

# SLG59H1313C

## A 23 mΩ, 4.5 A nFET Load Switch

with Surge Protection and Adjustable OVP in a 2.34 mm<sup>2</sup> WLCSP

### General Description

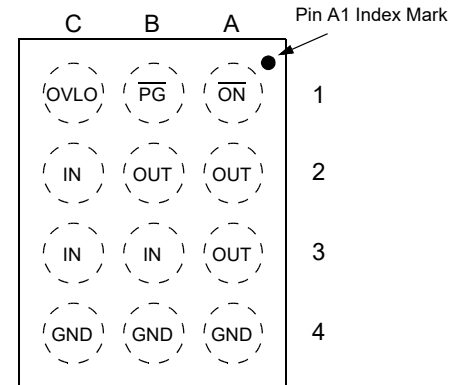

The SLG59H1313C features a low 23 mΩ RDS<sub>ON</sub> internal nFET that protects low-voltage 2.5 Vdc to 5.5 Vdc operating systems against voltage faults up to 29 Vdc. An internal clamp circuit protects the downstream components from surge voltage up to 100 V. The SLG59H1313C features a fast 50 ns (typ) over-voltage response time that turns off the internal nFET if the input voltage exceeds the OVP threshold. The OVP threshold is adjustable with optional external resistors to any voltage between 4 V and 20 V. Over-temperature protection powers down the device at 145°C (typ). SLG59H1313C also features an Over-current protection that turns off the switch if the current exceeds 7 A (typ), this gives additional protection from over-heating the device.

SLG59H1313C incorporates an open-drain output  $\overline{\text{PG}}$  pin. When  $V_{\text{IN\_min}} < V_{\text{IN}} < V_{\text{OVLO}}$  and the switch is on,  $\overline{\text{PG}}$  will be driven low indicating a good power input, otherwise it is high impedance.

### Features

- Pin-to-pin to FPF2280 with Improved Performance
- Surge protection (IEC61000-4-5: >100 V)
- Input maximum voltage rating: 29 Vdc
- Integrated low RDS<sub>ON</sub> nFET switch: 23 mΩ (typ)
- 4.5 A continuous current capability
- Over-Voltage Protection (OVP): adjustable 4 V to 20 V
- Over-Temperature Protection (OTP): 145°C (typ)
- 7 A Over-Current Protection (OCP)
- Fast OVP turn-off response: typical 50 ns
- 1.3 mm x 1.8 mm in 12-ball WLCSP
- Pb-Free/Halogen-Free /ROHS Compliant

### Pin Configuration

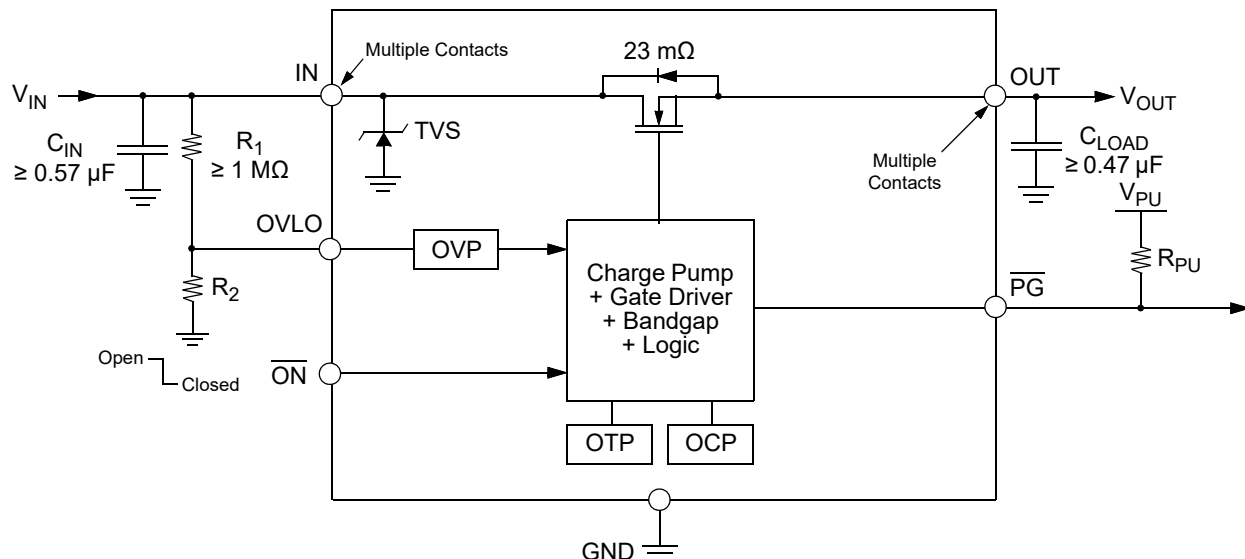

(Laser Marking View)  
1.3 x 1.8 x 0.5 mm, 0.4 mm pitch

### Applications

- Wearable Devices
- Tablet PCs and Smartphones

### Block Diagram

## SLG59H1313C

A 23 mΩ, 4.5 A nFET Load Switch  
with Surge Protection and Adjustable OVP in a 2.34 mm<sup>2</sup> WLCSP

### Pin Description

Pin Name	Pin #	Type	Pin Description
IN	B3, C2, C3	Input	IC power supply and load switch input (3 contacts). Bypass the IN pin to GND with a 0.57 μF (or larger) capacitor. Capacitors used at the IN pin should be rated at 30 V or higher.
OUT	A2, A3, B2	Output	Load switch output to Load (3 contacts). Connect a low-ESR capacitor from the OUT pin to ground and follow the C <sub>LOAD</sub> recommendation in the Electrical Characteristics section. Capacitors used at the OUT pin should be rated at 30 V or higher.
$\overline{\text{PG}}$	B1	Output	Power Good is an open-drain, active LOW output and becomes asserted when $2.5 \text{ V} < V_{\text{IN}} < V_{\text{OVLO}}$ . For additional details on setting $V_{\text{OVLO}}$ , please consult the “OVLO Calculation” section under Applications Information. <div> <div>1</div> <div><math>V_{\text{IN}} &lt; V_{\text{IN\_min}}</math> or <math>V_{\text{IN}} \geq V_{\text{OVLO}}</math></div> <div>0</div> <div>Voltage Stable</div> </div>
$\overline{\text{ON}}$	A1	Input	A high-to-low transition on this pin initiates the operation of the SLG59H1313C's logic control. $\overline{\text{ON}}$ is an asserted active-LOW, level-sensitive CMOS input with $V_{\text{IL\_ON}} < 0.5 \text{ V}$ and $V_{\text{IH\_ON}} > 1.2 \text{ V}$ . As the $\overline{\text{ON}}$ pin input circuit is directly connected to internal digital circuits, connect this pin to a general-purpose output (GPO) of a microcontroller, an application processor, or a system controller – do not allow this pin to be open-circuited.
OVLO	C1	Input	Overvoltage Lockout Adjustment Pin. To set the SLG59H1313C's OVLO trip threshold to its internal $V_{\text{IN\_OVLO}}$ , connect OVLO pin to GND. To set the SLG59H1313C's OVLO trip threshold with an external resistor network, please consult Applications Information section; - minimum recommended value for $R_1$ is 1 MΩ
GND	A4, B4, C4	GND	Analog GND (3 contacts)

### Ordering Information

## Applications Information

### Typical Application Circuit

### VIN Over-Voltage Lockout (OVLO) Calculation

$V_{OVLO}$  can be set externally and override the SLG59H1313C's default OVP by connecting an external resistor-divider to the OVLO pin.

The following equation produces the desired trip voltage and resistor values:

$$V_{OVLO} = V_{OVLO\_TH} \times \left( 1 + \frac{R_1}{R_2} \right)$$

Recommended minimum  $R_1 = 1 \text{ M}\Omega$ .

Since the minimum recommended value for  $R_1$  is  $1 \text{ M}\Omega$ , the equation can be rewritten to isolate  $R_2$  for a desired  $V_{OVLO}$ :

$$R_2 = \frac{R_1}{\frac{V_{OVLO}}{V_{OVLO\_TH}} - 1}$$

### On-The-Go (OTG) Functionality

During OTG operation, the SLG59H1313C's initially disabled and its power FET bulk diode becomes forward biased. The bulk diode forward drop when conducting is approximately 0.7 V and remains forward biased until the applied  $V_{IN}$  rises higher than 2.5 V. While the IC is disabled and its FET body diode is forward biased, the max DC current through the diode is 1.8 A. This current is limited by the thermal performance of the IC ( $0.7 \text{ V} \times 1.8 \text{ A} = 1.26 \text{ W}$ ). Since sustained DC power dissipation in the OFF state should be minimized, the FET's body diode can withstand transient current operation so long as the max limit is never exceeded. To enable the operation of the SLG59H1313C, its  $\overline{\text{ON}}$  pin must be pulled LOW. The time-domain profile of any transient current through the bulk diode should not exceed the RC time constant formed by the  $C_{IN}$  and  $C_{LOAD}$  capacitors. At the system level, over-voltage and over-current protection should be provided external to the SLG59H1313C.

## SLG59H1313C

A 23 mΩ, 4.5 A nFET Load Switch  
with Surge Protection and Adjustable OVP in a 2.34 mm<sup>2</sup> WLCSP

### Layout Guidelines:

1. Since the IN and OUT pins dissipate most of the heat generated during high-load current operation, it is highly recommended to make power traces as short, direct, and wide as possible. A good practice is to make power traces with an absolute minimum widths of 15 mils (0.381 mm) per Ampere. A representative layout, shown in [Figure 30](#), illustrates proper techniques for heat to transfer as efficiently as possible out of the device;
2. To minimize the effects of parasitic trace inductance on normal operation, it is recommended to connect input C<sub>IN</sub> and output C<sub>LOAD</sub> low-ESR capacitors as close as possible to the SLG59H1313C's BUS, SYS and OUT pins;
3. The GND pin should be connected to system analog or power ground plane.

### SLG59H1313C Evaluation Board:

A High Voltage GreenFET Evaluation Board for SLG59H1313C is designed according to the statements above and is illustrated on [Figure 30](#). Please note that evaluation board has IN\_Sense and OUT\_Sense pads. They cannot carry high currents and dedicated only for RDSON evaluation.

## Basic Test Setup and Connections

Figure 32. SLG59H1313C Evaluation Board Connection Circuit

## EVb Configuration

1. Connect oscilloscope probes to VIN, VOUT, ON etc.;
2. Using resistor divider for OVLO pin set desired  $V_{IN\_OVLO}$  threshold or tie OVLO pin to GND in case of using internal  $V_{IN\_OVLO}$  threshold;
3. Turn on Power Supply and set desired  $V_{IN}$  from 2.5 V ... 20 V;
4. Toggle the ON signal High or Low to observe SLG59H1313C operation;

## Recommended Reflow Soldering Profile

For successful reflow of the SLG59H1313C a recommended thermal profile is illustrated below:

Note: This reflow profile is for classification/preconditioning and are not meant to specify board assembly profile. Actual board assembly profiles should be developed based on specific process needs and board designs and should not exceed parameters depicted on figure above.

Please see more information on IPC/JEDEC J-STD-020: latest revision for reflow profile based on package volume of 0.643 mm<sup>3</sup> (nominal).

# SLG59H1313C

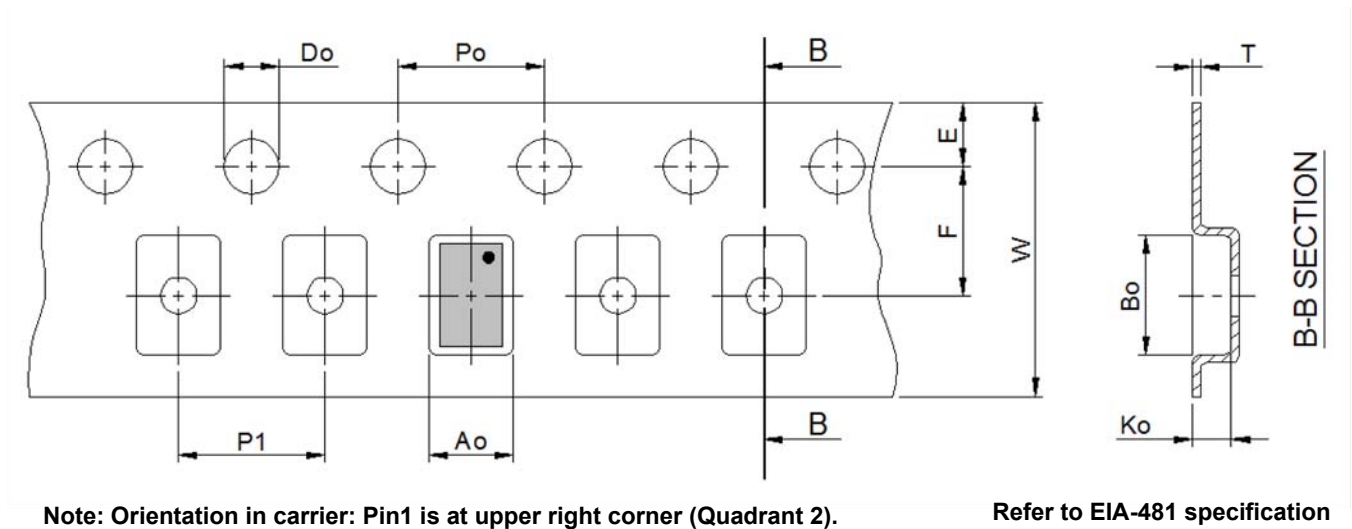

A 23 mΩ, 4.5 A nFET Load Switch  
with Surge Protection and Adjustable OVP in a 2.34 mm<sup>2</sup> WLCSP

## Tape and Reel Specifications

Package Type	# of Pins	Nominal Package Size [mm]	Max Units		Reel & Hub Size [mm]	Leader (min)		Trailer (min)		Tape Width [mm]	Part Pitch [mm]
			per Reel	per Box		Pockets	Length [mm]	Pockets	Length [mm]		
WLCSP 12L 1.3 x 1.8 mm 0.4P Green	12	1.3 x 1.8 x 0.5	3,000	3,000	178/60	100	400	100	400	8	4

## Carrier Tape Drawing and Dimensions

Package Type	Pocket BTM Length	Pocket BTM Width	Pocket Depth	Index Hole Pitch	Pocket Pitch	Index Hole Diameter	Index Hole to Tape Edge	Index Hole to Pocket Center	Tape Width	Tape Thickness
	A0	B0	K0	P0	P1	D0	E	F	W	T
WLCSP 12L 1.3 x 1.8 mm 0.4P Green	1.51	2.04	0.67	4	4	1.5	1.75	3.5	8	0.25

## SLG59H1313C

A 23 mΩ, 4.5 A nFET Load Switch  
with Surge Protection and Adjustable OVP in a 2.34 mm<sup>2</sup> WLCSP

### Revision History

Date	Version	Change
10/3/2023	1.08	Fixed typo in Part Marking
2/2/2022	1.07	Updated Company name and logo Fixed typos
3/18/2021	1.06	Updated Abs Max Table Fixed typos
2/18/2021	1.05	Updated Features
12/20/2018	1.04	Added Layout Guidelines
7/24/2018	1.03	Updated V <sub>OVLO_TH</sub> spec to 2 decimal places
7/09/2018	1.02	Fixed typos
6/20/2018	1.01	Fixed typo in Landing Pattern Updated style and formatting
3/5/2018	1.00	Production Release

## IMPORTANT NOTICE AND DISCLAIMER

RENESAS ELECTRONICS CORPORATION AND ITS SUBSIDIARIES ("RENESAS") PROVIDES TECHNICAL SPECIFICATIONS AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT OF THIRD-PARTY INTELLECTUAL PROPERTY RIGHTS.
