

## Description

The AS044 Energy Meter Power supply is a 10W Isolated multi-channel AC-DC Flyback converter which has a special requirement to pass the magnetic tampering using Iron dust core. The design is made to operate at 450V AC, and it has capacitor saver function which will help in reducing the BOM and increase the reliability.

## Kit Contents

- AS044 Energy Meter Power Supply Board

## Features

- Flyback AC-DC supply to withstand 450V AC with avalanche rated 900V, 13ohm integrated Mosfet.
- Iron dust core to pass 0.5T Magnetic tampering as per IEC standard.
- Capacitor Saver feature to save the BOM Cost and improve reliability.
- Isolated dual channel outputs which have 4KV isolation between Primary and all secondary outputs.
- Configurable overload timer of the device allows 100msec peak demand of 2A.
- Pulse frequency Modulation (PFM) for light load implementation, PWM changes from 50KHz to 3KHz.

## AS044 Overview

The block diagram below highlights the main parts of the system:

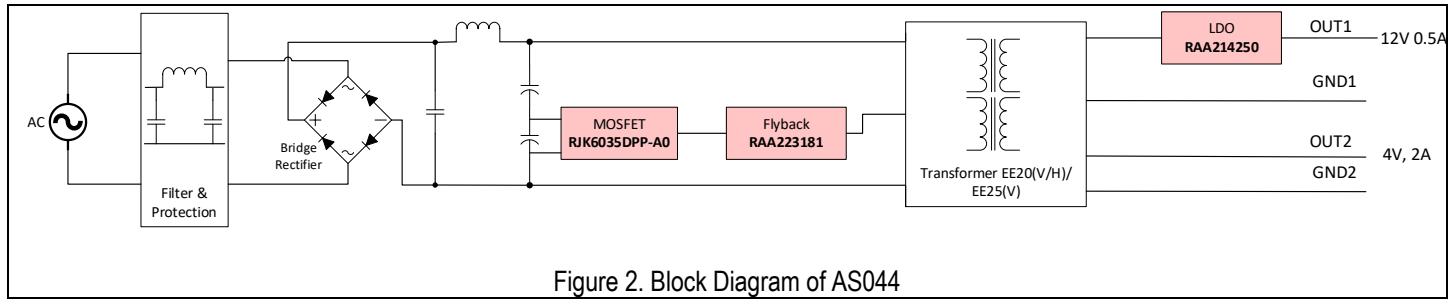

Figure 2. Block Diagram of AS044

The building blocks of the AS044 and their functionality are listed below:

1. [RAA214250](#): The RAA214250 is a low-dropout linear voltage regulator that operates from 2.5V to 20V and provide up to 500mA of output current with a typical dropout of 269mV. The output voltage is adjustable with external feedback resistors anywhere from 1.224V to 18V.
2. [RAA223181](#): The RAA223181 is an off-line Flyback regulator with a 900V integrated MOSFET, designed for high input voltage and high reliability application of smart meter power supplies and other general isolated power supplies.
3. [RJK6035DPP-A0](#): MOSFETs suitable for switching (motor drive, etc.) and load switch applications. Low on-resistance, high-speed switching, and high-robustness.

## Hardware Overview

The following block diagrams have specific applications explained below.

**Bridge Rectifier and Filter:** The mains AC line input with the Diode Bridge, Storage Capacitor(s), EMI-reduction Choke as well as safety and protection components like Fuse or Fusible Resistor, MOV and X-Capacitor. The input surge section consists of 510V MOV (Metal Oxide Varistor). MOV is used to protect the circuit from high voltage spikes. The LC filter helps by filtering the HV peak of the incoming surge event. Line filter design can be improved to increase the system surge rating. Common mode choke coils are suited for noise suppression on lines with large current flows, such as AC/DC power supply lines. The Bridge rectifier DF10S is used to convert AC to DC supply. The obtained DC output is filtered and is fed to RAA223181 Flyback converter.

**Bridge Rectifier & Filter:**

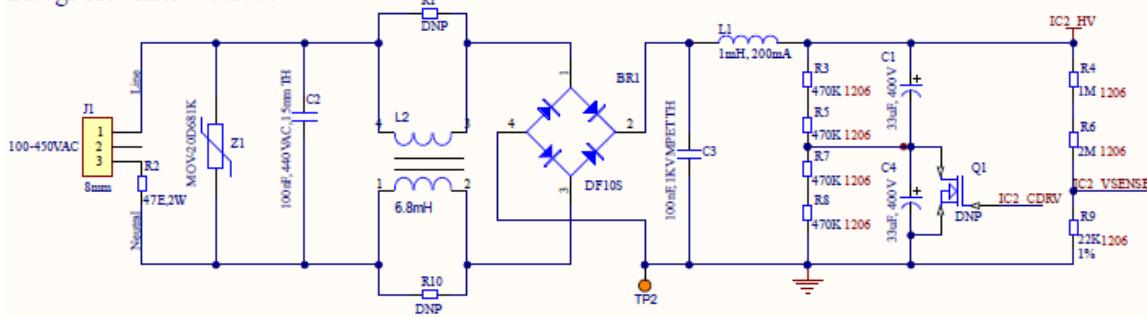

Figure 3. Bridge Rectifier and Filter

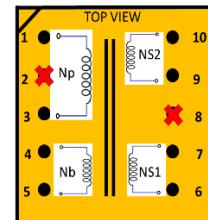

**Input Capacitor Saving Feature:** Meters are required to be always safe at two types of input overvoltage (transient kV+ as lighting surge; continuous OV of 2-3 times of nominal AC input as wrong wiring). Power meters need 2+ stacked 450V capacitors to protect from any extended OV event. Renesas CAPsaver™ replaces one 450V capacitor with a lower cost MOSFET. Example shown saves from two 450V 47uF capacitors & two 2512 balancing resistors to one 450V 22uF capacitor and one 500V 10ohm MOSFET (>\$0.2 savings). For the meters that must always work at full load at any OV events, this feature can be disabled.

**Output LDO:** The RAA214250 is a low-dropout linear voltage regulator that operates from 2.5V to 20V and provides up to 500mA of output current with a typical dropout of 269mV. The output voltage is adjustable with external feedback resistors anywhere from 1.224V to 18V. RAA214250 is connected to 18V from transformer to provide an output of 12V, 0.5A.

**Flyback Operation:** The RAA223181 is an off-line Flyback regulator with a 900V integrated MOSFET, designed for high input voltage and high reliability application of smart meter power supplies and other general isolated power supplies. The Energy Meter Power supply board, featuring the RAA223181 900V regulator, is a dual output 8W universal input flyback evaluation board; it provides a low-cost high performance isolated AC/DC solution from a universal input of 85VAC to 450VAC to both a 12V output and a 4V output for smart meter applications. The board operates in DCM with constant frequency at 50kHz in normal operation and uses valley switching to reduce switching losses and EMI noises. The board has built-in protections of overload, short-circuit, input brownout, VCC UV, VCC OV, VIN UV, peak current limit, primary short, and over-temperature protections. With a low-cost input EMI filter, the board is pre-compliant with EN55022/CISPR 22 Class B conducted EMI limits, and it has the 4kV surge capability according to IEC61000-4-5 standard.
