

**HI-201HS/883**

High Speed Quad SPST CMOS Analog Switch

FN8265  
Rev.0.00  
April 9, 2012

The HI-201HS/883 is a monolithic CMOS analog switch featuring very fast switching speeds and low ON resistance. This integrated circuit consists of four independently selectable SPST switches and is pin compatible with the industry standard HI-201 switch.

Fabricated using silicon-gate technology and the Intersil dielectric isolation process, this TTL compatible device offers improved performance over previously available CMOS analog switches while eliminating the problem of latch-up associated with other fabrication processes. Featuring maximum switching times of 50ns, low ON resistance of 50Ω maximum, and a wide analog signal range, the HI-201HS/883 is designed for any military application where improved switching performance, particularly switching speed, is required. (A more detailed discussion on the design and application of the HI-201HS/883 can be found in Application Note [AN543](#).)

The HI-201HS/883 is available in a 16 Ld CerDIP package and is specified over the temperature range of -55 °C to +125 °C.

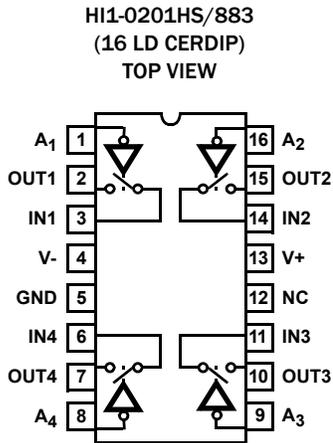

**Features**

- This Circuit is Processed in Accordance to MIL-STD-883 and is Fully Conformant Under the Provisions of Paragraph 1.2.1.
- Low “On” Release ..... 50Ω Max
- Wide Analog Signal Range ..... ±15V
- Turn-On Time ..... 50ns
- Analog Current Range (Continuous) ..... 25mA
- TTL/CMOS Compatible
- No Latch-Up
- Pin Compatible with Standard HI-201

**Applications**

- High Speed Multiplexing
- High Frequency Analog Switching
- Sample and Hold Circuits
- Digital Filters
- Op Amp Gain Switching Networks
- Integrator Reset Circuits

### Recommended Operating Conditions

Operating Temperature Range	-55°C to +125°C
Operating Supply Voltage Range ( $\pm V_{SUPPLY}$ )	$\pm 15V$
Analog Input Voltage (V <sub>S</sub> )	$\pm V_{SUPPLY}$
Logic Low Level (V <sub>AL</sub> )	0V to 0.8V
Logic High Level (V <sub>AH</sub> )	3.0V to +V <sub>SUPPLY</sub>

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

NOTE:

- Parameters listed in Table 3 are controlled via design or process parameters and are not directly tested at final production. These parameters are lab characterized upon initial design release, or upon design changes. These parameters are guaranteed by characterization based upon data from multiple production runs which reflect lot to lot and within lot variation.
