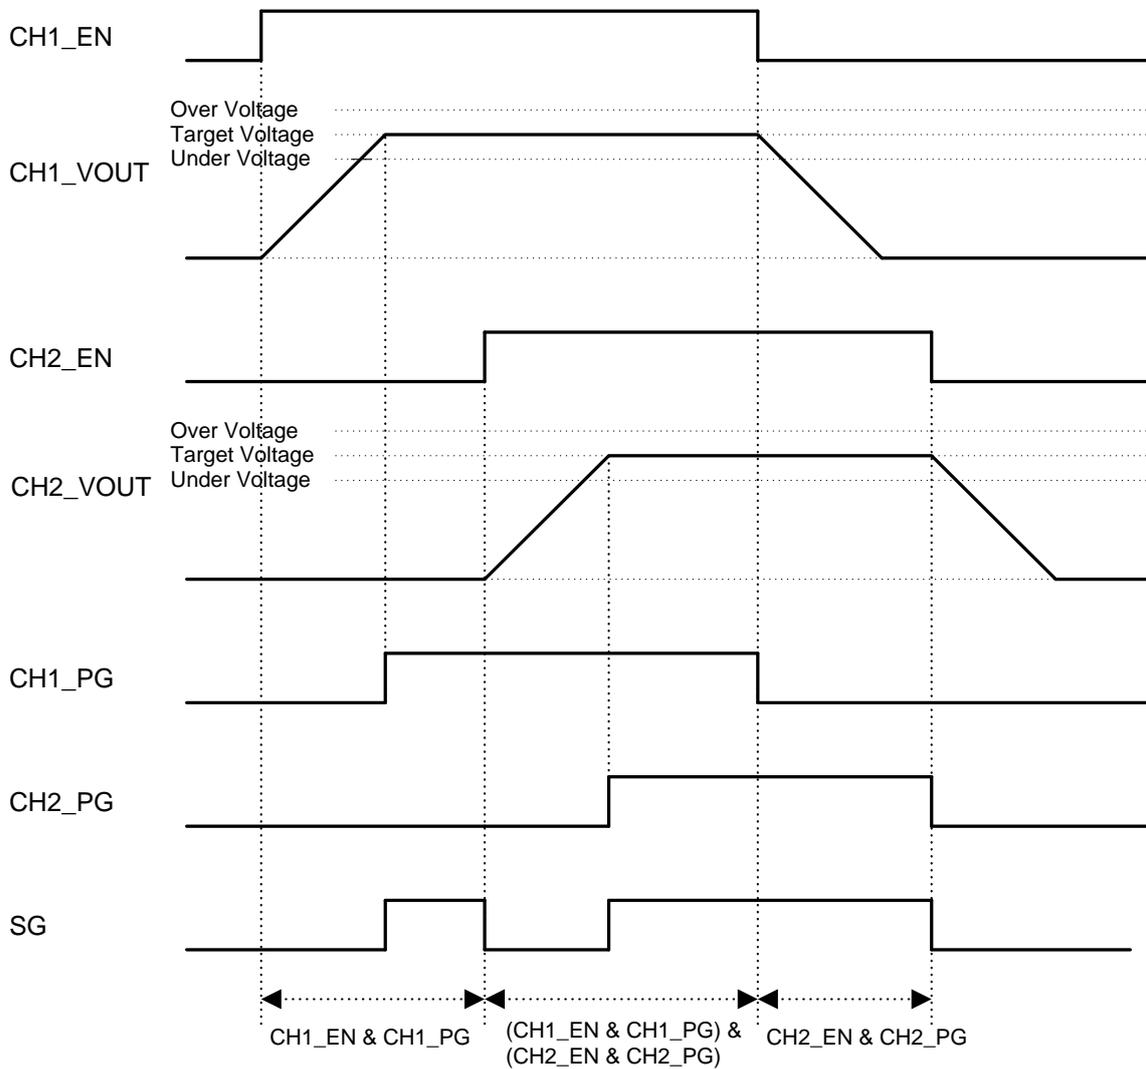

Figure 15. Power-Good (PG) and System Good (SG)

### 5.2.3.3 Chip Configuration Select (CONF)

GPIO0 functions as chip configuration select (CONF) input when CONF\_EN = 1.

Three different chip configurations can be selected according to the CONF pin level.

- GPIO0 low: OTP default or CONF0 on reload
- GPIO0 high: CONF1
- GPIO0 floating: CONF2 - not recommended.

Table 18 lists the device configurations that can be modified if CONF\_EN = 1. Register CONF\_EN is set by OTP, see section 10.1.

**Table 18: GPIO0-Configurable Registers when CONF\_EN = 1**

Register Name	Description
IF_SLAVE_ADDR[6:0]	I <sup>2</sup> C slave address
CH1_A_MODE[1:0]	CH1_A Operation mode select
CH1_B_MODE[1:0]	CH1_B Operation mode select
CH1_VSEL	CH1 output voltage and operation selection
CH1_EN	CH1 enable
CH1_A_VOUT[7:0]	CH1 output voltage setting A
CH1_B_VOUT[7:0]	CH1 output voltage setting B
CH2_A_MODE[1:0]	CH2_A Operation mode select
CH2_B_MODE[1:0]	CH2_B Operation mode select
CH2_VSEL	CH2 output voltage and operation selection
CH2_EN	CH2 enable
CH2_A_VOUT[7:0]	CH2 output voltage setting A
CH2_B_VOUT[7:0]	CH2 output voltage setting B
M_PG1_STAT	IRQ mask setting for CH1 power-good status
M_PG2_STAT	IRQ mask setting for CH2 power-good status
M_SG_STAT	IRQ mask setting for system good status
M_VR_HOT	IRQ mask setting for temp warning status
CH1_EN_DLY[3:0]	Delay setting for CH1 enable
CH1_DIS_DLY[3:0]	Delay setting for CH1 disable
CH2_EN_DLY[3:0]	Delay setting for CH2 enable
CH2_DIS_DLY[3:0]	Delay setting for CH2 disable
GPIO1_MODE[3:0]	GPIO1 mode setting
GPIO2_MODE[3:0]	GPIO2 mode setting
GPIO1_OBUF	GPIO1 output buffer select
GPIO2_OBUF	GPIO2 output buffer select
GPIO1_TRIG[1:0]	GPIO1 input trigger select
GPIO1_POL	GPIO1 polarity select
GPIO1_PUPD	GPIO1 pull-up/pull-down enable
GPIO1_DEB[1:0]	GPIO1 input debounce time setting
GPIO1_DEB_RISE	GPIO1 input debounce rising edge enable
GPIO1_DEB_FALL	GPIO1 input debounce falling edge enable
GPIO2_TRIG[1:0]	GPIO2 input trigger select

Register Name	Description
GPIO2_POL	GPIO2 polarity select
GPIO2_PUPD	GPIO2 pull-up/pull-down enable
GPIO2_DEB[1:0]	GPIO2 input debounce time setting
GPIO2_DEB_RISE	GPIO2 input debounce rising edge enable
GPIO2_DEB_FALL	GPIO2 input debounce falling edge enable

### 5.3 Operating Modes

#### 5.3.1 ON

DA9131-A is ON when the IC\_EN port is higher than  $V_{IH\_EN}$  and the supply voltage is higher than  $V_{THR\_POR}$ . Once enabled, the host processor can start communicating with DA9131-A using the control interface, after the  $t_{IC\_EN}$  delay.

#### 5.3.2 OFF

DA9131-A is OFF when the IC\_EN port is lower than  $V_{IL\_EN}$ . In OFF, the bucks are always disabled and LX nodes are pulled down by (typically 150  $\Omega$ ) internal pull-down resistors.

### 5.4 I<sup>2</sup>C Communication

All features of DA9131-A can be controlled with the I<sup>2</sup>C interface which is enabled or disabled in register I2C\_EN.

I2C_EN	Description
0	I <sup>2</sup> C disable: SCL/GPIO3 and SDA/GPIO4 pins should be used as GPO
1	I <sup>2</sup> C enable: SCL/GPIO3 and SDA/GPIO4 pins are used as I <sup>2</sup> C clock input and I <sup>2</sup> C data input/output.

GPIO3 functions as the I<sup>2</sup>C clock and GPIO4 carries all the power manager bidirectional I<sup>2</sup>C data. The I<sup>2</sup>C interface is open-drain supporting multiple devices on a single line. The bus lines have to be pulled high by external pull-up resistors (2 k $\Omega$  to 20 k $\Omega$ ). The standard frequency of the I<sup>2</sup>C bus is 1 MHz in fast-mode plus (FM+), 400 kHz in fast-mode, or 100 kHz in standard mode.

#### 5.4.1 I<sup>2</sup>C Protocol

All data is transmitted across the I<sup>2</sup>C bus in eight-bit groups. To send a bit, the SDA line is driven towards the intended state while the SCL is low (a low SDA indicates a zero bit). Once the SDA has settled, the SCL line is brought high and then low. This pulse on SCL clocks the SDA bit into the receiver's shift register.

A two-byte serial protocol is used containing one byte for address and one byte data. Data and address transfer are transmitted MSB first for both read and write operations. All transmissions begin with the START condition from the master while the bus is in idle state (the bus is free). It is initiated by a high to low transition on the SDA line while the SCL is in the high state (a STOP condition is indicated by a low to high transition on the SDA line while the SCL is in the high state).

Figure 16. I<sup>2</sup>C START and STOP Condition Timing

The I<sup>2</sup>C bus is monitored for a valid slave address whenever the interface is enabled. It responds immediately when it receives its own slave address. The acknowledge is done by pulling the SDA line low during the following clock cycle (white blocks marked with A in Figure 17 and Figure 18).

The protocol for a register write from master to slave consists of a START condition, a slave address with read/write bit, and the eight-bit register address followed by eight bits of data, terminated by a STOP condition. DA9131-A responds to all bytes with acknowledge (A), see Figure 17.

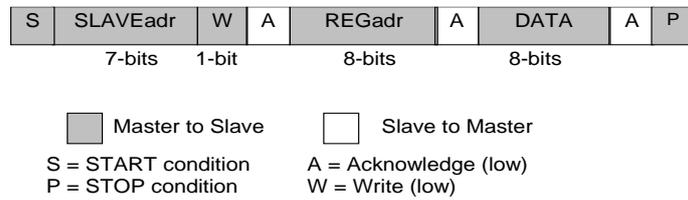

Figure 17. I<sup>2</sup>C Byte Write (SDA Line)

When the host reads data from a register it first has to write to R16DS0569EJ0300 with the target register address and then read from R16DS0569EJ0300 with a repeated START, or alternatively a second START, condition. After receiving the data, the host sends no acknowledge (A\*) and terminates the transmission with a STOP condition, see Figure 18.

Default I<sup>2</sup>C address is 0xD0 (0x68 excluding the R/W bit). It is possible to change this address by writing the new address to the register SYS\_CFG\_SLVADDR, see section 7.1.1.

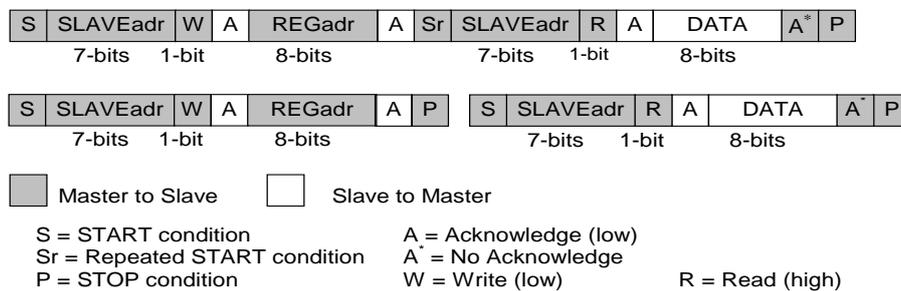

Figure 18. I<sup>2</sup>C Byte Read (SDA Line) Examples

## 6. Application Information

The following recommended components are examples selected from requirements of a typical application.

### 6.1 Capacitor Selection

Ceramic capacitors are used as bypass capacitors at all VDD and output rails. When selecting a capacitor, especially for types with high capacitance at smallest physical dimension, the DC bias characteristic has to be taken into account.

Table 19: Recommended Automotive Grade Capacitor Types

Application	Value (µF)	Size	Temp. Char.	Tol. (%)	V-Rate (V)	Type
VOOUT output bypass	10	0805	X7R ±15 %	±10	6.3	TDK CGA4J1X7R0J106K125AC
VOOUT output bypass	10	0603	X7R ±22 %	±33	6.3	Murata GCM188D70J106ME36D
PVDDx bypass	10	3216	X7R ±15 %	±10	16	Murata GCM31CR71C106KA64L
AVDD bypass	1	0805	X7R ±15 %	±10	50	Murata GCM21BR71H105KA03L

### 6.2 Inductor Selection

Inductors should be selected based on the following parameters:

- Rated maximum current  
Usually a coil provides two current limits: ISAT specifies the maximum current at which the inductance drops by 30 % of the nominal value, and IMAX is defined by the maximum power dissipation and is applied to the effective current.
- DC resistance  
Critical for the converter efficiency and should therefore be minimized.

Table 20: Recommended Inductor Types

Value (µH)	Size (mm)	IMAX (DC) (A)	ISAT (A)	Tol. (%)	DC Resistance (mΩ)	Type
0.22	2.5 x 2.0 x 1.2	6.7	8	20	8	TDK TFM252012ALMAR22MTAA
0.47	2.5 x 2.0 x 1.2	4.9	5.8	20	8	TDK TFM252012ALMAR47MTAA

[0]	R	OC1	Asserted whilst Buck1 output is over-current

Table 24: SYS\_STATUS\_2 (0x03)

Bit	Type	Symbol	Description
[2]	R	GPIO2	GPIO2 status
[1]	R	GPIO1	GPIO1 status
[0]	R	GPIO0	GPIO0 status

Table 25: SYS\_EVENT\_0 (0x04)

Bit	Type	Symbol	Description
[2]	R	E_SG	SG caused event. Write 1 to clear this bit after the event source has been released.
[1]	R	E_TEMP_CRIT	TEMP_CRIT event. Write 1 to clear this bit after the event source has been released.
[0]	R	E_TEMP_WARN	TEMP_WARN event. Write 1 to clear this bit after the event source has been released.

Table 26: SYS\_EVENT\_1 (0x05)

Bit	Type	Symbol	Description
[7]	RW	E_PG2	PG2 caused event. Write 1 to clear this bit after the event source has been released.
[6]	RW	E_OV2	OV2 caused event. Write 1 to clear this bit after the event source has been released.
[5]	RW	E_UV2	UV2 caused event. Write 1 to clear this bit after the event source has been released.
[4]	RW	E_OC2	OC2 caused event. Write 1 to clear this bit after the event source has been released.
[3]	RW	E_PG1	PG1 caused event. Write 1 to clear this bit after the event source has been released.

Bit	Type	Symbol	Description
[2]	RW	E_OV1	OV1 caused event. Write 1 to clear this bit after the event source has been released.
[1]	RW	E_UV1	UV1 caused event. Write 1 to clear this bit after the event source has been released.
[0]	RW	E_OC1	OC1 caused event. Write 1 to clear this bit after the event source has been released.

Table 27: SYS\_EVENT\_2 (0x06)

Bit	Type	Symbol	Description
[2]	RW	E_GPIO2	GPIO2 event. Write 1 to clear this bit after the event source has been released.
[1]	RW	E_GPIO1	GPIO1 event. Write 1 to clear this bit after the event source has been released.
[0]	RW	E_GPIO0	GPIO0 event. Write 1 to clear this bit after the event source has been released.

Table 28: SYS\_MASK\_0 (0x07)

Bit	Type	Symbol	Description
[2]	RW	M_SG	SG IRQ mask
[1]	RW	M_TEMP_CRIT	TEMP_CRIT IRQ mask
[0]	RW	M_TEMP_WARN	TEMP_WARN IRQ mask

Table 29: SYS\_MASK\_1 (0x08)

Bit	Type	Symbol	Description
[7]	RW	M_PG2	PG2 event IRQ mask
[6]	RW	M_OV2	OV2 event IRQ mask
[5]	RW	M_UV2	UV2 event IRQ mask
[4]	RW	M_OC2	OC2 event IRQ mask
[3]	RW	M_PG1	PG1 event IRQ mask

## 8. Moisture Sensitivity Level

The Moisture Sensitivity Level (MSL) is an indicator for the maximum allowable time period (floor lifetime) in which a moisture sensitive plastic device, once removed from the dry bag, can be exposed to an environment with a specified maximum temperature and a maximum relative humidity before the solder reflow process. The MSL classification is defined in [Table 61](#).

For detailed information on MSL levels, refer to the IPC/JEDEC standard J-STD-020, which can be downloaded from <http://www.jedec.org>.

The FCQFN package is qualified for MSL 3.

**Table 61: MSL classification**

MSL level	Floor lifetime	Conditions
MSL 4	72 hours	30°C/60% RH
MSL 3	168 hours	30°C/60% RH
MSL 2A	4 weeks	30°C/60% RH
MSL 2	1 year	30°C/60% RH
MSL 1	Unlimited	30°C/85% RH

### 8.1 Soldering Information

Refer to the IPC/JEDEC standard J-STD-020 for relevant soldering information. This document can be downloaded from <http://www.jedec.org>.

## 9. Package Outline Drawings

### 9.1 Package Outlines

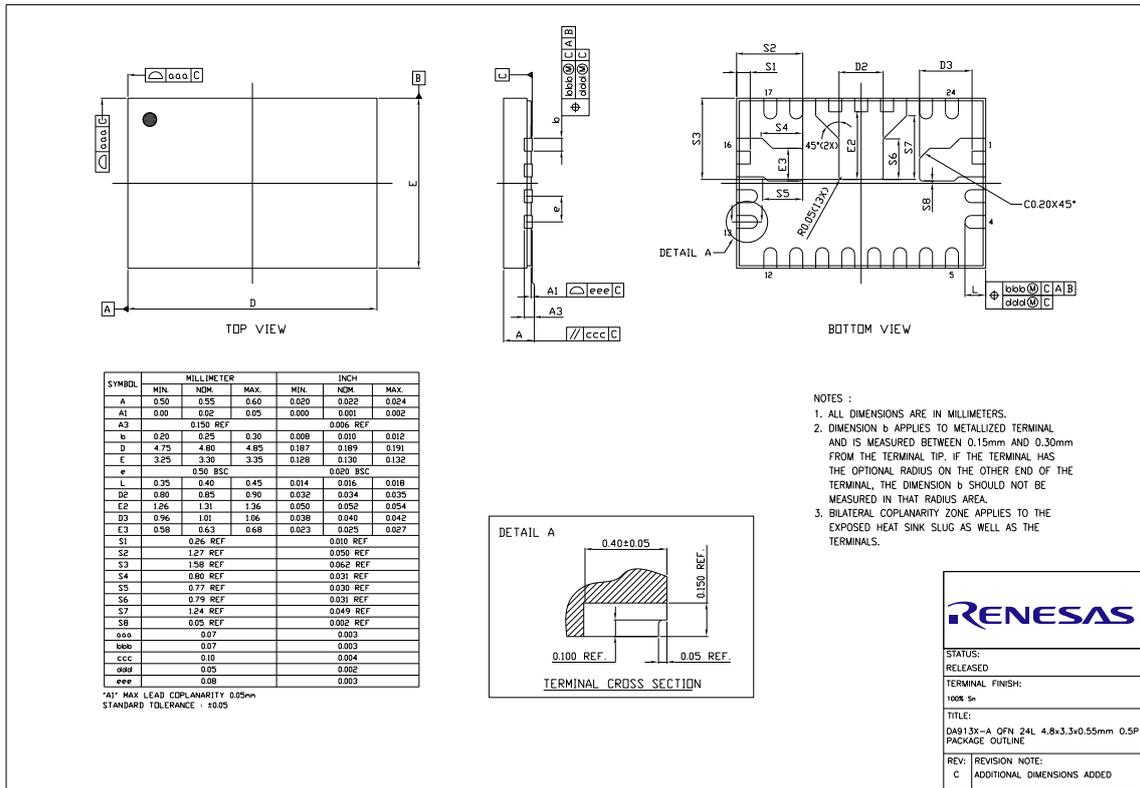

Figure 19. Package Outline Drawing

### 9.2 Package Marking

Package Marking							
A1 Corner >	Marking Content					Format	
1st	●					Pin 1 ID	
2nd	D	A	9	1	3	1	Orientation/Part No.
3rd	x	x	A	T	y	y	OTP/Option/Year
4th	w	w	z	z	z	z	Date Code
Date Code Format: yy = Year, ww = Week, zzzz = Traceability							
xx identifies the OTP Variant							
A or AT optionally indicate the Automotive and Automotive high temp test options.							

## 10. Ordering Information

The ordering number consists of the part number followed by a suffix indicating the packing method. For details and availability, please consult your Renesas local sales representative.

Table 62: Ordering information

Part Number	Package	Package Description	MOQ	Comment
DA9131-A-xxRT2-A	24 FCQFN wettable flanks, 3.3 x 4.8	T&R, 4800 pcs	3 Reels - 14400	AEC-Q100 Grade 2
DA9131-A-xxRT1-A	24 FCQFN wettable flanks, 3.3 x 4.8	Tray, 490 pcs	30 Trays - 14700 pcs	AEC-Q100 Grade 2
DA9131-A-xxRT2-AT	24 FCQFN wettable flanks, 3.3 x 4.8	T&R, 4800 pcs	3 Reels - 14400	AEC-Q100 Grade 2
DA9131-A-xxRT1-AT	24 FCQFN wettable flanks, 3.3 x 4.8	Tray, 490 pcs	30 Trays - 14700 pcs	AEC-Q100 Grade 2

### 10.1 Variants Ordering Information

DA9131 supports delivery of variants indicated by xx in the part number above, where xx is replaced with the actual variant number. Please contact your Renesas [local sales representative](#) to discuss requirements.

## 11. Layout Guidelines

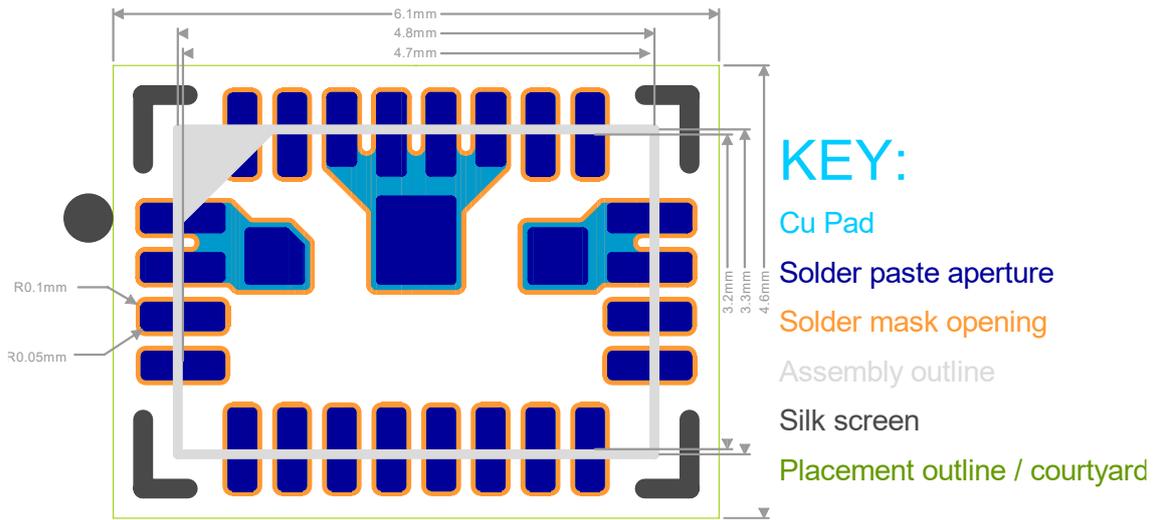

Figure 20. DA9131-A Footprint

Additional information:

- Standard pads are 0.85 mm x 0.3 mm with 0.05 mm radius corners.
- Solder paste aperture is the same size as the copper pads
- Solder mask is 0.05 mm over size. That is 0.95 mm x 0.4 mm with 0.1 mm radius corners.
- Solder paste on custom pads is split into multiple apertures meeting standard area coverage of 30 to 70 %.

### 11.1 Custom Pads Details

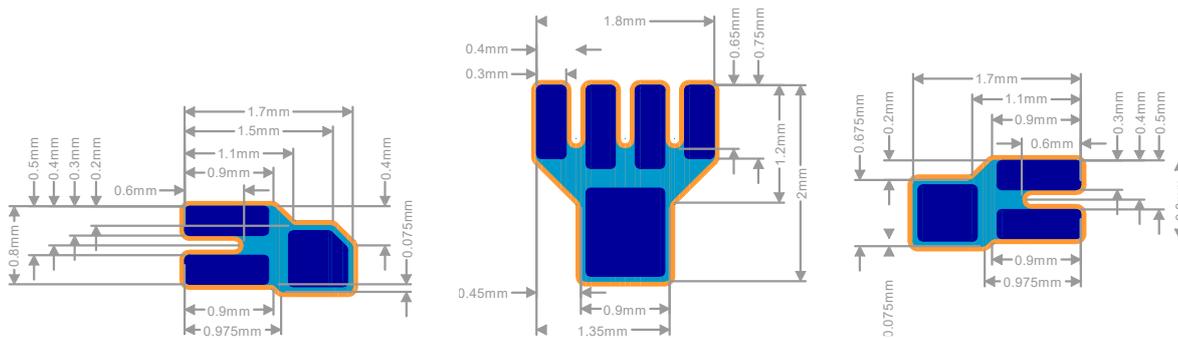

Figure 21. DA9131-A Footprint Details

### RoHS Compliance

Renesas Electronics' suppliers certify that its products are in compliance with the requirements of Directive 2011/65/EU of the European Parliament on the restriction of the use of certain hazardous substances in electrical and electronic equipment. RoHS certificates from our suppliers are available on request.

## Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall be responsible for determining what licenses are required from any third parties, and obtaining such licenses for the lawful import, export, manufacture, sales, utilization, distribution or other disposal of any products incorporating Renesas Electronics products, if required.
5. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
6. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.

"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.

"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.

Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
7. No semiconductor product is absolutely secure. Notwithstanding any security measures or features that may be implemented in Renesas Electronics hardware or software products, Renesas Electronics shall have absolutely no liability arising out of any vulnerability or security breach, including but not limited to any unauthorized access to or use of a Renesas Electronics product or a system that uses a Renesas Electronics product. RENESAS ELECTRONICS DOES NOT WARRANT OR GUARANTEE THAT RENESAS ELECTRONICS PRODUCTS, OR ANY SYSTEMS CREATED USING RENESAS ELECTRONICS PRODUCTS WILL BE INVULNERABLE OR FREE FROM CORRUPTION, ATTACK, VIRUSES, INTERFERENCE, HACKING, DATA LOSS OR THEFT, OR OTHER SECURITY INTRUSION ("Vulnerability Issues"). RENESAS ELECTRONICS DISCLAIMS ANY AND ALL RESPONSIBILITY OR LIABILITY ARISING FROM OR RELATED TO ANY VULNERABILITY ISSUES. FURTHERMORE, TO THE EXTENT PERMITTED BY APPLICABLE LAW, RENESAS ELECTRONICS DISCLAIMS ANY AND ALL WARRANTIES, EXPRESS OR IMPLIED, WITH RESPECT TO THIS DOCUMENT AND ANY RELATED OR ACCOMPANYING SOFTWARE OR HARDWARE, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE.
8. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
12. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
13. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
14. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
