fsp_err_t R_POEG_Open (poeg_ctrl_t *const *p_ctrl*, poeg_cfg_t const *const *p_cfg*)

Initializes the POEG module and applies configurations. Implements poeg_api_t::open.

Note

The poeg_cfg_t::trigger setting can only be configured once after reset. Reopening with a different trigger configuration is not possible.

Example:

```
/* Initializes the POEG. */
   err = R_POEG_Open(&g_poeg0_ctrl, &g_poeg0_cfg);
```

Return values

FSP_SUCCESS	Initialization was successful.
FSP_ERR_ASSERTION	A required input pointer is NULL or the source divider is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open.
FSP_ERR_IRQ_BSP_DISABLED	poeg_cfg_t::p_callback is not NULL, but ISR is not enabled. ISR must be enabled to use callback.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	The channel requested in the p_cfg parameter is not available on this device.

◆ R_POEG_StatusGet()

fsp_err_t R_POEG_StatusGet (poeg_ctrl_t *const *p_ctrl*, poeg_status_t *const *p_status*)

Get current POEG status and store it in provided pointer p_status. Implements poeg_api_t::statusGet.

Example:

```
/* (Optional) Determine the cause of the POEG event. */
poeg_status_t status;
   (void) R_POEG_StatusGet(&g_poeg0_ctrl, &status);
```

Return values

FSP_SUCCESS	Current POEG state stored successfully.
FSP_ERR_ASSERTION	p_ctrl or p_status was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

◆ R_POEG_CallbackSet()

fsp_err_t R_POEG_CallbackSet (poeg_ctrl_t *const *p_ctrl*, void(*)(poeg_callback_args_t *) *p_callback*, void const *const *p_context*, poeg_callback_args_t *const *p_callback_memory*)

Updates the user callback with the option to provide memory for the callback argument structure. Implements poeg_api_t::callbackSet.

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

◆ R_POEG_OutputDisable()

fsp_err_t R_POEG_OutputDisable (poeg_ctrl_t *const *p_ctrl*)

Disables GPT output pins. Implements poeg_api_t::outputDisable.

Return values

FSP_SUCCESS	GPT output pins successfully disabled.
FSP_ERR_ASSERTION	p_ctrl was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

◆ R_POEG_Reset()

fsp_err_t R_POEG_Reset (poeg_ctrl_t *const *p_ctrl*)

Resets status flags. Implements poeg_api_t::reset.

Note

Status flags are only reset if the original POEG trigger is resolved. Check the status using R_POEG_StatusGet after calling this function to verify the status is cleared.

Example:

```
/* Correct the cause of the POEG event before resetting POEG. */
/* Reset the POEG before exiting the callback. */
   (void) R_POEG_Reset(&g_poeg0_ctrl);
/* Wait for the status to clear after reset before exiting the callback to ensure
the interrupt does not fire
 * again. */
do
   {
     (void) R_POEG_StatusGet(&g_poeg0_ctrl, &status);
   } while (POEG_STATE_NO_DISABLE_REQUEST != status.state);
```

Return values

FSP_SUCCESS	Function attempted to clear status flags.
FSP_ERR_ASSERTION	p_ctrl was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

◆ R_POEG_Close()

fsp_err_t R_POEG_Close (poeg_ctrl_t *const *p_ctrl*)

Disables POEG interrupt. Implements poeg_api_t::close.

Note

This function does not disable the POEG.

Return values

FSP_SUCCESS	Successful close.
FSP_ERR_ASSERTION	p_ctrl was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

4.2.48 Precision Time Protocol (r_ptp)

Detailed Description

Driver for the PTP peripheral on RA MCUs. This module implements the PTP Interface.

Overview

PTP allows for multiple devices on a network to synchronize their clocks with very high precision. The PTP peripheral generates and processes PTP messages automatically. In slave mode, it also corrects the local time in order to adjust for any offset from the master clock time.

Features

- Ordinary clock
  - Master mode
  - Slave mode
- Peer-to-peer
- End-to-end
- Frame fromats
  - Ethernet II frames
  - IEEE802.3 + LLC + SNAP frames
  - IPv4 + UDP
- Clock correction modes
  - Mode 1: Add the offsetFromMaster value to the local time whenever it is updated.
  - Mode 2: Calculate a clock gradient and continuously adjust the local time in order to minimize the offsetFromMaster value.

Configuration

Build Time Configurations for r_ptp

The following build time configurations are defined in fsp_cfg/r_ptp_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Networking > PTP (r_ptp)

This module can be added to the Stacks tab via New Stack > Networking > PTP (r_ptp).

Configuration	Options	Default	Description
Clock Properties > Priority 1	Value must in the range [0,255].	128	Priority1 field advertised in generated announce packets.
Clock Properties > Class	Value must in the range [0,255].	248	Class field advertised in generated announce packets.

Clock Properties > Accuracy	Value must in the range [0,255].	0xFE	Accuracy field advertised in generated announce packets.
Clock Properties > Variance	Value must in the range [0,65535].	0xFFFF	Variance field advertised in generated announce packets.
Clock Properties > Priority 2	Value must in the range [0,255].	128	Priority2 field advertised in generated announce packets.
Clock Properties > Time Source	Value must in the range [0,255].	160	Time Source field advertised in generated announce packets.
Ethernet > Multicast Filter MAC address	Must be a valid MAC address	01:1B:19:00:00:00	In Multicast Filtered mode, only multicast addresses that match this address are received by the ETHERC EDMAC.
Ethernet > Primary Destination MAC address	Must be a valid MAC address	01:1B:19:00:00:00	The destination MAC address for primary PTP messages.
Ethernet > PDelay Destination MAC address	Must be a valid MAC address	01:80:C2:00:00:0E	The destination MAC address for PDelay messages.
IP > Primary Destination IP address	Must be a valid IP address	224.0.1.129	The destination IPv4 address for primary messages.
IP > PDelay Destination IP address	Must be a valid IP address	224.0.0.107	The destination IPv4 address for PDelay messages.
IP > Event Message TOS	Value must in the range [0,255].	0	The IP packet TOS for event messages.
IP > General Message TOS	Value must in the range [0,255].	0	The IP packet TOS for general messages.
IP > Primary Message TTL	Value must in the range [0,255].	1	The IP packet TTL for primary messages.
IP > PDelay Message TTL	Value must in the range [0,255].	1	The IP packet TTL for p_delay messages.
IP > Event Port	Value must in the range [0,65535].	319	The UDP port for event messages.
IP > General Port	Value must in the range [0,65535].	320	The UDP port for general messages.

Synchronization Detection > Threshold (Nanoseconds)	Value must be greater than 0.	1000000	The minimum offsetFromMaster value required in order to synchronize with the master clock.
Synchronization Detection > Count	Value must in the range [0,255].	5	The number of times the calculated offsetFromMaster value must be less than the threshold in order to synchronize with the master clock.
Synchronization Lost Detection > Threshold (Nanoseconds)	Value must be greater than 0.	10000000	The minimum offsetFromMaster value required in order to lose synchronization with the master clock.
Synchronization Lost Detection > Count	Value must in the range [0,255].	5	The number of times the calculated offsetFromMaster value must be greater than the threshold in order to lose synchronization with the master.
Interrupts > Callback	Name must be a valid C symbol	ptp0_user_callback	Called when a STCA/SYNFP event occurs, a PTP message is received, or if a Pulse Timer event occurs.
Interrupts > MINT Interrupt priority	MCU Specific Options		Select the EPTPC MINT interrupt priority.
Interrupts > Pulse Timer Interrupt priority	MCU Specific Options		Select the EPTPC IPLS priority.
Name	Name must be a valid C symbol	g_ptp0	Module name.
Ethernet PHY Interface Type	• MII • RMII	RMII	The interface type used to communicate with the Ethernet PHY.
Frame Filter	• Extended Promiscuous Mode • Unicast and Multicast • Unicast and Multicast Filtered • Unicast	Unicast	Selects how packets are filtered based on their destination MAC address. Packets that pass the filter are transferred to the ETHERC EDMAC.
Frame Format	• Ethernet II • Ethernet II |	Ethernet II	The format of the frames that

	IPv4 | UDP • IEEE802.3 | LLC | SNAP • IEEE802.3 | LLC | SNAP | IPv4 | UDP		encapsulate the PTP messages.
Clock Domain	Value must in the range [0,255].	0	The PTP clock will only respond to clocks in its domain.
Clock Domain Filter	• Enable • Disable	Enable	Filter out PTP messages from other clock domains.
Buffer Size	Value must in the range [64,1536].	1536	The maximum Ethernet packet size that can be transmitted or received by the application from the EDMAC.
Number of transmit buffers	Value must in the range [1,16].	4	The number of transmit buffers in the packet queue.
Number of receive buffers	Value must in the range [1,16].	4	The number of receive buffers in the packet queue.
Announce message interval.	MCU Specific Options		The period of time between generated announce messages.
Sync message interval.	MCU Specific Options		The period of time between generated sync messages.
Delay_req message interval.	MCU Specific Options		The period of time between generated delay_req messages.
Message timeout	Value must be greater than 0.	4000	The time in milliseconds needed to generate timeout events after not receiving a sync or delay_resp message.
Clock Source	• PCLKA / 1 • PCLKA / 2 • PCLKA / 3 • PCLKA / 4 • PCLKA / 5 • PCLKA / 6 • REF50CK0	PCLKA / 6	The STCA clock source must be 20Mhz, 25Mhz, 50Mhz, or 100Mhz. When REF50CK0 is selected, the STCA frequency is 25Mhz.
Clock Correction Mode	• Clock Correction Mode 1	Clock Correction Mode 1	Clock correction mode 1 corrects the local clock using the current

	• Clock Correction Mode 2		offsetFromMaster value. Clock correction mode 2 calculates a clock gradient in order to continuously correct the local clock.
Gradient Worst10 Interval	Value must in the range [0,255].	32	The number of sync messages to use when calculating the worst10 gradient values (Only applies to clock correction mode 2).

Clock Configuration

The STCA input clock can be the following clock sources:

- PCLKA / 1
- PCLKA / 2
- PCLKA / 3
- PCLKA / 4
- PCLKA / 5
- PCLKA / 6
- REF50CK0

The STCA input clock is restricted to the following frequencies:

- 20 Mhz
- 25 Mhz
- 50 Mhz
- 100 Mhz

When REF50CK0 is selected, the input clock frequency is 25 Mhz.

Pin Configuration

The PTP module requires the Ethernet (r_ether) instance in order to initialize the Ethernet PHY. This means that the ETHERC pins must be configured.

Usage Notes

PTP Port State

The current PTP port state determines which messages need to be generated and processed by the PTP peripheral. It is the application's responsibility to determine what the current state of the PTP port should be.

The following messages can be generated by the PTP peripheral:

- Announce
- Sync
- Delay_req
- Delay_resp
- PDelay_req

- PDelay_resp

The following messages can be processed by the PTP peripheral:

- Sync
- Follow_up
- Delay_req
- Delay_resp
- PDelay_req
- PDelay_resp
- PDelay_resp_follow_up

The application must receive the following messages in order to determine the current state of its PTP port:

- Announce
- Management
- Signaling

The following messages can only be sent manually:

- Management
- Signaling

The PTP API defines the following states:

State	Generated Messages	Processed Messages	Received Messages
Disabled	N/A	N/A	N/A
Passive	N/A	N/A	Announce, Signaling, Management
E2E/P2P Slave	Delay_req/(PDelay_req, PDelay_resp)	Sync, Follow_up, Delay_resp/(PDelay_req, PDelay_resp)	Announce, Signaling, Management
E2E/P2P Master	Announce, Sync, Delay_resp/(PDelay_req, PDelay_resp)	delay_req/(PDelay_req, PDelay_resp)	Announce, Signaling, Management

Pulse Timers

Pulse Timers are configurable timers used to generate interrupts and ELC events. Each pulse timer has a configurable start time, pulse, and period. At the start of each timer period, a rising edge occurs. After the pulse time has elapsed, a falling edge occurs. ELC events and IRQs can be generated on rising and/or falling edges for each Pulse Timer. There are two types of interrupts generated by each Pulse Timer; MINT and IPLS.

MINT Interrupts

MINT IRQs are only generated on the rising edge of a Pulse Timer channel. The callback will provide the channel number of the pulse timer that caused the interrupt.

IPLS Interrupts

Each Pulse Timer channel can be configured as a source for generating IPLS IRQs. All of the pulse timers that are selected as IPLS sources are OR'd together and rising and falling edge IRQs can be generated from the resulting signal. Below is an example of a resulting signal from two IPLS sources. Unlike MINT interrupts, IPLS interrupts do not provide any information about which Pulse Timer caused the IRQ because the IRQs from all the Pulse Timers are OR'd together.

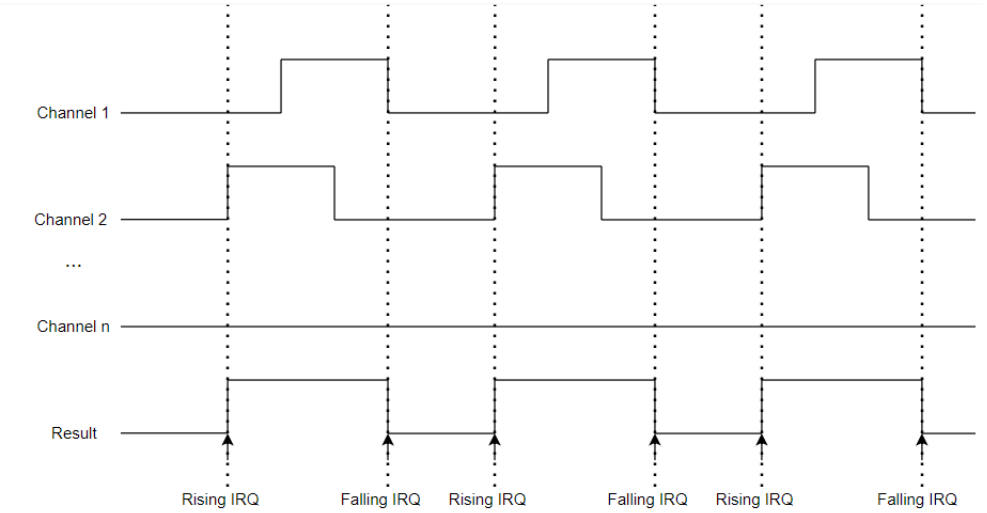

Figure 175: IPLS IRQ Generation

Ethernet Frame Filter

The PTP driver can filter Ethernet frames that are received by Ethernet (r_ether). There are four different filtering modes:

- Extended Promiscuous - All Ethernet frames are received by Ethernet (r_ether).
- Unicast and Multicast - All Unicast frames destined for the PTP and Multicast frames are received by Ethernet (r_ether).
- Unicast and Multicast Filtered - All Unicast frames destined for the PTP are received by Ethernet (r_ether). All multicast frames that match ptp_synfp_cfg_t::p_multicast_addr_filter are received by Ethernet (r_ether).
- Unicast - Only Unicast frames destined for the PTP are received by Ethernet (r_ether).

Limitations

Developers should be aware of the following limitations when using the PTP:

- PTP will not automatically initialize Ethernet (r_ether). This provides flexibility by allowing PTP to be used alongside 3rd party IP stacks (Eg. FreeRTOS Plus TCP (rm_freertos_plus_tcp)), however this means the application must execute the Ethernet (r_ether) link process in order to use PTP.
- The driver will not detect announce message timeouts. This functionality must be handled by the application.
- When IP + UDP frame format is selected, the driver will not automatically join the multicast group. This must be done by the application.
- In order to call PTP API functions from ISRs, the MINT and IPLS interrupt priorities must be configured to be lower than BSP_CFG_IRQ_MASK_LEVEL_FOR_CRITICAL_SECTION. This is to guarantee that PTP register accesses are atomic.

Examples

Slave Mode

This is a basic example of minimal use of PTP in slave mode.

```
volatile bool g_first_announce_message_received = false;
volatile bool g_sync_acquired = false;
void slave_mode_basic_example (void)
{
 /* The PTP Instance must be opened before R_ETHER is opened. */
 fsp_err_t err = R_PTP_Open(&g_ptp_ctrl, &g_ptp_cfg);
    assert(FSP_SUCCESS == err);
 /* Configure the PTP MAC address. */
    err = R_PTP_MacAddrSet(&g_ptp_ctrl, g_ptp_mac_address);
    assert(FSP_SUCCESS == err);
 /* Configure the PTP Local Clock ID (Usually generated from MAC address). */
    err = R_PTP_LocalClockIdSet(&g_ptp_ctrl, g_ptp_clock_id);
    assert(FSP_SUCCESS == err);
 /* Open the r_ether_api instance. */
    err = R_ETHER_Open(&g_ether_ctrl, &g_ether_cfg);
    assert(FSP_SUCCESS == err);
 /* Wait for the link to be established. */
 do
    {
       err = R_ETHER_LinkProcess(&g_ether_ctrl);
    } while (FSP_SUCCESS != err);
 /* Set the PTP instance to passive state and listen for announce message. */
    err = R_PTP_PortStateSet(&g_ptp_ctrl, PTP_PORT_STATE_PASSIVE);
    assert(FSP_SUCCESS == err);
 /* Wait for the first announce message (This will provide the master clock ID). */
    uint32_t timeout = EXAMPLE_TIMEOUT;
 while (!g_first_announce_message_received && --timeout)
    {
 R_BSP_SoftwareDelay(1, BSP_DELAY_UNITS_SECONDS);
    }
```

```
    assert(0U != timeout);
 /* When a master clock is found, change to the slave state to start synchronizing
  * the local clock to the master clock. */
    err = R_PTP_PortStateSet(&g_ptp_ctrl, PTP_PORT_STATE_E2E_SLAVE);
    assert(FSP_SUCCESS == err);
 /* Wait for local clock to be synchronized with the master clock. */
    timeout = EXAMPLE_TIMEOUT;
 while (!g_sync_acquired && --timeout)
    {
 R_BSP_SoftwareDelay(1, BSP_DELAY_UNITS_SECONDS);
    }
    assert(0U != timeout);
 /* The local clock is now synchronized with the grand master clock. */
}
/* Callback called whenever a PTP event occurs. */
void g_ptp_slave_callback_example (ptp_callback_args_t * p_args)
{
 switch (p_args->event)
    {
 case PTP_EVENT_SYNC_ACQUIRED:
      {
 /* The offsetFromMaster value is now within the configured threshold to be
  * synchronized with the master clock.
  */
           g_sync_acquired = true;
 break;
      }
 case PTP_EVENT_MESSAGE_RECEIVED:
      {
 static ptp_message_t g_current_master_announce_message;
 switch (p_args->p_message->header.message_type)
      {
 case PTP_MESSAGE_TYPE_ANNOUNCE:
      {
```

```
                int8_t comparison = 0;
 if (!g_first_announce_message_received)
     {
 /* If this is the first announce packet, immediately switch to this master clock. */
                        comparison = 1;
                        g_first_announce_message_received = true;
     }
 else
     {
 /*
  * Run the "Best Master Clock Algorithm" to determine if the clock defined in this
announce
  * packet is better than the current master clock.
  */
 fsp_err_t err = R_PTP_BestMasterClock(&g_current_master_announce_message,
                                                          p_args->p_message,
                                                          &comparison);
     assert(FSP_SUCCESS == err);
     }
 if (1 == comparison)
     {
 /* Save the message as the new master announce message. */
                        g_current_master_announce_message = *p_args->p_message;
 /* Set the master clock ID and sourcePortID in the PTP instance so that it
  * synchronizes with the new best master clock.
  */
 fsp_err_t err = R_PTP_MasterClockIdSet(&g_ptp_ctrl,
                                                            g_current_master_annou
nce_message.header.clock_id,
                                                            g_current_master_annou
nce_message.header.source_port_id);
     assert(FSP_SUCCESS == err);
     }
 break;
```

```
     }
 default:
     {
 break;
     }
     }
 break;
     }
 default:
     {
 break;
     }
   }
}
```

Master Mode

This is a basic example of minimal use of PTP in master mode.

```
#define PTP_EXAMPLE_CURRENT_UTC_OFFSET (37)
void master_mode_basic_example (void)
{
 /* The PTP Instance must be opened before R_ETHER is opened. */
 fsp_err_t err = R_PTP_Open(&g_ptp_ctrl, &g_ptp_cfg);
    assert(FSP_SUCCESS == err);
 /* Configure the PTP MAC address. */
    err = R_PTP_MacAddrSet(&g_ptp_ctrl, g_ptp_mac_address);
    assert(FSP_SUCCESS == err);
 /* Configure the PTP Local Clock ID (Usually generated from MAC address). */
    err = R_PTP_LocalClockIdSet(&g_ptp_ctrl, g_ptp_clock_id);
    assert(FSP_SUCCESS == err);
 /* Get the current time from an external time source (Eg. RTC). */
 ptp_time_t current_time;
    get_current_time_example(&current_time);
 /* Set the PTP local time to the current time. */
```

```
    err = R_PTP_LocalClockValueSet(&g_ptp_ctrl, &current_time);
    assert(FSP_SUCCESS == err);
 /* Set the currentUtcOffset field in announce messages. */
    err = R_PTP_CurrentUtcOffsetSet(&g_ptp_ctrl, PTP_EXAMPLE_CURRENT_UTC_OFFSET);
    assert(FSP_SUCCESS == err);
 /* Set message flags in announce messages to indicate that the current UTC offset is
valid and that the PTP timescale is used. */
 ptp_message_flags_t flags;
    flags.value = 0;
    flags.value_b.currentUtcOffsetValid = 1;
    flags.value_b.ptpTimescale          = 1;
    err = R_PTP_MessageFlagsSet(&g_ptp_ctrl, PTP_MESSAGE_TYPE_ANNOUNCE, flags);
    assert(FSP_SUCCESS == err);
 /* Open the r_ether_api instance. */
    err = R_ETHER_Open(&g_ether_ctrl, &g_ether_cfg);
    assert(FSP_SUCCESS == err);
 /* Wait for the link to be established. */
 do
    {
       err = R_ETHER_LinkProcess(&g_ether_ctrl);
    } while (FSP_SUCCESS != err);
 /* Set the PTP instance to passive state and listen for announce message. */
    err = R_PTP_PortStateSet(&g_ptp_ctrl, PTP_PORT_STATE_E2E_MASTER);
    assert(FSP_SUCCESS == err);
 /*
  * The master clock is now operational and will automatically generate announce and
sync messages
  * as well as respond to delay_req messages.
  */
}
```

Send PTP Messages

This is a basic example of how to send PTP messages.

```
```

```
#define PTP_MANAGEMENT_ACTION_GET (0U)
#define PTP_TLV_TYPE_MANAGEMENT (1U)
#define PTP_TLV_MANAGEMENT_ID_CLOCK_DESCRIPTION (1U)
static uint32_t g_transmit_complete = 0U;
void send_message_example (void)
{
 static ptp_message_t message;
 static uint8_t       p_tlv_data[6];
    memset(&message, 0, sizeof(ptp_message_t));
 /* Fill in the required fields for the message header (Note that appropriate fields
will be endian swapped). */
    message.header.message_type = PTP_MESSAGE_TYPE_MANAGEMENT;
    message.header.version      = 2;
 /* The message length is the total number of bytes in the PTP message (Including the
message header). */
    message.header.message_length = (uint16_t) (sizeof(ptp_message_header_t) +
 sizeof(ptp_message_management_t) +
 sizeof(p_tlv_data));
    memcpy(message.header.clock_id, g_ptp_clock_id, sizeof(g_ptp_clock_id));
    message.header.control_field = PTP_CTRL_FIELD_MANAGEMENT;
 /* Fill in the required fields for the management message. */
    memcpy(message.management.target_clock_id, g_target_clock_id, sizeof
(g_target_clock_id));
    message.management.target_port_id         = 1;
    message.management.starting_boundary_hops = 1;
    message.management.boundary_hops          = 1;
    message.management.action                = PTP_MANAGEMENT_ACTION_GET;
 /*
  * Fill in TLV data (Note that TLV data is big endian).
  *
  * Type (Management)
  */
    p_tlv_data[0] = 0;
    p_tlv_data[1] = PTP_TLV_TYPE_MANAGEMENT;
```

```
 /* Length */
    p_tlv_data[2] = 0;

Data Structures

struct	ptp_instance_ctrl_t

Data Structure Documentation

◆ ptp_instance_ctrl_t

struct ptp_instance_ctrl_t		
PTP instance control block.		
Data Fields		
uint32_t	open	Marks if the instance has been opened.
uint32_t	tx_buffer_write_index	Index into the descriptor list to write the next packet.
uint32_t	tx_buffer_complete_index	Index into the descriptor list of the last transmitted packet.
uint32_t	rx_buffer_index	Index into the descriptor of the last received packet.
uint32_t	tslatr	Keep track of whether tslatr was set.
ptp_cfg_t const *	p_cfg	Pointer to the configuration structure.

Function Documentation

◆ R_PTP_Open()

fsp_err_t R_PTP_Open (ptp_ctrl_t *const *p_ctrl*, ptp_cfg_t const *const *p_cfg*)

This function initializes PTP. Implements ptp_api_t::open.

This function performs the following tasks:

- Performs parameter checking and processes error conditions.
- Configures the peripheral registers acording to the configuration.
- Initialize the control structure for use in other PTP Interface functions.

Return values

FSP_SUCCESS	The instance has been successfully configured.
FSP_ERR_ALREADY_OPEN	Instance was already initialized.
FSP_ERR_NOT_OPEN	The EDMAC instance was not opened correctly.
FSP_ERR_ASSERTION	An invalid argument was given in the configuration structure.

◆ R_PTP_MacAddrSet()

fsp_err_t R_PTP_MacAddrSet (ptp_ctrl_t *const *p_ctrl*, uint8_t const *const *p_mac_addr*)

This function sets the MAC address for the PTP instance. Implements ptp_api_t::macAddrSet.

Note

This function may only be called while the PTP instance is in ptp_port_state_t::PTP_PORT_STATE_DISABLE.

Return values

FSP_SUCCESS	The MAC address has been set.
FSP_ERR_NOT_OPEN	The instance has not been opened.
FSP_ERR_ASSERTION	An argument was NULL
FSP_ERR_INVALID_MODE	The instance is not in the correct state.

◆ R_PTP_IpAddrSet()

fsp_err_t R_PTP_IpAddrSet (ptp_ctrl_t *const *p_ctrl*, uint32_t *ip_addr*)

This function sets the IP address for the PTP instance. Implements ptp_api_t::ipAddrSet.

Note

This function may only be called while the PTP instance is in ptp_port_state_t::PTP_PORT_STATE_DISABLE.

Return values

FSP_SUCCESS	The IP address has been set.
FSP_ERR_NOT_OPEN	The instance has not been opened.
FSP_ERR_ASSERTION	An argument was NULL.
FSP_ERR_INVALID_MODE	The configured ptp_synfp_cfg_t::frame_format is not configured to use IP packets, or the instance is not in the correct state.

◆ R_PTP_LocalClockIdSet()

fsp_err_t R_PTP_LocalClockIdSet (ptp_ctrl_t *const *p_ctrl*, uint8_t const *const *p_clock_id*)

This function sets the local clock ID for the PTP instance. Implements ptp_api_t::localClockIdSet.

Note

This function may only be called while the PTP instance is in ptp_port_state_t::PTP_PORT_STATE_DISABLE. Typically the clock ID is derived from the MAC address (E.g. {b1,b2,b3,0xFF,0xFE,b4,b5,b6}).

Return values

FSP_SUCCESS	The local clock ID has been set.
FSP_ERR_NOT_OPEN	The instance has not been opened.
FSP_ERR_ASSERTION	An argument was NULL
FSP_ERR_INVALID_MODE	The instance is not in the correct state.

◆ R_PTP_MasterClockIdSet()

fsp_err_t R_PTP_MasterClockIdSet (ptp_ctrl_t *const *p_ctrl*, uint8_t const *const *p_clock_id*, uint16_t *port_id*)

This function sets the master clock ID and port ID that the local clock will synchronize with. Implements ptp_api_t::masterClockIdSet.

Return values

FSP_SUCCESS	The master clock ID and port ID have been set.
FSP_ERR_NOT_OPEN	The instance has not been opened.
FSP_ERR_ASSERTION	An argument was NULL

◆ R_PTP_MessageFlagsSet()

fsp_err_t R_PTP_MessageFlagsSet (ptp_ctrl_t *const *p_ctrl*, ptp_message_type_t *message_type*, ptp_message_flags_t *flags*)

This function sets the flags field for the given message type. Implements ptp_api_t::messageFlagsSet.

Return values

FSP_SUCCESS	The master clock ID and port ID have been set.
FSP_ERR_NOT_OPEN	The instance has not been opened.
FSP_ERR_ASSERTION	An argument was NULL or invalid.

◆ R_PTP_CurrentUtcOffsetSet()

fsp_err_t R_PTP_CurrentUtcOffsetSet (ptp_ctrl_t *const *p_ctrl*, uint16_t *offset*)

This function sets the currentUtcOffset value in announce messages. ptp_api_t::currentUtcOffsetSet .

Return values

FSP_SUCCESS	The currentUtcOffset has been updated.
FSP_ERR_NOT_OPEN	The instance has not been opened.
FSP_ERR_ASSERTION	An argument was NULL or invalid.

◆ R_PTP_PortStateSet()

fsp_err_t R_PTP_PortStateSet (ptp_ctrl_t *const *p_ctrl*, uint32_t *state*)

This function changes the current state of the PTP instance. Implements ptp_api_t::portStateSet.

Return values

FSP_SUCCESS	The instance will transition to the new state.
FSP_ERR_NOT_OPEN	The instance has not been opened.
FSP_ERR_ASSERTION	An argument was NULL

◆ R_PTP_MessageSend()

fsp_err_t R_PTP_MessageSend (ptp_ctrl_t *const *p_ctrl*, ptp_message_t const *const *p_message*, uint8_t const *const *p_tlv_data*, uint16_t *tlv_data_size*)

This function sends a PTP message. ptp_api_t::messageSend.

Return values

FSP_SUCCESS	The packet has been written to the transmit descriptor.
FSP_ERR_NOT_OPEN	The instance has not been opened.
FSP_ERR_ASSERTION	An argument was NULL or invalid.
FSP_ERR_ETHER_ERROR_TRANSMIT_BUFFER_FULL	There is no space for the packet in the transmit queue.

◆ R_PTP_LocalClockValueSet()

fsp_err_t R_PTP_LocalClockValueSet (ptp_ctrl_t *const *p_ctrl*, ptp_time_t const *const *p_time*)

This function sets the local clock value. Implements ptp_api_t::localClockValueSet.

Return values

FSP_SUCCESS	The local clock value has been set.
FSP_ERR_NOT_OPEN	The instance has not been opened.
FSP_ERR_ASSERTION	An argument was NULL or invalid.

◆ R_PTP_LocalClockValueGet()

fsp_err_t R_PTP_LocalClockValueGet (ptp_ctrl_t *const *p_ctrl*, ptp_time_t *const *p_time*)

This function gets the local clock value. Implements ptp_api_t::localClockValueGet.

Return values

FSP_SUCCESS	The local clock value has been written in p_time.
FSP_ERR_NOT_OPEN	The instance has not been opened.
FSP_ERR_ASSERTION	An argument was NULL

◆ R_PTP_PulseTimerCommonConfig()

fsp_err_t R_PTP_PulseTimerCommonConfig (ptp_ctrl_t *const *p_ctrl*, ptp_pulse_timer_common_cfg_t *const *p_timer_cfg*)

This function configures IPLS IRQ settings that are common to all pulse timer channels. Implements ptp_api_t::pulseTimerCommonConfig.

Return values

FSP_SUCCESS	The pulse timer has been enabled.
FSP_ERR_NOT_OPEN	The instance has not been opened.
FSP_ERR_ASSERTION	An argument was NULL or invalid.

◆ R_PTP_PulseTimerEnable()

fsp_err_t R_PTP_PulseTimerEnable (ptp_ctrl_t *const *p_ctrl*, uint32_t *channel*, ptp_pulse_timer_cfg_t *const *p_timer_cfg*)

This function enables a pulse timer channel. Implements ptp_api_t::pulseTimerEnable.

Return values

FSP_SUCCESS	The pulse timer has been enabled.
FSP_ERR_NOT_OPEN	The instance has not been opened.
FSP_ERR_ASSERTION	An argument was NULL or invalid.

◆ R_PTP_PulseTimerDisable()

fsp_err_t R_PTP_PulseTimerDisable (ptp_ctrl_t *const *p_ctrl*, uint32_t *channel*)

This function disables a pulse timer channel. Implements ptp_api_t::pulseTimerDisable.

Return values

FSP_SUCCESS	The pulse timer has been disabled.
FSP_ERR_NOT_OPEN	The instance has not been opened.
FSP_ERR_ASSERTION	An argument was NULL or invalid.

◆ R_PTP_Close()

fsp_err_t R_PTP_Close (ptp_ctrl_t *const *p_ctrl*)

Disable the PTP instance. Implements ptp_api_t::close.

Return values

FSP_SUCCESS	The pulse timer has been disabled.
FSP_ERR_NOT_OPEN	The instance has not been opened.
FSP_ERR_ASSERTION	An argument was NULL or invalid.

◆ R_PTP_BestMasterClock()

fsp_err_t R_PTP_BestMasterClock (ptp_message_t const *const *p_announce1*, ptp_message_t const *const *p_announce2*, int8_t *const *p_comparison*)

This function compares two clocks to determine which one is the better master clock.

p_comparison:

- Set to -1 if p_announce1 defines the best master clock.
- Set to 1 if p_announce2 defines the best master clock.
- Set to 0 if p_announce1 and p_announce2 define the same clock.

Return values

FSP_SUCCESS	The valid result has been written to p_use_announce_clock.
FSP_ERR_ASSERTION	An argument was NULL.

4.2.49 Quad Serial Peripheral Interface Flash (r_qspi)

fsp_err_t	R_QSPI_AutoCalibrate (spi_flash_ctrl_t *p_ctrl)

Detailed Description

Driver for the QSPI peripheral on RA MCUs. This module implements the SPI Flash Interface.

Overview

Features

The QSPI driver has the following key features:

- Memory mapped read access to the QSPI flash

- Programming the QSPI flash device
- Erasing the QSPI flash device
- Sending device specific commands and reading back responses
- Entering and exiting QPI mode
- Entering and exiting XIP mode
- 3 or 4 byte addressing

Configuration

Build Time Configurations for r_qspi

The following build time configurations are defined in driver/r_qspi_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Support Multiple Line Program in Extended SPI Mode	• Enabled • Disabled	Disabled	If selected code for programming on multiple lines in extended SPI mode is included in the build.

Configurations for Storage > QSPI (r_qspi)

This module can be added to the Stacks tab via New Stack > Storage > QSPI (r_qspi).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_qspi0	Module name.
General > SPI Protocol	• Extended SPI • QPI	Extended SPI	Select the initial SPI protocol. SPI protocol can be changed in R_QSPI_Direct().
General > Address Bytes	• 3 • 4 • 4 with 4-byte read code	3	Select the number of address bytes. Selecting '4 with 4-byte read code' converts the default read code determined in Read Mode to the 4-byte version. If 4-byte mode is selected without using 4-byte commands, the application must issue the EN4B command using R_QSPI_Direct().
General > Read Mode	• Standard Read • Fast Read	Fast Read Quad I/O	Select the read mode for memory mapped

	• Fast Read Dual Output • Fast Read Dual I/O • Fast Read Quad Output • Fast Read Quad I/O		access.
General > Dummy Clocks for Fast Read	Refer to the RA Configuration tool for available options.	Default	Select the number of dummy clocks for fast read operations. Default is 6 clocks for Fast Read Quad I/O, 4 clocks for Fast Read Dual I/O, and 8 clocks for other fast read instructions including Fast Read Quad Output, Fast Read Dual Output, and Fast Read
General > Page Size Bytes	Must be an integer greater than 0	256	The maximum number of bytes allowed for a single write.
Command Definitions > Page Program Command	Must be an 8-bit QSPI Page Program Command under Command Definitions	0x02	The command to program a page. If 'Support Multiple Line Program in Extended SPI Mode' is Enabled, this command must use the same number of data lines as the selected read mode.
Command Definitions > Page Program Address Lines	• 1 • 2 • 4	1	Select the number of lines to use for the address bytes during write operations. This can be determined by referencing the datasheet for the external QSPI. It should either be 1 or match the number of data lines used for memory mapped fast read operations.
Command Definitions > Write Enable Command	Must be an 8-bit QSPI Write Enable Command under Command Definitions	0x06	The command to enable write.
Command Definitions > Status Command	Must be an 8-bit QSPI Status Command under	0x05	The command to query the status of a write or

	Command Definitions		erase command.
Command Definitions > Write Status Bit	Must be an integer between 0 and 7	0	Which bit contains the write in progress status returned from the Write Status Command.
Command Definitions > Sector Erase Command	Must be an 8-bit QSPI Sector Erase Command under Command Definitions	0x20	The command to erase a sector. Set Sector Erase Size to 0 if unused.
Command Definitions > Sector Erase Size	Must be an integer greater than or equal to 0	4096	The sector erase size. Set Sector Erase Size to 0 if Sector Erase is not supported.
Command Definitions > Block Erase Command	Must be an 8-bit QSPI Block Erase Command under Command Definitions	0xD8	The command to erase a block. Set Block Erase Size to 0 if unused.
Command Definitions > Block Erase Size	Must be an integer greater than or equal to 0	65536	The block erase size. Set Block Erase Size to 0 if Block Erase is not supported.
Command Definitions > Block Erase 32KB Command	Must be an 8-bit QSPI Block Erase 32KB Command under Command Definitions	0x52	The command to erase a 32KB block. Set Block Erase Size to 0 if unused.
Command Definitions > Block Erase 32KB Size	Must be an integer greater than or equal to 0	32768	The block erase 32KB size. Set Block Erase 32KB Size to 0 if Block Erase 32KB is not supported.
Command Definitions > Chip Erase Command	Must be an 8-bit QSPI Chip Erase Command under Command Definitions	0xC7	The command to erase the entire chip. Set Chip Erase Command to 0 if unused.
Command Definitions > XIP Enter M7-M0	Must be an 8-bit QSPI XIP Enter M7-M0 command under Command Definitions	0x20	How to set M7-M0 to enter XIP mode.
Command Definitions > XIP Exit M7-M0	Must be an 8-bit QSPI XIP Exit M7-M0 command under Command Definitions	0xFF	How to set M7-M0 exit XIP mode.
Bus Timing > QSPKCLK Divisor	Refer to the RA Configuration tool for available options.	2	Select the divisor to apply to PCLK to get QSPCLK.
Bus Timing > Minimum	Refer to the RA	4 QSPCLK	Define the minimum

QSSL Deselect Cycles	Configuration tool for available options.	number of QSPCLK cycles for QSSL to remain high beween operations.

Clock Configuration

The QSPI clock is derived from PCLKA.

Pin Configuration

The following pins are available to connect to an external QSPI device:

- QSPCLK: QSPI clock output
- QSSL: QSPI slave select
- QIO0: Data 0 I/O
- QIO1: Data 1 I/O
- QIO2: Data 2 I/O
- QIO3: Data 3 I/O

Note

It is recommended to configure the pins with IOPORT_CFG_DRIVE_HIGH.

Usage Notes

QSPI Memory Mapped Access

After R_QSPI_Open() completes successfully, the QSPI flash device contents are mapped to address 0x60000000 and can be read like on-chip flash.

Limitations

Developers should be aware of the following limitations when using the QSPI driver:

- Only P305-P310 are currently supported by the J-Link driver to flash the QSPI.
- The default J-Link downloader requires the device to be in extended SPI mode (not QPI mode).

Examples

Basic Example

This is a basic example of minimal use of the QSPI in an application.

```
#define QSPI_EXAMPLE_DATA_LENGTH (1024)
uint8_t g_dest[QSPI_EXAMPLE_DATA_LENGTH];
/* Place data in the .qspi_flash section to flash it during programming. */
const uint8_t g_src[QSPI_EXAMPLE_DATA_LENGTH] BSP_PLACE_IN_SECTION(".qspi_flash") =
"ABCDEFGHIJKLMNOPQRSTUVWXYZ";
/* Place code in the .code_in_qspi section to flash it during programming. */
```

```
void r_qspi_example_function(void) BSP_PLACE_IN_SECTION(".code_in_qspi")
__attribute__((noinline));
void r_qspi_example_function (void)
{
 /* Add code here. */
}
void r_qspi_basic_example (void)
{
 /* Open the QSPI instance. */
 fsp_err_t err = R_QSPI_Open(&g_qspi0_ctrl, &g_qspi0_cfg);
    assert(FSP_SUCCESS == err);
 /* (Optional) Send device specific initialization commands. */
    r_qspi_example_init();
 /* After R_QSPI_Open() and any required device specific intiialization, data can be
read directly from the QSPI flash. */
    memcpy(&g_dest[0], &g_src[0], QSPI_EXAMPLE_DATA_LENGTH);
 /* After R_QSPI_Open() and any required device specific intiialization, functions in
the QSPI flash can be called. */
    r_qspi_example_function();
}
```

Initialization Command Structure Example

This is an example of the types of commands that can be used to initialize the QSPI.

```
#define QSPI_COMMAND_WRITE_ENABLE (0x06U)
#define QSPI_COMMAND_WRITE_STATUS_REGISTER (0x01U)
#define QSPI_COMMAND_ENTER_QPI_MODE (0x38U)
#define QSPI_EXAMPLE_STATUS_REGISTER_1 (0x40)
#define QSPI_EXAMPLE_STATUS_REGISTER_2 (0x00)
static void r_qspi_example_init (void)
{
 /* Write status registers */
 /* Write one byte to enable writing to the status register, then deassert QSSL. */
    uint8_t   data[4];
```

```
 fsp_err_t err;
    data[0] = QSPI_COMMAND_WRITE_ENABLE;
    err    = R_QSPI_DirectWrite(&g_qspi0_ctrl, &data[0], 1, false);
    assert(FSP_SUCCESS == err);
 /* Write 3 bytes, including the write status register command followed by values for
both status registers. In the
  * status registers, set QE to 1 and other bits to their default setting. After all
data is written, deassert the
  * QSSL line. */
    data[0] = QSPI_COMMAND_WRITE_STATUS_REGISTER;
    data[1] = QSPI_EXAMPLE_STATUS_REGISTER_1;
    data[2] = QSPI_EXAMPLE_STATUS_REGISTER_2;
    err    = R_QSPI_DirectWrite(&g_qspi0_ctrl, &data[0], 3, false);
    assert(FSP_SUCCESS == err);
 /* Wait for status register to update. */
 spi_flash_status_t status;
 do
    {
       (void) R_QSPI_StatusGet(&g_qspi0_ctrl, &status);
    } while (true == status.write_in_progress);
 /* Write one byte to enter QSPI mode, then deassert QSSL. After entering QPI mode on
the device, change the SPI
  * protocol to QPI mode on the MCU peripheral. */
    data[0] = QSPI_COMMAND_ENTER_QPI_MODE;
    err    = R_QSPI_DirectWrite(&g_qspi0_ctrl, &data[0], 1, false);
    assert(FSP_SUCCESS == err);
    (void) R_QSPI_SpiProtocolSet(&g_qspi0_ctrl, SPI_FLASH_PROTOCOL_QPI);
}
```

Reading Status Register Example (R_QSPI_DirectWrite, R_QSPI_DirectRead)

This is an example of using R_QSPI_DirectWrite followed by R_QSPI_DirectRead to send the read status register command and read back the status register from the device.

```
#define QSPI_COMMAND_READ_STATUS_REGISTER (0x05U)
```

```
void r_qspi_direct_example (void)
{
 /* Read a status register. */
 /* Write one byte to read the status register. Do not deassert QSSL. */
    uint8_t   data;
 fsp_err_t err;
    data = QSPI_COMMAND_READ_STATUS_REGISTER;
    err = R_QSPI_DirectWrite(&g_qspi0_ctrl, &data, 1, true);
    assert(FSP_SUCCESS == err);
 /* Read one byte. After all data is read, deassert the QSSL line. */
    err = R_QSPI_DirectRead(&g_qspi0_ctrl, &data, 1);
    assert(FSP_SUCCESS == err);
 /* Status register contents are available in variable 'data'. */
}
```

Querying Device Size Example (R_QSPI_DirectWrite, R_QSPI_DirectRead)

This is an example of using R_QSPI_DirectWrite followed by R_QSPI_DirectRead to query the device size.

```
#define QSPI_EXAMPLE_COMMAND_READ_ID (0x9F)
#define QSPI_EXAMPLE_COMMAND_READ_SFDP (0x5A)
void r_qspi_size_example (void)
{
 /* Many QSPI devices support more than one way to query the device size. Consult the
datasheet for your
  * QSPI device to determine which of these methods are supported (if any). */
    uint32_t device_size_bytes;
 fsp_err_t err;
#ifdef QSPI_EXAMPLE_COMMAND_READ_ID
 /* This example shows how to get the device size by reading the manufacturer ID. */
    uint8_t data[4];
    data[0] = QSPI_EXAMPLE_COMMAND_READ_ID;
    err    = R_QSPI_DirectWrite(&g_qspi0_ctrl, &data[0], 1, true);
    assert(FSP_SUCCESS == err);
```

```
 /* Read 3 bytes. The third byte often represents the size of the QSPI, where the
size of the QSPI = 2 ^ N. */
    err = R_QSPI_DirectRead(&g_qspi0_ctrl, &data[0], 3);
    assert(FSP_SUCCESS == err);
    device_size_bytes = 1U << data[2];
 FSP_PARAMETER_NOT_USED(device_size_bytes);
#endif
#ifdef QSPI_EXAMPLE_COMMAND_READ_SFDP
 /* Read the JEDEC SFDP header to locate the JEDEC flash parameters table. Reference
JESD216 "Serial Flash
  * Discoverable Parameters (SFDP)". */
 /* Send the standard 0x5A command followed by 3 address bytes (SFDP header is at
address 0). */
    uint8_t buffer[16];
    memset(&buffer[0], 0, sizeof(buffer));
    buffer[0] = QSPI_EXAMPLE_COMMAND_READ_SFDP;
    err       = R_QSPI_DirectWrite(&g_qspi0_ctrl, &buffer[0], 4, true);
    assert(FSP_SUCCESS == err);
 /* Read out 16 bytes (1 dummy byte followed by 15 data bytes). */
    err = R_QSPI_DirectRead(&g_qspi0_ctrl, &buffer[0], 16);
    assert(FSP_SUCCESS == err);
 /* Read the JEDEC flash parameters to locate the memory size. */
 /* Send the standard 0x5A command followed by 3 address bytes (located in big endian
order at offset 0xC-0xE).
  * These bytes are accessed at 0xD-0xF because the first byte read is a dummy byte.
*/
    buffer[0] = QSPI_EXAMPLE_COMMAND_READ_SFDP;
    buffer[1] = buffer[0xF];
    buffer[2] = buffer[0xE];
    buffer[3] = buffer[0xD];
    err       = R_QSPI_DirectWrite(&g_qspi0_ctrl, &buffer[0], 4, true);
    assert(FSP_SUCCESS == err);
 /* Read out 9 bytes (1 dummy byte followed by 8 data bytes). */
    err = R_QSPI_DirectRead(&g_qspi0_ctrl, &buffer[0], 9);
```

```
    assert(FSP_SUCCESS == err);
 /* Read the memory density (located in big endian order at offset 0x4-0x7). These
bytes are accessed at 0x5-0x8
  * because the first byte read is a dummy byte. */
    uint32_t memory_density = (uint32_t) ((buffer[8] << 24) | (buffer[7] << 16) |
(buffer[6] << 8) | buffer[5]);
 if ((1U << 31) & memory_density)
    {
 /* For densities 4 gigabits and above, bit-31 is set to 1b. The field 30:0 defines
'N' where the density is
  * computed as 2^N bits (N must be >= 32). This code subtracts 3 from N to divide by
8 to get the size in
  * bytes instead of bits. */
       device_size_bytes = 1U << ((memory_density & ~(1U << 31)) - 3U);
    }
 else
    {

QSPI_QSPCLK_DIV_42	QSPCLK = PCLK / 42.
QSPI_QSPCLK_DIV_44	QSPCLK = PCLK / 44.
QSPI_QSPCLK_DIV_46	QSPCLK = PCLK / 46.
QSPI_QSPCLK_DIV_48	QSPCLK = PCLK / 48.

Function Documentation

◆ R_QSPI_Open()

fsp_err_t R_QSPI_Open (spi_flash_ctrl_t * *p_ctrl*, spi_flash_cfg_t const *const *p_cfg*)

Open the QSPI driver module. After the driver is open, the QSPI can be accessed like internal flash memory starting at address 0x60000000.

Implements spi_flash_api_t::open.

Return values

FSP_SUCCESS	Configuration was successful.
FSP_ERR_ASSERTION	The parameter p_instance_ctrl or p_cfg is NULL.
FSP_ERR_ALREADY_OPEN	Driver has already been opened with the same p_instance_ctrl.

◆ R_QSPI_Close()

fsp_err_t R_QSPI_Close (spi_flash_ctrl_t * *p_ctrl*)

Close the QSPI driver module.

Implements spi_flash_api_t::close.

Return values

FSP_SUCCESS	Configuration was successful.
FSP_ERR_ASSERTION	p_instance_ctrl is NULL.
FSP_ERR_NOT_OPEN	Driver is not opened.

◆ R_QSPI_DirectWrite()

fsp_err_t R_QSPI_DirectWrite (spi_flash_ctrl_t * *p_ctrl*, uint8_t const *const *p_src*, uint32_t const *bytes*, bool const *read_after_write*)

Writes raw data directly to the QSPI.

Implements spi_flash_api_t::directWrite.

Return values

FSP_SUCCESS	The flash was programmed successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	Driver is not opened.
FSP_ERR_INVALID_MODE	This function can't be called when XIP mode is enabled.
FSP_ERR_DEVICE_BUSY	The device is busy.

◆ R_QSPI_DirectRead()

fsp_err_t R_QSPI_DirectRead (spi_flash_ctrl_t * *p_ctrl*, uint8_t *const *p_dest*, uint32_t const *bytes*)

Reads raw data directly from the QSPI. This API can only be called after R_QSPI_DirectWrite with read_after_write set to true.

Implements spi_flash_api_t::directRead.

Return values

FSP_SUCCESS	The flash was programmed successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	Driver is not opened.
FSP_ERR_INVALID_MODE	This function must be called after R_QSPI_DirectWrite with read_after_write set to true.

◆ R_QSPI_SpiProtocolSet()

fsp_err_t R_QSPI_SpiProtocolSet (spi_flash_ctrl_t * *p_ctrl*, spi_flash_protocol_t *spi_protocol*)

Sets the SPI protocol.

Implements spi_flash_api_t::spiProtocolSet.

Return values

FSP_SUCCESS	SPI protocol updated on MCU peripheral.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	Driver is not opened.
FSP_ERR_INVALID_ARGUMENT	Invalid SPI protocol requested.

◆ R_QSPI_XipEnter()

fsp_err_t R_QSPI_XipEnter (spi_flash_ctrl_t * *p_ctrl*)

Enters XIP (execute in place) mode.

Implements spi_flash_api_t::xipEnter.

Return values

FSP_SUCCESS	The flash was programmed successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	Driver is not opened.

◆ R_QSPI_XipExit()

fsp_err_t R_QSPI_XipExit (spi_flash_ctrl_t * *p_ctrl*)

Exits XIP (execute in place) mode.

Implements spi_flash_api_t::xipExit.

Return values

FSP_SUCCESS	The flash was programmed successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	Driver is not opened.

◆ R_QSPI_Write()

fsp_err_t R_QSPI_Write (spi_flash_ctrl_t * *p_ctrl*, uint8_t const *const *p_src*, uint8_t *const *p_dest*, uint32_t *byte_count*)

Program a page of data to the flash.

Implements spi_flash_api_t::write.

Return values

FSP_SUCCESS	The flash was programmed successfully.
FSP_ERR_ASSERTION	p_instance_ctrl, p_dest or p_src is NULL, or byte_count crosses a page boundary.
FSP_ERR_NOT_OPEN	Driver is not opened.
FSP_ERR_INVALID_MODE	This function can't be called when XIP mode is enabled.
FSP_ERR_DEVICE_BUSY	The device is busy.

◆ R_QSPI_Erase()

fsp_err_t R_QSPI_Erase (spi_flash_ctrl_t * *p_ctrl*, uint8_t *const *p_device_address*, uint32_t *byte_count*)

Erase a block or sector of flash. The byte_count must exactly match one of the erase sizes defined in spi_flash_cfg_t. For chip erase, byte_count must be SPI_FLASH_ERASE_SIZE_CHIP_ERASE.

Implements spi_flash_api_t::erase.

Return values

FSP_SUCCESS	The command to erase the flash was executed successfully.
FSP_ERR_ASSERTION	p_instance_ctrl or p_device_address is NULL, or byte_count doesn't match an erase size defined in spi_flash_cfg_t, or device is in XIP mode.
FSP_ERR_NOT_OPEN	Driver is not opened.
FSP_ERR_INVALID_MODE	This function can't be called when XIP mode is enabled.
FSP_ERR_DEVICE_BUSY	The device is busy.

◆ R_QSPI_StatusGet()

fsp_err_t R_QSPI_StatusGet (spi_flash_ctrl_t * *p_ctrl*, spi_flash_status_t *const *p_status*)

Gets the write or erase status of the flash.

Implements spi_flash_api_t::statusGet.

Return values

FSP_SUCCESS	The write status is in p_status.
FSP_ERR_ASSERTION	p_instance_ctrl or p_status is NULL.
FSP_ERR_NOT_OPEN	Driver is not opened.
FSP_ERR_INVALID_MODE	This function can't be called when XIP mode is enabled.

◆ R_QSPI_BankSet()

fsp_err_t R_QSPI_BankSet (spi_flash_ctrl_t * *p_ctrl*, uint32_t *bank*)

Selects the bank to access. A bank is a 64MB sliding access window into the QSPI device flash memory space. To access chip address 0x4000000, select bank 1, then read from internal flash address 0x60000000. To access chip address 0x8001000, select bank 2, then read from internal flash address 0x60001000.

This function is not required for memory devices less than or equal to 512 Mb (64MB).

Implements spi_flash_api_t::bankSet.

Return values

FSP_SUCCESS	Bank successfully selected.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	Driver is not opened.

◆ R_QSPI_DirectTransfer()

fsp_err_t R_QSPI_DirectTransfer (spi_flash_ctrl_t * *p_ctrl*, spi_flash_direct_transfer_t *const *p_transfer*, spi_flash_direct_transfer_dir_t *direction*)

Read/Write raw data directly with the OctaFlash/OctaRAM device. Unsupported by QSPI.

Implements spi_flash_api_t::directTransfer.

Return values

FSP_ERR_UNSUPPORTED	API not supported by QSPI.

◆ R_QSPI_AutoCalibrate()

fsp_err_t R_QSPI_AutoCalibrate (spi_flash_ctrl_t * *p_ctrl*)
Auto-calibrate the OctaRAM device using the preamble pattern. Unsupported by QSPI. Implements spi_flash_api_t::autoCalibrate. **Return values** FSP_ERR_UNSUPPORTED — API not supported by QSPI

4.2.50 Realtime Clock (r_rtc)

Detailed Description

Driver for the RTC peripheral on RA MCUs. This module implements the RTC Interface.

Overview

The RTC HAL module configures the RTC module and controls clock, calendar and alarm functions. A callback can be used to respond to the alarm and periodic interrupt.

Features

- RTC time and date get and set.
- RTC time and date alarm get and set.
- RTC alarm and periodic event notification.

The RTC HAL module supports three different interrupt types:

- An alarm interrupt generated on a match of any combination of year, month, day, day of the week, hour, minute or second
- A periodic interrupt generated every 2, 1, 1/2, 1/4, 1/8, 1/16, 1/32, 1/64, 1/128, or 1/256 second(s)
- A carry interrupt is used internally when reading time from the RTC calender to get accurant time readings.

Note

See section "23.3.5 Reading 64-Hz Counter and Time" of the RA6M3 manual R01UH0886EJ0100 for more details.

A user-defined callback function can be registered (in the rtc_api_t::open API call) and will be called from the interrupt service routine (ISR) for alarm and periodic interrupt. When called, it is passed a pointer to a structure (rtc_callback_args_t) that holds a user-defined context pointer and an indication of which type of interrupt was fired.

Date and Time validation

"Parameter Checking" needs to be enabled if date and time validation is required for calendarTimeSet and calendarAlarmSet APIs. If "Parameter Checking" is enabled, the 'day of the week' field is automatically calculated and updated by the driver for the provided date. When using the calendarAlarmSet API, only the fields which have their corresponding match flag set are written to the registers. Other register fields are reset to default value.

Sub-Clock error adjustment (Time Error Adjustment Function)

The time error adjustment function is used to correct errors, running fast or slow, in the time caused by variation in the precision of oscillation by the sub-clock oscillator. Because 32,768 cycles of the sub-clock oscillator constitute 1 second of operation when the sub-clock oscillator is selected, the clock runs fast if the sub-clock frequency is high and slow if the sub-clock frequency is low. The time error adjustment functions include:

- Automatic adjustment
- Adjustment by software

The error adjustment is reset every time RTC is reconfigured or time is set.

Note

RTC driver configurations do not do error adjustment internally while initiliazing the driver. Application must

make calls to the error adjustment api's for desired adjustment. See section 26.3.8 "Time Error Adjustment Function" of the RA6M3 manual R01UH0886EJ0100) for more details on this feature

Configuration

Build Time Configurations for r_rtc

The following build time configurations are defined in fsp_cfg/r_rtc_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Timers > Realtime Clock (r_rtc)

This module can be added to the Stacks tab via New Stack > Timers > Realtime Clock (r_rtc). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_rtc0	Module name.
Clock Source	• Sub-Clock • LOCO	LOCO	Select the RTC clock source.
Frequency Comparision Value (LOCO)	Value must be a positive integer between 7 and 511	255	Frequency comparison value when using LOCO
Automatic Adjustment Mode	• Enabled • Disabled	Enabled	Enable/ Disable the Error Adjustment mode
Automatic Adjustment Period	• 10 Seconds • 1 Minute • NONE	10 Seconds	Select the Error Adjustment Period for Automatic Adjustment
Adjustment Type (Plus-Minus)	• NONE • Addition • Subtraction	NONE	Select the Error Adjustment type
Error Adjustment Value	Value must be a positive integer less than equal to 63	0	Specify the Adjustment Value (the number of sub-clock cycles) from the prescaler
Callback	Name must be a valid C symbol	NULL	A user callback function can be provided. If this callback function is provided, it will be called from the interrupt service routine (ISR).

Alarm Interrupt Priority	MCU Specific Options	Select the alarm interrupt priority.
Period Interrupt Priority	MCU Specific Options	Select the period interrupt priority.
Carry Interrupt Priority	MCU Specific Options	Select the carry interrupt priority.

Note

See 23.2.20 Frequency Register (RFRH/RFRL) of the RA6M3 manual R01UH0886EJ0100) for more details

Interrupt Configuration

To activate interrupts for the RTC module, the desired interrupts must be enabled, The underlying implementation will be expected to handle any interrupts it can support and notify higher layers via callback.

Clock Configuration

The RTC HAL module can use the following clock sources:

- LOCO (Low Speed On-Chip Oscillator) with less accuracy
- Sub-clock oscillator with increased accuracy

The LOCO is the default selection during configuration.

Pin Configuration

This module does not use I/O pins.

Usage Notes

System Initialization

- RTC driver does not start the sub-clock. The application is responsible for ensuring required clocks are started and stable before accessing MCU peripheral registers.

Warning

The subclock can take seconds to stabilize. The RA startup code does not wait for subclock stabilization unless the subclock is the main clock source. When running AGT or RTC off the subclock, the application must ensure the subclock is stable before starting operation.

- Carry interrupt priority must be set to avoid incorrect time returned from calendarTimeGet API during roll-over.
- Even when only running in Periodic Interrupt mode R_RTC_CalendarTimeSet must be called successfully to start the RTC.
- When handling power-on reset events in software, the application must ensure that the RTC is stopped prior to clearing the power-on reset flag (RSTSRO.PORF).

Limitations

Developers should be aware of the following limitations when using the RTC:

- R_RTC operates in 24-hour mode.

- Binary-count mode is not supported.
- The R_RTC_CalendarTimeGet() cannot be used from an interrupt that has higher priority than the carry interrupt. Also, it must not be called with interrupts disabled globally, as this API internally uses carry interrupt for its processing. API may return incorrect time if this is done.

Examples

RTC Basic Example

This is a basic example of minimal use of the RTC in an application.

```
/* rtc_time_t is an alias for the C Standard time.h struct 'tm' */
rtc_time_t set_time =
{
    .tm_sec = 10,
    .tm_min = 11,
    .tm_hour = 12,
    .tm_mday = 6,
    .tm_wday = 3,
    .tm_mon = 11,
    .tm_year = YEARS_SINCE_1900,
};
rtc_time_t get_time;
void rtc_example ()
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initialize the RTC module */
    err = R_RTC_Open(&g_rtc0_ctrl, &g_rtc0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Set the calendar time */
 R_RTC_CalendarTimeSet(&g_rtc0_ctrl, &set_time);
 /* Get the calendar time */
 R_RTC_CalendarTimeGet(&g_rtc0_ctrl, &get_time);
}
```

RTC Periodic interrupt example

This is an example of periodic interrupt in RTC.

```
void rtc_periodic_irq_example ()
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initialize the RTC module*/
    err = R_RTC_Open(&g_rtc0_ctrl, &g_rtc0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* R_RTC_CalendarTimeSet must be called at least once to start the RTC */
 R_RTC_CalendarTimeSet(&g_rtc0_ctrl, &set_time);
 /* Set the periodic interrupt rate to 1 second */
 R_RTC_PeriodicIrqRateSet(&g_rtc0_ctrl, RTC_PERIODIC_IRQ_SELECT_1_SECOND);
 /* Wait for the periodic interrupt */
 while (1)
    {
 /* Wait for interrupt */
    }
}
```

RTC Alarm interrupt example

This is an example of alarm interrupt in RTC.

```
void rtc_alarm_irq_example ()
{
 fsp_err_t err = FSP_SUCCESS;
 /*Initialize the RTC module*/
    err = R_RTC_Open(&g_rtc0_ctrl, &g_rtc0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 R_RTC_CalendarTimeSet(&g_rtc0_ctrl, &set_time1.time);
 R_RTC_CalendarAlarmSet(&g_rtc0_ctrl, &set_time1);
 /* Wait for the Alarm interrupt */
 while (1)
    {
```

```
 /* Wait for interrupt */
    }
}
```

RTC Error Adjustment example

This is an example of modifying error adjustment in RTC.

```
void rtc_erroradj_example ()
{
 fsp_err_t err = FSP_SUCCESS;
 /*Initialize the RTC module*/
 R_RTC_Open(&g_rtc0_ctrl, &g_rtc1_cfg);
 R_RTC_CalendarTimeSet(&g_rtc0_ctrl, &set_time1.time);
 /* Modify Error Adjustment after RTC is running */
    err = R_RTC_ErrorAdjustmentSet(&g_rtc0_ctrl, &err_cfg2);
    assert(FSP_SUCCESS == err);
}
```

Data Structures

struct	rtc_instance_ctrl_t

Data Structure Documentation

◆ rtc_instance_ctrl_t

struct rtc_instance_ctrl_t	
Channel control block. DO NOT INITIALIZE. Initialization occurs when rtc_api_t::open is called	
Data Fields	
uint32_t	open
	Whether or not driver is open.
const rtc_cfg_t *	p_cfg
	Pointer to initial configurations.
volatile bool	carry_isr_triggered

	Was the carry isr triggered.

Function Documentation

◆ R_RTC_Open()

fsp_err_t R_RTC_Open (rtc_ctrl_t *const *p_ctrl*, rtc_cfg_t const *const *p_cfg*)

Opens and configures the RTC driver module. Implements rtc_api_t::open. Configuration includes clock source, and interrupt callback function.

Example:

```
/* Initialize the RTC module */
   err = R_RTC_Open(&g_rtc0_ctrl, &g_rtc0_cfg);
```

Return values

FSP_SUCCESS	Initialization was successful and RTC has started.
FSP_ERR_ASSERTION	Invalid p_ctrl or p_cfg pointer.
FSP_ERR_ALREADY_OPEN	Module is already open.
FSP_ERR_INVALID_ARGUMENT	Invalid time parameter field.

◆ R_RTC_Close()

fsp_err_t R_RTC_Close (rtc_ctrl_t *const *p_ctrl*)

Close the RTC driver. Implements rtc_api_t::close

Return values

FSP_SUCCESS	De-Initialization was successful and RTC driver closed.
FSP_ERR_ASSERTION	Invalid p_ctrl.
FSP_ERR_NOT_OPEN	Driver not open already for close.

◆ R_RTC_CalendarTimeSet()

fsp_err_t R_RTC_CalendarTimeSet (rtc_ctrl_t *const *p_ctrl*, rtc_time_t *const *p_time*)

Set the calendar time.

Implements rtc_api_t::calendarTimeSet.

Return values

FSP_SUCCESS	Calendar time set operation was successful.
FSP_ERR_ASSERTION	Invalid input argument.
FSP_ERR_NOT_OPEN	Driver not open already for operation.
FSP_ERR_INVALID_ARGUMENT	Invalid time parameter field.

◆ R_RTC_CalendarTimeGet()

fsp_err_t R_RTC_CalendarTimeGet (rtc_ctrl_t *const *p_ctrl*, rtc_time_t *const *p_time*)

Get the calendar time.

Warning

Do not call this function from a critical section or from an interrupt with higher priority than the carry interrupt, or the time returned may be inaccurate.

Implements rtc_api_t::calendarTimeGet

Return values

FSP_SUCCESS	Calendar time get operation was successful.
FSP_ERR_ASSERTION	Invalid input argument.
FSP_ERR_NOT_OPEN	Driver not open already for operation.
FSP_ERR_IRQ_BSP_DISABLED	User IRQ parameter not valid

◆ R_RTC_CalendarAlarmSet()

fsp_err_t R_RTC_CalendarAlarmSet (rtc_ctrl_t *const *p_ctrl*, rtc_alarm_time_t *const *p_alarm*)

Set the calendar alarm time.

Implements rtc_api_t::calendarAlarmSet.

Precondition

The calendar counter must be running before the alarm can be set.

Return values

FSP_SUCCESS	Calendar alarm time set operation was successful.
FSP_ERR_INVALID_ARGUMENT	Invalid time parameter field.
FSP_ERR_ASSERTION	Invalid input argument.
FSP_ERR_NOT_OPEN	Driver not open already for operation.
FSP_ERR_IRQ_BSP_DISABLED	User IRQ parameter not valid

◆ R_RTC_CalendarAlarmGet()

fsp_err_t R_RTC_CalendarAlarmGet (rtc_ctrl_t *const *p_ctrl*, rtc_alarm_time_t *const *p_alarm*)

Get the calendar alarm time.

Implements rtc_api_t::calendarAlarmGet

Return values

FSP_SUCCESS	Calendar alarm time get operation was successful.
FSP_ERR_ASSERTION	Invalid input argument.
FSP_ERR_NOT_OPEN	Driver not open already for operation.

◆ R_RTC_PeriodicIrqRateSet()

fsp_err_t R_RTC_PeriodicIrqRateSet (rtc_ctrl_t *const *p_ctrl*, rtc_periodic_irq_select_t const *rate*)

Set the periodic interrupt rate and enable periodic interrupt.

Implements rtc_api_t::periodicIrqRateSet

Note

To start the RTC R_RTC_CalendarTimeSet must be called at least once.

Example:

```
/* Set the periodic interrupt rate to 1 second */
R_RTC_PeriodicIrqRateSet(&g_rtc0_ctrl, RTC_PERIODIC_IRQ_SELECT_1_SECOND);
```

Return values

FSP_SUCCESS	The periodic interrupt rate was successfully set.
FSP_ERR_ASSERTION	Invalid input argument.
FSP_ERR_NOT_OPEN	Driver not open already for operation.
FSP_ERR_IRQ_BSP_DISABLED	User IRQ parameter not valid

◆ R_RTC_ErrorAdjustmentSet()

fsp_err_t R_RTC_ErrorAdjustmentSet (rtc_ctrl_t *const *p_ctrl*, rtc_error_adjustment_cfg_t const *const *err_adj_cfg*)

This function sets time error adjustment

Implements rtc_api_t::errorAdjustmentSet

Return values

FSP_SUCCESS	Time error adjustment successful.
FSP_ERR_ASSERTION	Invalid input argument.
FSP_ERR_NOT_OPEN	Driver not open for operation.
FSP_ERR_UNSUPPORTED	The clock source is not sub-clock.
FSP_ERR_INVALID_ARGUMENT	Invalid error adjustment value.

◆ R_RTC_InfoGet()

fsp_err_t R_RTC_InfoGet (rtc_ctrl_t *const *p_ctrl*, rtc_info_t *const *p_rtc_info*)

Set RTC clock source and running status information ad store it in provided pointer p_rtc_info

Implements rtc_api_t::infoGet

Return values

FSP_SUCCESS	Get information Successful.
FSP_ERR_ASSERTION	Invalid input argument.
FSP_ERR_NOT_OPEN	Driver not open already for operation.

◆ R_RTC_CallbackSet()

fsp_err_t R_RTC_CallbackSet (rtc_ctrl_t *const *p_ctrl*, void(*)(rtc_callback_args_t *) *p_callback*, void const *const *p_context*, rtc_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements rtc_api_t::callbackSet

Return values

FSP_SUCCESS	Baud rate was successfully changed.
FSP_ERR_ASSERTION	Pointer to RTC control block is NULL or the RTC is not configured to use the internal clock.
FSP_ERR_NOT_OPEN	The control block has not been opened
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

4.2.51 Secure Crypto Engine (r_sce_protected)

Detailed Description

Driver for the Secure Crypto Engine (SCE9) on RA MCUs.

Overview

This module provides SCE functions in protected mode.

Note

For a detailed description of the different SCE9 operating modes, refer to Application Note R11AN0498.

HW Overview

Crypto Peripheral version	Devices
SCE9 (Protected mode)	RA4M2, RA4M3, RA6M4, RA6M5

Features

The SCE module supports for the following features.

- Cryptography
  - Symmetric Encryption/Decryption
    - AES
      - ECB 128/256bit
      - CBC 128/256bit
      - GCM 128/256bit
      - CCM 128/256bit
  - Asymmetric Encryption/Decryption
    - RSA
      - RSAES-PKCS1-V1_5 1024/2048bit
      - RSAES-PKCS1-V1_5 3072/4096bit (Encryption only)
      - RSASSA-PKCS1-V1_5 1024/2048bit
      - RSASSA-PKCS1-V1_5 3072/4096bit (Verification only)
    - ECC
      - ECDSA secp192r1/secp224r1/secp256r1/secp384r1
      - ECDH secp192r1/secp224r1/secp256r1/secp384r1
  - Hash Functions
    - SHA-2
      - SHA-256
- Message Authentication Code
  - HMAC-SHA256bit
  - AES-CMAC 128/256bit
- Key Support
  - AES 128/256bit
  - AES Key Wrap/Key Unwrap 128/256bit
  - RSA 1024/2048bit
  - RSA 3072/4096bit (public key only)
  - ECC secp192r1/secp224r1/secp256r1/secp384r1
  - HMAC-SHA256bit
- TRNG

Configuration

Clock Configuration

This module does not require a specific clock configuration.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Getting Started: Creating a SCE Protected Mode Project

Start by creating a new project in e2 studio or RA SC. On the Stacks tab, add New > Driver > Crypto > SCE Protected Mode. For information on how to install and update secure keys, refer to the Application Note R11AN0496.

Limitations

Usage of R_SCE_ECDSA_secp384r1_SignatureGenerate/Verify

The SCE does not support SHA-384 in hardware, so the APIs listed below require the user to create a SHA-384 function for signature generation and verification. To use the APIs listed below, enable SCE_USER_SHA_384_ENABLED on RA Smart Configurator and prepare a function called SCE_USER_SHA_384_FUNCTION. The interface of SCE_USER_SHA_384_FUNCTION, which is called by the following APIs, is described below.

- R_SCE_ECDSA_secp384r1_SignatureGenerate()
- R_SCE_ECDSA_secp384r1_SignatureVerify()

SCE_USER_SHA_384_FUNCTION()

```
uint32_t SCE_USER_SHA_384_FUNCTION(uint8_t * message, uint8_t * digest, uint32_t
message_length)
```

SHA-384 hash calculation is performed for an area extending the number of bytes specified by the argument message_length from the address specified by the argument message. The calculation result should be stored at the address specified by the argument digest.

Parameters

message	[in] Start address of message
digest	[in,out] address for storing hash calculation result (48 bytes)
message_length	[in] Effective byte count of message

Return values

0	Hash value stored successfully.
others	Storing of hash value failed.

Examples

AES Example

This is an example of AES-256 encryption and decryption.

```
#include <string.h>
#include "r_sce.h"
#define BLOCK 16
void r_sce_example_aes();
sce_instance_ctrl_t sce_ctrl;
sce_cfg_t sce_cfg =
{
    .lifecycle = SCE_SSD
};
static uint8_t plain[BLOCK * 2] =
{
    0x52, 0x65, 0x6e, 0x65, 0x73, 0x61, 0x73, 0x20, 0x45, 0x6c, 0x65, 0x63, 0x74,
0x72, 0x6f, 0x6e,
    0x69, 0x63, 0x73, 0x20, 0x43, 0x6f, 0x72, 0x70, 0x6f, 0x72, 0x61, 0x74, 0x69,
0x6f, 0x6e, 0x00
};
void r_sce_example_aes ()
{
 sce_aes_handle_t      handle;
 sce_aes_wrapped_key_t wrapped_key;
    uint8_t               cipher_calculated[32] = {0};
    uint8_t               plain_calculated[32] = {0};
    uint32_t             dummy;
 /* SCE power on */
 R_SCE_Open(&sce_ctrl, &sce_cfg);
 /* Generate a random key */
 R_SCE_AES256_WrappedKeyGenerate(&wrapped_key);
 /* Encrypt a plain text */
 R_SCE_AES256ECB_EncryptInit(&handle, &wrapped_key);
 R_SCE_AES256ECB_EncryptUpdate(&handle, plain, cipher_calculated, BLOCK * 2);
 R_SCE_AES256ECB_EncryptFinal(&handle, cipher_calculated, &dummy);
 /* Decrypt a cipher text using same key as Encryption */
 R_SCE_AES256ECB_DecryptInit(&handle, &wrapped_key);
 R_SCE_AES256ECB_DecryptUpdate(&handle, cipher_calculated, plain_calculated, BLOCK *
```

```
2);
 R_SCE_AES256ECB_DecryptFinal(&handle, plain_calculated, &dummy);
 /* SCE power off */
 R_SCE_Close(&sce_ctrl);
 /* Compare plain and plain_calculated */
 if (memcmp(plain, plain_calculated, BLOCK * 2))
    {
 while (1)
      {
 /* plain and plain_calculated are different (incorrect) */
       }
    }
 else
    {
 while (1)
      {
 /* plain and plain_calculated are the same (correct) */
       }
    }
}
```

Data Structures

struct	sce_instance_ctrl_t

Data Structure Documentation

◆ sce_instance_ctrl_t

struct sce_instance_ctrl_t
SCE private control block. DO NOT MODIFY. Initialization occurs when R_SCE_Open() is called.

Function Documentation

◆ R_SCE_Open()

fsp_err_t R_SCE_Open (sce_ctrl_t *const *p_ctrl*, sce_cfg_t const *const *p_cfg*)

Enables use of SCE functionality.

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_FAIL	The error-detection self-test failed to terminate normally.
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_RETRY	Indicates that an entropy evaluation failure occurred. Run the function again.

Returns

See Common Error Codes or functions called by this function for other possible return codes.

Note

The valid pre-run state is SCE disabled. The pre-run state is SCE Disabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_Close()

fsp_err_t R_SCE_Close (sce_ctrl_t *const *p_ctrl*)

Stops supply of power to the SCE.

Parameters

[in]	p_ctrl	Pointer to control structure.

Return values

FSP_SUCCESS	Normal termination

Note

The pre-run state is any state. After the function runs the state transitions to SCE Disabled State.

◆ R_SCE_SoftwareReset()

fsp_err_t R_SCE_SoftwareReset (void)

Software reset to SCE.

Reverts the state to the SCE initial state.

Return values

FSP_SUCCESS	Normal termination

Note

The pre-run state is any state. After the function runs the state transitions to SCE Disabled State.

◆ R_SCE_AES128_WrappedKeyGenerate()

fsp_err_t R_SCE_AES128_WrappedKeyGenerate (sce_aes_wrapped_key_t * *wrapped_key*)

This API outputs 128-bit AES wrapped key from a random number.

This API generates a wrapped key from a random number in the SCE. Accordingly, user key input is unnecessary. By encrypting data using the wrapped key is output by this API, dead copying of data can be prevented.

Parameters

[in,out]	wrapped_key	128-bit AES wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Disabled State.

◆ R_SCE_AES256_WrappedKeyGenerate()

fsp_err_t R_SCE_AES256_WrappedKeyGenerate (sce_aes_wrapped_key_t * *wrapped_key*)

This API outputs 256-bit AES wrapped key from a random number.

This API generates a wrapped key from a random number in the SCE. Accordingly, user key input is unnecessary. By encrypting data using the wrapped key is output by this API, dead copying of data can be prevented.

Parameters

[in,out]	wrapped_key	256-bit AES wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Disabled State.

◆ R_SCE_RSA1024_WrappedKeyPairGenerate()

fsp_err_t R_SCE_RSA1024_WrappedKeyPairGenerate (sce_rsa1024_wrapped_pair_key_t * *wrapped_pair_key*)

This API outputs a wrapped key pair for a 1024-bit RSA public key and private key pair. These keys are generated from a random value produced internally by the SCE. Consequently, there is no need to input a user key. Dead copying of data can be prevented by encrypting the data using the wrapped key output by this API. A public wrapped key is generated by wrapped_pair_key->pub_key, and a private wrapped key is generated by wrapped_pair_key->priv_key. As the public key exponent, only 0x00010001 is generated.

Parameters

[in,out]	wrapped_pair_key	User key index for RSA 1024-bit public key and private key pair

Return values

FSP_SUCCESS	Normal end
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred. Key generation failed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSA2048_WrappedKeyPairGenerate()

fsp_err_t R_SCE_RSA2048_WrappedKeyPairGenerate (sce_rsa2048_wrapped_pair_key_t * *wrapped_pair_key*)

This API outputs a wrapped key pair for a 2048-bit RSA public key and private key pair. These keys are generated from a random value produced internally by the SCE. Consequently, there is no need to input a user key. Dead copying of data can be prevented by encrypting the data using the wrapped key output by this API. A public wrapped key is generated by wrapped_pair_key->pub_key, and a private wrapped key is generated by wrapped_pair_key->priv_key. As the public key exponent, only 0x00010001 is generated.

Parameters

[in,out]	wrapped_pair_key	User key index for RSA 2048-bit public key and private key pair

Return values

FSP_SUCCESS	Normal end
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred. Key generation failed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp192r1_WrappedKeyPairGenerate()

fsp_err_t R_SCE_ECC_secp192r1_WrappedKeyPairGenerate (sce_ecc_wrapped_pair_key_t * *wrapped_pair_key*)

This is an API for outputting a wrapped key pair for secp192r1 public key and private key pair. These keys are generated from a random number value internally within the SCE. There is therefore no need to input user keys. It is possible to prevent dead copying of data by using the wrapped key output by this API to encrypt the data. The public key index is generated in wrapped_pair_key->pub_key, and the private key index is generated in wrapped_pair_key->priv_key.

Parameters

[in,out]	wrapped_pair_key	Wrapped pair key for secp192r1 public key and private key pair

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp224r1_WrappedKeyPairGenerate()

fsp_err_t R_SCE_ECC_secp224r1_WrappedKeyPairGenerate (sce_ecc_wrapped_pair_key_t * *wrapped_pair_key*)

This is an API for outputting a wrapped key pair for secp224r1 public key and private key pair. These keys are generated from a random number value internally within the SCE. There is therefore no need to input user keys. It is possible to prevent dead copying of data by using the wrapped key output by this API to encrypt the data. The public key index is generated in wrapped_pair_key->pub_key, and the private key index is generated in wrapped_pair_key->priv_key.

Parameters

[in,out]	wrapped_pair_key	Wrapped pair key for secp224r1 public key and private key pair

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp256r1_WrappedKeyPairGenerate()

fsp_err_t R_SCE_ECC_secp256r1_WrappedKeyPairGenerate (sce_ecc_wrapped_pair_key_t * *wrapped_pair_key*)

This is an API for outputting a wrapped key pair for secp256r1 public key and private key pair. These keys are generated from a random number value internally within the SCE. There is therefore no need to input user keys. It is possible to prevent dead copying of data by using the wrapped key output by this API to encrypt the data. The public key index is generated in wrapped_pair_key->pub_key, and the private key index is generated in wrapped_pair_key->priv_key.

Parameters

[in,out]	wrapped_pair_key	Wrapped pair key for secp256r1 public key and private key pair

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp384r1_WrappedKeyPairGenerate()

fsp_err_t R_SCE_ECC_secp384r1_WrappedKeyPairGenerate (sce_ecc_wrapped_pair_key_t * *wrapped_pair_key*)

This is an API for outputting a wrapped key pair for secp384r1 public key and private key pair. These keys are generated from a random number value internally within the SCE. There is therefore no need to input user keys. It is possible to prevent dead copying of data by using the wrapped key output by this API to encrypt the data. The public key index is generated in wrapped_pair_key->pub_key, and the private key index is generated in wrapped_pair_key->priv_key.

Parameters

[in,out]	wrapped_pair_key	Wrapped pair key for secp384r1 public key and private key pair

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RandomNumberGenerate()

fsp_err_t R_SCE_RandomNumberGenerate (uint32_t * *random*)

This API can generate 4 words random number.

Parameters

[in,out]	random	Stores 4words (16 bytes) random data.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128_EncryptedKeyWrap()

fsp_err_t R_SCE_AES128_EncryptedKeyWrap (uint8_t * *initial_vector*, uint8_t * *encrypted_key*, sce_key_update_key_t * *key_update_key*, sce_aes_wrapped_key_t * *wrapped_key*)

This API wraps 128-bit AES key within the user routine.

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	128-bit AES wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256_EncryptedKeyWrap()

fsp_err_t R_SCE_AES256_EncryptedKeyWrap (uint8_t * *initial_vector*, uint8_t * *encrypted_key*, sce_key_update_key_t * *key_update_key*, sce_aes_wrapped_key_t * *wrapped_key*)

This API wraps 256-bit AES key within the user routine.

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	256-bit AES wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128_RFC3394KeyWrap()

fsp_err_t R_SCE_AES128_RFC3394KeyWrap (sce_aes_wrapped_key_t * *master_key*, uint32_t *target_key_type*, sce_aes_wrapped_key_t * *target_key*, uint32_t * *rfc3394_wrapped_key*)

This API wraps 128-bit AES key within the user routine.

Parameters

[in]	master_key	AES-128 key used for wrapping.
[in]	target_key_type	Selects key to be wrapped.
[in]	target_key	Key to be wrapped.
[out]	rfc3394_wrapped_key	Wrapped key.

Return values

FSP_SUCCESS	Normal termination.
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	Resource conflict.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Input illegal user Key Generation Information.
FSP_ERR_CRYPTO_SCE_FAIL	Internal error occurred.

◆ R_SCE_AES256_RFC3394KeyWrap()

fsp_err_t R_SCE_AES256_RFC3394KeyWrap (sce_aes_wrapped_key_t * *master_key*, uint32_t *target_key_type*, sce_aes_wrapped_key_t * *target_key*, uint32_t * *rfc3394_wrapped_key*)

This API wraps 256-bit AES key within the user routine.

Parameters

[in]	master_key	AES-256 key used for wrapping.
[in]	target_key_type	Selects key to be wrapped.
[in]	target_key	Key to be wrapped.
[out]	rfc3394_wrapped_key	Wrapped key.

Return values

FSP_SUCCESS	Normal termination.
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	Resource conflict.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Input illegal user Key Generation Information.
FSP_ERR_CRYPTO_SCE_FAIL	Internal error occurred.

◆ R_SCE_AES128_RFC3394KeyUnwrap()

fsp_err_t R_SCE_AES128_RFC3394KeyUnwrap (sce_aes_wrapped_key_t * *master_key*, uint32_t *target_key_type*, uint32_t * *rfc3394_wrapped_key*, sce_aes_wrapped_key_t * *target_key*)

This API unwraps 128-bit AES key within the user routine.

Parameters

[in]	master_key	AES-128 key used for unwrapping.
[in]	target_key_type	Selects key to be unwrapped.
[in]	rfc3394_wrapped_key	Wrapped key.
[out]	target_key	Key to be unwrapped.

Return values

FSP_SUCCESS	Normal termination.
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	Resource conflict.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Input illegal user Key Generation Information.
FSP_ERR_CRYPTO_SCE_FAIL	Internal error occurred.

◆ R_SCE_AES256_RFC3394KeyUnwrap()

fsp_err_t R_SCE_AES256_RFC3394KeyUnwrap (sce_aes_wrapped_key_t * *master_key*, uint32_t *target_key_type*, uint32_t * *rfc3394_wrapped_key*, sce_aes_wrapped_key_t * *target_key*)

This API unwraps 256-bit AES key within the user routine.

Parameters

[in]	master_key	AES-256 key used for unwrapping.
[in]	target_key_type	Selects key to be unwrapped.
[in]	rfc3394_wrapped_key	Wrapped key.
[out]	target_key	Key to be unwrapped.

Return values

FSP_SUCCESS	Normal termination.
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	Resource conflict.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Input illegal user Key Generation Information.
FSP_ERR_CRYPTO_SCE_FAIL	Internal error occurred.

◆ R_SCE_SHA256HMAC_EncryptedKeyWrap()

fsp_err_t R_SCE_SHA256HMAC_EncryptedKeyWrap (uint8_t * *initial_vector*, uint8_t * *encrypted_key*, sce_key_update_key_t * *key_update_key*, sce_hmac_sha_wrapped_key_t * *wrapped_key*)

This API wraps HMAC-SHA256 key within the user routine.

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	HMAC-SHA256 wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSA1024_EncryptedPublicKeyWrap()

fsp_err_t R_SCE_RSA1024_EncryptedPublicKeyWrap (uint8_t * *initial_vector*, uint8_t * *encrypted_key*, sce_key_update_key_t * *key_update_key*, sce_rsa1024_public_wrapped_key_t * *wrapped_key*)

This API wraps 1024-bit RSA public key within the user routine.

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	1024-bit RSA public wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSA1024_EncryptedPrivateKeyWrap()

fsp_err_t R_SCE_RSA1024_EncryptedPrivateKeyWrap (uint8_t * *initial_vector*, uint8_t * *encrypted_key*, sce_key_update_key_t * *key_update_key*, sce_rsa1024_private_wrapped_key_t * *wrapped_key*)

This API wraps 1024-bit RSA private key within the user routine.

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	1024-bit RSA private wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSA2048_EncryptedPublicKeyWrap()

fsp_err_t R_SCE_RSA2048_EncryptedPublicKeyWrap (uint8_t * *initial_vector*, uint8_t * *encrypted_key*, sce_key_update_key_t * *key_update_key*, sce_rsa2048_public_wrapped_key_t * *wrapped_key*)

This API wraps 2048-bit RSA public key within the user routine.

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	1024-bit RSA public wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSA2048_EncryptedPrivateKeyWrap()

fsp_err_t R_SCE_RSA2048_EncryptedPrivateKeyWrap (uint8_t * *initial_vector*, uint8_t * *encrypted_key*, sce_key_update_key_t * *key_update_key*, sce_rsa2048_private_wrapped_key_t * *wrapped_key*)

This API wraps 2048-bit RSA private key within the user routine.

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	2048-bit RSA private wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSA3072_EncryptedPublicKeyWrap()

fsp_err_t R_SCE_RSA3072_EncryptedPublicKeyWrap (uint8_t * *initial_vector*, uint8_t * *encrypted_key*, sce_key_update_key_t * *key_update_key*, sce_rsa3072_public_wrapped_key_t * *wrapped_key*)

This API wraps 3072-bit RSA public key within the user routine.

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	3072-bit RSA public wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSA4096_EncryptedPublicKeyWrap()

fsp_err_t R_SCE_RSA4096_EncryptedPublicKeyWrap (uint8_t * *initial_vector*, uint8_t * *encrypted_key*, sce_key_update_key_t * *key_update_key*, sce_rsa4096_public_wrapped_key_t * *wrapped_key*)

This API wraps 4096-bit RSA public key within the user routine.

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	1024-bit RSA public wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp192r1_EncryptedPublicKeyWrap()

fsp_err_t R_SCE_ECC_secp192r1_EncryptedPublicKeyWrap (uint8_t * *initial_vector*, uint8_t * *encrypted_key*, sce_key_update_key_t * *key_update_key*, sce_ecc_public_wrapped_key_t * *wrapped_key*)

This API wraps secp192r1 public key within the user routine.

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp192r1 public wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp224r1_EncryptedPublicKeyWrap()

fsp_err_t R_SCE_ECC_secp224r1_EncryptedPublicKeyWrap (uint8_t * *initial_vector*, uint8_t * *encrypted_key*, sce_key_update_key_t * *key_update_key*, sce_ecc_public_wrapped_key_t * *wrapped_key*)

This API wraps secp224r1 public key within the user routine.

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp224r1 public wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp256r1_EncryptedPublicKeyWrap()

fsp_err_t R_SCE_ECC_secp256r1_EncryptedPublicKeyWrap (uint8_t * *initial_vector*, uint8_t * *encrypted_key*, sce_key_update_key_t * *key_update_key*, sce_ecc_public_wrapped_key_t * *wrapped_key*)

This API wraps secp256r1 public key within the user routine.

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp256r1 public wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp384r1_EncryptedPublicKeyWrap()

fsp_err_t R_SCE_ECC_secp384r1_EncryptedPublicKeyWrap (uint8_t * *initial_vector*, uint8_t * *encrypted_key*, sce_key_update_key_t * *key_update_key*, sce_ecc_public_wrapped_key_t * *wrapped_key*)

This API wraps secp384r1 public key within the user routine.

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp384r1 public wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp192r1_EncryptedPrivateKeyWrap()

fsp_err_t R_SCE_ECC_secp192r1_EncryptedPrivateKeyWrap (uint8_t * *initial_vector*, uint8_t * *encrypted_key*, sce_key_update_key_t * *key_update_key*, sce_ecc_private_wrapped_key_t * *wrapped_key*)

This API wraps secp192r1 private key within the user routine.

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp192r1 private wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp224r1_EncryptedPrivateKeyWrap()

fsp_err_t R_SCE_ECC_secp224r1_EncryptedPrivateKeyWrap (uint8_t * *initial_vector*, uint8_t * *encrypted_key*, sce_key_update_key_t * *key_update_key*, sce_ecc_private_wrapped_key_t * *wrapped_key*)

This API wraps secp224r1 private key within the user routine.

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp224r1 private wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp256r1_EncryptedPrivateKeyWrap()

fsp_err_t R_SCE_ECC_secp256r1_EncryptedPrivateKeyWrap (uint8_t * *initial_vector*, uint8_t * *encrypted_key*, sce_key_update_key_t * *key_update_key*, sce_ecc_private_wrapped_key_t * *wrapped_key*)

This API wraps secp256r1 private key within the user routine.

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp256r1 private wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECC_secp384r1_EncryptedPrivateKeyWrap()

fsp_err_t R_SCE_ECC_secp384r1_EncryptedPrivateKeyWrap (uint8_t * *initial_vector*, uint8_t * *encrypted_key*, sce_key_update_key_t * *key_update_key*, sce_ecc_private_wrapped_key_t * *wrapped_key*)

This API wraps secp384r1 private key within the user routine.

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp384r1 private wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128ECB_EncryptInit()

fsp_err_t R_SCE_AES128ECB_EncryptInit (sce_aes_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*)

The R_SCE_AES128ECB_EncryptInit() function performs preparations for the execution of an AES calculation, and writes the result to the first argument, handle. The value of handle is used as an argument in the subsequent R_SCE_AES128ECB_EncryptUpdate() function and R_SCE_AES128ECB_EncryptFinal() function.

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	128-bit AES wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Input illegal wrapped key.
FSP_ERR_CRYPTO_SCE_FAIL	Internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128ECB_EncryptUpdate()

fsp_err_t R_SCE_AES128ECB_EncryptUpdate (sce_aes_handle_t * *handle*, uint8_t * *plain*, uint8_t * *cipher*, uint32_t *plain_length*)

The R_SCE_AES128ECB_EncryptUpdate() function encrypts the second argument, plain, utilizing the key index stored in the handle specified in the first argument, handle, and writes the ongoing status to this first argument. In addition, it writes the encryption result to the third argument, cipher. After plaintext input is completed, call R_SCE_AES128ECB_EncryptFinal().

Specify areas for plain and cipher that do not overlap. For plain and cipher, specify RAM addresses that are multiples of 4.

Parameters

[in,out]	handle	AES handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in,out]	plain_length	plaintext data length (must be a multiple of 16)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128ECB_EncryptFinal()

fsp_err_t R_SCE_AES128ECB_EncryptFinal (sce_aes_handle_t * *handle*, uint8_t * *cipher*, uint32_t * *cipher_length*)

Using the handle specified in the first argument, handle, the R_SCE_AES128ECB_EncryptFinal() function writes the calculation result to the second argument, cipher, and writes the length of the calculation result to the third argument, cipher_length. The original intent was for a portion of the encryption result that was not a multiple of 16 bytes to be written to the second argument. However, as a result of the restriction that only multiples of 16 can be input to the Update function, nothing is ever written to cipher, and 0 is always written to cipher_length. The arguments cipher and cipher_length are provided for compatibility in anticipation of the time when this restriction is lifted.

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	cipher	ciphertext data area (nothing ever written here)
[in,out]	cipher_length	ciphertext data length (0 always written here)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128ECB_DecryptInit()

fsp_err_t R_SCE_AES128ECB_DecryptInit (sce_aes_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*)

The R_SCE_AES128ECB_DecryptInit() function performs preparations for the execution of an AES calculation, and writes the result to the first argument, handle. The value of handle is used as an argument in the subsequent R_SCE_AES128ECB_DecryptUpdate() function and R_SCE_AES128ECB_DecryptFinal() function.

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	128-bit AES wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Input illegal wrapped key.
FSP_ERR_CRYPTO_SCE_FAIL	Internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128ECB_DecryptUpdate()

fsp_err_t R_SCE_AES128ECB_DecryptUpdate (sce_aes_handle_t * *handle*, uint8_t * *cipher*, uint8_t * *plain*, uint32_t *cipher_length*)

The R_SCE_AES128ECB_DecryptUpdate() function decrypts the second argument, cipher, utilizing the key index stored in the handle specified in the first argument, handle, and writes the ongoing status to this first argument. In addition, it writes the decryption result to the third argument, plain. After plaintext input is completed, call R_SCE_AES128ECB_DecryptFinal().

Specify areas for plain and cipher that do not overlap. For plain and cipher, specify RAM addresses that are multiples of 4.

Parameters

[in,out]	handle	AES handler (work area)
[in]	cipher	ciphertext data area
[in,out]	plain	plaintext data area
[in,out]	cipher_length	ciphertext data length (must be a multiple of 16)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128ECB_DecryptFinal()

fsp_err_t R_SCE_AES128ECB_DecryptFinal (sce_aes_handle_t * *handle*, uint8_t * *plain*, uint32_t * *plain_length*)

Using the handle specified in the first argument, handle, the R_SCE_AES128ECB_DecryptFinal() function writes the calculation result to the second argument, plain, and writes the length of the calculation result to the third argument, plain_length. The original intent was for a portion of the decryption result that was not a multiple of 16 bytes to be written to the second argument. However, as a result of the restriction that only multiples of 16 can be input to the Update function, nothing is ever written to plain, and 0 is always written to plain_length. The arguments plain and plain_length are provided for compatibility in anticipation of the time when this restriction is lifted.

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	plain	plaintext data area (nothing ever written here)
[in,out]	plain_length	plaintext data length (0 always written here)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256ECB_EncryptInit()

fsp_err_t R_SCE_AES256ECB_EncryptInit (sce_aes_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*)

The R_SCE_AES256ECB_EncryptInit() function performs preparations for the execution of an AES calculation, and writes the result to the first argument, handle. The value of handle is used as an argument in the subsequent R_SCE_AES256ECB_EncryptUpdate() function and R_SCE_AES256ECB_EncryptFinal() function.

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	128-bit AES wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Input illegal wrapped key.
FSP_ERR_CRYPTO_SCE_FAIL	Internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256ECB_EncryptUpdate()

fsp_err_t R_SCE_AES256ECB_EncryptUpdate (sce_aes_handle_t * *handle*, uint8_t * *plain*, uint8_t * *cipher*, uint32_t *plain_length*)

The R_SCE_AES256ECB_EncryptUpdate() function encrypts the second argument, plain, utilizing the key index stored in the handle specified in the first argument, handle, and writes the ongoing status to this first argument. In addition, it writes the encryption result to the third argument, cipher. After plaintext input is completed, call R_SCE_AES256ECB_EncryptFinal().

Specify areas for plain and cipher that do not overlap. For plain and cipher, specify RAM addresses that are multiples of 4.

Parameters

[in,out]	handle	AES handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in,out]	plain_length	plaintext data length (must be a multiple of 16)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256ECB_EncryptFinal()

fsp_err_t R_SCE_AES256ECB_EncryptFinal (sce_aes_handle_t * *handle*, uint8_t * *cipher*, uint32_t * *cipher_length*)

Using the handle specified in the first argument, handle, the R_SCE_AES256ECB_EncryptFinal() function writes the calculation result to the second argument, cipher, and writes the length of the calculation result to the third argument, cipher_length. The original intent was for a portion of the encryption result that was not a multiple of 16 bytes to be written to the second argument. However, as a result of the restriction that only multiples of 16 can be input to the Update function, nothing is ever written to cipher, and 0 is always written to cipher_length. The arguments cipher and cipher_length are provided for compatibility in anticipation of the time when this restriction is lifted.

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	cipher	ciphertext data area (nothing ever written here)
[in,out]	cipher_length	ciphertext data length (0 always written here)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256ECB_DecryptInit()

fsp_err_t R_SCE_AES256ECB_DecryptInit (sce_aes_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*)

The R_SCE_AES128ECB_DecryptInit() function performs preparations for the execution of an AES calculation, and writes the result to the first argument, handle. The value of handle is used as an argument in the subsequent R_SCE_AES128ECB_DecryptUpdate() function and R_SCE_AES128ECB_DecryptFinal() function.

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	128-bit AES wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Input illegal wrapped key.
FSP_ERR_CRYPTO_SCE_FAIL	Internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256ECB_DecryptUpdate()

fsp_err_t R_SCE_AES256ECB_DecryptUpdate (sce_aes_handle_t * *handle*, uint8_t * *cipher*, uint8_t * *plain*, uint32_t *cipher_length*)

The R_SCE_AES256ECB_DecryptUpdate() function decrypts the second argument, cipher, utilizing the key index stored in the handle specified in the first argument, handle, and writes the ongoing status to this first argument. In addition, it writes the decryption result to the third argument, plain. After plaintext input is completed, call R_SCE_AES256ECB_DecryptFinal().

Specify areas for plain and cipher that do not overlap. For plain and cipher, specify RAM addresses that are multiples of 4.

Parameters

[in,out]	handle	AES handler (work area)
[in]	cipher	ciphertext data area
[in,out]	plain	plaintext data area
[in,out]	cipher_length	ciphertext data length (must be a multiple of 16)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256ECB_DecryptFinal()

fsp_err_t R_SCE_AES256ECB_DecryptFinal (sce_aes_handle_t * *handle*, uint8_t * *plain*, uint32_t * *plain_length*)

Using the handle specified in the first argument, handle, the R_SCE_AES256ECB_DecryptFinal() function writes the calculation result to the second argument, plain, and writes the length of the calculation result to the third argument, plain_length. The original intent was for a portion of the decryption result that was not a multiple of 16 bytes to be written to the second argument. However, as a result of the restriction that only multiples of 16 can be input to the Update function, nothing is ever written to plain, and 0 is always written to plain_length. The arguments plain and plain_length are provided for compatibility in anticipation of the time when this restriction is lifted.

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	plain	plaintext data area (nothing ever written here)
[in,out]	plain_length	plaintext data length (0 always written here)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CBC_EncryptInit()

fsp_err_t R_SCE_AES128CBC_EncryptInit (sce_aes_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*, uint8_t * *initial_vector*)

The R_SCE_AES128CBC_EncryptInit() function performs preparations for the execution of an AES calculation, and writes the result to the first argument, handle. The value of handle is used as an argument in the subsequent R_SCE_AES128CBC_EncryptUpdate() function and R_SCE_AES128CBC_EncryptFinal() function.

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	128-bit AES wrapped key
[in]	initial_vector	initialization vector area (16byte)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Input illegal wrapped key.
FSP_ERR_CRYPTO_SCE_FAIL	Internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CBC_EncryptUpdate()

fsp_err_t R_SCE_AES128CBC_EncryptUpdate (sce_aes_handle_t * *handle*, uint8_t * *plain*, uint8_t * *cipher*, uint32_t *plain_length*)

The R_SCE_AES128CBC_EncryptUpdate() function encrypts the second argument, plain, utilizing the key index stored in the handle specified in the first argument, handle, and writes the ongoing status to this first argument. In addition, it writes the encryption result to the third argument, cipher. After plaintext input is completed, call R_SCE_AES128CBC_EncryptFinal().

Specify areas for plain and cipher that do not overlap. For plain and cipher, specify RAM addresses that are multiples of 4.

Parameters

[in,out]	handle	AES handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in,out]	plain_length	plaintext data length (must be a multiple of 16)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CBC_EncryptFinal()

fsp_err_t R_SCE_AES128CBC_EncryptFinal (sce_aes_handle_t * *handle*, uint8_t * *cipher*, uint32_t * *cipher_length*)

Using the handle specified in the first argument, handle, the R_SCE_AES128CBC_EncryptFinal() function writes the calculation result to the second argument, cipher, and writes the length of the calculation result to the third argument, cipher_length. The original intent was for a portion of the encryption result that was not a multiple of 16 bytes to be written to the second argument. However, as a result of the restriction that only multiples of 16 can be input to the Update function, nothing is ever written to cipher, and 0 is always written to cipher_length. The arguments cipher and cipher_length are provided for compatibility in anticipation of the time when this restriction is lifted.

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	cipher	ciphertext data area (nothing ever written here)
[in,out]	cipher_length	ciphertext data length (0 always written here)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CBC_DecryptInit()

fsp_err_t R_SCE_AES128CBC_DecryptInit (sce_aes_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*, uint8_t * *initial_vector*)

The R_SCE_AES128CBC_DecryptInit() function performs preparations for the execution of an AES calculation, and writes the result to the first argument, handle. The value of handle is used as an argument in the subsequent R_SCE_AES128CBC_DecryptUpdate() function and R_SCE_AES128CBC_DecryptFinal() function.

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	128-bit AES wrapped key
[in]	initial_vector	initialization vector area (16byte)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Input illegal wrapped key.
FSP_ERR_CRYPTO_SCE_FAIL	Internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CBC_DecryptUpdate()

fsp_err_t R_SCE_AES128CBC_DecryptUpdate (sce_aes_handle_t * *handle*, uint8_t * *cipher*, uint8_t * *plain*, uint32_t *cipher_length*)

The R_SCE_AES128CBC_DecryptUpdate() function decrypts the second argument, cipher, utilizing the key index stored in the handle specified in the first argument, handle, and writes the ongoing status to this first argument. In addition, it writes the decryption result to the third argument, plain. After plaintext input is completed, call R_SCE_AES128CBC_DecryptFinal().

Specify areas for plain and cipher that do not overlap. For plain and cipher, specify RAM addresses that are multiples of 4.

Parameters

[in,out]	handle	AES handler (work area)
[in]	cipher	ciphertext data area
[in,out]	plain	plaintext data area
[in,out]	cipher_length	ciphertext data length (must be a multiple of 16)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CBC_DecryptFinal()

fsp_err_t R_SCE_AES128CBC_DecryptFinal (sce_aes_handle_t * *handle*, uint8_t * *plain*, uint32_t * *plain_length*)

Using the handle specified in the first argument, handle, the R_SCE_AES128CBC_DecryptFinal() function writes the calculation result to the second argument, plain, and writes the length of the calculation result to the third argument, plain_length. The original intent was for a portion of the decryption result that was not a multiple of 16 bytes to be written to the second argument. However, as a result of the restriction that only multiples of 16 can be input to the Update function, nothing is ever written to plain, and 0 is always written to plain_length. The arguments plain and plain_length are provided for compatibility in anticipation of the time when this restriction is lifted.

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	plain	plaintext data area (nothing ever written here)
[in,out]	plain_length	plaintext data length (0 always written here)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CBC_EncryptInit()

fsp_err_t R_SCE_AES256CBC_EncryptInit (sce_aes_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*, uint8_t * *initial_vector*)

The R_SCE_AES256CBC_EncryptInit() function performs preparations for the execution of an AES calculation, and writes the result to the first argument, handle. The value of handle is used as an argument in the subsequent R_SCE_AES256CBC_EncryptUpdate() function and R_SCE_AES256CBC_EncryptFinal() function.

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	256-bit AES wrapped key
[in]	initial_vector	initial vector area (16byte)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Input illegal wrapped key.
FSP_ERR_CRYPTO_SCE_FAIL	Internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CBC_EncryptUpdate()

fsp_err_t R_SCE_AES256CBC_EncryptUpdate (sce_aes_handle_t * *handle*, uint8_t * *plain*, uint8_t * *cipher*, uint32_t *plain_length*)

The R_SCE_AES256CBC_EncryptUpdate() function encrypts the second argument, plain, utilizing the key index stored in the handle specified in the first argument, handle, and writes the ongoing status to this first argument. In addition, it writes the encryption result to the third argument, cipher. After plaintext input is completed, call R_SCE_AES256CBC_EncryptFinal().

Specify areas for plain and cipher that do not overlap. For plain and cipher, specify RAM addresses that are multiples of 4.

Parameters

[in,out]	handle	AES handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in,out]	plain_length	plaintext data length (must be a multiple of 16)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CBC_EncryptFinal()

fsp_err_t R_SCE_AES256CBC_EncryptFinal (sce_aes_handle_t * *handle*, uint8_t * *cipher*, uint32_t * *cipher_length*)

Using the handle specified in the first argument, handle, the R_SCE_AES256CBC_EncryptFinal() function writes the calculation result to the second argument, cipher, and writes the length of the calculation result to the third argument, cipher_length. The original intent was for a portion of the encryption result that was not a multiple of 16 bytes to be written to the second argument. However, as a result of the restriction that only multiples of 16 can be input to the Update function, nothing is ever written to cipher, and 0 is always written to cipher_length. The arguments cipher and cipher_length are provided for compatibility in anticipation of the time when this restriction is lifted.

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	cipher	ciphertext data area (nothing ever written here)
[in,out]	cipher_length	ciphertext data length (0 always written here)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CBC_DecryptInit()

fsp_err_t R_SCE_AES256CBC_DecryptInit (sce_aes_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*, uint8_t * *initial_vector*)

The R_SCE_AES256CBC_DecryptInit() function performs preparations for the execution of an AES calculation, and writes the result to the first argument, handle. The value of handle is used as an argument in the subsequent R_SCE_AES256CBC_DecryptUpdate() function and R_SCE_AES256CBC_DecryptFinal() function.

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	256-bit AES wrapped key
[in]	initial_vector	initialization vector area (16byte)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Input illegal wrapped key.
FSP_ERR_CRYPTO_SCE_FAIL	Internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CBC_DecryptUpdate()

fsp_err_t R_SCE_AES256CBC_DecryptUpdate (sce_aes_handle_t * *handle*, uint8_t * *cipher*, uint8_t * *plain*, uint32_t *cipher_length*)

The R_SCE_AES256CBC_DecryptUpdate() function decrypts the second argument, cipher, utilizing the key index stored in the handle specified in the first argument, handle, and writes the ongoing status to this first argument. In addition, it writes the decryption result to the third argument, plain. After plaintext input is completed, call R_SCE_AES256CBC_DecryptFinal().

Specify areas for plain and cipher that do not overlap. For plain and cipher, specify RAM addresses that are multiples of 4.

Parameters

[in,out]	handle	AES handler (work area)
[in]	cipher	ciphertext data area
[in,out]	plain	plaintext data area
[in,out]	cipher_length	ciphertext data length (must be a multiple of 16)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CBC_DecryptFinal()

fsp_err_t R_SCE_AES256CBC_DecryptFinal (sce_aes_handle_t * *handle*, uint8_t * *plain*, uint32_t * *plain_length*)

Using the handle specified in the first argument, handle, the R_SCE_AES256CBC_DecryptFinal() function writes the calculation result to the second argument, plain, and writes the length of the calculation result to the third argument, plain_length. The original intent was for a portion of the decryption result that was not a multiple of 16 bytes to be written to the second argument. However, as a result of the restriction that only multiples of 16 can be input to the Update function, nothing is ever written to plain, and 0 is always written to plain_length. The arguments plain and plain_length are provided for compatibility in anticipation of the time when this restriction is lifted.

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	plain	plaintext data area (nothing ever written here)
[in,out]	plain_length	plaintext data length (0 always written here)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128GCM_EncryptInit()

fsp_err_t R_SCE_AES128GCM_EncryptInit (sce_gcm_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*, uint8_t * *initial_vector*, uint32_t *initial_vector_length*)

The R_SCE_AES128GCM_EncryptInit() function performs preparations for the execution of an GCM calculation, and writes the result to the first argument, handle. The value of handle is used as an argument in the subsequent R_SCE_AES128GCM_EncryptUpdate() function and R_SCE_AES128GCM_EncryptFinal() function.

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in]	wrapped_key	128-bit AES wrapped key
[in]	initial_vector	initialization vector area (initial_vector_length byte)
[in]	initial_vector_length	initialization vector length (1 ore more bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128GCM_EncryptUpdate()

fsp_err_t R_SCE_AES128GCM_EncryptUpdate (sce_gcm_handle_t * *handle*, uint8_t * *plain*, uint8_t * *cipher*, uint32_t *plain_data_length*, uint8_t * *aad*, uint32_t *aad_length*)

The R_SCE_AES128GCM_EncryptUpdate() function encrypts the plaintext specified in the second argument, plain, in GCM mode using the values specified for wrapped_key and initial_vector in R_SCE_AES128GCM_EncryptInit(), along with the additional authentication data specified in the fifth argument, aad. Inside this function, the data that is input by the user is buffered until the input values of aad and plain exceed 16 bytes. After the input data from plain reaches 16 bytes or more, the encryption result is output to the ciphertext data area specified in the third argument, cipher. The lengths of the plain and aad data to input are respectively specified in the fourth argument, plain_data_length, and the sixth argument, aad_length. For these, specify not the total byte count for the aad and plain input data, but rather the data length to input when the user calls this function. If the input values plain and aad are not divisible by 16 bytes, they will be padded inside the function. First process the data that is input from aad, and then process the data that is input from plain. If aad data is input after starting to input plain data, an error will occur. If aad data and plain data are input to this function at the same time, the aad data will be processed, and then the function will transition to the plain data input state.

Specify areas for plain and cipher that do not overlap. For plain, cipher, initial_vector, and aad, specify RAM addresses that are multiples of 4

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in]	plain_data_length	plaintext data length (0 or more bytes)
[in]	aad	additional authentication data (aad_length byte)
[in]	aad_length	additional authentication data length (0 or more bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PARAMETER	After the data from plain was input, an invalid handle was input from aad.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128GCM_EncryptFinal()

fsp_err_t R_SCE_AES128GCM_EncryptFinal (sce_gcm_handle_t * *handle*, uint8_t * *cipher*, uint32_t * *cipher_data_length*, uint8_t * *atag*)

If there is 16-byte fractional data indicated by the total data length of the value of plain that was input by R_SCE_AES128GCM_EncryptUpdate (), the R_SCE_AES128GCM_EncryptFinal() function will output the result of encrypting that fractional data to the ciphertext data area specified in the second argument, cipher. Here, the portion that does not reach 16 bytes will be padded with zeros. The authentication tag is output to the fourth argument, atag. For cipher and atag, specify RAM addresses that are multiples of 4.

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in,out]	cipher	ciphertext data area (cipher_data_length byte)
[in,out]	cipher_data_length	ciphertext data length (0 always written here)
[in,out]	atag	authentication tag area

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128GCM_DecryptInit()

fsp_err_t R_SCE_AES128GCM_DecryptInit (sce_gcm_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*, uint8_t * *initial_vector*, uint32_t *initial_vector_length*)

The R_SCE_AES128GCM_DecryptInit() function performs preparations for the execution of an GCM calculation, and writes the result to the first argument, handle. The value of handle is used as an argument in the subsequent R_SCE_AES128GCM_DecryptUpdate() function and R_SCE_AES128GCM_DecryptFinal() function.

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in]	wrapped_key	128-bit AES wrapped key
[in]	initial_vector	initialization vector area (initial_vector_length byte)
[in]	initial_vector_length	initialization vector length (1 ore more bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128GCM_DecryptUpdate()

fsp_err_t R_SCE_AES128GCM_DecryptUpdate (sce_gcm_handle_t * *handle*, uint8_t * *cipher*, uint8_t * *plain*, uint32_t *cipher_data_length*, uint8_t * *aad*, uint32_t *aad_length*)

The R_SCE_AES128GCM_DecryptUpdate() function decrypts the ciphertext specified in the second argument, cipher, in GCM mode using the values specified for wrapped_key and initial_vector in R_SCE_AES128GCM_DecryptInit(), along with the additional authentication data specified in the fifth argument, aad. Inside this function, the data that is input by the user is buffered until the input values of aad and plain exceed 16 bytes. After the input data from cipher reaches 16 bytes or more, the decryption result is output to the plaintext data area specified in the third argument, plain. The lengths of the cipher and aad data to input are respectively specified in the fourth argument, cipher_data_length, and the sixth argument, aad_length. For these, specify not the total byte count for the aad and cipher input data, but rather the data length to input when the user calls this function. If the input values cipher and aad are not divisible by 16 bytes, they will be padded inside the function. First process the data that is input from aad, and then process the data that is input from cipher. If aad data is input after starting to input cipher data, an error will occur. If aad data and cipher data are input to this function at the same time, the aad data will be processed, and then the function will transition to the cipher data input state. Specify areas for plain and cipher that do not overlap. For plain, cipher, stage, initial_vector, and aad, specify RAM addresses that are multiples of 4.

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in,out]	cipher	ciphertext data area
[in]	plain	plaintext data area
[in]	cipher_data_length	ciphertext data length (0 or more bytes)
[in]	aad	additional authentication data (aad_length byte)
[in]	aad_length	additional authentication data length (0 or more bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PARAMETER	After the data from plain was input, an invalid handle was input from aad.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128GCM_DecryptFinal()

fsp_err_t R_SCE_AES128GCM_DecryptFinal (sce_gcm_handle_t * *handle*, uint8_t * *plain*, uint32_t * *plain_data_length*, uint8_t * *atag*, uint32_t *atag_length*)

The R_SCE_AES128GCM_DecryptFinal() function decrypts, in GCM mode, the fractional ciphertext specified by R_SCE_AES128GCM_DecryptUpdate() that does not reach 16 bytes, and ends GCM decryption. The encryption data and authentication tag are respectively output to the plaintext data area specified in the second argument, plain, and the authentication tag area specified in the fourth argument, atag. The decoded data length is output to the third argument, plain_data_length. If authentication fails, the return value will be TSIP_ERR_AUTHENTICATION. For the fourth argument, atag, input 16 bytes or less. If it is less than 16 bytes, it will be padded with zeros inside the function. For plain and atag, specify RAM addresses that are multiples of 4.

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in,out]	plain	plaintext data area (cipher_data_length byte)
[in,out]	plain_data_length	plaintext data length (0 always written here)
[in,out]	atag	authentication tag area (atag_length byte)
[in]	atag_length	authentication tag length (4,8,12,13,14,15,16 bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_AUTHENTICATION	Authentication failed
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256GCM_EncryptInit()

fsp_err_t R_SCE_AES256GCM_EncryptInit (sce_gcm_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*, uint8_t * *initial_vector*, uint32_t *initial_vector_length*)

The R_SCE_AES256GCM_EncryptInit() function performs preparations for the execution of an GCM calculation, and writes the result to the first argument, handle. The value of handle is used as an argument in the subsequent R_SCE_AES256GCM_EncryptUpdate() function and R_SCE_AES256GCM_EncryptFinal() function.

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in]	wrapped_key	256-bit AES wrapped key
[in]	initial_vector	initialization vector area (initial_vector_length byte)
[in]	initial_vector_length	initialization vector length (1 ore more bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256GCM_EncryptUpdate()

fsp_err_t R_SCE_AES256GCM_EncryptUpdate (sce_gcm_handle_t * *handle*, uint8_t * *plain*, uint8_t * *cipher*, uint32_t *plain_data_length*, uint8_t * *aad*, uint32_t *aad_length*)

The R_SCE_AES256GCM_EncryptUpdate() function encrypts the plaintext specified in the second argument, plain, in GCM mode using the values specified for wrapped_key and initial_vector in R_SCE_AES256GCM_EncryptInit(), along with the additional authentication data specified in the fifth argument, aad. Inside this function, the data that is input by the user is buffered until the input values of aad and plain exceed 16 bytes. After the input data from plain reaches 16 bytes or more, the encryption result is output to the ciphertext data area specified in the third argument, cipher. The lengths of the plain and aad data to input are respectively specified in the fourth argument, plain_data_length, and the sixth argument, aad_length. For these, specify not the total byte count for the aad and plain input data, but rather the data length to input when the user calls this function. If the input values plain and aad are not divisible by 16 bytes, they will be padded inside the function. First process the data that is input from aad, and then process the data that is input from plain. If aad data is input after starting to input plain data, an error will occur. If aad data and plain data are input to this function at the same time, the aad data will be processed, and then the function will transition to the plain data input state.

Specify areas for plain and cipher that do not overlap. For plain, cipher, initial_vector, and aad, specify RAM addresses that are multiples of 4

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in]	plain_data_length	plaintext data length (0 or more bytes)
[in]	aad	additional authentication data (aad_length byte)
[in]	aad_length	additional authentication data length (0 or more bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PARAMETER	After the data from plain was input, an invalid handle was input from aad.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256GCM_EncryptFinal()

fsp_err_t R_SCE_AES256GCM_EncryptFinal (sce_gcm_handle_t * *handle*, uint8_t * *cipher*, uint32_t * *cipher_data_length*, uint8_t * *atag*)

If there is 16-byte fractional data indicated by the total data length of the value of plain that was input by R_SCE_AES256GCM_EncryptUpdate (), the R_SCE_AES256GCM_EncryptFinal() function will output the result of encrypting that fractional data to the ciphertext data area specified in the second argument, cipher. Here, the portion that does not reach 16 bytes will be padded with zeros. The authentication tag is output to the fourth argument, atag. For cipher and atag, specify RAM addresses that are multiples of 4.

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in,out]	cipher	ciphertext data area (cipher_data_length byte)
[in,out]	cipher_data_length	ciphertext data length (0 always written here)
[in,out]	atag	authentication tag area

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256GCM_DecryptInit()

fsp_err_t R_SCE_AES256GCM_DecryptInit (sce_gcm_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*, uint8_t * *initial_vector*, uint32_t *initial_vector_length*)

The R_SCE_AES256GCM_DecryptInit() function performs preparations for the execution of an GCM calculation, and writes the result to the first argument, handle. The value of handle is used as an argument in the subsequent R_SCE_AES256GCM_DecryptUpdate() function and R_SCE_AES256GCM_DecryptFinal() function.

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in]	wrapped_key	256-bit AES wrapped key
[in]	initial_vector	initialization vector area (initial_vector_length byte)
[in]	initial_vector_length	initialization vector length (1 ore more bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256GCM_DecryptUpdate()

fsp_err_t R_SCE_AES256GCM_DecryptUpdate (sce_gcm_handle_t * *handle*, uint8_t * *cipher*, uint8_t * *plain*, uint32_t *cipher_data_length*, uint8_t * *aad*, uint32_t *aad_length*)

The R_SCE_AES256GCM_DecryptUpdate() function decrypts the ciphertext specified in the second argument, cipher, in GCM mode using the values specified for wrapped_key and initial_vector in R_SCE_AES256GCM_DecryptInit(), along with the additional authentication data specified in the fifth argument, aad. Inside this function, the data that is input by the user is buffered until the input values of aad and plain exceed 16 bytes. After the input data from cipher reaches 16 bytes or more, the decryption result is output to the plaintext data area specified in the third argument, plain. The lengths of the cipher and aad data to input are respectively specified in the fourth argument, cipher_data_length, and the sixth argument, aad_length. For these, specify not the total byte count for the aad and cipher input data, but rather the data length to input when the user calls this function. If the input values cipher and aad are not divisible by 16 bytes, they will be padded inside the function. First process the data that is input from aad, and then process the data that is input from cipher. If aad data is input after starting to input cipher data, an error will occur. If aad data and cipher data are input to this function at the same time, the aad data will be processed, and then the function will transition to the cipher data input state. Specify areas for plain and cipher that do not overlap. For plain, cipher, stage, initial_vector, and aad, specify RAM addresses that are multiples of 4.

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in,out]	cipher	ciphertext data area
[in]	plain	plaintext data area
[in]	cipher_data_length	ciphertext data length (0 or more bytes)
[in]	aad	additional authentication data (aad_length byte)
[in]	aad_length	additional authentication data length (0 or more bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PARAMETER	After the data from plain was input, an invalid handle was input from aad.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256GCM_DecryptFinal()

fsp_err_t R_SCE_AES256GCM_DecryptFinal (sce_gcm_handle_t * *handle*, uint8_t * *plain*, uint32_t * *plain_data_length*, uint8_t * *atag*, uint32_t *atag_length*)

The R_SCE_AES256GCM_DecryptFinal() function decrypts, in GCM mode, the fractional ciphertext specified by R_SCE_AES256GCM_DecryptUpdate() that does not reach 16 bytes, and ends GCM decryption. The encryption data and authentication tag are respectively output to the plaintext data area specified in the second argument, plain, and the authentication tag area specified in the fourth argument, atag. The decoded data length is output to the third argument, plain_data_length. If authentication fails, the return value will be TSIP_ERR_AUTHENTICATION. For the fourth argument, atag, input 16 bytes or less. If it is less than 16 bytes, it will be padded with zeros inside the function. For plain and atag, specify RAM addresses that are multiples of 4.

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in,out]	plain	plaintext data area (cipher_data_length byte)
[in,out]	plain_data_length	plaintext data length (0 always written here)
[in,out]	atag	authentication tag area (atag_length byte)
[in]	atag_length	authentication tag length (4,8,12,13,14,15,16 bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_AUTHENTICATION	Authentication failed
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CCM_EncryptInit()

fsp_err_t R_SCE_AES128CCM_EncryptInit (sce_ccm_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*, uint8_t * *nonce*, uint32_t *nonce_length*, uint8_t * *adata*, uint8_t *a_length*, uint32_t *payload_length*, uint32_t *mac_length*)

The R_SCE_AES128CCM_EncryptInit() function prepares to perform CCM computation and writes the result to the first argument, handle. The succeeding functions R_SCE_AES128CCM_EncryptUpdate() and R_SCE_AES128CCM_EncryptFinal() use handle as an argument.

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	wrapped_key	128-bit AES wrapped key
[in]	nonce	Nonce
[in]	nonce_length	Nonce data length (7 to 13 bytes)
[in]	adata	additional authentication data
[in]	a_length	additional authentication data length (0 to 110 bytes)
[in]	payload_length	Payload length (any number of bytes)
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CCM_EncryptUpdate()

fsp_err_t R_SCE_AES128CCM_EncryptUpdate (sce_ccm_handle_t * *handle*, uint8_t * *plain*, uint8_t * *cipher*, uint32_t *plain_length*)

The R_SCE_AES128CCM_EncryptUpdate() function encrypts the plaintext specified in the second argument, plain, in CCM mode using the values specified by wrapped_key, nonce, and adata in R_SCE_AES128CCM_EncryptInit(). This function buffers internally the data input by the user until the input value of plain exceeds 16 bytes. Once the amount of plain input data is 16 bytes or greater, the encrypted result is output to cipher, which is specified in the third argument. Use payload_length in R_SCE_AES128CCM_EncryptInit() to specify the total data length of plain that will be input. Use plain_length in this function to specify the data length to be input when the user calls this function. If the input value of plain is less than 16 bytes, the function performs padding internally.

Ensure that the areas allocated to plain and cipher do not overlap. Also, specify RAM addresses that are multiples of 4 for plain and cipher.

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in]	plain_length	plaintext data length

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CCM_EncryptFinal()

fsp_err_t R_SCE_AES128CCM_EncryptFinal (sce_ccm_handle_t * *handle*, uint8_t * *cipher*, uint32_t * *cipher_length*, uint8_t * *mac*, uint32_t *mac_length*)

If the data length of plain input in R_SCE_AES128CCM_EncryptUpdate() results in leftover data after 16 bytes, the R_SCE_AES128CCM_EncryptFinal() function outputs the leftover encrypted data to cipher, which is specified in the second argument. The MAC value is output to the fourth argument, mac. Set the fifth argument, mac_length to the same value as that specified for the argument mac_length in Aes128CcmEncryptInit(). Also, specify RAM addresses that are multiples of 4 for cipher and mac.

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in,out]	cipher	ciphertext data area
[in,out]	cipher_length	ciphertext data length
[in,out]	mac	MAC area
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CCM_DecryptInit()

fsp_err_t R_SCE_AES128CCM_DecryptInit (sce_ccm_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*, uint8_t * *nonce*, uint32_t *nonce_length*, uint8_t * *adata*, uint8_t *a_length*, uint32_t *payload_length*, uint32_t *mac_length*)

The R_SCE_AES128CCM_DecryptInit() function prepares to perform CCM computation and writes the result to the first argument, handle. The succeeding functions R_SCE_AES128CCM_DecryptUpdate() and R_SCE_AES128CCM_DecryptFinal() use handle as an argument.

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	wrapped_key	128-bit AES wrapped key
[in]	nonce	Nonce
[in]	nonce_length	Nonce data length (7 to 13 bytes)
[in]	adata	additional authentication data
[in]	a_length	additional authentication data length (0 to 110 bytes)
[in]	payload_length	Payload length (any number of bytes)
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CCM_DecryptUpdate()

fsp_err_t R_SCE_AES128CCM_DecryptUpdate (sce_ccm_handle_t * *handle*, uint8_t * *cipher*, uint8_t * *plain*, uint32_t *cipher_length*)

The R_SCE_AES128CCM_DecryptUpdate() function decrypts the ciphertext specified by the second argument, cipher, in CCM mode using the values specified by wrapped_key, nonce, and adata in in R_SCE_AES128CCM_DecryptInit(). This function buffers internally the data input by the user until the input value of cipher exceeds 16 bytes. Once the amount of cipher input data is 16 bytes or greater, the decrypted result is output to plain, which is specified in the third argument. Use payload_length in R_SCE_AES128CCM_DecryptInit() to specify the total data length of cipher that will be input. Use cipher_length in this function to specify the data length to be input when the user calls this function. If the input value of cipher is less than 16 bytes, the function performs padding internally.

Ensure that the areas allocated to cipher and plain do not overlap. Also, specify RAM addresses that are multiples of 4 for cipher and plain.

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	cipher	ciphertext data area
[in,out]	plain	plaintext data area
[in]	cipher_length	ciphertext data length

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CCM_DecryptFinal()

fsp_err_t R_SCE_AES128CCM_DecryptFinal (sce_ccm_handle_t * *handle*, uint8_t * *plain*, uint32_t * *plain_length*, uint8_t * *mac*, uint32_t *mac_length*)

If the data length of cipher input in R_SCE_AES128GCM_DecryptUpdate() results in leftover data after 16 bytes, the R_SCE_AES128GCM_DecryptFinal() function outputs the leftover decrypted data to cipher, which is specified in the second argument. In addition, the function verifies the fourth argument, mac. Set the fifth argument, mac_length, to the same value as that specified for the argument mac_length in Aes128CcmDecryptInit().

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in,out]	plain	plaintext data area
[in,out]	plain_length	plaintext data length
[in]	mac	MAC area
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_FAIL	Internal error, or authentication failed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CCM_EncryptInit()

fsp_err_t R_SCE_AES256CCM_EncryptInit (sce_ccm_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*, uint8_t * *nonce*, uint32_t *nonce_length*, uint8_t * *adata*, uint8_t *a_length*, uint32_t *payload_length*, uint32_t *mac_length*)

The R_SCE_AES256CCM_EncryptInit() function prepares to perform CCM computation and writes the result to the first argument, handle. The succeeding functions R_SCE_AES256CCM_EncryptUpdate() and R_SCE_AES256CCM_EncryptFinal() use handle as an argument.

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	wrapped_key	256-bit AES wrapped key
[in]	nonce	Nonce
[in]	nonce_length	Nonce data length (7 to 13 bytes)
[in]	adata	additional authentication data
[in]	a_length	additional authentication data length (0 to 110 bytes)
[in]	payload_length	Payload length (any number of bytes)
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CCM_EncryptUpdate()

fsp_err_t R_SCE_AES256CCM_EncryptUpdate (sce_ccm_handle_t * *handle*, uint8_t * *plain*, uint8_t * *cipher*, uint32_t *plain_length*)

The R_SCE_AES256CCM_EncryptUpdate() function encrypts the plaintext specified in the second argument, plain, in CCM mode using the values specified by wrapped_key, nonce, and adata in R_SCE_AES256CCM_EncryptInit(). This function buffers internally the data input by the user until the input value of plain exceeds 16 bytes. Once the amount of plain input data is 16 bytes or greater, the encrypted result is output to cipher, which is specified in the third argument. Use payload_length in R_SCE_AES256CCM_EncryptInit() to specify the total data length of plain that will be input. Use plain_length in this function to specify the data length to be input when the user calls this function. If the input value of plain is less than 16 bytes, the function performs padding internally.

Ensure that the areas allocated to plain and cipher do not overlap. Also, specify RAM addresses that are multiples of 4 for plain and cipher.

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in]	plain_length	plaintext data length

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CCM_EncryptFinal()

fsp_err_t R_SCE_AES256CCM_EncryptFinal (sce_ccm_handle_t * *handle*, uint8_t * *cipher*, uint32_t * *cipher_length*, uint8_t * *mac*, uint32_t *mac_length*)

If the data length of plain input in R_SCE_AES256CCM_EncryptUpdate() results in leftover data after 16 bytes, the R_SCE_AES256CCM_EncryptFinal() function outputs the leftover encrypted data to cipher, which is specified in the second argument. The MAC value is output to the fourth argument, mac. Set the fifth argument, mac_length to the same value as that specified for the argument mac_length in Aes256CcmEncryptInit(). Also, specify RAM addresses that are multiples of 4 for cipher and mac.

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in,out]	cipher	ciphertext data area
[in,out]	cipher_length	ciphertext data length
[in,out]	mac	MAC area
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CCM_DecryptInit()

fsp_err_t R_SCE_AES256CCM_DecryptInit (sce_ccm_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*, uint8_t * *nonce*, uint32_t *nonce_length*, uint8_t * *adata*, uint8_t *a_length*, uint32_t *payload_length*, uint32_t *mac_length*)

The R_SCE_AES256CCM_DecryptInit() function prepares to perform CCM computation and writes the result to the first argument, handle. The succeeding functions R_SCE_AES256CCM_DecryptUpdate() and R_SCE_AES256CCM_DecryptFinal() use handle as an argument.

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	wrapped_key	256-bit AES wrapped key
[in]	nonce	Nonce
[in]	nonce_length	Nonce data length (7 to 13 bytes)
[in]	adata	additional authentication data
[in]	a_length	additional authentication data length (0 to 110 bytes)
[in]	payload_length	Payload length (any number of bytes)
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CCM_DecryptUpdate()

fsp_err_t R_SCE_AES256CCM_DecryptUpdate (sce_ccm_handle_t * *handle*, uint8_t * *cipher*, uint8_t * *plain*, uint32_t *cipher_length*)

The R_SCE_AES256CCM_DecryptUpdate() function decrypts the ciphertext specified by the second argument, cipher, in CCM mode using the values specified by wrapped_key, nonce, and adata in in R_SCE_AES256CCM_DecryptInit(). This function buffers internally the data input by the user until the input value of cipher exceeds 16 bytes. Once the amount of cipher input data is 16 bytes or greater, the decrypted result is output to plain, which is specified in the third argument. Use payload_length in R_SCE_AES256CCM_DecryptInit() to specify the total data length of cipher that will be input. Use cipher_length in this function to specify the data length to be input when the user calls this function. If the input value of cipher is less than 16 bytes, the function performs padding internally.

Ensure that the areas allocated to cipher and plain do not overlap. Also, specify RAM addresses that are multiples of 4 for cipher and plain.

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	cipher	ciphertext data area
[in,out]	plain	plaintext data area
[in]	cipher_length	ciphertext data length

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CCM_DecryptFinal()

fsp_err_t R_SCE_AES256CCM_DecryptFinal (sce_ccm_handle_t * *handle*, uint8_t * *plain*, uint32_t * *plain_length*, uint8_t * *mac*, uint32_t *mac_length*)

If the data length of cipher input in R_SCE_AES256GCM_DecryptUpdate() results in leftover data after 16 bytes, the R_SCE_AES256GCM_DecryptFinal() function outputs the leftover decrypted data to cipher, which is specified in the second argument. In addition, the function verifies the fourth argument, mac. Set the fifth argument, mac_length, to the same value as that specified for the argument mac_length in Aes256CcmDecryptInit().

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in,out]	plain	plaintext data area
[in,out]	plain_length	plaintext data length
[in]	mac	MAC area
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_FAIL	Internal error, or authentication failed.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CMAC_GenerateInit()

fsp_err_t R_SCE_AES128CMAC_GenerateInit (sce_cmac_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*)

The R_SCE_AES128CMAC_GenerateInit() function performs preparations for the execution of an CMAC calculation, and writes the result to the first argument, handle. The value of handle is used as an argument in the subsequent R_SCE_AES128CMAC_GenerateUpdate() function and R_SCE_AES128CMAC_GenerateFinal() function.

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	wrapped_key	128-bit AES wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_FAIL	Internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CMAC_GenerateUpdate()

fsp_err_t R_SCE_AES128CMAC_GenerateUpdate (sce_cmac_handle_t * *handle*, uint8_t * *message*, uint32_t *message_length*)

The R_SCE_AES128CMAC_GenerateUpdate() function performs MAC value generation based on the message specified in the second argument, message, using the value specified for wrapped_key in R_SCE_AES128CMAC_GenerateInit(). Inside this function, the data that is input by the user is buffered until the input value of message exceeds 16 bytes. The length of the message data to input is specified in the third argument, message_len. For these, input not the total byte count for message input data, but rather the message data length to input when the user calls this function. If the input value, message, is not a multiple of 16 bytes, it will be padded within the function. For message, specify a RAM address that are multiples of 4.

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	message	message data area (message_length byte)
[in]	message_length	message data length (0 or more bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CMAC_GenerateFinal()

fsp_err_t R_SCE_AES128CMAC_GenerateFinal (sce_cmac_handle_t * *handle*, uint8_t * *mac*)

The R_SCE_AES128CMAC_GenerateFinal() function outputs the MAC value to the MAC data area specified in the second argument, mac, and ends CMAC mode.

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in,out]	mac	MAC data area (16byte)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.
FSP_ERR_CRYPTO_SCE_AUTHENTICATION	Not used.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CMAC_VerifyInit()

fsp_err_t R_SCE_AES128CMAC_VerifyInit (sce_cmac_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*)

The R_SCE_AES128CMAC_VerifyInit() function performs preparations for the execution of a CMAC calculation, and writes the result to the first argument, handle. The value of handle is used as an argumentin the subsequent R_SCE_AES128CMAC_VerifyUpdate() function and R_SCE_AES128CMAC_VerifyFinal() function.

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	wrapped_key	128-bit AES wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_FAIL	Internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CMAC_VerifyUpdate()

fsp_err_t R_SCE_AES128CMAC_VerifyUpdate (sce_cmac_handle_t * *handle*, uint8_t * *message*, uint32_t *message_length*)

The R_SCE_AES128CMAC_VerifyUpdate() function performs MAC value generation based on the message specified in the second argument, message, using the value specified for wrapped_key in R_SCE_AES128CMAC_VerifyInit(). Inside this function, the data that is input by the user is buffered until the input value of message exceeds 16 bytes. The length of the message data to input is specified in the third argument, message_len. For these, input not the total byte count for message input data, but rather the message data length to input when the user calls this function. If the input value, message, is not a multiple of 16 bytes, it will be padded within the function. For message, specify a RAM address that are multiples of 4.

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	message	message data area (message_length byte)
[in]	message_length	message data length (0 or more bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES128CMAC_VerifyFinal()

fsp_err_t R_SCE_AES128CMAC_VerifyFinal (sce_cmac_handle_t * *handle*, uint8_t * *mac*, uint32_t *mac_length*)

The R_SCE_AES128CMAC_VerifyFinal() function inputs the MAC value in the MAC data area specified in the second argument, mac, and verifies the MAC value. If authentication fails, the return value will be TSIP_ERR_AUTHENTICATION. If the MAC value is less than 16 bytes, it will be padded with zeros inside the function.

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in,out]	mac	MAC data area (mac_length byte)
[in,out]	mac_length	MAC data length (2 to 16 bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_AUTHENTICATION	Authentication failed
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CMAC_GenerateInit()

fsp_err_t R_SCE_AES256CMAC_GenerateInit (sce_cmac_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*)

The R_SCE_AES256CMAC_GenerateInit() function performs preparations for the execution of an CMAC calculation, and writes the result to the first argument, handle. The value of handle is used as an argument in the subsequent R_SCE_AES256CMAC_GenerateUpdate() function and R_SCE_AES256CMAC_GenerateFinal() function.

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	wrapped_key	256-bit AES wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_FAIL	Internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CMAC_GenerateUpdate()

fsp_err_t R_SCE_AES256CMAC_GenerateUpdate (sce_cmac_handle_t * *handle*, uint8_t * *message*, uint32_t *message_length*)

The R_SCE_AES256CMAC_GenerateUpdate() function performs MAC value generation based on the message specified in the second argument, message, using the value specified for wrapped_key in R_SCE_AES256CMAC_GenerateInit(). Inside this function, the data that is input by the user is buffered until the input value of message exceeds 16 bytes. The length of the message data to input is specified in the third argument, message_len. For these, input not the total byte count for message input data, but rather the message data length to input when the user calls this function. If the input value, message, is not a multiple of 16 bytes, it will be padded within the function. For message, specify a RAM address that are multiples of 4.

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	message	message data area (message_length byte)
[in]	message_length	message data length (0 or more bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CMAC_GenerateFinal()

fsp_err_t R_SCE_AES256CMAC_GenerateFinal (sce_cmac_handle_t * *handle*, uint8_t * *mac*)

The R_SCE_AES256CMAC_GenerateFinal() function outputs the MAC value to the MAC data area specified in the second argument, mac, and ends CMAC mode.

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in,out]	mac	MAC data area (16byte)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.
FSP_ERR_CRYPTO_SCE_AUTHENTICATION	Not used.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CMAC_VerifyInit()

fsp_err_t R_SCE_AES256CMAC_VerifyInit (sce_cmac_handle_t * *handle*, sce_aes_wrapped_key_t * *wrapped_key*)

The R_SCE_AES256CMAC_VerifyInit() function performs preparations for the execution of a CMAC calculation, and writes the result to the first argument, handle. The value of handle is used as an argumentin the subsequent R_SCE_AES256CMAC_VerifyUpdate() function and R_SCE_AES256CMAC_VerifyFinal() function.

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	wrapped_key	256-bit AES wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_FAIL	Internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CMAC_VerifyUpdate()

fsp_err_t R_SCE_AES256CMAC_VerifyUpdate (sce_cmac_handle_t * *handle*, uint8_t * *message*, uint32_t *message_length*)

The R_SCE_AES256CMAC_VerifyUpdate() function performs MAC value generation based on the message specified in the second argument, message, using the value specified for wrapped_key in R_SCE_AES256CMAC_VerifyInit(). Inside this function, the data that is input by the user is buffered until the input value of message exceeds 16 bytes. The length of the message data to input is specified in the third argument, message_len. For these, input not the total byte count for message input data, but rather the message data length to input when the user calls this function. If the input value, message, is not a multiple of 16 bytes, it will be padded within the function. For message, specify a RAM address that are multiples of 4.

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	message	message data area (message_length byte)
[in]	message_length	message data length (0 or more bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_AES256CMAC_VerifyFinal()

fsp_err_t R_SCE_AES256CMAC_VerifyFinal (sce_cmac_handle_t * *handle*, uint8_t * *mac*, uint32_t *mac_length*)

The R_SCE_AES256CMAC_VerifyFinal() function inputs the MAC value in the MAC data area specified in the second argument, mac, and verifies the MAC value. If authentication fails, the return value will be TSIP_ERR_AUTHENTICATION. If the MAC value is less than 16 bytes, it will be padded with zeros inside the function.

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in,out]	mac	MAC data area (mac_length byte)
[in,out]	mac_length	MAC data length (2 to 16 bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_AUTHENTICATION	Authentication failed
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_SHA256_Init()

fsp_err_t R_SCE_SHA256_Init (sce_sha_md5_handle_t * *handle*)

The R_SCE_SHA256_Init() function performs preparations for the execution of an SHA-256 hash calculation, and writes the result to the first argument, handle. The value of handle is used as an argument in the subsequent R_SCE_SHA256_Update() function and R_SCE_SHA256_Final() function.

Parameters

[in,out]	handle	SHA handler (work area)

Return values

FSP_SUCCESS	Normal termination

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_SHA256_Update()

fsp_err_t R_SCE_SHA256_Update (sce_sha_md5_handle_t * *handle*, uint8_t * *message*, uint32_t *message_length*)

The R_SCE_SHA256_Update() function calculates a hash value based on the second argument, message, and the third argument, message_length, and writes the ongoing status to the first argument, handle. After message input is completed, call R_SCE_SHA256_Final().

Parameters

[in,out]	handle	SHA handler (work area)
[in]	message	message data area
[in]	message_length	message data length

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_SHA256_Final()

fsp_err_t R_SCE_SHA256_Final (sce_sha_md5_handle_t * *handle*, uint8_t * *digest*, uint32_t * *digest_length*)

Using the handle specified in the first argument, handle, the R_SCE_SHA256_Final() function writes the calculation result to the second argument, digest, and writes the length of the calculation result to the third argument, digest_length.

Parameters

[in,out]	handle	SHA handler (work area)
[in,out]	digest	hasha data area
[in,out]	digest_length	hash data length (32bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_SHA256HMAC_GenerateInit()

fsp_err_t R_SCE_SHA256HMAC_GenerateInit (sce_hmac_sha_handle_t * *handle*, sce_hmac_sha_wrapped_key_t * *wrapped_key*)

The R_SCE_SHA256HMAC_GenerateInit() function uses the second argument wrapped_key to prepare for execution of SHA256-HMAC calculation, then writes the result to the first argument handle. The argument handle is used by the subsequent R_SCE_SHA256HMAC_GenerateUpdate() function or R_SCE_SHA256HMAC_GenerateFinal() function.

Parameters

[in,out]	handle	SHA-HMAC handler (work area)
[in]	wrapped_key	MAC wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	An invalid MAC wrapped key was input.
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_SHA256HMAC_GenerateUpdate()

fsp_err_t R_SCE_SHA256HMAC_GenerateUpdate (sce_hmac_sha_handle_t * *handle*, uint8_t * *message*, uint32_t *message_length*)

The R_SCE_SHA256HMAC_GenerateUpdate() function uses the handle specified by the first argument handle, calculates a hash value from the second argument message and third argument message_length, then writes the intermediate result to the first argument handle. After message input finishes, call the R_SCE_SHA256HMAC_GenerateFinal() function.

Parameters

[in,out]	handle	SHA-HMAC handle (work area)
[in]	message	Message area
[in]	message_length	Message length

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_SHA256HMAC_GenerateFinal()

fsp_err_t R_SCE_SHA256HMAC_GenerateFinal (sce_hmac_sha_handle_t * *handle*, uint8_t * *mac*)

The R_SCE_SHA256HMAC_GenerateFinal() function uses the handle specified by the first argument handle and writes the calculation result to the second argument mac.

Parameters

[in,out]	handle	SHA-HMAC handle (work area)
[in,out]	mac	HMAC area (32 bytes)

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_SHA256HMAC_VerifyInit()

fsp_err_t R_SCE_SHA256HMAC_VerifyInit (sce_hmac_sha_handle_t * *handle*, sce_hmac_sha_wrapped_key_t * *wrapped_key*)

The R_SCE_SHA256HMAC_VerifyInit() function uses the second argument wrapped_key to prepare for execution of SHA256-HMAC calculation, then writes the result to the first argument handle. The argument handle is used by the subsequent R_SCE_SHA256HMAC_VerifyUpdate() function or R_SCE_SHA256HMAC_VerifyFinal() function.

Parameters

[in,out]	handle	SHA-HMAC handler (work area)
[in]	wrapped_key	MAC wrapped key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	An invalid MAC wrapped key was input.
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_SHA256HMAC_VerifyUpdate()

fsp_err_t R_SCE_SHA256HMAC_VerifyUpdate (sce_hmac_sha_handle_t * *handle*, uint8_t * *message*, uint32_t *message_length*)

The R_SCE_SHA256HMAC_VerifyUpdate() function uses the handle specified by the first argument handle, calculates a hash value from the second argument message and third argument message_length, then writes the intermediate result to the first argument handle. After message input finishes, call the R_SCE_SHA256HMAC_VerifyFinal() function.

Parameters

[in,out]	handle	SHA-HMAC handle (work area)
[in]	message	Message area
[in]	message_length	Message length

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_SHA256HMAC_VerifyFinal()

fsp_err_t R_SCE_SHA256HMAC_VerifyFinal (sce_hmac_sha_handle_t * *handle*, uint8_t * *mac*, uint32_t *mac_length*)

The R_SCE_SHA256HMAC_VerifyFinal() function uses the handle specified by the first argument handle and verifies the mac value from the second argument mac and third argument mac_length. Input a value in bytes from 4 to 32 as mac_length.

Parameters

[in,out]	handle	SHA-HMAC handle (work area)
[in]	mac	HMAC area
[in]	mac_length	HMAC length

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSASSA_PKCS1024_SignatureGenerate()

fsp_err_t R_SCE_RSASSA_PKCS1024_SignatureGenerate (sce_rsa_byte_data_t * *message_hash*, sce_rsa_byte_data_t * *signature*, sce_rsa1024_private_wrapped_key_t * *wrapped_key*, uint8_t *hash_type*)

The R_SCE_RSASSA_PKCS1024_SignatureGenerate() function generates, in accordance with RSASSA-PKCS1-V1_5, a signature from the message text or hash value that is input in the first argument, message_hash, using the private wrapped key input to the third argument, wrapped_key, and writes the signature text to the second argument, signature. When a message is specified in the first argument, message_hash->data_type, a hash value is calculated for the message as specified by the fourth argument, hash_type. When specifying a hash value in the first argument, message_hash->data_type, a hash value calculated with a hash algorithm as specified by the fourth argument, hash_type, must be input to message_hash->pdata.

Parameters

[in]	message_hash	Message or hash value to which to attach signature • message_hash->pdata : Specifies pointer to array storing the message or hash value

		• message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) • message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1)
[in,out]	signature	Signature text storage destination information • signature->pdata : Specifies pointer to array storing the signature text • signature->data_length : data length
[in]	wrapped_key	Inputs the 1024-bit RSA private wrapped key.
[in]	hash_type	Only HW_SCE_RSA_HASH_SHA256 is supported

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is invalid.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSASSA_PKCS1024_SignatureVerify()

fsp_err_t R_SCE_RSASSA_PKCS1024_SignatureVerify (sce_rsa_byte_data_t * *signature*, sce_rsa_byte_data_t * *message_hash*, sce_rsa1024_public_wrapped_key_t * *wrapped_key*, uint8_t *hash_type*)

The R_SCE_RSASSA_PKCS1024_SignatureVerify() function verifies, in accordance with RSASSA-PKCS1-V1_5, the signature text input to the first argument signature, and the message text or hash value input to the second argument, message_hash, using the public wrapped key input to the third argument, wrapped_key. When a message is specified in the second argument, message_hash->data_type, a hash value is calculated using the public wrapped key input to the third argument, wrapped_key, and as specified by the fourth argument, hash_type. When specifying a hash value in the second argument, message_hash->data_type, a hash value calculated with a hash algorithm as specified by the fourth argument, hash_type, must be input to message_hash->pdata.

Parameters

[in]	signature	Signature text information to verify • signature->pdata : Specifies pointer to array storing the signature text • signature->data_length : Specifies effective data length of the array
[in]	message_hash	Message text or hash value to verify • message_hash->pdata : Specifies pointer to array storing the message or hash value • message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) • message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1)
[in]	wrapped_key	Inputs the 1024-bit RSA public wrapped key.
[in]	hash_type	Only

		HW_SCE_RSA_HASH_SHA256 is supported

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_AUTHENTICATION	Authentication failed
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is invalid.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSASSA_PKCS2048_SignatureGenerate()

fsp_err_t R_SCE_RSASSA_PKCS2048_SignatureGenerate (sce_rsa_byte_data_t * *message_hash*, sce_rsa_byte_data_t * *signature*, sce_rsa2048_private_wrapped_key_t * *wrapped_key*, uint8_t *hash_type*)

The R_SCE_RSASSA_PKCS2048_SignatureGenerate() function generates, in accordance with RSASSA-PKCS1-V1_5, a signature from the message text or hash value that is input in the first argument, message_hash, using the private wrapped key input to the third argument, wrapped_key, and writes the signature text to the second argument, signature. When a message is specified in the first argument, message_hash->data_type, a hash value is calculated for the message as specified by the fourth argument, hash_type. When specifying a hash value in the first argument, message_hash->data_type, a hash value calculated with a hash algorithm as specified by the fourth argument, hash_type, must be input to message_hash->pdata.

Parameters

[in]	message_hash	Message or hash value to which to attach signature • message_hash->pdata : Specifies pointer to array storing the message or hash value • message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) • message_hash->data_type : Selects the

		data type of message_hash (Message: 0 Hash value: 1)
[in,out]	signature	Signature text storage destination information • signature->pdata : Specifies pointer to array storing the signature text • signature->data_length : data length
[in]	wrapped_key	Inputs the 2048-bit RSA private wrapped key.
[in]	hash_type	Only HW_SCE_RSA_HASH_SHA256 is supported

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is invalid.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSASSA_PKCS2048_SignatureVerify()

fsp_err_t R_SCE_RSASSA_PKCS2048_SignatureVerify (sce_rsa_byte_data_t * *signature*, sce_rsa_byte_data_t * *message_hash*, sce_rsa2048_public_wrapped_key_t * *wrapped_key*, uint8_t *hash_type*)

The R_SCE_RSASSA_PKCS2048_SignatureVerify() function verifies, in accordance with RSASSA-PKCS1-V1_5, the signature text input to the first argument signature, and the message text or hash value input to the second argument, message_hash, using the public wrapped key input to the third argument, wrapped_key. When a message is specified in the second argument, message_hash->data_type, a hash value is calculated using the public wrapped key input to the third argument, wrapped_key, and as specified by the fourth argument, hash_type. When specifying a hash value in the second argument, message_hash->data_type, a hash value calculated with a hash algorithm as specified by the fourth argument, hash_type, must be input to message_hash->pdata.

Parameters

[in]	signature	Signature text information to verify • signature->pdata : Specifies pointer to array storing the signature text • signature->data_length : Specifies effective data length of the array
[in]	message_hash	Message text or hash value to verify • message_hash->pdata : Specifies pointer to array storing the message or hash value • message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) • message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1)
[in]	wrapped_key	Inputs the 1024-bit RSA public wrapped key.
[in]	hash_type	Only

		HW_SCE_RSA_HASH_SHA256 is supported

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_AUTHENTICATION	Authentication failed
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is invalid.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSASSA_PKCS3072_SignatureVerify()

fsp_err_t R_SCE_RSASSA_PKCS3072_SignatureVerify (sce_rsa_byte_data_t * *signature*, sce_rsa_byte_data_t * *message_hash*, sce_rsa3072_public_wrapped_key_t * *wrapped_key*, uint8_t *hash_type*)

The R_SCE_RSASSA_PKCS3072_SignatureVerify() function verifies, in accordance with RSASSA-PKCS1-V1_5, the signature text input to the first argument signature, and the message text or hash value input to the second argument, message_hash, using the public wrapped key input to the third argument, wrapped_key. When a message is specified in the second argument, message_hash->data_type, a hash value is calculated using the public wrapped key input to the third argument, wrapped_key, and as specified by the fourth argument, hash_type. When specifying a hash value in the second argument, message_hash->data_type, a hash value calculated with a hash algorithm as specified by the fourth argument, hash_type, must be input to message_hash->pdata.

Parameters

[in]	signature	Signature text information to verify • signature->pdata : Specifies pointer to array storing the signature text • signature->data_length : Specifies effective data length of the array
[in]	message_hash	Message text or hash value to verify • message_hash->pda

		ta : Specifies pointer to array storing the message or hash value • message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) • message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1)
[in]	wrapped_key	Inputs the 3072-bit RSA public wrapped key.
[in]	hash_type	Only HW_SCE_RSA_HASH_SHA256 is supported

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_AUTHENTICATION	Authentication failed
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is invalid.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSASSA_PKCS4096_SignatureVerify()

fsp_err_t R_SCE_RSASSA_PKCS4096_SignatureVerify (sce_rsa_byte_data_t * *signature*, sce_rsa_byte_data_t * *message_hash*, sce_rsa4096_public_wrapped_key_t * *wrapped_key*, uint8_t *hash_type*)

The R_SCE_RSASSA_PKCS4096_SignatureVerify() function verifies, in accordance with RSASSA-PKCS1-V1_5, the signature text input to the first argument signature, and the message text or hash value input to the second argument, message_hash, using the public wrapped key input to the third argument, wrapped_key. When a message is specified in the second argument, message_hash->data_type, a hash value is calculated using the public wrapped key input to the third argument, wrapped_key, and as specified by the fourth argument, hash_type. When specifying a hash value in the second argument, message_hash->data_type, a hash value calculated with a hash algorithm as specified by the fourth argument, hash_type, must be input to message_hash->pdata.

Parameters

[in]	signature	Signature text information to verify • signature->pdata : Specifies pointer to array storing the signature text • signature->data_length : Specifies effective data length of the array
[in]	message_hash	Message text or hash value to verify • message_hash->pdata : Specifies pointer to array storing the message or hash value • message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) • message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1)
[in]	wrapped_key	Inputs the 1024-bit RSA public wrapped key.
[in]	hash_type	Only

		HW_SCE_RSA_HASH_SHA256 is supported

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_AUTHENTICATION	Authentication failed
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is invalid.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSAES_PKCS1024_Encrypt()

fsp_err_t R_SCE_RSAES_PKCS1024_Encrypt (sce_rsa_byte_data_t * *plain*, sce_rsa_byte_data_t * *cipher*, sce_rsa1024_public_wrapped_key_t * *wrapped_key*)

The R_SCE_RSAES_PKCS1024_Encrypt() function RSA-encrypts the plaintext input to the first argument, plain, according to RSAES-PKCS1-V1_5. It writes the encryption result to the second argument, cipher.

Parameters

[in]	plain	plaintext • plain->pdata : Specifies pointer to array containing plaintext. • plain->data_length : Specifies valid data length of plaintext array. data size <= public key n size - 11
[in,out]	cipher	ciphertext • cipher->pdata : Specifies pointer to array containing ciphertext. • cipher->data_length : Inputs ciphertext buffer size. Outputs valid data length after encryption (public key n size).
[in]	wrapped_key	Inputs the 1024-bit RSA public wrapped key.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Incorrect wrapped key was input.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSAES_PKCS1024_Decrypt()

fsp_err_t R_SCE_RSAES_PKCS1024_Decrypt (sce_rsa_byte_data_t * *cipher*, sce_rsa_byte_data_t * *plain*, sce_rsa1024_private_wrapped_key_t * *wrapped_key*)

The R_SCE_RSAES_PKCS1024_Decrypt() function RSA-decrypts the ciphertext input to the first argument, cipher, according to RSAES-PKCS1-V1_5. It writes the decryption result to the second argument, plain.

Parameters

[in]	cipher	ciphertext • cipher->pdata : Specifies pointer to array containing ciphertext. • cipher->data_length : Inputs ciphertext buffer size. Outputs valid data length after encryption (public key n size).
[in,out]	plain	plaintext • plain->pdata : Specifies pointer to array containing plaintext. • plain->data_length : Inputs plaintext buffer size. The following size is required. Plaintext buffer size >= public key n size -11. Outputs valid data length after decryption (public key n size).
[in]	wrapped_key	Inputs the 1024-bit RSA private wrapped key.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Incorrect wrapped key was input.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.

FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSAES_PKCS2048_Encrypt()

fsp_err_t R_SCE_RSAES_PKCS2048_Encrypt (sce_rsa_byte_data_t * *plain*, sce_rsa_byte_data_t * *cipher*, sce_rsa2048_public_wrapped_key_t * *wrapped_key*)

The R_SCE_RSAES_PKCS2048_Encrypt() function RSA-encrypts the plaintext input to the first argument, plain, according to RSAES-PKCS1-V1_5. It writes the encryption result to the second argument, cipher.

Parameters

[in]	plain	plaintext • plain->pdata : Specifies pointer to array containing plaintext. • plain->data_length : Specifies valid data length of plaintext array. data size <= public key n size - 11
[in,out]	cipher	ciphertext • cipher->pdata : Specifies pointer to array containing ciphertext. • cipher->data_length : Inputs ciphertext buffer size. Outputs valid data length after encryption (public key n size).
[in]	wrapped_key	Inputs the 2048-bit RSA public wrapped key.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Incorrect wrapped key was input.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSAES_PKCS2048_Decrypt()

fsp_err_t R_SCE_RSAES_PKCS2048_Decrypt (sce_rsa_byte_data_t * *cipher*, sce_rsa_byte_data_t * *plain*, sce_rsa2048_private_wrapped_key_t * *wrapped_key*)

The R_SCE_RSAES_PKCS2048_Decrypt() function RSA-decrypts the ciphertext input to the first argument, cipher, according to RSAES-PKCS1-V1_5. It writes the decryption result to the second argument, plain.

Parameters

[in]	cipher	ciphertext • cipher->pdata : Specifies pointer to array containing ciphertext. • cipher->data_length : Inputs ciphertext buffer size. Outputs valid data length after encryption (public key n size).
[in,out]	plain	plaintext • plain->pdata : Specifies pointer to array containing plaintext. • plain->data_length : Inputs plaintext buffer size. The following size is required. Plaintext buffer size >= public key n size -11. Outputs valid data length after decryption (public key n size).
[in]	wrapped_key	Inputs the 1024-bit RSA private wrapped key.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Incorrect wrapped key was input.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.

FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSAES_PKCS3072_Encrypt()

fsp_err_t R_SCE_RSAES_PKCS3072_Encrypt (sce_rsa_byte_data_t * *plain*, sce_rsa_byte_data_t * *cipher*, sce_rsa3072_public_wrapped_key_t * *wrapped_key*)

The R_SCE_RSAES_PKCS3072_Encrypt() function RSA-encrypts the plaintext input to the first argument, plain, according to RSAES-PKCS1-V1_5. It writes the encryption result to the second argument, cipher.

Parameters

[in]	plain	plaintext • plain->pdata : Specifies pointer to array containing plaintext. • plain->data_length : Specifies valid data length of plaintext array. data size <= public key n size - 11
[in,out]	cipher	ciphertext • cipher->pdata : Specifies pointer to array containing ciphertext. • cipher->data_length : Inputs ciphertext buffer size. Outputs valid data length after encryption (public key n size).
[in]	wrapped_key	Inputs the 3072-bit RSA public wrapped key.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Incorrect wrapped key was input.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_RSAES_PKCS4096_Encrypt()

fsp_err_t R_SCE_RSAES_PKCS4096_Encrypt (sce_rsa_byte_data_t * *plain*, sce_rsa_byte_data_t * *cipher*, sce_rsa4096_public_wrapped_key_t * *wrapped_key*)

The R_SCE_RSAES_PKCS4096_Encrypt() function RSA-encrypts the plaintext input to the first argument, plain, according to RSAES-PKCS1-V1_5. It writes the encryption result to the second argument, cipher.

Parameters

[in]	plain	plaintext • plain->pdata : Specifies pointer to array containing plaintext. • plain->data_length : Specifies valid data length of plaintext array. data size <= public key n size - 11
[in,out]	cipher	ciphertext • cipher->pdata : Specifies pointer to array containing ciphertext. • cipher->data_length : Inputs ciphertext buffer size. Outputs valid data length after encryption (public key n size).
[in]	wrapped_key	Inputs the 4096-bit RSA public wrapped key.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Incorrect wrapped key was input.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is illegal.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDSA_secp192r1_SignatureGenerate()

fsp_err_t R_SCE_ECDSA_secp192r1_SignatureGenerate (sce_ecdsa_byte_data_t * *message_hash*, sce_ecdsa_byte_data_t * *signature*, sce_ecc_private_wrapped_key_t * *wrapped_key*)

When a message is specified in the first argument, message_hash->data_type, a SHA-256 hash of the message text input as the first argument, message_hash->pdata, is calculated, and the signature text is written to the second argument, signature, in accordance with secp192r1 using the private wrapped key input as the third argument, wrapped_key.

When a hash value is specified in the first argument, message_hash->data_type, the signature text for the first 24 bytes of the SHA-256 hash value input to the first argument, message_hash->pdata, is written to the second argument, signature, in accordance with secp192r1 using the private wrapped key input as the third argument, wrapped_key.

Parameters

[in]	message_hash	Message or hash value to which to attach signature • message_hash->pdata : Specifies pointer to array storing the message or hash value • message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) • message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1)
[in,out]	signature	Signature text storage destination information • signature->pdata : Specifies pointer to array storing signature text The signature format is "0 padding (64 bits) || signature r (192 bits) || 0 padding (64 bits) || signature s (192 bits)". • signature->data_length : Data length (byte units)

[in]	wrapped_key	Input wrapped key of secp192r1 private key.

Return values

FSP_SUCCESS	Normal end
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource required by the processing is in use by other processing.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is invalid.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDSA_secp224r1_SignatureGenerate()

fsp_err_t R_SCE_ECDSA_secp224r1_SignatureGenerate (sce_ecdsa_byte_data_t * *message_hash*, sce_ecdsa_byte_data_t * *signature*, sce_ecc_private_wrapped_key_t * *wrapped_key*)

When a message is specified in the first argument, message_hash->data_type, a SHA-256 hash of the message text input as the first argument, message_hash->pdata, is calculated, and the signature text is written to the second argument, signature, in accordance with secp224r1 using the private wrapped key input as the third argument, wrapped_key.

When a hash value is specified in the first argument, message_hash->data_type, the signature text for the first 28 bytes of the SHA-256 hash value input to the first argument, message_hash->pdata, is written to the second argument, signature, in accordance with secp224r1 using the private wrapped key input as the third argument, wrapped_key.

Parameters

[in]	message_hash	Message or hash value to which to attach signature • message_hash->pdata : Specifies pointer to array storing the message or hash value • message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) • message_hash->data_type : Selects the data type of message_hash

		(Message: 0 Hash value: 1)
[in,out]	signature	Signature text storage destination information • signature->pdata : Specifies pointer to array storing signature text The signature format is "0 padding (32 bits) || signature r (224 bits) || 0 padding (32 bits) || signature s (224 bits)". • signature->data_length : Data length (byte units)
[in]	wrapped_key	Input wrapped key of secp224r1 private key.

Return values

FSP_SUCCESS	Normal end
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource required by the processing is in use by other processing.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is invalid.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDSA_secp256r1_SignatureGenerate()

fsp_err_t R_SCE_ECDSA_secp256r1_SignatureGenerate (sce_ecdsa_byte_data_t * *message_hash*, sce_ecdsa_byte_data_t * *signature*, sce_ecc_private_wrapped_key_t * *wrapped_key*)

When a message is specified in the first argument, message_hash->data_type, a SHA-256 hash of the message text input as the first argument, message_hash->pdata, is calculated, and the signature text is written to the second argument, signature, in accordance with secp256r1 using the private wrapped key input as the third argument, wrapped_key.

When a hash value is specified in the first argument, message_hash->data_type, the signature text for the first 32 bytes of the SHA-256 hash value input to the first argument, message_hash->pdata, is written to the second argument, signature, in accordance with secp256r1 using the private wrapped key input as the third argument, wrapped_key.

Parameters

[in]	message_hash	Message or hash value to which to attach signature • message_hash->pdata : Specifies pointer to array storing the message or hash value • message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) • message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1)
[in,out]	signature	Signature text storage destination information • signature->pdata : Specifies pointer to array storing signature text The signature format is "signature r (256 bits) || signature s (256 bits)". • signature->data_length : Data length (byte units)
[in]	wrapped_key	Input wrapped key of secp256r1 private key.

Return values

FSP_SUCCESS	Normal end
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource required by the processing is in use by other processing.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is invalid.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDSA_secp384r1_SignatureGenerate()

fsp_err_t R_SCE_ECDSA_secp384r1_SignatureGenerate (sce_ecdsa_byte_data_t * *message_hash*, sce_ecdsa_byte_data_t * *signature*, sce_ecc_private_wrapped_key_t * *wrapped_key*)

When a message is specified in the first argument, message_hash->data_type, a SHA-384 hash of the message text input as the first argument, message_hash->pdata, is calculated, and the signature text is written to the second argument, signature, in accordance with secp384r1 using the private wrapped key input as the third argument, wrapped_key.

To use message input, prepare a user-defined function for SHA384.

When a hash value is specified in the first argument, message_hash->data_type, the signature text for the first 48 bytes of the SHA-384 hash value input to the first argument, message_hash->pdata, is written to the second argument, signature, in accordance with secp384r1 using the private wrapped key input as the third argument, wrapped_key.

Parameters

[in]	message_hash	Message or hash value to which to attach signature • message_hash->pdata : Specifies pointer to array storing the message or hash value • message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) • message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash

		value: 1)
[in,out]	signature	Signature text storage destination information • signature->pdata : Specifies pointer to array storing signature text The signature format is "signature r (384 bits) || signature s (384 bits)". • signature->data_length : Data length (byte units)
[in]	wrapped_key	Input wrapped key of secp384r1 private key.

Return values

FSP_SUCCESS	Normal end
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource required by the processing is in use by other processing.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is invalid.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDSA_secp192r1_SignatureVerify()

fsp_err_t R_SCE_ECDSA_secp192r1_SignatureVerify (sce_ecdsa_byte_data_t * *signature*, sce_ecdsa_byte_data_t * *message_hash*, sce_ecc_public_wrapped_key_t * *wrapped_key*)

When a message is specified in the second argument, message_hash->data_type, a SHA-256 hash of the message text input as the second argument, message_hash->pdata, is calculated, and the signature text input to the first argument, signature, is validated in accordance with secp192r1 using the public wrapped key input as the third argument, wrapped_key.

When a hash value is specified in the second argument, message_hash->data_type, the signature text for the first 24 bytes of the SHA-256 hash value input to the second argument, message_hash->pdata, input to the first argument, signature, is validated in accordance with secp192r1 using the public wrapped key input as the third argument, wrapped_key.

Parameters

[in]	signature	Signature text information to be verified • signature->pdata : Specifies pointer to array storing signature text The signature format is "0 padding (64 bits) || signature r (192 bits) || 0 padding (64 bits) || signature s (192 bits)". • signature->data_length : Specifies the data length (byte units) (nonuse)
[in,out]	message_hash	Message or hash value to be verified • message_hash->pdata : Specifies pointer to array storing the message or hash value • message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) • message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1)

[in]	wrapped_key	Input wrapped key of secp192r1 public key.

Return values

FSP_SUCCESS	Normal end
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource required by the processing is in use by other processing.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred or signature verification failed.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is invalid.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDSA_secp224r1_SignatureVerify()

fsp_err_t R_SCE_ECDSA_secp224r1_SignatureVerify (sce_ecdsa_byte_data_t * *signature*, sce_ecdsa_byte_data_t * *message_hash*, sce_ecc_public_wrapped_key_t * *wrapped_key*)

When a message is specified in the second argument, message_hash->data_type, a SHA-256 hash of the message text input as the second argument, message_hash->pdata, is calculated, and the signature text input to the first argument, signature, is validated in accordance with secp224r1 using the public wrapped key input as the third argument, wrapped_key.

When a hash value is specified in the second argument, message_hash->data_type, the signature text for the first 28 bytes of the SHA-256 hash value input to the second argument, message_hash->pdata, input to the first argument, signature, is validated in accordance with secp224r1 using the public wrapped key input as the third argument, wrapped_key.

Parameters

[in]	signature	Signature text information to be verified • signature->pdata : Specifies pointer to array storing signature text The signature format is "0 padding (32 bits) || signature r (224 bits) || 0 padding (32 bits) || signature s (224 bits)". • signature->data_length : Specifies the data length (byte units) (nonuse)

[in,out]	message_hash	Message or hash value to be verified • message_hash->pdata : Specifies pointer to array storing the message or hash value • message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) • message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1)
[in]	wrapped_key	Input wrapped key of secp224r1 public key.

Return values

FSP_SUCCESS	Normal end
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource required by the processing is in use by other processing.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred or signature verification failed.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is invalid.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDSA_secp256r1_SignatureVerify()

fsp_err_t R_SCE_ECDSA_secp256r1_SignatureVerify (sce_ecdsa_byte_data_t * *signature*, sce_ecdsa_byte_data_t * *message_hash*, sce_ecc_public_wrapped_key_t * *wrapped_key*)

When a message is specified in the second argument, message_hash->data_type, a SHA-256 hash of the message text input as the second argument, message_hash->pdata, is calculated, and the signature text input to the first argument, signature, is validated in accordance with secp256r1 using the public wrapped key input as the third argument, wrapped_key.

When a hash value is specified in the second argument, message_hash->data_type, the signature text for the first 32 bytes of the SHA-256 hash value input to the second argument, message_hash->pdata, input to the first argument, signature, is validated in accordance with secp256r1 using the public wrapped key input as the third argument, wrapped_key.

Parameters

[in]	signature	Signature text information to be verified • signature->pdata : Specifies pointer to array storing signature text The signature format is "signature r (256 bits) || signature s (256 bits)". • signature->data_length : Specifies the data length (byte units) (nonuse)
[in,out]	message_hash	Message or hash value to be verified • message_hash->pdata : Specifies pointer to array storing the message or hash value • message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) • message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1)
[in]	wrapped_key	Input wrapped key of

		secp256r1 public key.

Return values

FSP_SUCCESS	Normal end
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource required by the processing is in use by other processing.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred or signature verification failed.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is invalid.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDSA_secp384r1_SignatureVerify()

fsp_err_t R_SCE_ECDSA_secp384r1_SignatureVerify (sce_ecdsa_byte_data_t * *signature*, sce_ecdsa_byte_data_t * *message_hash*, sce_ecc_public_wrapped_key_t * *wrapped_key*)

When a message is specified in the second argument, message_hash->data_type, a SHA-256 hash of the message text input as the second argument, message_hash->pdata, is calculated, and the signature text input to the first argument, signature, is validated in accordance with secp384r1 using the public wrapped key input as the third argument, wrapped_key.

To use message input, prepare a user-defined function for SHA384.

When a hash value is specified in the second argument, message_hash->data_type, the signature text for the first 48 bytes of the SHA-256 hash value input to the second argument, message_hash->pdata, input to the first argument, signature, is validated in accordance with secp384r1 using the public wrapped key input as the third argument, wrapped_key.

Parameters

[in]	signature	Signature text information to be verified • signature->pdata : Specifies pointer to array storing signature text The signature format is "signature r (384 bits) || signature s (384 bits)". • signature->data_length : Specifies the data length (byte units) (nonuse)

[in,out]	message_hash	Message or hash value to be verified • message_hash->pdata : Specifies pointer to array storing the message or hash value • message_hash->data_length : Specifies effective data length of the array (Specify only when Message is selected) • message_hash->data_type : Selects the data type of message_hash (Message: 0 Hash value: 1)
[in]	wrapped_key	Input wrapped key of secp384r1 public key.

Return values

FSP_SUCCESS	Normal end
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource required by the processing is in use by other processing.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred or signature verification failed.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is invalid.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDH_secp256r1_Init()

fsp_err_t R_SCE_ECDH_secp256r1_Init (sce_ecdh_handle_t * *handle*, uint32_t *key_type*, uint32_t *use_key_id*)

The R_SCE_ECDH_secp256r1_Init() function prepares to perform ECDH key exchange computation and writes the result to the first argument, handle. The succeeding functions R_SCE_ECDH_secp256r1_PublicKeySign(), R_SCE_ECDH_secp256r1_PublicKeyVerify(), R_SCE_ECDH_secp256r1_SharedSecretCalculate(), and R_SCE_ECDH_secp256r1_KeyDerivation() use handle as an argument.

Use the second argument, key_type, to select the type of ECDH key exchange. When ECDHE is selected, the R_SCE_ECDH_secp256r1_PublicKeySign() function uses the SCE's random number generation functionality to generate an secp256r1 key pair. When ECDH is selected, keys installed beforehand are used for key exchange.

Input 1 as the third argument, use_key_id, to use key_id when key exchange is performed. key_id is for applications conforming to the DLMS/COSEM standard for smart meters.

Parameters

[in,out]	handle	ECDH handler (work area)
[in]	key_type	Key exchange type (0: ECDHE, 1: ECDH, 2:ECDH(AES-GCM-128 with IV))
[in]	use_key_id	0: key_id not used, 1: key_id used

Return values

FSP_SUCCESS	Normal end
FSP_ERR_CRYPTO_SCE_PARAMETER	Input data is invalid.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDH_secp256r1_PublicKeySign()

fsp_err_t R_SCE_ECDH_secp256r1_PublicKeySign (sce_ecdh_handle_t * *handle*, sce_ecc_public_wrapped_key_t * *ecc_public_wrapped_key*, sce_ecc_private_wrapped_key_t * *ecc_private_wrapped_key*, uint8_t * *public_key*, sce_ecdsa_byte_data_t * *signature*, sce_ecc_private_wrapped_key_t * *wrapped_key*)

The R_SCE_ECDH_secp256r1_PublicKeySign() function calculates a signature for a public key user wrapped key used for ECDH key exchange.

If ECDHE is specified by the key_type argument of the R_SCE_ECDH_secp256r1_Init() function, the SCE's random number generation functionality is used to generate an secp256r1 key pair. The public key is output to public_key and the private key is output to wrapped_key.

If ECDH is specified by the key_type argument of the R_SCE_ECDH_secp256r1_Init() function, the public key input as ecc_public_wrapped_key is output to public_key and nothing is output to wrapped_key.

The succeeding function R_SCE_ECDH_secp256r1_SharedSecretCalculate() uses the first argument, handle, as an argument. R_SCE_ECDH_secp256r1_SharedSecretCalculate() function uses wrapped_key as input to calculate Z.

Parameters

[in,out]	handle	ECDH handler (work area) When using key_id, input handle->key_id after running R_SCE_ECDH_secp256r1_Init().
[in]	ecc_public_wrapped_key	For ECDHE, input a null pointer. For ECDH, input the wrapped key of a secp256r1 public key.
[in]	ecc_private_wrapped_key	secp256r1 private key for signature generation
[in,out]	public_key	User secp256r1 public key (512-bit) for key exchange. When using key_id, key_id (8-bit) || public key (512-bit) || 0 padding (24-bit)
[in,out]	signature	Signature text storage destination information • signature->pdata : Specifies pointer to array storing signature text. The signature format is "signature r (256 bits) || signature s (256 bits)" • signature->data_leng

		th : Data length (in byte units)
[in,out]	wrapped_key	For ECDHE, a private wrapped key generated from a random number. Not output for ECDH.

Return values

FSP_SUCCESS	Normal end
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource required by the processing is in use by other processing.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDH_secp256r1_PublicKeyVerify()

fsp_err_t R_SCE_ECDH_secp256r1_PublicKeyVerify (sce_ecdh_handle_t * *handle*, sce_ecc_public_wrapped_key_t * *ecc_public_wrapped_key*, uint8_t * *public_key_data*, sce_ecdsa_byte_data_t * *signature*, sce_ecc_public_wrapped_key_t * *wrapped_key*)

The R_SCE_ECDH_secp256r1_PublicKeyVerify() function verifies the signature of the secp256r1 public key of the other ECDH key exchange party. If the signature is correct, it outputs the public wrapped key to the fifth argument. The first argument, handle, is used as an argument in the subsequent function R_SCE_ECDH_secp256r1_SharedSecretCalculate(). R_SCE_ECDH_secp256r1_SharedSecretCalculate() uses wrapped_key as input to calculate Z.

Parameters

[in,out]	handle	ECDH handler (work area)
[in]	ecc_public_wrapped_key	Public wrapped key area for signature verification
[in]	public_key_data	secp256r1 public key (512-bit). When key_id is used: key_id (8-bit) || public key (512-bit)
[in]	signature	ECDSA secp256r1 signature of ecc_public_wrapped_key
[in,out]	wrapped_key	wrapped key of ecc_public_wrapped_key

Return values

FSP_SUCCESS	Normal end
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource required by the processing is in use by other processing.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred or signature verification failed.
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDH_secp256r1_PublicKeyReadWithoutSignature()

fsp_err_t R_SCE_ECDH_secp256r1_PublicKeyReadWithoutSignature (sce_ecdh_handle_t * *handle*, uint8_t * *public_key_data*, sce_ecc_public_wrapped_key_t * *wrapped_key*)

The R_SCE_ECDH_secp256r1_PublicKeyReadWithoutSignature() function reads the secp256r1 public key of the other ECDH key exchange party and outputs the public wrapped key to the third argument. The first argument, handle, is used as an argument in the subsequent function R_SCE_ECDH_secp256r1_SharedSecretCalculate().
R_SCE_ECDH_secp256r1_SharedSecretCalculate() uses wrapped_key as input to calculate Z. This API does not verify signature of public_key_data, please protect this data by upper layer software.

Parameters

[in,out]	handle	ECDH handler (work area)
[in]	public_key_data	secp256r1 public key (512-bit). When key_id is used: key_id (8-bit) || public key (512-bit)
[in,out]	wrapped_key	wrapped key of public_key_data

Return values

FSP_SUCCESS	Normal end
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource required by the processing is in use by other processing.
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State. Please note that this is slightly contrary to the protected mode policy as it omits signature verification.

◆ R_SCE_ECDH_secp256r1_SharedSecretCalculate()

fsp_err_t R_SCE_ECDH_secp256r1_SharedSecretCalculate (sce_ecdh_handle_t * *handle*, sce_ecc_public_wrapped_key_t * *ecc_public_wrapped_key*, sce_ecc_private_wrapped_key_t * *ecc_private_wrapped_key*, sce_ecdh_wrapped_key_t * *shared_secret_wrapped_key*)

The R_SCE_ECDH_secp256r1_SharedSecretCalculate() function uses the ECDH key exchange algorithm to output the wrapped key of the shared secret Z derived from the public key of the other key exchange party and your own private key. Input as the second argument, ecc_public_wrapped_key, the public wrapped key whose signature was verified by R_SCE_ECDH_secp256r1_PublicKeyVerify(). When key_type of R_SCE_ECDH_secp256r1_Init() is 0, input as the third argument, ecc_private_wrapped_key, the private wrapped key generated from a random number by R_SCE_ECDH_secp256r1_PublicKeySign(), and when key_type is other than 0, input the private wrapped key that forms a pair with the second argument of R_SCE_ECDH_secp256r1_PublicKeySign(). The subsequent R_SCE_ECDH_secp256r1_KeyDerivation() function uses shared_secret_wrapped_key as key material for outputting the wrapped key.

Parameters

[in,out]	handle	ECDH handler (work area)
[in]	ecc_public_wrapped_key	Public wrapped key whose signature was verified by R_SCE_ECDH_secp256r1_PublicKeyVerify()
[in]	ecc_private_wrapped_key	Private wrapped key
[in,out]	shared_secret_wrapped_key	Wrapped key of shared secret Z calculated by ECDH key exchange

Return values

FSP_SUCCESS	Normal end
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource required by the processing is in use by other processing.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_ECDH_secp256r1_KeyDerivation()

fsp_err_t R_SCE_ECDH_secp256r1_KeyDerivation (sce_ecdh_handle_t * *handle*, sce_ecdh_wrapped_key_t * *shared_secret_wrapped_key*, uint32_t *key_type*, uint32_t *kdf_type*, uint8_t * *other_info*, uint32_t *other_info_length*, sce_hmac_sha_wrapped_key_t * *salt_wrapped_key*, sce_aes_wrapped_key_t * *wrapped_key*)

The R_SCE_ECDH_secp256r1_KeyDerivation() function uses the shared secret "Z (shared_secret_index)" calculated by the R_SCE_ECDH_secp256r1_SharedSecretCalculate() function as the key material to derive the wrapped key specified by the third argument, key_type. The key derivation algorithm is one-step key derivation as defined in NIST SP800-56C. Either SHA-256 or SHA-256 HMAC is specified by the fourth argument, kdf_type. When SHA-256 HMAC is specified, the wrapped key output by the R_SCE_SHA256HMAC_EncryptedKeyWrap() function is specified as the seventh argument, salt_wrapped_key. Enter a fixed value for deriving a key shared with the key exchange partner in the fifth argument, other_info. A wrapped key corresponding to key_type is output as the eighth argument, wrapped_key. The correspondences between the types of derived wrapped_key and the functions with which they can be used as listed below.

- AES-128: All AES-128 Init functions
- AES-256: All AES-256 Init functions
- SHA256-HMAC: R_SCE_SHA256HMAC_GenerateInit() function and R_SCE_SHA256HMAC_VerifyInit() function

Parameters

[in,out]	handle	ECDH handler (work area)
[in]	shared_secret_wrapped_key	Z wrapped key calculated by R_SCE_ECDH_secp256r1_SharedSecretCalculate
[in]	key_type	Derived key type (0: AES-128, 1: AES-256, 2:SHA256-HMAC, 3: AES-GCM-128 with IV)
[in]	kdf_type	Algorithm used for key derivation calculation (0: SHA-256, 1:SHA256-HMAC)
[in]	other_info	Additional data used for key derivation calculation: AlgorithmID || PartyUInfo || PartyVInfo
[in]	other_info_length	Data length of other_info (up to 147 byte units)
[in]	salt_wrapped_key	Salt wrapped key (Input NULL when kdf_type is 0.)
[in,out]	wrapped_key	Wrapped key corresponding to key_type. When the value of key_type is 2, an SHA256-HMAC wrapped key is output. wrapped_key can be specified by casting the start address of the area

		reserved beforehand by the sce_hmac_sha_wrapped_key_t type with the (sce_aes_wrapped_key_t*) type.

Return values

FSP_SUCCESS	Normal end
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource required by the processing is in use by other processing.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Invalid wrapped key was input.
FSP_ERR_CRYPTO_SCE_PARAMETER	An invalid handle was input.
FSP_ERR_CRYPTO_SCE_FAIL	Internal error occurred.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function was called.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_TLS_RootCertificateRSA2048PublicKeyInstall()

fsp_err_t R_SCE_TLS_RootCertificateRSA2048PublicKeyInstall (uint8_t * *encrypted_provisioning_key*, uint8_t * *initial_vector*, uint8_t * *encrypted_key*, sce_tls_ca_certification_public_wrapped_key_t * *wrapped_key*)

Generate TLS RSA Public key index data

Parameters

[in]	encrypted_provisioning_key	the provisioning key includes encrypted CBC/CBC-MAC key for user key
[in]	initial_vector	the initial_vector for user key CBC encrypt
[in]	encrypted_key	the user key encrypted with AES128-ECB mode
[out]	wrapped_key	the user Key Generation Information (141 words) of RSA2048 bit

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_TLS_ECC_secp256r1_EphemeralWrappedKeyPairGenerate()

fsp_err_t R_SCE_TLS_ECC_secp256r1_EphemeralWrappedKeyPairGenerate (sce_tls_p256_ecc_wrapped_key_t * *tls_p256_ecc_wrapped_key*, uint8_t * *ephemeral_ecdh_public_key*)

Generate TLS ECC key pair

Parameters

[in]	tls_p256_ecc_wrapped_key	P256 ECC key index for TLS
[in]	ephemeral_ecdh_public_key	ephemeral ECDH public key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_TLS_RootCertificateVerify()

fsp_err_t R_SCE_TLS_RootCertificateVerify (uint32_t *public_key_type*, uint8_t * *certificate*, uint32_t *certificate_length*, uint32_t *public_key_n_start_position*, uint32_t *public_key_n_end_position*, uint32_t *public_key_e_start_position*, uint32_t *public_key_e_end_position*, uint8_t * *signature*, uint32_t * *encrypted_root_public_key*)

Verify root CA certificate.

Parameters

[in]	public_key_type	key type
[in]	certificate	certificates.
[in]	certificate_length	byte size of certificates.
[in]	public_key_n_start_position	start position of public key n.
[in]	public_key_n_end_position	end position of public key n.
[in]	public_key_e_start_position	start position of public key e.
[in]	public_key_e_end_position	end position of public key e.
[in]	signature	signature for certificates.
[out]	encrypted_root_public_key	public key for RSA 2048bit.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_TLS_CertificateVerify()

fsp_err_t R_SCE_TLS_CertificateVerify (uint32_t *public_key_type*, uint32_t * *encrypted_input_public_key*, uint8_t * *certificate*, uint32_t *certificate_length*, uint8_t * *signature*, uint32_t *public_key_n_start_position*, uint32_t *public_key_n_end_position*, uint32_t *public_key_e_start_position*, uint32_t *public_key_e_end_position*, uint32_t * *encrypted_output_public_key*)

Verify server certificate and intermediate certificate.

Parameters

[in]	public_key_type	key type
[in]	encrypted_input_public_key	public key.
[in]	certificate	certificates.
[in]	certificate_length	byte size of certificates.
[in]	signature	signature for certificates.
[in]	public_key_n_start_position	start position of public key n.
[in]	public_key_n_end_position	end position of public key n.
[in]	public_key_e_start_position	start position of public key e.
[in]	public_key_e_end_position	end position of public key e.
[out]	encrypted_output_public_key	public key for RSA 2048bit.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_TLS_PreMasterSecretEncryptWithRSA2048()

fsp_err_t R_SCE_TLS_PreMasterSecretEncryptWithRSA2048 (uint32_t * *encrypted_public_key*, uint32_t * *sce_pre_master_secret*, uint8_t * *encrypted_pre_master_secret*)

Output the result encrypted pre-master secret with RSA 2048bit

Parameters

[in]	encrypted_public_key	public key data.
[in]	sce_pre_master_secret	pre-master secret value.
[out]	encrypted_pre_master_secret	the value encrypted pre-master secret.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_TLS_PreMasterSecretGenerateForRSA2048()

fsp_err_t R_SCE_TLS_PreMasterSecretGenerateForRSA2048 (uint32_t * *sce_pre_master_secret*)

Generate encrypted pre-master secret.

Parameters

[out]	sce_pre_master_secret	pre-master secret value for SCE.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_TLS_MasterSecretGenerate()

fsp_err_t R_SCE_TLS_MasterSecretGenerate (uint32_t *select_cipher_suite*, uint32_t * *sce_pre_master_secret*, uint8_t * *client_random*, uint8_t * *server_random*, uint32_t * *sce_master_secret*)

Generate encrypted master secret.

Parameters

[in]	select_cipher_suite	cipher suite type
[in]	sce_pre_master_secret	pre-master secret value for SCE.
[in]	client_random	random value reported ClientHello.
[in]	server_random	random value reported ServerHello.
[out]	sce_master_secret	master secret value for SCE.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_TLS_SessionKeyGenerate()

fsp_err_t R_SCE_TLS_SessionKeyGenerate (uint32_t *select_cipher_suite*, uint32_t * *sce_master_secret*, uint8_t * *client_random*, uint8_t * *server_random*, uint8_t * *nonce_explicit*, sce_hmac_sha_wrapped_key_t * *client_mac_wrapped_key*, sce_hmac_sha_wrapped_key_t * *server_mac_wrapped_key*, sce_aes_wrapped_key_t * *client_crypto_wrapped_key*, sce_aes_wrapped_key_t * *server_crypto_wrapped_key*, uint8_t * *client_initial_vector*, uint8_t * *server_initial_vector*)

Output various key information.

Parameters

[in]	select_cipher_suite	Key suite information number.
[in]	sce_master_secret	master secret value.
[in]	client_random	random value reported ClientHello.
[in]	server_random	random value reported ServerHello.
[in]	nonce_explicit	nonce value
[out]	client_mac_wrapped_key	the mac key during communication from client to server.
[out]	server_mac_wrapped_key	the mac key during communication from server to client.
[out]	client_crypto_wrapped_key	the crypto key during communication from client to server.
[out]	server_crypto_wrapped_key	the crypto key during communication from server to client.
[in]	client_initial_vector	not use.
[in]	server_initial_vector	not use.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_TLS_VerifyDataGenerate()

fsp_err_t R_SCE_TLS_VerifyDataGenerate (uint32_t *select_verify_data*, uint32_t * *sce_master_secret*, uint8_t * *hand_shake_hash*, uint8_t * *verify_data*)

Generate verify data.

Parameters

[in]	select_verify_data	Select Client/Server data.
[in]	sce_master_secret	master secret data.
[in]	hand_shake_hash	TLS hand shake message SHA256 HASH value.
[out]	verify_data	verify data.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_TLS_ServerKeyExchangeVerify()

fsp_err_t R_SCE_TLS_ServerKeyExchangeVerify (uint32_t *public_key_type*, uint8_t * *client_random*, uint8_t * *server_random*, uint8_t * *server_ephemeral_ecdh_public_key*, uint8_t * *server_key_exchange_signature*, uint32_t * *encrypted_public_key*, uint32_t * *encrypted_ephemeral_ecdh_public_key*)

Retrives ECDH public key.

Parameters

[in]	public_key_type	key type
[in]	client_random	random value reported ClientHello.
[in]	server_random	random value reported ServerHello.
[in]	server_ephemeral_ecdh_public_key	Ephemeral ECDH public key from Server.
[in]	server_key_exchange_signature	Server Key Exchange sigunature.
[in]	encrypted_public_key	encrypted public key.
[out]	encrypted_ephemeral_ecdh_public_key	encrypted Ephemeral ECDH public key.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

◆ R_SCE_TLS_PreMasterSecretGenerateForECC_secp256r1()

fsp_err_t R_SCE_TLS_PreMasterSecretGenerateForECC_secp256r1 (uint32_t * *encrypted_public_key*, sce_tls_p256_ecc_wrapped_key_t * *tls_p256_ecc_wrapped_key*, uint32_t * *sce_pre_master_secret*)

Generate encrypted pre-master secret.

Parameters

[in]	encrypted_public_key	encrypted public key
[in]	tls_p256_ecc_wrapped_key	P-256 ECC key index.
[out]	sce_pre_master_secret	encrypted pre-master secret value for SCE.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

Note

The pre-run state is SCE Enabled State. After the function runs the state transitions to SCE Enabled State.

4.2.52 Secure Crypto Engine (r_sce_protected_cavp)

Modules

Driver for the CAVP Certified Secure Crypto Engine (SCE) on RA MCUs.

Version

v1.0.0

The version that appears on the Components tab of the FSP Configuration editor is v1.0.0+fsp.<fsp_version>. The <fsp_version> metadata reflects tooling support files only and does not indicate any changes to the CAVP certified code. See Module Versioning for more information about component versioning in FSP.

Functions

The user documentation for the functions in this module.

- Secure Crypto Engine (r_sce_protected)

Overview

This module provides SCE CAVP Certified functions.

HW Overview

Obtained device certification with RA6M4.

Crypto Peripheral version	Devices
SCE9 (Protected mode)	RA4M2, RA4M3, RA6M4, RA6M5

Features

The SCE module supports for the following features.

- Cryptography
  - Symmetric Encryption/Decryption
    - AES
      - ECB 128/256bit
      - CBC 128/256bit
      - GCM 128/256bit
      - CCM 128/256bit
  - Asymmetric Encryption/Decryption
    - RSA
      - RSAES-PKCS1-V1_5 1024/2048bit
      - RSAES-PKCS1-V1_5 3072/4096bit (Encryption only)
      - RSASSA-PKCS1-V1_5 1024/2048bit
      - RSASSA-PKCS1-V1_5 3072/4096bit (Verification only)
    - ECC
      - ECDSA secp192r1/secp224r1/secp256r1/secp384r1
      - ECDH secp192r1/secp224r1/secp256r1/secp384r1
  - Hash Functions
    - SHA-2
      - SHA-256
- Message Authentication Code
  - HMAC-SHA256bit
  - AES-CMAC 128/256bit
- Key Support
  - AES 128/256bit
  - RSA 1024/2048bit
  - RSA 3072/4096bit (public key only)
  - ECC secp192r1/secp224r1/secp256r1/secp384r1
  - HMAC-SHA256bit
- TRNG
- TLS
  - SSL / TLS support function (TLS1.2 compliant)

Configuration

Clock Configuration

This module does not require a specific clock configuration.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Getting Started: Creating a SCE Protected Mode Project

Start by creating a new project in e2 studio or RA SC. On the Stacks tab, add New > Driver > Crypto > SCE Protected Mode(CAVP Certified). For information on how to install and update secure keys, refer to the Application Note R11AN0496.

Limitations

Usage of R_SCE_ECDSA_secp384r1_SignatureGenerate/Verify

The SCE does not support SHA-384 in hardware, so the APIs listed below require the user to create a SHA-384 function for signature generation and verification. To use the APIs listed below, enable SCE_USER_SHA_384_ENABLED on RA Smart Configurator and prepare a function called SCE_USER_SHA_384_FUNCTION. The interface of SCE_USER_SHA_384_FUNCTION, which is called by the following APIs, is described below.

- R_SCE_ECDSA_secp384r1_SignatureGenerate()
- R_SCE_ECDSA_secp384r1_SignatureVerify()

SCE_USER_SHA_384_FUNCTION()

```
uint32_t SCE_USER_SHA_384_FUNCTION(uint8_t * message, uint8_t * digest, uint32_t
message_length)
```

SHA-384 hash calculation is performed for an area extending the number of bytes specified by the argument message_length from the address specified by the argument message. The calculation result should be stored at the address specified by the argument digest.

Parameters

message	[in] Start address of message
digest	[in,out] address for storing hash calculation result (48 bytes)
message_length	[in] Effective byte count of message

Return values

0	Hash value stored successfully.
others	Storing of hash value failed.

Examples

AES Example

This is an example of AES-256 encryption and decryption.

```
#include <string.h>
#include "r_sce.h"
#define BLOCK 16
void r_sce_example_aes();
sce_instance_ctrl_t sce_ctrl;
sce_cfg_t sce_cfg =
{
    .lifecycle = SCE_SSD
};
static uint8_t plain[BLOCK * 2] =
{
    0x52, 0x65, 0x6e, 0x65, 0x73, 0x61, 0x73, 0x20, 0x45, 0x6c, 0x65, 0x63, 0x74,
0x72, 0x6f, 0x6e,
    0x69, 0x63, 0x73, 0x20, 0x43, 0x6f, 0x72, 0x70, 0x6f, 0x72, 0x61, 0x74, 0x69,
0x6f, 0x6e, 0x00
};
void r_sce_example_aes ()
{
 sce_aes_handle_t      handle;
 sce_aes_wrapped_key_t wrapped_key;
    uint8_t               cipher_calculated[32] = {0};
    uint8_t               plain_calculated[32] = {0};
    uint32_t             dummy;
 /* SCE power on */
 R_SCE_Open(&sce_ctrl, &sce_cfg);
 /* Generate a random key */
 R_SCE_AES256_WrappedKeyGenerate(&wrapped_key);
 /* Encrypt a plain text */
 R_SCE_AES256ECB_EncryptInit(&handle, &wrapped_key);
 R_SCE_AES256ECB_EncryptUpdate(&handle, plain, cipher_calculated, BLOCK * 2);
```

```
 R_SCE_AES256ECB_EncryptFinal(&handle, cipher_calculated, &dummy);
 /* Decrypt a cipher text using same key as Encryption */
 R_SCE_AES256ECB_DecryptInit(&handle, &wrapped_key);
 R_SCE_AES256ECB_DecryptUpdate(&handle, cipher_calculated, plain_calculated, BLOCK *
2);
 R_SCE_AES256ECB_DecryptFinal(&handle, plain_calculated, &dummy);
 /* SCE power off */
 R_SCE_Close(&sce_ctrl);
 /* Compare plain and plain_calculated */
 if (memcmp(plain, plain_calculated, BLOCK * 2))
    {
 while (1)
      {
 /* plain and plain_calculated are different (incorrect) */
       }
    }
 else
    {
 while (1)
      {
 /* plain and plain_calculated are the same (correct) */
       }
    }
}
```

fsp_err_t	R_SCI_B_I2C_StatusGet (i2c_master_ctrl_t *const p_api_ctrl, i2c_master_status_t *p_status)

Detailed Description

Driver for the SCI_B peripheral on RA MCUs. This module implements the I2C Master Interface.

Overview

The Simple I2C master on SCI_B HAL module supports transactions with an I2C Slave device. Callbacks must be provided which would be invoked when a transmission or receive has been completed. The callback arguments will contain information about the transaction status, bytes transferred and a pointer to the user defined context.

Features

- Supports multiple transmission rates
  - Standard Mode Support with up to 100 kHz transaction rate.
  - Fast Mode Support with up to 400 kHz transaction rate.
- SDA Delay in nanoseconds can be specified as a part of the configuration.
- I2C Master Read from a slave device.
- I2C Master Write to a slave device.
- Abort any in-progress transactions.
- Set the address of the slave device.
- Non-blocking behavior is achieved by the use of callbacks.
- Additional build-time features
  - Optional (build time) DTC support for read and write respectively.
  - Optional (build time) support for 10-bit slave addressing.

Configuration

Build Time Configurations for r_sci_b_i2c

The following build time configurations are defined in fsp_cfg/r_sci_b_i2c_cfg.h:

Configuration	Options	Default	Description

Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
DTC on Transmission and Reception	• Enabled • Disabled	Disabled	If enabled, DTC instances will be included in the build for both transmission and reception.
10-bit slave addressing	• Enabled • Disabled	Disabled	If enabled, the driver will support 10-bit slave addressing mode along with the default 7-bit slave addressing mode.

Configurations for Connectivity > I2C Master (r_sci_b_i2c)

This module can be added to the Stacks tab via New Stack > Connectivity > I2C Master (r_sci_b_i2c). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_i2c0	Module name.
Channel	Value must be an integer between 0 and 9	0	Select the SCI channel.
Slave Address	Value must be a hex value	0x00	Specify the slave address.
Address Mode	• 7-Bit • 10-Bit	7-Bit	Select the address mode.
Rate	• Standard • Fast-mode	Standard	Select the I2C data rate. If the requested transfer rate cannot be achieved, the settings with the largest possible transfer rate that is less than or equal to the requested transfer rate are used. The theoretical calculated transfer rate and SDA delay are printed in a comment in the generated sci_b_i2c_extended_cfg_t structure.
SDA Output Delay	Must be a valid non-	300	Specify the SDA output

(nano seconds)	negative integer with maximum configurable value of 300		delay in nanoseconds.
Noise Filter Clock Select	• The on-chip baud rate generator source clock divided by 1 • The on-chip baud rate generator source clock divided by 2 • The on-chip baud rate generator source clock divided by 4 • The on-chip baud rate generator source clock divided by 8	The on-chip baud rate generator source clock divided by 1	Select the on-chip baud rate generator source clock division setting for the digital noise filter
Clock Source	• PCLK • SCISPICLK	PCLK	Select the clock source for the SCI I2C module.
Bit Rate Modulation	• Enable • Disable	Enable	Enabling bitrate modulation reduces the percent error of the actual bitrate with respect to the requested baud rate. It does this by modulating the number of cycles per clock output pulse, so the clock is no longer a square wave.
Callback	Name must be a valid C symbol	sci_b_i2c_master_callback	A user callback function can be provided. If this callback function is provided, it will be called from the interrupt service routine (ISR).
Interrupt Priority Level	MCU Specific Options		Select the interrupt priority level. This is set for TXI, RXI (if used), TEI interrupts.
RX Interrupt Priority Level [Only used when	MCU Specific Options		Select the interrupt priority level. This is set

DTC is enabled]	for RXI only when DTC is enabled.

Clock Configuration

The clock for this module is derived from the following peripheral clock for each MCU group:

MCU Group	Peripheral Clock
RA6T2	PCLKA

The actual I2C transfer rate can be derived from either SCISPICLK or the peripheral clock (PCLK)[1], and will be calculated and set by the tooling depending on the selected transfer rate and the SDA delay. If the selected clock is configured in such a manner that the selected internal rate cannot be achieved, an error will be returned.

Note

1. See Figure 26.2 in the RA6T2 manual for more information.

Pin Configuration

The SCI_B I2C peripheral module uses pins on the MCU to communicate to external devices. I/O pins must be selected and configured as required by the external device. An I2C channel would consist of two pins - SDA and SCL for data/address and clock respectively.

Usage Notes

Interrupt Configuration

- Receive buffer full (RXI), transmit buffer empty (TXI) and transmit end (TEI) interrupts for the selected channel used must be enabled in the properties of the selected device.
- Set equal priority levels for all the interrupts mentioned above. Setting the interrupts to different priority levels could result in improper operation.

SCI_B I2C Master Rate Calculation

- The RA Configuration editor calculates the internal baud-rate setting based on the configured transfer rate and SDA Delay. The closest possible baud-rate that can be achieved (less than or equal to the requested rate) at the current PCLK settings is calculated and used.
- If a valid clock rate could not be calculated, an error is returned by the tool.

Enabling DTC with the SCI_B I2C

- DTC transfer support is configurable and is disabled from the build by default. SCI_B I2C driver provides two DTC instances for transmission and reception respectively.
- DTC is helpful for minimizing interrupts during large transactions. Many I2C applications have shorter transactions. These applications will likely not see any improvement with DTC. I2C often runs at a much slower speed than the CPU core clock. Some applications with longer transactions may prefer servicing the interrupts at the I2C bitrate to the overhead of bringing in the DTC driver.
- For further details on DTC please refer Data Transfer Controller (r_dtc)

Multiple Devices on the Bus

- A single SCI_B I2C instance can be used to communicate with multiple slave devices on the same channel by using the SlaveAddressSet API.

Restart

- SCI_B_I2C can hold the the bus after an I2C transaction by issuing a repeated start condition.

Examples

Basic Example

This is a basic example of minimal use of the r_sci_b_i2c in an application. This example shows how this driver can be used for basic read and write operations.

```
void basic_example (void)
{
 fsp_err_t err;
    uint32_t i;
    uint32_t timeout_ms = I2C_TRANSACTION_BUSY_DELAY;
 /* Initialize the I2C module */
    err = R_SCI_B_I2C_Open(&g_i2c_device_ctrl_1, &g_i2c_device_cfg_1);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Write some data to the transmit buffer */
 for (i = 0; i < I2C_BUFFER_SIZE_BYTES; i++)
    {
       g_i2c_tx_buffer[i] = (uint8_t) i;
    }
 /* Send data to I2C slave */
    g_i2c_callback_event = I2C_MASTER_EVENT_ABORTED;
    err = R_SCI_B_I2C_Write(&g_i2c_device_ctrl_1, &g_i2c_tx_buffer[0],
I2C_BUFFER_SIZE_BYTES, false);
    assert(FSP_SUCCESS == err);
 /* Since there is nothing else to do, block until Callback triggers*/
 while ((I2C_MASTER_EVENT_TX_COMPLETE != g_i2c_callback_event) && timeout_ms)
    {
 R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
```

```
      timeout_ms--;;
   }
 if (I2C_MASTER_EVENT_ABORTED == g_i2c_callback_event)
   {
      __BKPT(0);
   }
 /* Read data back from the I2C slave */
   g_i2c_callback_event = I2C_MASTER_EVENT_ABORTED;
   timeout_ms          = I2C_TRANSACTION_BUSY_DELAY;
   err = R_SCI_B_I2C_Read(&g_i2c_device_ctrl_1, &g_i2c_rx_buffer[0],
I2C_BUFFER_SIZE_BYTES, false);
   assert(FSP_SUCCESS == err);
 /* Since there is nothing else to do, block until Callback triggers*/
 while ((I2C_MASTER_EVENT_RX_COMPLETE != g_i2c_callback_event) && timeout_ms)
   {
 R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
      timeout_ms--;;
   }
 if (I2C_MASTER_EVENT_ABORTED == g_i2c_callback_event)
   {
      __BKPT(0);
   }
 /* Verify the read data */
 if (0U != memcmp(g_i2c_tx_buffer, g_i2c_rx_buffer, I2C_BUFFER_SIZE_BYTES))
   {
      __BKPT(0);
   }
}
```

Multiple Slave devices on the same channel (bus)

This example demonstrates how a single SCI_B I2C driver can be used to communicate with different slave devices which are on the same channel.

```
void single_channel_multi_slave (void)
```

```
{
 fsp_err_t err;
    uint32_t timeout_ms = I2C_TRANSACTION_BUSY_DELAY;
    err = R_SCI_B_I2C_Open(&g_i2c_device_ctrl_2, &g_i2c_device_cfg_2);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Clear the recieve buffer */
    memset(g_i2c_rx_buffer, '0', I2C_BUFFER_SIZE_BYTES);
 /* Read data from I2C slave */
    g_i2c_callback_event = I2C_MASTER_EVENT_ABORTED;
    err = R_SCI_B_I2C_Read(&g_i2c_device_ctrl_2, &g_i2c_rx_buffer[0],
I2C_BUFFER_SIZE_BYTES, false);
    assert(FSP_SUCCESS == err);
 while ((I2C_MASTER_EVENT_RX_COMPLETE != g_i2c_callback_event) && timeout_ms)
    {
 R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
       timeout_ms--;;
    }
 if (I2C_MASTER_EVENT_ABORTED == g_i2c_callback_event)
    {
       __BKPT(0);
    }
 /* Send data to I2C slave on the same channel */
    err = R_SCI_B_I2C_SlaveAddressSet(&g_i2c_device_ctrl_2,
I2C_SLAVE_DISPLAY_ADAPTER, I2C_MASTER_ADDR_MODE_7BIT);
    assert(FSP_SUCCESS == err);
    g_i2c_tx_buffer[0]   = (uint8_t) I2C_EXAMPLE_DATA_1;
    g_i2c_tx_buffer[1]   = (uint8_t) I2C_EXAMPLE_DATA_2;
    g_i2c_callback_event = I2C_MASTER_EVENT_ABORTED;
    timeout_ms           = I2C_TRANSACTION_BUSY_DELAY;
    err = R_SCI_B_I2C_Write(&g_i2c_device_ctrl_2, &g_i2c_tx_buffer[0], 2U, false);
    assert(FSP_SUCCESS == err);
 while ((I2C_MASTER_EVENT_TX_COMPLETE != g_i2c_callback_event) && timeout_ms)
    {
```

```
R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
      timeout_ms--;;
   }
if (I2C_MASTER_EVENT_ABORTED == g_i2c_callback_event)
   {
      __BKPT(0);
   }
}
```

Enumeration Type Documentation

◆ sci_b_i2c_clock_source_t

enum sci_b_i2c_clock_source_t
SCI clock source

Function Documentation

◆ R_SCI_B_I2C_Open()

fsp_err_t R_SCI_B_I2C_Open (i2c_master_ctrl_t *const *p_api_ctrl*, i2c_master_cfg_t const *const *p_cfg*)

Opens the I2C device.

Return values

FSP_SUCCESS	Requested clock rate was set exactly.
FSP_ERR_ALREADY_OPEN	Module is already open.
FSP_ERR_ASSERTION	Parameter check failure due to one or more reasons below: 1. p_api_ctrl or p_cfg is NULL. 2. extended parameter is NULL. 3. Callback parameter is NULL. 4. Clock rate requested is greater than 400KHz 5. Invalid IRQ number assigned

◆ R_SCI_B_I2C_Close()

fsp_err_t R_SCI_B_I2C_Close (i2c_master_ctrl_t *const *p_api_ctrl*)

Closes the I2C device. Power down I2C peripheral.

This function will safely terminate any in-progress I2C transfer with the device. If a transfer is aborted, the user will be notified via callback with an abort event. Since the callback is optional, this function will also return a specific error code in this situation.

Return values

FSP_SUCCESS	Device closed without issue.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Device was not even opened.

◆ R_SCI_B_I2C_Read()

fsp_err_t R_SCI_B_I2C_Read (i2c_master_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_dest*, uint32_t const *bytes*, bool const *restart*)

Performs a read from the I2C device. The caller will be notified when the operation has completed (successfully) by an I2C_MASTER_EVENT_RX_COMPLETE in the callback.

Return values

FSP_SUCCESS	Function executed without issue.
FSP_ERR_ASSERTION	The parameter p_ctrl, p_dest is NULL, bytes is 0.
FSP_ERR_INVALID_SIZE	Provided number of bytes more than uint16_t size (65535) while DTC is used for data transfer.
FSP_ERR_NOT_OPEN	Device was not even opened.

◆ R_SCI_B_I2C_Write()

fsp_err_t R_SCI_B_I2C_Write (i2c_master_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_src*, uint32_t const *bytes*, bool const *restart*)

Performs a write to the I2C device.

This function will fail if there is already an in-progress I2C transfer on the associated channel. Otherwise, the I2C write operation will begin. When no callback is provided by the user, this function performs a blocking write. Otherwise, the write operation is non-blocking and the caller will be notified when the operation has finished by an I2C_EVENT_TX_COMPLETE in the callback.

Return values

FSP_SUCCESS	Function executed without issue.
FSP_ERR_ASSERTION	p_ctrl, p_src is NULL.
FSP_ERR_INVALID_SIZE	Provided number of bytes more than uint16_t size (65535) while DTC is used for data transfer.
FSP_ERR_NOT_OPEN	Device was not even opened.

◆ R_SCI_B_I2C_Abort()

fsp_err_t R_SCI_B_I2C_Abort (i2c_master_ctrl_t *const *p_api_ctrl*)

Aborts any in-progress transfer and forces the I2C peripheral into a ready state.

This function will safely terminate any in-progress I2C transfer with the device. If a transfer is aborted, the user will be notified via callback with an abort event. Since the callback is optional, this function will also return a specific error code in this situation.

Return values

FSP_SUCCESS	Transaction was aborted without issue.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Device was not even opened.

◆ R_SCI_B_I2C_SlaveAddressSet()

fsp_err_t R_SCI_B_I2C_SlaveAddressSet (i2c_master_ctrl_t *const *p_api_ctrl*, uint32_t const *slave*, i2c_master_addr_mode_t const *addr_mode*)

Sets address and addressing mode of the slave device.

This function is used to set the device address and addressing mode of the slave without reconfiguring the entire bus.

Return values

FSP_SUCCESS	Address of the slave is set correctly.
FSP_ERR_ASSERTION	p_ctrl or address is NULL.
FSP_ERR_NOT_OPEN	Device was not even opened.
FSP_ERR_IN_USE	An I2C Transaction is in progress.

◆ R_SCI_B_I2C_CallbackSet()

fsp_err_t R_SCI_B_I2C_CallbackSet (i2c_master_ctrl_t *const *p_api_ctrl*, void(*)(i2c_master_callback_args_t *) *p_callback*, void const *const *p_context*, i2c_master_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements i2c_master_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

◆ R_SCI_B_I2C_StatusGet()

fsp_err_t R_SCI_B_I2C_StatusGet (i2c_master_ctrl_t *const *p_api_ctrl*, i2c_master_status_t * *p_status*)
Provides driver status. **Return values** FSP_SUCCESS — Status stored in p_status. FSP_ERR_ASSERTION — NULL pointer.

fsp_err_t	R_SCI_B_SPI_CallbackSet (spi_ctrl_t *const p_api_ctrl, void(*p_callback)(spi_callback_args_t *), void const *const p_context, spi_callback_args_t *const p_callback_memory)
fsp_err_t	R_SCI_B_SPI_Close (spi_ctrl_t *const p_api_ctrl)
fsp_err_t	R_SCI_B_SPI_CalculateBitrate (uint32_t bitrate, sci_b_spi_clock_source_t clock_source, sci_b_spi_div_setting_t *sclk_div)

Detailed Description

Driver for the SCI peripheral on RA MCUs. This module implements the SPI Interface.

Overview

Features

- Standard SPI Modes
  - Master or Slave Mode
  - Clock Polarity (CPOL)
    - CPOL=0 SCLK is low when idle
    - CPOL=1 SCLK is high when idle
  - Clock Phase (CPHA)
    - CPHA=0 Select data sampling on leading edge, data change on trailing edge
    - CPHA=1 Select data change on leading edge, data sampling on trailing edge
  - MSB/LSB first
- Configurable bit rate
- DTC Support
- Callback Events
  - Transfer Complete
  - RX Overflow Error (The SCI shift register is copied to the data register before previous data was read)

Configuration

Build Time Configurations for r_sci_b_spi

The following build time configurations are defined in fsp_cfg/r_sci_b_spi_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
DTC Support	• Enabled • Disabled	Enabled	If support for transfering data using the DTC will be compiled in.

Configurations for Connectivity > SPI (r_sci_b_spi)

This module can be added to the Stacks tab via New Stack > Connectivity > SPI (r_sci_b_spi). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_spi0	Module name.
Channel	Value must be a non-negative integer	0	Select the SCI channel.
Operating Mode	• Master • Slave	Master	Select the SPI operating mode.

Clock Phase	• Data sampling on odd edge, data variation on even edge • Data sampling on even edge, data variation on odd edge	Data sampling on odd edge, data variation on even edge	Select the clock edge to sample data.
Clock Polarity	• Low when idle • High when idle	Low when idle	Select clock level when idle.
Mode Fault Error	• Enable • Disable	Disable	Detect master/slave mode conflicts.
Bit Order	• MSB First • LSB First	MSB First	Select the data bit order.
Clock Source	• PCLK • SCISPICLK	PCLK	Select whether the peripheral clock (PCLK) or SCISPICLK is used for generating the SCK frequency.
Callback	Name must be a valid C symbol	sci_b_spi_callback	A user callback function that is called from the sci_b_spi interrupts when a transfer is completed or an error has occurred.
Receive Interrupt Priority	MCU Specific Options		Select the receive interrupt priority.
Transmit Interrupt Priority	MCU Specific Options		Select the transmit interrupt priority.
Transmit End Interrupt Priority	MCU Specific Options		Select the transmit end interrupt priority.
Error Interrupt Priority	MCU Specific Options		Select the error interrupt priority.
Bitrate	Value must be an integer greater than 0	8000000	Enter the desired bitrate. If the requested bitrate cannot be achieved, the settings with the largest possible value that is less than or equal to the requested bitrate is used. The theoretical bitrate is printed in a comment in the generated sci_spi_extended_cfg_t structure.

Clock Configuration

The clock for this module is derived from the following peripheral clock for each MCU group:

MCU Group	Peripheral Clock
RA6T2	PCLKA

Pin Configuration

This module uses SCIn_MOSI, SCIn_MISO, SCIn_SPCK, and SCIn_SS pins to communicate with on board devices.

Note

At high bit rates, it might be necessary to configure the pins with IOPORT_CFG_DRIVE_HIGH.

Usage Notes

Transfer Complete Event

The transfer complete event is triggered when all of the data has been transfered. In slave mode if the SS pin is de-asserted then no transfer complete event is generated until the SS pin is asserted and the remaining data is transferred.

Performance

At high bit rates, interrupts may not be able to service transfers fast enough. In master mode this means there will be a delay between each data frame. In slave mode this could result in RX Overflow errors.

In order to improve performance at high bit rates, it is recommended that the instance be configured to service transfers using the DTC.

Transmit From RXI Interrupt

After every byte, the SCI SPI peripheral generates a transmit buffer empty interrupt and a receive buffer full interrupt. Whenever possible, the SCI SPI module handles both interrupts in the receive buffer full interrupt. This improves performance when the DTC is not being used.

Slave Select Pin

- In master mode the slave select pin must be driven in software.
- In slave mode the hardware handles the slave select pin and will only transfer data when the SS pin is low.

Examples

Basic Example

This is a basic example of minimal use of the SCI_B_SPI module in an application.

```
static volatile bool g_transfer_complete = false;
```

```
static void r_sci_b_spi_callback (spi_callback_args_t * p_args)
{
 if (SPI_EVENT_TRANSFER_COMPLETE == p_args->event)
    {
       g_transfer_complete = true;
    }
}
void sci_b_spi_basic_example (void)
{
    uint8_t tx_buffer[TRANSFER_SIZE];
    uint8_t rx_buffer[TRANSFER_SIZE];
 /* Configure Slave Select Line 1 */
 R_BSP_PinWrite(SLAVE_SELECT_LINE_1, BSP_IO_LEVEL_HIGH);
 /* Configure Slave Select Line 2 */
 R_BSP_PinWrite(SLAVE_SELECT_LINE_2, BSP_IO_LEVEL_HIGH);
 fsp_err_t err = FSP_SUCCESS;
 /* Initialize the SPI module. */
    err = R_SCI_B_SPI_Open(&g_spi_ctrl, &g_spi_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Assert Slave Select Line 1 */
 R_BSP_PinWrite(SLAVE_SELECT_LINE_1, BSP_IO_LEVEL_LOW);
 /* Start a write/read transfer */
    g_transfer_complete = false;
    err = R_SCI_B_SPI_WriteRead(&g_spi_ctrl, tx_buffer, rx_buffer, TRANSFER_SIZE,
SPI_BIT_WIDTH_8_BITS);
    assert(FSP_SUCCESS == err);
 /* Wait for SPI_EVENT_TRANSFER_COMPLETE callback event. */
 while (false == g_transfer_complete)
    {
       ;
    }
 /* De-assert Slave Select Line 1 */
 R_BSP_PinWrite(SLAVE_SELECT_LINE_1, BSP_IO_LEVEL_HIGH);
```

```
 /* Wait for minimum time required between transfers. */
 R_BSP_SoftwareDelay(SSL_NEXT_ACCESS_DELAY, BSP_DELAY_UNITS_MICROSECONDS);
 /* Assert Slave Select Line 2 */
 R_BSP_PinWrite(SLAVE_SELECT_LINE_2, BSP_IO_LEVEL_LOW);
 /* Start a write/read transfer */
    g_transfer_complete = false;
    err = R_SCI_B_SPI_WriteRead(&g_spi_ctrl, tx_buffer, rx_buffer, TRANSFER_SIZE,
SPI_BIT_WIDTH_8_BITS);
    assert(FSP_SUCCESS == err);
 /* Wait for SPI_EVENT_TRANSFER_COMPLETE callback event. */
 while (false == g_transfer_complete)
    {
       ;
    }
 /* De-assert Slave Select Line 2 */
 R_BSP_PinWrite(SLAVE_SELECT_LINE_2, BSP_IO_LEVEL_HIGH);
}
```

Data Structures

struct	sci_b_spi_div_setting_t

Data Structure Documentation

◆ sci_b_spi_div_setting_t

struct sci_b_spi_div_setting_t
Settings for adjusting the SPI CLK.

Function Documentation

◆ R_SCI_B_SPI_Open()

fsp_err_t R_SCI_B_SPI_Open (spi_ctrl_t * *p_api_ctrl*, spi_cfg_t const *const *p_cfg*)

Initialize a channel for SPI communication mode. Implements spi_api_t::open.

This function performs the following tasks:

- Performs parameter checking and processes error conditions.
- Enables the clock for the SCI channel.
- Initializes the associated registers with default value and the user-configurable options.
- Provides the channel handle for use with other API functions.

Parameters

p_api_ctrl	Pointer to the control structure.
p_cfg	Pointer to a configuration structure.

Return values

FSP_SUCCESS	Channel initialized successfully.
FSP_ERR_ASSERTION	An input parameter is invalid or NULL.
FSP_ERR_ALREADY_OPEN	The instance has already been opened.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	The channel number is invalid.

◆ R_SCI_B_SPI_Read()

fsp_err_t R_SCI_B_SPI_Read (spi_ctrl_t *const *p_api_ctrl*, void * *p_dest*, uint32_t const *length*, spi_bit_width_t const *bit_width*)

Receive data from an SPI device. Implements spi_api_t::read.

The function performs the following tasks:

- Performs parameter checking and processes error conditions.
- Enable transmitter.
- Enable receiver.
- Enable interrupts.
- Start data transmission by writing data to the TXD register.
- Receive data from receive buffer full interrupt occurs and copy data to the buffer of destination.
- Complete data reception via receive buffer full interrupt and transmitting dummy data.
- Disable transmitter.
- Disable receiver.
- Disable interrupts.

Parameters

	p_api_ctrl	Pointer to the control structure.
	p_dest	Pointer to the destination buffer.
[in]	length	The number of bytes to transfer.
[in]	bit_width	Invalid for SCI_B_SPI (Set to SPI_BIT_WIDTH_8_BITS).

Return values

FSP_SUCCESS	Read operation successfully completed.
FSP_ERR_ASSERTION	One of the following invalid parameters passed: • Pointer p_api_ctrl is NULL • Bit width is not 8 bits • Length is equal to 0 • Pointer to destination is NULL
FSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.
FSP_ERR_UNSUPPORTED	The given bit_width is not supported.
FSP_ERR_IN_USE	A transfer is already in progress.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::reconfigure

◆ R_SCI_B_SPI_Write()

fsp_err_t R_SCI_B_SPI_Write (spi_ctrl_t *const *p_api_ctrl*, void const * *p_src*, uint32_t const *length*, spi_bit_width_t const *bit_width*)

Transmit data to a SPI device. Implements spi_api_t::write.

The function performs the following tasks:

- Performs parameter checking and processes error conditions.
- Enable transmitter.
- Enable interrupts.
- Start data transmission with data via transmit buffer empty interrupt.
- Copy data from source buffer to the SPI data register for transmission.
- Complete data transmission via transmit buffer empty interrupt.
- Disable transmitter.
- Disable receiver.
- Disable interrupts.

Parameters

	p_api_ctrl	Pointer to the control structure.
	p_src	Pointer to the source buffer.
[in]	length	The number of bytes to transfer.
[in]	bit_width	Invalid for SCI_B_SPI (Set to SPI_BIT_WIDTH_8_BITS).

Return values

FSP_SUCCESS	Write operation successfully completed.
FSP_ERR_ASSERTION	One of the following invalid parameters passed: • Pointer p_api_ctrl is NULL • Pointer to source is NULL • Length is equal to 0 • Bit width is not equal to 8 bits
FSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.
FSP_ERR_UNSUPPORTED	The given bit_width is not supported.
FSP_ERR_IN_USE	A transfer is already in progress.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::reconfigure

◆ R_SCI_B_SPI_WriteRead()

fsp_err_t R_SCI_B_SPI_WriteRead (spi_ctrl_t *const *p_api_ctrl*, void const * *p_src*, void * *p_dest*, uint32_t const *length*, spi_bit_width_t const *bit_width*)

Simultaneously transmit data to SPI device while receiving data from SPI device (full duplex). Implements spi_api_t::writeRead.

The function performs the following tasks:

- Performs parameter checking and processes error conditions.
- Enable transmitter.
- Enable receiver.
- Enable interrupts.
- Start data transmission using transmit buffer empty interrupt (or by writing to the TDR register).
- Copy data from source buffer to the SPI data register for transmission.
- Receive data from receive buffer full interrupt and copy data to the destination buffer.
- Complete data transmission and reception via transmit end interrupt.
- Disable transmitter.
- Disable receiver.
- Disable interrupts.

Parameters

	p_api_ctrl	Pointer to the control structure.
	p_src	Pointer to the source buffer.
	p_dest	Pointer to the destination buffer.
[in]	length	The number of bytes to transfer.
[in]	bit_width	Invalid for SCI_B_SPI (Set to SPI_BIT_WIDTH_8_BITS).

Return values

FSP_SUCCESS	Write operation successfully completed.
FSP_ERR_ASSERTION	One of the following invalid parameters passed: • Pointer p_api_ctrl is NULL • Pointer to source is NULL • Pointer to destination is NULL • Length is equal to 0 • Bit width is not equal to 8 bits
FSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.
FSP_ERR_UNSUPPORTED	The given bit_width is not supported.
FSP_ERR_IN_USE	A transfer is already in progress.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::reconfigure

◆ R_SCI_B_SPI_CallbackSet()

fsp_err_t R_SCI_B_SPI_CallbackSet (spi_ctrl_t *const *p_api_ctrl*, void(*)(spi_callback_args_t *) *p_callback*, void const *const *p_context*, spi_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements spi_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

◆ R_SCI_B_SPI_Close()

fsp_err_t R_SCI_B_SPI_Close (spi_ctrl_t *const *p_api_ctrl*)

Disable the SCI channel and set the instance as not open. Implements spi_api_t::close.

Parameters

p_api_ctrl	Pointer to an opened instance.

Return values

FSP_SUCCESS	Channel successfully closed.
FSP_ERR_ASSERTION	The parameter p_api_ctrl is NULL.
FSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.

◆ R_SCI_B_SPI_CalculateBitrate()

fsp_err_t R_SCI_B_SPI_CalculateBitrate (uint32_t *bitrate*, sci_b_spi_clock_source_t *clock_source*, sci_b_spi_div_setting_t * *sclk_div*)

Calculate the register settings required to achieve the desired bitrate.

Parameters

[in]	bitrate	bitrate [bps]. For example, 250,000; 500,00; 2,500,000 (max), etc.
	clock_source	clock source (PCLKA or SCISPICLK) used for bit rate calculation.
	sclk_div	Pointer to sci_b_spi_div_setting_t used to configure baudrate settings.

Return values

FSP_SUCCESS	Baud rate is set successfully.
FSP_ERR_ASSERTION	Baud rate is not achievable.

Note

The application must pause for 1 bit time after the BRR register is loaded before transmitting/receiving to allow time for the clock to settle.

4.2.55 Serial Communications Interface (SCI) UART (r_sci_b_uart)

Modules

Functions

fsp_err_t	R_SCI_B_UART_Open (uart_ctrl_t *const p_api_ctrl, uart_cfg_t const *const p_cfg)
fsp_err_t	R_SCI_B_UART_Read (uart_ctrl_t *const p_api_ctrl, uint8_t *const p_dest, uint32_t const bytes)
fsp_err_t	R_SCI_B_UART_Write (uart_ctrl_t *const p_api_ctrl, uint8_t const *const p_src, uint32_t const bytes)
fsp_err_t	R_SCI_B_UART_BaudSet (uart_ctrl_t *const p_api_ctrl, void const *const p_baud_setting)

fsp_err_t	R_SCI_B_UART_BaudCalculate (uint32_t baudrate, bool bitrate_modulation, uint32_t baud_rate_error_x_1000, sci_b_baud_setting_t *const p_baud_setting)
fsp_err_t	R_SCI_B_UART_CallbackSet (uart_ctrl_t *const p_api_ctrl, void(*p_callback)(uart_callback_args_t *), void const *const p_context, uart_callback_args_t *const p_callback_memory)
fsp_err_t	R_SCI_B_UART_ReadStop (uart_ctrl_t *const p_api_ctrl, uint32_t *remaining_bytes)

Detailed Description

Driver for the SCI peripheral on RA MCUs. This module implements the UART Interface.

Overview

Features

The SCI UART module supports the following features:

- Full-duplex UART communication
- Interrupt-driven data transmission and reception
- Invoking the user-callback function with an event code (RX/TX complete, TX data empty, RX char, error, etc)
- Baud-rate change at run-time
- Bit rate modulation and noise cancellation
- CTS/RTS hardware flow control (with an associated pin)
- RS-485 Half Duplex driver support with external RS-485 transceiver
- Integration with the DTC transfer module
- Abort in-progress read/write operations
- FIFO support on supported channels

Configuration

Build Time Configurations for r_sci_b_uart

The following build time configurations are defined in fsp_cfg/r_sci_b_uart_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
FIFO Support	• Enable	Disable	Enable FIFO support for

	• Disable		the SCI_UART module.
DTC Support	• Enable • Disable	Disable	Enable DTC support for the SCI_UART module.
Flow Control Support	• Enable • Disable	Disable	Enable RS232 and RS-485 flow control support using a user provided pin.

Configurations for Connectivity > UART (r_sci_b_uart)

This module can be added to the Stacks tab via New Stack > Connectivity > UART (r_sci_b_uart). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_uart0	Module name.
General > Channel	Value must be a non-negative integer	0	Select the SCI channel.
General > Data Bits	• 8bits • 7bits • 9bits	8bits	Select the number of bits per word.
General > Parity	• None • Odd • Even	None	Select the parity mode.
General > Stop Bits	• 1bit • 2bits	1bit	Select the number of stop bits.
Baud > Baud Rate	Value must be an integer greater than 0	115200	Enter the desired baud rate. If the requested baud rate cannot be achieved, the settings with the smallest percent error are used. The theoretical calculated baud rate and percent error are printed in a comment in the generated sci_b_baud_setting_t structure.
Baud > Baud Rate Modulation	• Disabled • Enabled	Disabled	Enabling baud rate modulation reduces the percent error of the actual baud rate with respect to the requested baud rate. It does this by

			modulating the number of cycles per clock, so some bits are slightly longer than others.
Baud > Max Error (%)	Must be a valid non-negative integer with a maximum configurable value of 100	5	Maximum percent error allowed during baud calculation. This is used by the algorithm to determine whether or not to consider using less accurate alternative register settings. NOTE: The baud calculation does not show an error in the tool if this percent error was not achieved. The calculated percent error is recorded in a comment in the generated sci_b_baud_setting_t structure.
Flow Control > CTS/RTS Selection	MCU Specific Options		Select either CTS or RTS function on the CTSn_RTSn pin of SCI channel n or select CTS function on CTSn pin and RTS function on CTSn_RTSn pin of SCI channel n (Available on selected MCUs and channels).
Flow Control > Software RTS Port	Refer to the RA Configuration tool for available options.	Disabled	Specify the flow control pin port for the MCU.
Flow Control > Software RTS Pin	Refer to the RA Configuration tool for available options.	Disabled	Specify the flow control pin for the MCU.
Extra > RS-485 > DE Pin	• Disable • Enable	Disable	Enable or disable the DE pin for use in RS-485 half-duplex mode.
Extra > RS-485 > DE Pin Polarity	• Active Low • Active High	Active High	Select the polarity of the DE pin.
Extra > RS-485 > DE Pin Assertion Time	Must be a valid integer greater than 0 and less than or equal to 31.	1	Configure the time between assertion of the DE pin and the start of a write

			transfer. The time is specified in multiples of the SCI base clock period.
Extra > RS-485 > DE Pin Negation Time	Must be a valid integer greater than 0 and less than or equal to 31.	1	Configure the time between the end of a write transfer and the negation of the DE pin. The time is specified in multiples of the SCI base clock period.
Extra > Clock Source	• Internal Clock • Internal Clock With Output on SCK • External Clock 8x baud rate • External Clock 16x baud rate	Internal Clock	Selection of the clock source to be used in the baud-rate clock generator. When internal clock is used the baud rate can be output on the SCK pin.
Extra > Start bit detection	• Falling Edge • Low Level	Falling Edge	Start bit detected as falling edge or low level.
Extra > Noise Filter	• Enable • Disable	Disable	Enable the digital noise filter on RXDn pin. The digital noise filter block in SCI consists of two-stage flipflop circuits.
Extra > Receive FIFO Trigger Level	• One • Max	Max	Unused if the channel has no FIFO or if DTC is used for reception. Set to One to get a callback immediately when each byte is received. Set to Max to get a callback when FIFO is full or after 15 bit times with no data (fewer interrupts).
Interrupts > Callback	Name must be a valid C symbol	NULL	A user callback function can be provided. If this callback function is provided, it will be called from the interrupt service routine (ISR).
Interrupts > Receive Interrupt Priority	MCU Specific Options		Select the receive interrupt priority.
Interrupts > Transmit Data Empty Interrupt	MCU Specific Options		Select the transmit interrupt priority.

Priority		
Interrupts > Transmit End Interrupt Priority	MCU Specific Options	Select the transmit end interrupt priority.
Interrupts > Error Interrupt Priority	MCU Specific Options	Select the error interrupt priority.

Clock Configuration

The clock for this module is derived from the following peripheral clock for each MCU group:

MCU Group	Peripheral Clock
RA6T2	SCISPICLK

The clock source for the baud-rate clock generator can be selected from the internal clock, the external clock times 8 or the external clock times 16. The external clock is supplied to the SCK pin.

Pin Configuration

This module uses TXD and RXD to communicate to external devices. CTS or RTS can be controlled by the hardware. CTS or RTS or both (CTS and RTS) can be controlled by the hardware When the internal clock is the source for the baud-rate generator the SCK pin can be used to output a clock with the same frequency as the bit rate.

Usage Notes

- When configured for Hardware CTS and Software RTS the configured flow control pin will be used for RTS. The pin will be set high inside of the receive ISR while data is being read. It will be set low when all data is read.
- When configured for Hardware CTS and Hardware RTS the CSTn_RTSn pin will be used for RTS function and the CTSn pin will be used for CTS function on channel n.
- The driver will follow correct hardware flow control function when CTSn_RTSn pin is connected to CTSn pin when "Hardware CTS and Hardware RTS" flow control is selected. The data will still be transferred when CTSn_RTSn and CTSn are disconnected as the CTSn pin is internally pulled low on the hardware when CTSn pin is configured as a peripheral pin for SCI module. Do not configure CTSn pin if the hardware flow control is not desired.

Limitations

- Reception is still enabled after uart_api_t::communicationAbort API is called. Any characters received after abort and before the next call to read will arrive via the callback function with event UART_EVENT_RX_CHAR.

DTC Limitations

- DTC support is available for reception, but labeled as [Not recommended]. This is because the UART bytes are received asynchronously. Bytes can be received between calls to R_SCI_B_UART_Read(). The logic required to combine bytes received through R_SCI_B_UART_Read() (UART_EVENT_RX_COMPLETE) and bytes received between calls (UART_EVENT_RX_CHAR) is complex. Reception length may also be unknown, and the driver will not issue an interrupt unless the entire DTC buffer is filled.
- Transfer size must be less than or equal to 64K bytes if DTC interface is used for transfer.

uart_api_t::infoGet API can be used to get the max transfer size allowed.
- When using 9-bit reception with DTC, clear the upper 7 bits of data before processing the read data. The upper 7 bits contain status flags that are part of the register used to read data in 9-bit mode.

Examples

SCI UART Example

```
uint8_t g_dest[TRANSFER_LENGTH];
uint8_t g_src[TRANSFER_LENGTH];
uint8_t g_out_of_band_received[TRANSFER_LENGTH];
uint32_t g_transfer_complete = 0;
uint32_t g_receive_complete = 0;
uint32_t g_out_of_band_index = 0;
void r_sci_b_uart_basic_example (void)
{
 /* Initialize p_src to known data */
 for (uint32_t i = 0; i < TRANSFER_LENGTH; i++)
    {
       g_src[i] = (uint8_t) ('A' + (i % 26));
    }
 /* Open the transfer instance with initial configuration. */
 fsp_err_t err = R_SCI_B_UART_Open(&g_uart0_ctrl, &g_uart0_cfg);
    assert(FSP_SUCCESS == err);
    err = R_SCI_B_UART_Read(&g_uart0_ctrl, g_dest, TRANSFER_LENGTH);
    assert(FSP_SUCCESS == err);
    err = R_SCI_B_UART_Write(&g_uart0_ctrl, g_src, TRANSFER_LENGTH);
    assert(FSP_SUCCESS == err);
 while (!g_transfer_complete)
    {
    }
 while (!g_receive_complete)
    {
    }
}
void example_callback (uart_callback_args_t * p_args)
```

```
{
 /* Handle the UART event */
 switch (p_args->event)
    {
 /* Received a character */
 case UART_EVENT_RX_CHAR:
      {
 /* Only put the next character in the receive buffer if there is space for it */
 if (sizeof(g_out_of_band_received) > g_out_of_band_index)
      {
 /* Write either the next one or two bytes depending on the receive data size */
 if (UART_DATA_BITS_8 >= g_uart0_cfg.data_bits)
      {
                  g_out_of_band_received[g_out_of_band_index++] = (uint8_t)
p_args->data;
      }
 else
      {
                  uint16_t * p_dest = (uint16_t *)
&g_out_of_band_received[g_out_of_band_index];
                  *p_dest             = (uint16_t) p_args->data;
                  g_out_of_band_index += 2;
      }
      }
 break;
      }
 /* Receive complete */
 case UART_EVENT_RX_COMPLETE:
      {
            g_receive_complete = 1;
 break;
      }
 /* Transmit complete */
 case UART_EVENT_TX_COMPLETE:
```

```
     {
           g_transfer_complete = 1;
 break;
     }
 default:
     {
     }
   }
}
```

SCI UART Baud Set Example

```
#define SCI_B_UART_BAUDRATE_19200 (19200)
#define SCI_B_UART_BAUDRATE_ERROR_PERCENT_5 (5000)

Data Structure Documentation

◆ sci_b_uart_instance_ctrl_t

struct sci_b_uart_instance_ctrl_t
UART instance control block.

◆ sci_b_baud_setting_t

struct sci_b_baud_setting_t
Register settings to acheive a desired baud rate and modulation duty.

◆ sci_b_uart_rs485_setting_t

struct sci_b_uart_rs485_setting_t		
Configuration settings for controlling the DE signal for RS-485.		
Data Fields		
sci_b_uart_rs485_enable_t	enable	Enable the DE signal.
sci_b_uart_rs485_de_polarity_t	polarity	DE signal polarity.
uint8_t	assertion_time: 5	Time in baseclock units after assertion of the DE signal and before the start of the write transfer.
uint8_t	negation_time: 5	Time in baseclock units after the end of a write transfer and before the DE signal is negated.

◆ sci_b_uart_extended_cfg_t

struct sci_b_uart_extended_cfg_t

UART on SCI device Configuration		
Data Fields		
sci_b_clk_src_t	clock	The source clock for the baud-rate generator. If internal optionally output baud rate on SCK.
sci_b_uart_start_bit_detect_t	rx_edge_start	Start reception on falling edge.
sci_b_uart_noise_cancellation_t	noise_cancel	Noise cancellation setting.
sci_b_baud_setting_t *	p_baud_setting	Register settings for a desired baud rate.
sci_b_uart_rx_fifo_trigger_t	rx_fifo_trigger	Receive FIFO trigger level, unused if channel has no FIFO or if DTC is used.
bsp_io_port_pin_t	flow_control_pin	UART Driver Enable pin.
sci_b_uart_flow_control_t	flow_control	CTS/RTS function of the SSn pin.
sci_b_uart_rs485_setting_t	rs485_setting	RS-485 settings.

Enumeration Type Documentation

◆ sci_b_clk_src_t

enum sci_b_clk_src_t	
Enumeration for SCI clock source	
Enumerator	
SCI_B_UART_CLOCK_INT	Use internal clock for baud generation.
SCI_B_UART_CLOCK_INT_WITH_BAUDRATE_OUTPUT	Use internal clock for baud generation and output on SCK.
SCI_B_UART_CLOCK_EXT8X	Use external clock 8x baud rate.
SCI_B_UART_CLOCK_EXT16X	Use external clock 16x baud rate.

◆ sci_b_uart_flow_control_t

enum sci_b_uart_flow_control_t	
UART flow control mode definition	
Enumerator	
SCI_B_UART_FLOW_CONTROL_RTS	Use CTSn_RTSn pin for RTS.
SCI_B_UART_FLOW_CONTROL_CTS	Use CTSn_RTSn pin for CTS.
SCI_B_UART_FLOW_CONTROL_HARDWARE_CTSRTS	Use CTSn pin for CTS, CTSn_RTSn pin for RTS.
SCI_B_UART_FLOW_CONTROL_CTSRTS	Use SCI pin for CTS, external pin for RTS.

◆ sci_b_uart_rx_fifo_trigger_t

enum sci_b_uart_rx_fifo_trigger_t	
Receive FIFO trigger configuration.	
Enumerator	
SCI_B_UART_RX_FIFO_TRIGGER_1	Callback after each byte is received without buffering.
SCI_B_UART_RX_FIFO_TRIGGER_MAX	Callback when FIFO is full or after 15 bit times with no data (fewer interrupts)

◆ sci_b_uart_start_bit_detect_t

enum sci_b_uart_start_bit_detect_t	
Asynchronous Start Bit Edge Detection configuration.	
Enumerator	
SCI_B_UART_START_BIT_LOW_LEVEL	Detect low level on RXDn pin as start bit.
SCI_B_UART_START_BIT_FALLING_EDGE	Detect falling level on RXDn pin as start bit.

◆ sci_b_uart_noise_cancellation_t

enum sci_b_uart_noise_cancellation_t	
Noise cancellation configuration.	
Enumerator	
SCI_B_UART_NOISE_CANCELLATION_DISABLE	Disable noise cancellation.
SCI_B_UART_NOISE_CANCELLATION_ENABLE	Enable noise cancellation.

◆ sci_b_uart_rs485_enable_t

enum sci_b_uart_rs485_enable_t	
RS-485 Enable/Disable.	
Enumerator	
SCI_B_UART_RS485_DISABLE	RS-485 disabled.
SCI_B_UART_RS485_ENABLE	RS-485 enabled.

◆ sci_b_uart_rs485_de_polarity_t

enum sci_b_uart_rs485_de_polarity_t	
The polarity of the RS-485 DE signal.	
Enumerator	
SCI_B_UART_RS485_DE_POLARITY_HIGH	The DE signal is high when a write transfer is in progress.
SCI_B_UART_RS485_DE_POLARITY_LOW	The DE signal is low when a write transfer is in progress.

Function Documentation

◆ R_SCI_B_UART_Open()

fsp_err_t R_SCI_B_UART_Open (uart_ctrl_t *const *p_api_ctrl*, uart_cfg_t const *const *p_cfg*)

Configures the UART driver based on the input configurations. If reception is enabled at compile time, reception is enabled at the end of this function. Implements uart_api_t::open

Return values

FSP_SUCCESS	Channel opened successfully.
FSP_ERR_ASSERTION	Pointer to UART control block or configuration structure is NULL.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	The requested channel does not exist on this MCU.
FSP_ERR_INVALID_ARGUMENT	Flow control is enabled but flow control pin is not defined.
FSP_ERR_ALREADY_OPEN	Control block has already been opened or channel is being used by another instance. Call close() then open() to reconfigure.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::open

◆ R_SCI_B_UART_Read()

fsp_err_t R_SCI_B_UART_Read (uart_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_dest*, uint32_t const *bytes*)

Receives user specified number of bytes into destination buffer pointer. Implements uart_api_t::read

Return values

FSP_SUCCESS	Data reception successfully ends.
FSP_ERR_ASSERTION	Pointer to UART control block is NULL. Number of transfers outside the max or min boundary when transfer instance used
FSP_ERR_INVALID_ARGUMENT	Destination address or data size is not valid for 9-bit mode.
FSP_ERR_NOT_OPEN	The control block has not been opened
FSP_ERR_IN_USE	A previous read operation is still in progress.
FSP_ERR_UNSUPPORTED	SCI_B_UART_CFG_RX_ENABLE is set to 0

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::reset

Note

If 9-bit data length is specified at R_SCI_B_UART_Open call, p_dest must be aligned 16-bit boundary.

◆ R_SCI_B_UART_Write()

fsp_err_t R_SCI_B_UART_Write (uart_ctrl_t *const *p_api_ctrl*, uint8_t const *const *p_src*, uint32_t const *bytes*)

Transmits user specified number of bytes from the source buffer pointer. Implements uart_api_t::write

Return values

FSP_SUCCESS	Data transmission finished successfully.
FSP_ERR_ASSERTION	Pointer to UART control block is NULL. Number of transfers outside the max or min boundary when transfer instance used
FSP_ERR_INVALID_ARGUMENT	Source address or data size is not valid for 9-bit mode.
FSP_ERR_NOT_OPEN	The control block has not been opened
FSP_ERR_IN_USE	A UART transmission is in progress
FSP_ERR_UNSUPPORTED	SCI_B_UART_CFG_TX_ENABLE is set to 0

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::reset

Note

If 9-bit data length is specified at R_SCI_B_UART_Open call, p_src must be aligned on a 16-bit boundary.

◆ R_SCI_B_UART_BaudSet()

fsp_err_t R_SCI_B_UART_BaudSet (uart_ctrl_t *const *p_api_ctrl*, void const *const *p_baud_setting*)

Updates the baud rate using the clock selected in Open. p_baud_setting is a pointer to a sci_b_baud_setting_t structure. Implements uart_api_t::baudSet

Warning

This terminates any in-progress transmission.

Return values

FSP_SUCCESS	Baud rate was successfully changed.
FSP_ERR_ASSERTION	Pointer to UART control block is NULL or the UART is not configured to use the internal clock.
FSP_ERR_NOT_OPEN	The control block has not been opened

◆ R_SCI_B_UART_InfoGet()

fsp_err_t R_SCI_B_UART_InfoGet (uart_ctrl_t *const *p_api_ctrl*, uart_info_t *const *p_info*)

Provides the driver information, including the maximum number of bytes that can be received or transmitted at a time. Implements uart_api_t::infoGet

Return values

FSP_SUCCESS	Information stored in provided p_info.
FSP_ERR_ASSERTION	Pointer to UART control block is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened

◆ R_SCI_B_UART_Close()

fsp_err_t R_SCI_B_UART_Close (uart_ctrl_t *const *p_api_ctrl*)

Aborts any in progress transfers. Disables interrupts, receiver, and transmitter. Closes lower level transfer drivers if used. Removes power. Implements uart_api_t::close

Return values

FSP_SUCCESS	Channel successfully closed.
FSP_ERR_ASSERTION	Pointer to UART control block is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened

◆ R_SCI_B_UART_Abort()

fsp_err_t R_SCI_B_UART_Abort (uart_ctrl_t *const *p_api_ctrl*, uart_dir_t *communication_to_abort*)

Provides API to abort ongoing transfer. Transmission is aborted after the current character is transmitted. Reception is still enabled after abort(). Any characters received after abort() and before the transfer is reset in the next call to read(), will arrive via the callback function with event UART_EVENT_RX_CHAR. Implements uart_api_t::communicationAbort

Return values

FSP_SUCCESS	UART transaction aborted successfully.
FSP_ERR_ASSERTION	Pointer to UART control block is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_UNSUPPORTED	The requested Abort direction is unsupported.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::disable

◆ R_SCI_B_UART_BaudCalculate()

fsp_err_t R_SCI_B_UART_BaudCalculate (uint32_t *baudrate*, bool *bitrate_modulation*, uint32_t *baud_rate_error_x_1000*, sci_b_baud_setting_t *const *p_baud_setting*)

Calculates baud rate register settings. Evaluates and determines the best possible settings set to the baud rate related registers.

Parameters

[in]	baudrate	Baud rate [bps]. For example, 19200, 57600, 115200, etc.
[in]	bitrate_modulation	Enable bitrate modulation
[in]	baud_rate_error_x_1000	Max baud rate error. At most <baud_rate_percent_error> x 1000 required for module to function. Absolute max baud_rate_error is 15000 (15%).
[out]	p_baud_setting	Baud setting information stored here if successful

Return values

FSP_SUCCESS	Baud rate is set successfully
FSP_ERR_ASSERTION	Null pointer
FSP_ERR_INVALID_ARGUMENT	Baud rate is '0', error in calculated baud rate is larger than requested max error, or requested max error in baud rate is larger than 15%.

◆ R_SCI_B_UART_CallbackSet()

fsp_err_t R_SCI_B_UART_CallbackSet (uart_ctrl_t *const *p_api_ctrl*, void(*)(uart_callback_args_t *) *p_callback*, void const *const *p_context*, uart_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements uart_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

◆ R_SCI_B_UART_ReadStop()

fsp_err_t R_SCI_B_UART_ReadStop (uart_ctrl_t *const *p_api_ctrl*, uint32_t * *remaining_bytes*)

Provides API to abort ongoing read. Reception is still enabled after abort(). Any characters received after abort() and before the transfer is reset in the next call to read(), will arrive via the callback function with event UART_EVENT_RX_CHAR. Implements uart_api_t::readStop

Return values

FSP_SUCCESS	UART transaction aborted successfully.
FSP_ERR_ASSERTION	Pointer to UART control block is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_UNSUPPORTED	The requested Abort direction is unsupported.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::disable

4.2.56 Serial Communications Interface (SCI) I2C (r_sci_i2c)

Modules

Functions

fsp_err_t	R_SCI_I2C_Open (i2c_master_ctrl_t *const p_api_ctrl, i2c_master_cfg_t const *const p_cfg)

fsp_err_t	R_SCI_I2C_Close (i2c_master_ctrl_t *const p_api_ctrl)

fsp_err_t	R_SCI_I2C_CallbackSet (i2c_master_ctrl_t *const p_api_ctrl, void(*p_callback)(i2c_master_callback_args_t *), void const *const p_context, i2c_master_callback_args_t *const p_callback_memory)
fsp_err_t	R_SCI_I2C_StatusGet (i2c_master_ctrl_t *const p_api_ctrl, i2c_master_status_t *p_status)

Detailed Description

Driver for the SCI peripheral on RA MCUs. This module implements the I2C Master Interface.

Overview

The Simple I2C master on SCI HAL module supports transactions with an I2C Slave device. Callbacks must be provided which would be invoked when a transmission or receive has been completed. The callback arguments will contain information about the transaction status, bytes transferred and a pointer to the user defined context.

Features

- Supports multiple transmission rates
  - Standard Mode Support with up to 100 kHz transaction rate.
  - Fast Mode Support with up to 400 kHz transaction rate.
- SDA Delay in nanoseconds can be specified as a part of the configuration.
- I2C Master Read from a slave device.
- I2C Master Write to a slave device.
- Abort any in-progress transactions.
- Set the address of the slave device.
- Non-blocking behavior is achieved by the use of callbacks.
- Additional build-time features
  - Optional (build time) DTC support for read and write respectively.
  - Optional (build time) support for 10-bit slave addressing.

Configuration

Build Time Configurations for r_sci_i2c

The following build time configurations are defined in fsp_cfg/r_sci_i2c_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
DTC on Transmission and Reception	• Enabled • Disabled	Disabled	If enabled, DTC instances will be included in the build for both transmission and reception.
10-bit slave addressing	• Enabled • Disabled	Disabled	If enabled, the driver will support 10-bit slave addressing mode along with the default 7-bit slave addressing mode.

Configurations for Connectivity > I2C Master (r_sci_i2c)

This module can be added to the Stacks tab via New Stack > Connectivity > I2C Master (r_sci_i2c). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_i2c0	Module name.
Channel	Value must be an integer between 0 and 9	0	Select the SCI channel.
Slave Address	Value must be a hex value	0x00	Specify the slave address.
Address Mode	• 7-Bit • 10-Bit	7-Bit	Select the address mode.
Rate	• Standard • Fast-mode	Standard	Select the I2C data rate. If the requested transfer rate cannot be achieved, the settings with the largest possible transfer rate that is less than or equal to the requested transfer rate are used. The theoretical calculated transfer rate and SDA delay are printed in a comment

			in the generated sci_i2c_extended_cfg_t structure.
SDA Output Delay (nano seconds)	Must be a valid non-negative integer with maximum configurable value of 300	300	Specify the SDA output delay in nanoseconds.
Noise filter setting	• Use clock signal divided by 1 with noise filter • Use clock signal divided by 2 with noise filter • Use clock signal divided by 4 with noise filter • Use clock signal divided by 8 with noise filter	Use clock signal divided by 1 with noise filter	Select the sampling clock for the digital noise filter
Bit Rate Modulation	• Enable • Disable	Enable	Enabling bitrate modulation reduces the percent error of the actual bitrate with respect to the requested baud rate. It does this by modulating the number of cycles per clock output pulse, so the clock is no longer a square wave.
Callback	Name must be a valid C symbol	sci_i2c_master_callback	A user callback function can be provided. If this callback function is provided, it will be called from the interrupt service routine (ISR).
Interrupt Priority Level	MCU Specific Options		Select the interrupt priority level. This is set for TXI, RXI (if used), TEI interrupts.
RX Interrupt Priority Level [Only used when DTC is enabled]	MCU Specific Options		Select the interrupt priority level. This is set for RXI only when DTC is enabled.

Clock Configuration

The clock for this module is derived from the following peripheral clock for each MCU group:

MCU Group	Peripheral Clock
RA2A1	PCLKB
RA2E1	PCLKB
RA2E2	PCLKB
RA2L1	PCLKB
RA4E1	PCLKA
RA4M1	PCLKA
RA4M2	PCLKA
RA4M3	PCLKA
RA4W1	PCLKA
RA6E1	PCLKA
RA6M1	PCLKA
RA6M2	PCLKA
RA6M3	PCLKA
RA6M4	PCLKA
RA6M5	PCLKA
RA6T1	PCLKA

The actual I2C transfer rate will be calculated and set by the tooling depending on the selected transfer rate and the SDA delay. If the PCLK is configured in such a manner that the selected internal rate cannot be achieved, an error will be returned.

Pin Configuration

The SCI I2C peripheral module uses pins on the MCU to communicate to external devices. I/O pins must be selected and configured as required by the external device. An I2C channel would consist of two pins - SDA and SCL for data/address and clock respectively.

Usage Notes

Interrupt Configuration

- Receive buffer full (RXI), transmit buffer empty (TXI) and transmit end (TEI) interrupts for the selected channel used must be enabled in the properties of the selected device.
- Set equal priority levels for all the interrupts mentioned above. Setting the interrupts to different priority levels could result in improper operation.

SCI I2C Master Rate Calculation

- The RA Configuration editor calculates the internal baud-rate setting based on the configured transfer rate and SDA Delay. The closest possible baud-rate that can be achieved (less than or equal to the requested rate) at the current PCLK settings is

calculated and used.
- If a valid clock rate could not be calculated, an error is returned by the tool.

Enabling DTC with the SCI I2C

- DTC transfer support is configurable and is disabled from the build by default. SCI I2C driver provides two DTC instances for transmission and reception respectively.
- DTC is helpful for minimizing interrupts during large transactions. Many I2C applications have shorter transactions. These applications will likely not see any improvement with DTC. I2C often runs at a much slower speed than the CPU core clock. Some applications with longer transactions may prefer servicing the interrupts at the I2C bitrate to the overhead of bringing in the DTC driver.
- For further details on DTC please refer Data Transfer Controller (r_dtc)

Multiple Devices on the Bus

- A single SCI I2C instance can be used to communicate with multiple slave devices on the same channel by using the SlaveAddressSet API.

Restart

- SCI I2C master can hold the the bus after an I2C transaction by issuing Restart. This will mimic a stop followed by start condition.

Examples

Basic Example

This is a basic example of minimal use of the r_sci_i2c in an application. This example shows how this driver can be used for basic read and write operations.

```
void basic_example (void)
{
 fsp_err_t err;
    uint32_t i;
    uint32_t timeout_ms = I2C_TRANSACTION_BUSY_DELAY;
 /* Initialize the I2C module */
    err = R_SCI_I2C_Open(&g_i2c_device_ctrl_1, &g_i2c_device_cfg_1);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Write some data to the transmit buffer */
 for (i = 0; i < I2C_BUFFER_SIZE_BYTES; i++)
    {
       g_i2c_tx_buffer[i] = (uint8_t) i;
    }
```

```
 /* Send data to I2C slave */
    g_i2c_callback_event = I2C_MASTER_EVENT_ABORTED;
    err = R_SCI_I2C_Write(&g_i2c_device_ctrl_1, &g_i2c_tx_buffer[0],
I2C_BUFFER_SIZE_BYTES, false);
    assert(FSP_SUCCESS == err);
 /* Since there is nothing else to do, block until Callback triggers*/
 while ((I2C_MASTER_EVENT_TX_COMPLETE != g_i2c_callback_event) && timeout_ms)
    {
 R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
       timeout_ms--;;
    }
 if (I2C_MASTER_EVENT_ABORTED == g_i2c_callback_event)
    {
       __BKPT(0);
    }
 /* Read data back from the I2C slave */
    g_i2c_callback_event = I2C_MASTER_EVENT_ABORTED;
    timeout_ms          = I2C_TRANSACTION_BUSY_DELAY;
    err = R_SCI_I2C_Read(&g_i2c_device_ctrl_1, &g_i2c_rx_buffer[0],
I2C_BUFFER_SIZE_BYTES, false);
    assert(FSP_SUCCESS == err);
 /* Since there is nothing else to do, block until Callback triggers*/
 while ((I2C_MASTER_EVENT_RX_COMPLETE != g_i2c_callback_event) && timeout_ms)
    {
 R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
       timeout_ms--;;
    }
 if (I2C_MASTER_EVENT_ABORTED == g_i2c_callback_event)
    {
       __BKPT(0);
    }
 /* Verify the read data */
 if (0U != memcmp(g_i2c_tx_buffer, g_i2c_rx_buffer, I2C_BUFFER_SIZE_BYTES))
    {
```

```
      __BKPT(0);
   }
}
```

Multiple Slave devices on the same channel (bus)

This example demonstrates how a single SCI I2C driver can be used to communicate with different slave devices which are on the same channel.

```
void single_channel_multi_slave (void)
{
 fsp_err_t err;
   uint32_t timeout_ms = I2C_TRANSACTION_BUSY_DELAY;
   err = R_SCI_I2C_Open(&g_i2c_device_ctrl_2, &g_i2c_device_cfg_2);
 /* Handle any errors. This function should be defined by the user. */
   assert(FSP_SUCCESS == err);
 /* Clear the recieve buffer */
   memset(g_i2c_rx_buffer, '0', I2C_BUFFER_SIZE_BYTES);
 /* Read data from I2C slave */
   g_i2c_callback_event = I2C_MASTER_EVENT_ABORTED;
   err = R_SCI_I2C_Read(&g_i2c_device_ctrl_2, &g_i2c_rx_buffer[0],
I2C_BUFFER_SIZE_BYTES, false);
   assert(FSP_SUCCESS == err);
 while ((I2C_MASTER_EVENT_RX_COMPLETE != g_i2c_callback_event) && timeout_ms)
   {
 R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
      timeout_ms--;;
   }
 if (I2C_MASTER_EVENT_ABORTED == g_i2c_callback_event)
   {
      __BKPT(0);
   }
 /* Send data to I2C slave on the same channel */
   err = R_SCI_I2C_SlaveAddressSet(&g_i2c_device_ctrl_2, I2C_SLAVE_DISPLAY_ADAPTER,
I2C_MASTER_ADDR_MODE_7BIT);
```

```
    assert(FSP_SUCCESS == err);
    g_i2c_tx_buffer[0]   = (uint8_t) I2C_EXAMPLE_DATA_1;
    g_i2c_tx_buffer[1]   = (uint8_t) I2C_EXAMPLE_DATA_2;
    g_i2c_callback_event = I2C_MASTER_EVENT_ABORTED;
    timeout_ms           = I2C_TRANSACTION_BUSY_DELAY;
    err = R_SCI_I2C_Write(&g_i2c_device_ctrl_2, &g_i2c_tx_buffer[0], 2U, false);
    assert(FSP_SUCCESS == err);
 while ((I2C_MASTER_EVENT_TX_COMPLETE != g_i2c_callback_event) && timeout_ms)
    {
 R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
       timeout_ms--;;
    }
 if (I2C_MASTER_EVENT_ABORTED == g_i2c_callback_event)
    {
       __BKPT(0);
    }
}
```

◆ sci_i2c_instance_ctrl_t

struct sci_i2c_instance_ctrl_t
I2C control structure. DO NOT INITIALIZE.

◆ sci_i2c_extended_cfg_t

struct sci_i2c_extended_cfg_t		
SCI I2C extended configuration		
Data Fields		
sci_i2c_clock_settings_t	clock_settings	I2C Clock settings.

Function Documentation

◆ R_SCI_I2C_Open()

fsp_err_t R_SCI_I2C_Open (i2c_master_ctrl_t *const *p_api_ctrl*, i2c_master_cfg_t const *const *p_cfg*)

Opens the I2C device.

Return values

FSP_SUCCESS	Requested clock rate was set exactly.
FSP_ERR_ALREADY_OPEN	Module is already open.
FSP_ERR_ASSERTION	Parameter check failure due to one or more reasons below: 1. p_api_ctrl or p_cfg is NULL. 2. extended parameter is NULL. 3. Callback parameter is NULL. 4. Clock rate requested is greater than 400KHz 5. Invalid IRQ number assigned

◆ R_SCI_I2C_Close()

fsp_err_t R_SCI_I2C_Close (i2c_master_ctrl_t *const *p_api_ctrl*)

Closes the I2C device. Power down I2C peripheral.

This function will safely terminate any in-progress I2C transfer with the device. If a transfer is aborted, the user will be notified via callback with an abort event. Since the callback is optional, this function will also return a specific error code in this situation.

Return values

FSP_SUCCESS	Device closed without issue.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Device was not even opened.

◆ R_SCI_I2C_Read()

fsp_err_t R_SCI_I2C_Read (i2c_master_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_dest*, uint32_t const *bytes*, bool const *restart*)

Performs a read from the I2C device. The caller will be notified when the operation has completed (successfully) by an I2C_MASTER_EVENT_RX_COMPLETE in the callback.

Return values

FSP_SUCCESS	Function executed without issue.
FSP_ERR_ASSERTION	The parameter p_ctrl, p_dest is NULL, bytes is 0.
FSP_ERR_INVALID_SIZE	Provided number of bytes more than uint16_t size (65535) while DTC is used for data transfer.
FSP_ERR_NOT_OPEN	Device was not even opened.

◆ R_SCI_I2C_Write()

fsp_err_t R_SCI_I2C_Write (i2c_master_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_src*, uint32_t const *bytes*, bool const *restart*)

Performs a write to the I2C device.

This function will fail if there is already an in-progress I2C transfer on the associated channel. Otherwise, the I2C write operation will begin. When no callback is provided by the user, this function performs a blocking write. Otherwise, the write operation is non-blocking and the caller will be notified when the operation has finished by an I2C_EVENT_TX_COMPLETE in the callback.

Return values

FSP_SUCCESS	Function executed without issue.
FSP_ERR_ASSERTION	p_ctrl, p_src is NULL.
FSP_ERR_INVALID_SIZE	Provided number of bytes more than uint16_t size (65535) while DTC is used for data transfer.
FSP_ERR_NOT_OPEN	Device was not even opened.

◆ R_SCI_I2C_Abort()

fsp_err_t R_SCI_I2C_Abort (i2c_master_ctrl_t *const *p_api_ctrl*)

Aborts any in-progress transfer and forces the I2C peripheral into a ready state.

This function will safely terminate any in-progress I2C transfer with the device. If a transfer is aborted, the user will be notified via callback with an abort event. Since the callback is optional, this function will also return a specific error code in this situation.

Return values

FSP_SUCCESS	Transaction was aborted without issue.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Device was not even opened.

◆ R_SCI_I2C_SlaveAddressSet()

fsp_err_t R_SCI_I2C_SlaveAddressSet (i2c_master_ctrl_t *const *p_api_ctrl*, uint32_t const *slave*, i2c_master_addr_mode_t const *addr_mode*)

Sets address and addressing mode of the slave device.

This function is used to set the device address and addressing mode of the slave without reconfiguring the entire bus.

Return values

FSP_SUCCESS	Address of the slave is set correctly.
FSP_ERR_ASSERTION	p_ctrl or address is NULL.
FSP_ERR_NOT_OPEN	Device was not even opened.
FSP_ERR_IN_USE	An I2C Transaction is in progress.

◆ R_SCI_I2C_CallbackSet()

fsp_err_t R_SCI_I2C_CallbackSet (i2c_master_ctrl_t *const *p_api_ctrl*, void(*)(i2c_master_callback_args_t *) *p_callback*, void const *const *p_context*, i2c_master_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements i2c_master_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

◆ R_SCI_I2C_StatusGet()

fsp_err_t R_SCI_I2C_StatusGet (i2c_master_ctrl_t *const *p_api_ctrl*, i2c_master_status_t * *p_status*)
Provides driver status. **Return values** FSP_SUCCESS — Status stored in p_status. FSP_ERR_ASSERTION — NULL pointer.

4.2.57 Serial Communications Interface (SCI) SPI (r_sci_spi)

Modules

Functions

fsp_err_t	R_SCI_SPI_Open (spi_ctrl_t *p_api_ctrl, spi_cfg_t const *const p_cfg)
fsp_err_t	R_SCI_SPI_Read (spi_ctrl_t *const p_api_ctrl, void *p_dest, uint32_t const length, spi_bit_width_t const bit_width)
fsp_err_t	R_SCI_SPI_Write (spi_ctrl_t *const p_api_ctrl, void const *p_src, uint32_t const length, spi_bit_width_t const bit_width)
fsp_err_t	R_SCI_SPI_WriteRead (spi_ctrl_t *const p_api_ctrl, void const *p_src, void *p_dest, uint32_t const length, spi_bit_width_t const bit_width)
fsp_err_t	R_SCI_SPI_CallbackSet (spi_ctrl_t *const p_api_ctrl, void(*p_callback)(spi_callback_args_t *), void const *const p_context, spi_callback_args_t *const p_callback_memory)
fsp_err_t	R_SCI_SPI_Close (spi_ctrl_t *const p_api_ctrl)
fsp_err_t	R_SCI_SPI_CalculateBitrate (uint32_t bitrate, sci_spi_div_setting_t *sclk_div, bool use_mddr)

Detailed Description

Driver for the SCI peripheral on RA MCUs. This module implements the SPI Interface.

Overview

Features

- Standard SPI Modes
    - Master or Slave Mode
    - Clock Polarity (CPOL)
        - CPOL=0 SCLK is low when idle
        - CPOL=1 SCLK is high when idle
    - Clock Phase (CPHA)
        - CPHA=0 Select data sampling on leading edge, data change on trailing edge
        - CPHA=1 Select data change on leading edge, data sampling on trailing edge
    - MSB/LSB first
- Configurable bit rate
- DTC Support
- Callback Events
    - Transfer Complete
    - RX Overflow Error (The SCI shift register is copied to the data register before previous data was read)

Configuration

Build Time Configurations for r_sci_spi

The following build time configurations are defined in fsp_cfg/r_sci_spi_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
DTC Support	• Enabled • Disabled	Enabled	If support for transfering data using the DTC will be compiled in.

Configurations for Connectivity > SPI (r_sci_spi)

This module can be added to the Stacks tab via New Stack > Connectivity > SPI (r_sci_spi). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_spi0	Module name.
Channel	Value must be a non-negative integer	0	Select the SCI channel.
Operating Mode	• Master • Slave	Master	Select the SPI operating mode.
Clock Phase	• Data sampling on odd edge,	Data sampling on odd edge, data variation on	Select the clock edge to sample data.

	data variation on even edge • Data sampling on even edge, data variation on odd edge	even edge	
Clock Polarity	• Low when idle • High when idle	Low when idle	Select clock level when idle.
Mode Fault Error	• Enable • Disable	Disable	Detect master/slave mode conflicts.
Bit Order	• MSB First • LSB First	MSB First	Select the data bit order.
Callback	Name must be a valid C symbol	sci_spi_callback	A user callback function that is called from the sci spi interrupts when a transfer is completed or an error has occurred.
Receive Interrupt Priority	MCU Specific Options		Select the receive interrupt priority.
Transmit Interrupt Priority	MCU Specific Options		Select the transmit interrupt priority.
Transmit End Interrupt Priority	MCU Specific Options		Select the transmit end interrupt priority.
Error Interrupt Priority	MCU Specific Options		Select the error interrupt priority.
Bitrate	Value must be an integer greater than 0	8000000	Enter the desired bitrate. If the requested bitrate cannot be achieved, the settings with the largest possible value that is less than or equal to the requested bitrate is used. The theoretical bitrate is printed in a comment in the generated sci_spi_extended_cfg_t structure.
Bitrate Modulation	• Disabled • Enabled	Disabled	Enabling bitrate modulation reduces the percent error of the actual bitrate with respect to the requested baud rate. It does this by

modulating the number of cycles per clock output pulse, so the clock is no longer a square wave.

Clock Configuration

The clock for this module is derived from the following peripheral clock for each MCU group:

MCU Group	Peripheral Clock
RA2A1	PCLKB
RA2E1	PCLKB
RA2E2	PCLKB
RA2L1	PCLKB
RA4E1	PCLKA
RA4M1	PCLKA
RA4M2	PCLKA
RA4M3	PCLKA
RA4W1	PCLKA
RA6E1	PCLKA
RA6M1	PCLKA
RA6M2	PCLKA
RA6M3	PCLKA
RA6M4	PCLKA
RA6M5	PCLKA
RA6T1	PCLKA

Pin Configuration

This module uses SCIn_MOSI, SCIn_MISO, SCIn_SPCK, and SCIn_SS pins to communicate with on board devices.

Note

At high bit rates, it might be necessary to configure the pins with IOPORT_CFG_DRIVE_HIGH.

Usage Notes

Transfer Complete Event

The transfer complete event is triggered when all of the data has been transfered. In slave mode if the SS pin is de-asserted then no transfer complete event is generated until the SS pin is asserted and the remaining data is transferred.

Performance

At high bit rates, interrupts may not be able to service transfers fast enough. In master mode this means there will be a delay between each data frame. In slave mode this could result in RX Overflow errors.

In order to improve performance at high bit rates, it is recommended that the instance be configured to service transfers using the DTC.

Transmit From RXI Interrupt

After every byte, the SCI SPI peripheral generates a transmit buffer empty interrupt and a receive buffer full interrupt. Whenever possible, the SCI_SPI module handles both interrupts in the receive buffer full interrupt. This improves performance when the DTC is not being used.

Slave Select Pin

- In master mode the slave select pin must be driven in software.
- In slave mode the hardware handles the slave select pin and will only transfer data when the SS pin is low.

Bit Rate Modulation

Depending on the peripheral clock frequency, the desired bit rate may not be achievable. With bit rate modulation, the device can remove a configurable number of input clock pulses to the internal bit rate counter in order to create the desired bit rate. This has the effect of changing the period of individual bits in order to achieve the desired average bit rate. For more information see section 34.9 Bit Rate Modulation Function in the RA6M3 manual.

Examples

Basic Example

This is a basic example of minimal use of the SCI_SPI in an application.

```
static volatile bool g_transfer_complete = false;
static void r_sci_spi_callback (spi_callback_args_t * p_args)
{
 if (SPI_EVENT_TRANSFER_COMPLETE == p_args->event)
    {
       g_transfer_complete = true;
    }
}
void sci_spi_basic_example (void)
{
    uint8_t tx_buffer[TRANSFER_SIZE];
    uint8_t rx_buffer[TRANSFER_SIZE];
```

```
/* Configure Slave Select Line 1 */
R_BSP_PinWrite(SLAVE_SELECT_LINE_1, BSP_IO_LEVEL_HIGH);
/* Configure Slave Select Line 2 */
R_BSP_PinWrite(SLAVE_SELECT_LINE_2, BSP_IO_LEVEL_HIGH);
fsp_err_t err = FSP_SUCCESS;
/* Initialize the SPI module. */
   err = R_SCI_SPI_Open(&g_spi_ctrl, &g_spi_cfg);
/* Handle any errors. This function should be defined by the user. */
   assert(FSP_SUCCESS == err);
/* Assert Slave Select Line 1 */
R_BSP_PinWrite(SLAVE_SELECT_LINE_1, BSP_IO_LEVEL_LOW);
/* Start a write/read transfer */
   g_transfer_complete = false;
   err = R_SCI_SPI_WriteRead(&g_spi_ctrl, tx_buffer, rx_buffer, TRANSFER_SIZE,
SPI_BIT_WIDTH_8_BITS);
   assert(FSP_SUCCESS == err);
/* Wait for SPI_EVENT_TRANSFER_COMPLETE callback event. */
while (false == g_transfer_complete)
   {
      ;
   }
/* De-assert Slave Select Line 1 */
R_BSP_PinWrite(SLAVE_SELECT_LINE_1, BSP_IO_LEVEL_HIGH);
/* Wait for minimum time required between transfers. */
R_BSP_SoftwareDelay(SSL_NEXT_ACCESS_DELAY, BSP_DELAY_UNITS_MICROSECONDS);
/* Assert Slave Select Line 2 */
R_BSP_PinWrite(SLAVE_SELECT_LINE_2, BSP_IO_LEVEL_LOW);
/* Start a write/read transfer */
   g_transfer_complete = false;
   err = R_SCI_SPI_WriteRead(&g_spi_ctrl, tx_buffer, rx_buffer, TRANSFER_SIZE,
SPI_BIT_WIDTH_8_BITS);
   assert(FSP_SUCCESS == err);
/* Wait for SPI_EVENT_TRANSFER_COMPLETE callback event. */
while (false == g_transfer_complete)
```

```
    {
        ;
    }
 /* De-assert Slave Select Line 2 */
 R_BSP_PinWrite(SLAVE_SELECT_LINE_2, BSP_IO_LEVEL_HIGH);
}
```

Data Structures

struct	sci_spi_div_setting_t

Data Structure Documentation

◆ sci_spi_div_setting_t

struct sci_spi_div_setting_t		
Settings for adjusting the SPI CLK.		
Data Fields		
uint8_t	brr	
uint8_t	cks: 2	
uint8_t	mddr	Set to 0 to disable MDDR.

Function Documentation

◆ R_SCI_SPI_Open()

fsp_err_t R_SCI_SPI_Open (spi_ctrl_t * *p_api_ctrl*, spi_cfg_t const *const *p_cfg*)

Initialize a channel for SPI communication mode. Implements spi_api_t::open.

This function performs the following tasks:

- Performs parameter checking and processes error conditions.
- Enables the clock for the SCI channel.
- Initializes the associated registers with default value and the user-configurable options.
- Provides the channel handle for use with other API functions.

Parameters

p_api_ctrl	Pointer to the control structure.
p_cfg	Pointer to a configuration structure.

Return values

FSP_SUCCESS	Channel initialized successfully.
FSP_ERR_ASSERTION	An input parameter is invalid or NULL.
FSP_ERR_ALREADY_OPEN	The instance has already been opened.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	The channel number is invalid.

◆ R_SCI_SPI_Read()

fsp_err_t R_SCI_SPI_Read (spi_ctrl_t *const *p_api_ctrl*, void * *p_dest*, uint32_t const *length*, spi_bit_width_t const *bit_width*)

Receive data from an SPI device. Implements spi_api_t::read.

The function performs the following tasks:

- Performs parameter checking and processes error conditions.
- Enable transmitter.
- Enable receiver.
- Enable interrupts.
- Start data transmission by writing data to the TXD register.
- Receive data from receive buffer full interrupt occurs and copy data to the buffer of destination.
- Complete data reception via receive buffer full interrupt and transmitting dummy data.
- Disable transmitter.
- Disable receiver.
- Disable interrupts.

Parameters

	p_api_ctrl	Pointer to the control structure.
	p_dest	Pointer to the destination buffer.
[in]	length	The number of bytes to transfer.
[in]	bit_width	Invalid for SCI_SPI (Set to SPI_BIT_WIDTH_8_BITS).

Return values

FSP_SUCCESS	Read operation successfully completed.
FSP_ERR_ASSERTION	One of the following invalid parameters passed: • Pointer p_api_ctrl is NULL • Bit width is not 8 bits • Length is equal to 0 • Pointer to destination is NULL
FSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.
FSP_ERR_UNSUPPORTED	The given bit_width is not supported.
FSP_ERR_IN_USE	A transfer is already in progress.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::reconfigure

◆ R_SCI_SPI_Write()

fsp_err_t R_SCI_SPI_Write (spi_ctrl_t *const *p_api_ctrl*, void const * *p_src*, uint32_t const *length*, spi_bit_width_t const *bit_width*)

Transmit data to a SPI device. Implements spi_api_t::write.

The function performs the following tasks:

- Performs parameter checking and processes error conditions.
- Enable transmitter.
- Enable interrupts.
- Start data transmission with data via transmit buffer empty interrupt.
- Copy data from source buffer to the SPI data register for transmission.
- Complete data transmission via transmit buffer empty interrupt.
- Disable transmitter.
- Disable receiver.
- Disable interrupts.

Parameters

	p_api_ctrl	Pointer to the control structure.
	p_src	Pointer to the source buffer.
[in]	length	The number of bytes to transfer.
[in]	bit_width	Invalid for SCI_SPI (Set to SPI_BIT_WIDTH_8_BITS).

Return values

FSP_SUCCESS	Write operation successfully completed.
FSP_ERR_ASSERTION	One of the following invalid parameters passed: • Pointer p_api_ctrl is NULL • Pointer to source is NULL • Length is equal to 0 • Bit width is not equal to 8 bits
FSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.
FSP_ERR_UNSUPPORTED	The given bit_width is not supported.
FSP_ERR_IN_USE	A transfer is already in progress.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::reconfigure

◆ R_SCI_SPI_WriteRead()

fsp_err_t R_SCI_SPI_WriteRead (spi_ctrl_t *const *p_api_ctrl*, void const * *p_src*, void * *p_dest*, uint32_t const *length*, spi_bit_width_t const *bit_width*)

Simultaneously transmit data to SPI device while receiving data from SPI device (full duplex). Implements spi_api_t::writeRead.

The function performs the following tasks:

- Performs parameter checking and processes error conditions.
- Enable transmitter.
- Enable receiver.
- Enable interrupts.
- Start data transmission using transmit buffer empty interrupt (or by writing to the TDR register).
- Copy data from source buffer to the SPI data register for transmission.
- Receive data from receive buffer full interrupt and copy data to the destination buffer.
- Complete data transmission and reception via transmit end interrupt.
- Disable transmitter.
- Disable receiver.
- Disable interrupts.

Parameters

	p_api_ctrl	Pointer to the control structure.
	p_src	Pointer to the source buffer.
	p_dest	Pointer to the destination buffer.
[in]	length	The number of bytes to transfer.
[in]	bit_width	Invalid for SCI_SPI (Set to SPI_BIT_WIDTH_8_BITS).

Return values

FSP_SUCCESS	Write operation successfully completed.
FSP_ERR_ASSERTION	One of the following invalid parameters passed: • Pointer p_api_ctrl is NULL • Pointer to source is NULL • Pointer to destination is NULL • Length is equal to 0 • Bit width is not equal to 8 bits
FSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.
FSP_ERR_UNSUPPORTED	The given bit_width is not supported.
FSP_ERR_IN_USE	A transfer is already in progress.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::reconfigure

◆ R_SCI_SPI_CallbackSet()

fsp_err_t R_SCI_SPI_CallbackSet (spi_ctrl_t *const *p_api_ctrl*, void(*)(spi_callback_args_t *) *p_callback*, void const *const *p_context*, spi_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements spi_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

◆ R_SCI_SPI_Close()

fsp_err_t R_SCI_SPI_Close (spi_ctrl_t *const *p_api_ctrl*)

Disable the SCI channel and set the instance as not open. Implements spi_api_t::close.

Parameters

p_api_ctrl	Pointer to an opened instance.

Return values

FSP_SUCCESS	Channel successfully closed.
FSP_ERR_ASSERTION	The parameter p_api_ctrl is NULL.
FSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.

◆ R_SCI_SPI_CalculateBitrate()

fsp_err_t R_SCI_SPI_CalculateBitrate (uint32_t *bitrate*, sci_spi_div_setting_t * *sclk_div*, bool *use_mddr*)

Calculate the register settings required to achieve the desired bitrate.

Parameters

[in]	bitrate	bitrate [bps]. For example, 250,000; 500,00; 2,500,000 (max), etc.
	sclk_div	Pointer to sci_spi_div_setting_t used to configure baudrate settings.
[in]	use_mddr	Calculate the divider settings for use with MDDR.

Return values

FSP_SUCCESS	Baud rate is set successfully.
FSP_ERR_ASSERTION	Baud rate is not achievable.

Note

The application must pause for 1 bit time after the BRR register is loaded before transmitting/receiving to allow time for the clock to settle.

4.2.58 Serial Communications Interface (SCI) UART (r_sci_uart)

Modules

Functions

fsp_err_t	R_SCI_UART_Open (uart_ctrl_t *const p_api_ctrl, uart_cfg_t const *const p_cfg)

fsp_err_t	R_SCI_UART_Write (uart_ctrl_t *const p_api_ctrl, uint8_t const *const p_src, uint32_t const bytes)
fsp_err_t	R_SCI_UART_BaudSet (uart_ctrl_t *const p_api_ctrl, void const *const p_baud_setting)
fsp_err_t	R_SCI_UART_InfoGet (uart_ctrl_t *const p_api_ctrl, uart_info_t *const p_info)

fsp_err_t	R_SCI_UART_Close (uart_ctrl_t *const p_api_ctrl)
fsp_err_t	R_SCI_UART_Abort (uart_ctrl_t *const p_api_ctrl, uart_dir_t communication_to_abort)
fsp_err_t	R_SCI_UART_BaudCalculate (uint32_t baudrate, bool bitrate_modulation, uint32_t baud_rate_error_x_1000, baud_setting_t *const p_baud_setting)
fsp_err_t	R_SCI_UART_CallbackSet (uart_ctrl_t *const p_api_ctrl, void(*p_callback)(uart_callback_args_t *), void const *const p_context, uart_callback_args_t *const p_callback_memory)
fsp_err_t	R_SCI_UART_ReadStop (uart_ctrl_t *const p_api_ctrl, uint32_t *remaining_bytes)

Detailed Description

Driver for the SCI peripheral on RA MCUs. This module implements the UART Interface.

Overview

Features

The SCI UART module supports the following features:

- Full-duplex UART communication
- Interrupt-driven data transmission and reception
- Invoking the user-callback function with an event code (RX/TX complete, TX data empty, RX char, error, etc)
- Baud-rate change at run-time
- Bit rate modulation and noise cancellation
- CTS/RTS hardware flow control (with an associated pin)
- RS-485 Half Duplex driver support with external RS-485 transceiver
- Integration with the DTC transfer module
- Abort in-progress read/write operations
- FIFO support on supported channels

Configuration

Build Time Configurations for r_sci_uart

The following build time configurations are defined in fsp_cfg/r_sci_uart_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
FIFO Support	• Enable • Disable	Disable	Enable FIFO support for the SCI_UART module.

DTC Support	• Enable • Disable	Disable	Enable DTC support for the SCI_UART module.
Flow Control Support	• Enable • Disable	Disable	Enable RS232 and RS-485 flow control support using a user provided pin.
RS-485 Support	• Enable • Disable	Disable	Enable support for controlling the RS-485 DE pin.

Configurations for Connectivity > UART (r_sci_uart)

This module can be added to the Stacks tab via New Stack > Connectivity > UART (r_sci_uart). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_uart0	Module name.
General > Channel	Value must be a non-negative integer	0	Select the SCI channel.
General > Data Bits	• 8bits • 7bits • 9bits	8bits	Select the number of bits per word.
General > Parity	• None • Odd • Even	None	Select the parity mode.
General > Stop Bits	• 1bit • 2bits	1bit	Select the number of stop bits.
Baud > Baud Rate	Value must be an integer greater than 0	115200	Enter the desired baud rate. If the requested baud rate cannot be achieved, the settings with the smallest percent error are used. The theoretical calculated baud rate and percent error are printed in a comment in the generated baud_setting_t structure.
Baud > Baud Rate Modulation	• Disabled • Enabled	Disabled	Enabling baud rate modulation reduces the percent error of the actual baud rate with respect to the

			requested baud rate. It does this by modulating the number of cycles per clock, so some bits are slightly longer than others.
Baud > Max Error (%)	Must be a valid non-negative integer with a maximum configurable value of 100	5	Maximum percent error allowed during baud calculation. This is used by the algorithm to determine whether or not to consider using less accurate alternative register settings. NOTE: The baud calculation does not show an error in the tool if this percent error was not achieved. The calculated percent error is recorded in a comment in the generated baud_setting_t structure.
Flow Control > CTS/RTS Selection	MCU Specific Options		Select either CTS or RTS function on the CTSn_RTSn pin of SCI channel n or select CTS function on CTSn pin and RTS function on CTSn_RTSn pin of SCI channel n (Available on selected MCUs and channels).
Flow Control > Software RTS Port	Refer to the RA Configuration tool for available options.	Disabled	Specify the flow control pin port for the MCU.
Flow Control > Software RTS Pin	Refer to the RA Configuration tool for available options.	Disabled	Specify the flow control pin for the MCU.
Extra > RS-485 > DE Pin	• Disable • Enable	Disable	Enable or disable the DE pin for use in RS-485 half-duplex mode.
Extra > RS-485 > DE Pin Polarity	• Active Low • Active High	Active High	Select the polarity of the DE pin.
Extra > RS-485 > DE Port Number	Refer to the RA Configuration tool for	Disabled	GPIO output port number to use for

	available options.		generating the DE signal.
Extra > RS-485 > DE Pin Number	Refer to the RA Configuration tool for available options.	Disabled	GPIO output pin number to use for generating the DE signal.
Extra > Clock Source	• Internal Clock • Internal Clock With Output on SCK • External Clock 8x baud rate • External Clock 16x baud rate	Internal Clock	Selection of the clock source to be used in the baud-rate clock generator. When internal clock is used the baud rate can be output on the SCK pin.
Extra > Start bit detection	• Falling Edge • Low Level	Falling Edge	Start bit detected as falling edge or low level.
Extra > Noise Filter	• Enable • Disable	Disable	Enable the digital noise filter on RXDn pin. The digital noise filter block in SCI consists of two-stage flipflop circuits.
Extra > Receive FIFO Trigger Level	• One • Max	Max	Unused if the channel has no FIFO or if DTC is used for reception. Set to One to get a callback immediately when each byte is received. Set to Max to get a callback when FIFO is full or after 15 bit times with no data (fewer interrupts).
Interrupts > Callback	Name must be a valid C symbol	NULL	A user callback function can be provided. If this callback function is provided, it will be called from the interrupt service routine (ISR).
Interrupts > Receive Interrupt Priority	MCU Specific Options		Select the receive interrupt priority.
Interrupts > Transmit Data Empty Interrupt Priority	MCU Specific Options		Select the transmit interrupt priority.
Interrupts > Transmit End Interrupt Priority	MCU Specific Options		Select the transmit end interrupt priority.
Interrupts > Error	MCU Specific Options		Select the error

Interrupt Priority interrupt priority.

Clock Configuration

The clock for this module is derived from the following peripheral clock for each MCU group:

MCU Group	Peripheral Clock
RA2A1	PCLKB
RA2E1	PCLKB
RA2E2	PCLKB
RA2L1	PCLKB
RA4E1	PCLKA
RA4M1	PCLKA
RA4M2	PCLKA
RA4M3	PCLKA
RA4W1	PCLKA
RA6E1	PCLKA
RA6M1	PCLKA
RA6M2	PCLKA
RA6M3	PCLKA
RA6M4	PCLKA
RA6M5	PCLKA
RA6T1	PCLKA

The clock source for the baud-rate clock generator can be selected from the internal clock, the external clock times 8 or the external clock times 16. The external clock is supplied to the SCK pin.

Pin Configuration

This module uses TXD and RXD to communicate to external devices. CTS or RTS or both (CTS and RTS) can be controlled by the hardware. Some MCUs support hardware flow control for both CTS and RTS on some channels. Some MCUs and channels support hardware flow control for either CTS or RTS but not both. If both are desired a GPIO pin can be used for RTS. When the internal clock is the source for the baud-rate generator the SCK pin can be used to output a clock with the same frequency as the bit rate.

Usage Notes

- When configured for Hardware CTS and Software RTS the configured flow control pin will be used for RTS. The pin will be set high inside of the receive ISR while data is being read. It will be set low when all data is read.
- When configured for Hardware CTS and Hardware RTS the CSTn_RTSn pin will be used for RTS function and the CTSn pin will be used for CTS function on channel n.

- The driver will follow correct hardware flow control function when CTSn_RTSn pin is connected to CTSn pin when "Hardware CTS and Hardware RTS" flow control is selected. The data will still be transferred when CTSn_RTSn and CTSn are disconnected as the CTSn pin is internally pulled low on the hardware when CTSn pin is configured as a peripheral pin for SCI module. Do not configure CTSn pin if the hardware flow control is not desired.

Limitations

- Reception is still enabled after uart_api_t::communicationAbort API is called. Any characters received after abort and before the next call to read will arrive via the callback function with event UART_EVENT_RX_CHAR.

DTC Limitations

- DTC support is available for reception, but labeled as [Not recommended]. This is because the UART bytes are received asynchronously. Bytes can be received between calls to R_SCI_UART_Read(). The logic required to combine bytes received through R_SCI_UART_Read() (UART_EVENT_RX_COMPLETE) and bytes received between calls (UART_EVENT_RX_CHAR) is complex. Reception length may also be unknown, and the driver will not issue an interrupt unless the entire DTC buffer is filled.
- Transfer size must be less than or equal to 64K bytes if DTC interface is used for transfer. uart_api_t::infoGet API can be used to get the max transfer size allowed.
- When using 9-bit reception with DTC, clear the upper 7 bits of data before processing the read data. The upper 7 bits contain status flags that are part of the register used to read data in 9-bit mode.

Examples

SCI UART Example

```
uint8_t g_dest[TRANSFER_LENGTH];
uint8_t g_src[TRANSFER_LENGTH];
uint8_t g_out_of_band_received[TRANSFER_LENGTH];
uint32_t g_transfer_complete = 0;
uint32_t g_receive_complete = 0;
uint32_t g_out_of_band_index = 0;
void r_sci_uart_basic_example (void)
{
 /* Initialize p_src to known data */
 for (uint32_t i = 0; i < TRANSFER_LENGTH; i++)
    {
       g_src[i] = (uint8_t) ('A' + (i % 26));
    }
 /* Open the transfer instance with initial configuration. */
 fsp_err_t err = R_SCI_UART_Open(&g_uart0_ctrl, &g_uart0_cfg);
```

```
    assert(FSP_SUCCESS == err);
    err = R_SCI_UART_Read(&g_uart0_ctrl, g_dest, TRANSFER_LENGTH);
    assert(FSP_SUCCESS == err);
    err = R_SCI_UART_Write(&g_uart0_ctrl, g_src, TRANSFER_LENGTH);
    assert(FSP_SUCCESS == err);
 while (!g_transfer_complete)
    {
    }
 while (!g_receive_complete)
    {
    }
}
void example_callback (uart_callback_args_t * p_args)
{
 /* Handle the UART event */
 switch (p_args->event)
    {
 /* Received a character */
 case UART_EVENT_RX_CHAR:
     {
 /* Only put the next character in the receive buffer if there is space for it */
 if (sizeof(g_out_of_band_received) > g_out_of_band_index)
     {
 /* Write either the next one or two bytes depending on the receive data size */
 if (UART_DATA_BITS_8 >= g_uart0_cfg.data_bits)
     {
                 g_out_of_band_received[g_out_of_band_index++] = (uint8_t)
p_args->data;
     }
 else
     {
                 uint16_t * p_dest = (uint16_t *)
&g_out_of_band_received[g_out_of_band_index];
                 *p_dest             = (uint16_t) p_args->data;
```

```
                g_out_of_band_index += 2;
     }
     }
 break;
     }
 /* Receive complete */
 case UART_EVENT_RX_COMPLETE:
     {
           g_receive_complete = 1;
 break;
     }
 /* Transmit complete */
 case UART_EVENT_TX_COMPLETE:
     {
           g_transfer_complete = 1;
 break;
     }
 default:
     {
     }
   }
}
```

SCI UART Baud Set Example

```
#define SCI_UART_BAUDRATE_19200 (19200)
#define SCI_UART_BAUDRATE_ERROR_PERCENT_5 (5000)
void r_sci_uart_baud_example (void)
{
 baud_setting_t baud_setting;
    uint32_t       baud_rate                = SCI_UART_BAUDRATE_19200;
 bool          enable_bitrate_modulation = false;
    uint32_t       error_rate_x_1000         = SCI_UART_BAUDRATE_ERROR_PERCENT_5;
 fsp_err_t err = R_SCI_UART_BaudCalculate(baud_rate, enable_bitrate_modulation,
error_rate_x_1000, &baud_setting);
```

```
    assert(FSP_SUCCESS == err);
    err = R_SCI_UART_BaudSet(&g_uart0_ctrl, (void *) &baud_setting);
    assert(FSP_SUCCESS == err);
}
```

Data Structures

enum	sci_uart_rs485_de_polarity_t

Data Structure Documentation

◆ sci_uart_instance_ctrl_t

struct sci_uart_instance_ctrl_t
UART instance control block.

◆ baud_setting_t

struct baud_setting_t		
Register settings to acheive a desired baud rate and modulation duty.		
Data Fields		
union baud_setting_t	__unnamed__	
uint8_t	cks: 2	CKS value to get divisor (CKS = N)

uint8_t	brr	Bit Rate Register setting.
uint8_t	mddr	Modulation Duty Register setting.

◆ sci_uart_rs485_setting_t

struct sci_uart_rs485_setting_t		
Configuration settings for controlling the DE signal for RS-485.		
Data Fields		
sci_uart_rs485_enable_t	enable	Enable the DE signal.
sci_uart_rs485_de_polarity_t	polarity	DE signal polarity.
bsp_io_port_pin_t	de_control_pin	UART Driver Enable pin.

◆ sci_uart_extended_cfg_t

struct sci_uart_extended_cfg_t		
UART on SCI device Configuration		
Data Fields		
sci_clk_src_t	clock	The source clock for the baud-rate generator. If internal optionally output baud rate on SCK.
sci_uart_start_bit_detect_t	rx_edge_start	Start reception on falling edge.
sci_uart_noise_cancellation_t	noise_cancel	Noise cancellation setting.
baud_setting_t *	p_baud_setting	Register settings for a desired baud rate.
sci_uart_rx_fifo_trigger_t	rx_fifo_trigger	Receive FIFO trigger level, unused if channel has no FIFO or if DTC is used.
bsp_io_port_pin_t	flow_control_pin	UART Driver Enable pin.
sci_uart_flow_control_t	flow_control	CTS/RTS function of the SSn pin.
sci_uart_rs485_setting_t	rs485_setting	RS-485 settings.

Enumeration Type Documentation

◆ sci_clk_src_t

enum sci_clk_src_t	
Enumeration for SCI clock source	
Enumerator	
SCI_UART_CLOCK_INT	Use internal clock for baud generation.
SCI_UART_CLOCK_INT_WITH_BAUDRATE_OUTPUT	Use internal clock for baud generation and output on SCK.
SCI_UART_CLOCK_EXT8X	Use external clock 8x baud rate.
SCI_UART_CLOCK_EXT16X	Use external clock 16x baud rate.

◆ sci_uart_flow_control_t

enum sci_uart_flow_control_t	
UART flow control mode definition	
Enumerator	
SCI_UART_FLOW_CONTROL_RTS	Use SCI pin for RTS.
SCI_UART_FLOW_CONTROL_CTS	Use SCI pin for CTS.
SCI_UART_FLOW_CONTROL_CTSRTS	Use SCI pin for CTS, external pin for RTS.
SCI_UART_FLOW_CONTROL_HARDWARE_CTSRTS	Use CTSn_RTSn pin for RTS and CTSn pin for CTS. Available only for some channels on selected MCUs. See hardware manual for channel specific options.

◆ sci_uart_rx_fifo_trigger_t

enum sci_uart_rx_fifo_trigger_t	
Receive FIFO trigger configuration.	
Enumerator	
SCI_UART_RX_FIFO_TRIGGER_1	Callback after each byte is received without buffering.
SCI_UART_RX_FIFO_TRIGGER_MAX	Callback when FIFO is full or after 15 bit times with no data (fewer interrupts)

◆ sci_uart_start_bit_detect_t

enum sci_uart_start_bit_detect_t	
Asynchronous Start Bit Edge Detection configuration.	
Enumerator	
SCI_UART_START_BIT_LOW_LEVEL	Detect low level on RXDn pin as start bit.
SCI_UART_START_BIT_FALLING_EDGE	Detect falling level on RXDn pin as start bit.

◆ sci_uart_noise_cancellation_t

enum sci_uart_noise_cancellation_t	
Noise cancellation configuration.	
Enumerator	
SCI_UART_NOISE_CANCELLATION_DISABLE	Disable noise cancellation.
SCI_UART_NOISE_CANCELLATION_ENABLE	Enable noise cancellation.

◆ sci_uart_rs485_enable_t

enum sci_uart_rs485_enable_t	
RS-485 Enable/Disable.	
Enumerator	
SCI_UART_RS485_DISABLE	RS-485 disabled.
SCI_UART_RS485_ENABLE	RS-485 enabled.

◆ sci_uart_rs485_de_polarity_t

enum sci_uart_rs485_de_polarity_t	
The polarity of the RS-485 DE signal.	
Enumerator	
SCI_UART_RS485_DE_POLARITY_HIGH	The DE signal is high when a write transfer is in progress.
SCI_UART_RS485_DE_POLARITY_LOW	The DE signal is low when a write transfer is in progress.

Function Documentation

◆ R_SCI_UART_Open()

fsp_err_t R_SCI_UART_Open (uart_ctrl_t *const *p_api_ctrl*, uart_cfg_t const *const *p_cfg*)

Configures the UART driver based on the input configurations. If reception is enabled at compile time, reception is enabled at the end of this function. Implements uart_api_t::open

Return values

FSP_SUCCESS	Channel opened successfully.
FSP_ERR_ASSERTION	Pointer to UART control block or configuration structure is NULL.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	The requested channel does not exist on this MCU.
FSP_ERR_INVALID_ARGUMENT	Flow control is enabled but flow control pin is not defined or selected channel does not support "Hardware CTS and Hardware RTS" flow control.
FSP_ERR_ALREADY_OPEN	Control block has already been opened or channel is being used by another instance. Call close() then open() to reconfigure.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::open

◆ R_SCI_UART_Read()

fsp_err_t R_SCI_UART_Read (uart_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_dest*, uint32_t const *bytes*)

Receives user specified number of bytes into destination buffer pointer. Implements uart_api_t::read

Return values

FSP_SUCCESS	Data reception successfully ends.
FSP_ERR_ASSERTION	Pointer to UART control block is NULL. Number of transfers outside the max or min boundary when transfer instance used
FSP_ERR_INVALID_ARGUMENT	Destination address or data size is not valid for 9-bit mode.
FSP_ERR_NOT_OPEN	The control block has not been opened
FSP_ERR_IN_USE	A previous read operation is still in progress.
FSP_ERR_UNSUPPORTED	SCI_UART_CFG_RX_ENABLE is set to 0

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::reset

Note

If 9-bit data length is specified at R_SCI_UART_Open call, p_dest must be aligned 16-bit boundary.

◆ R_SCI_UART_Write()

fsp_err_t R_SCI_UART_Write (uart_ctrl_t *const *p_api_ctrl*, uint8_t const *const *p_src*, uint32_t const *bytes*)

Transmits user specified number of bytes from the source buffer pointer. Implements uart_api_t::write

Return values

FSP_SUCCESS	Data transmission finished successfully.
FSP_ERR_ASSERTION	Pointer to UART control block is NULL. Number of transfers outside the max or min boundary when transfer instance used
FSP_ERR_INVALID_ARGUMENT	Source address or data size is not valid for 9-bit mode.
FSP_ERR_NOT_OPEN	The control block has not been opened
FSP_ERR_IN_USE	A UART transmission is in progress
FSP_ERR_UNSUPPORTED	SCI_UART_CFG_TX_ENABLE is set to 0

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::reset

Note

If 9-bit data length is specified at R_SCI_UART_Open call, p_src must be aligned on a 16-bit boundary.

◆ R_SCI_UART_BaudSet()

fsp_err_t R_SCI_UART_BaudSet (uart_ctrl_t *const *p_api_ctrl*, void const *const *p_baud_setting*)

Updates the baud rate using the clock selected in Open. p_baud_setting is a pointer to a baud_setting_t structure. Implements uart_api_t::baudSet

Warning

This terminates any in-progress transmission.

Return values

FSP_SUCCESS	Baud rate was successfully changed.
FSP_ERR_ASSERTION	Pointer to UART control block is NULL or the UART is not configured to use the internal clock.
FSP_ERR_NOT_OPEN	The control block has not been opened

◆ R_SCI_UART_InfoGet()

fsp_err_t R_SCI_UART_InfoGet (uart_ctrl_t *const *p_api_ctrl*, uart_info_t *const *p_info*)

Provides the driver information, including the maximum number of bytes that can be received or transmitted at a time. Implements uart_api_t::infoGet

Return values

FSP_SUCCESS	Information stored in provided p_info.
FSP_ERR_ASSERTION	Pointer to UART control block is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened

◆ R_SCI_UART_Close()

fsp_err_t R_SCI_UART_Close (uart_ctrl_t *const *p_api_ctrl*)

Aborts any in progress transfers. Disables interrupts, receiver, and transmitter. Closes lower level transfer drivers if used. Removes power. Implements uart_api_t::close

Return values

FSP_SUCCESS	Channel successfully closed.
FSP_ERR_ASSERTION	Pointer to UART control block is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened

◆ R_SCI_UART_Abort()

fsp_err_t R_SCI_UART_Abort (uart_ctrl_t *const *p_api_ctrl*, uart_dir_t *communication_to_abort*)

Provides API to abort ongoing transfer. Transmission is aborted after the current character is transmitted. Reception is still enabled after abort(). Any characters received after abort() and before the transfer is reset in the next call to read(), will arrive via the callback function with event UART_EVENT_RX_CHAR. Implements uart_api_t::communicationAbort

Return values

FSP_SUCCESS	UART transaction aborted successfully.
FSP_ERR_ASSERTION	Pointer to UART control block is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_UNSUPPORTED	The requested Abort direction is unsupported.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::disable

◆ R_SCI_UART_BaudCalculate()

fsp_err_t R_SCI_UART_BaudCalculate (uint32_t *baudrate*, bool *bitrate_modulation*, uint32_t *baud_rate_error_x_1000*, baud_setting_t *const *p_baud_setting*)

Calculates baud rate register settings. Evaluates and determines the best possible settings set to the baud rate related registers.

Parameters

[in]	baudrate	Baud rate [bps]. For example, 19200, 57600, 115200, etc.
[in]	bitrate_modulation	Enable bitrate modulation
[in]	baud_rate_error_x_1000	Max baud rate error. At most <baud_rate_percent_error> x 1000 required for module to function. Absolute max baud_rate_error is 15000 (15%).
[out]	p_baud_setting	Baud setting information stored here if successful

Return values

FSP_SUCCESS	Baud rate is set successfully
FSP_ERR_ASSERTION	Null pointer
FSP_ERR_INVALID_ARGUMENT	Baud rate is '0', error in calculated baud rate is larger than requested max error, or requested max error in baud rate is larger than 15%.

◆ R_SCI_UART_CallbackSet()

fsp_err_t R_SCI_UART_CallbackSet (uart_ctrl_t *const *p_api_ctrl*, void(*)(uart_callback_args_t *) *p_callback*, void const *const *p_context*, uart_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements uart_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

◆ R_SCI_UART_ReadStop()

fsp_err_t R_SCI_UART_ReadStop (uart_ctrl_t *const *p_api_ctrl*, uint32_t * *remaining_bytes*)

Provides API to abort ongoing read. Reception is still enabled after abort(). Any characters received after abort() and before the transfer is reset in the next call to read(), will arrive via the callback function with event UART_EVENT_RX_CHAR. Implements uart_api_t::readStop

Return values

FSP_SUCCESS	UART transaction aborted successfully.
FSP_ERR_ASSERTION	Pointer to UART control block is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_UNSUPPORTED	The requested Abort direction is unsupported.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::disable

4.2.59 Sigma Delta Analog to Digital Converter (r_sdadc)

Modules

Functions

fsp_err_t	R_SDADC_Open (adc_ctrl_t *p_ctrl, adc_cfg_t const *const p_cfg)

fsp_err_t	R_SDADC_ScanCfg (adc_ctrl_t *p_ctrl, void const *const p_extend)
fsp_err_t	R_SDADC_InfoGet (adc_ctrl_t *p_ctrl, adc_info_t *p_adc_info)
fsp_err_t	R_SDADC_ScanStart (adc_ctrl_t *p_ctrl)
fsp_err_t	R_SDADC_ScanGroupStart (adc_ctrl_t *p_ctrl, adc_group_mask_t group_id)
fsp_err_t	R_SDADC_ScanStop (adc_ctrl_t *p_ctrl)
fsp_err_t	R_SDADC_StatusGet (adc_ctrl_t *p_ctrl, adc_status_t *p_status)
fsp_err_t	R_SDADC_Read (adc_ctrl_t *p_ctrl, adc_channel_t const reg_id, uint16_t *const p_data)
fsp_err_t	R_SDADC_Read32 (adc_ctrl_t *p_ctrl, adc_channel_t const reg_id, uint32_t *const p_data)
fsp_err_t	R_SDADC_OffsetSet (adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, int32_t const offset)
fsp_err_t	R_SDADC_Calibrate (adc_ctrl_t *const p_ctrl, void const *p_extend)
fsp_err_t	R_SDADC_Close (adc_ctrl_t *p_ctrl)

Detailed Description

Driver for the SDADC24 peripheral on RA MCUs. This module implements the ADC Interface.

Overview

Features

The SDADC module supports the following features:

- 24 bit maximum resolution
- Configure scans to include:
  - Multiple analog channels
  - Outputs of OPAMP0 (P side) and OPAMP1 (N side) of SDADC channel 4
- Configurable scan start trigger:
  - Software scan triggers
  - Hardware scan triggers (timer expiration, for example)
- Configurable scan mode:
  - Single scan mode, where each trigger starts a single scan
  - Continuous scan mode, where all channels are scanned continuously
- Supports averaging converted samples
- Optional callback when single conversion, entire scan, or calibration completes
- Supports reading converted data
- Sample and hold support

Selecting an ADC

All RA MCUs have an Analog to Digital Converter (r_adc). Only select RA MCUs have an SDADC. When selecting between them, consider these factors. Refer to the hardware manual for details.

	ADC	SDADC
Availability	Available on all RA MCUs.	Available on select RA MCUs.
Resolution	The ADC has a maximum resolution of 12, 14, or 16 bits depending on the MCU.	The SDADC has a maximum accuracy of 24 bits.
Number of Channels	The ADC has more channels than the SDADC.	The SDADC 5 channels, one of which is tied to OPAMP0 and OPAMP1.
Frequency	The ADC sampling time is shorter (more samples per second).	The SDADC sampling time is longer (fewer samples per second).
Settling Time	The ADC does not have a settling time when switching between channels.	The SDADC requires a settling time when switching between channels.

Configuration

Build Time Configurations for r_sdadc

The following build time configurations are defined in fsp_cfg/r_sdadc_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Analog > ADC (r_sdadc)

This module can be added to the Stacks tab via New Stack > Analog > ADC (r_sdadc).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_adc0	Module name.
Mode	• Single Scan • Continuous Scan	Continuous Scan	In single scan mode, all channels are converted once per start trigger, and conversion stops after all enabled channels are scanned. In continuous scan mode, conversion

			starts after a start trigger, then continues until stopped in software.
Resolution	• 16 Bit • 24 Bit	24 Bit	Select 24-bit or 16-bit resolution.
Alignment	• Right • Left	Right	Select left or right alignment.
Trigger	MCU Specific Options		Select conversion start trigger. Conversion can be started in software, or conversion can be started when a hardware event occurs if the hardware event is linked to the SDADC peripheral using the ELC API.
Vref Source	• Internal • External	Internal	Vref can be source internally and output on the SBIAS pin, or Vref can be input from VREFI.
Vref Voltage	• 0.8 V • 1.0 V • 1.2 V • 1.4 V • 1.6 V • 1.8 V • 2.0 V • 2.2 V • 2.4 V	1.0 V	Select Vref voltage. If Vref is input externally, the voltage on VREFI must match the voltage selected within 3%.
Callback	Name must be a valid C symbol	NULL	Enter the name of the callback function to be called when conversion completes or a scan ends.
Conversion End Interrupt Priority	MCU Specific Options		[Required] Select the interrupt priority for the conversion end interrupt.
Scan End Interrupt Priority	MCU Specific Options		[Optional] Select the interrupt priority for the scan end interrupt.
Calibration End Interrupt Priority	MCU Specific Options		[Optional] Select the interrupt priority for the calibration end interrupt.

Configurations for Analog > SDADC Channel Configuration (r_sdadc)

Configuration	Options	Default	Description
Input	• Differential • Single Ended	Differential	Select differential or single-ended input.
Stage 1 Gain	• 1 • 2 • 3 • 4 • 8	1	Select the gain for stage 1 of the PGA. Must be 1 for single-ended input.
Stage 2 Gain	• 1 • 2 • 4 • 8	1	Select the gain for stage 2 of the PGA. Must be 1 for single-ended input.
Oversampling Ratio	• 64 • 128 • 256 • 512 • 1024 • 2048	256	Select the oversampling ratio for the PGA. Must be 256 for single-ended input.
Polarity (Valid for Single-Ended Input Only)	• Positive • Negative	Positive	Select positive or negative polarity for single-ended input. VBIAS (1.0 V typical) is connected on the opposite input.
Conversions to Average per Result	• Do Not Average (Interrupt after Each Conversion) • Average 8 • Average 16 • Average 32 • Average 64	Do Not Average (Interrupt after Each Conversion)	Select the number of conversions to average for each result. The ADC_EVENT_CONVERSION_END event occurs after each average, or after each individual conversion if averaging is disabled.
Invert (Valid for Negative Single-Ended Input Only)	• Result Not Inverted • Result Inverted	Result Not Inverted	Select whether to invert negative single-ended input. When the result is inverted, the lowest measurable voltage gives a result of 0, and the highest measurable voltage gives a result of 2^resolution - 1.
Number of Conversions Per Scan	Refer to the RA Configuration tool for available options.	1	Number of conversions on this channel before AUTOSCAN moves to the next channel. When all conversions of

	all channels are complete, the ADC_EVENT_SCAN_END event occurs.

Clock Configuration

The SDADC clock clock is configurable on the clocks tab.

The SDADC clock must be 4 MHz when the SDADC is used.

Pin Configuration

The ANSDnP (n = 0-3) pins are analog input channels that can be used with the SDADC.

Usage Notes

Scan Procedure

In this document, the term "scan" refers to the AUTOSCAN feature of the SDADC, which works as follows:

1. Conversions are performed on enabled channels in ascending order of channel number. All conversions required for a single channel are completed before the sequencer moves to the next channel.
2. Conversions are performed at the rate (in Hz) of the SDADC oversampling clock frequency / oversampling ratio (configured per channel). The FSP uses the normal mode SDADC oversampling clock frequency.
3. If averaging is enabled for the channel, the number of conversions to average are performed before each conversion end interrupt occurs.

4. If the number of conversions for the channel is more than 1, SDADC performs the number of conversions requested. These are performed consecutively. There is a settling time associated with switching channels. Performing all of the requested conversions for each channel at a time avoids this settling time after the first conversion.

   If averaging is enabled for the channel, each averaged result counts as a single conversion.

5. Continues to the next enabled channel only after completing all conversions requested.
6. After all enabled channels are scanned, a scan end interrupt occurs. The driver supports single-scan and continuous scan operation modes.
   - Single-scan mode performs one scan per trigger (hardware trigger or software start using R_SDADC_ScanStart).
   - In continuous scan mode, the scan is restarted after each scan completes. A single trigger is required to start continuous operation of the SDADC.

When Interrupts Are Not Enabled

If interrupts are not enabled, the R_SDADC_StatusGet() API can be used to poll the SDADC to determine when the scan has completed. The R_SDADC_Read() API function is used to access the converted SDADC result. This applies to both normal scans and calibration scans.

Calibration

Calibration is required to use the SDADC if any channel is configured for differential mode. Call R_SDADC_Calibrate() after open, and prior to any other function, then wait for a calibration complete event before using the SDADC. R_SDADC_Calibrate() should not be called if all channels are configured for single-ended mode.

Examples

Basic Example

This is a basic example of minimal use of the SDADC in an application.

```
void sdadc_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = R_SDADC_Open(&g_adc0_ctrl, &g_adc0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Calibrate all differential channels. */
 sdadc_calibrate_args_t calibrate_args;
    calibrate_args.mode    = SDADC_CALIBRATION_INTERNAL_GAIN_OFFSET;
    calibrate_args.channel = ADC_CHANNEL_0;
    err = R_SDADC_Calibrate(&g_adc0_ctrl, &calibrate_args);
    assert(FSP_SUCCESS == err);
 /* Wait for calibration to complete. */
 adc_status_t status;
    status.state = ADC_STATE_SCAN_IN_PROGRESS;
 while (ADC_STATE_SCAN_IN_PROGRESS == status.state)
    {
 R_SDADC_StatusGet(&g_adc0_ctrl, &status);
    }
 /* In software trigger mode, start a scan by calling R_SDADC_ScanStart(). In other
modes, enable external
  * triggers by calling R_SDADC_ScanStart(). */
    (void) R_SDADC_ScanStart(&g_adc0_ctrl);
 /* Wait for conversion to complete. */
    status.state = ADC_STATE_SCAN_IN_PROGRESS;
 while (ADC_STATE_SCAN_IN_PROGRESS == status.state)
```

```
    {
 R_SDADC_StatusGet(&g_adc0_ctrl, &status);
    }
 /* Read converted data. */
    uint32_t channel1_conversion_result;
 R_SDADC_Read32(&g_adc0_ctrl, ADC_CHANNEL_1, &channel1_conversion_result);
}
```

Using DTC or DMAC with the SDADC

If desired, the DTC or DMAC can be used to store each conversion result in a circular buffer. An example configuration is below.

```
/* Example DTC transfer settings to used with SDADC. */
/* The transfer length should match the total number of conversions per scan. This
example assumes the SDADC is
 * configured to scan channel 1 three times, then channel 2 and channel 4 once, for a
total of 5 conversions. */
#define SDADC_EXAMPLE_TRANSFER_LENGTH (5)
uint32_t g_sdadc_example_buffer[SDADC_EXAMPLE_TRANSFER_LENGTH];
transfer_info_t g_sdadc_transfer_info =
{
    .transfer_settings_word_b.dest_addr_mode = TRANSFER_ADDR_MODE_INCREMENTED,
    .transfer_settings_word_b.repeat_area    = TRANSFER_REPEAT_AREA_DESTINATION,
    .transfer_settings_word_b.irq            = TRANSFER_IRQ_END,
    .transfer_settings_word_b.chain_mode    = TRANSFER_CHAIN_MODE_DISABLED,
    .transfer_settings_word_b.src_addr_mode = TRANSFER_ADDR_MODE_FIXED,
    .transfer_settings_word_b.mode          = TRANSFER_MODE_REPEAT,
 /* NOTE: The data transferred will contain a 24-bit converted value in bits 23:0.
Bit 24 contains a status flag
  * indicating if the result overflowed or not. Bits 27:25 contain the channel number
+ 1. The settings for
  * resolution and alignment and ignored when DTC or DMAC is used. */
    .transfer_settings_word_b.size          = TRANSFER_SIZE_4_BYTE,
 /* NOTE: It is strongly recommended to enable averaging on all channels or no
```

```
channels when using DTC with SDADC
  * because the result register is different when averaging is used. If averaging is
enabled on all channels,
  * set transfer_info_t::p_src to &R_SDADC->ADAR. */
    .p_src = (void const *) &R_SDADC0->ADCR,
    .p_dest = &g_sdadc_example_buffer[0],
    .length = SDADC_EXAMPLE_TRANSFER_LENGTH,
};
void sdadc_dtc_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = R_SDADC_Open(&g_adc0_ctrl, &g_adc0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Calibrate all differential channels. */
 sdadc_calibrate_args_t calibrate_args;
    calibrate_args.mode    = SDADC_CALIBRATION_INTERNAL_GAIN_OFFSET;
    calibrate_args.channel = ADC_CHANNEL_0;
    err = R_SDADC_Calibrate(&g_adc0_ctrl, &calibrate_args);
    assert(FSP_SUCCESS == err);
 /* Wait for calibration to complete. */
 adc_status_t status;
    status.state = ADC_STATE_SCAN_IN_PROGRESS;
 while (ADC_STATE_SCAN_IN_PROGRESS == status.state)
    {
 R_SDADC_StatusGet(&g_adc0_ctrl, &status);
    }
 /* In software trigger mode, start a scan by calling R_SDADC_ScanStart(). In other
modes, enable external
  * triggers by calling R_SDADC_ScanStart(). */
    (void) R_SDADC_ScanStart(&g_adc0_ctrl);
 /* After each conversion, the converted data is transferred to the next index in
g_sdadc_example_buffer. After
```

```
  * the entire scan completes, the index in g_sdadc_example_buffer resets. The data
in g_sdadc_example_buffer
  * is:
  * - g_sdadc_example_buffer[0] = SDADC channel 1 conversion 0
  * - g_sdadc_example_buffer[1] = SDADC channel 1 conversion 1
  * - g_sdadc_example_buffer[2] = SDADC channel 1 conversion 2
  * - g_sdadc_example_buffer[3] = SDADC channel 2 conversion 0
  * - g_sdadc_example_buffer[4] = SDADC channel 4 conversion 0
  *//* At any point in the application after the first scan completes, the most
recent data for channel 2 can be read
  * from the buffer like this. Shifting removes the unrelated bits in the result
register and propagates the sign
  * bit so the value can be interpreted as a signed result. This assumes channel 2 is
configured in differential
  * mode. */
    int32_t channel_2_data = (int32_t) (g_sdadc_example_buffer[3] << 8) >> 8;
 FSP_PARAMETER_NOT_USED(channel_2_data);
}
```

Data Structure Documentation

◆ sdadc_calibrate_args_t

struct sdadc_calibrate_args_t		
Structure to pass to the adc_api_t::calibrate p_extend argument.		
Data Fields		
adc_channel_t	channel	Which channel to calibrate.
sdadc_calibration_t	mode	Calibration mode.

◆ sdadc_channel_cfg_t

struct sdadc_channel_cfg_t
SDADC per channel configuration.

◆ sdadc_scan_cfg_t

struct sdadc_scan_cfg_t		
SDADC active channel configuration		
Data Fields		
uint32_t	scan_mask	Channels/bits: bit 0 is ch0; bit 15 is ch15.

◆ sdadc_extended_cfg_t

struct sdadc_extended_cfg_t		
SDADC configuration extension. This extension is required and must be provided in adc_cfg_t::p_extend.		
Data Fields		
uint8_t	conv_end_ipl	Conversion end interrupt priority.
IRQn_Type	conv_end_irq	

sdadc_vref_src_t	vref_src	Source of Vref (internal or external)
sdadc_vref_voltage_t	vref_voltage	Voltage of Vref, required for both internal and external Vref. If Vref is from an external source, the voltage must match the specified voltage within 3%.
sdadc_channel_cfg_t const *	p_channel_cfgs[SDADC_MAX_NUM_CHANNELS]	Configuration for each channel, set to NULL if unused.

◆ sdadc_instance_ctrl_t

struct sdadc_instance_ctrl_t
ADC instance control block. DO NOT INITIALIZE. Initialized in adc_api_t::open().

Enumeration Type Documentation

◆ sdadc_vref_src_t

enum sdadc_vref_src_t	
Source of Vref.	
Enumerator	
SDADC_VREF_SRC_INTERNAL	Vref is internally sourced, can be output as SBIAS.
SDADC_VREF_SRC_EXTERNAL	Vref is externally sourced from the VREFI pin.

◆ sdadc_vref_voltage_t

enum sdadc_vref_voltage_t	
Voltage of Vref.	
Enumerator	
SDADC_VREF_VOLTAGE_800_MV	Vref is 0.8 V.
SDADC_VREF_VOLTAGE_1000_MV	Vref is 1.0 V.
SDADC_VREF_VOLTAGE_1200_MV	Vref is 1.2 V.
SDADC_VREF_VOLTAGE_1400_MV	Vref is 1.4 V.
SDADC_VREF_VOLTAGE_1600_MV	Vref is 1.6 V.
SDADC_VREF_VOLTAGE_1800_MV	Vref is 1.8 V.
SDADC_VREF_VOLTAGE_2000_MV	Vref is 2.0 V.
SDADC_VREF_VOLTAGE_2200_MV	Vref is 2.2 V.
SDADC_VREF_VOLTAGE_2400_MV	Vref is 2.4 V (only valid for external Vref)

◆ sdadc_channel_input_t

enum sdadc_channel_input_t	
Per channel input mode.	
Enumerator	
SDADC_CHANNEL_INPUT_DIFFERENTIAL	Differential input.
SDADC_CHANNEL_INPUT_SINGLE_ENDED	Single-ended input.

◆ sdadc_channel_stage_1_gain_t

enum sdadc_channel_stage_1_gain_t	
Per channel stage 1 gain options.	
Enumerator	
SDADC_CHANNEL_STAGE_1_GAIN_1	Gain of 1.
SDADC_CHANNEL_STAGE_1_GAIN_2	Gain of 2.
SDADC_CHANNEL_STAGE_1_GAIN_3	Gain of 3 (only valid for stage 1)
SDADC_CHANNEL_STAGE_1_GAIN_4	Gain of 4.
SDADC_CHANNEL_STAGE_1_GAIN_8	Gain of 8.

◆ sdadc_channel_stage_2_gain_t

enum sdadc_channel_stage_2_gain_t	
Per channel stage 2 gain options.	
Enumerator	
SDADC_CHANNEL_STAGE_2_GAIN_1	Gain of 1.
SDADC_CHANNEL_STAGE_2_GAIN_2	Gain of 2.
SDADC_CHANNEL_STAGE_2_GAIN_4	Gain of 4.
SDADC_CHANNEL_STAGE_2_GAIN_8	Gain of 8.

◆ sdadc_channel_oversampling_t

enum sdadc_channel_oversampling_t	
Per channel oversampling ratio.	
Enumerator	
SDADC_CHANNEL_OVERSAMPLING_64	Oversampling ratio of 64.
SDADC_CHANNEL_OVERSAMPLING_128	Oversampling ratio of 128.
SDADC_CHANNEL_OVERSAMPLING_256	Oversampling ratio of 256.
SDADC_CHANNEL_OVERSAMPLING_512	Oversampling ratio of 512.
SDADC_CHANNEL_OVERSAMPLING_1024	Oversampling ratio of 1024.
SDADC_CHANNEL_OVERSAMPLING_2048	Oversampling ratio of 2048.

◆ sdadc_channel_polarity_t

enum sdadc_channel_polarity_t	
Per channel polarity, valid for single-ended input only.	
Enumerator	
SDADC_CHANNEL_POLARITY_POSITIVE	Positive-side single-ended input.
SDADC_CHANNEL_POLARITY_NEGATIVE	Negative-side single-ended input.

◆ sdadc_channel_average_t

enum sdadc_channel_average_t	
Per channel number of conversions to average before conversion end callback.	
Enumerator	
SDADC_CHANNEL_AVERAGE_NONE	Do not average (callback for each conversion)
SDADC_CHANNEL_AVERAGE_8	Average 8 samples for each conversion end callback.
SDADC_CHANNEL_AVERAGE_16	Average 16 samples for each conversion end callback.
SDADC_CHANNEL_AVERAGE_32	Average 32 samples for each conversion end callback.
SDADC_CHANNEL_AVERAGE_64	Average 64 samples for each conversion end callback.

◆ sdadc_channel_inversion_t

enum sdadc_channel_inversion_t	
Per channel polarity, valid for negative-side single-ended input only.	
Enumerator	
SDADC_CHANNEL_INVERSION_OFF	Do not invert conversion result.
SDADC_CHANNEL_INVERSION_ON	Invert conversion result.

◆ sdadc_channel_count_formula_t

enum sdadc_channel_count_formula_t	
Select a formula to specify the number of conversions. The following symbols are used in the formulas: • N: Number of conversions • n: sdadc_channel_cfg_t::coefficient_n, do not set to 0 if m is 0 • m: sdadc_channel_cfg_t::coefficient_m, do not set to 0 if n is 0 Either m or n must be non-zero.	
Enumerator	
SDADC_CHANNEL_COUNT_FORMULA_EXPONENTIAL	N = 32 * (2 ^ n - 1) + m * 2 ^ n.
SDADC_CHANNEL_COUNT_FORMULA_LINEAR	N = (32 * n) + m.

◆ sdadc_calibration_t

enum sdadc_calibration_t	
Calibration mode.	
Enumerator	
SDADC_CALIBRATION_INTERNAL_GAIN_OFFSET	Use internal reference to calibrate offset and gain.
SDADC_CALIBRATION_EXTERNAL_OFFSET	Use external reference to calibrate offset.
SDADC_CALIBRATION_EXTERNAL_GAIN	Use external reference to calibrate gain.

Function Documentation

◆ R_SDADC_Open()

fsp_err_t R_SDADC_Open (adc_ctrl_t * *p_ctrl*, adc_cfg_t const *const *p_cfg*)

Applies power to the SDADC and initializes the hardware based on the user configuration. As part of this initialization, the SDADC clock is configured and enabled. If an interrupt priority is non-zero, enables an interrupt which will call a callback to notify the user when a conversion, scan, or calibration is complete. R_SDADC_Calibrate() must be called after this function before using the SDADC if any channels are used in differential mode. Implements adc_api_t::open().

Note

This function delays at least 2 ms as required by the SDADC power on procedure.

Return values

FSP_SUCCESS	Configuration successful.
FSP_ERR_ASSERTION	An input pointer is NULL or an input parameter is invalid.
FSP_ERR_ALREADY_OPEN	Control block is already open.
FSP_ERR_IRQ_BSP_DISABLED	A required interrupt is disabled

◆ R_SDADC_ScanCfg()

fsp_err_t R_SDADC_ScanCfg (adc_ctrl_t * *p_ctrl*, void const *const *p_extend*)

Configures the enabled channels of the ADC. Pass a pointer to sdadc_scan_cfg_t to p_extend. Implements adc_api_t::scanCfg().

Return values

FSP_SUCCESS	Information stored in p_adc_info.
FSP_ERR_ASSERTION	An input pointer is NULL or an input parameter is invalid.
FSP_ERR_NOT_OPEN	Instance control block is not open.

◆ R_SDADC_InfoGet()

fsp_err_t R_SDADC_InfoGet (adc_ctrl_t * *p_ctrl*, adc_info_t * *p_adc_info*)

Returns the address of the lowest number configured channel, the total number of results to be read in order to read the results of all configured channels, the size of each result, and the ELC event enumerations. Implements adc_api_t::infoGet().

Return values

FSP_SUCCESS	Information stored in p_adc_info.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_NOT_OPEN	Instance control block is not open.

◆ R_SDADC_ScanStart()

fsp_err_t R_SDADC_ScanStart (adc_ctrl_t * *p_ctrl*)

If the SDADC is configured for hardware triggers, enables hardware triggers. Otherwise, starts a scan. Implements adc_api_t::scanStart().

Return values

FSP_SUCCESS	Scan started or hardware triggers enabled successfully.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_NOT_OPEN	Instance control block is not open.
FSP_ERR_IN_USE	A conversion or calibration is in progress.

◆ R_SDADC_ScanGroupStart()

fsp_err_t R_SDADC_ScanGroupStart (adc_ctrl_t * *p_ctrl*, adc_group_mask_t *group_id*)

adc_api_t::scanStart is not supported on the SDADC. Use scanStart instead.

Return values

FSP_ERR_UNSUPPORTED	Function not supported in this implementation.

◆ R_SDADC_ScanStop()

fsp_err_t R_SDADC_ScanStop (adc_ctrl_t * *p_ctrl*)

If the SDADC is configured for hardware triggers, disables hardware triggers. Otherwise, stops any in-progress scan started by software. Implements adc_api_t::scanStop().

Return values

FSP_SUCCESS	Scan stopped or hardware triggers disabled successfully.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_NOT_OPEN	Instance control block is not open.

◆ R_SDADC_StatusGet()

fsp_err_t R_SDADC_StatusGet (adc_ctrl_t * *p_ctrl*, adc_status_t * *p_status*)

Returns the status of a scan started by software, including calibration scans. It is not possible to determine the status of a scan started by a hardware trigger. Implements adc_api_t::scanStatusGet().

Return values

FSP_SUCCESS	No software scan or calibration is in progress.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_NOT_OPEN	Instance control block is not open.

◆ R_SDADC_Read()

fsp_err_t R_SDADC_Read (adc_ctrl_t * *p_ctrl*, adc_channel_t const *reg_id*, uint16_t *const *p_data*)

Reads the most recent conversion result from a channel. Truncates 24-bit results to the upper 16 bits. Implements adc_api_t::read().

Note

The result stored in p_data is signed when the SDADC channel is configured in differential mode.
Do not use this API if the conversion end interrupt (SDADC0_ADI) is used to trigger the DTC unless the interrupt mode is set to TRANSFER_IRQ_EACH.

Return values

FSP_SUCCESS	Conversion result in p_data.
FSP_ERR_ASSERTION	An input pointer was NULL or an input parameter was invalid.
FSP_ERR_NOT_OPEN	Instance control block is not open.

◆ R_SDADC_Read32()

fsp_err_t R_SDADC_Read32 (adc_ctrl_t * *p_ctrl*, adc_channel_t const *reg_id*, uint32_t *const *p_data*)

Reads the most recent conversion result from a channel. Implements adc_api_t::read32().

Note

The result stored in p_data is signed when the SDADC channel is configured in differential mode. When the SDADC is configured for 24-bit resolution and right alignment, the sign bit is bit 23, and the upper 8 bits are 0. When the SDADC is configured for 16-bit resolution and right alignment, the sign bit is bit 15, and the upper 16 bits are 0.
Do not use this API if the conversion end interrupt (SDADC0_ADI) is used to trigger the DTC unless the interrupt mode is set to TRANSFER_IRQ_EACH.

Return values

FSP_SUCCESS	Conversion result in p_data.
FSP_ERR_ASSERTION	An input pointer was NULL or an input parameter was invalid.
FSP_ERR_NOT_OPEN	Instance control block is not open.

◆ R_SDADC_OffsetSet()

fsp_err_t R_SDADC_OffsetSet (adc_ctrl_t *const *p_ctrl*, adc_channel_t const *reg_id*, int32_t const *offset*)

Sets the offset. Offset is applied after stage 1 of the input channel. Offset can only be applied when the channel is configured for differential input. Implements adc_api_t::offsetSet().

Note: The offset is cleared if adc_api_t::calibrate() is called. The offset can be re-applied if necessary after the the callback with event ADC_EVENT_CALIBRATION_COMPLETE is called.

Parameters

[in]	p_ctrl	See p_instance_ctrl in adc_api_t::offsetSet().
[in]	reg_id	See reg_id in adc_api_t::offsetSet().
[in]	offset	Must be between -15 and 15, offset (mV) = 10.9376 mV * offset_steps / stage 1 gain.

Return values

FSP_SUCCESS	Offset updated successfully.
FSP_ERR_ASSERTION	An input pointer was NULL or an input parameter was invalid.
FSP_ERR_IN_USE	A conversion or calibration is in progress.
FSP_ERR_NOT_OPEN	Instance control block is not open.

◆ R_SDADC_Calibrate()

fsp_err_t R_SDADC_Calibrate (adc_ctrl_t *const *p_ctrl*, void const * *p_extend*)

Requires sdadc_calibrate_args_t passed to p_extend. Calibrates the specified channel. Calibration is not required or supported for single-ended mode. Calibration must be completed for differential mode before using the SDADC. A callback with the event ADC_EVENT_CALIBRATION_COMPLETE is called when calibration completes. Implements adc_api_t::calibrate().

During external offset calibration, apply a differential voltage of 0 to ANSDnP - ANSDnN, where n is the input channel and ANSDnP is OPAMP0 for channel 4 and ANSDnN is OPAMP1 for channel 4. Complete external offset calibration before external gain calibration.

During external gain calibration apply a voltage between 0.4 V / total_gain and 0.8 V / total_gain. The differential voltage applied during calibration is corrected to a conversion result of 0x7FFFFF, which is the maximum possible positive differential measurement.

This function clears the offset value. If offset is required after calibration, it must be reapplied after calibration is complete using adc_api_t::offsetSet.

Return values

FSP_SUCCESS	Calibration began successfully.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_IN_USE	A conversion or calibration is in progress.
FSP_ERR_NOT_OPEN	Instance control block is not open.

◆ R_SDADC_Close()

fsp_err_t R_SDADC_Close (adc_ctrl_t * *p_ctrl*)

Stops any scan in progress, disables interrupts, and powers down the SDADC peripheral. Implements adc_api_t::close().

Note

This function delays at least 3 us as required by the SDADC24 stop procedure.

Return values

FSP_SUCCESS	Instance control block closed successfully.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_NOT_OPEN	Instance control block is not open.

4.2.60 SD/MMC Host Interface (r_sdhi)

Modules

Functions

Detailed Description

Driver for the SD/MMC Host Interface (SDHI) peripheral on RA MCUs. This module implements the SD/MMC Interface.

Overview

Features

- Supports the following memory devices: SDSC (SD Standard Capacity), SDHC (SD High Capacity), SDXC (SD Extended Capacity) and eMMC (embedded Multi Media Card)
    - Supports reading, writing and erasing SD memory devices
    - Supports 1, 4 or 8-bit data bus (8-bit bus is supported for eMMC only)
    - Supports detection of device write protection (SD cards only)
    - Supports high speed mode
- Automatically configures the clock to the maximum clock rate supported by both host (MCU) and device
- Supports hardware acceleration using DMAC or DTC
- Supports callback notification when an operation completes or an error occurs

Configuration

Build Time Configurations for r_sdhi

The following build time configurations are defined in fsp_cfg/r_sdhi_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Unaligned Access Support	• Disabled • Enabled	Enabled	If enabled, code for supporting buffers that are not aligned on a 4-byte boundary is included in the build. Only disable this if all buffers passed to the driver are 4-byte aligned.
SD Support	• Disabled • Enabled	Enabled	If selected code for SD card support is included in the build.
eMMC Support	• Disabled • Enabled	Disabled	If selected code for eMMC device support is included in the build.

Configurations for Storage > SD/MMC (r_sdhi)

This module can be added to the Stacks tab via New Stack > Storage > SD/MMC (r_sdhi). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_sdmmc0	Module name.

Channel	Value must be a non-negative integer	0	Select the channel.
Bus Width	MCU Specific Options		Select the bus width.
Block Size	Value must be an integer between 1 and 512	512	Select the media block size. Must be 512 for SD cards or eMMC devices. Must be 1-512 for SDIO.
Card Detection	• Not Used • CD Pin	CD Pin	Select the card detection method.
Write Protection	• Not Used • WP Pin	WP Pin	Select whether or not to use the write protect pin. Select Not Used if the MCU or device does not have a write protect pin.
Callback	Name must be a valid C symbol	NULL	A user callback function can be provided. If this callback function is provided, it will be called from the interrupt service routine (ISR).
Access Interrupt Priority	MCU Specific Options		Select the access interrupt priority.
Card Interrupt Priority	MCU Specific Options		Select the card interrupt priority.
DTC Interrupt Priority	MCU Specific Options		Select the DTC interrupt priority.

Interrupt Configurations:

The following interrupts are required to use the r_sdhi module:

Using SD/MMC with DTC:

- Access Interrupt
- DTC Interrupt

Using SD/MMC with DMAC:

- Access Interrupt
- DMAC Interrupt (in DMAC instance)

The Card interrupt is optional and only available on MCU packages that have the SDnCD pin (n = channel number).

Clock Configuration

The SDMMC MCU peripheral (SDHI) uses the PCLKA for its clock source. The SDMMC driver selects the optimal built-in divider based on the PCLKA frequency and the maximum clock rate allowed by the device obtained at media initialization.

Pin Configuration

The SDMMC driver supports the following pins (n = channel number):

- SDnCLK
- SDnCMD
- SDnDAT0
- SDnDAT1
- SDnDAT2
- SDnDAT3
- SDnDAT4 (not available on all MCUs)
- SDnDAT5 (not available on all MCUs)
- SDnDAT6 (not available on all MCUs)
- SDnDAT7 (not available on all MCUs)
- SDnCD (not available on all MCUs)
- SDnWP

The drive capacity for each pin should be set to "Medium" or "High" for most hardware designs. This can be configured in the **Pins** tab of the RA Configuration editor by selecting the pin under Pin Selection -> Ports.

Usage Notes

Card Detection

When Card Detection is configured to "CD Pin" in the RA Configuration editor, interrupt flags are cleared and card detection is enabled during R_SDHI_Open().

R_SDHI_StatusGet() can be called to retrieve the current status of the card (including whether a card is present). If the Card Interrupt Priority is enabled, a callback is called when a card is inserted or removed.

If a card is removed and reinserted, R_SDHI_MediaInit() must be called before reading from the card or writing to the card.

Note

R_SDHI_StatusGet() should be used to initially determine the card state after opening the interface.

DMA Request Interrupt Priority

When data transfers are not 4-byte aligned or not a multiple of 4 bytes, a software copy of the block size (up to 512 bytes) is done in the DMA Request interrupt. This blocks all other interrupts that are a lower or equal priority to the access interrupt until the software copy is complete.

Timing Notes for R_SDHI_MediaInit

The R_SDHI_MediaInit() API completes the entire device identification and configuration process. This involves several command-response cycles at a bus width of 1 bit and a bus speed of 400 kHz or less.

Limitations

Developers should be aware of the following limitations when using the SDHI:

Blocking Calls

The following functions block execution until the response is received for at least one command:

- R_SDHI_MediaInit
- R_SDHI_Erase

Once the function returns the status of the operation can be determined via R_SDHI_StatusGet or through receipt of a callback.

Note

Due to the variability in clocking configurations it is recommended to determine blocking delays experimentally on the target system.

Data Alignment and Size

Data transfers should be 4-byte aligned and a multiple of 4 bytes in size whenever possible. This recommendation applies to the read(), write(), readIoExt(), and writeIoExt() APIs. When data transfers are 4-byte aligned and a multiple of 4-bytes, the r_sdhi driver is zero copy and takes full advantage of hardware acceleration by the DMAC or DTC. When data transfers are not 4-byte aligned or not a multiple of 4 bytes an extra CPU interrupt is required for each block transferred and a software copy is used to move data to the destination buffer.

Examples

Basic Example

This is a basic example of minimal use of the r_sdhi in an application.

```
uint8_t g_dest[SDHI_MAX_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
uint8_t g_src[SDHI_MAX_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
uint32_t g_transfer_complete = 0;
void r_sdhi_basic_example (void)
{
 /* Initialize g_src to known data */
 for (uint32_t i = 0; i < SDHI_MAX_BLOCK_SIZE; i++)
    {
       g_src[i] = (uint8_t) ('A' + (i % 26));
    }
 /* Open the SDHI driver. */
 fsp_err_t err = R_SDHI_Open(&g_sdmmc0_ctrl, &g_sdmmc0_cfg);
    assert(FSP_SUCCESS == err);
```

```
 /* A device shall be ready to accept the first command within 1ms from detecting VDD
min. Reference section 6.4.1.1
  * "Power Up Time of Card" in the SD Physical Layer Simplified Specification Version
6.00. */
 R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
 /* Initialize the SD card. This should not be done until the card is plugged in for
SD devices. */
    err = R_SDHI_MediaInit(&g_sdmmc0_ctrl, NULL);
    assert(FSP_SUCCESS == err);
    err = R_SDHI_Write(&g_sdmmc0_ctrl, g_src, 3, 1);
    assert(FSP_SUCCESS == err);
 while (!g_transfer_complete)
    {
 /* Wait for transfer. */
    }
    err = R_SDHI_Read(&g_sdmmc0_ctrl, g_dest, 3, 1);
    assert(FSP_SUCCESS == err);
 while (!g_transfer_complete)
    {
 /* Wait for transfer. */
    }
}
/* The callback is called when a transfer completes. */
void r_sdhi_example_callback (sdmmc_callback_args_t * p_args)
{
 if (SDMMC_EVENT_TRANSFER_COMPLETE == p_args->event)
    {
       g_transfer_complete = 1;
    }
}
```

Card Detection Example

This is an example of using SDHI when the card may not be plugged in. The card detection interrupt must be enabled to use this example.

```
bool g_card_inserted = false;
void r_sdhi_card_detect_example (void)
{
 /* Open the SDHI driver. This enables the card detection interrupt. */
 fsp_err_t err = R_SDHI_Open(&g_sdmmc0_ctrl, &g_sdmmc0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Check if card is inserted. */
 sdmmc_status_t status;
    err = R_SDHI_StatusGet(&g_sdmmc0_ctrl, &status);
    assert(FSP_SUCCESS == err);
 if (!status.card_inserted)
    {
 while (!g_card_inserted)
      {
 /* Wait for a card insertion interrupt. */
      }
    }
 /* A device shall be ready to accept the first command within 1ms from detecting VDD
min. Reference section 6.4.1.1
  * "Power Up Time of Card" in the SD Physical Layer Simplified Specification Version
6.00. */
 R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
 /* Initialize the SD card after card insertion is detected. */
    err = R_SDHI_MediaInit(&g_sdmmc0_ctrl, NULL);
    assert(FSP_SUCCESS == err);
}
/* The callback is called when a card detection event occurs if the card detection
interrupt is enabled. */
void r_sdhi_card_detect_example_callback (sdmmc_callback_args_t * p_args)
{
 if (SDMMC_EVENT_CARD_INSERTED == p_args->event)
    {
       g_card_inserted = true;
```

```
    }
 if (SDMMC_EVENT_CARD_REMOVED == p_args->event)
    {
       g_card_inserted = false;
    }
}
```

Function Documentation

◆ R_SDHI_Open()

fsp_err_t R_SDHI_Open (sdmmc_ctrl_t *const *p_api_ctrl*, sdmmc_cfg_t const *const *p_cfg*)

Opens the driver. Resets SDHI, and enables card detection interrupts if card detection is enabled. R_SDHI_MediaInit must be called after this function before any other functions can be used.

Implements sdmmc_api_t::open().

Example:

```
/* Open the SDHI driver. */
fsp_err_t err = R_SDHI_Open(&g_sdmmc0_ctrl, &g_sdmmc0_cfg);
```

Return values

FSP_SUCCESS	Module is now open.
FSP_ERR_ASSERTION	Null Pointer or block size is not in the valid range of 1-512. Block size must be 512 bytes for SD cards and eMMC devices. It is configurable for SDIO only.
FSP_ERR_ALREADY_OPEN	Driver has already been opened with this instance of the control structure.
FSP_ERR_IRQ_BSP_DISABLED	Access interrupt is not enabled.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	Requested channel does not exist on this MCU.

◆ R_SDHI_MediaInit()

fsp_err_t R_SDHI_MediaInit (sdmmc_ctrl_t *const *p_api_ctrl*, sdmmc_device_t *const *p_device*)

Initializes the SDHI hardware and completes identification and configuration for the SD or eMMC device. This procedure requires several sequential commands. This function blocks until all identification and configuration commands are complete.

Implements sdmmc_api_t::mediaInit().

Example:

```
 /* A device shall be ready to accept the first command within 1ms from detecting VDD
min. Reference section 6.4.1.1
  * "Power Up Time of Card" in the SD Physical Layer Simplified Specification Version
6.00. */
 R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
 /* Initialize the SD card. This should not be done until the card is plugged in for
SD devices. */
    err = R_SDHI_MediaInit(&g_sdmmc0_ctrl, NULL);
```

Return values

FSP_SUCCESS	Module is now ready for read/write access.
FSP_ERR_ASSERTION	Null Pointer or block size is not in the valid range of 1-512. Block size must be 512 bytes for SD cards and eMMC devices. It is configurable for SDIO only.
FSP_ERR_NOT_OPEN	Driver has not been initialized.
FSP_ERR_CARD_INIT_FAILED	Device was not identified as an SD card, eMMC device, or SDIO card.
FSP_ERR_RESPONSE	Device did not respond or responded with an error.
FSP_ERR_DEVICE_BUSY	Device is holding DAT0 low (device is busy) or another operation is ongoing.

◆ R_SDHI_Read()

fsp_err_t R_SDHI_Read (sdmmc_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_dest*, uint32_t const *start_sector*, uint32_t const *sector_count*)

Reads data from an SD or eMMC device. Up to 0x10000 sectors can be read at a time. Implements sdmmc_api_t::read().

A callback with the event SDMMC_EVENT_TRANSFER_COMPLETE is called when the read data is available.

Example:

```
err = R_SDHI_Read(&g_sdmmc0_ctrl, g_dest, 3, 1);
```

Return values

FSP_SUCCESS	Data read successfully.
FSP_ERR_ASSERTION	NULL pointer.
FSP_ERR_NOT_OPEN	Driver has not been initialized.
FSP_ERR_CARD_NOT_INITIALIZED	Card was unplugged.
FSP_ERR_DEVICE_BUSY	Driver is busy with a previous operation.

◆ R_SDHI_Write()

fsp_err_t R_SDHI_Write (sdmmc_ctrl_t *const *p_api_ctrl*, uint8_t const *const *p_source*, uint32_t const *start_sector*, uint32_t const *sector_count*)

Writes data to an SD or eMMC device. Up to 0x10000 sectors can be written at a time. Implements sdmmc_api_t::write().

A callback with the event SDMMC_EVENT_TRANSFER_COMPLETE is called when the all data has been written and the device is no longer holding DAT0 low to indicate it is busy.

Example:

```
err = R_SDHI_Write(&g_sdmmc0_ctrl, g_src, 3, 1);
```

Return values

FSP_SUCCESS	Card write finished successfully.
FSP_ERR_ASSERTION	Handle or Source address is NULL.
FSP_ERR_NOT_OPEN	Driver has not been initialized.
FSP_ERR_CARD_NOT_INITIALIZED	Card was unplugged.
FSP_ERR_DEVICE_BUSY	Driver is busy with a previous operation.
FSP_ERR_CARD_WRITE_PROTECTED	SD card is Write Protected.
FSP_ERR_WRITE_FAILED	Write operation failed.

◆ R_SDHI_ReadIo()

fsp_err_t R_SDHI_ReadIo (sdmmc_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_data*, uint32_t const *function*, uint32_t const *address*)

The Read function reads a one byte register from an SDIO card. Implements sdmmc_api_t::readIo().

This function blocks until the command is sent and the response is received. p_data contains the register value read when this function returns.

Return values

FSP_SUCCESS	Data read successfully.
FSP_ERR_ASSERTION	NULL pointer.
FSP_ERR_NOT_OPEN	Driver has not been initialized.
FSP_ERR_CARD_NOT_INITIALIZED	Card was unplugged.
FSP_ERR_UNSUPPORTED	SDIO support disabled in SDHI_CFG_SDIO_SUPPORT_ENABLE.
FSP_ERR_RESPONSE	Device did not respond or responded with an error.
FSP_ERR_DEVICE_BUSY	Device is holding DAT0 low (device is busy) or another operation is ongoing.

◆ R_SDHI_WriteIo()

fsp_err_t R_SDHI_WriteIo (sdmmc_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_data*, uint32_t const *function*, uint32_t const *address*, sdmmc_io_write_mode_t const *read_after_write*)

Writes a one byte register to an SDIO card. Implements sdmmc_api_t::writeIo().

This function blocks until the command is sent and the response is received. The register has been written when this function returns. If read_after_write is true, p_data contains the register value read when this function returns.

Return values

FSP_SUCCESS	Card write finished successfully.
FSP_ERR_ASSERTION	Handle or Source address is NULL.
FSP_ERR_NOT_OPEN	Driver has not been initialized.
FSP_ERR_CARD_NOT_INITIALIZED	Card was unplugged.
FSP_ERR_WRITE_FAILED	Write operation failed.
FSP_ERR_UNSUPPORTED	SDIO support disabled in SDHI_CFG_SDIO_SUPPORT_ENABLE.
FSP_ERR_RESPONSE	Device did not respond or responded with an error.
FSP_ERR_DEVICE_BUSY	Device is holding DAT0 low (device is busy) or another operation is ongoing.

◆ R_SDHI_ReadIoExt()

fsp_err_t R_SDHI_ReadIoExt (sdmmc_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_dest*, uint32_t const *function*, uint32_t const *address*, uint32_t *const *count*, sdmmc_io_transfer_mode_t *transfer_mode*, sdmmc_io_address_mode_t *address_mode*)

Reads data from an SDIO card function. Implements sdmmc_api_t::readIoExt().

This function blocks until the command is sent and the response is received. A callback with the event SDMMC_EVENT_TRANSFER_COMPLETE is called when the read data is available.

Return values

FSP_SUCCESS	Data read successfully.
FSP_ERR_ASSERTION	NULL pointer, or count is not in the valid range of 1-512 for byte mode or 1-511 for block mode.
FSP_ERR_NOT_OPEN	Driver has not been initialized.
FSP_ERR_CARD_NOT_INITIALIZED	Card was unplugged.
FSP_ERR_DEVICE_BUSY	Driver is busy with a previous operation.
FSP_ERR_UNSUPPORTED	SDIO support disabled in SDHI_CFG_SDIO_SUPPORT_ENABLE.

◆ R_SDHI_WriteIoExt()

fsp_err_t R_SDHI_WriteIoExt (sdmmc_ctrl_t *const *p_api_ctrl*, uint8_t const *const *p_source*, uint32_t const *function*, uint32_t const *address*, uint32_t const *count*, sdmmc_io_transfer_mode_t *transfer_mode*, sdmmc_io_address_mode_t *address_mode*)

Writes data to an SDIO card function. Implements sdmmc_api_t::writeIoExt().

This function blocks until the command is sent and the response is received. A callback with the event SDMMC_EVENT_TRANSFER_COMPLETE is called when the all data has been written.

Return values

FSP_SUCCESS	Card write finished successfully.
FSP_ERR_ASSERTION	NULL pointer, or count is not in the valid range of 1-512 for byte mode or 1-511 for block mode.
FSP_ERR_NOT_OPEN	Driver has not been initialized.
FSP_ERR_CARD_NOT_INITIALIZED	Card was unplugged.
FSP_ERR_DEVICE_BUSY	Driver is busy with a previous operation.
FSP_ERR_WRITE_FAILED	Write operation failed.
FSP_ERR_UNSUPPORTED	SDIO support disabled in SDHI_CFG_SDIO_SUPPORT_ENABLE.

◆ R_SDHI_IoIntEnable()

fsp_err_t R_SDHI_IoIntEnable (sdmmc_ctrl_t *const *p_api_ctrl*, bool *enable*)

Enables or disables the SDIO Interrupt. Implements sdmmc_api_t::ioIntEnable().

Return values

FSP_SUCCESS	Card enabled or disabled SDIO interrupts successfully.
FSP_ERR_NOT_OPEN	Driver has not been initialized.
FSP_ERR_ASSERTION	NULL pointer.
FSP_ERR_DEVICE_BUSY	Driver is busy with a previous operation.
FSP_ERR_UNSUPPORTED	SDIO support disabled in SDHI_CFG_SDIO_SUPPORT_ENABLE.

◆ R_SDHI_StatusGet()

fsp_err_t R_SDHI_StatusGet (sdmmc_ctrl_t *const *p_api_ctrl*, sdmmc_status_t *const *p_status*)

Provides driver status. Implements sdmmc_api_t::statusGet().

Return values

FSP_SUCCESS	Status stored in p_status.
FSP_ERR_ASSERTION	NULL pointer.
FSP_ERR_NOT_OPEN	Driver has not been initialized.

◆ R_SDHI_Erase()

fsp_err_t R_SDHI_Erase (sdmmc_ctrl_t *const *p_api_ctrl*, uint32_t const *start_sector*, uint32_t const *sector_count*)

Erases sectors of an SD card or eMMC device. Implements sdmmc_api_t::erase().

This function blocks until the erase command is sent. Poll the status to determine when erase is complete.

Return values

FSP_SUCCESS	Erase operation requested.
FSP_ERR_ASSERTION	A required pointer is NULL or an argument is invalid.
FSP_ERR_NOT_OPEN	Driver has not been initialized.
FSP_ERR_CARD_NOT_INITIALIZED	Card was unplugged.
FSP_ERR_CARD_WRITE_PROTECTED	SD card is Write Protected.
FSP_ERR_RESPONSE	Device did not respond or responded with an error.
FSP_ERR_DEVICE_BUSY	Device is holding DAT0 low (device is busy) or another operation is ongoing.

◆ R_SDHI_CallbackSet()

fsp_err_t R_SDHI_CallbackSet (sdmmc_ctrl_t *const *p_api_ctrl*, void(*)(sdmmc_callback_args_t *) *p_callback*, void const *const *p_context*, sdmmc_callback_args_t *const *p_callback_memory*)
Updates the user callback with the option to provide memory for the callback argument structure. Implements sdmmc_api_t::callbackSet. **Return values** FSP_SUCCESS — Callback updated successfully. FSP_ERR_ASSERTION — A required pointer is NULL. FSP_ERR_NOT_OPEN — The control block has not been opened. FSP_ERR_NO_CALLBACK_MEMORY — p_callback is non-secure and p_callback_memory is either secure or NULL.

◆ R_SDHI_Close()

fsp_err_t R_SDHI_Close (sdmmc_ctrl_t *const *p_api_ctrl*)
Closes an open SD/MMC device. Implements sdmmc_api_t::close(). **Return values** FSP_SUCCESS — Successful close. FSP_ERR_ASSERTION — The parameter p_ctrl is NULL. FSP_ERR_NOT_OPEN — Driver has not been initialized.

4.2.61 Segment LCD Controller (r_slcdc)

Modules

Functions

fsp_err_t	R_SLCDC_Open (slcdc_ctrl_t *const p_ctrl, slcdc_cfg_t const *const p_cfg)
fsp_err_t	R_SLCDC_Write (slcdc_ctrl_t *const p_ctrl, uint8_t const start_segment, uint8_t const *p_data, uint8_t const segment_count)
fsp_err_t	R_SLCDC_Modify (slcdc_ctrl_t *const p_ctrl, uint8_t const segment_number, uint8_t const data_mask, uint8_t const data)

fsp_err_t	R_SLCDC_Start (slcdc_ctrl_t *const p_ctrl)
fsp_err_t	R_SLCDC_Stop (slcdc_ctrl_t *const p_ctrl)
fsp_err_t	R_SLCDC_SetContrast (slcdc_ctrl_t *const p_ctrl, slcdc_contrast_t const contrast)
fsp_err_t	R_SLCDC_SetDisplayArea (slcdc_ctrl_t *const p_ctrl, slcdc_display_area_t const display_area)
fsp_err_t	R_SLCDC_Close (slcdc_ctrl_t *const p_ctrl)

Detailed Description

Driver for the SLCDC peripheral on RA MCUs. This module implements the SLCDC Interface.

Overview

The segment LCD controller (SLCDC) utilizes two to four reference voltages to provide AC signals for driving traditional segment LCD panels. Depending on the LCD and MCU package, up to 272 segments can be driven. A built-in link to the RTC allows for up to 152 segments to switch between two patterns at regular intervals. An on-chip boost driver can be used to provide configurable reference voltages up to 5.25V allowing for simple contrast adjustment.

Features

The SLCDC module can perform the following functions:

- Initialize, start and stop the SLCDC
- Set and modify the output pattern
- Blink between two patterns based on a periodic RTC interrupt signal
- Adjust display contrast (only when using internal voltage boosting)

Configuration

Build Time Configurations for r_slcdc

The following build time configurations are defined in fsp_cfg/r_slcdc_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Graphics > Segment LCD (r_slcdc)

This module can be added to the Stacks tab via New Stack > Graphics > Segment LCD (r_slcdc).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_slcdc0	Module Name
Clock > Source	• LOCO • SOSC • MOSC • HOCO	HOCO	Select the clock source.
Clock > Divisor	Refer to the RA Configuration tool for available options.	(HOCO/MOSC) 16384	Select the clock divisor.
Output > Bias method	• 1/2 bias • 1/3 bias • 1/4 bias	1/2 bias	Select the bias method. This determines the number of voltage levels used to create the waveforms.
Output > Timeslice	• Static • 2-slice • 3-slice • 4-slice • 8-slice	Static	Select the LCD time slice. The number of slices should match the number of common (COM) pins for your LCD panel.
Output > Waveform	• Waveform A • Waveform B	Waveform A	Select the LCD waveform.
Output > Drive method	• External resistance division • Internal voltage boosting • Capacitor split	External resistance division	Select the LCD drive method.
Output > Default contrast	Refer to the RA Configuration tool for available options.	0	Select the default contrast level.

Valid Configurations

Though there are many setting combinations only a limited subset are supported by the SLCDC peripheral hardware:

Waveform	Slices	Bias	External Resistance	Internal Boost	Capacitor Split
A	8	1/4	Available	Available	—
A	4	1/3	Available	Available	Available
A	3	1/3	Available	Available	Available
A	3	1/2	Available	—	—
A	2	1/2	Available	—	—
A	Static	—	Available	—	—

B	8	1/4	Available	Available	Available
B	4	1/3	Available	Available	—

Clock Configuration

The SLCDC clock can be sourced from the main clock (MOSC), sub-clock (SOSC), HOCO or LOCO. Dividers of 4 to 1024 are available for SOSC/LOCO and 256 to 524288 for MOSC/HOCO. It is recommended to adjust the divisor such that the resulting clock provides a frame frequency of 32-128 Hz.

Note

Make sure your desired source clock is enabled and running before starting SLCDC output.
Do not set the segment LCD clock over 512 Hz when using internal boost or capacitor split modes.

Pin Configuration

This module controls a variety of pins necessary for segment LCD voltage generation and signal output:

Pin Name	Function	Notes
SEGn	Segment data output	Connect these signals to the segment pins of the LCD.
COMn	Common signal output	Connect these signals to the common pins of the LCD.
VLn	Voltage reference	These pins should be connected to passive components based on the selected drive method (see section 45.7 "Supplying LCD Drive Voltages VL1, VL2, VL3, and VL4" in the RA4M1 User's Manual (R01UH0887EJ0100)).
CAPH, CAPL	Drive voltage generator capacitor	Connect a nonpolar 0.47uF capacitor across these pins when using internal boost or capacitor split modes. This pin is not needed when using resistance division.

Interrupt Configuration

The SLCDC provides no interrupt signals.

Note

Blinking output timing is driven directly from the RTC periodic interrupt. Once the interrupt is enabled setting the display to SLCDC_DISP_BLINK will swap between A- and B-pattern each time it occurs. The ELC is not required for this functionality.

Usage Notes

Limitations

Developers should be aware of the following limitations when using the SLCDC:

- Different packages provide different numbers of segment pins. Check the User's Manual for your device to confirm availability and mapping of segment signals.
- When using internal boost mode a delay of 5ms is required between calling R_SLCDC_Open and R_SLCDC_Start to allow the boost circuit to charge.
- When using the internal boost or capacitor split method do not set the segment LCD clock higher than 512 Hz.

Examples

Basic Example

Below is a basic example of minimal use of the SLCDC in an application. The SLCDC driver is initialized, output is started and a pattern is written to the segment registers.

```
void slcdc_init (void)
{
 fsp_err_t err;
 /* Open SLCDC driver */
    err = R_SLCDC_Open(&g_slcdc_ctrl, &g_slcdc_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* When using internal boost mode this delay is required to allow the boost circuit
to charge. See RA4M1 User's
  * Manual (R01UH0887EJ0100) 8.2.18 "Segment LCD Source Clock Control Register
(SLCDSCKCR)" for details. */
 R_BSP_SoftwareDelay(5, BSP_DELAY_UNITS_MILLISECONDS);
 /* Start SLCDC output */
    err = R_SLCDC_Start(&g_slcdc_ctrl);
    assert(FSP_SUCCESS == err);
 /* Write pattern to display */
    err = R_SLCDC_Write(&g_slcdc_ctrl, 0, segment_data, NUM_SEGMENTS);
    assert(FSP_SUCCESS == err);
}
```

Note

While the SLCDC is running, pattern data is constantly being output. No latching or buffering is required when writing or reading segment data.

Blinking Output

This example demonstrates how to set up blinking output using the RTC periodic interrupt. In this example it is assumed that the SLCDC has already been started.

```
void slcdc_blink (void)
{
 fsp_err_t err;
 /* Open RTC and set time/date */
    err = R_RTC_Open(&r_rtc_ctrl, &r_rtc_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    err = R_RTC_CalendarTimeSet(&r_rtc_ctrl, &g_rtc_time);
    assert(FSP_SUCCESS == err);
 /* Set RTC periodic interrupt to 2 Hz (display blink cycle will be 1 Hz) */
    err = R_RTC_PeriodicIrqRateSet(&r_rtc_ctrl,
RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_2_SECOND);
    assert(FSP_SUCCESS == err);
 /* Set display to blink */
    err = R_SLCDC_SetDisplayArea(&g_slcdc_ctrl, SLCDC_DISP_BLINK);
    assert(FSP_SUCCESS == err);
 /* Display will now continuously blink */
}
```

Data Structures

struct	slcdc_instance_ctrl_t

Data Structure Documentation

◆ slcdc_instance_ctrl_t

struct slcdc_instance_ctrl_t
SLCDC control block. DO NOT INITIALIZE. Initialization occurs when slcdc_api_t::open is called

Function Documentation

◆ R_SLCDC_Open()

fsp_err_t R_SLCDC_Open (slcdc_ctrl_t *const *p_ctrl*, slcdc_cfg_t const *const *p_cfg*)

Opens the SLCDC driver. Implements slcdc_api_t::open.

Return values

FSP_SUCCESS	Device was opened successfully.
FSP_ERR_ASSERTION	Pointer to the control block or the configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Module is already open.
FSP_ERR_UNSUPPORTED	Invalid display mode.

◆ R_SLCDC_Write()

fsp_err_t R_SLCDC_Write (slcdc_ctrl_t *const *p_ctrl*, uint8_t const *start_segment*, uint8_t const * *p_data*, uint8_t const *segment_count*)

Writes a sequence of display data to the segment data registers. Implements slcdc_api_t::write.

Return values

FSP_SUCCESS	Data was written successfully.
FSP_ERR_ASSERTION	Pointer to the control block or data is NULL.
FSP_ERR_INVALID_ARGUMENT	Segment index is (or will be) out of range.
FSP_ERR_NOT_OPEN	Device is not opened or initialized.

◆ R_SLCDC_Modify()

fsp_err_t R_SLCDC_Modify (slcdc_ctrl_t *const *p_ctrl*, uint8_t const *segment*, uint8_t const *data*, uint8_t const *data_mask*)

Modifies a single segment register based on a mask and the desired data. Implements slcdc_api_t::modify.

Return values

FSP_SUCCESS	Device was opened successfully.
FSP_ERR_ASSERTION	Pointer to the control block structure is NULL.
FSP_ERR_INVALID_ARGUMENT	Invalid parameter in the argument.
FSP_ERR_NOT_OPEN	Device is not opened or initialized

◆ R_SLCDC_Start()

fsp_err_t R_SLCDC_Start (slcdc_ctrl_t *const *p_ctrl*)

Starts output of LCD signals. Implements slcdc_api_t::start.

Return values

FSP_SUCCESS	Device was opened successfully.
FSP_ERR_ASSERTION	Pointer to the control block structure is NULL.
FSP_ERR_NOT_OPEN	Device is not opened or initialized

◆ R_SLCDC_Stop()

fsp_err_t R_SLCDC_Stop (slcdc_ctrl_t *const *p_ctrl*)

Stops output of LCD signals. Implements slcdc_api_t::stop.

Return values

FSP_SUCCESS	Device was opened successfully.
FSP_ERR_ASSERTION	Pointer to the control block structure is NULL.
FSP_ERR_NOT_OPEN	Device is not opened or initialized

◆ R_SLCDC_SetContrast()

fsp_err_t R_SLCDC_SetContrast (slcdc_ctrl_t *const *p_ctrl*, slcdc_contrast_t const *contrast*)

Sets contrast to the specified level. Implements slcdc_api_t::setContrast.

Note

Contrast can be adjusted when the SLCDC is operating in internal boost mode only. The range of values is 0-5 when 1/4 bias setting is used and 0-15 otherwise. See RA4M1 User's Manual (R01UH0887EJ0100) section 45.2.4 "LCD Boost Level Control Register (VLCD)" for voltage levels at each setting.

Return values

FSP_SUCCESS	Device was opened successfully.
FSP_ERR_ASSERTION	Pointer to the control block structure is NULL.
FSP_ERR_NOT_OPEN	Device is not opened or initialized
FSP_ERR_UNSUPPORTED	Unsupported operation

◆ R_SLCDC_SetDisplayArea()

fsp_err_t R_SLCDC_SetDisplayArea (slcdc_ctrl_t *const *p_ctrl*, slcdc_display_area_t const *display_area*)

Sets output to Waveform A, Waveform B or blinking output. Implements slcdc_api_t::setDisplayArea.

Return values

FSP_SUCCESS	Device was opened successfully.
FSP_ERR_ASSERTION	Pointer to the control block structure is NULL.
FSP_ERR_UNSUPPORTED	Pattern selection has no effect in 8-time-slice mode.
FSP_ERR_NOT_OPEN	Device is not opened or initialized.

◆ R_SLCDC_Close()

fsp_err_t R_SLCDC_Close (slcdc_ctrl_t *const *p_ctrl*)

Closes the SLCDC driver. Implements slcdc_api_t::close.

Return values

FSP_SUCCESS	Device was closed successfully.
FSP_ERR_ASSERTION	Pointer to the control block structure is NULL.
FSP_ERR_NOT_OPEN	Device is not opened or initialized

4.2.62 Serial Peripheral Interface (r_spi)

Modules

Functions

fsp_err_t	R_SPI_Open (spi_ctrl_t *p_api_ctrl, spi_cfg_t const *const p_cfg)
fsp_err_t	R_SPI_Read (spi_ctrl_t *const p_api_ctrl, void *p_dest, uint32_t const length, spi_bit_width_t const bit_width)
fsp_err_t	R_SPI_Write (spi_ctrl_t *const p_api_ctrl, void const *p_src, uint32_t const length, spi_bit_width_t const bit_width)

fsp_err_t	R_SPI_WriteRead (spi_ctrl_t *const p_api_ctrl, void const *p_src, void *p_dest, uint32_t const length, spi_bit_width_t const bit_width)
fsp_err_t	R_SPI_Close (spi_ctrl_t *const p_api_ctrl)
fsp_err_t	R_SPI_CalculateBitrate (uint32_t bitrate, rspck_div_setting_t *spck_div)
fsp_err_t	R_SPI_CallbackSet (spi_ctrl_t *const p_api_ctrl, void(*p_callback)(spi_callback_args_t *), void const *const p_context, spi_callback_args_t *const p_callback_memory)

Detailed Description

Driver for the SPI peripheral on RA MCUs. This module implements the SPI Interface.

Overview

Features

- Standard SPI Modes
  - Master or Slave Mode
  - 3-Wire (clock synchronous) or 4-Wire (SPI) Mode
  - Clock Polarity (CPOL)
    - CPOL=0 SCLK is low when idle
    - CPOL=1 SCLK is high when idle
  - Clock Phase (CPHA)
    - CPHA=0 Data Sampled on the even edge of SCLK (Master Mode Only)
    - CPHA=1 Data Sampled on the odd edge of SCLK
  - MSB/LSB first
  - 8-16 bit, 20-bit, 24-bit, and 32-bit data frames
    - Hardware endian swap in 16-bit and 32-bit modes
  - SSL level keep (burst transfer) supported if available
- Configurable bitrate
- Supports Full Duplex or Transmit Only Mode
- DTC Support
- Callback Events
  - Transfer Complete
  - RX Overflow Error (The SPI shift register is copied to the data register before previous data was read)
  - TX Underrun Error (No data to load into shift register for transmitting)
  - Parity Error (When parity is enabled and a parity error is detected)

Configuration

Build Time Configurations for r_spi

The following build time configurations are defined in fsp_cfg/r_spi_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Enable Support for using DTC	• Enabled • Disabled	Enabled	If enabled, DTC instances will be included in the build for both transmission and reception.
Enable Transmitting from RXI Interrupt	• Enabled • Disabled	Disabled	If enabled, all operations will be handled from the RX (receive) interrupt. This setting only provides a performance boost when DTC is not used. In addition, Transmit Only mode is not supported when this configuration is enabled.

Configurations for Connectivity > SPI (r_spi)

This module can be added to the Stacks tab via New Stack > Connectivity > SPI (r_spi). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_spi0	Module name.
Channel	Value must be a non-negative integer	0	Select the SPI channel.
Receive Interrupt Priority	MCU Specific Options		Select the interrupt priority for all SPI interrupts.
Transmit Buffer Empty Interrupt Priority	MCU Specific Options		Select the interrupt priority for all SPI interrupts.
Transfer Complete Interrupt Priority	MCU Specific Options		Select the interrupt priority for all SPI interrupts.
Error Interrupt Priority	MCU Specific Options		Select the interrupt priority for all SPI interrupts.
Operating Mode	• Master • Slave	Master	Select the SPI operating mode.
Clock Phase	• Data sampling	Data sampling on odd	Select the clock edge

	on odd edge, data variation on even edge • Data sampling on even edge, data variation on odd edge	edge, data variation on even edge	to sample data.
Clock Polarity	• Low when idle • High when idle	Low when idle	Select clock level when idle.
Mode Fault Error	• Enable • Disable	Disable	Detect master/slave mode conflicts.
Bit Order	• MSB First • LSB First	MSB First	Select the data bit order.
Callback	Name must be a valid C symbol	spi_callback	A user callback function can be provided. If this callback function is provided, it will be called from the interrupt service routine (ISR).
SPI Mode	• SPI Operation • Clock Synchronous Operation	Clock Synchronous Operation	Select the clock sync mode.
Full or Transmit Only Mode	• Full Duplex • Transmit Only	Full Duplex	Select Full Duplex or Transmit Only Mode.
Slave Select Polarity	• Active Low • Active High	Active Low	Select the slave select active level.
Select SSL(Slave Select)	• SSL0 • SSL1 • SSL2 • SSL3	SSL0	Select which slave to use.
MOSI Idle State	• MOSI Idle Value Fixing Disable • MOSI Idle Value Fixing Low • MOSI Idle Value Fixing High	MOSI Idle Value Fixing Disable	Select the MOSI idle level if MOSI idle is enabled.
Parity Mode	• Disabled • Odd • Even	Disabled	Select the parity mode if parity is enabled.
Byte Swapping	• Disable • Enable	Disable	Select the byte swap mode for 16/32-Bit Data Frames.
Bitrate	Value must be an integer greater than 0	16000000	Enter the desired bitrate, change the

			bitrate to a value supported by MCU. If the requested bitrate cannot be achieved, the settings with the largest possible value that is less than or equal to the requested bitrate is used. The theoretical bitrate is printed in a comment in the generated spi_extended_cfg_t structure.
Clock Delay	• 1 Clock • 2 Clocks • 3 Clocks • 4 Clocks • 5 Clocks • 6 Clocks • 7 Clocks • 8 Clocks	1 Clock	Configure the number of SPI clock cycles before each data frame.
SSL Negation Delay	• 1 Clock • 2 Clocks • 3 Clocks • 4 Clocks • 5 Clocks • 6 Clocks • 7 Clocks • 8 Clocks	1 Clock	Configure the number of SPI clock cycles after each data frame.
Next Access Delay	• 1 Clock • 2 Clocks • 3 Clocks • 4 Clocks • 5 Clocks • 6 Clocks • 7 Clocks • 8 Clocks	1 Clock	Configure the number of SPI clock cycles between each data frame.

Clock Configuration

The clock for this module is derived from the following peripheral clock for each MCU group:

MCU Group	Peripheral Clock
RA2A1	PCLKB
RA2E1	PCLKB
RA2E2	PCLKB
RA2L1	PCLKB
RA4E1	PCLKA

RA4M1	PCLKA
RA4M2	PCLKA
RA4M3	PCLKA
RA4W1	PCLKA
RA6E1	PCLKA
RA6M1	PCLKA
RA6M2	PCLKA
RA6M3	PCLKA
RA6M4	PCLKA
RA6M5	PCLKA
RA6T1	PCLKA

Pin Configuration

This module uses MOSI, MISO, RSPCK, and SSL pins to communicate with on board devices.

Note

At high bitrates, it might be nessecary to configure the pins with IOPORT_CFG_DRIVE_HIGH.

Usage Notes

Performance

At high bitrates, interrupts may not be able to service transfers fast enough. In master mode this means there will be a delay between each data frame. In slave mode this could result in TX Underrun and RX Overflow errors.

In order to improve performance at high bitrates, it is recommended that the instance be configured to service transfers using the DTC.

Another way to improve performance is to transfer the data in 16/32 bit wide data frames when possible. A typical use-case where this is possible is when reading/writing to a block device.

Transmit From RXI Interrupt

After every data frame the SPI peripheral generates a transmit buffer empty interrupt and a receive buffer full interrupt. It is possible to configure the driver to handle transmit buffer empty interrupts in the receive buffer full isr. This only improves performance when the DTC is not being used.

Note

Configuring the module to use RX DTC instance without also providing a TX DTC instance results in an invalid configuration when RXI transmit is enabled.
Transmit Only mode is not supported when Transmit from RXI is enabled.

Clock Auto-Stopping

In master mode, if the Receive Buffer Full Interrupts are not handled fast enough, instead of generating a RX Overflow error, the last clock cycle will be stretched until the receive buffer is read.

Parity Mode

When parity mode is configured, the LSB of each data frame is used as a parity bit. When odd parity is selected, the LSB is set such that there are an odd number of ones in the data frame. When even parity is selected, the LSB is set such that there are an even number of ones in the data frame.

Limitations

Developers should be aware of the following limitations when using the SPI:

- In master mode, the driver will only configure 4-Wire mode if the device supports SSL Level Keeping (SSLKP bit in SPCMD0) and will return FSP_ERR_UNSUPPORTED if configured for 4-Wire mode on devices without SSL Level Keeping. Without SSL Level Keeping, the SSL pin is toggled after every data frame. In most cases this is not desirable behavior so it is recommended that the SSL pin be driven in software if SSL Level Keeping is not present on the device.
- In order to use CPHA=0 setting in slave mode, the master must toggle the SSL pin after every data frame (Even if the device supports SSL Level Keeping). Because of this hardware limitation, the module will return FSP_ERR_UNSUPPORTED when it is configured to use CPHA=0 setting in slave mode.
- The module does not support communicating with multiple slaves using different SSL pins. In order to achieve this, the module must either be closed and re-opened to change the SSL pin or drive SSL in software. It is recommended that SSL be driven in software when controlling multiple slave devices.
- The SPI peripheral has a minimum 3 SPI CLK delay between each data frame.
- The behavior for Byte Swap operation is not guaranteed for data frames other than 8-bit, 16-bit and 32bit.

Examples

Basic Example

This is a basic example of minimal use of the SPI in an application.

```
static volatile bool g_transfer_complete = false;

void spi_basic_example (void)

{

    uint8_t tx_buffer[TRANSFER_SIZE];

    uint8_t rx_buffer[TRANSFER_SIZE];

 fsp_err_t err = FSP_SUCCESS;

 /* Initialize the SPI module. */

    err = R_SPI_Open(&g_spi_ctrl, &g_spi_cfg);

 /* Handle any errors. This function should be defined by the user. */

    assert(FSP_SUCCESS == err);

 /* Start a write/read transfer */

    err = R_SPI_WriteRead(&g_spi_ctrl, tx_buffer, rx_buffer, TRANSFER_SIZE,

SPI_BIT_WIDTH_8_BITS);
```

```
    assert(FSP_SUCCESS == err);
 /* Wait for SPI_EVENT_TRANSFER_COMPLETE callback event. */
 while (false == g_transfer_complete)
    {
       ;
    }
}
static void r_spi_callback (spi_callback_args_t * p_args)
{
 if (SPI_EVENT_TRANSFER_COMPLETE == p_args->event)
    {
       g_transfer_complete = true;
    }
}
```

Driving Software Slave Select Line

This is an example of communicating with multiple slave devices by asserting SSL in software.

```
void spi_software_ssl_example (void)
{
    uint8_t tx_buffer[TRANSFER_SIZE];
    uint8_t rx_buffer[TRANSFER_SIZE];
 /* Configure Slave Select Line 1 */
 R_BSP_PinWrite(SLAVE_SELECT_LINE_1, BSP_IO_LEVEL_HIGH);
 /* Configure Slave Select Line 2 */
 R_BSP_PinWrite(SLAVE_SELECT_LINE_2, BSP_IO_LEVEL_HIGH);
 fsp_err_t err = FSP_SUCCESS;
 /* Initialize the SPI module. */
    err = R_SPI_Open(&g_spi_ctrl, &g_spi_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Assert Slave Select Line 1 */
 R_BSP_PinWrite(SLAVE_SELECT_LINE_1, BSP_IO_LEVEL_LOW);
 /* Start a write/read transfer */
```

```
    g_transfer_complete = false;
    err                = R_SPI_WriteRead(&g_spi_ctrl, tx_buffer, rx_buffer,
TRANSFER_SIZE, SPI_BIT_WIDTH_8_BITS);
    assert(FSP_SUCCESS == err);
 /* Wait for SPI_EVENT_TRANSFER_COMPLETE callback event. */
 while (false == g_transfer_complete)
    {
       ;
    }
 /* De-assert Slave Select Line 1 */
 R_BSP_PinWrite(SLAVE_SELECT_LINE_1, BSP_IO_LEVEL_HIGH);
 /* Wait for minimum time required between transfers. */
 R_BSP_SoftwareDelay(SSL_NEXT_ACCESS_DELAY, BSP_DELAY_UNITS_MICROSECONDS);
 /* Assert Slave Select Line 2 */
 R_BSP_PinWrite(SLAVE_SELECT_LINE_2, BSP_IO_LEVEL_LOW);
 /* Start a write/read transfer */
    g_transfer_complete = false;
    err                = R_SPI_WriteRead(&g_spi_ctrl, tx_buffer, rx_buffer,
TRANSFER_SIZE, SPI_BIT_WIDTH_8_BITS);
    assert(FSP_SUCCESS == err);
 /* Wait for SPI_EVENT_TRANSFER_COMPLETE callback event. */
 while (false == g_transfer_complete)
    {
       ;
    }
 /* De-assert Slave Select Line 2 */
 R_BSP_PinWrite(SLAVE_SELECT_LINE_2, BSP_IO_LEVEL_HIGH);
}
```

Configuring the SPI Clock Divider Registers

This example demonstrates how to set the SPI clock divisors at runtime.

```
void spi_bitrate_example (void)
{
```

```
 fsp_err_t err = FSP_SUCCESS;
    g_spi_cfg.p_extend = &g_spi_extended_cfg;
 /* Configure SPI Clock divider to achieve largest bitrate less than or equal to the
desired bitrate. */
    err = R_SPI_CalculateBitrate(BITRATE, &(g_spi_extended_cfg.spck_div));
    assert(FSP_SUCCESS == err);
 /* Initialize the SPI module. */
    err = R_SPI_Open(&g_spi_ctrl, &g_spi_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
}
```

Data Structures

struct	rspck_div_setting_t

Enumerations

enum	spi_ssl_mode_t
enum	spi_communication_t
enum	spi_ssl_polarity_t
enum	spi_ssl_select_t
enum	spi_mosi_idle_value_fixing_t
enum	spi_parity_t
enum	spi_byte_swap_t
enum	spi_delay_count_t

Data Structure Documentation

◆ rspck_div_setting_t

struct rspck_div_setting_t
SPI Clock Divider settings.

Data Fields		
uint8_t	spbr	SPBR register setting.
uint8_t	brdv: 2	BRDV setting in SPCMD0.

◆ spi_extended_cfg_t

struct spi_extended_cfg_t		
Extended SPI interface configuration		
Data Fields		
spi_ssl_mode_t	spi_clksyn	Select spi or clock syn mode operation.
spi_communication_t	spi_comm	Select full-duplex or transmit-only communication.
spi_ssl_polarity_t	ssl_polarity	Select SSLn signal polarity.
spi_ssl_select_t	ssl_select	Select which slave to use: 0-SSL0, 1-SSL1, 2-SSL2, 3-SSL3.
spi_mosi_idle_value_fixing_t	mosi_idle	Select MOSI idle fixed value and selection.
spi_parity_t	parity	Select parity and enable/disable parity.
spi_byte_swap_t	byte_swap	Select byte swap mode.
rspck_div_setting_t	spck_div	Register values for configuring the SPI Clock Divider.
spi_delay_count_t	spck_delay	SPI Clock Delay Register Setting.
spi_delay_count_t	ssl_negation_delay	SPI Slave Select Negation Delay Register Setting.
spi_delay_count_t	next_access_delay	SPI Next-Access Delay Register Setting.

◆ spi_instance_ctrl_t

struct spi_instance_ctrl_t	
Channel control block. DO NOT INITIALIZE. Initialization occurs when spi_api_t::open is called.	
Data Fields	
uint32_t	open
	Indicates whether the open() API has been successfully called.
spi_cfg_t const *	p_cfg
	Pointer to instance configuration.

R_SPI0_Type *	p_regs
	Base register for this channel.
void const *	p_tx_data
	Buffer to transmit.
void *	p_rx_data
	Buffer to receive.
uint32_t	tx_count
	Number of Data Frames to transfer (8-bit, 16-bit, 32-bit)
uint32_t	rx_count
	Number of Data Frames to transfer (8-bit, 16-bit, 32-bit)
uint32_t	count
	Number of Data Frames to transfer (8-bit, 16-bit, 32-bit)
spi_bit_width_t	bit_width
	Bits per Data frame (8-bit, 16-bit, 32-bit)

Enumeration Type Documentation

◆ spi_ssl_mode_t

enum spi_ssl_mode_t	
3-Wire or 4-Wire mode.	
Enumerator	
SPI_SSL_MODE_SPI	SPI operation (4-wire method)
SPI_SSL_MODE_CLK_SYN	Clock Synchronous operation (3-wire method)

◆ spi_communication_t

enum spi_communication_t	
Transmit Only (Half Duplex), or Full Duplex.	
Enumerator	
SPI_COMMUNICATION_FULL_DUPLEX	Full-Duplex synchronous serial communication.
SPI_COMMUNICATION_TRANSMIT_ONLY	Transit only serial communication.

◆ spi_ssl_polarity_t

enum spi_ssl_polarity_t	
Slave Select Polarity.	
Enumerator	
SPI_SSLP_LOW	SSLP signal polarity active low.
SPI_SSLP_HIGH	SSLP signal polarity active high.

◆ spi_ssl_select_t

enum spi_ssl_select_t	
The Slave Select Line	
Enumerator	
SPI_SSL_SELECT_SSL0	Select SSL0.
SPI_SSL_SELECT_SSL1	Select SSL1.
SPI_SSL_SELECT_SSL2	Select SSL2.
SPI_SSL_SELECT_SSL3	Select SSL3.

◆ spi_mosi_idle_value_fixing_t

enum spi_mosi_idle_value_fixing_t	
MOSI Idle Behavior.	
Enumerator	
SPI_MOSI_IDLE_VALUE_FIXING_DISABLE	MOSI output value=value set in MOIFV bit.
SPI_MOSI_IDLE_VALUE_FIXING_LOW	MOSIn level low during MOSI idling.
SPI_MOSI_IDLE_VALUE_FIXING_HIGH	MOSIn level high during MOSI idling.

◆ spi_parity_t

enum spi_parity_t	
Parity Mode	
Enumerator	
SPI_PARITY_MODE_DISABLE	Disable parity.
SPI_PARITY_MODE_ODD	Select even parity.
SPI_PARITY_MODE_EVEN	Select odd parity.

◆ spi_byte_swap_t

enum spi_byte_swap_t	
Byte Swapping Enable/Disable.	
Enumerator	
SPI_BYTE_SWAP_DISABLE	Disable Byte swapping for 16/32-Bit transfers.
SPI_BYTE_SWAP_ENABLE	Enable Byte swapping for 16/32-Bit transfers.

◆ spi_delay_count_t

enum spi_delay_count_t	
Delay count for SPI delay settings.	
Enumerator	
SPI_DELAY_COUNT_1	Set RSPCK delay count to 1 RSPCK.
SPI_DELAY_COUNT_2	Set RSPCK delay count to 2 RSPCK.
SPI_DELAY_COUNT_3	Set RSPCK delay count to 3 RSPCK.
SPI_DELAY_COUNT_4	Set RSPCK delay count to 4 RSPCK.
SPI_DELAY_COUNT_5	Set RSPCK delay count to 5 RSPCK.
SPI_DELAY_COUNT_6	Set RSPCK delay count to 6 RSPCK.
SPI_DELAY_COUNT_7	Set RSPCK delay count to 7 RSPCK.
SPI_DELAY_COUNT_8	Set RSPCK delay count to 8 RSPCK.

Function Documentation

◆ R_SPI_Open()

fsp_err_t R_SPI_Open (spi_ctrl_t * *p_api_ctrl*, spi_cfg_t const *const *p_cfg*)

This functions initializes a channel for SPI communication mode. Implements spi_api_t::open.

This function performs the following tasks:

- Performs parameter checking and processes error conditions.
- Configures the pperipheral registers acording to the configuration.
- Initialize the control structure for use in other SPI Interface functions.

Return values

FSP_SUCCESS	Channel initialized successfully.
FSP_ERR_ALREADY_OPEN	Instance was already initialized.
FSP_ERR_ASSERTION	An invalid argument was given in the configuration structure.
FSP_ERR_UNSUPPORTED	A requested setting is not possible on this device with the current build configuration.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	The channel number is invalid.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls: transfer_api_t::open

Note

This function is reentrant.

◆ R_SPI_Read()

fsp_err_t R_SPI_Read (spi_ctrl_t *const *p_api_ctrl*, void * *p_dest*, uint32_t const *length*, spi_bit_width_t const *bit_width*)

This function receives data from a SPI device. Implements spi_api_t::read.

The function performs the following tasks:

- Performs parameter checking and processes error conditions.
- Sets up the instance to complete a SPI read operation.

Return values

FSP_SUCCESS	Read operation successfully completed.
FSP_ERR_ASSERTION	NULL pointer to control or destination parameters or transfer length is zero.
FSP_ERR_NOT_OPEN	The channel has not been opened. Open channel first.
FSP_ERR_IN_USE	A transfer is already in progress.

◆ R_SPI_Write()

fsp_err_t R_SPI_Write (spi_ctrl_t *const *p_api_ctrl*, void const * *p_src*, uint32_t const *length*, spi_bit_width_t const *bit_width*)

This function transmits data to a SPI device using the TX Only Communications Operation Mode. Implements spi_api_t::write.

The function performs the following tasks:

- Performs parameter checking and processes error conditions.
- Sets up the instance to complete a SPI write operation.

Return values

FSP_SUCCESS	Write operation successfully completed.
FSP_ERR_ASSERTION	NULL pointer to control or source parameters or transfer length is zero.
FSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.
FSP_ERR_IN_USE	A transfer is already in progress.

◆ R_SPI_WriteRead()

fsp_err_t R_SPI_WriteRead (spi_ctrl_t *const *p_api_ctrl*, void const * *p_src*, void * *p_dest*, uint32_t const *length*, spi_bit_width_t const *bit_width*)

This function simultaneously transmits and receive data. Implements spi_api_t::writeRead.

The function performs the following tasks:

- Performs parameter checking and processes error conditions.
- Sets up the instance to complete a SPI writeRead operation.

Return values

FSP_SUCCESS	Write operation successfully completed.
FSP_ERR_ASSERTION	NULL pointer to control, source or destination parameters or transfer length is zero.
FSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.
FSP_ERR_IN_USE	A transfer is already in progress.

◆ R_SPI_Close()

fsp_err_t R_SPI_Close (spi_ctrl_t *const *p_api_ctrl*)

This function manages the closing of a channel by the following task. Implements spi_api_t::close.

Disables SPI operations by disabling the SPI bus.

- Disables the SPI peripheral.
- Disables all the associated interrupts.
- Update control structure so it will not work with SPI Interface functions.

Return values

FSP_SUCCESS	Channel successfully closed.
FSP_ERR_ASSERTION	A required pointer argument is NULL.
FSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.

◆ R_SPI_CalculateBitrate()

fsp_err_t R_SPI_CalculateBitrate (uint32_t *bitrate*, rspck_div_setting_t * *spck_div*)

Calculates the SPBR register value and the BRDV bits for a desired bitrate. If the desired bitrate is faster than the maximum bitrate, than the bitrate is set to the maximum bitrate. If the desired bitrate is slower than the minimum bitrate, than an error is returned.

Parameters

[in]	bitrate	Desired bitrate
[out]	spck_div	Memory location to store bitrate register settings.

Return values

FSP_SUCCESS	Valid spbr and brdv values were calculated
FSP_ERR_UNSUPPORTED	Bitrate is not achievable

◆ R_SPI_CallbackSet()

fsp_err_t R_SPI_CallbackSet (spi_ctrl_t *const *p_api_ctrl*, void(*)(spi_callback_args_t *) *p_callback*, void const *const *p_context*, spi_callback_args_t *const *p_callback_memory*)
Updates the user callback and has option of providing memory for callback structure. Implements spi_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

4.2.63 Serial Peripheral Interface (r_spi_b)

fsp_err_t	R_SPI_B_CallbackSet (spi_ctrl_t *const p_api_ctrl, void(*p_callback)(spi_callback_args_t *), void const *const p_context, spi_callback_args_t *const p_callback_memory)

Detailed Description

Driver for the SPI peripheral on RA MCUs. This module implements the SPI Interface.

Overview

Features

- Standard SPI Modes
  - Master or Slave Mode
  - 3-Wire (clock synchronous) or 4-Wire (SPI) Mode
  - Clock Polarity (CPOL)
    - CPOL=0 SCLK is low when idle
    - CPOL=1 SCLK is high when idle
  - Clock Phase (CPHA)
    - CPHA=0 Data Sampled on the even edge of SCLK (Master Mode Only)
    - CPHA=1 Data Sampled on the odd edge of SCLK
  - MSB/LSB first
  - 8- to 32-Bit data frames
    - Hardware endian swap in 16-Bit and 32-Bit mode
  - SSL level keep (burst transfer) supported
- Configurable bitrate
- Supports Full Duplex or Transmit Only Mode
- DTC Support
- Callback Events
  - Transfer Complete
  - RX Overflow Error (The SPI shift register is copied to the data register before previous data was read)
  - TX Underrun Error (No data to load into shift register for transmitting)
  - Parity Error (When parity is enabled and a parity error is detected)

Configuration

Build Time Configurations for r_spi_b

The following build time configurations are defined in fsp_cfg/r_spi_b_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Enable Support for using DTC	• Enabled • Disabled	Enabled	If enabled, DTC instances will be included in the build for both transmission and reception.
Enable Transmitting from RXI Interrupt	• Enabled • Disabled	Disabled	If enabled, all operations will be handled from the RX (receive) interrupt. This setting only provides a performance boost

			when DTC is not used. In addition, Transmit Only mode is not supported when this configuration is enabled.

Configurations for Connectivity > SPI (r_spi_b)

This module can be added to the Stacks tab via New Stack > Connectivity > SPI (r_spi_b). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_spi0	Module name.
Channel	Value must be a non-negative integer	0	Select the SPI channel.
Receive Interrupt Priority	MCU Specific Options		Select the interrupt priority for all SPI interrupts.
Transmit Buffer Empty Interrupt Priority	MCU Specific Options		Select the interrupt priority for all SPI interrupts.
Transfer Complete Interrupt Priority	MCU Specific Options		Select the interrupt priority for all SPI interrupts.
Error Interrupt Priority	MCU Specific Options		Select the interrupt priority for all SPI interrupts.
Operating Mode	• Master • Slave	Master	Select the SPI operating mode.
Clock Phase	• Data sampling on odd edge, data variation on even edge • Data sampling on even edge, data variation on odd edge	Data sampling on odd edge, data variation on even edge	Select the clock edge to sample data.
Clock Polarity	• Low when idle • High when idle	Low when idle	Select clock level when idle.
Mode Fault Error	• Enable • Disable	Disable	Detect master/slave mode conflicts.
Bit Order	• MSB First • LSB First	MSB First	Select the data bit order.
Callback	Name must be a valid	spi_callback	A user callback

	C symbol		function can be provided. If this callback function is provided, it will be called from the interrupt service routine (ISR).
SPI Mode	• SPI Operation • Clock Synchronous Operation	Clock Synchronous Operation	Select the clock sync mode.
Full or Transmit Only Mode	• Full Duplex • Transmit Only	Full Duplex	Select Full Duplex or Transmit Only Mode.
Slave Select Polarity	• Active Low • Active High	Active Low	Select the slave select active level.
Select SSL(Slave Select)	• SSL0 • SSL1 • SSL2 • SSL3	SSL0	Select which slave to use.
MOSI Idle State	• MOSI Idle Value Fixing Disable • MOSI Idle Value Fixing Low • MOSI Idle Value Fixing High	MOSI Idle Value Fixing Disable	Select the MOSI idle level if MOSI idle is enabled.
Parity Mode	• Disabled • Odd • Even	Disabled	Select the parity mode if parity is enabled.
Byte Swapping	• Disable • Enable	Disable	Select the byte swap mode for 16/32-Bit Data Frames.
Clock Source	• SCISPICLK • PCLK	PCLK	Select the clock source for communication.
Bitrate	Value must be an integer greater than 0	16000000	Enter the desired bitrate, change the bitrate to a value supported by MCU. If the requested bitrate cannot be achieved, the settings with the largest possible value that is less than or equal to the requested bitrate is used. The theoretical bitrate is printed in a comment in the generated spi_extended_cfg_t structure.

Clock Delay	• 1 Clock • 2 Clocks • 3 Clocks • 4 Clocks • 5 Clocks • 6 Clocks • 7 Clocks • 8 Clocks	1 Clock	Configure the number of SPI clock cycles before each data frame.
SSL Negation Delay	• 1 Clock • 2 Clocks • 3 Clocks • 4 Clocks • 5 Clocks • 6 Clocks • 7 Clocks • 8 Clocks	1 Clock	Configure the number of SPI clock cycles after each data frame.
Next Access Delay	• 1 Clock • 2 Clocks • 3 Clocks • 4 Clocks • 5 Clocks • 6 Clocks • 7 Clocks • 8 Clocks	1 Clock	Configure the number of SPI clock cycles between each data frame.

Clock Configuration

The SPI peripheral uses the SCISPICLK for communication and PCLKB for internal operations. Both can be configured via the **Clocks** tab of the RA Configuration editor or by using the CGC Interface at run-time.

Pin Configuration

This module uses MOSI, MISO, RSPCK, and SSL pins to communicate with on board devices.

Note

At high bitrates it may be necessary to configure the pins with IOPORT_CFG_DRIVE_HIGH to maintain signal integrity.

Usage Notes

Performance

At high bitrates, interrupts may not be able to service transfers fast enough. In master mode this means there will be a delay between each data frame. In slave mode this could result in TX Underrun and RX Overflow errors.

In order to improve performance at high bitrates, it is recommended that the instance be configured to service transfers using the DTC.

Another way to improve performance is to transfer the data in 16/32 bit wide data frames when possible. A typical use-case where this is possible is when reading/writing to a block device.

Transmit From RXI Interrupt

After every data frame the SPI peripheral generates a transmit buffer empty interrupt and a receive buffer full interrupt. It is possible to configure the driver to handle transmit buffer empty interrupts in the receive buffer full ISR. This only improves performance when the DTC is not being used.

Note

Configuring the module to use RX DTC instance without also providing a TX DTC instance results in an invalid configuration when RXI transmit is enabled.
Transmit Only mode is not supported when Transmit from RXI is enabled.

Clock Auto-Stopping

In master mode, if the Receive Buffer Full Interrupts are not handled fast enough, instead of generating a RX Overflow error, the last clock cycle will be stretched until the receive buffer is read.

Parity Mode

When parity mode is configured, the LSB of each data frame is used as a parity bit. When odd parity is selected, the LSB is set such that there are an odd number of ones in the data frame. When even parity is selected, the LSB is set such that there are an even number of ones in the data frame.

Limitations

Developers should be aware of the following limitations when using the SPI:

- In master mode, the driver will only configure 4-Wire mode if the device supports SSL Level Keeping (SSLKP bit in SPCMD0) and will return FSP_ERR_UNSUPPORTED if configured for 4-Wire mode on devices without SSL Level Keeping. Without SSL Level Keeping, the SSL pin is toggled after every data frame. In most cases this is not desirable behavior so it is recommended that the SSL pin be driven in software if SSL Level Keeping is not present on the device.
- The module does not support communicating with multiple slaves using different SSL pins. In order to achieve this, the module must either be closed and re-opened to change the SSL pin or drive SSL in software. It is recommended that SSL be driven in software when controlling multiple slave devices.
- The SPI peripheral has a minimum 3 SPI CLK delay between each data frame.
- The behavior for Byte Swap operation is not guaranteed for data frames other than 8-bit, 16-bit and 32bit.

Examples

Basic Example

This is a basic example of minimal use of the SPI in an application.

```
static volatile bool g_transfer_complete = false;

void spi_basic_example (void)

{

    uint8_t tx_buffer[TRANSFER_SIZE];

    uint8_t rx_buffer[TRANSFER_SIZE];
```

```
 fsp_err_t err = FSP_SUCCESS;
 /* Initialize the SPI module. */
    err = R_SPI_B_Open(&g_spi_ctrl, &g_spi_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Start a write/read transfer */
    err = R_SPI_B_WriteRead(&g_spi_ctrl, tx_buffer, rx_buffer, TRANSFER_SIZE,
SPI_BIT_WIDTH_8_BITS);
    assert(FSP_SUCCESS == err);
 /* Wait for SPI_EVENT_TRANSFER_COMPLETE callback event. */
 while (false == g_transfer_complete)
    {
       ;
    }
}
static void r_spi_callback (spi_callback_args_t * p_args)
{
 if (SPI_EVENT_TRANSFER_COMPLETE == p_args->event)
    {
       g_transfer_complete = true;
    }
}
```

Driving Software Slave Select Line

This is an example of communicating with multiple slave devices by asserting SSL in software.

```
void spi_software_ssl_example (void)
{
    uint8_t tx_buffer[TRANSFER_SIZE];
    uint8_t rx_buffer[TRANSFER_SIZE];
 /* Configure Slave Select Line 1 */
 R_BSP_PinWrite(SLAVE_SELECT_LINE_1, BSP_IO_LEVEL_HIGH);
 /* Configure Slave Select Line 2 */
 R_BSP_PinWrite(SLAVE_SELECT_LINE_2, BSP_IO_LEVEL_HIGH);
```

```
fsp_err_t err = FSP_SUCCESS;
/* Initialize the SPI module. */
   err = R_SPI_B_Open(&g_spi_ctrl, &g_spi_cfg);
/* Handle any errors. This function should be defined by the user. */
   assert(FSP_SUCCESS == err);
/* Assert Slave Select Line 1 */
R_BSP_PinWrite(SLAVE_SELECT_LINE_1, BSP_IO_LEVEL_LOW);
/* Start a write/read transfer */
   g_transfer_complete = false;
   err                 = R_SPI_B_WriteRead(&g_spi_ctrl, tx_buffer, rx_buffer,
TRANSFER_SIZE, SPI_BIT_WIDTH_8_BITS);
   assert(FSP_SUCCESS == err);
/* Wait for SPI_EVENT_TRANSFER_COMPLETE callback event. */
while (false == g_transfer_complete)
   {
      ;
   }
/* De-assert Slave Select Line 1 */
R_BSP_PinWrite(SLAVE_SELECT_LINE_1, BSP_IO_LEVEL_HIGH);
/* Wait for minimum time required between transfers. */
R_BSP_SoftwareDelay(SSL_NEXT_ACCESS_DELAY, BSP_DELAY_UNITS_MICROSECONDS);
/* Assert Slave Select Line 2 */
R_BSP_PinWrite(SLAVE_SELECT_LINE_2, BSP_IO_LEVEL_LOW);
/* Start a write/read transfer */
   g_transfer_complete = false;
   err                 = R_SPI_B_WriteRead(&g_spi_ctrl, tx_buffer, rx_buffer,
TRANSFER_SIZE, SPI_BIT_WIDTH_8_BITS);
   assert(FSP_SUCCESS == err);
/* Wait for SPI_EVENT_TRANSFER_COMPLETE callback event. */
while (false == g_transfer_complete)
   {
      ;
   }
/* De-assert Slave Select Line 2 */
```

```
 R_BSP_PinWrite(SLAVE_SELECT_LINE_2, BSP_IO_LEVEL_HIGH);
}
```

Configuring the SPI Clock Divider Registers

This example demonstrates how to set the SPI clock divisors at runtime.

```
void spi_bitrate_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
    g_spi_cfg.p_extend = &g_spi_extended_cfg;
 /* Configure SPI Clock divider to achieve largest bitrate less than or equal to the
desired bitrate. */
    err = R_SPI_B_CalculateBitrate(BITRATE, SPI_B_CLOCK_SOURCE_SCISPICLK,
&(g_spi_extended_cfg.spck_div));
    assert(FSP_SUCCESS == err);
 /* Initialize the SPI module. */
    err = R_SPI_B_Open(&g_spi_ctrl, &g_spi_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
}
```

Data Structures

struct	rspck_div_setting_t
struct	spi_b_extended_cfg_t
struct	spi_b_instance_ctrl_t

Enumerations

enum	spi_b_ssl_mode_t
enum	spi_b_communication_t
enum	spi_b_ssl_polarity_t
enum	spi_b_ssl_select_t
enum	spi_b_mosi_idle_value_fixing_t

enum	spi_b_parity_t
enum	spi_b_byte_swap_t
enum	spi_b_delay_count_t
enum	spi_b_clock_source_t

Data Structure Documentation

◆ rspck_div_setting_t

struct rspck_div_setting_t		
SPI Clock Divider settings.		
Data Fields		
uint8_t	spbr	SPBR register setting.
uint8_t	brdv: 2	BRDV setting in SPCMD0.

◆ spi_b_extended_cfg_t

struct spi_b_extended_cfg_t		
Extended SPI interface configuration		
Data Fields		
spi_b_ssl_mode_t	spi_clksyn	Select SPI or Clock Synchronous mode operation.
spi_b_communication_t	spi_comm	Select full-duplex or transmit-only communication.
spi_b_ssl_polarity_t	ssl_polarity	Select SSLn signal polarity.
spi_b_ssl_select_t	ssl_select	Select which slave to use: 0-SSL0, 1-SSL1, 2-SSL2, 3-SSL3.
spi_b_mosi_idle_value_fixing_t	mosi_idle	Select MOSI idle fixed value and selection.
spi_b_parity_t	parity	Select parity and enable/disable parity.
spi_b_byte_swap_t	byte_swap	Select byte swap mode.
spi_b_clock_source_t	clock_source	Communication clock source (TCLK).
rspck_div_setting_t	spck_div	Register values for configuring the SPI Clock Divider.
spi_b_delay_count_t	spck_delay	SPI Clock Delay Register Setting.
spi_b_delay_count_t	ssl_negation_delay	SPI Slave Select Negation Delay Register Setting.

spi_b_delay_count_t	next_access_delay	SPI Next-Access Delay Register Setting.

◆ spi_b_instance_ctrl_t

struct spi_b_instance_ctrl_t	
Channel control block. DO NOT INITIALIZE. Initialization occurs when spi_api_t::open is called.	
Data Fields	
uint32_t	open
	Indicates whether the open() API has been successfully called.
spi_cfg_t const *	p_cfg
	Pointer to instance configuration.
R_SPI_B0_Type *	p_regs
	Base register for this channel.
void const *	p_tx_data
	Buffer to transmit.
void *	p_rx_data
	Buffer to receive.
uint32_t	tx_count
	Number of Data Frames to transfer (8-bit, 16-bit, 32-bit)
uint32_t	rx_count
	Number of Data Frames to transfer (8-bit, 16-bit, 32-bit)
uint32_t	count
	Number of Data Frames to transfer (8-bit, 16-bit, 32-bit)

spi_bit_width_t	bit_width
	Bits per Data frame (8-bit, 16-bit, 32-bit)

Enumeration Type Documentation

◆ spi_b_ssl_mode_t

enum spi_b_ssl_mode_t	
3-Wire or 4-Wire mode.	
Enumerator	
SPI_B_SSL_MODE_SPI	SPI operation (4-wire method)
SPI_B_SSL_MODE_CLK_SYN	Clock Synchronous operation (3-wire method)

◆ spi_b_communication_t

enum spi_b_communication_t	
Transmit Only (Half Duplex), or Full Duplex.	
Enumerator	
SPI_B_COMMUNICATION_FULL_DUPLEX	Full-Duplex synchronous serial communication.
SPI_B_COMMUNICATION_TRANSMIT_ONLY	Transit only serial communication.

◆ spi_b_ssl_polarity_t

enum spi_b_ssl_polarity_t	
Slave Select Polarity.	
Enumerator	
SPI_B_SSLP_LOW	SSLP signal polarity active low.
SPI_B_SSLP_HIGH	SSLP signal polarity active high.

◆ spi_b_ssl_select_t

enum spi_b_ssl_select_t	
The Slave Select Line	
Enumerator	
SPI_B_SSL_SELECT_SSL0	Select SSL0.
SPI_B_SSL_SELECT_SSL1	Select SSL1.
SPI_B_SSL_SELECT_SSL2	Select SSL2.
SPI_B_SSL_SELECT_SSL3	Select SSL3.

◆ spi_b_mosi_idle_value_fixing_t

enum spi_b_mosi_idle_value_fixing_t	
MOSI Idle Behavior.	
Enumerator	
SPI_B_MOSI_IDLE_VALUE_FIXING_DISABLE	MOSI output value=value set in MOIFV bit.
SPI_B_MOSI_IDLE_VALUE_FIXING_LOW	MOSIn level low during MOSI idling.
SPI_B_MOSI_IDLE_VALUE_FIXING_HIGH	MOSIn level high during MOSI idling.

◆ spi_b_parity_t

enum spi_b_parity_t	
Parity Mode	
Enumerator	
SPI_B_PARITY_MODE_DISABLE	Disable parity.
SPI_B_PARITY_MODE_ODD	Select even parity.
SPI_B_PARITY_MODE_EVEN	Select odd parity.

◆ spi_b_byte_swap_t

enum spi_b_byte_swap_t	
Byte Swapping Enable/Disable.	
Enumerator	
SPI_B_BYTE_SWAP_DISABLE	Disable Byte swapping for 16/32-Bit transfers.
SPI_B_BYTE_SWAP_ENABLE	Enable Byte swapping for 16/32-Bit transfers.

◆ spi_b_delay_count_t

enum spi_b_delay_count_t	
Delay count for SPI delay settings.	
Enumerator	
SPI_B_DELAY_COUNT_1	Set RSPCK delay count to 1 RSPCK.
SPI_B_DELAY_COUNT_2	Set RSPCK delay count to 2 RSPCK.
SPI_B_DELAY_COUNT_3	Set RSPCK delay count to 3 RSPCK.
SPI_B_DELAY_COUNT_4	Set RSPCK delay count to 4 RSPCK.
SPI_B_DELAY_COUNT_5	Set RSPCK delay count to 5 RSPCK.
SPI_B_DELAY_COUNT_6	Set RSPCK delay count to 6 RSPCK.
SPI_B_DELAY_COUNT_7	Set RSPCK delay count to 7 RSPCK.
SPI_B_DELAY_COUNT_8	Set RSPCK delay count to 8 RSPCK.

◆ spi_b_clock_source_t

enum spi_b_clock_source_t
SPI communication clock source.

Function Documentation

◆ R_SPI_B_Open()

fsp_err_t R_SPI_B_Open (spi_ctrl_t * *p_api_ctrl*, spi_cfg_t const *const *p_cfg*)

This functions initializes a channel for SPI communication mode. Implements spi_api_t::open.

This function performs the following tasks:

- Performs parameter checking and processes error conditions.
- Configures the peripheral registers according to the configuration.
- Initialize the control structure for use in other SPI Interface functions.

Return values

FSP_SUCCESS	Channel initialized successfully.
FSP_ERR_ALREADY_OPEN	Instance was already initialized.
FSP_ERR_ASSERTION	An invalid argument was given in the configuration structure.
FSP_ERR_UNSUPPORTED	A requested setting is not possible on this device with the current build configuration.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	The channel number is invalid.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls: transfer_api_t::open

Note

This function is reentrant.

◆ R_SPI_B_Read()

fsp_err_t R_SPI_B_Read (spi_ctrl_t *const *p_api_ctrl*, void * *p_dest*, uint32_t const *length*, spi_bit_width_t const *bit_width*)

This function receives data from a SPI device. Implements spi_api_t::read.

The function performs the following tasks:

- Performs parameter checking and processes error conditions.
- Sets up the instance to complete a SPI read operation.

Return values

FSP_SUCCESS	Read operation successfully completed.
FSP_ERR_ASSERTION	NULL pointer to control or destination parameters or transfer length is zero.
FSP_ERR_NOT_OPEN	The channel has not been opened. Open channel first.
FSP_ERR_IN_USE	A transfer is already in progress.

◆ R_SPI_B_Write()

fsp_err_t R_SPI_B_Write (spi_ctrl_t *const *p_api_ctrl*, void const * *p_src*, uint32_t const *length*, spi_bit_width_t const *bit_width*)

This function transmits data to a SPI device using the TX Only Communications Operation Mode. Implements spi_api_t::write.

The function performs the following tasks:

- Performs parameter checking and processes error conditions.
- Sets up the instance to complete a SPI write operation.

Return values

FSP_SUCCESS	Write operation successfully completed.
FSP_ERR_ASSERTION	NULL pointer to control or source parameters or transfer length is zero.
FSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.
FSP_ERR_IN_USE	A transfer is already in progress.

◆ R_SPI_B_WriteRead()

fsp_err_t R_SPI_B_WriteRead (spi_ctrl_t *const *p_api_ctrl*, void const * *p_src*, void * *p_dest*, uint32_t const *length*, spi_bit_width_t const *bit_width*)

This function simultaneously transmits and receive data. Implements spi_api_t::writeRead.

The function performs the following tasks:

- Performs parameter checking and processes error conditions.
- Sets up the instance to complete a SPI writeRead operation.

Return values

FSP_SUCCESS	Write operation successfully completed.
FSP_ERR_ASSERTION	NULL pointer to control, source or destination parameters or transfer length is zero.
FSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.
FSP_ERR_IN_USE	A transfer is already in progress.

◆ R_SPI_B_Close()

fsp_err_t R_SPI_B_Close (spi_ctrl_t *const *p_api_ctrl*)

This function manages the closing of a channel by the following task. Implements spi_api_t::close.

Disables SPI operations by disabling the SPI bus.

- Disables the SPI peripheral.
- Disables all the associated interrupts.
- Update control structure so it will not work with SPI Interface functions.

Return values

FSP_SUCCESS	Channel successfully closed.
FSP_ERR_ASSERTION	A required pointer argument is NULL.
FSP_ERR_NOT_OPEN	The channel has not been opened. Open the channel first.

◆ R_SPI_B_CalculateBitrate()

fsp_err_t R_SPI_B_CalculateBitrate (uint32_t *bitrate*, spi_b_clock_source_t *clock_source*, rspck_div_setting_t * *spck_div*)

Calculates the SPBR register value and the BRDV bits for a desired bitrate. If the desired bitrate is faster than the maximum bitrate, than the bitrate is set to the maximum bitrate. If the desired bitrate is slower than the minimum bitrate, than an error is returned.

Parameters

[in]	bitrate	Desired bitrate
[in]	clock_source	SPI communication clock source to be used
[out]	spck_div	Memory location to store bitrate register settings.

Return values

FSP_SUCCESS	Valid spbr and brdv values were calculated
FSP_ERR_UNSUPPORTED	Bitrate is not achievable

◆ R_SPI_B_CallbackSet()

fsp_err_t R_SPI_B_CallbackSet (spi_ctrl_t *const *p_api_ctrl*, void(*)(spi_callback_args_t *) *p_callback*, void const *const *p_context*, spi_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements spi_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

4.2.64 Serial Sound Interface (r_ssi)

Modules

Functions

fsp_err_t	R_SSI_Open (i2s_ctrl_t *const p_ctrl, i2s_cfg_t const *const p_cfg)
fsp_err_t	R_SSI_Stop (i2s_ctrl_t *const p_ctrl)
fsp_err_t	R_SSI_StatusGet (i2s_ctrl_t *const p_ctrl, i2s_status_t *const p_status)
fsp_err_t	R_SSI_Write (i2s_ctrl_t *const p_ctrl, void const *const p_src, uint32_t const bytes)
fsp_err_t	R_SSI_Read (i2s_ctrl_t *const p_ctrl, void *const p_dest, uint32_t const bytes)
fsp_err_t	R_SSI_WriteRead (i2s_ctrl_t *const p_ctrl, void const *const p_src, void *const p_dest, uint32_t const bytes)
fsp_err_t	R_SSI_Mute (i2s_ctrl_t *const p_ctrl, i2s_mute_t const mute_enable)
fsp_err_t	R_SSI_Close (i2s_ctrl_t *const p_ctrl)
fsp_err_t	R_SSI_CallbackSet (i2s_ctrl_t *const p_api_ctrl, void(*p_callback)(i2s_callback_args_t *), void const *const p_context, i2s_callback_args_t *const p_callback_memory)

Detailed Description

Driver for the SSIE peripheral on RA MCUs. This module implements the I2S Interface.

Overview

Features

The SSI module supports the following features:

- Transmission and reception of uncompressed audio data using the standard I2S protocol in master mode
- Full-duplex I2S communication (channel 0 only)
- Integration with the DTC transfer module
- Internal connection to GPT timer output to generate the audio clock
- Callback function notification when all data is loaded into the SSI FIFO

Configuration

Build Time Configurations for r_ssi

The following build time configurations are defined in fsp_cfg/r_ssi_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
DTC Support	• Enabled • Disabled	Enabled	If code for DTC transfer support is included in the build.

Configurations for Connectivity > I2S (r_ssi)

This module can be added to the Stacks tab via New Stack > Connectivity > I2S (r_ssi). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_i2s0	Module name.
Channel	Value must be an integer between 0 and 1	0	Specify the I2S channel.
Bit Depth	• 8 Bits • 16 Bits • 18 Bits	16 Bits	Select the bit depth of one sample of audio data.

	• 20 Bits • 22 Bits • 24 Bits • 32 Bits		
Word Length	• 8 Bits • 16 Bits • 24 Bits • 32 Bits • 48 Bits • 64 Bits • 128 Bits • 256 Bits	16 Bits	Select the word length of audio data. Must be at least as large as Data bits.
WS Continue Mode	• Enabled • Disabled	Disabled	Enable WS continue mode to output the word select (WS) pin even when transmission is idle.
Bit Clock Source	• External AUDIO_CLK • Internal AUDIO_CLK	External AUDIO_CLK	Select External AUDIO_CLK for external signal to AUDIO_CLK input pin or Internal AUDIO_CLK for internal connection to MCU specific GPT channel. Please refer to the hardware manual for which GPT channel is connected to the internal signal
Bit Clock Divider	Refer to the RA Configuration tool for available options.	Audio Clock / 1	Select divider used to generate bit clock from audio clock.
Callback	Name must be a valid C symbol	NULL	A user callback function can be provided. If this callback function is provided, it will be called from all three interrupt service routines (ISR).
Transmit Interrupt Priority	MCU Specific Options		Select the transmit interrupt priority.
Receive Interrupt Priority	MCU Specific Options		Select the receive interrupt priority.
Idle/Error Interrupt Priority	MCU Specific Options		Select the Idle/Error interrupt priority.

Clock Configuration

The SSI peripheral runs on PCLKB. The PCLKB frequency can be configured on the **Clocks** tab of the

RA Configuration editor. The SSI audio clock can optionally be supplied from an external source through the AUDIO_CLK pin in master mode.

Pin Configuration

The SSI uses the following pins:

- AUDIO_CLK (optional, master mode only): The AUDIO_CLK pin is used to supply the audio clock from an external source.
- SSIBCKn: Bit clock pin for channel n
- SSILRCKn/SSIFSn: Channel selection pin for channel n
- SSIRXD0: Reception pin for channel 0
- SSITXD0: Transmission pin for channel 0
- SSIDATA1: Transmission or reception pin for channel 1

Usage Notes

SSI Frames

An SSI frame is 2 samples worth of data. The frame boundary (end of previous frame, start of next frame) is on the falling edge of the SSILRCKn signal.

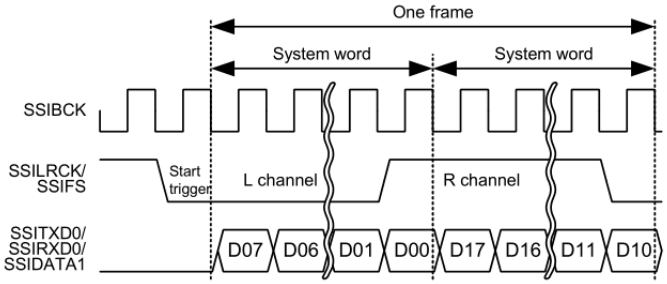

Figure 176: SSI Frame Diagram (8-bit word, 8-bit samples)

Note

If the word length is longer than the sample bit depth, padding bits (0) will be added after the sample.

Audio Data

Only uncompressed PCM data is supported.

Data arrays have the following size, alignment, and length based on the "Bit Depth" setting:

Bit Depth	Array Data Type	Required Alignment	Required Length (bytes)
8 Bits	8-bit integer	1 byte alignment	Multiple of 2
16 Bits	16-bit integer	2 byte alignment	Multiple of 4
18 Bits	32-bit integer, right justified	4 byte alignment	Multiple of 8
20 Bits	32-bit integer, right justified	4 byte alignment	Multiple of 8

22 Bits	32-bit integer, right justified	4 byte alignment	Multiple of 8
24 Bits	32-bit integer, right justified	4 byte alignment	Multiple of 8
32 Bits	32-bit integer	4 byte alignment	Multiple of 8

Note

The length of the array must be a multiple of 2 when the data type is the recommended data type. The 2 represents the frame size (left and right channel) of I2S communication. The SSIE peripheral does not support odd read/write lengths in I2S mode.

Audio Clock

The audio clock is only required for master mode.

Audio Clock Frequency

The bit clock frequency is the product of the sampling frequency and channels and bits per system word:

bit_clock (Hz) = sampling_frequency (Hz) * channels * system_word_bits

I2S data always has 2 channels.

For example, the bit clock for transmitting 2 channels of 16-bit data (using a 16-bit system word) at 44100 Hz would be:

44100 * 2 * 16 = 1,411,200 Hz

The audio clock frequency is used to generate the bit clock frequency. It must be a multiple of the bit clock frequency. Refer to the Bit Clock Divider configuration for divider options. The input audio clock frequency must be:

audio_clock (Hz) = desired_bit_clock (Hz) * bit_clock_divider

To get a bit clock of 1.4 MHz from an audio clock of 2.8 MHz, select the divider Audio Clock / 2.

Audio Clock Source

The audio clock source can come from:

- An external source input to the AUDIO_CLK pin
- An internal connection to the GPT timer output

Note

When using the internal GPT timer output, Pin Output Support must be Enabled, and GTIOCA Output Enabled must be True.
See the SSIE section in the MCU hardware manual for information about which GPT channel may be used.

Limitations

Developers should be aware of the following limitations when using the SSI:

- When using channel 1, full duplex communication is not possible. Only tranmission or reception is possible.
- SSI must go idle before changing the communication mode (between read only, write only, and full duplex)

Examples

Basic Example

This is a basic example of minimal use of the SSI in an application.

```
#define SSI_EXAMPLE_SAMPLES_TO_TRANSFER (1024)
#define SSI_EXAMPLE_TONE_FREQUENCY_HZ (800)
int16_t g_src[SSI_EXAMPLE_SAMPLES_TO_TRANSFER];
int16_t g_dest[SSI_EXAMPLE_SAMPLES_TO_TRANSFER];
void ssi_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Create a stereo sine wave. Using formula sample = sin(2 * pi * tone_frequency * t
/ sampling_frequency) */
    uint32_t freq = SSI_EXAMPLE_TONE_FREQUENCY_HZ;
 for (uint32_t t = 0; t < SSI_EXAMPLE_SAMPLES_TO_TRANSFER / 2; t += 1)
    {
 float input = (((float) (freq * t)) * (M_TWOPI)) /
SSI_EXAMPLE_AUDIO_SAMPLING_FREQUENCY_HZ;
       g_src[2 * t]    = (int16_t) ((INT16_MAX * sinf(input)));
       g_src[2 * t + 1] = (int16_t) ((INT16_MAX * sinf(input)));
    }
 /* Initialize the module. */
    err = R_SSI_Open(&g_i2s_ctrl, &g_i2s_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Transfer data. */
    (void) R_SSI_WriteRead(&g_i2s_ctrl,
                           (uint8_t *) &g_src[0],
                           (uint8_t *) &g_dest[0],
                           SSI_EXAMPLE_SAMPLES_TO_TRANSFER * sizeof(int16_t));
}
```

Streaming Example

This is an example of using SSI to stream audio data. This application uses a double buffer to store PCM sine wave data. It starts transmitting in the main loop, then loads the next buffer if it is ready in the callback. If the next buffer is not ready, a flag is set in the callback so the application knows to restart transmission in the main loop.

This example also checks the return code of R_SSI_Write() because R_SSI_Write() can return an error if a transmit overflow occurs before the FIFO is reloaded. If a transmit overflow occurs before the FIFO is reloaded, the SSI will be stopped in the error interrupt, and it cannot be restarted until the I2S_EVENT_IDLE callback is received.

```
#define SSI_STREAMING_EXAMPLE_AUDIO_SAMPLING_FREQUENCY_HZ (22050)
#define SSI_STREAMING_EXAMPLE_SAMPLES_PER_CHUNK (1024)
#define SSI_STREAMING_EXAMPLE_TONE_FREQUENCY_HZ (800)
int16_t       g_stream_src[2][SSI_EXAMPLE_SAMPLES_TO_TRANSFER];
uint32_t      g_buffer_index          = 0;
volatile bool g_send_data_in_main_loop = true;
volatile bool g_data_ready = false;
/* Example callback called when SSI is ready for more data. */
void ssi_example_callback (i2s_callback_args_t * p_args)
{
 /* Reload the FIFO if we hit the transmit watermark or restart transmission if the
SSI is idle because it was
  * stopped after a transmit FIFO overflow. */
 if ((I2S_EVENT_TX_EMPTY == p_args->event) || (I2S_EVENT_IDLE == p_args->event))
    {
 if (g_data_ready)
     {
 /* Reload FIFO and handle errors. */
           ssi_example_write();
     }
 else
     {
 /* Data was not ready yet, send it in the main loop. */
           g_send_data_in_main_loop = true;
     }
```

```
    }
}
/* Load the transmit FIFO and check for error conditions. */
void ssi_example_write (void)
{
 /* Transfer data. This call is non-blocking. */
 fsp_err_t err = R_SSI_Write(&g_i2s_ctrl,
                             (uint8_t *) &g_stream_src[g_buffer_index][0],
                             SSI_STREAMING_EXAMPLE_SAMPLES_PER_CHUNK * sizeof
(int16_t));
 if (FSP_SUCCESS == err)
    {
 /* Switch the buffer after data is sent. */
       g_buffer_index = !g_buffer_index;
 /* Allow loop to calculate next buffer only if transmission was successful. */
       g_data_ready = false;
    }
 else
    {
 /* Getting here most likely means a transmit overflow occurred before the FIFO could
be reloaded. The
  * application must wait until the SSI is idle, then restart transmission. In this
example, the idle
  * callback transmits data or resets the flag g_send_data_in_main_loop. */
    }
}
/* Calculate samples. This example is just a sine wave. For this type of data, it
would be better to calculate
 * one period and loop it. This example should be updated for the audio data used by
the application. */
void ssi_example_calculate_samples (uint32_t buffer_index)
{
 static uint32_t t = 0U;
 /* Create a stereo sine wave. Using formula sample = sin(2 * pi * tone_frequency * t
```

```
/ sampling_frequency) */
    uint32_t freq = SSI_STREAMING_EXAMPLE_TONE_FREQUENCY_HZ;
 for (uint32_t i = 0; i < SSI_STREAMING_EXAMPLE_SAMPLES_PER_CHUNK / 2; i += 1)
    {
 float input = (((float) (freq * t)) * M_TWOPI) /
SSI_STREAMING_EXAMPLE_AUDIO_SAMPLING_FREQUENCY_HZ;
       t++;
 /* Store sample twice, once for left channel and once for right channel. */
       int16_t sample = (int16_t) ((INT16_MAX * sinf(input)));
       g_stream_src[buffer_index][2 * i]    = sample;
       g_stream_src[buffer_index][2 * i + 1] = sample;
    }
 /* Data is ready to be sent in the interrupt. */
    g_data_ready = true;
}
void ssi_streaming_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initialize the module. */
    err = R_SSI_Open(&g_i2s_ctrl, &g_i2s_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 while (true)
    {
 /* Prepare data in a buffer that is not currently used for transmission. */
       ssi_example_calculate_samples(g_buffer_index);
 /* Send data in main loop the first time, and if it was not ready in the interrupt.
*/
 if (g_send_data_in_main_loop)
     {
 /* Clear flag. */
           g_send_data_in_main_loop = false;
 /* Reload FIFO and handle errors. */
           ssi_example_write();
```

```
    }
/* If the next buffer is ready, wait for the data to be sent in the interrupt. */
while (g_data_ready)
    {
/* Do nothing. */
    }
  }
}
```

Data Structures

struct	ssi_instance_ctrl_t
struct	ssi_extended_cfg_t

Enumerations

enum	ssi_audio_clock_t
enum	ssi_clock_div_t

Data Structure Documentation

◆ ssi_instance_ctrl_t

struct ssi_instance_ctrl_t
Channel instance control block. DO NOT INITIALIZE. Initialization occurs when i2s_api_t::open is called.

◆ ssi_extended_cfg_t

struct ssi_extended_cfg_t		
SSI configuration extension. This extension is optional.		
Data Fields		
ssi_audio_clock_t	audio_clock	Audio clock source, default is SSI_AUDIO_CLOCK_EXTERNAL.
ssi_clock_div_t	bit_clock_div	Select bit clock division ratio.

Enumeration Type Documentation

◆ ssi_audio_clock_t

enum ssi_audio_clock_t	
Audio clock source.	
Enumerator	
SSI_AUDIO_CLOCK_EXTERNAL	Audio clock source is the AUDIO_CLK input pin.
SSI_AUDIO_CLOCK_INTERNAL	Audio clock source is internal connection to a MCU specific GPT channel output.

◆ ssi_clock_div_t

enum ssi_clock_div_t	
Bit clock division ratio. Bit clock frequency = audio clock frequency / bit clock division ratio.	
Enumerator	
SSI_CLOCK_DIV_1	Clock divisor 1.
SSI_CLOCK_DIV_2	Clock divisor 2.
SSI_CLOCK_DIV_4	Clock divisor 4.
SSI_CLOCK_DIV_6	Clock divisor 6.
SSI_CLOCK_DIV_8	Clock divisor 8.
SSI_CLOCK_DIV_12	Clock divisor 12.
SSI_CLOCK_DIV_16	Clock divisor 16.
SSI_CLOCK_DIV_24	Clock divisor 24.
SSI_CLOCK_DIV_32	Clock divisor 32.
SSI_CLOCK_DIV_48	Clock divisor 48.
SSI_CLOCK_DIV_64	Clock divisor 64.
SSI_CLOCK_DIV_96	Clock divisor 96.
SSI_CLOCK_DIV_128	Clock divisor 128.

Function Documentation

◆ R_SSI_Open()

fsp_err_t R_SSI_Open (i2s_ctrl_t *const *p_ctrl*, i2s_cfg_t const *const *p_cfg*)

Opens the SSI. Implements i2s_api_t::open.

This function sets this clock divisor and the configurations specified in i2s_cfg_t. It also opens the timer and transfer instances if they are provided.

Return values

FSP_SUCCESS	Ready for I2S communication.
FSP_ERR_ASSERTION	The pointer to p_ctrl or p_cfg is null.
FSP_ERR_ALREADY_OPEN	The control block has already been opened.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	Channel number is not available on this MCU.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::open

◆ R_SSI_Stop()

fsp_err_t R_SSI_Stop (i2s_ctrl_t *const *p_ctrl*)

Stops SSI. Implements i2s_api_t::stop.

This function disables both transmission and reception, and disables any transfer instances used.

The SSI will stop on the next frame boundary. Do not restart SSI until it is idle.

Return values

FSP_SUCCESS	I2S communication stop request issued.
FSP_ERR_ASSERTION	The pointer to p_ctrl was null.
FSP_ERR_NOT_OPEN	The channel is not opened.

Returns

See Common Error Codes or lower level drivers for other possible return codes.

◆ R_SSI_StatusGet()

fsp_err_t R_SSI_StatusGet (i2s_ctrl_t *const *p_ctrl*, i2s_status_t *const *p_status*)

Gets SSI status and stores it in provided pointer p_status. Implements i2s_api_t::statusGet.

Return values

FSP_SUCCESS	Information stored successfully.
FSP_ERR_ASSERTION	The p_instance_ctrl or p_status parameter was null.
FSP_ERR_NOT_OPEN	The channel is not opened.

◆ R_SSI_Write()

fsp_err_t R_SSI_Write (i2s_ctrl_t *const *p_ctrl*, void const *const *p_src*, uint32_t const *bytes*)

Writes data buffer to SSI. Implements i2s_api_t::write.

This function resets the transfer if the transfer interface is used, or writes the length of data that fits in the FIFO then stores the remaining write buffer in the control block to be written in the ISR.

Write() cannot be called if another write(), read() or writeRead() operation is in progress. Write can be called when the SSI is idle, or after the I2S_EVENT_TX_EMPTY event.

Return values

FSP_SUCCESS	Write initiated successfully.
FSP_ERR_ASSERTION	The pointer to p_ctrl or p_src was null, or bytes requested was 0.
FSP_ERR_IN_USE	Another transfer is in progress, data was not written.
FSP_ERR_NOT_OPEN	The channel is not opened.
FSP_ERR_UNDERFLOW	A transmit underflow error is pending. Wait for the SSI to go idle before resuming communication.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::reset

◆ R_SSI_Read()

fsp_err_t R_SSI_Read (i2s_ctrl_t *const *p_ctrl*, void *const *p_dest*, uint32_t const *bytes*)

Reads data into provided buffer. Implements i2s_api_t::read.

This function resets the transfer if the transfer interface is used, or reads the length of data available in the FIFO then stores the remaining read buffer in the control block to be filled in the ISR.

Read() cannot be called if another write(), read() or writeRead() operation is in progress. Read can be called when the SSI is idle, or after the I2S_EVENT_RX_FULL event.

Return values

FSP_SUCCESS	Read initiated successfully.
FSP_ERR_IN_USE	Peripheral is in the wrong mode or not idle.
FSP_ERR_ASSERTION	The pointer to p_ctrl or p_dest was null, or bytes requested was 0.
FSP_ERR_NOT_OPEN	The channel is not opened.
FSP_ERR_OVERFLOW	A receive overflow error is pending. Wait for the SSI to go idle before resuming communication.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::reset

◆ R_SSI_WriteRead()

fsp_err_t R_SSI_WriteRead (i2s_ctrl_t *const *p_ctrl*, void const *const *p_src*, void *const *p_dest*, uint32_t const *bytes*)

Writes from source buffer and reads data into destination buffer. Implements i2s_api_t::writeRead.

This function calls R_SSI_Write and R_SSI_Read.

writeRead() cannot be called if another write(), read() or writeRead() operation is in progress. writeRead() can be called when the SSI is idle, or after the I2S_EVENT_RX_FULL event.

Return values

FSP_SUCCESS	Write and read initiated successfully.
FSP_ERR_IN_USE	Peripheral is in the wrong mode or not idle.
FSP_ERR_ASSERTION	An input parameter was invalid.
FSP_ERR_NOT_OPEN	The channel is not opened.
FSP_ERR_UNDERFLOW	A transmit underflow error is pending. Wait for the SSI to go idle before resuming communication.
FSP_ERR_OVERFLOW	A receive overflow error is pending. Wait for the SSI to go idle before resuming communication.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- transfer_api_t::reset

◆ R_SSI_Mute()

fsp_err_t R_SSI_Mute (i2s_ctrl_t *const *p_ctrl*, i2s_mute_t const *mute_enable*)

Mutes SSI on the next frame boundary. Implements i2s_api_t::mute.

Data is still written while mute is enabled, but the transmit line outputs zeros.

Return values

FSP_SUCCESS	Transmission is muted.
FSP_ERR_ASSERTION	The pointer to p_ctrl was null.
FSP_ERR_NOT_OPEN	The channel is not opened.

◆ R_SSI_Close()

fsp_err_t R_SSI_Close (i2s_ctrl_t *const *p_ctrl*)

Closes SSI. Implements i2s_api_t::close.

This function powers down the SSI and closes the lower level timer and transfer drivers if they are used.

Return values

FSP_SUCCESS	Device closed successfully.
FSP_ERR_ASSERTION	The pointer to p_ctrl was null.
FSP_ERR_NOT_OPEN	The channel is not opened.

◆ R_SSI_CallbackSet()

fsp_err_t R_SSI_CallbackSet (i2s_ctrl_t *const *p_api_ctrl*, void(*)(i2s_callback_args_t *) *p_callback*, void const *const *p_context*, i2s_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements i2s_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

Detailed Description

Driver for the USB peripheral on RA MCUs. This module implements the USB Interface.

Overview

The USB module operates in combination with the device class drivers provided by Renesas to form a complete USB stack.

Features

The USB module has the following key features:

- USB Host mode
  - Enumerates Low/Full/High-speed devices (see note below)
  - Automatic transfer error determination and retry
- USB Peripheral mode
  - Supports USB1.1/2.0/3.0 hosts
- Automatic processing of device connect/disconnect, suspend/resume, and USB bus reset
- Up to 10 pipes
  - Control transfers supported on pipe 0
  - Data transfer on pipes 1 to 9 (Bulk or Interrupt)
- Functions with or without an RTOS

Note

Supported speeds are dependent on the MCU.

Configuration

Build Time Configurations for r_usb_basic

The following build time configurations are defined in fsp_cfg/r_usb_basic_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
PLL Frequency	MCU Specific Options		Specify the PLL frequency supplied to the USB module. This

			setting only applies to USB1 (not USB0).
CPU Bus Access Wait Cycles	MCU Specific Options		This setting controls the delay for consecutive USB peripheral register access. Set this value to a number of CPU cycles that is equivalent to 40.8ns or more.
Battery Charging	MCU Specific Options		Specify whether or not to include battery charging functionality.
Power IC Shutdown Polarity	MCU Specific Options		Select the polarity of the Shutdown signal on the power supply IC (if provided).
Dedicated Charging Port (DCP) Mode	MCU Specific Options		When enabled, USB communication is disabled and the port is used for charging only.
Notifications for SET_INTERFACE/SET_FEATURE/CLEAR_FEATURE	• Disabled • Enabled	Enabled	When enabled, the application will receive notifications for SET_INTERFACE, SET_FEATURE and CLEAR_FEATURE messages.
Double Buffering	• Disabled • Enabled	Enabled	When enabled, the FIFOs for Pipes 1-5 are double-buffered.
Continuous Transfer Mode	MCU Specific Options		Enable or disable continuous transfer mode.
LDO Regulator	MCU Specific Options		Enable or disable LDO regulator.
DMA Support	MCU Specific Options		Enable or disable DMA support for the USB module.
DMA Source Address	• DMA Disabled • FS Address • HS Address	DMA Disabled	Set this to match the speed mode when DMA is enabled. Otherwise, set to 'DMA Disabled'.
DMA Destination Address	• DMA Disabled • FS Address • HS Address	DMA Disabled	Set this to match the speed mode when DMA is enabled. Otherwise, set to 'DMA Disabled'.

USB Compliance Test mode	• Enabled • Disabled	Disabled	Display the information required to take the compliance test.
USB TPL table name	Enter the TPL table name.	NULL	Enter the name of the TPL Table.

Configurations for Connectivity > USB (r_usb_basic)

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_basic0	Module name.
USB Mode	• Host mode • Peri mode • OTG mode	Host mode	Select the usb mode.
USB Speed	• Full Speed • Hi Speed • Low Speed	Full Speed	Select the USB speed.
USB Module Number	• USB_IP0 Port • USB_IP1 Port	USB_IP0 Port	Specify the USB module number to be used.
USB Device Class	• Peripheral Communications Device Class • Peripheral Human Interface Device Class • Peripheral Mass Storage Class • Peripheral Vendor Class • Peripheral Audio Class • Host Communications Device Class • Host Human Interface Device Class • Host Mass Storage Class • Host Vendor Class	Peripheral Communications Device Class	Select the USB device class.
USB Descriptor	USB Descriptor must be a valid C symbol.	g_usb_descriptor	Enter the name of the descriptor to be used. For how to create a descriptor structure, refer to the Descriptor definition chapter in the usb_basic manual. Specify NULL when

			using the Host class.
USB Compliance Callback	Compliance Callback must be a valid C symbol.	NULL	Set the callback for compliance tests here.
USBFS Interrupt Priority	MCU Specific Options		Select the interrupt priority used by the main USBFS ISR.
USBFS Resume Priority	MCU Specific Options		Select the interrupt priority used by the USBFS Resume ISR.
USBFS D0FIFO Interrupt Priority	MCU Specific Options		Select the interrupt priority used by the USBFS D0FIFO.
USBFS D1FIFO Interrupt Priority	MCU Specific Options		Select the interrupt priority used by the USBFS D1FIFO.
USBHS Interrupt Priority	MCU Specific Options		Select the interrupt priority used by the main USBHS ISR.
USBHS D0FIFO Interrupt Priority	MCU Specific Options		Select the interrupt priority used by the USBHS D0FIFO ISR.
USBHS D1FIFO Interrupt Priority	MCU Specific Options		Select the interrupt priority used by the USBHS D1FIFO ISR.
USB RTOS Callback	Enter the address of the function.	NULL	If an FreeRTOS is used, set the callback function here.
USB Callback Context	Enter the address of the context.	NULL	Set the callback context here.

Clock Configuration

The USB module uses PLL as the clock source. The PLL frequency can be set in the **Clocks** tab of the configuration editor or by using the CGC Interface at run-time.

Note

When using HOCO as the PLL source on Cortex M33 parts the FLL function must be enabled for correct USB operation. Refer to the MCU Family -> Clocks group of the BSP properties in the RA configuration tool to adjust FLL settings.

Pin Configuration

In peripheral mode the USB_VBUS and/or USBHS_VBUS pins are used to detect the USB connection status (connected or disconnected) and should be connected to the USB VBUS signal.

Note

USB_VBUS and USBHS_VBUS are 5V-tolerant pins.

In host mode the USBHS_VBUSEN, USBHS_OVRCURA and USBHS_OVRCURB pins should be connected to the relevant pins of an external power supply IC, if available. These pins will be used to manage the USB VBUS supply.

DMA Configuration

When using DMA with USB the following properties must be configured for each DMAC module:

Config Name	Select Name	Description
Transfer Size	2 Bytes 4 Bytes	In FS mode, select "2 Bytes" In HS mode, select "4 Bytes"
Activation source	USBFS FIFO 0 USBFS FIFO 1 USBHS FIFO 0 USBHS FIFO 1	USB FS Reception USB FS Transmission USB HS Reception USB HS Transmission

Descriptor definition

In Peripheral mode, the usb_descriptor_t structure stores descriptor information including the device and configuration descriptors. The values set in this structure are sent to the USB host as part of enumeration.

```
typedef struct usb_descriptor
{
    uint8_t *p_device;    /* Pointer to device descriptor */
    uint8_t *p_config_f; /* Pointer to full-speed configuration descriptor */
    uint8_t *p_config_h; /* Pointer to high-speed configuration descriptor (HS only)
*/
    uint8_t *p_qualifier; /* Pointer to device qualifier descriptor (HS only) */
    uint8_t **pp_string; /* Pointer to string descriptor table */
    uint8_t num_string;   /* Number of strings in table */
} usb_descriptor_t;
```

Note

Even in high-speed mode the full-speed configuration must be made available:

```
/* Example USB FS descriptor struct */
usb_descriptor_t g_usb_descriptor =
{
    smp_device,
    smp_config_f,
    NULL,
```

```
    NULL,
    smp_str_table,
    3,
};
/* Example USB HS descriptor struct */
usb_descriptor_t g_usb_descriptor =
{
    smp_device,
    smp_config_f,
    smp_config_h,
    smp_qualifier,
    smp_str_table,
    3,
};
```

String Descriptor

This USB driver requires string descriptors to be registered in the string descriptor table. Use the following format to define the elements:

```
/* String descriptor 0 is reserved for language ID information */
uint8_t str_descriptor_0[]
{
    0x04,      /* Length */
    0x03,      /* Descriptor type */
    0x09, 0x04 /* Language ID */
};
uint8_t str_descriptor_manufacturer[] =
{
    0x10,      /* Length */
    0x03,      /* Descriptor type */
 'R', 0x00,
 'E', 0x00,
 'N', 0x00,
 'E', 0x00,
```

```
 'S', 0x00,
 'A', 0x00,
 'S', 0x00
};
uint8_t str_descriptor_product[] =
{
    0x12,      /* Length */
    0x03,      /* Descriptor type */
 'C', 0x00,
 'D', 0x00,
 'C', 0x00,
 '_', 0x00,
 'D', 0x00,
 'E', 0x00,
 'M', 0x00,
 'O', 0x00
};
/* String descriptor table */
uint8_t * smp_str_table[] =
{
    str_descriptor_0,            /* Index: 0 */
    str_descriptor_manufacturer, /* Index: 1 */
    str_descriptor_product,      /* Index: 2 */
};
```

Note

Set the string index values in the device/configuration descriptors (iManufacturer, iConfiguration etc.) to the index of the desired string in the string descriptor table. For example, in the table below, the manufacturer is described in ***str_descriptor_manufacturer*** *and the value of iManufacturer in the device descriptor is* ***1****.*

Other Descriptors

Refer to the Universal Serial Bus Revision 2.0 specification (http://www.usb.org/developers/docs/) for details on how to construct the device, configuration and qualifier descriptors.

Usage Notes

Program Structure

USB applications (whether using an RTOS or not) should be written as an event-handling loop. Either a callback function (RTOS only) or R_USB_EventGet should be used to provide event data to the application loop where a switch statement handles the event.

Note

1.The USB_STATUS_CONFIGURED event should be confirmed before calling R_USB_Read or R_USB_Write.
2.When attaching to USB Host, Suspend event is notified to the application program in USB peripheral mode. Notification of this event to the application program does not affect the operation.

Limitations

Developers should be aware of the following limitations when using the USB driver:

- The current USB driver does not support hub.
- In USB host mode, the module does not support suspend during data transfers. Execute suspend only after confirming that all transfers are complete.
- Multiconfigurations are not supported.
- This driver does not support CPU transfers using the D0FIFO/D1FIFO register.
- Only one device-class driver may be used at a time.
- The USB Hi-Speed module only supports Hi-Speed operation.
- In USB host mode, this USB driver does not support the composite device.
- The user can not specify DMA transfer to USB IP0 and IP1 modules at the same time when using USB multi-port feature. USB multi-port function: Simultaneous operation feature of USB Host and Peripheral.

Compliance Test

Please set as follows to the following items in RA configuration (r_usb_basic) when doing the compliance test.

1.USB Compliance Test mode Set "Enabled" in this item.

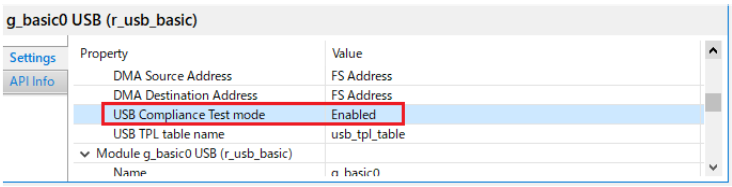

Figure 177: Compliance Test Setting

2.USB TPL table name. Set the start address of TPL(Target Peripheral List) defined in the application program.

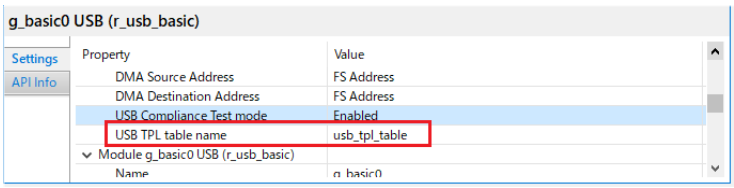

Figure 178: TPL Start Address Setting

Please refer to the following about how to define for TPL.
The following example is when two devices are set in TPL.

```
const uint16_t usb_tpl_table[] =
{
    2,                /* Number of tpl */
    0,                /* Reserved */
    0x0123, 0x4567,   /* Vendor ID, Product ID (1st device) */
    0x89ab, 0xcdef    /* Vendor ID, Product ID (2nd device) */
};
```

3.USB Compliance Callback Set the start address of the callback function defined in the application program.

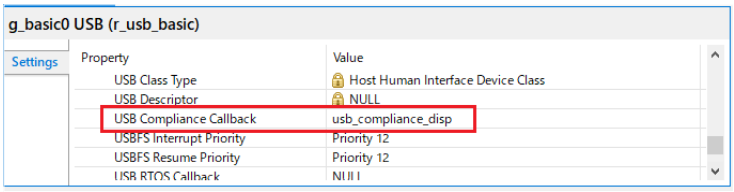

Figure 179: Compliance Callback Setting

The user needs to create this callback function by referring to the following.

```
void usb_compliance_disp (void * param)
{
    usb_compliance_t    *disp_data;
    uint8_t             print_data[32];
    disp_data = (usb_compliance_t*)param;
 switch(disp_data->status)
    {
 case USB_COMPLIANCETEST_ATTACH:           /* Device Attach Detection */
           display("\nATTACH \n");
 break;
 case USB_COMPLIANCETEST_DETACH:           /* Device Detach Detection */
           display("\nDETACH \n");
 break;
 case USB_COMPLIANCETEST_TPL:              /* TPL device connect */
```

```
            display("\nTPL PID:%04x VID:%04x \n",disp_data->pid, disp_data->vid);
 break;
 case USB_COMPLIANCETEST_NOTTPL:            /* Not TPL device connect */
            display("\nNOTPL PID:%04x VID:%04x \n",disp_data->pid, disp_data->vid);
 break;
 case USB_COMPLIANCETEST_HUB:               /* USB Hub connect */
            display("\nHub    \n");
 break;
 case USB_COMPLIANCETEST_OVRC:             /* over current */
 break;
 case USB_COMPLIANCETEST_NORES:             /* Responce Time out for Control Read
Transfer */
            display("\nNOTRESP \n");
 break;
 case USB_COMPLIANCETEST_SETUP_ERR:         /* Setup Transaction Error */
 break;
 default:
 break;
    }
} /* End of function usb_compliance_disp() */
```

Please replace the display function described in the example with the display function created by the customer.

TrustZone

The USB driver for FreeRTOS cannot be allocated in Secure region.

UCLK setting

Enable UCLK in "Clocks" tab on e2 studio when using the following MCU.

1. RA6M4

Examples

USB Basic Example

This is a basic example of minimal use of the USB in an application.

```
void usb_basic_example (void)
{
    usb_event_info_t event_info;
 usb_status_t    event;
    g_usb_on_usb.open(&g_basic0_ctrl, &g_basic0_cfg);
 /* Loop back between PC(TerminalSoft) and USB MCU */
 while (1)
    {
       g_usb_on_usb.eventGet(&event_info, &event);
 switch (event)
     {
 case USB_STATUS_CONFIGURED:
 case USB_STATUS_WRITE_COMPLETE:
               g_usb_on_usb.read(&g_basic0_ctrl, g_buf, DATA_LEN, USB_CLASS_PCDC);
 break;
 case USB_STATUS_READ_COMPLETE:
               g_usb_on_usb.write(&g_basic0_ctrl, g_buf, event_info.data_size,
USB_CLASS_PCDC);
 break;
 case USB_STATUS_REQUEST:   /* Receive Class Request */
 if (USB_PCDC_SET_LINE_CODING == (event_info.setup.request_type & USB_BREQUEST))
     {
                  g_usb_on_usb.periControlDataGet(&g_basic0_ctrl, (uint8_t *)
&g_line_coding, LINE_CODING_LENGTH);
     }
 else if (USB_PCDC_GET_LINE_CODING == (event_info.setup.request_type & USB_BREQUEST))
     {
                  g_usb_on_usb.periControlDataSet(&g_basic0_ctrl, (uint8_t *)
&g_line_coding, LINE_CODING_LENGTH);
     }
 else
     {
                  g_usb_on_usb.periControlStatusSet(&g_basic0_ctrl,
USB_SETUP_STATUS_ACK);
```

```
     }
 break;
 case USB_STATUS_SUSPEND:
 case USB_STATUS_DETACH:
 break;
 default:
 break;
     }
   }
} /* End of function usb_main() */
```

Typedefs

typedef usb_event_info_t usb_instance_ctrl_t

Typedef Documentation

◆ usb_instance_ctrl_t

typedef usb_event_info_t usb_instance_ctrl_t

ICU private control block. DO NOT MODIFY. Initialization occurs when R_ICU_ExternalIrqOpen is called.

Function Documentation

◆ R_USB_Open()

fsp_err_t R_USB_Open (usb_ctrl_t *const *p_api_ctrl*, usb_cfg_t const *const *p_cfg*)

Applies power to the USB module specified in the argument (p_ctrl).

Return values

FSP_SUCCESS	Success in open.
FSP_ERR_USB_BUSY	Specified USB module now in use.
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_USB_PARAMETER	Parameter error.

Note

Do not call this API in the following function.
(1). Interrupt function.
(2). Callback function (for RTOS).

◆ R_USB_Close()

fsp_err_t R_USB_Close (usb_ctrl_t *const *p_api_ctrl*)

Terminates power to the USB module specified in argument (p_ctrl). USB0 module stops when USB_IP0 is specified to the member (module), USB1 module stops when USB_IP1 is specified to the member (module).

Return values

FSP_SUCCESS	Success.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_USB_NOT_OPEN	USB module is not open.
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_PARAMETER	Parameter error.

Note

Do not call this API in the following function.
(1). Interrupt function.
(2). Callback function (for RTOS).

◆ R_USB_Read()

fsp_err_t R_USB_Read (usb_ctrl_t *const *p_api_ctrl*, uint8_t * *p_buf*, uint32_t *size*, uint8_t *destination*)

Bulk/interrupt data transfer and control data transfer.

1. Bulk/interrupt data transfer

   Requests USB data read (bulk/interrupt transfer). The read data is stored in the area specified by argument (p_buf). After data read is completed, confirm the operation by checking the return value (USB_STATUS_READ_COMPLETE) of the R_USB_GetEvent function. The received data size is set in member (size) of the usb_ctrl_t structure. To figure out the size of the data when a read is complete, check the return value (USB_STATUS_READ_COMPLETE) of the R_USB_GetEvent function, and then refer to the member (size) of the usb_crtl_t structure.

2. Control data transfer

   The R_USB_Read function is used to receive data in the data stage and the R_USB_Write function is used to send data to the USB host.

Return values

FSP_SUCCESS	Successfully completed (Data read request completed).
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_USB_BUSY	Data receive request already in process for USB device with same device address.
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_PARAMETER	Parameter error.

Note

Do not call this API in the following function.
(1). Interrupt function.
(2). Callback function (for RTOS).

◆ R_USB_Write()

fsp_err_t R_USB_Write (usb_ctrl_t *const *p_api_ctrl*, uint8_t const *const *p_buf*, uint32_t *size*, uint8_t *destination*)

Bulk/Interrupt data transfer and control data transfer.

1. Bulk/Interrupt data transfer

   Requests USB data write (bulk/interrupt transfer). Stores write data in area specified by argument (p_buf). Set the device class type in usb_ctrl_t structure member (type). Confirm after data write is completed by checking the return value (USB_STATUS_WRITE_COMPLETE) of the R_USB_GetEvent function. For sending a zero-length packet, please refer the following Note.

2. Control data transfer

   The R_USB_Read function is used to receive data in the data stage and the R_USB_Write function is used to send data to the USB host.

Return values

FSP_SUCCESS	Successfully completed. (Data write request completed)
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_USB_BUSY	Data write request already in process for USB device with same device address.
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_PARAMETER	Parameter error.

Note

1.The user needs to send the zero-length packet(ZLP) since this USB driver does not send the ZLP automatically. When sending a ZLP, the user sets USB_NULL in the third argument (size) of R_USB_Write function as follow.
e.g)
R_USB_Write (&g_basic0_ctrl, &g_buf, USB_NULL);
2.Do not call this API in the following function.
(1). Interrupt function.
(2). Callback function (for RTOS).

◆ R_USB_Stop()

fsp_err_t R_USB_Stop (usb_ctrl_t *const *p_api_ctrl*, usb_transfer_t *direction*, uint8_t *destination*)

Requests a data read/write transfer be terminated when a data read/write transfer is being performed.

To stop a data read, set USB_TRANSFER_READ as the argument (type); to stop a data write, specify USB_WRITE as the argument (type).

Return values

FSP_SUCCESS	Successfully completed. (stop completed)
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_BUSY	Stop processing is called multiple times.
FSP_ERR_USB_PARAMETER	Parameter error.

Note

Do not call this API in the following function.
(1). Interrupt function.
(2). Callback function (for RTOS).

◆ R_USB_Suspend()

fsp_err_t R_USB_Suspend (usb_ctrl_t *const *p_api_ctrl*)

Sends a SUSPEND signal from the USB module assigned to the member (module) of the usb_crtl_t structure.

After the suspend request is completed, confirm the operation with the return value (USB_STATUS_SUSPEND) of the R_USB_EventGet function.

Return values

FSP_SUCCESS	Successfully completed.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_USB_BUSY	During a suspend request to the specified USB module, or when the USB module is already in the suspended state.
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_PARAMETER	Parameter error.

Note

Do not call this API in the following function.
(1). Interrupt function.
(2). Callback function (for RTOS).

◆ R_USB_Resume()

fsp_err_t R_USB_Resume (usb_ctrl_t *const *p_api_ctrl*)

Sends a RESUME signal from the USB module assigned to the member (module) of the usb_ctrl_tstructure.

After the resume request is completed, confirm the operation with the return value (USB_STATUS_RESUME) of the R_USB_EventGet function

Return values

FSP_SUCCESS	Successfully completed.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_USB_BUSY	Resume already requested for same device address. (USB host mode only)
FSP_ERR_USB_NOT_SUSPEND	USB device is not in the SUSPEND state.
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_PARAMETER	Parameter error.

Note

Do not call this API in the following function.
(1). Interrupt function.
(2). Callback function (for RTOS).

◆ R_USB_VbusSet()

fsp_err_t R_USB_VbusSet (usb_ctrl_t *const *p_api_ctrl*, uint16_t *state*)

Specifies starting or stopping the VBUS supply.

Return values

FSP_SUCCESS	Successful completion. (VBUS supply start/stop completed)
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_PARAMETER	Parameter error.

Note

Do not call this API in the following function.
(1). Interrupt function.
(2). Callback function (for RTOS).

◆ R_USB_InfoGet()

fsp_err_t R_USB_InfoGet (usb_ctrl_t *const *p_api_ctrl*, usb_info_t * *p_info*, uint8_t *destination*)

Obtains completed USB-related events.

Return values

FSP_SUCCESS	Successful completion. (VBUS supply start/stop completed)
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_USB_PARAMETER	Parameter error.

◆ R_USB_PipeRead()

fsp_err_t R_USB_PipeRead (usb_ctrl_t *const *p_api_ctrl*, uint8_t * *p_buf*, uint32_t *size*, uint8_t *pipe_number*)

Requests a data read (bulk/interrupt transfer) via the pipe specified in the argument.

The read data is stored in the area specified in the argument (p_buf). After the data read is completed, confirm the operation with the R_USB_GetEvent function return value(USB_STATUS_READ_COMPLETE). To figure out the size of the data when a read is complete, check the return value (USB_STATUS_READ_COMPLETE) of the R_USB_GetEvent function, and then refer to the member (size) of the usb_crtl_t structure.

Return values

FSP_SUCCESS	Successfully completed.
FSP_ERR_USB_BUSY	Specified pipe now handling data receive/send request.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_PARAMETER	Parameter error.

Note

Do not call this API in the following function.
(1). Interrupt function.
(2). Callback function (for RTOS).

◆ R_USB_PipeWrite()

fsp_err_t R_USB_PipeWrite (usb_ctrl_t *const *p_api_ctrl*, uint8_t * *p_buf*, uint32_t *size*, uint8_t *pipe_number*)

Requests a data write (bulk/interrupt transfer).

The write data is stored in the area specified in the argument (p_buf). After data write is completed, confirm the operation with the return value (USB_STATUS_WRITE_COMPLETE) of the EventGet function. For sending a zero-length packet, please refer the following Note.

Return values

FSP_SUCCESS	Successfully completed.
FSP_ERR_USB_BUSY	Specified pipe now handling data receive/send request.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_PARAMETER	Parameter error.

Note

1.The user needs to send the zero-length packet(ZLP) since this USB driver does not send the ZLP automatically. When sending a ZLP, the user sets USB_NULL in the third argument (size) of R_USB_PipeWrite function as follow.
e.g)
R_USB_PipeWrite (&g_basic0_ctrl, &g_buf, USB_NULL, pipe_number);
2.Do not call this API in the following function.
(1). Interrupt function.
(2). Callback function (for RTOS).

◆ R_USB_PipeStop()

fsp_err_t R_USB_PipeStop (usb_ctrl_t *const *p_api_ctrl*, uint8_t *pipe_number*)

Terminates a data read/write operation.

Return values

FSP_SUCCESS	Successfully completed. (Stop request completed)
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_PARAMETER	Parameter error.

Note

Do not call this API in the following function.
(1). Interrupt function.
(2). Callback function (for RTOS).

◆ R_USB_UsedPipesGet()

fsp_err_t R_USB_UsedPipesGet (usb_ctrl_t *const *p_api_ctrl*, uint16_t * *p_pipe*, uint8_t *destination*)

Gets the selected pipe number (number of the pipe that has completed initalization) via bit map information.

The bit map information is stored in the area specified in argument (p_pipe). Based on the information (module member and address member) assigned to the usb_ctrl_t structure, obtains the PIPE information of that USB device.

Return values

FSP_SUCCESS	Successfully completed.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_PARAMETER	Parameter error.

◆ R_USB_PipeInfoGet()

fsp_err_t R_USB_PipeInfoGet (usb_ctrl_t *const *p_api_ctrl*, usb_pipe_t * *p_info*, uint8_t *pipe_number*)

Gets the following pipe information regarding the pipe specified in the argument (p_ctrl) member (pipe): endpoint number, transfer type, transfer direction and maximum packet size.

The obtained pipe information is stored in the area specified in the argument (p_info).

Return values

FSP_SUCCESS	Successfully completed.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_PARAMETER	Parameter error.

◆ R_USB_PullUp()

fsp_err_t R_USB_PullUp (usb_ctrl_t *const *p_api_ctrl*, uint8_t *state*)

This API enables or disables pull-up of D+/D- line.

Return values

FSP_SUCCESS	Successful completion. (Pull-up enable/disable setting completed)
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_PARAMETER	Parameter error.

Note

Do not call this API in the following function.
(1). Interrupt function.
(2). Callback function (for RTOS).

◆ R_USB_EventGet()

fsp_err_t R_USB_EventGet (usb_ctrl_t *const *p_api_ctrl*, usb_status_t * *event*)

Obtains completed USB related events. (OS-less Only)

In USB host mode, the device address value of the USB device that completed an event is specified in the usb_ctrl_t structure member (address) specified by the event's argument. In USB peripheral mode, USB_NULL is specified in member (address). If this function is called in the RTOS execution environment, a failure is returned.

Return values

FSP_SUCCESS	Event Get Success.
FSP_ERR_USB_FAILED	If called in the RTOS environment, an error is returned.

Note

Do not use the same variable as the first argument of R_USB_Open for the first argument.
Do not call this API in the interrupt function.

◆ R_USB_Callback()

fsp_err_t R_USB_Callback (usb_callback_t * *p_callback*)

Register a callback function to be called upon completion of a USB related event. (RTOS only)

This function registers a callback function to be called when a USB-related event has completed. If this function is called in the OS-less execution environment, a failure is returned.

Return values

FSP_SUCCESS	Successfully completed.
FSP_ERR_USB_FAILED	If this function is called in the OS-less execution environment, a failure is returned.
FSP_ERR_ASSERTION	Parameter is NULL error.

Note

Do not call this API in the interrupt function.

◆ R_USB_HostControlTransfer()

fsp_err_t R_USB_HostControlTransfer (usb_ctrl_t *const *p_api_ctrl*, usb_setup_t * *p_setup*, uint8_t * *p_buf*, uint8_t *device_address*)

Performs settings and transmission processing when transmitting a setup packet.

Return values

FSP_SUCCESS	Successful completion.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_PARAMETER	Parameter error.
FSP_ERR_USB_BUSY	Specified pipe now handling data receive/send request.

Note

Do not call this API in the following function.
(1). Interrupt function.
(2). Callback function (for RTOS).

◆ R_USB_PeriControlDataGet()

fsp_err_t R_USB_PeriControlDataGet (usb_ctrl_t *const *p_api_ctrl*, uint8_t * *p_buf*, uint32_t *size*)

Receives data sent by control transfer.

Return values

FSP_SUCCESS	Successful completion.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_BUSY	Specified pipe now handling data receive/send request.
FSP_ERR_USB_PARAMETER	Parameter error.

Note

Do not call this API in the following function.
(1). Interrupt function.
(2). Callback function (for RTOS).

◆ R_USB_PeriControlDataSet()

fsp_err_t R_USB_PeriControlDataSet (usb_ctrl_t *const *p_api_ctrl*, uint8_t * *p_buf*, uint32_t *size*)

Performs transfer processing for control transfer.

Return values

FSP_SUCCESS	Successful completion.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_BUSY	Specified pipe now handling data receive/send request.
FSP_ERR_USB_PARAMETER	Parameter error.

Note

Do not call this API in the following function.
(1). Interrupt function.
(2). Callback function (for RTOS).

◆ R_USB_PeriControlStatusSet()

fsp_err_t R_USB_PeriControlStatusSet (usb_ctrl_t *const *p_api_ctrl*, usb_setup_status_t *status*)

Set the response to the setup packet.

Return values

FSP_SUCCESS	Successful completion.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_PARAMETER	Parameter error.

Note

Do not call this API in the following function.
(1). Interrupt function.
(2). Callback function (for RTOS).

◆ R_USB_RemoteWakeup()

fsp_err_t R_USB_RemoteWakeup (usb_ctrl_t *const *p_api_ctrl*)

Sends a remote wake-up signal to the connected Host.

Return values

FSP_SUCCESS	Successful completion.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter is NULL error.
FSP_ERR_USB_NOT_SUSPEND	Device is not suspended.
FSP_ERR_USB_BUSY	The device is in resume operation.

Note

Do not call this API in the following function.
(1). Interrupt function.
(2). Callback function (for RTOS).

◆ R_USB_ModuleNumberGet()

fsp_err_t R_USB_ModuleNumberGet (usb_ctrl_t *const *p_api_ctrl*, uint8_t * *module_number*)

This API gets the module number.

Return values

FSP_SUCCESS	Successful completion.

◆ R_USB_ClassTypeGet()

fsp_err_t R_USB_ClassTypeGet (usb_ctrl_t *const *p_api_ctrl*, usb_class_t * *class_type*)

This API gets the class type.

Return values

FSP_SUCCESS	Successful completion.

◆ R_USB_DeviceAddressGet()

fsp_err_t R_USB_DeviceAddressGet (usb_ctrl_t *const *p_api_ctrl*, uint8_t * *device_address*)

This API gets the device address.

Return values

FSP_SUCCESS	Successful completion.

◆ R_USB_PipeNumberGet()

fsp_err_t R_USB_PipeNumberGet (usb_ctrl_t *const *p_api_ctrl*, uint8_t * *pipe_number*)

This API gets the pipe number.

Return values

FSP_SUCCESS	Successful completion.

◆ R_USB_DeviceStateGet()

fsp_err_t R_USB_DeviceStateGet (usb_ctrl_t *const *p_api_ctrl*, uint16_t * *state*)

This API gets the state of the device.

Return values

FSP_SUCCESS	Successful completion.

◆ R_USB_DataSizeGet()

fsp_err_t R_USB_DataSizeGet (usb_ctrl_t *const *p_api_ctrl*, uint32_t * *data_size*)

This API gets the data size.

Return values

FSP_SUCCESS	Successful completion.

◆ R_USB_SetupGet()

fsp_err_t R_USB_SetupGet (usb_ctrl_t *const *p_api_ctrl*, usb_setup_t * *setup*)

This API gets the setup type.

Return values

FSP_SUCCESS	Successful completion.

◆ R_USB_OtgCallbackSet()

fsp_err_t R_USB_OtgCallbackSet (usb_ctrl_t *const *p_api_ctrl*, usb_otg_callback_t * *p_callback*)

Set callback function to be called when the OTG role swap was completed on Azure RTOS.

Return values

FSP_SUCCESS	Successful completion.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter is NULL error.

◆ R_USB_OtgSRP()

fsp_err_t R_USB_OtgSRP (usb_ctrl_t *const *p_api_ctrl*)

Start the SRP processing for OTG on Azure RTOS.

Return values

FSP_SUCCESS	Successful completion.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter is NULL error.

Note

Do not support the VBUS Pulsing since OTG 2.0 does not support the VBUS Pulsing..

4.2.66 USB Composite Class (r_usb_composite)

Modules

Functions

Refer to USB (r_usb_basic) for the common API (r_usb_basic) to be called from the application.

Overview

USB composite device works as a USB Peripheral by combining two peripheral device classes and r_usb_basic module.
This USB driver supports the following composite devices:

1. PCDC + PMSC
2. PCDC + PHID
3. PHID + PMSC
4. PCDC + PCDC

How to Configuration

The following shows FSP configuration procedure for USB composite device.

- Select [New Stack]->[USB]->[USB Composite]

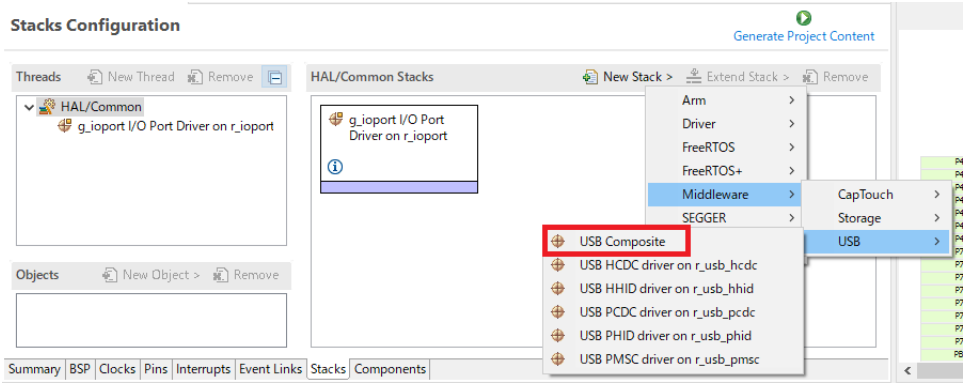

Figure 180: Select USB Composite

- The following is displayed when selecting [USB Composite].

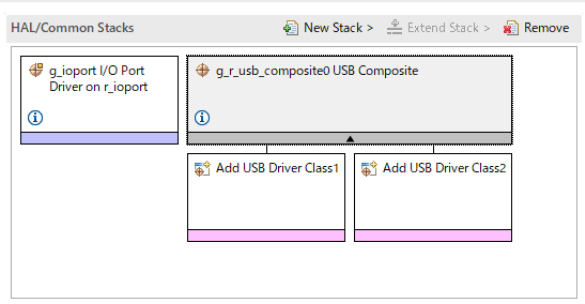

Figure 181: USB Composite Stack

- Select the supported 2 device classes as follows.

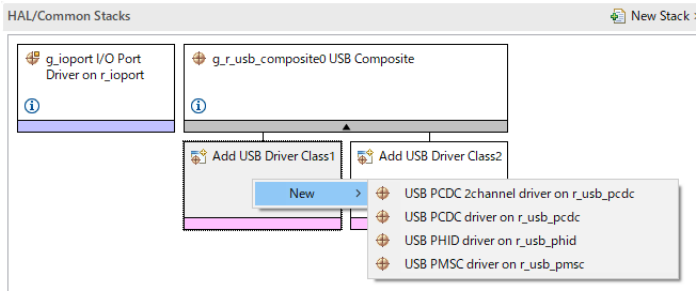

Figure 182: Select Device Classes

Note

1. *Be sure to select "USB PCDC driver on r_usb_pcdc" and "USB PCDC 2channel driver on r_usb_pcdc" when configurating for "PCDC + PCDC".*

- Select the supported 2 device classes as follows. The following is displayed when selecting 2 device classes.

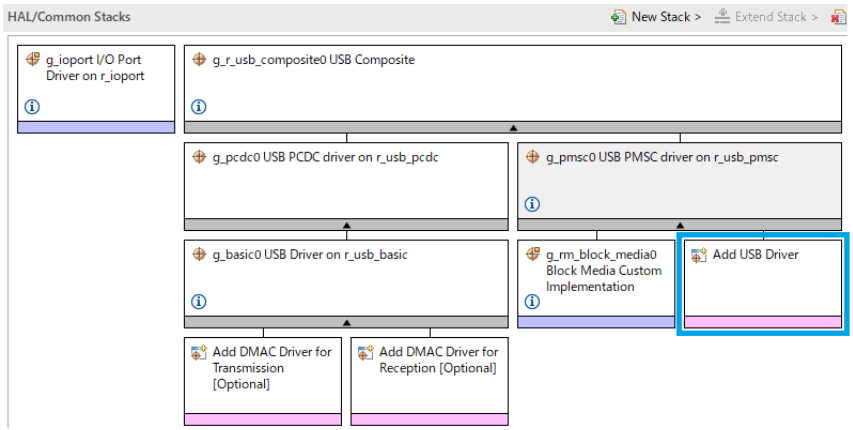

Figure 183: Delete USB Basic Instance

Note

1. *Delete the "g_basic1" instance manually since this instance is not used in composite device. (Refer to the blue frame in the above figure.)*
2. *The error is output when selecting the following device classes.*
    a. *PMSC + PMSC*
    b. *PHID + PHID*

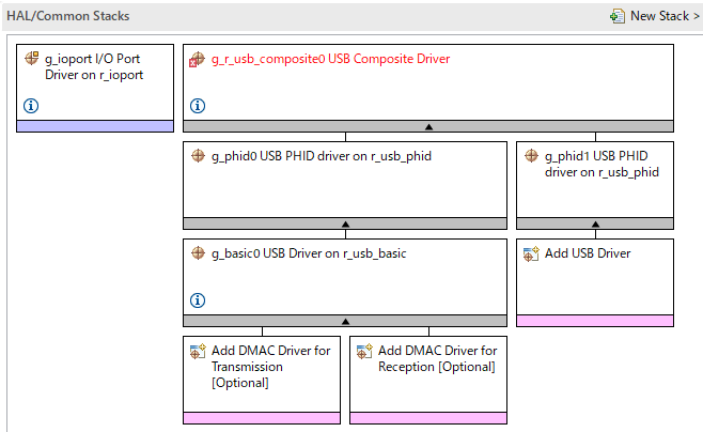

Figure 184: Device Class Selection Error

Limitations

1.The following composite device is not suppored when using RA2A1(MCU).

1. PMSC + PCDC
2. PCDC + PCDC

2.If you use PMSC, make sure to use usb_basic module with PMSC. There is a risk that the information on the PMSC storage media cannot be registered normally in the "USB Callback Context".

Notes

Please determine by the member "pipe" in "usb_event_info" structure when getting PCDC channel number which the write event is completed in PCDC + PCDC.
Don't refer to the member "type" in "usb_event_info" structure.

Descriptor

Templates for composite device descriptors can be found in ra/fsp/src/r_usb_composite folder. Also, please be sure to use your vendor ID.

1. r_usb_pcdc_pmsc_descriptor.c.template (for PCDC + PMSC)
2. r_usb_pcdc_phid_descriptor.c.template (for PCDC + PHID)
3. r_usb_phid_pmsc_descriptor.c.template (for PHID + PMSC)
4. r_usb_pcdc_pcdc_descriptor.c.template (for PCDC + PCDC)

Examples

USB COMPOSITE Example

- PCDC + PHID

4.2.67 USB Host Communications Device Class Driver (r_usb_hcdc)

Modules

This module provides a USB Host Communications Device Class (HCDC) driver. It implements the USB HCDC Interface.

Functions

Refer to USB (r_usb_basic) for the common API (r_usb_basic) to be called from the application.

Detailed Description

Overview

The r_usb_hcdc module, when used in combination with the r_usb_basic module, operates as a USB Host Communications Device Class (HCDC) driver. The HCDC conforms to the PSTN device subclass abstract control model of the USB Communications Device Class (CDC) specification and enables communication with a CDC peripheral device.

Features

The r_usb_hcdc module has the following key features:

- Checks for connected devices
- Implementation of communication line settings
- Acquisition of the communication line state
- Data transfer to and from a CDC peripheral device

Configuration

Build Time Configurations for r_usb_hcdc

The following build time configurations are defined in fsp_cfg/r_usb_hcdc_cfg.h:

Configuration	Options	Default	Description
Target Peripheral Device Class ID	• CDC class supported device • Vendor class device	CDC class supported device	Specify the device class ID of the CDC device to be connected.
Bulk Input Transfer Pipe	• USB PIPE1 • USB PIPE2 • USB PIPE3 • USB PIPE4 • USB PIPE5	USB PIPE1	Select the USB pipe to use for bulk input transfers.
Bulk Output Transfer Pipe	• USB PIPE1 • USB PIPE2 • USB PIPE3 • USB PIPE4 • USB PIPE5	USB PIPE2	Select the USB pipe to use for bulk output transfers.
Interrupt In Pipe	• USB PIPE6 • USB PIPE7 • USB PIPE8 • USB PIPE9	USB PIPE6	Select the USB pipe to use for interrupts.

Configurations for Connectivity > USB HCDC (r_usb_hcdc)

This module can be added to the Stacks tab via New Stack > Connectivity > USB HCDC (r_usb_hcdc).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_hcdc0	Module name.

Note

Refer to the USB (r_usb_basic) module for hardware configuration options.

Clock Configuration

Refer to the USB (r_usb_basic) module.

Pin Configuration

Refer to the USB (r_usb_basic) module.

Usage Notes

Communications Device Class (CDC), PSTN and ACM

This software conforms to the Abstract Control Model (ACM) subclass of the Communications Device Class specification as defined in the "USB Communications Class Subclass Specification for PSTN Devices", Revision 1.2. The Abstract Control Model subclass is a technology that bridges the gap between USB devices and earlier modems (employing RS-232C connections) enabling use of application programs designed for older modems.

Basic Functions

The main functions of HCDC are the following:

- Verify connected devices
- Make communication line settings
- Acquire the communication line state
- Transfer data to and from the CDC peripheral device

Abstract Control Model Class Requests - Host to Device

This driver supports the following class requests:

Request	Code	Description
SendEncapsulatedCommand	0x00	Transmits an AT command as defined by the protocol used by the device (normally 0 for USB).
GetEncapsulatedResponse	0x01	Requests a response to a command transmitted by SendEncapsulatedCommand.
SetCommFeature	0x02	Enables or disables features such as device-specific 2-byte code and country setting.
GetCommFeature	0x03	Acquires the enabled/disabled state of features such as device-specific 2-byte code and country setting.
ClearCommFeature	0x04	Restores the default enabled/disabled settings of features such as device-specific 2-byte code and country setting.
SetLineCoding	0x20	Makes communication line settings (communication speed, data length, parity bit, and stop bit length).
GetLineCoding	0x21	Acquires the communication line setting state.
SetControlLineState	0x22	Makes communication line control signal (RTS, DTR) settings.
SendBreak	0x23	Transmits a break signal.

Note

For more information about Abstract Control Model requests, refer to Table 11 "Requests - Abstract Control Model" in the "USB Communications Class Subclass Specification for PSTN Devices", Revision 1.2.

The expected data format for each command is shown below followed by dependent structures.

bmRequestType	bRequest	wValue	wIndex	wLength	Data
0x21	SEND_ENCAPSULATED_COMMAND (0x00)	0x0000	0x0000	Data length	usb_hcdc_encapsulated_t
0x21	GET_ENCAPSULATED_RESPONSE (0x01)	0x0000	0x0000	Data length	usb_hcdc_encapsulated_t
0x21	SET_COMM_FEATURE (0x02)	usb_hcdc_feature_selector_t	0x0000	Data length	usb_hcdc_commfeature_t
0x21	GET_COMM_FEATURE (0x03)	usb_hcdc_feature_selector_t	0x0000	Data length	usb_hcdc_commfeature_t
0x21	CLEAR_COMM_FEATURE (0x04)	usb_hcdc_feature_selector_t	0x0000	Data length	None
0x21	SET_LINE_CODING (0x20)	0x0000	0x0000	0x0000	usb_hcdc_linecoding_t
0xA1	GET_LINE_CODING (0x21)	0x0000	0x0000	0x0007	usb_hcdc_linecoding_t
0x21	SET_CONTROL_LINE_STATE (0x22)	usb_hcdc_controllinestate_t	0x0000	0x0000	None
0x21	SEND_BREAK (0x23)	usb_hcdc_breakduration_t	0x0000	0x0000	None

ACM Notifications from Device to Host

The following class notifications are supported:

Notification	Code	Description
RESPONSE_AVAILABLE	0x01	Response to GET_ENCAPSULATED_RESPONSE
SERIAL_STATE	0x20	Notification of serial line state

The data types returned are as follows:

bmRequestType	bRequest	wValue	wIndex	wLength	Data
0xA1	RESPONSE_AVAILABLE (0x01)	0x0000	0x0000	0x0000	None
0xA1	SERIAL_STATE (0x20)	0x0000	0x0000	0x0002	usb_hcdc_serialstate_t

Note

The host is notified with SERIAL_STATE whenever a change in the UART port state is detected.

Limitations

This driver is subject to the following limitations:

- Suspend is not supported when a data transfer is in progress. Confirm that data transfer has completed before executing suspend.
- Use of compound USB devices with CDC class support is not supported.
- This module must be incorporated into a project using r_usb_basic and does not provide any public APIs.
- This driver does not support Low-speed.
- This driver does not support simultaneous operation with the other device class.

Examples

USB HCDC Loopback Example

The main functions of the HCDC loopback example are as follows:

1. Virtual UART control settings are configured by transmitting the class request SET_LINE_CODING to the CDC device.
2. Sends receive (Bulk In transfer) requests to a CDC peripheral device and receives data.
3. Loops received data back to the peripheral by means of Bulk Out transfers.

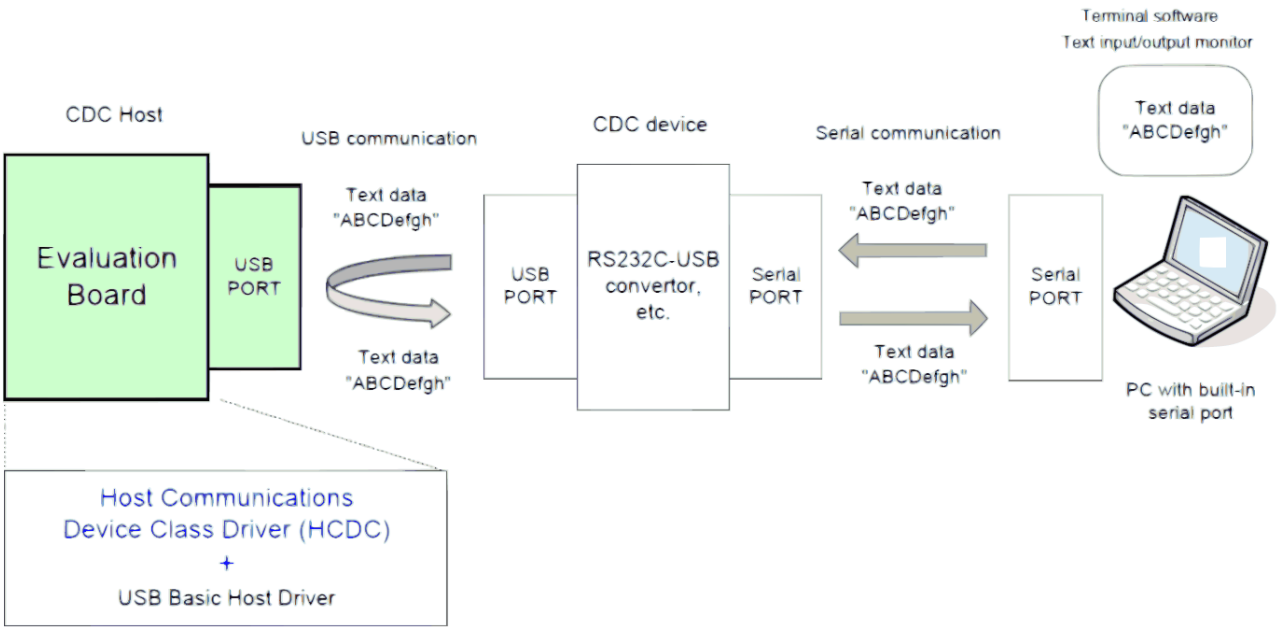

Figure 185: Data Transfer (Loopback)

The main loop performs loopback processing in which data received from a CDC peripheral device is transmitted unaltered back to the peripheral.

```
#define SET_LINE_CODING (USB_CDC_SET_LINE_CODING | USB_HOST_TO_DEV | USB_CLASS |
USB_INTERFACE)
#define GET_LINE_CODING (USB_CDC_GET_LINE_CODING | USB_DEV_TO_HOST | USB_CLASS |
```

```

Detailed Description

This module provides a USB Host Human Interface Device Class Driver (HHID). It implements the USB HHID Interface.

Overview

The r_usb_hhid module combines with the r_usb_basic module to provide a USB Host Human Interface Device Class (HHID) driver. The HHID driver conforms to the USB Human Interface Device class specifications and implements communication with a HID device.

Features

The r_usb_hhid module has the following key features:

- Data communication with a connected HID device (USB mouse, keyboard etc.)
- Issuing of HID class requests to a connected HID device
- Supports Interrupt OUT transfer

Configuration

Build Time Configurations for r_usb_hhid

The following build time configurations are defined in fsp_cfg/r_usb_hhid_cfg.h:

Configuration	Options	Default	Description
Interrupt In Pipe	• USB PIPE6 • USB PIPE7 • USB PIPE8 • USB PIPE9	USB PIPE6	Select the pipe number to use for input interrupt events.
Interrupt Out Pipe	• USB PIPE6 • USB PIPE7 • USB PIPE8 • USB PIPE9	USB PIPE9	Select the pipe number to use for output interrupt events.

Configurations for Connectivity > USB HHID (r_usb_hhid)

This module can be added to the Stacks tab via New Stack > Connectivity > USB HHID (r_usb_hhid). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid	g_hhid0	Module name.

C symbol

Clock Configuration

Refer to the USB (r_usb_basic) module.

Pin Configuration

Refer to the USB (r_usb_basic) module.

Usage Notes

Note

This driver is not guaranteed to provide USB HID operation in all scenarios. The developer must verify correct operation when connected to the targeted USB peripherals.

Class Requests

The class requests supported by this driver are shown below:

Request	Code	Description
USB_GET_REPORT	0x01	Receives a report from the HID device.
USB_SET_REPORT	0x09	Sends a report to the HID device.
USB_GET_IDLE	0x02	Receives a duration (time) from the HID device.
USB_SET_IDLE	0x0A	Sends a duration (time) to the HID device.
USB_GET_PROTOCOL	0x03	Reads a protocol from the HID device.
USB_SET_PROTOCOL	0x0B	Sends a protocol to the HID device.
USB_GET_REPORT_DESCRIPTOR	0x06	Requests a report descriptor.
USB_GET_HID_DESCRIPTOR	0x06	Requests a HID descriptor.

Data Format

The boot protocol data format of data received from the keyboard or mouse through interrupt-IN transfers is shown below:

offset	Keyboard (8 Bytes)	Mouse (3 Bytes)
0 (Top Byte)	Modifier keys	b0 : Button 1 b1 : Button 2 b2 : Button 3 b3-b7 : Reserved
+1	Reserved	X displacement

+2	Keycode 1	Y displacement
+3	Keycode 2	-
+4	Keycode 3	-
+5	Keycode 4	-
+6	Keycode 5	-
+7	Keycode 6	-

Limitations

- The HID driver does not analyze the report descriptor. This driver determines the report format from the interface protocol.
- This driver does not support DMA transfers.
- This driver does not support High-speed.
- The transfer rates of Full-speed and Low-speed are the same when the max packet sizes of Full-speed and Low-speed are the same.
- This driver does not support simultaneous operation with the other device class.

Examples

USB HHID Example

The main functions of the application are as follows:

1. Performs enumeration and initialization of HID devices.
2. Transfers data to and from a connected HID device (mouse or keyboard). Data received from the device is read and discarded.
3. When an RTOS is used, the USB driver calls the callback (usb_apl_callback) in order to pass events to the main loop through a queue.

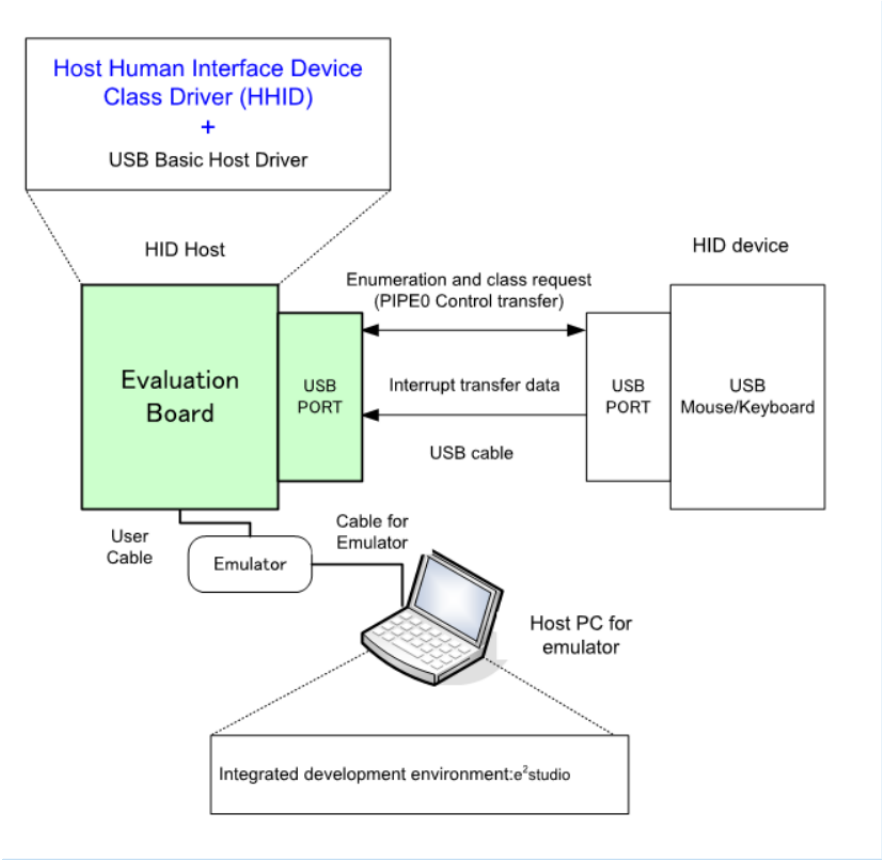

Figure 186: Example Operating Environment

Application Processing (for RTOS)

The main loop performs processing to receive data from the HID device as part of the main routine. An overview of the processing performed by the loop is shown below.

1. When a USB-related event has completed, the USB driver calls the callback function (usb_apl_callback). In the callback function (usb_apl_callback), the application task (APL) is notified of the USB completion event using the real-time OS functionality.
2. In APL, information regarding the USB completion event was notified from the callback function is retrieved using the real-time OS functionality.
3. If the USB completion event (the event member of the usb_ctrl_t structure) retrieved in step 2 above is USB_STATUS_CONFIGURED, APL sends the class request (SET_PROTOCOL) to the HID device.
4. If the USB completion event (the event member of the usb_ctrl_t structure) retrieved in step 2 above is USB_STATUS_REQUEST_COMPLETE, APL performs a data reception request to receive data transmitted from the HID device by calling the R_USB_Read function.
5. The above processing is repeated.

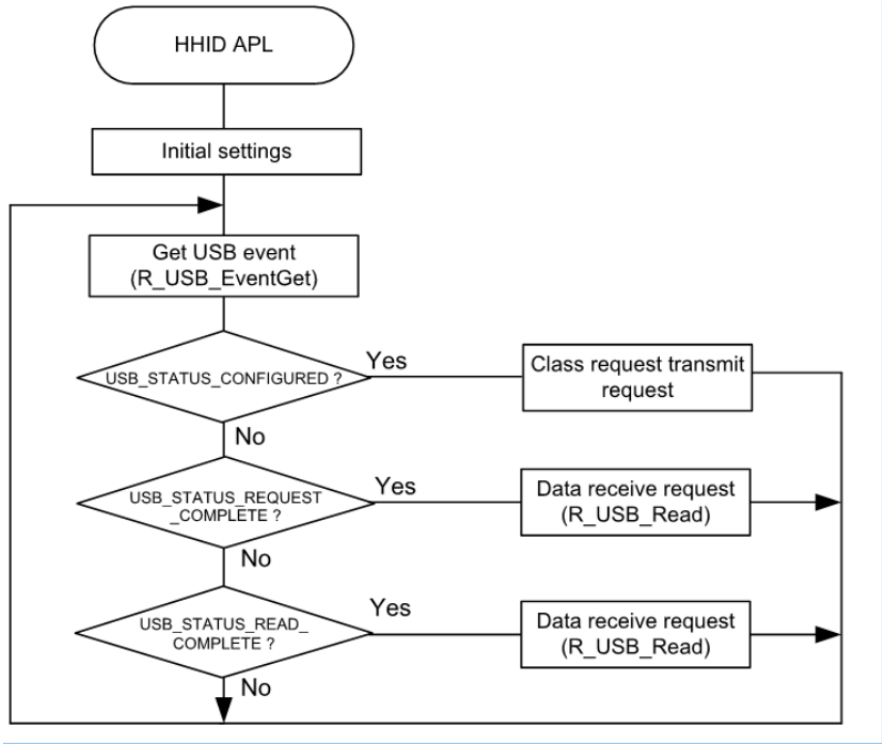

Figure 187: Main Loop (Normal mode)

Application Processing (for Non-OS)

The main loop performs processing to receive data from the HID device as part of the main routine. An overview of the processing of the main loop is presented below.

1. When the R_USB_GetEvent function is called after an HID device attaches to the USB host and enumeration completes, USB_STATUS_CONFIGURED is set as the return value. When the APL confirms USB_STATUS_CONFIGURED, it calls the R_USB_Write function to request transmission of data to the HID device.
2. When the R_USB_GetEvent function is called after sending of class request SET_PROTOCOL to the HID device has completed, USB_STATUS_REQUEST_COMPLETE is set as the return value. When the APL confirms USB_STATUS_REQUEST_COMPLETE, it calls the R_USB_Read function to make a data receive request for data sent by the HID device.
3. When the R_USB_GetEvent function is called after reception of data from the HID device has completed, USB_STATUS_READ_COMPLETE is set as the return value. When the APL confirms USB_STATUS_READ_COMPLETE, it calls the R_USB_Read function to make a data receive request for data sent by the HID device.
4. The processing in step 3, above, is repeated.

Detailed Description

This module provides a USB Host Mass Storage Class (HMSC) driver. It implements the USB HMSC Interface.

Overview

The r_usb_hmsc module, when used in combination with the r_usb_basic module, operates as a USB Host Mass Storage Class (HMSC) driver. It is built on the USB Mass Storage Class Bulk-Only Transport (BOT) protocol. It is possible to communicate with BOT-compatible USB storage devices by combining this module with a file system and storage device driver.

Note

This module should be used in combination with the FreeRTOS+FAT File System.

Features

The r_usb_hmsc module has the following key features:

- Checking of connected USB storage devices to determine whether or not operation is supported

- Storage command communication using the BOT protocol
- Support for SFF-8070i (ATAPI) USB mass storage subclass
- Sharing of a single pipe for IN/OUT directions or multiple devices
- Supports up to 4 connected USB storage devices

Class Requests

The class requests supported by this driver are shown below.

Request	Description
GetMaxLun	Gets the maximum number of units that are supported.
MassStorageReset	Cancels a protocol error.

Storage Commands

This driver supports the following storage commands:

- TEST_UNIT_READY
- MODE_SELECT10
- MODE_SENSE10
- PREVENT_ALLOW
- READ_FORMAT_CAPACITY
- READ10
- WRITE10

Configuration

Refer to the USB (r_usb_basic) module.

Clock Configuration

Refer to the USB (r_usb_basic) module.

Pin Configuration

Refer to the USB (r_usb_basic) module.

Usage Notes

Warning

Due to the wide variety of USB mass storage device implementations, this driver is not guaranteed to work with all devices. When implementing the driver it is important to verify correct operation with the mass storage devices that the end user is expected to use.

Multi Port

This driver supports simultaneous operation with Peripheral Communication Device Class(PCDC). If the user are using MCU that supports 2 USB modules, such as RA6M3, the user can run HMSC on one USB module and PCDC on the other. This driver does not support simultaneous operation using device classes other than PCDC.

For Bare Metal

1. To use FreeRTOS+FAT without FreeRTOS, copy FreeRTOSConfigMinimal.h to one of your project's include paths and rename it FreeRTOSConfig.h.
2. In RA configurator, enter the appropriate values in the Main stack size and Heap size fields. The figure below is an example of the RA6M3-EK board.

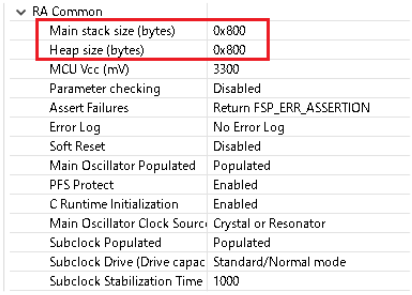

Figure 189: BSP Setting

1. In the Bare Metal version, specify "NULL" in the Callback item.

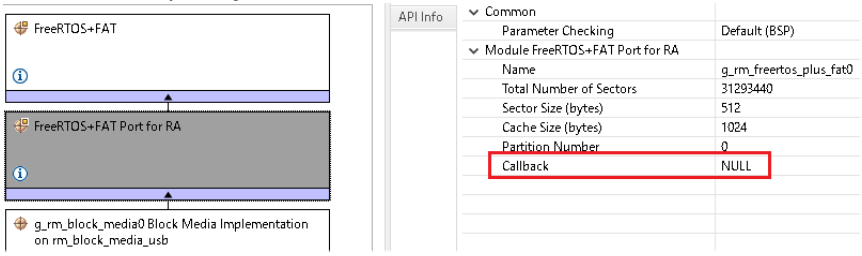

Figure 190: For Bare Metal Setting

Limitations

1. Some MSC devices may be unable to connect because they are not recognized as storage devices.
2. MSC devices that return values of 1 or higher in response to the GetMaxLun command (mass storage class command) are not supported.
3. A maximum of 4 USB storage devices can be connected.
4. Only USB storage devices with a sector size of 512 bytes can be connected.
5. A device that does not respond to the READ_CAPACITY command operates as a device with a sector size of 512 bytes.
6. The continuous transfer mode cannot be used when using DMA.
7. This module must be incorporated into a project using r_usb_basic and does not provide any public APIs.
8. This driver does not support Low-speed.

Examples

USB HMSC Example

Example Operating Environment

The following shows an example operating environment for the HMSC.

Refer to the associated instruction manuals for details on setting up the evaluation board and using the emulator, etc.

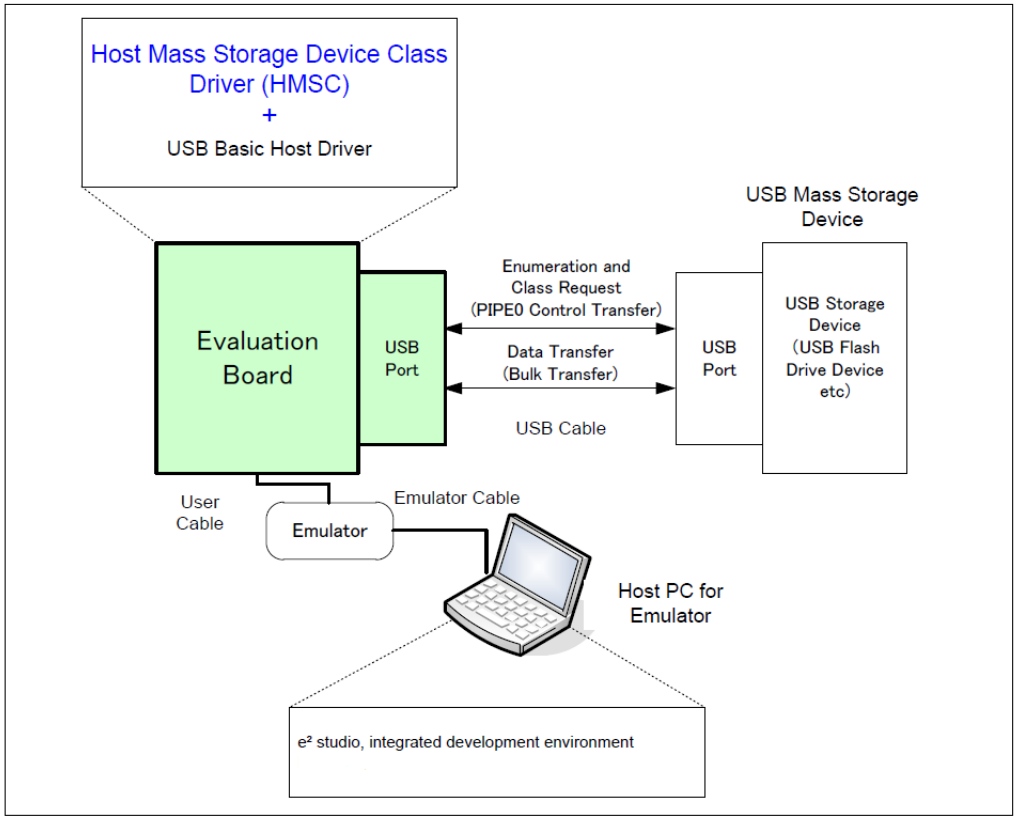

Figure 191: Example Operating Environment

Application Specifications

The main functions of the application are as follows:

1. Performs enumeration and drive recognition processing on MSC devices.
2. After the above processsing finisihes, the application writes the file to the MSC device once.
3. After writing the above file, the APL repeatedly reads the file. It continues to read the file repeatedly until the switch is pressed again.

Application Processing (for RTOS)

This application has two tasks. An overview of the processing in these two tasks is provided below.

usb_apl_task

1. After start up, MCU pin setting, USB controller initialization, and application program initialization are performed.
2. The MSC device is attached to the kit. When enumeration and drive recognition processing have completed, the USB driver calls the callback function (usb_apl_callback). In the callback function (usb_apl_callback), the application task is notified of the USB completion event using the FreeRTOS functionality.
3. In the application task, information regarding the USB completion event about which notification was received from the callback function is retrieved using the real-time OS

functionality.

4. If the USB completion event (the event member of the usb_ctrl_t structure) retrieved in step 2 above is USB_STS_CONFIGURED then, based on the USB completion event, the MSC device is mounted and the file is written to the MSC device.
5. If the USB completion event (the event member of the usb_ctrl_t structure) retrieved in step 2 above is USB_STS_DETACH, the application initializes the variables for state management.

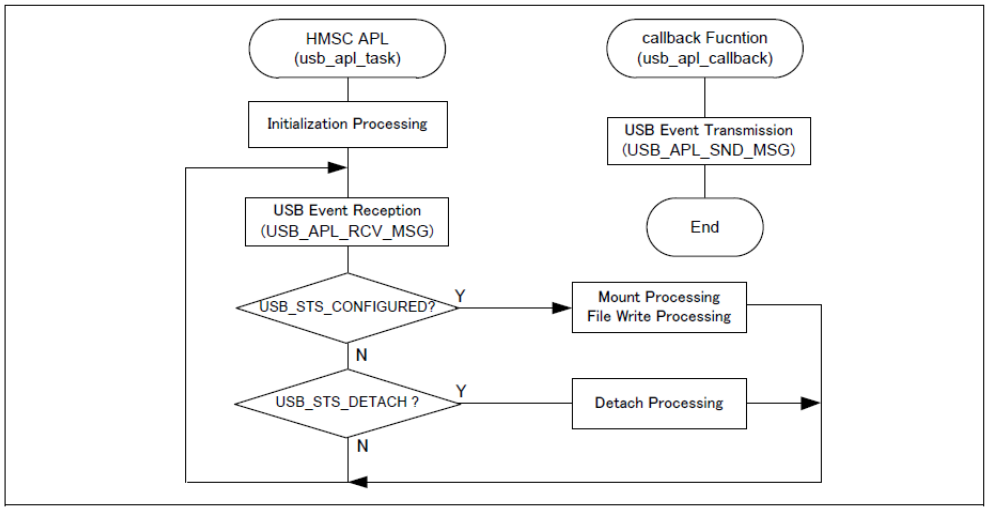

Figure 192: usb_apl_task

file_read_task

Of the application tasks usb_apl_task and file_read_task, file_read_task is processed while usb_apl_task is in the wait state. This task performs file read processing on the file that was written to the MSC device.

Example Code

```
#define RM_FREERTOS_PLUS_FAT_EXAMPLE_FILE_NAME "TEST_FILE.txt"

Function Documentation

◆ R_USB_HMSC_StorageCommand()

fsp_err_t R_USB_HMSC_StorageCommand (usb_ctrl_t *const *p_api_ctrl*, uint8_t * *buf*, uint8_t *command*, uint8_t *destination*)

Processing for MassStorage(ATAPI) command.

Return values

FSP_SUCCESS	Success.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter Null pointer error.
FSP_ERR_USB_PARAMETER	Parameter error.

◆ R_USB_HMSC_DriveNumberGet()

fsp_err_t R_USB_HMSC_DriveNumberGet (usb_ctrl_t *const *p_api_ctrl*, uint8_t * *p_drive*, uint8_t *destination*)

Get number of Storage drive.

Return values

FSP_SUCCESS	Success.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter Null pointer error.
FSP_ERR_USB_PARAMETER	Parameter error.

◆ R_USB_HMSC_SemaphoreGet()

fsp_err_t R_USB_HMSC_SemaphoreGet (void)

Get a semaphore. (RTOS only)

If this function is called in the OS less execution environment, a failure is returned.

Return values

FSP_SUCCESS	Success.
FSP_ERR_USB_FAILED	The function could not be completed successfully.

◆ R_USB_HMSC_SemaphoreRelease()

fsp_err_t R_USB_HMSC_SemaphoreRelease (void)

Release a semaphore. (RTOS only)

If this function is called in the OS less execution environment, a failure is returned.

Return values

FSP_SUCCESS	Success.
FSP_ERR_USB_FAILED	The function could not be completed successfully.

◆ R_USB_HMSC_StorageReadSector()

fsp_err_t R_USB_HMSC_StorageReadSector (uint16_t *drive_number*, uint8_t *const *buff*, uint32_t *sector_number*, uint16_t *sector_count*)

Read sector information.

Return values

FSP_SUCCESS	Success.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter Null pointer error.
FSP_ERR_USB_PARAMETER	Parameter error.

Note

The address specified in the argument buff must be 4-byte aligned.

◆ R_USB_HMSC_StorageWriteSector()

fsp_err_t R_USB_HMSC_StorageWriteSector (uint16_t *drive_number*, uint8_t const *const *buff*, uint32_t *sector_number*, uint16_t *sector_count*)

Write sector information.

Return values

FSP_SUCCESS	Success.
FSP_ERR_USB_FAILED	The function could not be completed successfully.
FSP_ERR_ASSERTION	Parameter Null pointer error.
FSP_ERR_USB_PARAMETER	Parameter error.

Note

The address specified in the argument buff must be 4-byte aligned.

4.2.70 USB Host Vendor Class (r_usb_hvnd)

Modules

Functions

Refer to USB (r_usb_basic) for the common API (r_usb_basic) to be called from the application.

Overview

USB Host Vendor class works by combining r_usb_basic module.

How to Configuration

The following shows FSP configuration procedure for USB Host Vendor class.

- Select [New Stack]->[Middleware]->[USB]->[USB Host Vendor class driver on r_usb_hvnd].

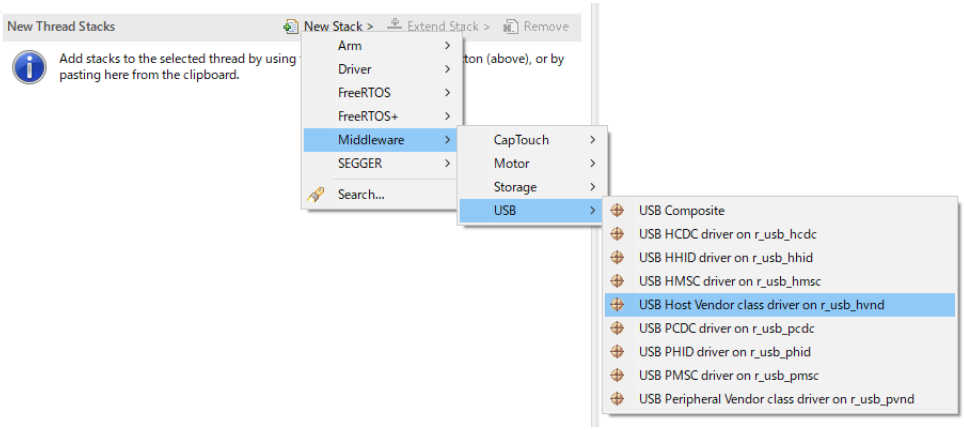

Figure 193: Select USB Host Vendor Class

- The following is displayed when selecting [USB Host Vendor class driver on r_usb_hvnd].
  The user does not specify USB pipe number in Vendor class.

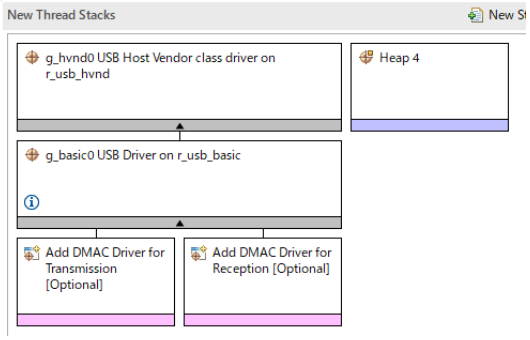

Figure 194: USB Host Vendor Class Stack

API

Use the following APIs in Host Vendor class application program.

- For Data Transfer
  Use the following APIs for data transfer for Bulk transfer or Interrupt transfer.

  1. R_USB_PipeRead()
  2. R_USB_PipeWrite()

3. R_USB_PipeStop()

- For Control Transfer
  Use the following API for the class request processing.

  1. R_USB_HostControlTransfer()

- For USB Pipe Information
  The USB driver allocates USB PIPE by analyzing the descriptor of USB device in Vendor class. Use the following APIs to get the allocated USB pipe information.

  1. R_USB_UsedPipesGet()
  2. R_USB_PipeInfoGet()

USB PIPE Allocation

The USB driver allocates USB PIPE by analyzing the descriptor of USB device in Vendor class.
The USB PIPE related to the Endpoint Descriptor are allocated in order from USB PIPE1 according to the description order of the Endpoint Descriptor.

Examples

This application program processes the follwoing after the enumeration completes with USB device.

1. Getting USB Pipe Infomattion
2. Vendor Class Request Processing
3. Loopback processing of bulk transfer and interrupt transfer.

4.2.71 USB Peripheral Communications Device Class (r_usb_pcdc)

Modules

This module provides a USB Peripheral Communications Device Class Driver (PCDC). It implements the USB PCDC Interface.

Functions

Refer to USB (r_usb_basic) for the common API (r_usb_basic) to be called from the application.

Detailed Description

Overview

The r_usb_pcdc module combines with the r_usb_basic module to provide a USB Peripheral Communications Device Class (PCDC) driver. The PCDC driver conforms to Abstract Control Model of the USB Communications Device Class (CDC) specification and enables communication with a CDC host device.

Features

The r_usb_pcdc module has the following key features:

- Data transfer to and from a USB host
- Response to CDC class requests
- Supports CDC notifications

Configuration

Build Time Configurations for r_usb_pcdc

The following build time configurations are defined in fsp_cfg/r_usb_pcdc_cfg.h:

Configuration	Options	Default	Description
Bulk In Pipe	• USB PIPE1 • USB PIPE2 • USB PIPE3 • USB PIPE4 • USB PIPE5	USB PIPE1	Select the USB pipe to use for bulk input transfers.
Bulk Out Pipe	• USB PIPE1 • USB PIPE2 • USB PIPE3 • USB PIPE4 • USB PIPE5	USB PIPE2	Select the USB pipe to use for bulk output transfers.
Interrupt Out Pipe	• USB PIPE6 • USB PIPE7 • USB PIPE8 • USB PIPE9	USB PIPE6	Select the USB pipe to use for interrupts.

Configurations for Connectivity > USB PCDC (r_usb_pcdc)

This module can be added to the Stacks tab via New Stack > Connectivity > USB PCDC (r_usb_pcdc).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_pcdc0	Module name.

Note

Refer to the USB (r_usb_basic) module for hardware configuration options.

Clock Configuration

Refer to the USB (r_usb_basic) module.

Pin Configuration

Refer to the USB (r_usb_basic) module.

Usage Notes

Abstract Control Model Overview

The Abstract Control Model subclass of CDC is a technology that bridges the gap between USB

devices and earlier modems (employing RS-232C connections), enabling use of application programs designed for older modems.

Class Requests (Host to Peripheral)

This driver notifies the application when receiving the following class requests:

Request	Code	Description
SetLineCoding	0x20	Sets communication line settings (bitrate, data length, parity, and stop bit length)
GetLineCoding	0x21	Acquires the communication line setting state
SetControlLineState	0x22	Set communication line control signals (RTS, DTR)

Note

For details concerning the Abstract Control Model requests, refer to Table 11 "Requests - Abstract Control Model" in the "USB Communications Class Subclass Specification for PSTN Devices", Revision 1.2.

Data Format of Class Requests

The data format of supported class requests is described below:

bmRequestType	bRequest	wValue	wIndex	wLength	Data
0x21	SET_LINE_CODING (0x20)	0x0000	0x0000	0x0007	usb_pcdc_linecoding_t
0xA1	GET_LINE_CODING (0x21)	0x0000	0x0000	0x0007	usb_pcdc_linecoding_t
0x21	SET_CONTROL_LINE_STATE (0x22)	usb_pcdc_ctrllinestate_t	0x0000	0x0000	None

Class Notifications (Peripheral to Host)

The following class notifications are supported:

Notification	Code	Description
SERIAL_STATE	0x20	Notification of serial line state

The data types returned are as follows:

bmRequestType	bRequest	wValue	wIndex	wLength	Data
0xA1	SERIAL_STATE (0x20)	0x0000	0x0000	0x0002	usb_serial_state_bitmap_t

Note

The host is notified with SERIAL_STATE whenever a change in the UART port state is detected. This driver will automatically detect overrun, parity and framing errors. A state notification is performed when a transition from normal to error state is detected.

Virtual COM-port Usage

When connected to a PC the CDC device can be used as a virtual COM port. After enumeration, the CDC class requests GetLineCoding and SetControlLineState are executed by the target, and the CDC device is registered in Windows Device Manager as a virtual COM device.

Registering the CDC device as a virtual COM-port in Windows Device Manager enables data communication with the CDC device via a terminal app such as PuTTY. When changing settings of the serial port in the terminal application, the UART setting is propagated to the firmware via the class request SetLineCoding.

Data input (or file transmission) from the terminal app window is transmitted to the board using endpoint 2 (EP2); data from the board side is transmitted to the PC using EP1.

When the last packet of data received is the maximum packet size, and the terminal determines that there is continuous data, the received data may not be displayed in the terminal. If the received data is smaller than the maximum packet size, the data received up to that point is displayed in the terminal.

Multi Port

This driver supports simultaneous operation with Host Mass Storage Class(HMSC). If the user are using MCU that supports 2 USB modules, such as RA6M3, the user can run PCDC on one USB module and HMSC on the other. This driver does not support simultaneous operation using device classes other than HMSC.

Limitations

- This module must be incorporated into a project using r_usb_basic and does not provide any public APIs.
- This driver does not support Low-speed.

Examples

USB PCDC Loopback Example

The main functions of the PCDC loopback example are as follows:

1. Receives virtual UART configuration data from the host terminal
2. Loops all other received data back to the host terminal

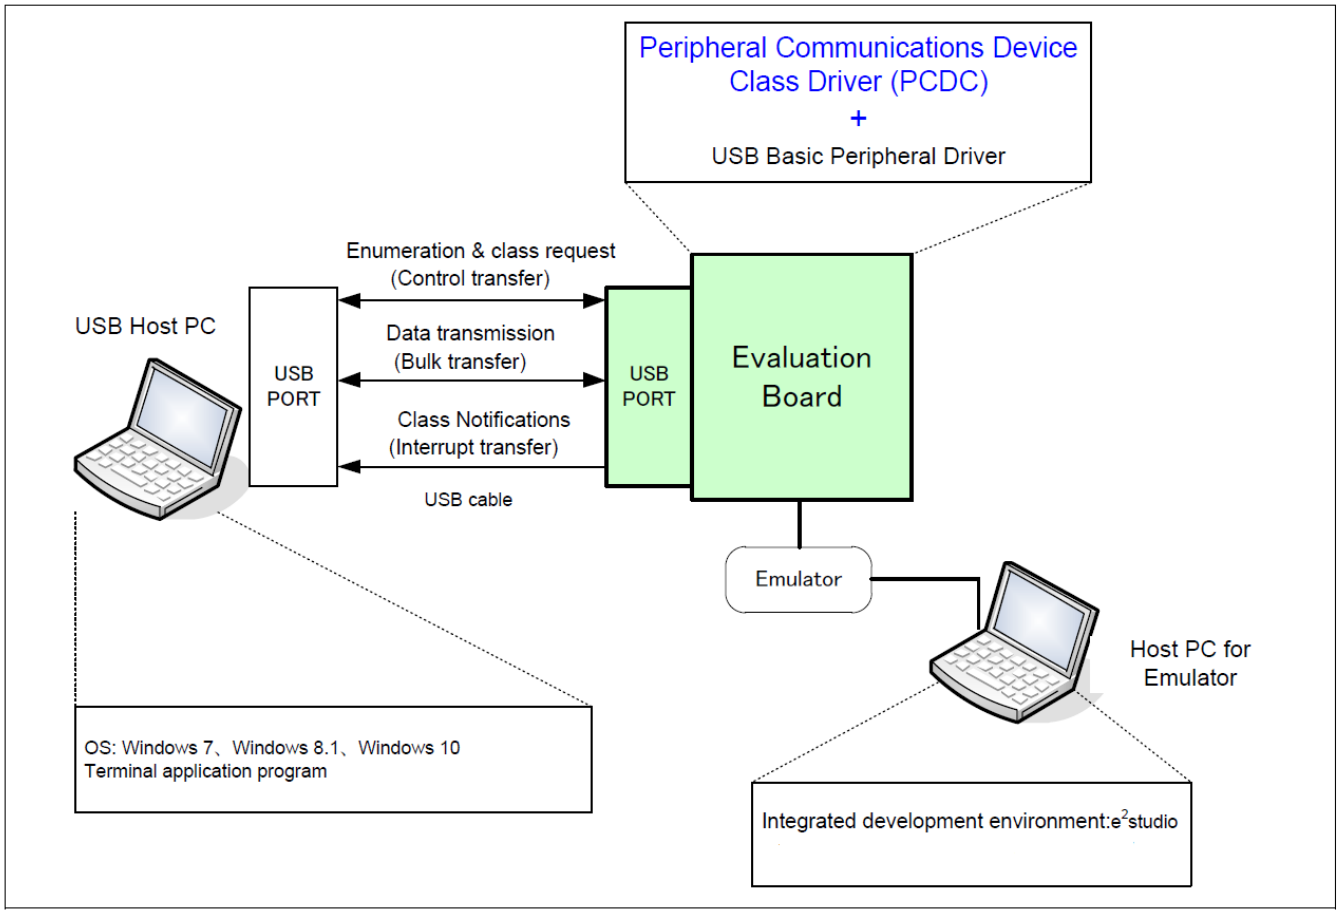

Figure 195: Example Operating Environment

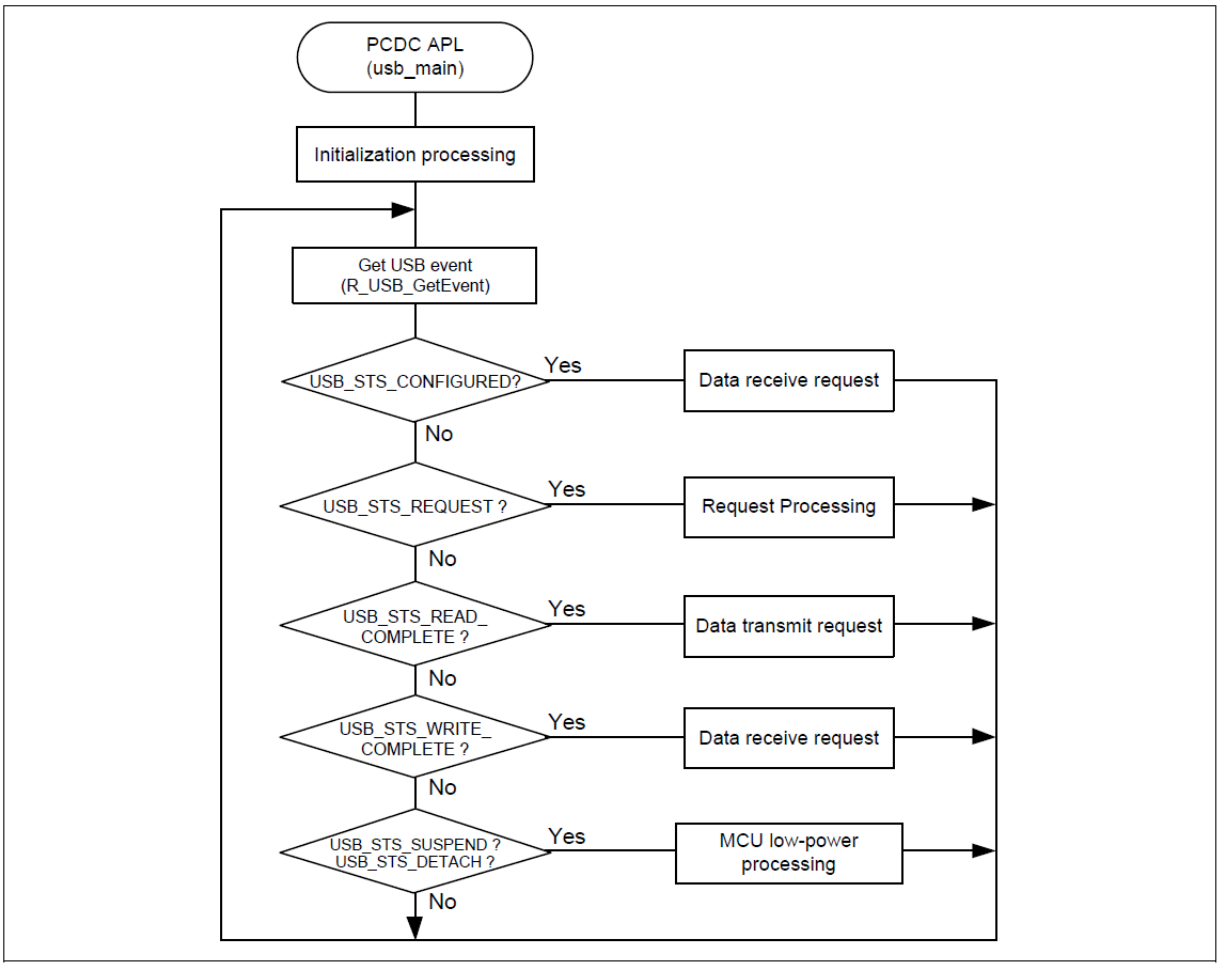

Figure 196: Main Loop processing (Echo mode)

```
void usb_basic_example (void)
{
    usb_event_info_t event_info;
 usb_status_t    event;
    g_usb_on_usb.open(&g_basic0_ctrl, &g_basic0_cfg);
 while (1)
    {
 /* Get USB event data */
       g_usb_on_usb.eventGet(&event_info, &event);
 /* Handle the received event (if any) */
 switch (event)
      {
 case USB_STATUS_CONFIGURED:
```

```
 case USB_STATUS_WRITE_COMPLETE:
 /* Initialization complete; get data from host */
                g_usb_on_usb.read(&g_basic0_ctrl, g_buf, DATA_LEN, USB_CLASS_PCDC);
 break;
 case USB_STATUS_READ_COMPLETE:
 /* Loop back received data to host */
                g_usb_on_usb.write(&g_basic0_ctrl, g_buf, event_info.data_size,
USB_CLASS_PCDC);
 break;
 case USB_STATUS_REQUEST:   /* Receive Class Request */
 if (USB_PCDC_SET_LINE_CODING == (event_info.setup.request_type & USB_BREQUEST))
      {
 /* Configure virtual UART settings */
                   g_usb_on_usb.periControlDataGet(&g_basic0_ctrl, (uint8_t *)
&g_line_coding, LINE_CODING_LENGTH);
                }
 else if (USB_PCDC_GET_LINE_CODING == (event_info.setup.request_type & USB_BREQUEST))
      {
 /* Send virtual UART settings back to host */
                   g_usb_on_usb.periControlDataSet(&g_basic0_ctrl, (uint8_t *)
&g_line_coding, LINE_CODING_LENGTH);
                }
 else
      {
 /* ACK all other status requests */
                   g_usb_on_usb.periControlStatusSet(&g_basic0_ctrl,
USB_SETUP_STATUS_ACK);
                }
 break;
 case USB_STATUS_SUSPEND:
 case USB_STATUS_DETACH:
 break;
 default:
 break;
```

```
        }
    }
}
```

Descriptor

A template for PCDC descriptors can be found in ra/fsp/src/r_usb_pcdc/r_usb_pcdc_descriptor.c.template. Also, please be sure to use your vendor ID.

4.2.72 USB Peripheral Human Interface Device Class (r_usb_phid)

Modules

This module is USB Peripheral Human Interface Device Class Driver (PHID). It implements the USB PHID Interface.

Functions

Refer to USB (r_usb_basic) for the common API (r_usb_basic) to be called from the application.

Detailed Description

Overview

The r_usb_phid module combines with the r_usb_basic module to provide a USB Peripheral Human Interface Device Class (PHID) driver. The PHID driver conforms to the USB Human Interface Device class specifications and implements communication with a HID host.

Features

The r_usb_phid module has the following functions:

- Data transfer to and from a USB host
- Response to HID class requests
- Response to function references from the HID host

Note

This driver is not guaranteed to provide USB HID operation in all scenarios. The developer must verify correct operation when connected to the targeted USB hosts.

Configuration

Build Time Configurations for r_usb_phid

The following build time configurations are defined in fsp_cfg/r_usb_phid_cfg.h:

Configuration	Options	Default	Description
Interrupt In Pipe	• USB PIPE6 • USB PIPE7 • USB PIPE8 • USB PIPE9	USB PIPE6	Select the pipe number for input interrupt events.
Interrupt Out Pipe	• USB PIPE6 • USB PIPE7 • USB PIPE8 • USB PIPE9	USB PIPE7	Select the pipe number for output interrupt events.

Configurations for Connectivity > USB PHID (r_usb_phid)

This module can be added to the Stacks tab via New Stack > Connectivity > USB PHID (r_usb_phid).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_phid0	Module name.

Clock Configuration

Refer to the USB (r_usb_basic) module.

Pin Configuration

Refer to the USB (r_usb_basic) module.

Usage Notes

Class Requests (Host to Peripheral)

This driver notifies the application when receiving the following class requests:

Request	Code	Description
Get_Report	0x01	Receives a report from the HID host
Set_Report	0x09	Sends a report to the HID host
Get_Idle	0x02	Receives a duration (time) from the HID host
Set_Idle	0x0A	Sends a duration (time) to the HID host
Get_Protocol	0x03	Reads a protocol from the HID host
Set_Protocol	0x0B	Sends a protocol to the HID host
Get_Descriptor	0x06	Transmits a report or HID

descriptor

The data format of supported class requests is described below:

bmRequestType	bRequest	wValue	wIndex	wLength	Data
0xA1	GET_REPORT (0x01)	ReportType & ReportID	Interface	ReportLength	Report
0x21	SET_REPORT (0x09)	ReportType & ReportID	Interface	ReportLength	Report
0xA1	GET_IDLE (0x02)	0 & ReportID	Interface	1	Idle rate
0x21	SET_IDLE (0x0A)	Duration & ReportID	Interface	0	Idle rate
0xA1	GET_PROTOCOL (0x03)	0	Interface	0	0 (Boot) or 1 (Report)
0x21	SET_PROTOCOL (0x0B)	0 (Boot) or 1 (Report)	Interface	0	Not applicable

Limitations

- This driver does not support USB Hi-speed mode.
- This driver does not support USB Low-speed mode.
- This driver does not support DMA transfers.
- This driver does not support simultaneous operation with USB Host device class.

Examples

Descriptors

A template for PHID descriptors can be found in ra/fsp/src/r_usb_phid. Be sure to replace the vendor ID with your own.
Keyboard templates should be referred to r_usb_phid_descriptor_keyboard.c.template.
Mouse templates should be referred to r_usb_phid_descriptor_mouse.c.template.

4.2.73 USB Peripheral Mass Storage Class (r_usb_pmsc)

Modules

This module provides a USB Peripheral Mass Storage Class (PMSC) driver. It implements the USB PMSC Interface.

Functions

Refer to USB (r_usb_basic) for the common API (r_usb_basic) to be called from the application.

Detailed Description

Overview

The r_usb_pmsc module combines with the r_usb_basic module to provide USB Peripheral It operates as a Mass Storage class driver (hereinafter referred to as PMSC).
The USB peripheral mass storage class driver (PMSC) comprises a USB mass storage class bulk-only transport (BOT) protocol.
When combined with a USB peripheral control driver and media driver, it enables communication with a USB host as a BOT-compatible storage device.

Features

The r_usb_pmsc module has the following key features:

- Storage command control using the BOT protocol
- Supports SFF-8070i (ATAPI)
- Response to mass storage device class requests from a USB host

Configuration

Build Time Configurations for r_usb_pmsc

The following build time configurations are defined in fsp_cfg/r_usb_pmsc_cfg.h:

Configuration	Options	Default	Description
Bulk Input Transfer Pipe	• USB PIPE1 • USB PIPE2 • USB PIPE3 • USB PIPE4 • USB PIPE5	USB PIPE1	Select the USB pipe to use for bulk input transfers.
Bulk Output Transfer Pipe	• USB PIPE1 • USB PIPE2 • USB PIPE3 • USB PIPE4 • USB PIPE5	USB PIPE2	Select the USB pipe to use for bulk output transfers.
Vendor Information	Vendor Information must be 8 bytes long; pad with spaces if shorter.	Vendor	Specify the vendor information field (part of the Inquiry command response).
Product Information	Product Information must be 16 bytes long; pad with spaces if shorter.	Mass Storage	Specify the product information field (part of the Inquiry command response).
Product Revision Level	Product Revision Level	1.00	Specify the product

	must be 4 bytes long; pad with spaces if shorter.		revision level field (part of the Inquiry command response).
Sector size	• 512 • 4096	512	Specifies the sector size.
Number of Transfer Sectors	Please enter a number between 1 and 255.	8	Specify the maximum sector size to request with one data transfer.

Configurations for Connectivity > USB PMSC (r_usb_pmsc)

This module can be added to the Stacks tab via New Stack > Connectivity > USB PMSC (r_usb_pmsc).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_pmsc0	Module name.

Refer to the USB (r_usb_basic) module for hardware configuration options.

Clock Configuration

Refer to the USB (r_usb_basic) module.

Pin Configuration

Refer to the USB (r_usb_basic) module.

Usage Notes

Class Requests

The class requests supported by this driver are shown below.

Request	Code	Description
Bulk-Only Mass Storage Reset	0xFF	Resets the connection interface to the mass storage device.
Get Max Logical Unit Number	0xFE	Reports the logical numbers supported by the device.

Storage Commands

This driver supports the following storage commands.

Command	Code	Description
TEST_UNIT_READY	0x00	Checks the state of the peripheral device.
REQUEST_SENSE	0x03	Gets the error information of the previous storage command

		execution result.
INQUIRY	0x12	Gets the parameter information of the logical unit.
READ_FORMAT_CAPACITY	0x23	Gets the formattable capacity.
READ_CAPACITY	0x25	Gets the capacity information of the logical unit.
READ10	0x28	Reads data.
WRITE10	0x1A	Writes data.
MODE_SENSE10	0x5A	Gets the parameters of the logical unit.

Note

A STALL or FAIL error is sent to the host upon receipt of any command not listed in the above table.

BOT Protocol Overview

BOT (USB MSC Bulk-Only Transport) is a transfer protocol that encapsulates command, data, and status (results of commands) using only two endpoints (one bulk in and one bulk out). The ATAPI storage commands and the response status are embedded in a Command Block Wrapper (CBW) and a Command Status Wrapper (CSW). The below image shows an overview of how the BOT protocol progresses with command and status data flowing between USB host and peripheral.

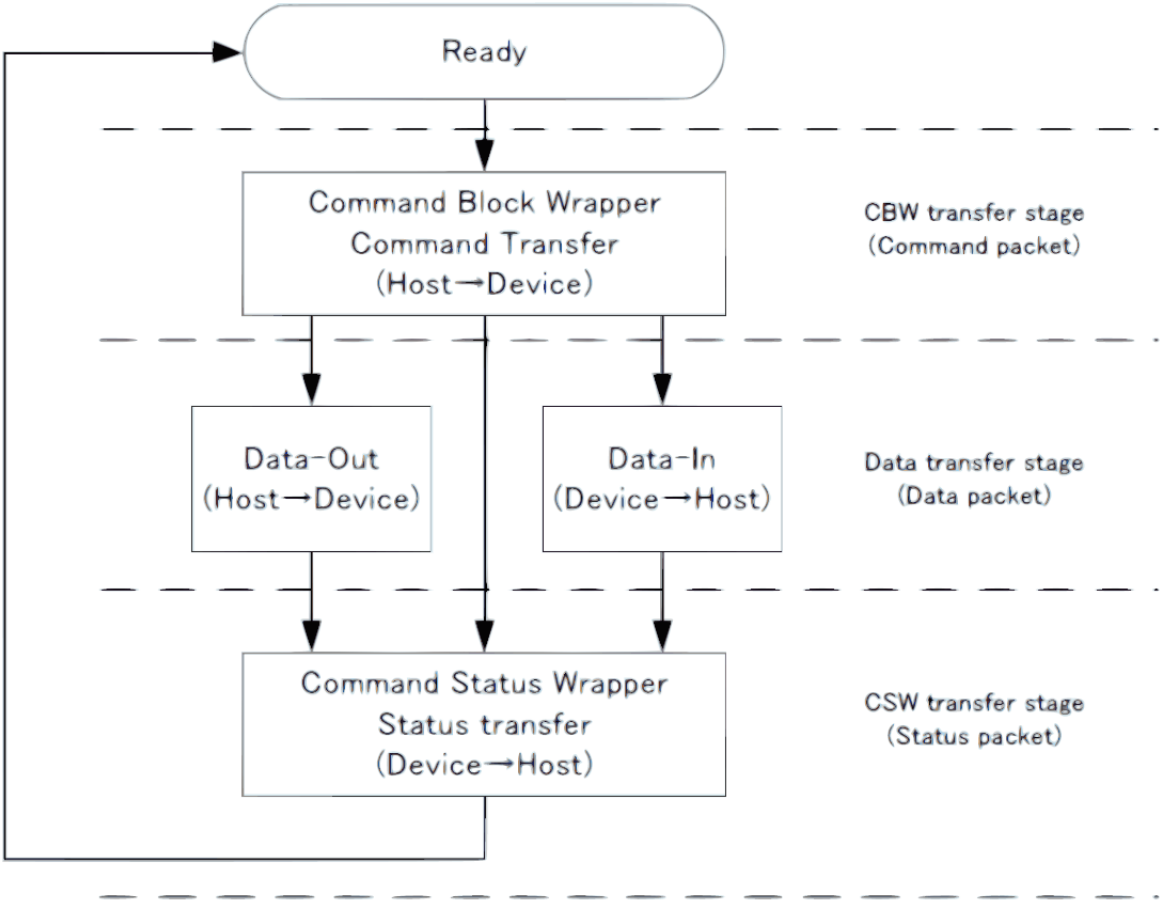

Figure 200: BOT protocol Overview

Block Media Interface

PMSC implements a block media interface to enable access to higher-level modules. If the block media interface supports multiple media, users can select any media to access.

Note

When the user develops the storage media driver, be sure to define the instance named "g_rm_block_media0".

Limitations

1. The driver always returns 0 in response to the GetMaxLun command.
2. The driver supports a sector size of 512 bytes only.
3. The only media currently supported by the block media interface is an SD card. The card must be inserted before initializing the driver.
4. When using DMA for Hi-Speed transfers continuous transfer mode must not be used in the USB Basic driver.
5. The storage area must be formatted before use.
6. When using the SD/MMC Block Media Implementation (rm_block_media_sdmmc), "Card Detection" must be set to "Not Used" in the SD/MMC Host Interface (r_sdhi) settings.
7. The driver does not support Low-speed.
8. This driver does not support simultaneous operation with USB Host device class.

Examples

USB PMSC Example

In this example, when the evaluation board is connected to the host PC it is recognized as a removable disk and reading/writing files is possible. The FAT type is either FAT12, FAT16, or FAT32 depending on the size of the media used.

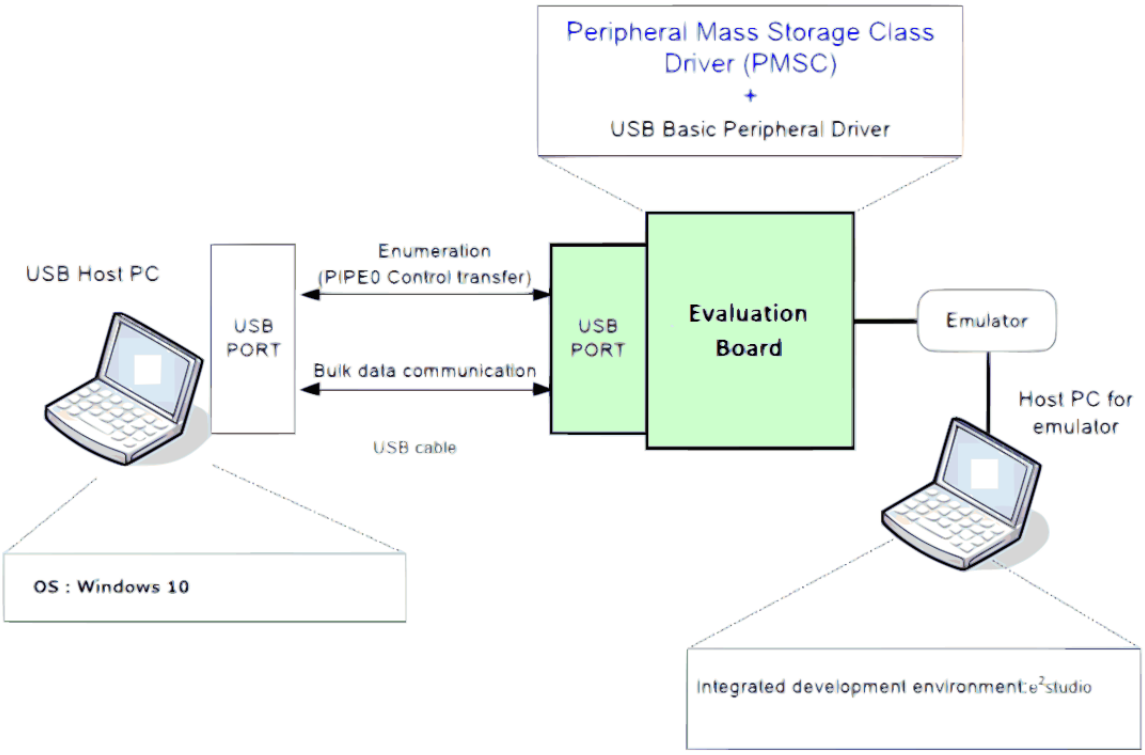

Figure 201: Example Operating Environment

```
void usb_pmsc_example (void)
{
    usb_event_info_t usb_event;
#if (BSP_CFG_RTOS == 2)
    usb_event_info_t * p_mess;
#else
 usb_status_t event;
#endif
    g_usb_on_usb.open(&g_basic0_ctrl, &g_basic0_cfg);
 /* Loop back between PC(TerminalSoft) and USB MCU */
 while (1)
    {
#if (BSP_CFG_RTOS == 2)
       USB_APL_RCV_MSG(USB_APL_MBX, (usb_msg_t **) &p_mess);
       usb_event = *p_mess;
 /* Analyzing the received message */
 switch (usb_event.event)
#else  /* (BSP_CFG_RTOS == 2) */
```

```
      g_usb_on_usb.eventGet(&usb_event, &event);
 switch (event)
#endif  /* (BSP_CFG_RTOS == 2) */
     {
 case USB_STATUS_CONFIGURED:
     {
 break;
           }
 case USB_STATUS_SUSPEND:
 case USB_STATUS_DETACH:
     {
#if USB_SUPPORT_LPW == USB_APL_ENABLE
// @@ low_power_mcu();
#endif  /* USB_SUPPORT_LPW == USB_APL_ENABLE */
 break;
           }
 default:
     {
 break;
           }
      }
   }
} /* End of function usb_main() */
```

Descriptor

A template for PMSC descriptors can be found in ra/fsp/src/r_usb_pmsc/r_usb_pmsc_descriptor.c.template. Also, please be sure to use your vendor ID.

4.2.74 USB Peripheral Vendor Class (r_usb_pvnd)

Modules

Functions

Refer to USB (r_usb_basic) for the common API (r_usb_basic) to be called from the application.

Overview

USB Peripheral Vendor class works by combining r_usb_basic module.

How to Configuration

The following shows FSP configuration procedure for USB Peripheral Vendor class.

- Select [New Stack]->[Middleware]->[USB]->[USB Peripheral Vendor class driver on r_usb_pvnd].

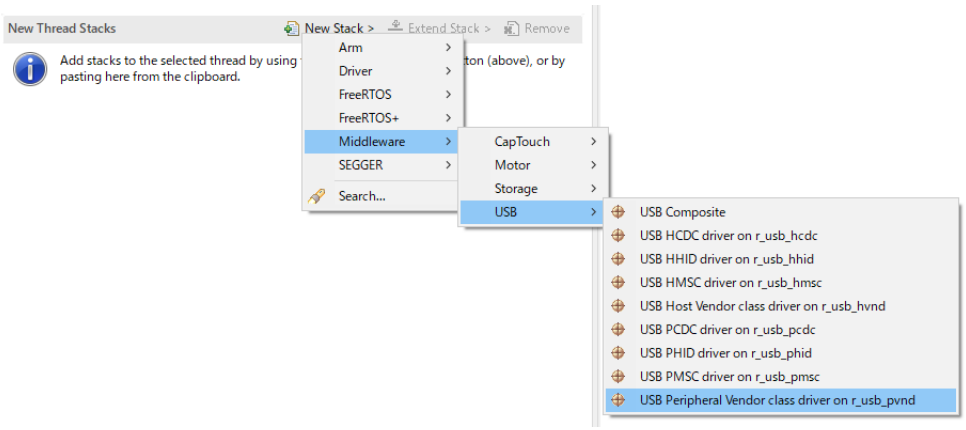

Figure 202: Select USB Peripheral Vendor Class

- The following is displayed when selecting [USB Peripheral Vendor class driver on r_usb_pvnd]. The user does not specify USB pipe number in Vendor class.

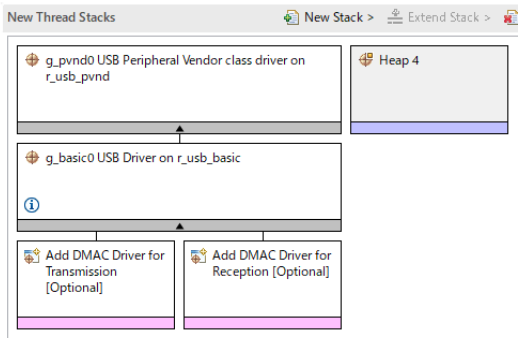

Figure 203: USB Peripheral Vendor Class Stack

API

Use the following APIs in Peripheral Vendor class application program.

- For Data Transfer
  Use the following APIs for data transfer for Bulk transfer or Interrupt transfer.

  1. R_USB_PipeRead()
  2. R_USB_PipeWrite()
  3. R_USB_PipeStop()

- For Control Transfer
  Use the following API for the class request processing.

  1. R_USB_PeriControlDataGet()
  2. R_USB_PeriControlDataSet()
  3. R_USB_PeriControlStatusSet()

- For USB Pipe Information
  The USB driver allocates USB PIPE by analyzing the descriptor of USB device in Vendor class. Use the following APIs to get the allocated USB pipe information.

  1. R_USB_UsedPipesGet()
  2. R_USB_PipeInfoGet()

USB PIPE Allocation

The USB driver allocates USB PIPE by analyzing the descriptor of USB device in Vendor class.
The USB PIPE related to the Endpoint Descriptor are allocated in order from USB PIPE1 according to the description order of the Endpoint Descriptor.

Limitations

This Peripheral Vendor class can not be included in composite device.

Descriptor

Template for Vendor class descriptor can be found in ra/fsp/src/r_usb_pvnd folder. Also, please be sure to use your vendor ID.

Examples

This application program processes the follwoing after the enumeration completes with USB device.

1. Getting USB Pipe Infomattion
2. Vendor Class Request Processing
3. Loopback processing of bulk transfer and interrupt transfer.

Detailed Description

Driver for the WDT peripheral on RA MCUs. This module implements the WDT Interface.

Overview

The watchdog timer is used to recover from unexpected errors in an application. The watchdog timer must be refreshed periodically in the permitted count window by the application. If the count is allowed to underflow or refresh occurs outside of the valid refresh period, the WDT resets the device or generates an NMI.

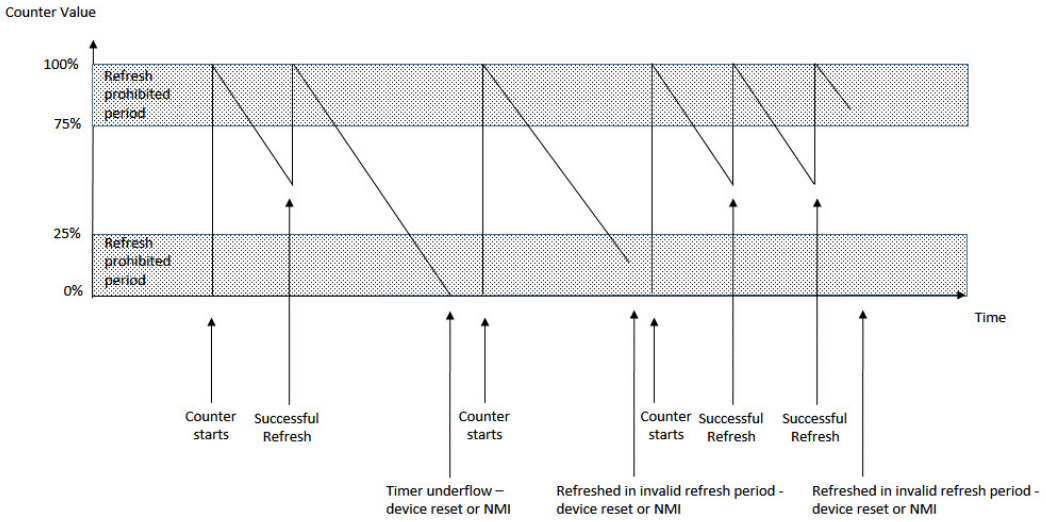

Figure 204: Watchdog Timer Operation Example

Features

The WDT HAL module has the following key features:

- When the WDT underflows or is refreshed outside of the permitted refresh window, one of the following events can occur:
  - Resetting of the device
  - Generation of an NMI
- The WDT has two supported modes:
  - In auto start mode, the WDT begins counting at reset.
  - In register start mode, the WDT can be started from the application.

Selecting a Watchdog

RA MCUs have two watchdog peripherals: the watchdog timer (WDT) and the independent watchdog timer (IWDT). When selecting between them, consider these factors:

	WDT	IWDT
Start Mode	The WDT can be started from the application (register start mode) or configured by hardware to start automatically (auto start mode).	The IWDT can only be configured by hardware to start automatically.
Clock Source	The WDT runs off a peripheral clock.	The IWDT has its own clock source which improves safety.

Configuration

When using register start mode, configure the watchdog timer on the Stacks tab.

Note

*When using auto start mode, configurations on the **Stacks** tab are ignored. Configure the watchdog using the OFS settings on the BSP tab.*

Build Time Configurations for r_wdt

The following build time configurations are defined in fsp_cfg/r_wdt_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Register Start NMI Support	• Enabled • Disabled	Disabled	If enabled, code for NMI support in register start mode is included in the build.

Configurations for Monitoring > Watchdog (r_wdt)

This module can be added to the Stacks tab via New Stack > Monitoring > Watchdog (r_wdt). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_wdt0	Module name.
Timeout	• 1,024 Cycles • 4,096 Cycles • 8,192 Cycles • 16,384 Cycles	16,384 Cycles	Select the watchdog timeout in cycles.
Clock Division Ratio	• PCLK/4 • PCLK/64 • PCLK/128 • PCLK/512 • PCLK/2048 • PCLK/8192	PCLK/8192	Select the watchdog clock divisor.
Window Start Position	• 100% (Window Position Not Specified) • 75% • 50% • 25	100% (Window Position Not Specified)	Select the allowed watchdog refresh start point.
Window End Position	• 0% (Window	0% (Window Position	Select the allowed

	Position Not Specified) • 25% • 50% • 75%	Not Specified)	watchdog refresh end point.
Reset Control	• Reset Output • NMI Generated	Reset Output	Select what happens when the watchdog timer expires.
Stop Control	• WDT Count Enabled in Low Power Mode • WDT Count Disabled in Low Power Mode	WDT Count Disabled in Low Power Mode	Select the watchdog state in low power mode.
NMI Callback	Name must be a valid C symbol	NULL	A user callback function must be provided if the WDT is configured to generate an NMI when the timer underflows or a refresh error occurs. If this callback function is provided, it will be called from the NMI handler each time the watchdog triggers.

Clock Configuration

The WDT clock is based on the PCLKB frequency. You can set the PCLKB frequency using the **Clocks** tab of the RA Configuration editor or by using the CGC Interface at run-time. The maximum timeout period with PCLKB running at 60 MHz is approximately 2.2 seconds.

Pin Configuration

This module does not use I/O pins.

Usage Notes

NMI Interrupt

The watchdog timer uses the NMI, which is enabled by default. No special configuration is required. When the NMI is triggered, the callback function registered during open is called.

Note

When using the WDT in software start mode with NMI and the timer underflows, the WDT status must be reset by calling R_WDT_StatusClear before restarting the timer via R_WDT_Refresh.

Period Calculation

The WDT operates from PCLKB. With a PCLKB of 60 MHz, the maximum time from the last refresh to device reset or NMI generation will be just over 2.2 seconds as detailed below.

PLCKB = 60 MHz
Clock division ratio = PCLKB / 8192
Timeout period = 16384 cycles
WDT clock frequency = 60 MHz / 8192 = 7.324 kHz
Cycle time = 1 / 7.324 kHz = 136.53 us
Timeout = 136.53 us x 16384 cycles = 2.23 seconds

Limitations

Developers should be aware of the following limitations when using the WDT:

- When using a J-Link debugger the WDT counter does not count and therefore will not reset the device or generate an NMI. To enable the watchdog to count and generate a reset or NMI while debugging, add this line of code in the application:

```
/* (Optional) Enable the WDT to count and generate NMI or reset when the
 * debugger is connected. */
   R_DEBUG->DBGSTOPCR_b.DBGSTOP_WDT = 0;
```

- If the WDT is configured to stop the counter in low power mode, then your application must restart the watchdog by calling R_WDT_Refresh() after the MCU wakes from low power mode.

Examples

WDT Basic Example

This is a basic example of minimal use of the WDT in an application.

```
void wdt_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* In auto start mode, the WDT starts counting immediately when the MCU is powered
on. */
 /* Initializes the module. */
    err = R_WDT_Open(&g_wdt0_ctrl, &g_wdt0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* In register start mode, start the watchdog by calling R_WDT_Refresh. */
    err = R_WDT_Refresh(&g_wdt0_ctrl);
    assert(FSP_SUCCESS == err);
 while (true)
    {
 /* Application work here. */
```

```
 /* Refresh before the counter underflows to prevent reset or NMI. */
      err = R_WDT_Refresh(&g_wdt0_ctrl);
      assert(FSP_SUCCESS == err);
    }
}
```

WDT Advanced Example

This example demonstrates using a start window and gives an example callback to handle an NMI generated by an underflow or refresh error.

```
#define WDT_TIMEOUT_COUNTS (16384U)
#define WDT_MAX_COUNTER (WDT_TIMEOUT_COUNTS - 1U)
#define WDT_START_WINDOW_75 ((WDT_MAX_COUNTER * 3) / 4)
/* Example callback called when a watchdog NMI occurs. */
void wdt_callback (wdt_callback_args_t * p_args)
{
 FSP_PARAMETER_NOT_USED(p_args);
 fsp_err_t err = FSP_SUCCESS;
 /* (Optional) Determine the source of the NMI. */
 wdt_status_t status = WDT_STATUS_NO_ERROR;
    err = R_WDT_StatusGet(&g_wdt0_ctrl, &status);
    assert(FSP_SUCCESS == err);
 /* (Optional) Log source of NMI and any other debug information. */
 /* (Optional) Clear the error flags. */
    err = R_WDT_StatusClear(&g_wdt0_ctrl, status);
    assert(FSP_SUCCESS == err);
 /* (Register start mode) In register start mode, call R_WDT_Refresh() to
  * continue using the watchdog after an error. */
    err = R_WDT_Refresh(&g_wdt0_ctrl);
    assert(FSP_SUCCESS == err);
 /* (Optional) Issue a software reset to reset the MCU. */
    __NVIC_SystemReset();
}
void wdt_advanced_example (void)
```

```
{
 fsp_err_t err = FSP_SUCCESS;
/* (Optional) Enable the WDT to count and generate NMI or reset when the
 * debugger is connected. */
   R_DEBUG->DBGSTOPCR_b.DBGSTOP_WDT = 0;
/* (Optional) Check if the WDTRF flag is set to know if the system is
 * recovering from a WDT reset. */
if (R_SYSTEM->RSTSR1_b.WDTRF)
   {
/* Clear the flag. */
      R_SYSTEM->RSTSR1 = 0U;
   }
/* Open the module. */
   err = R_WDT_Open(&g_wdt0_ctrl, &g_wdt0_cfg);
/* Handle any errors. This function should be defined by the user. */
   assert(FSP_SUCCESS == err);
/* Initialize other application code. */
/* (Register start mode) Call R_WDT_Refresh() to start the WDT in register
 * start mode. Do not call R_WDT_Refresh() in auto start mode unless the
 * counter is in the acceptable refresh window. */
   err = R_WDT_Refresh(&g_wdt0_ctrl);
   assert(FSP_SUCCESS == err);
while (true)
   {
/* Application work here. */
/* (Optional) If there is a chance the application takes less time than
 * the start window, verify the WDT counter is past the start window
 * before refreshing the WDT. */
      uint32_t wdt_counter = 0U;
do
    {
/* Read the current WDT counter value. */
          err = R_WDT_CounterGet(&g_wdt0_ctrl, &wdt_counter);
    assert(FSP_SUCCESS == err);
```

```
     } while (wdt_counter >= WDT_START_WINDOW_75);
 /* Refresh before the counter underflows to prevent reset or NMI. */
     err = R_WDT_Refresh(&g_wdt0_ctrl);
     assert(FSP_SUCCESS == err);
   }
}
```

Data Structures

struct	wdt_instance_ctrl_t

Data Structure Documentation

◆ wdt_instance_ctrl_t

struct wdt_instance_ctrl_t
WDT private control block. DO NOT MODIFY. Initialization occurs when R_WDT_Open() is called.

Function Documentation

◆ R_WDT_Refresh()

fsp_err_t R_WDT_Refresh (wdt_ctrl_t *const *p_ctrl*)

Refresh the watchdog timer. Implements wdt_api_t::refresh.

In addition to refreshing the watchdog counter this function can be used to start the counter in register start mode.

Example:

```
/* Refresh before the counter underflows to prevent reset or NMI. */
     err = R_WDT_Refresh(&g_wdt0_ctrl);
     assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	WDT successfully refreshed.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Instance control block is not initialized.

Note

This function only returns FSP_SUCCESS. If the refresh fails due to being performed outside of the permitted refresh period the device will either reset or trigger an NMI ISR to run.

◆ R_WDT_Open()

fsp_err_t R_WDT_Open (wdt_ctrl_t *const *p_ctrl*, wdt_cfg_t const *const *p_cfg*)

Configure the WDT in register start mode. In auto-start_mode the NMI callback can be registered. Implements wdt_api_t::open.

This function should only be called once as WDT configuration registers can only be written to once so subsequent calls will have no effect.

Example:

```
/* Initializes the module. */
   err = R_WDT_Open(&g_wdt0_ctrl, &g_wdt0_cfg);
```

Return values

FSP_SUCCESS	WDT successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_STATE	The security state of the NMI and the module do not match.

Note

In auto start mode the only valid configuration option is for registering the callback for the NMI ISR if NMI output has been selected.

◆ R_WDT_StatusClear()

fsp_err_t R_WDT_StatusClear (wdt_ctrl_t *const *p_ctrl*, const wdt_status_t *status*)

Clear the WDT status and error flags. Implements wdt_api_t::statusClear.

Example:

```
/* (Optional) Clear the error flags. */
   err = R_WDT_StatusClear(&g_wdt0_ctrl, status);
   assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	WDT flag(s) successfully cleared.
FSP_ERR_ASSERTION	Null pointer as a parameter.
FSP_ERR_NOT_OPEN	Instance control block is not initialized.
FSP_ERR_UNSUPPORTED	This function is only valid if the watchdog generates an NMI when an error occurs.

Note

When the WDT is configured to output a reset on underflow or refresh error reading the status and error flags serves no purpose as they will always indicate that no underflow has occurred and there is no refresh error. Reading the status and error flags is only valid when interrupt request output is enabled.

◆ R_WDT_StatusGet()

fsp_err_t R_WDT_StatusGet (wdt_ctrl_t *const *p_ctrl*, wdt_status_t *const *p_status*)

Read the WDT status flags. Implements wdt_api_t::statusGet.

Indicates both status and error conditions.

Example:

```
/* (Optional) Determine the source of the NMI. */
wdt_status_t status = WDT_STATUS_NO_ERROR;
   err = R_WDT_StatusGet(&g_wdt0_ctrl, &status);
   assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	WDT status successfully read.
FSP_ERR_ASSERTION	Null pointer as a parameter.
FSP_ERR_NOT_OPEN	Instance control block is not initialized.
FSP_ERR_UNSUPPORTED	This function is only valid if the watchdog generates an NMI when an error occurs.

Note

When the WDT is configured to output a reset on underflow or refresh error reading the status and error flags serves no purpose as they will always indicate that no underflow has occurred and there is no refresh error. Reading the status and error flags is only valid when interrupt request output is enabled.

◆ R_WDT_CounterGet()

fsp_err_t R_WDT_CounterGet (wdt_ctrl_t *const *p_ctrl*, uint32_t *const *p_count*)

Read the current count value of the WDT. Implements wdt_api_t::counterGet.

Example:

```
/* Read the current WDT counter value. */
           err = R_WDT_CounterGet(&g_wdt0_ctrl, &wdt_counter);
     assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	WDT current count successfully read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Instance control block is not initialized.

◆ R_WDT_TimeoutGet()

fsp_err_t R_WDT_TimeoutGet (wdt_ctrl_t *const *p_ctrl*, wdt_timeout_values_t *const *p_timeout*)

Read timeout information for the watchdog timer. Implements wdt_api_t::timeoutGet.

Return values

FSP_SUCCESS	WDT timeout information retrieved successfully.
FSP_ERR_ASSERTION	Null Pointer.
FSP_ERR_NOT_OPEN	Instance control block is not initialized.

◆ R_WDT_CallbackSet()

fsp_err_t R_WDT_CallbackSet (wdt_ctrl_t *const *p_ctrl*, void(*)(wdt_callback_args_t *) *p_callback*, void const *const *p_context*, wdt_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements wdt_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

4.2.76 ADPCM Decoder (rm_adpcm_decoder)

Modules

Functions

fsp_err_t	RM_ADPCM_DECODER_Open (adpcm_decoder_ctrl_t *p_ctrl, adpcm_decoder_cfg_t const *const p_cfg)
fsp_err_t	RM_ADPCM_DECODER_Decode (adpcm_decoder_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint32_t src_len_bytes)
fsp_err_t	RM_ADPCM_DECODER_Reset (adpcm_decoder_ctrl_t *p_ctrl)

```
fsp_err_t RM_ADPCM_DECODER_Close (adpcm_decoder_ctrl_t *p_ctrl)
```

Detailed Description

Middleware to implement the ADPCM Audio Decoder. This module implements the ADPCM Decoder Interface.

Overview

Features

The ADPCM Audio Decoder has the following key features:

- Decodes 4-bit ADPCM input to 16-bit PCM output

Configuration

Build Time Configurations for rm_adpcm_decoder

The following build time configurations are defined in fsp_cfg/rm_adpcm_decoder_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Audio > ADPCM Decoder (rm_adpcm_decoder)

This module can be added to the Stacks tab via New Stack > Audio > ADPCM Decoder (rm_adpcm_decoder).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_adpcm_decoder0	Module name.

Clock Configuration

This module has no required clock configurations.

Pin Configuration

This module does not use I/O pins.

Examples

Basic Example

This is a basic example of minimal use of the ADPCM Audio Decoder implementation in an application.

```
void rm_adpcm_decoder_example ()
{
 /* Open the ADPCM audio decoder instance. */
 fsp_err_t err = RM_ADPCM_DECODER_Open(&g_adpcmdec_ctrl, &g_adpcmdec_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Decode the data */
    err = RM_ADPCM_DECODER_Decode(&g_adpcmdec_ctrl, g_adpcm_stream1, g_pcm_stream,
ADPCM_BUFFER_SIZE_BYTES);
    assert(FSP_SUCCESS == err);
 /* Reset the ADPCM audio decoder instance before decoding a new stream. */
    err = RM_ADPCM_DECODER_Reset(&g_adpcmdec_ctrl);
    assert(FSP_SUCCESS == err);
 /* Decode the first chunk of ADPCM data */
    err = RM_ADPCM_DECODER_Decode(&g_adpcmdec_ctrl, g_adpcm_stream2, g_pcm_stream,
(ADPCM_BUFFER_SIZE_BYTES/2));
    assert(FSP_SUCCESS == err);
 /* Decode the second chunk of ADPCM data */
    err = RM_ADPCM_DECODER_Decode(&g_adpcmdec_ctrl,
&g_adpcm_stream2[ADPCM_BUFFER_SIZE_BYTES/2],
                                  g_pcm_stream, (ADPCM_BUFFER_SIZE_BYTES/2));
    assert(FSP_SUCCESS == err);
}
```

Data Structures

struct	adpcm_decoder_instance_ctrl_t

Data Structure Documentation

◆ adpcm_decoder_instance_ctrl_t

struct adpcm_decoder_instance_ctrl_t
RM_ADPCM_DECODER instance control block. DO NOT INITIALIZE. Initialized in adpcm_decoder_api_t::open().

Function Documentation

◆ RM_ADPCM_DECODER_Open()

fsp_err_t RM_ADPCM_DECODER_Open (adpcm_decoder_ctrl_t * *p_ctrl*, adpcm_decoder_cfg_t const *const *p_cfg*)

Initializes ADPCM audio decoder device.

Implements adpcm_decoder_api_t::open().

Return values

FSP_SUCCESS	Module is ready for use.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_ALREADY_OPEN	The instance control structure has already been opened.

◆ RM_ADPCM_DECODER_Decode()

fsp_err_t RM_ADPCM_DECODER_Decode (adpcm_decoder_ctrl_t *const *p_ctrl*, void const * *p_src*, void * *p_dest*, uint32_t *src_len_bytes*)

Decodes 4bit ADPCM data to 16bit PCM data. It reads ADPCM data from area pointed by inputAddr pointer, decodes the number of samples specified and stores the decoded data in buffer pointed with outputAddr pointer.

Implements adpcm_decoder_api_t::decode().

Return values

FSP_SUCCESS	Decode operation successfully completed.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.

◆ RM_ADPCM_DECODER_Reset()

fsp_err_t RM_ADPCM_DECODER_Reset (adpcm_decoder_ctrl_t * *p_ctrl*)

This function resets the ADPCM decoder device.

Implements adpcm_decoder_api_t::reset().

Return values

FSP_SUCCESS	Module closed.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.

◆ RM_ADPCM_DECODER_Close()

fsp_err_t RM_ADPCM_DECODER_Close (adpcm_decoder_ctrl_t * *p_ctrl*)
This function closes the ADPCM decoder device. Implements adpcm_decoder_api_t::close(). **Return values** FSP_SUCCESS — Module closed. FSP_ERR_ASSERTION — An input argument is invalid. FSP_ERR_NOT_OPEN — Unit is not open.

4.2.77 Audio Playback with PWM (rm_audio_playback_pwm)

Modules

Functions

Detailed Description

Driver for the Audio Playback middleware on RA MCUs. This module implements the AUDIO PLAYBACK Interface.

Overview

Features

The Audio Playback with PWM middleware is used to play audio streams at user selected playback rate using Pulse Width Modulation hardware on GPT or AGT timers. This module can play the 16 bit

uncompressed, unsigned PCM audio stream when AGT is selected as PWM interface and can play 32 bit uncompressed, unsigned PCM audio stream when GPT is used as PWM interface. The application code is expected to convert the signed PCM data to unsigned PCM data and scale it with the playback rate before starting the playback.

Configuration

Build Time Configurations for rm_audio_playback_pwm

The following build time configurations are defined in fsp_cfg/rm_audio_playback_pwm_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
DMAC Support	• Enabled • Disabled	Disabled	Select if DMAC will be used.

Configurations for Audio > Audio Playback PWM (rm_audio_playback_pwm)

This module can be added to the Stacks tab via New Stack > Audio > Audio Playback PWM (rm_audio_playback_pwm).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_rm_audio_playback0	Module name.
General > Playback Speed (Hz)	Manual Entry	44100	Enter playback sample rate in Hz.
Interrupts > Callback	Name must be a valid C symbol	g_rm_audio_playback0_callback	A user callback function. If this callback function is provided, it is called from the interrupt service routine (ISR) each time the playback completes.
PWM Output Pin	• Pin A • Pin B	Pin A	Select which timer output pin should be used for audio output.

Clock Configuration

The Audio Playback with PWM module does not require a specific clock configuration.

Pin Configuration

Configure the PWM output pins for selected PWM HAL layer peripheral (AGT/GPT). One of the following pins needs to be selected and enabled as PWM output for selected channel n,

If GPT is used as PWM interface,

- GTIOCAn
- GTIOCBn

If AGT is used as PWM interface,

- AGTOAn
- AGTOBn

Usage Notes

DMAC/DTC Integration

DMAC/DTC is used as a lower level transfer instance with this module and is operated in Normal mode to transfer 16 bit or 32 bit data from the audio stream buffer to the PWM peripheral AGT or GPT respectively. Destination address for transfer instance needs to be the Duty Cycle setting register GTCCR for GPT as PWM driver or AGTMA/AGTCMB in case of AGT as PWM driver. The Audio Playback with PWM module internally configures 'Transfer Size' as 2 Bytes if AGT is used for PWM generation, otherwise it configures 'Transfer Size" as 4 Bytes if GPT is used for PWM generation.

Examples

Basic Example

This is a basic example of minimal use of the RM_AUDIO_PLAYBACK_PWM in an application. This example shows how this driver can be used for playing a 16 bit uncompressed PCM audio from a single input buffer.

```
int16_t play_buffer[AUDIO_EXAMPLE_LENGTH];
uint32_t g_audio_callback_counter = 0;
void g_audio_example_counter_callback (audio_playback_callback_args_t * p_args)
{
 if (AUDIO_PLAYBACK_EVENT_PLAYBACK_COMPLETE == (p_args->event))
    {
       g_audio_callback_counter++;
    }
}
void basic_example (void)
{
 fsp_err_t err;
 /* Initialize the Audio Playback module for playing an audio stream. */
    err = RM_AUDIO_PLAYBACK_PWM_Open(&g_audio_playback_pwm_ctrl,
&g_audio_playback_pwm_cfg);
```

```
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Set the 16 Bit PCM audio stream to play next */
    err = RM_AUDIO_PLAYBACK_PWM_Play(&g_audio_playback_pwm_ctrl, play_buffer,
AUDIO_EXAMPLE_LENGTH);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Start to the play the selected audio stream*/
    err = RM_AUDIO_PLAYBACK_PWM_Start(&g_audio_playback_pwm_ctrl);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Wait till the playback is completed */
 while (g_audio_callback_counter == 0)
    {
       ;
    }
 /* Stop playing. */
    err = RM_AUDIO_PLAYBACK_PWM_Stop(&g_audio_playback_pwm_ctrl);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
}
```

Streaming Example

This is an example of using Audio Playback module to play audio stream. This application uses a double buffer to store PCM sine wave data. It starts playing in the main loop, then loads the next buffer if it is ready in the callback. If the next buffer is not ready, a flag is set in the callback so the application knows to restart playing in the main loop. This example also demonstrates conversion of signed PCM format data to unsigned PWM format data along with scaling the data samples for optimum PWM wave generation.

```
#define AUDIO_PLAYBACK_PWM_STREAMING_EXAMPLE_AUDIO_SAMPLING_FREQUENCY_HZ (22050U)
#define AUDIO_PLAYBACK_PWM_STREAMING_EXAMPLE_PERIOD_VALUE_AT_22050HZ (0x11B7U)
#define AUDIO_PLAYBACK_PWM_STREAMING_EXAMPLE_SAMPLES_PER_CHUNK (1024U)
#define AUDIO_PLAYBACK_PWM_STREAMING_EXAMPLE_TONE_FREQUENCY_HZ (800U)
#define AUDIO_PLAYBACK_PWM_EXAMPLE_SAMPLES_TO_TRANSFER (1024U)
#define AUDIO_PLAYBACK_PWM_EXAMPLE_CONVERT_TO_PWM_SAMPLES (32768U)
```

```
#define AUDIO_PLAYBACK_PWM_STREAMING_EXAMPLE_DATA_BIT_SIZE (16U)
int16_t       g_stream_src[2][AUDIO_PLAYBACK_PWM_EXAMPLE_SAMPLES_TO_TRANSFER];

Data Structures

struct	audio_playback_pwm_instance_ctrl_t

Data Structure Documentation

◆ audio_playback_pwm_instance_ctrl_t

struct audio_playback_pwm_instance_ctrl_t	
AUDIO_PLAYBACK_PWM instance control block. DO NOT MODIFY. Initialization occurs when RM_AUDIO_PLAYBACK_PWM_Open() is called.	
Data Fields	
void(*	p_callback)(audio_playback_callback_args_t *p_args)
void *	p_context
audio_playback_cfg_t const *	p_cfg
	Pointer to the configuration structure.
uint32_t	open
	Used by driver to check if the control structure is valid.
timer_instance_t const *	p_lower_lvl_timer
	Timer API used to generate sampling frequency and GPT/AGT API used to access PWM hardware.
transfer_instance_t const *	p_lower_lvl_transfer
	Transfer API used to transfer data each sampling frequency.

Field Documentation

◆ **p_callback**

void(* audio_playback_pwm_instance_ctrl_t::p_callback) (audio_playback_callback_args_t *p_args)
Callback called when play is complete.

◆ **p_context**

void* audio_playback_pwm_instance_ctrl_t::p_context
Placeholder for user data. Passed to the user callback in audio_playback_callback_args_t.

Function Documentation

◆ **RM_AUDIO_PLAYBACK_PWM_Open()**

fsp_err_t RM_AUDIO_PLAYBACK_PWM_Open (audio_playback_ctrl_t *const *p_api_ctrl*, audio_playback_cfg_t const *const *p_cfg*)

Opens and configures the Audio Playback with PWM driver. Sets playback speed and transfer rate to read the audio buffer.

Example:

```
/* Initialize the Audio Playback module for playing an audio stream. */
   err = RM_AUDIO_PLAYBACK_PWM_Open(&g_audio_playback_pwm_ctrl,
&g_audio_playback_pwm_cfg);
```

Return values

FSP_SUCCESS	Audio Playback module successfully configured.
FSP_ERR_ALREADY_OPEN	Module already open.
FSP_ERR_ASSERTION	One or more pointers point to NULL or callback is NULL.

◆ RM_AUDIO_PLAYBACK_PWM_Start()

fsp_err_t RM_AUDIO_PLAYBACK_PWM_Start (audio_playback_ctrl_t *const *p_api_ctrl*)

Start the PWM HAL driver (AGT or GPT) and timer HAL (AGT or GPT) drivers.

- Example:

```
/* Start to the play the selected audio stream*/
   err = RM_AUDIO_PLAYBACK_PWM_Start(&g_audio_playback_pwm_ctrl);
/* Handle any errors. This function should be defined by the user. */
   assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Audio playback hardware started successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Driver not open. This function calls • timer_api_t::start

◆ RM_AUDIO_PLAYBACK_PWM_Stop()

fsp_err_t RM_AUDIO_PLAYBACK_PWM_Stop (audio_playback_ctrl_t *const *p_api_ctrl*)

Stop the PWM HAL driver (AGT or GPT) and timer HAL driver (AGT or GPT).

- Example:

```
/* Stop playing. */
   err = RM_AUDIO_PLAYBACK_PWM_Stop(&g_audio_playback_pwm_ctrl);
/* Handle any errors. This function should be defined by the user. */
   assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Audio playback hardware stopped successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Driver not open. This function calls • timer_api_t::stop

◆ RM_AUDIO_PLAYBACK_PWM_Play()

fsp_err_t RM_AUDIO_PLAYBACK_PWM_Play (audio_playback_ctrl_t *const *p_api_ctrl*, void const *const *p_buffer*, uint32_t *length*)

Play a single audio buffer by input samples to the PWM HAL (AGT or GPT) at the sampling frequency configured by the timer.

- Example:

```
/* Set the 16 Bit PCM audio stream to play next */
   err = RM_AUDIO_PLAYBACK_PWM_Play(&g_audio_playback_pwm_ctrl, play_buffer,
AUDIO_EXAMPLE_LENGTH);
/* Handle any errors. This function should be defined by the user. */
   assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Buffer playback began successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl or p_buffer is NULL or buffer length is greater than 0x10000.
FSP_ERR_NOT_OPEN	Driver not open.. This function calls • transfer_api_t::reset

◆ RM_AUDIO_PLAYBACK_PWM_Close()

fsp_err_t RM_AUDIO_PLAYBACK_PWM_Close (audio_playback_ctrl_t *const *p_api_ctrl*)

Closes the module driver. Enables module stop mode.

Return values

FSP_SUCCESS	Module successfully closed.
FSP_ERR_NOT_OPEN	Driver not open.
FSP_ERR_ASSERTION	Pointer pointing to NULL.

Note

This function will close all the lower level HAL drivers as well.

4.2.78 AWS PKCS11 PAL (rm_aws_pkcs11_pal)

Modules

PKCS#11 PAL layer implementation for use by FreeRTOS TLS.

Overview

Note

The PKCS#11 PAL Interface does not provide any interfaces to the user. Consult the AWS documentation for more info: https://docs.aws.amazon.com/freertos/latest/portingguide/afr-porting-pkcs.html.

Configuration

There is no user configuration for this module

Data Flash Usage

The current implementation utilizes 16K of Data flash of which 8K is used for storage and the other 8K is used for backup.

Usage Notes

Limitations

- Interrupts are disabled while write or erase operations are being performed.
- Credentials are stored on data flash with no tamper protection other than SHA256 for integrity.
- Credential access is not limited in any way. The credential access and tamper issues can be resolved by updating the implementation to use code flash instead of data flash and using the Secure MPU to control access to it.

4.2.79 AWS PKCS11 PAL LITTLEFS (rm_aws_pkcs11_pal_littlefs)

Modules

PKCS#11 PAL LittleFS layer implementation for use by FreeRTOS TLS.

Overview

Note

The PKCS#11 PAL LittleFS Interface does not provide any interfaces to the user. Consult the AWS documentation for more info: https://docs.aws.amazon.com/freertos/latest/portingguide/afr-porting-pkcs.html.

Configuration

There is no user configuration for this module

Usage Notes

The current implementation utilizes LittleFS Flash Port (rm_littlefs_flash) for storage.

Limitations

- Credential access is not limited in any way.

4.2.80 AWS Transport Interface Port (rm_aws_transport_interface_port)

Modules

Middleware implementing a transport interface through MbedTLS and PKCS11.

Overview

This module implements a transport interface that provides an interface between MbedTLS and CoreMQTT/CoreHTTP. At a lower level the transport interface connects to a sockets wrapper in order to call down to the Cellular API.

Note

When using this transport interface with Cellular modules the user should call Cellular_Init() before trying to connect to anything.

Examples

MQTT Example

```

Detailed Description

Middleware for the Bluetooth peripheral on RA MCUs. This module implements the BLE ABS Interface .

Overview

This module provides BLE GAP functionality that complies with the Bluetooth Core Specification version 5.0 specified by the Bluetooth SIG. This module is configured via the QE for BLE. QE for BLE provides standard services defined by standardization organization and custom services defined by user. Bluetooth LE Profile API Document User's Manual describes the APIs for standard services.

Features

The Bluetooth Low Energy Abstraction module supports the following features:

- following GAP Role support
  - Central: The device that sends a connection request to the Peripheral device.
  - Peripheral: The device that accepts a connection request from Central and establishes a connection.
  - Observer : The device that scans for advertising.
  - Broadcaster : The device that sends advertising.

- LE 2M PHY
  - BLE communication is supported on the 2 Msym/s PHY.
- LE Coded PHY -Supports BLE communication on the Coded PHY. This enables communication over longer distances than 1M PHY and 2M PHY.
- LE Advertising Extensions
  - Up to four independent adverts can be executed simultaneously.
  - The size of Advertising Data/Scan Response Data has been expanded to a maximum of 1650 bytes.
  - Periodic Advertising is available.
- LE Channel Selection Algorithm #2
  - With the hopping channel selection algorithm added in Version 5.0, the machine that selects the channel It is possible.
- High Duty Cycle Non-Connectable Advertising
  - The ability to support non-connectable advertising with a minimum interval of up to 20 msec.
- LE Secure Connections
  - Elliptic curve Diffie-Hellman key sharing (ECDH) for pairing with passive eavesdropping support.
- Link Layer privacy
  - This feature avoids being tracked by other BLE devices by periodically changing the Bluetooth device address.
- Link Layer Extended Scanner Filter policies
  - Scan Filter support for Resolvable private addresses.
- LE Data Packet Length Extension
  - This function expands the packet size of BLE data communications. It is possible to scale up to 251 bytes.
- LE L2CAP Connection Oriented Channel Support
  - The ability to support communication using the L2CAP credit based flow control channel.
- Low Duty Cycle Directed Advertising
  - The ability to support the advertising of the Low Duty Cycle for reconnecting to a known device.
- LE Link Layer Topology
  - It supports both Master and Slave roles and can operate as Master when connected to one remote device and as Slave when connected to another remote device.
- LE Ping
  - This function checks whether the link is maintained or not by requesting the transmission of packets containing MIC after link encryption.

BLE Library Configuration

There are three types of BLE Protocol Stacks, and the functions provided are different depending on the type of BLE Protocol Stack you select.

BLE library feature	Extended	Balance	Compact
GAP Role	Central Peripheral Observer Broadcaster	Central Peripheral Observer Broadcaster	Peripheral Broadcaster
LE 2M PHY	Yes	Yes	No
LE Coded PHY	Yes	Yes	No
LE Advertising Extensions	Yes	No	No

LE Channel Selection Algorithm #2	Yes	Yes	No
High Duty Cycle Non-Connectable Advertising	Yes	Yes	Yes
LE Secure Connections	Yes	Yes	Yes
Link Layer privacy	Yes	Yes	Yes
Link Layer Extended Scanner Filter policies	Yes	Yes	No
LE Data Packet Length Extension	Yes	Yes	Yes
LE L2CAP Connection Oriented Channel Support	Yes	No	No
Low Duty Cycle Directed Advertising	Yes	Yes	Yes
LE Link Layer Topology	Yes	Yes	No
LE Ping	Yes	Yes	Yes
32-bit UUID Support in LE	Yes	Yes	Yes

Target Devices

The Bluetooth Low Energy Abstraction module supports the following devices.

- RA4W1

Configuration

Build Time Configurations for rm_ble_abs

The following build time configurations are defined in fsp_cfg/rm_ble_abs_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enable • Disable	Default (BSP)	Specify whether to include code for API parameter checking. Valid settings include.
Debug Public Address	Must be a valid device address	FF:FF:FF:50:90:74	Public Address of firmware initial value.
Debug Random Address	Must be a valid device address	FF:FF:FF:FF:FF:FF	Random Address of firmware initial value.
Maximum number of connections	Value must be an integer between 1 and 7	7	Maximum number of connections.

Maximum connection data length	Value must be an integer between 27 and 251	251	Maximum connection data length.
Maximum advertising data length	Value must be an integer between 31 and 1650	1650	Maximum advertising data length.
Maximum advertising set number	Value must be an integer between 1 and 4	4	Maximum advertising set number.
Maximum periodic sync set number.	Value must be an integer between 1 and 2	2	Maximum periodic sync set number.
Store Security Data	• Disable • Enable	Disable	Store Security Data in DataFlash.
Data Flash Block for Security Data	Value must be an integer between 0 and 7	0	Data Flash Block for Security Data Management.
Remote Device Bonding Number	Value must be an integer between 1 and 7	7	Number of remote device bonding information.
Connection Event Start Notify	• Disable • Enable	Disable	Set Connection event start notify enable/disable.
Connection Event Close Notify	• Disable • Enable	Disable	Set Connection event close notify enable/disable.
Advertising Event Start Notify	• Disable • Enable	Disable	Set Advertising event start notify enable/disable.
Advertising Event Close Notify	• Disable • Enable	Disable	Set Advertising event close notify enable/disable.
Scanning Event Start Notify	• Disable • Enable	Disable	Set Scanning event start notify enable/disable.
Scanning Event Close Notify	• Disable • Enable	Disable	Set Scanning event close notify enable/disable.
Initiating Event Start Notify	• Disable • Enable	Disable	Set Initiating event start notify enable/disable.
Initiating Event Close Notify	• Disable • Enable	Disable	Set Initiating event close notify enable/disable.
RF Deep Sleep Start	• Disable	Disable	Set RF_DEEP_SLEEP

Notify	• Enable		start notify enable/disable.
RF Deep Sleep Wakeup Notify	• Disable • Enable	Disable	Set RF_DEEP_SLEEP wakeup notify enable/disable.
Bluetooth dedicated clock	Value must be an integer between 0 and 15	6	Load capacitance adjustment.
DC-DC converter	• Disable • Enable	Disable	Set DC-DC converter for RF part.
Slow Clock Source	• Use RF_LOCO • Use External 32.768kHz	Use RF_LOCO	Set slow clock source for RF part.
MCU CLKOUT Port	• P109 • P205	P109	When BLE_ABS_CFG_RF_EXTERNAL_32K_ENABLE = 1, Set port of MCU CLKOUT.
MCU CLKOUT Frequency Output	• MCU CLKOUT frequency 32.768kHz • MCU CLKOUT frequency 16.384kHz	MCU CLKOUT frequency 32.768kHz	When BLE_ABS_CFG_RF_EXTERNAL_32K_ENABLE = 1, set frequency output from CLKOUT of MCU part.
Sleep Clock Accuracy(SCA)	Value must be an integer between 0 and 500	250	When BLE_ABS_CFG_RF_EXTERNAL_32K_ENABLE = 1, set Sleep Clock Accuracy(SCA) for RF slow clock.
Transmission Power Maximum Value	• max +0dBm • max +4dBm	max +4dBm	Set transmission power maximum value.
Transmission Power Default Value	• High 0dBm(Transmission Power Maximum Value = +0dBm) / +4dBm(Transmission Power Maximum Value = +4dBm) • Mid 0dBm(Transmission Power Maximum Value = +0dBm) / 0dBm(Transmission Power Maximum Value = +4dBm) • Low -18dBm(Transmission	High 0dBm(Transmission Power Maximum Value = +0dBm) / +4dBm(Transmission Power Maximum Value = +4dBm)	Set default transmit power. Default transmit power is dependent on the configuration of Maximum transmission power(BLE_ABS_CFG_RF_DEF_TX_POW).

	Power Maximum Value = +0dBm) / -20 dBm(Transmission Power Maximum Value = +4dBm)		
CLKOUT_RF Output	• No output • 4MHz output • 2MHz output • 1MHz output	No output	Set CLKOUT_RF output setting.
RF_DEEP_SLEEP Transition	• Disable • Enable	Enable	Set RF_DEEP_SLEEP transition.
MCU Main Clock Frequency	Value must be an integer between 1000 and 20000	8000	Set MCU Main Clock Frequency (kHz). Set clock source according to your board environment. HOCO: don't care. / Main Clock: 1000 to 20000 kHz / PLL Circuit: 4000 to 12500 kHz
Code Flash(ROM) Device Data Block	Value must be an integer between -1 and 255	255	Device specific data block on Code Flash (ROM).
Device Specific Data Flash Block	Value must be an integer between -1 and 7	-1	Device specific data block on E2 Data Flash.
MTU Size Configured	Value must be an integer between 23 and 247	247	MTU Size configured by GATT MTU exchange procedure.
Timer Slot Maximum Number	Value must be an integer between 1 and 10	10	The maximum number of timer slot.

Configurations for Networking > BLE Abstraction (rm_ble_abs)

This module can be added to the Stacks tab via New Stack > Networking > BLE Abstraction (rm_ble_abs).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_ble_abs0	Module name.
General > Gap callback	Name must be a valid C symbol	gap_cb	A user callback function must be provided if the BLE_ABS is configured to generate a GAP. If QE is used, set to

			NULL.
General > Vendor specific callback	Name must be a valid C symbol	vs_cb	A user callback function must be provided if the BLE_ABS is configured to generate a Vendor Specific. If QE is used, set to NULL.
General > GATT server callback parameter	Name must be a valid C symbol	gs_abs_gatts_cb_param	Set GATT server callback parameter. If QE is used, set to NULL.
General > GATT server callback number	Must be a valid number	2	The number of GATT Server callback functions.
General > GATT client callback parameter	Name must be a valid C symbol	gs_abs_gattc_cb_param	Set GATT client callback parameter. If QE is used, set to NULL.
General > GATT client callback number	Must be a valid number	2	The number of GATT Server callback functions.
Security > Pairing parameters	Name must be a valid C symbol	gs_abs_pairing_param	Set pairing parameters.
Security > IO capabilities of local device.	• BLE_GAP_IOCAP_DISPLAY_ONLY • BLE_GAP_IOCAP_DISPLAY_YESNO • BLE_GAP_IOCAP_KEYBOARD_ONLY • BLE_GAP_IOCAP_NOINPUT_NOOUTPUT • BLE_GAP_IOCAP_KEYBOARD_DISPLAY	BLE_GAP_IOCAP_NOINPUT_NOOUTPUT	Select IO capabilities of local device.
Security > MITM protection policy.	• BLE_GAP_SEC_MITM_BEST_EFFORT • BLE_GAP_SEC_MITM_STRICT	BLE_GAP_SEC_MITM_BEST_EFFORT	Select MITM protection policy.
Security > Determine whether to accept only Secure Connections or not.	• BLE_GAP_SC_BEST_EFFORT • BLE_GAP_SC_STRICT	BLE_GAP_SC_BEST_EFFORT	Select determine whether to accept only Secure Connections or not.
Security > Type of keys to be distributed from	• BLE_GAP_KEY_DIST_ENCKEY		Select type of keys to be distributed from

local device.	• BLE_GAP_KEY_DIST_IDKEY • BLE_GAP_KEY_DIST_SIGNKEY		local device.
Security > Type of keys which local device requests a remote device to distribute.	• BLE_GAP_KEY_DIST_ENCKEY • BLE_GAP_KEY_DIST_IDKEY • BLE_GAP_KEY_DIST_SIGNKEY		Set type of keys which local device requests a remote device to distribute.
Security > Maximum LTK size.	Valid range is 7 - 16	16	Set Maximum LTK size.
Interrupts > Callback provided when an ISR occurs	Name must be a valid C symbol	NULL	Callback provided when BLE ABS ISR occurs

Clock Configuration

Note

System clock (ICLK): 8 MHz or more
Peripheral module clock A (PCLKA): 8MHz or more
The BLE Protocol Stack is optimized for ICLK and PCLKA frequencies of 32 MHz.
It is recommended that the clock be set so that the ICLK and PCLKA frequencies are 32MHz in order to get the best performance from the BLE.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Limitations

Developers should be aware of the following limitations when using the BLE_ABS:

Examples

BLE_ABS Basic Example

This is a basic example of minimal use of the BLE_ABS in an application.

```
#define BLE_ABS_EVENT_FLAG_STACK_ON (0x01 << 0)
#define BLE_ABS_EVENT_FLAG_CONN_IND (0x01 << 1)
#define BLE_ABS_EVENT_FLAG_ADV_ON (0x01 << 2)
#define BLE_ABS_EVENT_FLAG_ADV_OFF (0x01 << 3)
#define BLE_ABS_EVENT_FLAG_DISCONN_IND (0x01 << 4)
#define BLE_ABS_EVENT_FLAG_RSLV_LIST_CONF_COMP (0x01 << 5)
#define BLE_ABS_EXAMPLE_SHORTENED_LOCAL_NAME 'E', 'x', 'a', 'm', 'p', 'l', 'e'
```

```
#define BLE_ABS_EXAMPLE_COMPLETE_LOCAL_NAME 'T', 'E', 'S', 'T', '_', 'E', 'x', 'a',
'm', 'p', 'l', 'e'
#define BLE_ABS_EXAMPLE_SLOW_ADVERTISING_INTERVAL (0x00000640)
void ble_abs_peripheral_example (void)
{

Data Structure Documentation

◆ abs_advertising_parameter_t

struct abs_advertising_parameter_t		
advertising set parameters structure		
Data Fields		
union abs_advertising_parameter_t	advertising_parameter	Advertising parameters.
uint32_t	advertising_status	Advertising status.
ble_device_address_t	remote_device_address	Remote device address for direct advertising.

◆ abs_scan_parameter_t

struct abs_scan_parameter_t
scan parameters structure

Data Fields		
ble_abs_scan_parameter_t	scan_parameter	Scan parameters.
ble_abs_scan_phy_parameter_t	scan_phy_parameter_1M	1M phy parameters for scan.
ble_abs_scan_phy_parameter_t	scan_phy_parameter_coded	Coded phy parameters for scan. */.
uint32_t	scan_status	

◆ ble_abs_instance_ctrl_t

struct ble_abs_instance_ctrl_t		
BLE ABS private control block. DO NOT MODIFY. Initialization occurs when RM_BLE_ABS_Open() is called.		
Data Fields		
uint32_t	open	Indicates whether the open() API has been successfully called.
void const *	p_context	Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t.
ble_gap_application_callback_t	abs_gap_callback	GAP callback function.
ble_vendor_specific_application_callback_t	abs_vendor_specific_callback	Vendor specific callback function.
ble_abs_delete_bond_application_callback_t	abs_delete_bond_callback	Delete bond information callback function.
uint32_t	connection_timer_handle	Cancel a request for connection timer.
uint32_t	advertising_timer_handle	Advertising timer for legacy advertising.
uint32_t	scan_timer_handle	Scan interval timer.
abs_advertising_parameter_t	advertising_sets[BLE_MAX_NO_OF_ADV_SETS_SUPPORTED]	Advertising set information.
abs_scan_parameter_t	abs_scan	Scan information.
st_ble_dev_addr_t	loc_bd_addr	Local device address.
uint8_t	privacy_mode	Privacy mode.
uint32_t	set_privacy_status	Local privacy status.
ble_abs_timer_t	timer[BLE_ABS_CFG_TIMER_NUMBER_OF_SLOT]	
uint8_t	local_irk[BLE_GAP_IRK_SIZE]	
ble_abs_identity_address_info_t	identity_address_info	

uint32_t	current_timeout_ms	Current timeout.
uint32_t	elapsed_timeout_ms	Elapsed timeout.
ble_abs_cfg_t const *	p_cfg	Pointer to the BLE ABS configuration block.

◆ st_ble_rf_notify_t

struct st_ble_rf_notify_t		
This structure is RF event notify management.		
Data Fields		
uint32_t	enable	Set enable/disable of each RF event notification. Bit0 Notify Connection event start(0:Disable/1:Enable) Bit1 Notify Advertising event start(0:Disable/1:Enable) Bit2 Notify Scanning event start(0:Disable/1:Enable) Bit3 Notify Initiating event start(0:Disable/1:Enable) Bit4 Notify Connection event close(0:Disable/1:Enable) Bit5 Notify Advertising event close(0:Disable/1:Enable) Bit6 Notify Scanning event close(0:Disable/1:Enable) Bit7 Notify Initiating event close(0:Disable/1:Enable) Bit8 Notify RF_DEEP_SLEEP event start(0:Disable/1:Enable) Bit9 Notify RF_DEEP_SLEEP event close(0:Disable/1:Enable) Other Bit: Reserved for future use.
ble_rf_notify_cb_t	start_cb	Set callback function pointer for RF event start.
ble_rf_notify_cb_t	close_cb	Set callback function pointer for RF event close.
ble_rf_notify_cb_t	dsleep_cb	Set callback function pointer for RF_DEEP_SLEEP.

Typedef Documentation

◆ ble_abs_timer_cb_t

typedef void(* ble_abs_timer_cb_t) (uint32_t timer_hdl)

The timer callback invoked when the timer expired.

◆ ble_mcu_clock_change_cb_t

ble_mcu_clock_change_cb_t

ble_mcu_clock_change_cb_t is the callback function type to use CLKOUT_RF as the MCU main clock source.

Parameters

none	

Returns

none

◆ ble_rf_notify_cb_t

ble_rf_notify_cb_t

ble_rf_notify_cb_t is the RF event notify callback function type.

Parameters

[in]	uint32_t	The infomation of RF event notification.

Returns

none

Enumeration Type Documentation

◆ e_ble_timer_type_t

enum e_ble_timer_type_t

The timer type.

Enumerator	
BLE_TIMER_ONE_SHOT	One shot timer type
BLE_TIMER_PERIODIC	Periodic timer type

Function Documentation

◆ RM_BLE_ABS_Open()

fsp_err_t RM_BLE_ABS_Open (ble_abs_ctrl_t *const *p_ctrl*, ble_abs_cfg_t const *const *p_cfg*)

Host stack is initialized with this function. Before using All the R_BLE APIs, it's necessary to call this function. A callback functions are registered with this function. In order to receive the GAP, GATT, Vendor specific event, it's necessary to register a callback function. The result of this API call is notified in BLE_GAP_EVENT_STACK_ON event. Implements ble_abs_api_t::open.

Example:

```
/* Open the module. */
   err = RM_BLE_ABS_Open(&g_ble_abs0_ctrl, &g_ble_abs0_cfg);
```

Return values

FSP_SUCCESS	Channel opened successfully.
FSP_ERR_ASSERTION	Null pointer presented.
FSP_ERR_INVALID_CHANNEL	The channel number is invalid.
FSP_ERR_ALREADY_OPEN	Requested channel is already open in a different configuration.
FSP_ERR_INVALID_ARGUMENT	Invalid input parameter.

Host stack is initialized with this function. Before using All the R_BLE APIs, it's necessary to call this function. A callback functions are registered with this function. In order to receive the GAP, GATT, Vendor specific event, it's necessary to register a callback function. The result of this API call is notified in BLE_GAP_EVENT_STACK_ON event. Implements ble_abs_api_t::open.

Example:

```
/* Open the module. */
   err = RM_BLE_ABS_Open(&g_ble_abs0_ctrl, &g_ble_abs0_cfg);
```

Return values

FSP_SUCCESS	Channel opened successfully.
FSP_ERR_ASSERTION	Null pointer presented.
FSP_ERR_ALREADY_OPEN	Requested channel is already open in a different configuration.
FSP_ERR_INVALID_ARGUMENT	Invalid input parameter.
FSP_ERR_INVALID_MODE	Invalid mode during open call

◆ RM_BLE_ABS_Close()

fsp_err_t RM_BLE_ABS_Close (ble_abs_ctrl_t *const *p_ctrl*)

Close the BLE channel. Implements ble_abs_api_t::close.

Example:

```
/* Close BLE driver */
   err = RM_BLE_ABS_Close(&g_ble_abs0_ctrl);
```

Return values

FSP_SUCCESS	Channel closed successfully.
FSP_ERR_ASSERTION	Null pointer presented.
FSP_ERR_NOT_OPEN	Control block not open.

Example:

```
/* Close BLE driver */
   err = RM_BLE_ABS_Close(&g_ble_abs0_ctrl);
```

Return values

FSP_SUCCESS	Channel closed successfully.
FSP_ERR_ASSERTION	Null pointer presented.
FSP_ERR_NOT_OPEN	Control block not open.

◆ RM_BLE_ABS_Reset()

fsp_err_t RM_BLE_ABS_Reset (ble_abs_ctrl_t *const *p_ctrl*, ble_event_cb_t *init_callback*)

BLE is reset with this function. The process is carried out in the following order. R_BLE_Close() -> R_BLE_GAP_Terminate() -> R_BLE_Open() -> R_BLE_SetEvent(). The init_cb callback initializes the others (Host Stack, timer, etc...). Implements ble_abs_api_t::reset.

Return values

FSP_SUCCESS	Channel closed successfully.
FSP_ERR_ASSERTION	Null pointer presented.
FSP_ERR_NOT_OPEN	Control block not open.

This function is not implemented. To perform this function call R_BLE_Close followed by R_BLE_Open. Implements ble_abs_api_t::reset.

Return values

FSP_ERR_UNSUPPORTED	Function is not supported

◆ RM_BLE_ABS_StartLegacyAdvertising()

fsp_err_t RM_BLE_ABS_StartLegacyAdvertising (ble_abs_ctrl_t *const *p_ctrl*, ble_abs_legacy_advertising_parameter_t const *const *p_advertising_parameter*)

Start Legacy Advertising after setting advertising parameters, advertising data and scan response data. The legacy advertising uses the advertising set whose advertising handle is 0. The advertising type is connectable and scannable(ADV_IND). The address type of local device is Public Identity Address or RPA(If the resolving list contains no matching entry, use the public address.). Scan request event(BLE_GAP_EVENT_SCAN_REQ_RECV) is not notified. Implements ble_abs_api_t::startLegacyAdvertising

Example:

```
/* Start advertising. */
   err = RM_BLE_ABS_StartLegacyAdvertising(&g_ble_abs0_ctrl,
&legacy_advertising_parameter);
```

Return values

FSP_SUCCESS	Operation succeeded
FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_STATE	Host stack hasn't been initialized.
FSP_ERR_INVALID_POINTER	p_advertising_parameter is specified as NULL.

FSP_ERR_INVALID_ARGUMENT	The advertising parameter is out of range.

Start Legacy Advertising after setting advertising parameters, advertising data and scan response data. The legacy advertising uses the advertising set whose advertising handle is 0. The advertising type is connectable and scannable(ADV_IND). The address type of local device is Public Identity Address or RPA(If the resolving list contains no matching entry, use the public address.). Scan request event(BLE_GAP_EVENT_SCAN_REQ_RECV) is not notified. Implements ble_abs_api_t::startLegacyAdvertising

Example:

```
/* Start advertising. */
   err = RM_BLE_ABS_StartLegacyAdvertising(&g_ble_abs0_ctrl,
&legacy_advertising_parameter);
```

Return values

FSP_SUCCESS	Operation succeeded
FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_STATE	Host stack hasn't been initialized.
FSP_ERR_INVALID_POINTER	p_advertising_parameter is specified as NULL.
FSP_ERR_INVALID_ARGUMENT	The advertising parameter is out of range.

◆ RM_BLE_ABS_StartExtendedAdvertising()

fsp_err_t RM_BLE_ABS_StartExtendedAdvertising (ble_abs_ctrl_t *const *p_ctrl*, ble_abs_extend_advertising_parameter_t const *const *p_advertising_parameter*)

Start Extended Advertising after setting advertising parameters, advertising data. The extended advertising uses the advertising set whose advertising handle is 1. The advertising type is connectable and non-scannable. The address type of local device is Public Identity Address or RPA(If the resolving list contains no matching entry, use the public address.). Scan request event(BLE_GAP_EVENT_SCAN_REQ_RECV) is not notified. Implements ble_abs_api_t::startExtendedAdvertising

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_advertising_parameter is specified as NULL.
FSP_ERR_INVALID_STATE	Host stack hasn't been initialized.
FSP_ERR_INVALID_ARGUMENT	The advertising parameter is out of range.
FSP_ERR_UNSUPPORTED	Subordinate modules do not support this feature.

Start Extended Advertising after setting advertising parameters, advertising data. The extended advertising uses the advertising set whose advertising handle is 1. The advertising type is connectable and non-scannable. The address type of local device is Public Identity Address or RPA(If the resolving list contains no matching entry, use the public address.). Scan request event(BLE_GAP_EVENT_SCAN_REQ_RECV) is not notified. Implements ble_abs_api_t::startExtendedAdvertising

Return values

FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_advertising_parameter is specified as NULL.
FSP_ERR_UNSUPPORTED	Subordinate modules do not support this feature.

◆ RM_BLE_ABS_StartNonConnectableAdvertising()

fsp_err_t RM_BLE_ABS_StartNonConnectableAdvertising (ble_abs_ctrl_t *const *p_ctrl*, ble_abs_non_connectable_advertising_parameter_t const *const *p_advertising_parameter*)

Start Non-Connectable Advertising after setting advertising parameters, advertising data. The non-connectable advertising uses the advertising set whose advertising handle is 2. The advertising type is non-connectable and non-scannable. The address type of local device is Public Identity Address or RPA(If the resolving list contains no matching entry, use the public address.). Scan request event(BLE_GAP_EVENT_SCAN_REQ_RECV) is not notified. Secondary Advertising Max Skip is 0. Implements ble_abs_api_t::startNonConnectableAdvertising.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_advertising_parameter is specified as NULL.
FSP_ERR_INVALID_STATE	Host stack hasn't been initialized.
FSP_ERR_INVALID_ARGUMENT	The advertising parameter is out of range.

Start Non-Connectable Advertising after setting advertising parameters, advertising data. The non-connectable advertising uses the advertising set whose advertising handle is 2. The advertising type is non-connectable and non-scannable. The address type of local device is Public Identity Address or RPA(If the resolving list contains no matching entry, use the public address.). Scan request event(BLE_GAP_EVENT_SCAN_REQ_RECV) is not notified. Secondary Advertising Max Skip is 0. Implements ble_abs_api_t::startNonConnectableAdvertising.

Return values

FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_advertising_parameter is specified as NULL.
FSP_ERR_UNSUPPORTED	Feature not yet supported.

◆ RM_BLE_ABS_StartPeriodicAdvertising()

fsp_err_t RM_BLE_ABS_StartPeriodicAdvertising (ble_abs_ctrl_t *const *p_ctrl*, ble_abs_periodic_advertising_parameter_t const *const *p_advertising_parameter*)

Start Periodic Advertising after setting advertising parameters, periodic advertising parameters, advertising data and periodic advertising data. The periodic advertising uses the advertising set whose advertising handle is 3. The advertising type is non-connectable and non-scannable. The address type of local device is Public Identity Address or RPA(If the resolving list contains no matching entry, use the public address.). Scan request event(BLE_GAP_EVENT_SCAN_REQ_RECV) is not notified. Secondary Advertising Max Skip is 0. Implements ble_abs_api_t::startPeriodicAdvertising

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_advertising_parameter is specified as NULL.
FSP_ERR_INVALID_ARGUMENT	The advertising parameter is out of range.
FSP_ERR_UNSUPPORTED	This feature is not supported in this configuration.

Start Periodic Advertising after setting advertising parameters, periodic advertising parameters, advertising data and periodic advertising data. The periodic advertising uses the advertising set whose advertising handle is 3. The advertising type is non-connectable and non-scannable. The address type of local device is Public Identity Address or RPA(If the resolving list contains no matching entry, use the public address.). Scan request event(BLE_GAP_EVENT_SCAN_REQ_RECV) is not notified. Secondary Advertising Max Skip is 0. Implements ble_abs_api_t::startPeriodicAdvertising

Return values

FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_advertising_parameter is specified as NULL.
FSP_ERR_UNSUPPORTED	Subordinate modules do not support this feature.

◆ RM_BLE_ABS_StartScanning()

fsp_err_t RM_BLE_ABS_StartScanning (ble_abs_ctrl_t *const *p_ctrl*, ble_abs_scan_parameter_t const *const *p_scan_parameter*)

Start scanning after setting scan parameters. The scanner address type is Public Identity Address. Fast scan is followed by slow scan. The end of fast scan or slow scan is notified with BLE_GAP_EVENT_SCAN_TO event. If fast_period is 0, only slow scan is carried out. If scan_period is 0, slow scan continues. Implements ble_abs_api_t::startScanning.

Example:

```
/* Start scanning. */
   err = RM_BLE_ABS_StartScanning(&g_ble_abs0_ctrl, &scan_parameter);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_scan_parameter is specified as NULL.
FSP_ERR_INVALID_ARGUMENT	The scan parameter is out of range.
FSP_ERR_IN_USE	This API is called in scanning.
FSP_ERR_BLE_ABS_NOT_FOUND	Usable timer slot not found.
FSP_ERR_UNSUPPORTED	This feature is not supported in this configuration.

Start scanning after setting scan parameters. The scanner address type is Public Identity Address. Fast scan is followed by slow scan. The end of fast scan or slow scan is notified with BLE_GAP_EVENT_SCAN_TO event. If fast_period is 0, only slow scan is carried out. If scan_period is 0, slow scan continues. Implements ble_abs_api_t::startScanning.

Example:

```
/* Start scanning. */
   err = RM_BLE_ABS_StartScanning(&g_ble_abs0_ctrl, &scan_parameter);
```

Return values

FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_scan_parameter is specified as NULL.
FSP_ERR_UNSUPPORTED	Function is not supported

◆ RM_BLE_ABS_CreateConnection()

fsp_err_t RM_BLE_ABS_CreateConnection (ble_abs_ctrl_t *const *p_ctrl*, ble_abs_connection_parameter_t const *const *p_connection_parameter*)

Request create connection. The initiator address type is Public Identity Address. The scan interval is 60ms and the scan window is 30ms in case of 1M PHY or 2M PHY. The scan interval is 180ms and the scan window is 90ms in case of coded PHY. The Minimum CE Length and the Maximum CE Length are 0xFFFF. When the request for a connection has been received by the Controller, BLE_GAP_EVENT_CREATE_CONN_COMP event is notified. When a link has beens established, BLE_GAP_EVENT_CONN_IND event is notified. Implements ble_abs_api_t::createConnection.

Example:

```
/* Create connection with remote device. */
   err = RM_BLE_ABS_CreateConnection(&g_ble_abs0_ctrl, &g_connection_parameter);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_connection_parameter is specified as NULL.
FSP_ERR_INVALID_ARGUMENT	The create connection parameter is out of range.
FSP_ERR_IN_USE	This API is called while creating a link by previous API call.
FSP_ERR_BLE_ABS_NOT_FOUND	Couldn't find a valid timer.
FSP_ERR_UNSUPPORTED	This feature is not supported in this configuration.

Request create connection. The initiator address type is Public Identity Address. The scan interval is 60ms and the scan window is 30ms in case of 1M PHY or 2M PHY. The scan interval is 180ms and the scan window is 90ms in case of coded PHY. The Minimum CE Length and the Maximum CE Length are 0xFFFF. When the request for a connection has been received by the Controller, BLE_GAP_EVENT_CREATE_CONN_COMP event is notified. When a link has beens established, BLE_GAP_EVENT_CONN_IND event is notified. Implements ble_abs_api_t::createConnection.

Example:

```
/* Create connection with remote device. */
   err = RM_BLE_ABS_CreateConnection(&g_ble_abs0_ctrl, &g_connection_parameter);
```

Return values

FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_POINTER	p_connection_parameter is specified as

	NULL.
FSP_ERR_INVALID_ARGUMENT	The create connection parameter is out of range.
FSP_ERR_UNSUPPORTED	Function is not supported

◆ RM_BLE_ABS_SetLocalPrivacy()

fsp_err_t RM_BLE_ABS_SetLocalPrivacy (ble_abs_ctrl_t *const *p_ctrl*, uint8_t const *const *p_lc_irk*, uint8_t *privacy_mode*)

Generate a IRK, add it to the resolving list, set privacy mode and enable RPA function. Register vendor specific callback function, if IRK is generated by this function. After configuring local device privacy, BLE_GAP_ADDR_RPA_ID_PUBLIC is specified as own device address in theadvertising/scan/create connection API. Implements ble_abs_api_t::setLocalPrivacy

Example:

```
/* Set local privacy. */
   err = RM_BLE_ABS_SetLocalPrivacy(&g_ble_abs0_ctrl, p_local_irk, privacy_mode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_ARGUMENT	The privacy_mode parameter is out of range.

Generate a IRK, add it to the resolving list, set privacy mode and enable RPA function. Register vendor specific callback function, if IRK is generated by this function. After configuring local device privacy, BLE_GAP_ADDR_RPA_ID_PUBLIC is specified as own device address in theadvertising/scan/create connection API. Implements ble_abs_api_t::setLocalPrivacy

Return values

FSP_ERR_ASSERTION	p_instance_ctrl is specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_ARGUMENT	The privacy_mode parameter is out of range.
FSP_ERR_UNSUPPORTED	Function is not supported

◆ RM_BLE_ABS_StartAuthentication()

fsp_err_t RM_BLE_ABS_StartAuthentication (ble_abs_ctrl_t *const *p_ctrl*, uint16_t *connection_handle*)

Start pairing or encryption. If pairing has been done, start encryption. The pairing parameters are configured by RM_BLE_ABS_Open() or R_BLE_GAP_SetPairingParams(). If the pairing parameters are configure by RM_BLE_ABS_Open(),

- bonding policy is that bonding information is stored.
- Key press notification is not supported. Implements ble_abs_api_t::startAuthentication.

Example:

```
/* Start authentication with remote device. */
   err = RM_BLE_ABS_StartAuthentication(&g_ble_abs0_ctrl, g_connection_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	p_instance_ctrl or connection_handle are specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_ARGUMENT	The connection handle parameter is out of range.

Start pairing or encryption. If pairing has been done, start encryption. The pairing parameters are configured by RM_BLE_ABS_Open() or R_BLE_GAP_SetPairingParams(). If the pairing parameters are configure by RM_BLE_ABS_Open(),

- bonding policy is that bonding information is stored.
- Key press notification is not supported. Implements ble_abs_api_t::startAuthentication.

Example:

```
/* Start authentication with remote device. */
   err = RM_BLE_ABS_StartAuthentication(&g_ble_abs0_ctrl, g_connection_handle);
```

Return values

FSP_ERR_ASSERTION	p_instance_ctrl or connection_handle are specified as NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_UNSUPPORTED	Function is not supported

◆ RM_BLE_ABS_DeleteBondInformation()

fsp_err_t RM_BLE_ABS_DeleteBondInformation (ble_abs_ctrl_t *const *p_ctrl*, ble_abs_bond_information_parameter_t const *const *p_bond_information_parameter*)

Delete bonding information from BLE stack and storage. Implements ble_abs_api_t::deleteBondInformation.

Example:

```
/* Delete bonding information. */
   err = RM_BLE_ABS_DeleteBondInformation(&g_ble_abs0_ctrl,
&g_bond_information_parameter);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_instance_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_bond_information_parameter is NULL.
FSP_ERR_NOT_OPEN	Control block not open.

Delete bonding information from BLE stack and storage. Implements ble_abs_api_t::deleteBondInformation.

Example:

```
/* Delete bonding information. */
   err = RM_BLE_ABS_DeleteBondInformation(&g_ble_abs0_ctrl,
&g_bond_information_parameter);
```

Return values

FSP_SUCCESS	Operation was successful
FSP_ERR_ASSERTION	The parameter p_instance_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_bond_information_parameter is NULL.
FSP_ERR_NOT_OPEN	Control block not open.

◆ RM_BLE_ABS_ImportKeyInformation()

fsp_err_t RM_BLE_ABS_ImportKeyInformation (ble_abs_ctrl_t *const *p_ctrl*, ble_device_address_t * *p_local_identity_address*, uint8_t * *p_local_irk*, uint8_t * *p_local_csrk*)

Import key information to BLE stack and storage. Implements ble_abs_api_t::importKeyInformation.

Example:

```
/* Import local key information. */
   err = RM_BLE_ABS_ImportKeyInformation(&g_ble_abs0_ctrl, &local_identity_address,
local_irk, local_csrk);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_instance_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_local_identity_address, p_local_irk or p_local_csrk is NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_HW_CONDITION	Failure to access internal storage.
FSP_ERR_UNSUPPORTED	Not supported in this configuration.

◆ RM_BLE_ABS_ExportKeyInformation()

fsp_err_t RM_BLE_ABS_ExportKeyInformation (ble_abs_ctrl_t *const *p_ctrl*, ble_device_address_t * *p_local_identity_address*, uint8_t * *p_local_irk*, uint8_t * *p_local_csrk*)

Export key information to BLE stack and storage. Implements ble_abs_api_t::exportKeyInformation.

Example:

```
/* Export local key information. */
   err = RM_BLE_ABS_ExportKeyInformation(&g_ble_abs0_ctrl, &local_identity_address,
local_irk, local_csrk);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_instance_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_local_identity_address, p_local_irk or p_local_csrk is NULL.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_BUFFER_EMPTY	Dynamic memory allocation failed.
FSP_ERR_OUT_OF_MEMORY	Failure to access internal storage.
FSP_ERR_NOT_INITIALIZED	Not initialized internal storage.
FSP_ERR_UNSUPPORTED	Not supported in this configuration.

4.2.82 Bluetooth Low Energy Abstraction with RYZ012 (rm_ble_abs_spp)

Modules

Middleware for the Bluetooth peripheral on RA MCUs. This module implements the BLE ABS Interface .

Overview

This module provides BLE GAP functionality that complies with the Bluetooth Core Specification version 5.0 specified by the Bluetooth SIG. This module is configured via the QE for BLE. QE for BLE provides standard and custom services defined by the user.

The module supports the Renesas Electronics RYZ012 Bluetooth® Low Energy 5 Module. The connection to the host is done through connecting the module to a PMOD on the development board. The rm_ble_abs_spp driver interfaces with the RYZ012 module over UART.

Features

The Bluetooth Low Energy Abstraction module with SPP supports the following features:

- Common functionality
  - Open/Close the BLE protocol stack.
  - Setting Transmit Power Level.
- The following GAP Role support
  - Peripheral: The device that accepts a connection request from Central and establishes a connection.
- GAP functionality
  - Initialize the Host stack.
  - Setting address.
  - Start/Stop Advertising.
  - Connect/Disconnect a link.
- GATT Common functionality
  - Get MTU Size.
- GATT Server functionality
  - Initialization of GATT Server.
  - Loading of Profile definition.
  - Notification of characteristics modification.
  - Read/Write of GATT Profile from host.

Target Devices

The Bluetooth Low Energy Abstraction module supports the following devices.

- RA6 line of devices using a PMOD connector for the RYZ012 module
- RA4 Line of devices using a PMOD connector for the RYZ012 module

Configuration

Build Time Configurations for rm_ble_abs_spp

The following build time configurations are defined in fsp_cfg/rm_ble_abs_spp_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enable • Disable	Default (BSP)	Specify whether to include code for API parameter checking.
Reset Port	Refer to the RA Configuration tool for available options.	03	Specify the module reset pin port for the MCU.
Reset Pin	Refer to the RA Configuration tool for available options.	10	Specify the module reset pin for the MCU.
UART/SPI Select Port (PB5)	Refer to the RA Configuration tool for available options.	03	Specify the module PB5 port for the MCU.
UART/SPI Select Pin (PB5)	Refer to the RA Configuration tool for available options.	11	Specify the module PB5 pin for the MCU.

Transmit Power Level (in dBm)	Refer to the RA Configuration tool for available options.	4.57	Specify the module transmit power in dBm.

Configurations for Networking > SPP BLE Abstraction (rm_ble_abs_spp)

This module can be added to the Stacks tab via New Stack > Networking > SPP BLE Abstraction (rm_ble_abs_spp).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_ble_abs0	Module name.
General > GAP callback	Name must be a valid C symbol	gap_cb	If QE is used, set to NULL.
General > Vendor specific callback	Name must be a valid C symbol	vs_cb	If QE is used, set to NULL.
General > GATT server callback parameter	Name must be a valid C symbol	gs_abs_gatts_cb_param	If QE is used, set to NULL.
General > GATT server callback number	Must be a valid number	2	The number of GATT Server callback functions.
General > GATT client callback parameter	Name must be a valid C symbol	gs_abs_gattc_cb_param	Set GATT client callback parameter. If QE is used, set to NULL.
General > GATT client callback number	Must be a valid number	2	The number of GATT Server callback functions.

Pin Configuration

Refer to Serial Communications Interface (SCI) UART (r_sci_uart). R_SCI_UART_Open() is called by Bluetooth Low Energy Abstraction with RYZ012 (rm_ble_abs_spp)

GPIO pins used by the BLE driver to control RYZ012:

- Reset Pin : Active low reset line for RYZ012 module
- UART/SPI Select Pin : Allows selection between UART or SPI from module communication. UART is selected with output low and SPI with output high.

Usage Notes

Limitations

Developers should be aware of the following limitations when using the BLE_ABS:

Currently supported rm_ble_abs_spp interface functions:

- RM_BLE_ABS_Open
- RM_BLE_ABS_Close

- RM_BLE_ABS_StartLegacyAdvertising

Currently supported r_ble_spp_api interface functions:

- R_BLE_Open
- R_BLE_Close
- R_BLE_SetEvent
- R_BLE_GAP_Init
- R_BLE_GAP_StopAdv
- R_BLE_GAP_SetAdvSresData
- R_BLE_GAP_StartAdv
- R_BLE_GAP_SetAdvParam
- R_BLE_GATT_GetMtu
- R_BLE_GATTS_SetDbInst
- R_BLE_GATTS_Init
- R_BLE_GATTS_GetAttr
- R_BLE_GATTS_SetAttr
- R_BLE_GATTS_Notification
- R_BLE_GATTS_Indication
- R_BLE_GATTS_RegisterCb
- R_BLE_GATTC_Init
- R_BLE_GATTC_RegisterCb
- R_BLE_VS_SetBdAddr
- R_BLE_VS_SetTxPower

Currently supported callback events:

- BLE_GAP_EVENT_CONN_IND
- BLE_GAP_EVENT_DISCONN_IND
- BLE_GAP_EVENT_ADV_ON
- BLE_GAP_EVENT_ADV_OFF
- BLE_GATTC_EVENT_CONN_IND
- BLE_GATTS_EVENT_CONN_IND
- BLE_GATTC_EVENT_DISCONN_IND
- BLE_GATTS_EVENT_DISCONN_IND
- BLE_GATTS_EVENT_WRITE_RSP_COMP

Transmit Power

Specific Operational Use Conditions for RYZ012 BLE module:

Please consult the laws and regulations of the region(s) in which the device will be used to verify the information below before using this device.

North America (FCC) The module must not be operated at power levels above 10.0 dBm. Host devices that need higher output power may not be marketed without prior re-certification.

Europe (RED) The module must not be operated at power levels above 8.4 dBm. Host devices that need higher output power may not be marketed in regions covered by RED regulation without prior re-certification.

Japan (MIC) The module must be operated at power level 4.5 dBm. Host devices that need to change output power may not be marketed without prior re-certification.

The current default level used in the E2 Studio Configurator is 4.5 dBm for the transmit power level.

Examples

BLE_ABS_SPP Basic Example

This is a basic example of minimal use of the BLE_ABS_SPP in an application.

```
/* The callback is called when peripheral event occurs. */
void gap_peripheral_cb (uint16_t type, ble_status_t result, st_ble_evt_data_t *
p_data)
{
 FSP_PARAMETER_NOT_USED(result);
 FSP_PARAMETER_NOT_USED(p_data);
 switch (type)
    {
 case BLE_GAP_EVENT_STACK_ON:
     {
           g_ble_event_flag = g_ble_event_flag | BLE_ABS_EVENT_FLAG_STACK_ON;
 break;
      }
 case BLE_GAP_EVENT_ADV_ON:
     {
 st_ble_gap_adv_set_evt_t * p_gap_adv_set_evt_param = (st_ble_gap_adv_set_evt_t *)
p_data->p_param;
           g_advertising_handle = p_gap_adv_set_evt_param->adv_hdl;
           g_ble_event_flag    |= BLE_ABS_EVENT_FLAG_ADV_ON;
 break;
      }
 case BLE_GAP_EVENT_ADV_OFF:
     {
           g_ble_event_flag |= BLE_ABS_EVENT_FLAG_ADV_OFF;
 break;
      }
 case BLE_GAP_EVENT_CONN_IND:
     {
           g_ble_event_flag |= BLE_ABS_EVENT_FLAG_CONN_IND;
```

```
 break;
       }
      {
 /* Do nothing. */
 break;
         }
 default:
 break;
    }
}
```

```
#define BLE_ABS_EVENT_FLAG_STACK_ON (0x01 << 0)
#define BLE_ABS_EVENT_FLAG_CONN_IND (0x01 << 1)

Detailed Description

Middleware to implement the block media interface on SD cards. This module implements the Block Media Interface.

Overview

Features

The SD/MMC implementation of the block media interface has the following key features:

- Reading, writing, and erasing data from an SD card
- Callback called when card insertion or removal is detected
- Provides media information such as sector size and total number of sectors.

Configuration

Build Time Configurations for rm_block_media_sdmmc

The following build time configurations are defined in driver/rm_block_media_sdmmc_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Storage > Block Media SD/MMC (rm_block_media_sdmmc)

This module can be added to the Stacks tab via New Stack > Storage > Block Media SD/MMC (rm_block_media_sdmmc). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_rm_block_media0	Module name.
Callback	Name must be a valid C symbol	NULL	A user callback function can be provided. If this callback function is provided, it will be called when a card is inserted or removed.

Clock Configuration

This module has no required clock configurations.

Pin Configuration

This module does not use I/O pins.

Examples

Basic Example

This is a basic example of minimal use of the SD/MMC block media implementation in an application.

```
#define RM_BLOCK_MEDIA_SDMMC_BLOCK_SIZE (512)
uint8_t g_dest[RM_BLOCK_MEDIA_SDMMC_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
uint8_t g_src[RM_BLOCK_MEDIA_SDMMC_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
uint32_t g_transfer_complete = 0;
void rm_block_media_sdmmc_basic_example (void)
{
 /* Initialize g_src to known data */
 for (uint32_t i = 0; i < RM_BLOCK_MEDIA_SDMMC_BLOCK_SIZE; i++)
    {
```

```
        g_src[i] = (uint8_t) ('A' + (i % 26));
    }
 /* Open the RM_BLOCK_MEDIA_SDMMC driver. */
 fsp_err_t err = RM_BLOCK_MEDIA_SDMMC_Open(&g_rm_block_media0_ctrl,
&g_rm_block_media0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* A device shall be ready to accept the first command within 1ms from detecting VDD
min. Reference section 6.4.1.1
  * "Power Up Time of Card" in the SD Physical Layer Simplified Specification Version
6.00. */
 R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
 /* Initialize the SD card. This should not be done until the card is plugged in for
SD devices. */
    err = RM_BLOCK_MEDIA_SDMMC_MediaInit(&g_rm_block_media0_ctrl);
    assert(FSP_SUCCESS == err);
 /* Write a block of data to sector 3 of an SD card. */
    err = RM_BLOCK_MEDIA_SDMMC_Write(&g_rm_block_media0_ctrl, g_src, 3, 1);
    assert(FSP_SUCCESS == err);
 /* Read a block of data from sector 3 of an SD card. */
    err = RM_BLOCK_MEDIA_SDMMC_Read(&g_rm_block_media0_ctrl, g_dest, 3, 1);
    assert(FSP_SUCCESS == err);
}
```

Function Documentation

◆ RM_BLOCK_MEDIA_SDMMC_Open()

fsp_err_t RM_BLOCK_MEDIA_SDMMC_Open (rm_block_media_ctrl_t *const *p_ctrl*, rm_block_media_cfg_t const *const *p_cfg*)

Opens the module.

Implements rm_block_media_api_t::open().

Return values

FSP_SUCCESS	Module is available and is now open.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_ALREADY_OPEN	Module has already been opened with this instance of the control structure.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- sdmmc_api_t::open

◆ RM_BLOCK_MEDIA_SDMMC_MediaInit()

fsp_err_t RM_BLOCK_MEDIA_SDMMC_MediaInit (rm_block_media_ctrl_t *const *p_ctrl*)

Initializes the SD or eMMC device. This procedure requires several sequential commands. This function blocks until all identification and configuration commands are complete.

Implements rm_block_media_api_t::mediaInit().

Return values

FSP_SUCCESS	Module is initialized and ready to access the memory device.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- sdmmc_api_t::mediaInit

◆ RM_BLOCK_MEDIA_SDMMC_Read()

fsp_err_t RM_BLOCK_MEDIA_SDMMC_Read (rm_block_media_ctrl_t *const *p_ctrl*, uint8_t *const *p_dest_address*, uint32_t const *block_address*, uint32_t const *num_blocks*)

Reads data from an SD or eMMC device. Up to 0x10000 sectors can be read at a time. Implements rm_block_media_api_t::read().

Return values

FSP_SUCCESS	Data read successfully.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:
- sdmmc_api_t::read

◆ RM_BLOCK_MEDIA_SDMMC_Write()

fsp_err_t RM_BLOCK_MEDIA_SDMMC_Write (rm_block_media_ctrl_t *const *p_ctrl*, uint8_t const *const *p_src_address*, uint32_t const *block_address*, uint32_t const *num_blocks*)

Writes data to an SD or eMMC device. Up to 0x10000 sectors can be written at a time. Implements rm_block_media_api_t::write().

Return values

FSP_SUCCESS	Write finished successfully.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:
- sdmmc_api_t::write

◆ RM_BLOCK_MEDIA_SDMMC_Erase()

fsp_err_t RM_BLOCK_MEDIA_SDMMC_Erase (rm_block_media_ctrl_t *const *p_ctrl*, uint32_t const *block_address*, uint32_t const *num_blocks*)

Erases sectors of an SD card or eMMC device. Implements rm_block_media_api_t::erase().

Return values

FSP_SUCCESS	Erase operation requested.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- sdmmc_api_t::erase
- sdmmc_api_t::statusGet

◆ RM_BLOCK_MEDIA_SDMMC_CallbackSet()

fsp_err_t RM_BLOCK_MEDIA_SDMMC_CallbackSet (rm_block_media_ctrl_t *const *p_ctrl*, void(*)(rm_block_media_callback_args_t *) *p_callback*, void const *const *p_context*, rm_block_media_callback_args_t *const *p_callback_memory*)

Updates the user callback with the option to provide memory for the callback argument structure. Implements rm_block_media_api_t::callbackSet.

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

◆ RM_BLOCK_MEDIA_SDMMC_StatusGet()

fsp_err_t RM_BLOCK_MEDIA_SDMMC_StatusGet (rm_block_media_ctrl_t *const *p_api_ctrl*, rm_block_media_status_t *const *p_status*)

Provides driver status. Implements rm_block_media_api_t::statusGet().

Return values

FSP_SUCCESS	Status stored in p_status.
FSP_ERR_ASSERTION	NULL pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLOCK_MEDIA_SDMMC_InfoGet()

fsp_err_t RM_BLOCK_MEDIA_SDMMC_InfoGet (rm_block_media_ctrl_t *const *p_ctrl*, rm_block_media_info_t *const *p_info*)

Retrieves module information. Implements rm_block_media_api_t::infoGet().

Return values

FSP_SUCCESS	Erase operation requested.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.

◆ RM_BLOCK_MEDIA_SDMMC_Close()

fsp_err_t RM_BLOCK_MEDIA_SDMMC_Close (rm_block_media_ctrl_t *const *p_ctrl*)

Closes an open SD/MMC device. Implements rm_block_media_api_t::close().

Return values

FSP_SUCCESS	Successful close.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.

4.2.84 SPI Block Media Implementation (rm_block_media_spi)

Modules

Functions

fsp_err_t	RM_BLOCK_MEDIA_SPI_Open (rm_block_media_ctrl_t *const p_ctrl, rm_block_media_cfg_t const *const p_cfg)
fsp_err_t	RM_BLOCK_MEDIA_SPI_InfoGet (rm_block_media_ctrl_t *const p_ctrl, rm_block_media_info_t *const p_info)
fsp_err_t	RM_BLOCK_MEDIA_SPI_MediaInit (rm_block_media_ctrl_t *const p_ctrl)
fsp_err_t	RM_BLOCK_MEDIA_SPI_Read (rm_block_media_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const start_block, uint32_t const num_blocks)
fsp_err_t	RM_BLOCK_MEDIA_SPI_StatusGet (rm_block_media_ctrl_t *const p_ctrl, rm_block_media_status_t *const p_status)
fsp_err_t	RM_BLOCK_MEDIA_SPI_Write (rm_block_media_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint32_t const start_block, uint32_t const num_blocks)
fsp_err_t	RM_BLOCK_MEDIA_SPI_CallbackSet (rm_block_media_ctrl_t *const p_ctrl, void(*p_callback)(rm_block_media_callback_args_t *), void const *const p_context, rm_block_media_callback_args_t *const p_callback_memory)
fsp_err_t	RM_BLOCK_MEDIA_SPI_Close (rm_block_media_ctrl_t *const p_ctrl)
fsp_err_t	RM_BLOCK_MEDIA_SPI_Erase (rm_block_media_ctrl_t *const p_ctrl, uint32_t const start_block, uint32_t const num_blocks)

Detailed Description

Middleware to implement the block media interface on SPI flash memory. This module implements the Block Media Interface.

Overview

Features

The SPI implementation of the block media interface has the following key features:

- Reading, writing, and erasing data from SPI flash memory
- Provides media information such as sector size and total number of sectors.

Note

By default, Block Media SPI Read, Write, and Erase are blocking operations. Non-blocking operation may be achieved by yielding control within the optional callback function.

Configuration

Build Time Configurations for rm_block_media_spi

The following build time configurations are defined in driver/rm_block_media_spi_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected, code for parameter checking is included in the build

Configurations for Storage > Block Media SPI Flash (rm_block_media_spi)

This module can be added to the Stacks tab via New Stack > Storage > Block Media SPI Flash (rm_block_media_spi).

Configuration	Options	Default	Description
Module Instance Name	Name must be a valid C symbol	g_rm_block_media0	Module name
Block size (bytes)	Manual Entry	4096	Specify the size of a block in bytes.
Block count	Minimum block count is 1, maximum is defined by hardware and software design.	8192	Number of blocks available for use by this driver instance.
Base Address	Manual Entry	0	Base address offset (bytes) for instance memory region.
Callback Function	Name must be a valid C symbol	NULL	A user callback function can be provided. If this callback is provided, it will be called after the completion of Read, Write, and Erase operations, or anytime these functions are waiting on hardware.
[DEPRECATED] Callback Context	Name must be a valid C symbol	NULL	A user specified context that will be provided back to the user when a callback occurs.

Clock Configuration

This module has no required clock configurations.

Pin Configuration

This module does not use I/O pins.

Limitations

Developers should be aware of the following limitations when using RM_BLOCK_MEDIA_SPI:

- Getting and setting Block Protection or Advanced Sector Protection modes is not supported.
- Addressing QSPI memory address ranges greater than 64 MB (one bank) is not supported.

Examples

Basic Example

This is a basic example of minimal use of the SPI block media implementation in an application.

```
#define RM_BLOCK_MEDIA_SPI_BLOCK_SIZE (256U)
uint8_t g_dest[RM_BLOCK_MEDIA_SPI_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
uint8_t g_src[RM_BLOCK_MEDIA_SPI_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
void rm_block_media_spi_basic_example (void)
{
 /* Initialize g_src to known data */
 for (uint32_t i = 0; i < RM_BLOCK_MEDIA_SPI_BLOCK_SIZE; i++)
    {
       g_src[i] = (uint8_t) ('A' + (i % 26));
    }
 /* Open the RM_BLOCK_MEDIA_SPI driver. */
 fsp_err_t err = RM_BLOCK_MEDIA_SPI_Open(&g_rm_block_media0_ctrl,
&g_rm_block_media0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Initialize the SPI flash memory. */
    err = RM_BLOCK_MEDIA_SPI_MediaInit(&g_rm_block_media0_ctrl);
    assert(FSP_SUCCESS == err);
 /* Write a block of data to block 3 of the SPI flash memory. */
    err = RM_BLOCK_MEDIA_SPI_Write(&g_rm_block_media0_ctrl, g_src, 3, 1);
    assert(FSP_SUCCESS == err);
 /* Read a block of data from block 3 of the SPI flash memory. */
    err = RM_BLOCK_MEDIA_SPI_Read(&g_rm_block_media0_ctrl, g_dest, 3, 1);
    assert(FSP_SUCCESS == err);
```

```
}
```

Non-Blocking Example

This is a basic example of using the optional SPI callback to impliment non-blocking operation.

```
#define RM_BLOCK_MEDIA_EXAMPLE_DEVICE_BLOCK_COUNT 0x1000
void rm_block_media_spi_non_blocking_example (void)
{
 /* Initialize g_src to known data */
 for (uint32_t i = 0; i < RM_BLOCK_MEDIA_SPI_BLOCK_SIZE; i++)
    {
       g_src[i] = (uint8_t) ('A' + (i % 26));
    }
 /* Open the RM_BLOCK_MEDIA_SPI driver. This enables the card detection interrupt. */
 fsp_err_t err = RM_BLOCK_MEDIA_SPI_Open(&g_rm_block_media0_ctrl,
&g_rm_block_media0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Initialize the Block Media SPI driver. */
    err = RM_BLOCK_MEDIA_SPI_MediaInit(&g_rm_block_media0_ctrl);
    assert(FSP_SUCCESS == err);
 /* Erase a large quantity of data from SPI Flash Memory */
    err = RM_BLOCK_MEDIA_SPI_Erase(&g_rm_block_media0_ctrl, 0,
RM_BLOCK_MEDIA_EXAMPLE_DEVICE_BLOCK_COUNT);
    assert(FSP_SUCCESS == err);
}
/* The optional callback is invoked for Read, Write, and Erase operations, whenever
the operation completes or has
 * been blocked by the lower level SPI driver busy indication.
 */
void rm_block_media_spi_example_callback (rm_block_media_callback_args_t * p_args)
{
 if (RM_BLOCK_MEDIA_EVENT_OPERATION_COMPLETE == p_args->event)
    {
```

```
/* TODO: Process operation complete. */
   }
else if (RM_BLOCK_MEDIA_EVENT_POLL_STATUS == p_args->event)
   {
rm_block_media_status_t status;
rm_block_media_ctrl_t * p_ctrl = (rm_block_media_ctrl_t *) p_args->p_context;
fsp_err_t err = RM_BLOCK_MEDIA_SPI_StatusGet(p_ctrl, &status);
     assert(FSP_SUCCESS == err);
if (true == status.busy)
     {
/* Run waiting tasks */
           vTaskSuspend(xTaskGetCurrentTaskHandle());
     }
   }
else
   {
      assert(RM_BLOCK_MEDIA_EVENT_ERROR == p_args->event);
/* TODO: Process Read, Write, or Erase error. */
   }
}
```

Function Documentation

◆ RM_BLOCK_MEDIA_SPI_Open()

fsp_err_t RM_BLOCK_MEDIA_SPI_Open (rm_block_media_ctrl_t *const *p_ctrl*, rm_block_media_cfg_t const *const *p_cfg*)

Parameter checking and Acquires mutex, then handles driver initialization at the HAL SPI layer and marking the open flag in control block.

Implements rm_block_media_api_t::open.

Return values

FSP_SUCCESS	Block media for SPI framework is successfully opened.
FSP_ERR_ASSERTION	One of the input parameters or their data references may be null.
FSP_ERR_ALREADY_OPEN	The channel specified has already been opened. See HAL driver for other possible causes.

Returns

See Common Error Codes or HAL driver for other possible return codes or causes. This function calls
- spi_flash_api_t::open

◆ RM_BLOCK_MEDIA_SPI_InfoGet()

fsp_err_t RM_BLOCK_MEDIA_SPI_InfoGet (rm_block_media_ctrl_t *const *p_ctrl*, rm_block_media_info_t *const *p_info*)

Retrieves module information.

Implements rm_block_media_api_t::infoGet.

Return values

FSP_SUCCESS	Erase operation requested.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.

◆ RM_BLOCK_MEDIA_SPI_MediaInit()

fsp_err_t RM_BLOCK_MEDIA_SPI_MediaInit (rm_block_media_ctrl_t *const *p_ctrl*)

Initializes the Block Media SPI Flash device.

Implements rm_block_media_api_t::mediaInit.

Return values

FSP_SUCCESS	Module is initialized and ready to access the memory device.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLOCK_MEDIA_SPI_Read()

fsp_err_t RM_BLOCK_MEDIA_SPI_Read (rm_block_media_ctrl_t *const *p_ctrl*, uint8_t *const *p_dest*, uint32_t const *start_block*, uint32_t const *num_blocks*)

Reads a number of blocks from spi flash memory. By default, this is a function is blocking. Non-blocking operation may be achieved by yielding control within the optional callback function.

Implements rm_block_media_api_t::read.

Return values

FSP_SUCCESS	SPI data read successfully
FSP_ERR_ASSERTION	p_ctrl or p_dest is NULL, or num_blocks is zero
FSP_ERR_NOT_OPEN	Block Media SPI module is not yet open
FSP_ERR_INVALID_ADDRESS	Invalid address range for read operation
FSP_ERR_NOT_INITIALIZED	Block Media SPI module is not yet initialized

◆ RM_BLOCK_MEDIA_SPI_StatusGet()

fsp_err_t RM_BLOCK_MEDIA_SPI_StatusGet (rm_block_media_ctrl_t *const *p_ctrl*, rm_block_media_status_t *const *p_status*)

Provides driver status.

Implements rm_block_media_api_t::statusGet.

Return values

FSP_SUCCESS	Status stored in p_status.
FSP_ERR_ASSERTION	NULL pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Returns

See Common Error Codes or HAL driver for other possible return codes or causes. This function calls
- spi_flash_api_t::statusGet

◆ RM_BLOCK_MEDIA_SPI_Write()

fsp_err_t RM_BLOCK_MEDIA_SPI_Write (rm_block_media_ctrl_t *const *p_ctrl*, uint8_t const *const *p_src*, uint32_t const *start_block*, uint32_t const *num_blocks*)

Writes provided data to a number of blocks of spi flash memory. By default, this is a function is blocking. Non-blocking operation may be achieved by yielding control within the optional callback function.

Implements rm_block_media_api_t::write.

Return values

FSP_SUCCESS	Flash write finished successfully.
FSP_ERR_ASSERTION	p_ctrl or p_src is NULL. Or num_blocks is zero.
FSP_ERR_NOT_OPEN	Block media SPI Framework module is not yet initialized.
FSP_ERR_INVALID_ADDRESS	Invalid address range
FSP_ERR_NOT_INITIALIZED	Block Media SPI module is not yet initialized

Returns

See Common Error Codes or HAL driver for other possible return codes or causes. This function calls
- spi_flash_api_t::write

◆ RM_BLOCK_MEDIA_SPI_CallbackSet()

fsp_err_t RM_BLOCK_MEDIA_SPI_CallbackSet (rm_block_media_ctrl_t *const *p_ctrl*, void(*)(rm_block_media_callback_args_t *) *p_callback*, void const *const *p_context*, rm_block_media_callback_args_t *const *p_callback_memory*)

Updates the user callback with the option to provide memory for the callback argument structure. API not supported.

Implements rm_block_media_api_t::callbackSet.

Return values

FSP_ERR_UNSUPPORTED	API not supported by RM_BLOCK_MEDIA_SPI.

◆ RM_BLOCK_MEDIA_SPI_Close()

fsp_err_t RM_BLOCK_MEDIA_SPI_Close (rm_block_media_ctrl_t *const *p_ctrl*)

Closes the Block Media SPI device. Implements rm_block_media_api_t::close.

Return values

FSP_SUCCESS	Successful close.
FSP_ERR_ASSERTION	One of the following parameters may be null: p_ctrl.
FSP_ERR_NOT_OPEN	Block media SPI Framework module is not yet initialized.

Returns

See Common Error Codes or HAL driver for other possible return codes or causes. This function calls

- spi_flash_api_t::close

◆ RM_BLOCK_MEDIA_SPI_Erase()

fsp_err_t RM_BLOCK_MEDIA_SPI_Erase (rm_block_media_ctrl_t *const *p_ctrl*, uint32_t const *start_block*, uint32_t const *num_blocks*)

This function erases blocks of the SPI device. By default, this is a function is blocking. Non-blocking operation may be achieved by yielding control within the optional callback function.

Implements rm_block_media_api_t::erase.

Return values

FSP_SUCCESS	Erase operation requested.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.
FSP_ERR_INVALID_ADDRESS	Invalid address range

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- spi_flash_api_t::erase
- spi_flash_api_t::statusGet

4.2.85 USB HMSC Block Media Implementation (rm_block_media_usb)

Modules

Functions

fsp_err_t	RM_BLOCK_MEDIA_USB_Open (rm_block_media_ctrl_t *const p_ctrl, rm_block_media_cfg_t const *const p_cfg)
fsp_err_t	RM_BLOCK_MEDIA_USB_MediaInit (rm_block_media_ctrl_t *const p_ctrl)
fsp_err_t	RM_BLOCK_MEDIA_USB_Read (rm_block_media_ctrl_t *const p_ctrl, uint8_t *const p_dest_address, uint32_t const block_address, uint32_t const num_blocks)
fsp_err_t	RM_BLOCK_MEDIA_USB_Write (rm_block_media_ctrl_t *const p_ctrl, uint8_t const *const p_src_address, uint32_t const block_address, uint32_t const num_blocks)
fsp_err_t	RM_BLOCK_MEDIA_USB_Erase (rm_block_media_ctrl_t *const p_ctrl, uint32_t const block_address, uint32_t const num_blocks)
fsp_err_t	RM_BLOCK_MEDIA_USB_CallbackSet (rm_block_media_ctrl_t *const

	p_ctrl, void(*p_callback)(rm_block_media_callback_args_t *), void const *const p_context, rm_block_media_callback_args_t *const p_callback_memory)
fsp_err_t	RM_BLOCK_MEDIA_USB_StatusGet (rm_block_media_ctrl_t *const p_api_ctrl, rm_block_media_status_t *const p_status)
fsp_err_t	RM_BLOCK_MEDIA_USB_InfoGet (rm_block_media_ctrl_t *const p_ctrl, rm_block_media_info_t *const p_info)
fsp_err_t	RM_BLOCK_MEDIA_USB_Close (rm_block_media_ctrl_t *const p_ctrl)

Detailed Description

Middleware to implement the block media interface on USB mass storage devices. This module implements the Block Media Interface.

Overview

Features

The USB implementation of the block media interface has the following key features:

- Reading, writing, and erasing data from a USB mass storage device
- Callback called when device insertion or removal is detected
- Provides media information such as sector size and total number of sectors.

Configuration

Build Time Configurations for rm_block_media_usb

The following build time configurations are defined in driver/rm_block_media_usb_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Storage > Block Media USB (rm_block_media_usb)

This module can be added to the Stacks tab via New Stack > Storage > Block Media USB (rm_block_media_usb).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_rm_block_media0	Module name.
Callback	Name must be a valid C symbol	NULL	A user callback function can be provided. If this

			callback function is provided, it will be called when a device is attached or removed.
Pointer to user context	Name must be a valid C symbol	NULL	A user context can be provided. If this context is provided, it will be passed to callback function when a device is attached or removed.

Note

RM_BLOCK_MEDIA_USB_MediaInit function must be called after receiving the insert event notification.

Clock Configuration

This module has no required clock configurations.

Pin Configuration

This module does not use I/O pins.

Examples

Basic Example

This is a basic example of minimal use of the USB mass storage block media implementation in an application.

```
#define RM_BLOCK_MEDIA_USB_BLOCK_SIZE (512)
volatile bool g_usb_inserted = false;
uint8_t       g_dest[RM_BLOCK_MEDIA_USB_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
uint8_t       g_src[RM_BLOCK_MEDIA_USB_BLOCK_SIZE] BSP_ALIGN_VARIABLE(4);
void rm_block_media_usb_basic_example (void)
{
 /* Initialize g_src to known data */
 for (uint32_t i = 0; i < RM_BLOCK_MEDIA_USB_BLOCK_SIZE; i++)
    {
       g_src[i] = (uint8_t) ('A' + (i % 26));
    }
 /* Open the RM_BLOCK_MEDIA_USB driver. */
 fsp_err_t err = RM_BLOCK_MEDIA_USB_Open(&g_rm_block_media0_ctrl,
&g_rm_block_media0_cfg);
 /* Handle any errors. This function should be defined by the user. */
```

```
    assert(FSP_SUCCESS == err);
 while (!g_usb_inserted)
    {
 /* Wait for a card insertion interrupt. */
    }
 /* Initialize the mass storage device. This should not be done until the device is
plugged in and initialized. */
    err = RM_BLOCK_MEDIA_USB_MediaInit(&g_rm_block_media0_ctrl);
    assert(FSP_SUCCESS == err);
 /* Write a block of data to sector 3 of an USB mass storage device. */
    err = RM_BLOCK_MEDIA_USB_Write(&g_rm_block_media0_ctrl, g_src, 3, 1);
    assert(FSP_SUCCESS == err);
 /* Read a block of data from sector 3 of an USB mass storage device. */
    err = RM_BLOCK_MEDIA_USB_Read(&g_rm_block_media0_ctrl, g_dest, 3, 1);
    assert(FSP_SUCCESS == err);
}
```

Device Insertion

This is an example of using a callback to determine when a mass storage device is plugged in and enumerated.

```
/* The callback is called when a media insertion event occurs. */
void rm_block_media_usb_media_insertion_example_callback
(rm_block_media_callback_args_t * p_args)
{
 if (RM_BLOCK_MEDIA_EVENT_MEDIA_INSERTED == p_args->event)
    {
       g_usb_inserted = true;
    }
 if (RM_BLOCK_MEDIA_EVENT_MEDIA_REMOVED == p_args->event)
    {
       g_usb_inserted = false;
    }
}
```

Function Documentation

◆ RM_BLOCK_MEDIA_USB_Open()

fsp_err_t RM_BLOCK_MEDIA_USB_Open (rm_block_media_ctrl_t *const *p_ctrl*, rm_block_media_cfg_t const *const *p_cfg*)

Opens the module.

Implements rm_block_media_api_t::open().

Return values

FSP_SUCCESS	Module is available and is now open.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_ALREADY_OPEN	Module has already been opened with this instance of the control structure.

Returns

See Common Error Codes or functions called by this function for other possible return codes.

◆ RM_BLOCK_MEDIA_USB_MediaInit()

fsp_err_t RM_BLOCK_MEDIA_USB_MediaInit (rm_block_media_ctrl_t *const *p_ctrl*)

Initializes the USB device.

Implements rm_block_media_api_t::mediaInit().

Return values

FSP_SUCCESS	Module is initialized and ready to access the memory device.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLOCK_MEDIA_USB_Read()

fsp_err_t RM_BLOCK_MEDIA_USB_Read (rm_block_media_ctrl_t *const *p_ctrl*, uint8_t *const *p_dest_address*, uint32_t const *block_address*, uint32_t const *num_blocks*)

Reads data from an USB device. Implements rm_block_media_api_t::read().

This function blocks until the data is read into the destination buffer.

Return values

FSP_SUCCESS	Data read successfully.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.
FSP_ERR_USB_FAILED	The message could not received completed successfully.

Returns

See Common Error Codes or functions called by this function for other possible return codes.

◆ RM_BLOCK_MEDIA_USB_Write()

fsp_err_t RM_BLOCK_MEDIA_USB_Write (rm_block_media_ctrl_t *const *p_ctrl*, uint8_t const *const *p_src_address*, uint32_t const *block_address*, uint32_t const *num_blocks*)

Writes data to an USB device. Implements rm_block_media_api_t::write().

This function blocks until the write operation completes.

Return values

FSP_SUCCESS	Write finished successfully.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.
FSP_ERR_USB_FAILED	The message could not received completed successfully.

Returns

See Common Error Codes or functions called by this function for other possible return codes.

◆ RM_BLOCK_MEDIA_USB_Erase()

fsp_err_t RM_BLOCK_MEDIA_USB_Erase (rm_block_media_ctrl_t *const *p_ctrl*, uint32_t const *block_address*, uint32_t const *num_blocks*)

Erases sectors of an USB device. Implements rm_block_media_api_t::erase().

This function blocks until erase is complete.

Return values

FSP_SUCCESS	Erase operation requested.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.

Returns

See Common Error Codes or functions called by this function for other possible return codes.

◆ RM_BLOCK_MEDIA_USB_CallbackSet()

fsp_err_t RM_BLOCK_MEDIA_USB_CallbackSet (rm_block_media_ctrl_t *const *p_ctrl*, void(*)(rm_block_media_callback_args_t *) *p_callback*, void const *const *p_context*, rm_block_media_callback_args_t *const *p_callback_memory*)

Updates the user callback with the option to provide memory for the callback argument structure. Implements rm_block_media_api_t::callbackSet.

Note

This function is currently unsupported for Block Media over USB.

Return values

FSP_ERR_UNSUPPORTED	CallbackSet is not currently supported for Block Media over USB.

◆ RM_BLOCK_MEDIA_USB_StatusGet()

fsp_err_t RM_BLOCK_MEDIA_USB_StatusGet (rm_block_media_ctrl_t *const *p_api_ctrl*, rm_block_media_status_t *const *p_status*)

Provides driver status. Implements rm_block_media_api_t::statusGet().

Return values

FSP_SUCCESS	Status stored in p_status.
FSP_ERR_ASSERTION	NULL pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.

Returns

See Common Error Codes or functions called by this function for other possible return codes.

◆ RM_BLOCK_MEDIA_USB_InfoGet()

fsp_err_t RM_BLOCK_MEDIA_USB_InfoGet (rm_block_media_ctrl_t *const *p_ctrl*, rm_block_media_info_t *const *p_info*)

Retrieves module information. Implements rm_block_media_api_t::infoGet().

Return values

FSP_SUCCESS	Erase operation requested.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_INITIALIZED	Module has not been initialized.

◆ RM_BLOCK_MEDIA_USB_Close()

fsp_err_t RM_BLOCK_MEDIA_USB_Close (rm_block_media_ctrl_t *const *p_ctrl*)

Closes an open USB device. Implements rm_block_media_api_t::close().

Return values

FSP_SUCCESS	Successful close.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module is not open.

4.2.86 User Block Media Implementation (rm_block_media_user)

Modules

Middleware that implements a block media interface on the media of your choice. This module implements the Block Media Interface.

Overview

Features

This module is for using Block media with user-selected media.

Configuration

Block Media User has no output config settings.
The user is required to create the config settings etc. in the application.
The figure below is an example of the config definition when the user media in USB PMSC is RAM.

```
const rm_block_media_api_t g_rm_block_media_on_user_media =
{
    .open      = RM_BLOCK_MEDIA_RAM_Open,
    .mediaInit = RM_BLOCK_MEDIA_RAM_MediaInit,
    .read      = RM_BLOCK_MEDIA_RAM_Read,
    .write    = RM_BLOCK_MEDIA_RAM_Write,
    .erase    = RM_BLOCK_MEDIA_RAM_Erase,
    .infoGet   = RM_BLOCK_MEDIA_RAM_InfoGet,
    .statusGet = RM_BLOCK_MEDIA_RAM_StatusGet,
    .close    = RM_BLOCK_MEDIA_RAM_Close,
};
extern void r_usb_pmsc_block_media_event_callback(rm_block_media_callback_args_t *
p_args);
const rm_block_media_cfg_t g_rm_block_media0_cfg =
{.p_extend = NULL, .p_callback = r_usb_pmsc_block_media_event_callback, .p_context =
NULL, };
rm_block_media_instance_t g_rm_block_media0 =
{.p_api = &g_rm_block_media_on_user_media, .p_ctrl = NULL, .p_cfg =
&g_rm_block_media0_cfg, };
```

Note

If you use block_media_user, you need to create a function that matches the media you are using.
In the above example, this is the function with RM_BLOCK_MEDIA_.
Register the created function in rm_block_media_api_t.
The registered rm_block_media_api_t is registered in p_api, which is a member of rm_block_media_instance_t.

Clock Configuration

This module has no required clock configurations.

Pin Configuration

This module does not use I/O pins.

Examples

Basic Example

Please refer to USB Peripheral Mass Storage Class (r_usb_pmsc) for the PMSC application given as an example.

4.2.87 AWS Cellular Comm Interface on UART (rm_cellular_comm_uart_aws)

Modules

Functions

CellularCommInterfaceError_t	RM_CELLULAR_COMM_UART_AWS_Open (rm_cellular_comm_uart_aws_instance_ctrl_t *p_instance_ctrl, CellularCommInterfaceReceiveCallback_t receive_callback, void *pUserData)
CellularCommInterfaceError_t	RM_CELLULAR_COMM_UART_AWS_Send (CellularCommInterfaceHandle_t commInterfaceHandle, const uint8_t *pData, uint32_t dataLength, uint32_t timeoutMilliseconds, uint32_t *pDataSentLength)
CellularCommInterfaceError_t	RM_CELLULAR_COMM_UART_AWS_Receive (CellularCommInterfaceHandle_t commInterfaceHandle, uint8_t *pBuffer, uint32_t bufferLength, uint32_t timeoutMilliseconds, uint32_t *pDataReceivedLength)
CellularCommInterfaceError_t	RM_CELLULAR_COMM_UART_AWS_Close (CellularCommInterfaceHandle_t commInterfaceHandle)
void	comm_uart_aws_callback (uart_callback_args_t *p_args)

Detailed Description

Middleware implementing the AWS Cellular Comm Interface for the FSP UART API.

Overview

See AWS documentation for how the Cellular Comm Interface works:
https://www.freertos.org/Documentation/api-ref/cellular/cellular_porting.html#cellular_porting_comm_if

Configuration

Note

Using DTC with UART is recommended to reduce the number of interrupts in the system.

Build Time Configurations for rm_cellular_comm_uart_aws

The following build time configurations are defined in fsp_cfg/middleware/rm_cellular_comm_uart_aws_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	Selects if code for parameter checking is to be included in the build.
Receive Buffer	Size should be greater than zero	256	Temporary buffer for received bytes. When read function is called reamaining bytes will be read directly into buffer specified by read function argument.

Configurations for Networking > Cellular Comm Interface on UART (rm_cellular_comm_uart_aws)

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_rm_cellular_comm_uart0	Module name.

Function Documentation

◆ RM_CELLULAR_COMM_UART_AWS_Open()

CellularCommInterfaceError_t RM_CELLULAR_COMM_UART_AWS_Open (rm_cellular_comm_uart_aws_instance_ctrl_t * *p_instance_ctrl*, CellularCommInterfaceReceiveCallback_t *receive_callback*, void * *pUserData*)

Implements open for CellularCommInterface_t

Parameters

[in]	receive_callback	Callback to call upon receiving data
[in]	pUserData	Pointer to user data to be passed through callback
[in]	p_instance_ctrl	Pointer to a rm_cellular_comm_uart_aws_instance_ctrl_t

Return values

IOT_COMM_INTERFACE_SUCCESS	Open succeeded
IOT_COMM_INTERFACE_BAD_PARAMETER	Bad parameter was passed in
IOT_COMM_INTERFACE_FAILURE	General failure
IOT_COMM_INTERFACE_DRIVER_ERROR	Lower level failure

◆ RM_CELLULAR_COMM_UART_AWS_Send()

CellularCommInterfaceError_t RM_CELLULAR_COMM_UART_AWS_Send (CellularCommInterfaceHandle_t *commInterfaceHandle*, const uint8_t * *pData*, uint32_t *dataLength*, uint32_t *timeoutMilliseconds*, uint32_t * *pDataSentLength*)

Implements send for CellularCommInterface_t. This function will block the calling thread until data is sent.

Parameters

[in]	commInterfaceHandle	CellularCommInterfaceHandle_t assigned in open
[in]	pData	Pointer to data to send
[in]	dataLength	Length of data to send
[in]	timeoutMilliseconds	Timeout in MS to wait for data to send
[in]	pDataSentLength	Actual length of data sent

Return values

IOT_COMM_INTERFACE_SUCCESS	Send succeeded
IOT_COMM_INTERFACE_BAD_PARAMETER	Bad parameter was passed in
IOT_COMM_INTERFACE_FAILURE	General failure
IOT_COMM_INTERFACE_DRIVER_ERROR	Lower level failure
IOT_COMM_INTERFACE_TIMEOUT	Send operation timed out

◆ RM_CELLULAR_COMM_UART_AWS_Receive()

CellularCommInterfaceError_t RM_CELLULAR_COMM_UART_AWS_Receive (CellularCommInterfaceHandle_t *commInterfaceHandle*, uint8_t * *pBuffer*, uint32_t *bufferLength*, uint32_t *timeoutMilliseconds*, uint32_t * *pDataReceivedLength*)

Implements receive for CellularCommInterface_t. This function will block the calling thread until data is received.

Parameters

[in]	commInterfaceHandle	CellularCommInterfaceHandle_t assigned in open
[in]	pBuffer	Pointer to buffer to receive to
[in]	bufferLength	Length of buffer
[in]	timeoutMilliseconds	Timeout in MS to wait for data reception
[in]	pDataReceivedLength	Actual length of data received

Return values

IOT_COMM_INTERFACE_SUCCESS	Receieve succeeded
IOT_COMM_INTERFACE_BAD_PARAMETER	Bad parameter was passed in
IOT_COMM_INTERFACE_FAILURE	General failure
IOT_COMM_INTERFACE_DRIVER_ERROR	Lower level failure

◆ RM_CELLULAR_COMM_UART_AWS_Close()

CellularCommInterfaceError_t RM_CELLULAR_COMM_UART_AWS_Close (CellularCommInterfaceHandle_t *commInterfaceHandle*)

Implements close for CellularCommInterface_t

Parameters

[in]	commInterfaceHandle	CellularCommInterfaceHandle_t assigned in open

Return values

IOT_COMM_INTERFACE_SUCCESS	Close succeeded
IOT_COMM_INTERFACE_BAD_PARAMETER	Bad parameter was passed in
IOT_COMM_INTERFACE_FAILURE	General failure

◆ comm_uart_aws_callback()

void comm_uart_aws_callback (uart_callback_args_t * *p_args*)		
Callback for UART driver **Parameters**		
[in]	p_args	Arguments from UART RX/TX callback

4.2.88 RYZ AWS Cellular Interface Port (rm_cellular_ryz_aws)

Modules

Middleware implementing the AWS Cellular API for RYZ cellular modems.

Overview

See AWS documentation for how the Cellular API works: https://www.freertos.org/Documentation/api-ref/cellular/index.html

Features

All APIs are supported by the RYZ port with the exception of the following RAT APIs:

- Cellular_SetRatPriority
- Cellular_GetRatPriority

The following URCs are supported by the RYZ port:

- CEREG/CREG (Cellular_RegisterUrcNetworkRegistrationEventCallback)
- SYSSTART (Cellular_RegisterModemEventCallback)
- SHUTDOWN (Cellular_RegisterModemEventCallback)
- SQNSRING (Cellular_SocketRegisterDataReadyCallback)

Support for other RYZ URCs can be possibly added by request in future releases.

Limitations

- This module does not handle the RYZ reset pin. The user should manually configure this pin in order to reset the module.
- The RYZ can only be used in buffer reception mode, not transparent mode. When calling Cellular_SocketConnect only CELLULAR_ACCESSMODE_BUFFER is supported.
- The AWS Cellular APIs don't currently allow remote port to be set for UDP. It can be set by modifying the localPort field in CellularSocketHandle_t after calling Cellular_CreateSocket but before calling Cellular_SocketConnect.

Configuration

AWS Cellular Interface

Build Time Configurations for source

The following build time configurations are defined in aws/cellular_interface/cellular_config.h:

Configuration	Options	Default	Description
Mobile Country Code Max Size	Value must be a positive integer	3	Mobile country code max size.
Mobile Network Node Max Size	Value must be a positive integer	3	Mobile network code max size.
Integrated Circuit Card Identity Max Size	Value must be a positive integer	20	Integrated circuit card identity max size.
International Mobile Subscriber Identity Max Size	Value must be a positive integer	15	International Mobile Subscriber Identity max size.
Firmware Version Max Size	Value must be a positive integer	32	Cellular module firmware version max size.
Hardware Version Max Size	Value must be a positive integer	12	Cellular module hardware version max size.
Serial Number Max Size	Value must be a positive integer	12	Cellular module serial number max size.
International Mobile Equipment Identity Max Size	Value must be a positive integer	15	International Mobile Equipment Identity number max size.
Registered Network operator Name Max Size	Value must be a positive integer	32	Registered network operator name max size.
Access Point Name Max Size	Value must be a positive integer	64	Access point name max size.
Packet Data Network Username Max Size	Value must be a positive integer	32	Packet data network username max size.
Packet Data Network Password Max Size	Value must be a positive integer	32	Packet data network password max size.
Data Network IP Address Max Size	Value must be a positive integer	40	Cellular data network IP address max size.
AT Command Max Size	Value must be a positive integer	200	Cellular AT command max size.
Max Number of Sockets	Value must be a positive integer	6	Cellular module number of socket max size.

Manufacturer ID Max Size	Value must be a positive integer	20	Cellular module manufacturer ID max size.
Model ID Max Size	Value must be a positive integer	10	Model ID max size.
EDRX List Max Size	Value must be a positive integer	4	EDRX list max size.
PDN Context ID Min Value	Value must be a positive integer	1	PDN context ID min value.
PDN Context ID Max Value	Value must be a positive integer	16	PDN context ID max value.
RAT Priority Count	Value must be a positive integer	3	RAT (radio access technology) priority count.
Socket Max Send Data Length (bytes)	Value must be a positive integer	1460	Socket max send data length.
Socket Max Receive Data Length (bytes)	Value must be a positive integer	1500	Socket max receive data length.
GetHostByName Support	• Enabled (default) • Disabled	Enabled (default)	Enables/disable GetHostByName.
Comm Interface Receive Timeout (ms)	Value must be a positive integer	1000	Cellular comm interface receive timeout in ms.
Comm Interface Receive Timeout (ms)	Value must be a positive integer	1000	Cellular comm interface receive timeout in ms.
Static Allocation Context	• Enabled (default) • Disabled	Disabled	Use statically allocated context.
Comm Interface Static Allocation Context	• Enabled (default) • Disabled	Disabled	Use statically allocated context for comm interface.
Default RAT	• GSM • WCDMA • EDGE • HSDPA • HSUPA • HSDPAHSUPA • LTE • CATM1 • NBIOT	CATM1	Default Radio Access Technology.
GSM Support	• Enabled • Disabled (default)	Disabled (default)	This should be disabled when a modem doesn't support GSM or the AT+CGREG command.

Static Socket Context	• Enabled (default) • Disabled	Disabled	Use statically allocated socket.
Log Level	• Off • Error • Warning • Info • Debug	Off	Log level for the cellular interface. Defaults to using printf when enabled

RYZ Cellular Interface Port

Configurations for Networking > AWS Cellular Interface on RYZ (rm_cellular_ryz_aws)

This module can be added to the Stacks tab via New Stack > Networking > AWS Cellular Interface on RYZ (rm_cellular_ryz_aws).

Configuration	Options	Default	Description
Module Reset Pin (Port Number)	Refer to the RA Configuration tool for available options.	00	Specify the reset control port for the RYZ module. This property is only used in devassist.
Module Reset Pin (Pin Number)	Refer to the RA Configuration tool for available options.	00	Specify the reset control pin for the RYZ module. This property is only used in devassist.

Examples

Basic Example

```
void rm_cellular_ryz_aws_basic_example (void)
{
    CellularHandle_t       cellular_handle = NULL;
    CellularSimCardStatus_t sim_card_status;
 /* Initialize Cellular Modem. */
    CellularError_t err = Cellular_Init(&cellular_handle,
&g_cellular_comm_interface_on_uart);
    assert(CELLULAR_SUCCESS == err);
 /* Get the SIM card status */
    err = Cellular_GetSimCardStatus(cellular_handle, &sim_card_status);
    assert(CELLULAR_SUCCESS == err);
    assert(CELLULAR_SIM_CARD_INSERTED == sim_card_status.simCardState);
}
```

Socket Example

```
#define SOCKET_EXAMPLE_BUFFER_SIZE (256)
#define SOCKET_EXAMPLE_TIMEOUT (UINT32_MAX)
#define SOCKET_EXAMPLE_IP ("255.255.255.255")
#define SOCKET_EXAMPLE_PORT (80)
uint32_t g_recv_event_count = 0;
void socket_example_data_ready_callback (CellularSocketHandle_t socketHandle, void *
pCallbackContext)
{
 FSP_PARAMETER_NOT_USED(socketHandle);
 FSP_PARAMETER_NOT_USED(pCallbackContext);
    g_recv_event_count++;
}
void rm_cellular_ryz_aws_socket_example (void)
{
    CellularHandle_t       cellular_handle = NULL;
 char                  * p_data          = "hello_world";
 char                   recv_buffer[SOCKET_EXAMPLE_BUFFER_SIZE] = "\0";
    uint32_t               sent_data_length    = 0;
    uint32_t               received_data_length = 0;
    uint32_t               timeout_ms          = SOCKET_EXAMPLE_TIMEOUT;
    CellularSocketHandle_t socket_handle;
    CellularSocketAddress_t socket_address =
    {
       .ipAddress =
      {
            CELLULAR_IP_ADDRESS_V4,
            SOCKET_EXAMPLE_IP
       },
       .port      = SOCKET_EXAMPLE_PORT
    };
 /* Initialize Cellular Modem. */
    CellularError_t err = Cellular_Init(&cellular_handle,
```

```
&g_cellular_comm_interface_on_uart);
    assert(CELLULAR_SUCCESS == err);
 /* Create a TCP socket */
    err = Cellular_CreateSocket(cellular_handle,
                                1,
                                CELLULAR_SOCKET_DOMAIN_AF_INET,
                                CELLULAR_SOCKET_TYPE_STREAM,
                                CELLULAR_SOCKET_PROTOCOL_TCP,
                                &socket_handle);
    assert(CELLULAR_SUCCESS == err);
 /* Register the data ready callback */
    err = Cellular_SocketRegisterDataReadyCallback(cellular_handle,
                                                   socket_handle,
                                                   socket_example_data_ready_callback
,
                                                   NULL);
    assert(CELLULAR_SUCCESS == err);
    g_recv_event_count = 0;
 /* Connect the TCP socket */
    err = Cellular_SocketConnect(cellular_handle, socket_handle,
CELLULAR_ACCESSMODE_BUFFER, &socket_address);
    assert(CELLULAR_SUCCESS == err);
 /* Send data over the socket */
    err = Cellular_SocketSend(cellular_handle, socket_handle, (uint8_t *) p_data,
strlen(p_data), &sent_data_length);
    assert(CELLULAR_SUCCESS == err);
    assert(strlen(p_data) == sent_data_length);
 /* Wait for data ready callback */
    timeout_ms = SOCKET_EXAMPLE_TIMEOUT;
 while (timeout_ms > 0)
    {
 if (g_recv_event_count > 0)
     {
 break;
```

```
      }
R_BSP_SoftwareDelay(1, BSP_DELAY_UNITS_MILLISECONDS);
      timeout_ms--;
   }
   assert(0 != timeout_ms);
/* Receive data back */
   err = Cellular_SocketRecv(cellular_handle,
                             socket_handle,
                             (uint8_t *) recv_buffer,
                             SOCKET_EXAMPLE_BUFFER_SIZE,
                             &received_data_length);
   assert(CELLULAR_SUCCESS == err);
/* Close the socket */
   err = Cellular_SocketClose(cellular_handle, socket_handle);
   assert(CELLULAR_SUCCESS == err);
}
```

4.2.89 I2C Communicatons Middleware (rm_comms_i2c)

Modules

Functions

fsp_err_t	RM_COMMS_I2C_Open (rm_comms_ctrl_t *const p_api_ctrl, rm_comms_cfg_t const *const p_cfg) Opens and configures the Communications Middle module. Implements rm_comms_api_t::open. More...
fsp_err_t	RM_COMMS_I2C_Close (rm_comms_ctrl_t *const p_api_ctrl) Disables specified Communications Middle module. Implements rm_comms_api_t::close. More...
fsp_err_t	RM_COMMS_I2C_Read (rm_comms_ctrl_t *const p_api_ctrl, uint8_t *const p_dest, uint32_t const bytes) Performs a read from the I2C device. Implements rm_comms_api_t::read. More...

fsp_err_t	RM_COMMS_I2C_Write (rm_comms_ctrl_t *const p_api_ctrl, uint8_t *const p_src, uint32_t const bytes) Performs a write from the I2C device. Implements rm_comms_api_t::write. More...
fsp_err_t	RM_COMMS_I2C_WriteRead (rm_comms_ctrl_t *const p_api_ctrl, rm_comms_write_read_params_t const write_read_params) Performs a write to, then a read from the I2C device. Implements rm_comms_api_t::writeRead. More...
void	rm_comms_i2c_callback (i2c_master_callback_args_t *p_args) Common callback function called in the I2C driver callback function.

Detailed Description

Middleware to implement the I2C communications interface. This module implements the Communicatons Middleware Interface.

Overview

Features

The implementation of the I2C communications interface has the following key features:

- Reading data from, writing data to I2C bus
- Writes to I2C bus, then reads with restart
- A single I2C bus used by multiple I2C devices

Configuration

Build Time Configurations for rm_comms_i2c

The following build time configurations are defined in fsp_cfg/rm_comms_i2c_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Connectivity > I2C Shared Bus (rm_comms_i2c)

This module can be added to the Stacks tab via New Stack > Connectivity > I2C Shared Bus (rm_comms_i2c).

Configuration	Options	Default	Description

Name	Manual Entry	g_comms_i2c_bus0	Module name.
Bus Timeout	Value must be a non-negative integer	0xFFFFFFFF	Set timeout for locking bus in using RTOS.
Semaphore for Blocking	• Unuse • Use	Unuse	Set Semaphore for blocking in using RTOS.
Recursive Mutex for Bus	• Unuse • Use	Unuse	Set Mutex for locking bus in using RTOS.

Configurations for Connectivity > I2C Communication Device (rm_comms_i2c)

This module can be added to the Stacks tab via New Stack > Connectivity > I2C Communication Device (rm_comms_i2c).

Configuration	Options	Default	Description
Name	Manual Entry	g_comms_i2c_device0	Module name.
Semaphore Timeout	Value must be a non-negative integer	0xFFFFFFFF	Set timeout for blocking in using RTOS.
Slave Address	Value must be non-negative	0x00	Specify the slave address.
Address Mode	• 7-Bit • 10-Bit	7-Bit	Select the I2C address mode.
Callback	Name must be a valid C symbol	comms_i2c_callback	A user callback function can be provided.

Pin Configuration

This module uses SDA and SCL pins of I2C Master and SCI I2C.

Usage Notes

If an RTOS is used, blocking and bus lock is available.

- If blocking of an I2C bus is required, it is necessary to create a semaphore for blocking.
- If bus lock is required, it is necessary to create a mutex for bus lock. Bus lock is only available when a semaphore for blocking is used.

Bus Initialization

The I2C communications interface expects a bus instance to be opened before opening any specific I2C comms device. The communications interface will handle switching between devices on the bus but will not open or close the bus instance. The user should open the bus with the appropriate I2C Master Interface open call.

Examples

Basic Example

This is a basic example of minimal use of I2C communications implementation in an application.

```
void rm_comms_i2c_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Open the I2C bus if it is not already open. */
    rm_comms_i2c_bus_extended_cfg_t * p_extend          =
(rm_comms_i2c_bus_extended_cfg_t *) g_comms_i2c_cfg.p_extend;
 i2c_master_instance_t          * p_driver_instance = (i2c_master_instance_t *)
p_extend->p_driver_instance;
    p_driver_instance->p_api->open(p_driver_instance->p_ctrl,
p_driver_instance->p_cfg);
#if BSP_CFG_RTOS
 /* Create a semaphore for blocking if a semaphore is not NULL */
 if (NULL != p_extend->p_blocking_semaphore)
    {
 #if BSP_CFG_RTOS == 1 // AzureOS
       tx_semaphore_create(p_extend->p_blocking_semaphore->p_semaphore_handle,
                           p_extend->p_blocking_semaphore->p_semaphore_name,
                           (ULONG) 0);
 #elif BSP_CFG_RTOS == 2 // FreeRTOS
       *(p_extend->p_blocking_semaphore->p_semaphore_handle) =
            xSemaphoreCreateCountingStatic((UBaseType_t) 1,
                                           (UBaseType_t) 0,

p_extend->p_blocking_semaphore->p_semaphore_memory);
 #endif
    }
 /* Create a recursive mutex for bus lock if a recursive mutex is not NULL */
 if (NULL != p_extend->p_bus_recursive_mutex)
    {
 #if BSP_CFG_RTOS == 1 // AzureOS
       tx_mutex_create(p_extend->p_bus_recursive_mutex->p_mutex_handle,
                       p_extend->p_bus_recursive_mutex->p_mutex_name,
                       TX_INHERIT);
 #elif BSP_CFG_RTOS == 2 // FreeRTOS
```

```
      *(p_extend->p_bus_recursive_mutex->p_mutex_handle) =
           xSemaphoreCreateRecursiveMutexStatic(p_extend->p_bus_recursive_mutex->p_m
utex_memory);
 #endif
    }
#endif
    err = RM_COMMS_I2C_Open(&g_comms_i2c_ctrl, &g_comms_i2c_cfg);
 /* Handle any errors. This function should be defined by the user. */
    handle_error(err);
 while (true)
    {
       g_flag = 0;
 /* Send data to an I2C device. */
 RM_COMMS_I2C_Write(&g_comms_i2c_ctrl, &write_data, 1);
 while (0 == g_flag)
      {
 /* Wait callback */
      }
       g_flag = 0;
 /* Receive data from an I2C device. */
 RM_COMMS_I2C_Read(&g_comms_i2c_ctrl, &read_data, 1);
 while (0 == g_flag)
      {
 /* Wait callback */
      }
    }
}
```

Data Structures

struct	rm_comms_i2c_instance_ctrl_t

Data Structure Documentation

◆ rm_comms_i2c_instance_ctrl_t

struct rm_comms_i2c_instance_ctrl_t
Communications middleware control structure.

Data Fields	
rm_comms_cfg_t const *	p_cfg
	middleware configuration.
rm_comms_i2c_bus_extended_cfg_t *	p_bus
	Bus using this device;.
void *	p_lower_level_cfg
	Used to reconfigure I2C driver.
uint32_t	open
	Open flag.
uint32_t	transfer_data_bytes
	Size of transfer data.
uint8_t *	p_transfer_data
	Pointer to transfer data buffer.
void const *	p_context
	Pointer to the user-provided context.

Function Documentation

◆ RM_COMMS_I2C_Open()

fsp_err_t RM_COMMS_I2C_Open (rm_comms_ctrl_t *const *p_api_ctrl*, rm_comms_cfg_t const *const *p_cfg*)

Opens and configures the Communications Middle module. Implements rm_comms_api_t::open.

Example:

```
    err = RM_COMMS_I2C_Open(&g_comms_i2c_ctrl, &g_comms_i2c_cfg);
```

Return values

FSP_SUCCESS	Communications Middle module successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_COMMS_BUS_NOT_OPEN	I2C driver is not open.

◆ RM_COMMS_I2C_Close()

fsp_err_t RM_COMMS_I2C_Close (rm_comms_ctrl_t *const *p_api_ctrl*)

Disables specified Communications Middle module. Implements rm_comms_api_t::close.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_COMMS_I2C_Read()

fsp_err_t RM_COMMS_I2C_Read (rm_comms_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_dest*, uint32_t const *bytes*)

Performs a read from the I2C device. Implements rm_comms_api_t::read.

Return values

FSP_SUCCESS	Successfully data decoded.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_COMMS_I2C_Write()

fsp_err_t RM_COMMS_I2C_Write (rm_comms_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_src*, uint32_t const *bytes*)

Performs a write from the I2C device. Implements rm_comms_api_t::write.

Return values

FSP_SUCCESS	Successfully writing data .
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_COMMS_I2C_WriteRead()

fsp_err_t RM_COMMS_I2C_WriteRead (rm_comms_ctrl_t *const *p_api_ctrl*, rm_comms_write_read_params_t const *write_read_params*)

Performs a write to, then a read from the I2C device. Implements rm_comms_api_t::writeRead.

Return values

FSP_SUCCESS	Successfully data decoded.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

4.2.90 SEGGER emWin Port (rm_emwin_port)

Modules

SEGGER emWin port for RA MCUs.

Overview

The SEGGER emWin RA Port module provides the configuration and hardware acceleration support necessary for use of emWin on RA products. The port provides full integration with the graphics peripherals (GLCDC, DRW and JPEG) as well as FreeRTOS.

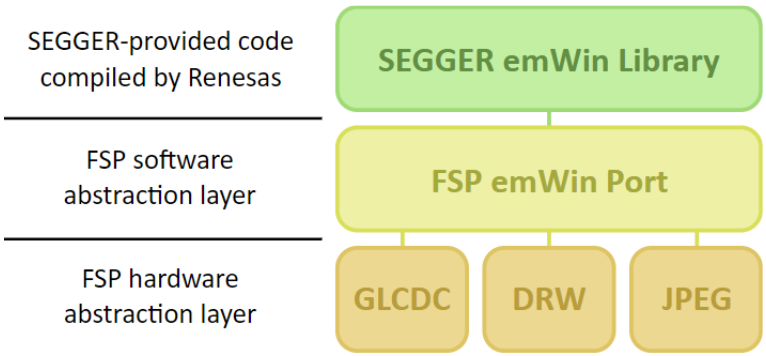

Figure 205: SEGGER emWin FSP Port Block Diagram

Note

This port layer primarily enables hardware acceleration and background handling of many display operations and does not contain code intended to be directly called by the user. Please consult the SEGGER emWin User Guide (UM03001) for details on how to use emWin in your project.

Hardware Acceleration

The following functions are currently performed with hardware acceleration:

- DRW Engine (r_drw)
  - Drawing bitmaps (ARGB8888 and RGB565)
  - 4bpp font rendering
  - Rectangle fill
  - Line and shape drawing
  - Anti-aliased operations
    - Circle stroke and fill
    - Polygon stroke and fill
    - Lines and arcs
- JPEG Codec (r_jpeg)
  - JPEG decoding
- Graphics LCD Controller (r_glcdc)
  - Brightness, contrast and gamma correction
  - Pixel format conversion (framebuffer to LCD)

Configuration

Build Time Configurations for rm_emwin_port

The following build time configurations are defined in fsp_cfg/rm_emwin_port_cfg.h:

Configuration	Options	Default	Description
Memory Allocation > GUI Heap Size	Value must be a non-negative integer	32768	Set the size of the heap to be allocated for use exclusively by emWin.
Memory Allocation > Section for GUI Heap	Manual Entry	.noinit	Specify the section in which to allocate the GUI heap. When Arm Compiler 6 is used to

			place this memory in on-chip SRAM, the section name must be .bss or start with .bss. to avoid consuming unnecessary ROM space.
Memory Allocation > Maximum Layers	Value must be a non-negative integer	16	Set the maximum number of available display layers in emWin. This setting is not related to GLCDC Layer 1 or 2.
Memory Allocation > AA Font Conversion Buffer Size	Value must be a non-negative integer	400	Set the size of the conversion buffer for anti-aliased font glyphs. This should be set to the size (in bytes) of the largest AA character to be rendered.
Configuration > Multi-thread Support	• Enabled • Disabled	Enabled	Enable or disable multithreading support.
Configuration > Number of emWin-supported threads	Manual Entry	5	If multithreading support is enabled this configuration specifies the number of different tasks that can call emWin functions.
Configuration > Touch Panel Support	• Enabled • Disabled	Enabled	Enable or disable touch panel support.
Configuration > Mouse Support	• Enabled • Disabled	Disabled	Enable or disable support for mouse input.
Configuration > Memory Devices	• Enabled • Disabled	Enabled	Enable or disable support for memory devices, which allow the user to allocate their own memory in the GUI heap.
Configuration > Text Rotation	• Enabled • Disabled	Enabled	Enable or disable support for displaying rotated text.
Configuration > Window Manager	• Enabled • Disabled	Enabled	Enable or disable the emWin Window Manager (WM).
Configuration >	• Enabled	Disabled	Enable or disable

Bidirectional Text	• Disabled		support for bidirectional text (such as Arabic or Hebrew).
Configuration > Debug Logging Level	• None (0) • Parameter checking only (1) • All checks enabled (2) • Log errors (3) • Log warnings (4) • Log all messages (5)	All checks enabled (2)	Set the debug logging level.
LCD Settings > Wait for Vertical Sync	• Enabled • Disabled	Enabled	When enabled emWin will wait for a vertical sync event each time the display is updated. If an RTOS is used the thread will yield; otherwise each frame will block until Vsync. WARNING: Disabling vertical sync will result in tearing. It is recommended to always leave this setting Enabled if an RTOS is used.
JPEG Decoding > General > Input Alignment	• 8-byte aligned (faster) • Unaligned (slower)	8-byte aligned (faster)	Setting this option to 8-bit alignment can allow the hardware JPEG Codec to directly read JPEG data. This speeds up JPEG decoding operations and reduces RAM overhead, but all JPEG images must reside on an 8-byte boundary. When this option is enabled the input buffer is not allocated.
JPEG Decoding > General > Double-Buffer Output	• Enabled • Disabled	Disabled	Enable this option to configure JPEG decoding operations to use a double-buffered output pipeline. This allows the JPEG to be rendered to the display

			at the same time as decoding at the cost of additional RAM usage. Enabling this option automatically allocates double the output buffer size.
JPEG Decoding > General > Error Timeout	Value must be a non-negative integer	50	Set the timeout for JPEG decoding operations (in RTOS ticks) in the event of a decode error.
JPEG Decoding > Buffers > Input Buffer Size	Value must be a non-negative integer	0x1000	Set the size of the JPEG decode input buffer (in bytes). This buffer is used to ensure 8-byte alignment of input data. Specifying a size smaller than the size of the JPEG to decode will use additional interrupts to stream data in during the decoding process.
JPEG Decoding > Buffers > Output Buffer Size	Value must be a non-negative integer	0x3C00	Set the size of the JPEG decode output buffer (in bytes). An output buffer smaller than the size of a decoded image will use additional interrupts to stream the data into a framebuffer. Unless you are sure of the subsampling used in and the size of the input JPEG images it is recommended to allocate at least 16 framebuffer lines of memory.
JPEG Decoding > Buffers > Section for Buffers	Manual Entry	.noinit	Specify the section in which to allocate the JPEG work buffers. When Arm Compiler 6 is used to place this memory in on-chip SRAM, the section name must be .bss or start with .bss. to avoid

consuming unnecessary ROM space.

Hardware Configuration

No clocks or pins are directly required by this module. Please consult the submodules' documentation for their requirements.

Usage Notes

Getting Started

To get started with emWin in an RA project the following must be performed:

1. Open the RA Configuration editor for your project
2. Add emWin to your project in the Stacks view by clicking **New Stack -> SEGGER -> SEGGER emWin**
3. Ensure the configuration options for emWin are set as necessary for your application
4. Set the proporties for the GLCDC module to match the timing and memory requirements of your display panel
5. Set the JPEG decode color depth to the desired value (if applicable)
6. Ensure interrupts on all modules are enabled:
    - GLCDC Vertical Position (Vpos) Interrupt
    - DRW Interrupt (if applicable)
    - JPEG Encode/Decode and Data Transfer Interrupts (if applicable)
7. Confirm stack and heap are configured as needed
    - When starting development a minimum stack of 0x1000 (4K) and heap of 0x4000 (16K) are recommended until actual usage can be characterized
8. Click Generate Project Content to save and commit configuration changes

At this point the project is now ready to build with emWin. Please refer to the SEGGER emWin User Guide (UM03001) as well as demo and sample code for details on how to create a GUI application.

Using Hardware Acceleration

In most cases there is no need to perform additional configuration to ensure the DRW Engine is used. However, there are some guidelines that should be followed depending on the item in question:

- Bitmaps:
    - ARGB8888, RGB888 and RGB565 bitmaps require no additional settings.
- Anti-aliased shapes:
    - Anti-aliased lines, circles, polygons, polygon outlines and arcs are rendered with the DRW Engine.
- Anti-aliased (4bpp) fonts:
    - Set the text mode to GUI_TM_TRANS or create the relevant widget with WM_CF_HASTRANS set.
    - Ensure the "AA Font Conversion Buffer Size" configuration option is set to a size equal to or greater than the size (in bytes) of the largest glyph.
- 8bpp palletized images:
    - When creating these images ensure transparency is not enabled as the SEGGER method for this is not compatible with the DRW Engine.
- RLE-encoded images:
    - Hardware acceleration is not available for SEGGER's RLE format.
- JPEG images:

- Align any user-declared JPEG data to an 8-byte boundary. If 8-byte alignment cannot be guaranteed disable the **JPEG Decoding -> General -> Input Alignment** option in the RA Configuration.

Multi-thread Support

When the "Multi-thread Support" configuration is enabled, emWin can be called from multiple threads. This comes with advantages and disadvantages:

Advantages:

- High flexibility in development of applications
- Threads can pend and post on emWin events

Disadvantages:

- Slightly higher RAM/ROM use
- Large GUI projects can become difficult to debug

Note

Multi-thread support is independent of RTOS support. RTOS support is managed internally and cannot be manually configured.

Limitations

Developers should be aware of the following limitations when using SEGGER emWin with FSP:

- Hardware acceleration is not available when using color modes lower than 16 bits.
- Hardware acceleration is not available for SEGGER's RLE image format.
- Rotated screen modes are not supported.

Examples

Basic Example

This is a basic example demonstrating a very simple emWin application. The screen is cleared to white and "Hello World!" is printed in the center.

Note

emWin manages the GLCDC, DRW and JPEG Codec submodules internally; they do not need to be opened directly.

```
#include "DIALOG.h"
#define COLOR_WHITE 0x00FFFFFFU
#define COLOR_BLACK 0x00000000U
#define GUI_DRAW_DELAY 100
static void _cbMain (WM_MESSAGE * pMsg)
{
    GUI_RECT Rect;
 switch (pMsg->MsgId)
```

```
    {
 case WM_CREATE:
      {
 break;
       }
 case WM_PAINT:
      {
 /* Clear background to white */
            GUI_SetBkColor(COLOR_WHITE);
            GUI_Clear();
 /* Draw "Hello World!" in black in the center */
            WM_GetClientRect(&Rect);
            GUI_SetColor(COLOR_BLACK);
            GUI_DispStringInRect("Hello World!", &Rect, GUI_TA_VCENTER |
GUI_TA_HCENTER);
 break;
       }
 default:
      {
            WM_DefaultProc(pMsg);
 break;
       }
    }
}
void emWinTask (void)
{
    int32_t xSize;
    int32_t ySize;
 /* Initialize emWin */
    GUI_Init();
 /* Get screen dimensions */
    xSize = LCD_GetXSize();
    ySize = LCD_GetYSize();
 /* Create main window */
```

```
    WM_CreateWindowAsChild(0, 0, xSize, ySize, WM_HBKWIN, WM_CF_SHOW, _cbMain, 0);
 /* Enter main drawing loop */
 while (1)
    {
       GUI_Delay(GUI_DRAW_DELAY);
    }
}
```

Note

For further example code please consult SEGGER emWin documentation, which can be downloaded here, as well as the Quick Start Guide and example project(s) provided with your Evaluation Kit (if applicable).

4.2.91 Azure RTOS FileX Block Media I/O Driver (rm_filex_block_media)

Modules

Functions

fsp_err_t	RM_FILEX_BLOCK_MEDIA_Open (rm_filex_block_media_ctrl_t *const p_ctrl, rm_filex_block_media_cfg_t const *const p_cfg)
fsp_err_t	RM_FILEX_BLOCK_MEDIA_Close (rm_filex_block_media_ctrl_t *const p_ctrl)
void	RM_FILEX_BLOCK_MEDIA_BlockDriver (FX_MEDIA *p_fx_media) Access Block Media device functions open, close, read, write and control. More...

Detailed Description

Middleware for the Azure RTOS FileX File System control using Block Media on RA MCUs.

Overview

This module provides the hardware port layer for FileX file system. After initializing this module, refer to the FileX API reference to use the file system: https://docs.microsoft.com/en-us/azure/rtos/filex/

Features

The FileX Block Media module supports the following features:

- Callbacks for insertion and removal for removable devices.

- ThreadX is typically required for FileX. To use FileX without ThreadX FX_STANDALONE_ENABLE must be defined.
- Unless FX_SINGLE_THREAD or FX_STANDALONE_ENABLE are defined, all FileX operations are thread safe.

Configuration

Build Time Configurations for rm_filex_block_media

The following build time configurations are defined in fsp_cfg/middleware/rm_filex_block_media_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	Selects if code for parameter checking is to be included in the build.

Configurations for Storage > FileX I/O (rm_filex_block_media)

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_rm_filex_block_media_0	Module name.
Callback	Name must be a valid C symbol	g_rm_filex_block_media_0_callback	A user callback function can be provided. If this callback function is provided, it will be called when media is inserted or removed. It will also be called during operations by the lower level block media as a way for the user to provide their desired waiting functionality.
Partition Number	• 0 • 1 • 2 • 3	0	The partition to use for partitioned media. This partition will only be used if a Master Boot Record with partition table exists at block 0 of the media, otherwise the FileX FAT boot record should exist or be formatted to block 0.

Build Time Configurations for fx

The following build time configurations are defined in fsp_cfg/azure/fx/fx_user.h:

Configuration	Options	Default	Description
Common > Max Long Name Len	Value must be greater than or equal to 13 and less than or equal to 256, or empty		Specifies the maximum file name size for FileX. If left blank the default value is 256. Legal values range between 13 and 256.
Common > Max Last Name Len	Value must be greater than or equal to 13 and less than or equal to 256, or empty		This value defines the maximum file name length, which includes full path name. If left blank the default value is 256. Legal values range between 13 and 256.
Common > Max Sector Cache	Value must be greater than 0 or empty		Specifies the maximum number of logical sectors that can be cached by FileX. The actual number of sectors that can be cached is lesser of this constant and how many sectors can fit in the amount of memory supplied at fx_media_open. The default value if left blank is 256. All values must be a power of 2.
Common > Fat Map Size	Value must be greater than 0 or empty		Specifies the number of sectors that can be represented in the FAT update map. The default value if left blank is 256. Larger values help reduce unneeded updates of secondary FAT sectors.
Common > Max Fat Cache	Value must be greater than 0 or empty		Specifies the number of entries in the internal FAT cache. The default value if left blank is 16. All values must be a power of 2.
Threading > Update Rate (Seconds)	Value must be greater than 0 or empty		Specifies rate at which system time in FileX is adjusted. Default value if left blank is 10, specifying that the FileX system time is

			updated every 10 seconds.
Threading > No Timer	• Enabled • Disabled (default)	Disabled (default)	Eliminates the ThreadX timer setup to update the FileX system time and date. Doing so causes default time and date to be placed on all file operations.
Threading > Single Thread	• Enabled • Disabled (default)	Disabled (default)	Eliminates ThreadX protection logic from the FileX source. It should be used if FileX is being used only from one thread.
Threading > Standalone	• Enabled • Disabled (default)	Disabled (default)	Enables FileX to be used in standalone mode (without Azure RTOS).
Extra Features > Don't Update Open Files	• Enabled • Disabled (default)	Disabled (default)	When enabled, FileX does not update already opened files.
Extra Features > Media Search Cache	• Enabled (default) • Disabled	Enabled (default)	When disabled, the file search cache optimization is disabled.
Extra Features > Direct Data Read Cache Fill	• Enabled (default) • Disabled	Enabled (default)	When disabled, the direct read sector update of cache is disabled.
Extra Features > Media Statistics	• Enabled (default) • Disabled	Enabled (default)	When disabled, gathering of media statistics is disabled.
Extra Features > Single Open Legacy	• Enabled • Disabled (default)	Disabled (default)	When enabled, legacy single open logic for the same file is enabled.
Extra Features > Rename Path Inherit	• Enabled • Disabled (default)	Disabled (default)	When enabled, renaming inherits path information.
Extra Features > No Local Path	• Enabled • Disabled (default)	Disabled (default)	When enabled, removes local path logic from FileX, resulting in smaller code size.
Extra Features > 64-bit LBA	• Enabled • Disabled (default)	Disabled (default)	When enabled, 64-bits sector addresses are used in I/O driver.

Extra Features > Cache	• Enabled (default) • Disabled	Enabled (default)	Enables or disables the cache, default is enabled.
Extra Features > File Close	• Enabled (default) • Disabled	Enabled (default)	Enables or disables file close, default is enabled.
Extra Features > Fast Close	• Enabled (default) • Disabled	Enabled (default)	Enables or disables fast open, default is enabled.
Extra Features > Force Memory Operation	• Enabled (default) • Disabled	Enabled (default)	Enables or disables force memory operation, default is enabled.
Extra Features > Build Options	• Enabled (default) • Disabled	Enabled (default)	Enables or disables build options, default is enabled.
Extra Features > One Line Function	• Enabled (default) • Disabled	Enabled (default)	Enables or disables one line function, default is enabled.
Extra Features > FAT Entry Refresh	• Enabled (default) • Disabled	Enabled (default)	Enables or disables FAT entry refresh, default is enabled.
Extra Features > Consecutive Detect	• Enabled (default) • Disabled	Enabled (default)	Enables or disables consecutive detect, default is enabled.
Extra Features > Enable exFAT	• Enabled • Disabled (default)	Disabled (default)	Enables exFAT support in FileX.
Fault Tolerant > Fault Tolerant Service	• Enabled • Disabled (default)	Disabled (default)	When enabled, enables the FileX Fault Tolerant Module. Enabling Fault Tolerant automatically defines the symbol FX_FAULT_TOLERANT and FX_FAULT_TOLERANT_DATA.
Fault Tolerant > Fault Tolerant Data	• Enabled • Disabled (default)	Disabled (default)	When enabled, FileX immediately passes all file data write requests to the media's driver. This potentially decreases performance, but helps limit lost file data. Note that enabling this feature does not automatically enable FileX Fault Tolerant Module, which should

			be enabled separately.
Fault Tolerant > Fault Tolerant	• Enabled • Disabled (default)	Disabled (default)	When enabled, FileX immediately passes write requests of all system sectors (boot, FAT, and directory sectors) to the media's driver. This potentially decreases performance, but helps limit corruption to lost clusters. Note that enabling this feature does not automatically enable FileX Fault Tolerant Module, which should be enabled separately.
Fault Tolerant > Fault Tolerant Boot Index	Value must be greater than or equal to 116 and less than or equal to 119		Defines byte offset in the boot sector where the cluster for the fault tolerant log is. By default if left blank this value is 116. This field takes 4 bytes. Bytes 116 through 119 are chosen because they are marked as reserved by FAT 12/16/32/exFAT specification.
Error Checking	• Enabled (default) • Disabled	Enabled (default)	

Configurations for Storage > Azure RTOS FileX on Block Media

This module can be added to the Stacks tab via New Stack > Storage > Azure RTOS FileX on Block Media.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_fx_media0	Symbol used for media_ptr parameter in FileX APIs
Volume Name	Name must be a valid C symbol	Volume 1	Volume name string, which is a maximum of 11 characters.
Number of FATs	Number of FATs must be an integer greater than 0	1	Number of FATs in the media. The minimal value is 1 for the primary FAT. Values

			greater than 1 result in additional FAT copies being maintained at run-time.
Directory Entries	Number of Directory Entries must be an integer greater than 0	256	Number of directory entries in the root directory.
Hidden Sectors	Number of Hidden Sectors must be an integer	0	Number of sectors hidden before this media's boot sector. If using media formatted with multiple partitions this number should correspond to the starting block number for the desired partition.
Total Sectors	Total Sectors must be an integer greater than 0	3751936	Total number of sectors in the media. When using a Renesas provided block media implementation, total sectors can be fetched by the infoGet from the block media API. Any removable media must be inserted and initialized first to retrieve this info.
Bytes per Sector	Bytes per Sector must be multiple of 32	512	Number of bytes per sector, which is typically 512. FileX requires this to be a multiple of 32. When using a Renesas provided block media implementation, bytes per sector can be fetched by the infoGet from the block media API. Any removable media must be inserted and initialized first to retrieve this info.
Sectors per Cluster	Sectors per Cluster must be an integer greater than 0	1	Number of sectors in each cluster. The cluster is the minimum allocation unit in a FAT file system.
Volume Serial Number (exFAT only)	Volume Serial Number must be an integer	12345	Serial number to be used for this volume.

	greater than 0		exFAT only.
Boundary Unit (exFAT only)	Boundary unit must be an integer greater than 0	128	Physical data area alignment size, in number of sectors. exFAT only.
Working media memory size	Memory size must be an integer greater than or equal to the size of one sector	512	Memory allocated for file system. Memory size must be an integer greater than or equal to the size of one sector.

Usage Notes

Pending during Read/Write

The FileX Block Media driver provides a number of events in the user callback to handle waiting or pending while it is doing blocking operations. The events received in the callback will differ depending on the lower level block media driver in use.

If the lower level block media driver is rm_block_media_spi (SPI blocks on read/write operations):

- The user will receive RM_BLOCK_MEDIA_EVENT_POLL_STATUS in the user callback while the lower level driver is polling for the read/write operation to be complete. The user can choose to do a thread sleep or software delay upon receiving this event in the callback.
- Once the operation is complete no other callbacks will be received.

If the lower level block media driver is rm_block_media_sdmmc (SDMMC is interrupt based, the FileX Block Media driver will still block while waiting for interrupts from SDMMC):

- The user will receive RM_BLOCK_MEDIA_EVENT_WAIT in the user callback when the FileX Block Media driver begins waiting for an interrupt event from SDMMC. This is sent from a thread context. The user can choose to pend on a semaphore, sleep the thread, or do a software delay upon receiving this event in the callback. The FileX Block Media driver thread will block until an interrupt is received.
- Once an SDMMC interrupt is received the user will receive RM_BLOCK_MEDIA_EVENT_WAIT_END in the user callback. This is sent from an interrupt context. The user can choose to give a semaphore on this event or do nothing.
- If SDMMC is busy on a long erase after receiving the interrupt the FileX Block Media driver will send RM_BLOCK_MEDIA_EVENT_POLL_STATUS to the user callback and proceed to do a blocking poll on SDMMC status. The user can choose to do a thread sleep or software delay upon receiving this event in the callback. This event will not be received by the user on typical operations by FileX.

Partitioned Media

When using fx_format to format a partition the number of hidden sectors should match the starting block number of the partition and the total number of sectors should be equal to the number of sectors in the partition.

Unused User Callback Events

Certain events are defined in rm_block_media_event_t but not returned by the FileX Block Media user

callback:

- RM_BLOCK_MEDIA_EVENT_OPERATION_COMPLETE: This event is handled internally and operation success is indicated by FileX API calls returning FX_SUCCESS.
- RM_BLOCK_MEDIA_EVENT_ERROR: This event is handled internally and operation failure will be indicated by an error return code from FileX API calls.

Examples

Basic Example

This is a basic example of FileX Block Media in an application.

```
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_FILE_NAME "TEST_FILE.txt"
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_BUFFER_SIZE_BYTES (10240)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_PARTITION_NUMBER (0)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_BLOCK_SIZE (512)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_DIRECTORY_ENTRIES (128)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_FATS (1)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_HIDDEN_SECTORS (0)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_TOTAL_SECTORS (1073741824)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTOR_SIZE (512)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTORS_PER_CLUSTER (1)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_HEADS (1)
#define RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTORS_PER_TRACK (1)
extern rm_filex_block_media_instance_t g_filex_block_media0;
extern rm_filex_block_media_instance_ctrl_t g_filex_block_media0_ctrl;
extern rm_filex_block_media_cfg_t g_filex_block_media0_cfg;
extern FX_MEDIA g_fx_media0;
extern uint8_t g_fx_media0_memory[RM_FILEX_BLOCK_MEDIA_EXAMPLE_BLOCK_SIZE];
extern uint8_t g_file_data[RM_FILEX_BLOCK_MEDIA_EXAMPLE_BUFFER_SIZE_BYTES];
extern uint8_t g_read_buffer[RM_FILEX_BLOCK_MEDIA_EXAMPLE_BUFFER_SIZE_BYTES];
void rm_filex_block_media_example (void)
{
 /* Open media driver.*/
 fsp_err_t err = RM_FILEX_BLOCK_MEDIA_Open(&g_filex_block_media0_ctrl,
&g_filex_block_media0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
```

```
/* Initialize FileX */
   fx_system_initialize();
/* Open the media. If the media is removable, it must be inserted before calling
 * fx_media_open. This assumes the disk is already partitioned and formatted. */
   UINT fx_err = fx_media_open(&g_fx_media0,
"filex_example_media",
RM_FILEX_BLOCK_MEDIA_BlockDriver,
                            &g_filex_block_media0,
                            g_fx_media0_memory,
sizeof(g_fx_media0_memory));
   handle_fx_error(fx_err);
/* Create a file */
   fx_err = fx_file_create(&g_fx_media0, RM_FILEX_BLOCK_MEDIA_EXAMPLE_FILE_NAME);
   handle_fx_error(fx_err);
/* Open source file for writing. */
   FX_FILE sourceFile;
   fx_err = fx_file_open(&g_fx_media0, &sourceFile,
RM_FILEX_BLOCK_MEDIA_EXAMPLE_FILE_NAME, FX_OPEN_FOR_WRITE);
   handle_fx_error(fx_err);
/* Write file data. */
   fx_err = fx_file_write(&sourceFile, g_file_data, sizeof(g_file_data));
   handle_fx_error(fx_err);
/* Close the file. */
   fx_err = fx_file_close(&sourceFile);
   handle_fx_error(fx_err);
/* Open the source file in read mode. */
   fx_err = fx_file_open(&g_fx_media0, &sourceFile,
RM_FILEX_BLOCK_MEDIA_EXAMPLE_FILE_NAME, FX_OPEN_FOR_READ);
   handle_fx_error(fx_err);
/* Read file data. */
   ULONG actual_size_read;
   fx_err = fx_file_read(&sourceFile, g_read_buffer, sizeof(g_file_data),
&actual_size_read);
   handle_fx_error(fx_err);
```

```
    assert(sizeof(g_file_data) == actual_size_read);
 /* Close the file. */
    fx_err = fx_file_close(&sourceFile);
    handle_fx_error(fx_err);
 /* Verify the file data read matches the file written. */
    assert(0U == memcmp(g_file_data, g_read_buffer, sizeof(g_file_data)));
 /* Close the Media */
    fx_err = fx_media_close(&g_fx_media0);
    handle_fx_error(fx_err);
}
```

Format Example

This shows how to partition and format a disk if it is not already partitioned and formatted.

```
void rm_filex_block_media_format_example (void)
{
 /* Open media driver.*/
 fsp_err_t err = RM_FILEX_BLOCK_MEDIA_Open(&g_filex_block_media0_ctrl,
&g_filex_block_media0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Format the media */
    UINT fx_err =
fx_media_format(&g_fx_media0,                                    // Pointer to
FileX media control block.
 RM_FILEX_BLOCK_MEDIA_BlockDriver,                  // Driver entry
                                &g_filex_block_media0, // Pointer to Block Media
Driver
                                g_fx_media0_memory, // Media buffer pointer
 sizeof(g_fx_media0_memory),                        // Media buffer size
 "EXAMPLE_VOLUME",                                 // Volume Name
                                 RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_FATS,
// Number of FATs
                                 RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_DIRECTORY_ENTRIES,
```

```
// Directory Entries
                                    RM_FILEX_BLOCK_MEDIA_EXAMPLE_HIDDEN_SECTORS,
// Hidden sectors

RM_FILEX_BLOCK_MEDIA_EXAMPLE_TOTAL_SECTORS,         // Total sectors
                                    RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTOR_SIZE,
// Sector size

RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTORS_PER_CLUSTER,   // Sectors per cluster
                                    RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_HEADS,
// Heads
                                    RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTORS_PER_TRACK);
// Sectors per track
    handle_fx_error(fx_err);
}
```

Callback Pend Example

This shows how to use the I/O driver callback with ThreadX in order to wait/pend for operations to complete.

```
TX_SEMAPHORE g_operation_wait_semaphore;
/* Callback called by FileX block media I/O driver needs to pend on operation. */
void rm_filex_block_media_test_callback_pend (rm_filex_block_media_callback_args_t *
p_args)
{
 if (p_args->event & RM_BLOCK_MEDIA_EVENT_WAIT)
    {
 /* Interrupt has not happened for operation, get semaphore to wait for it. This will
be called from the FileX I/O driver thread. */
       tx_semaphore_get(&g_operation_wait_semaphore, TX_WAIT_FOREVER);
    }
 if (p_args->event & RM_BLOCK_MEDIA_EVENT_WAIT_END)
    {
 /* Interrupt has occurred for operation, post semaphore so that wait will end. This
```

```
will be called from an interrupt context. */
       tx_semaphore_put(&g_operation_wait_semaphore);
    }
 if (p_args->event & RM_BLOCK_MEDIA_EVENT_POLL_STATUS)
    {
 /* Interrupt has been received from block media device but operation is still
ongoing. The FileX I/O driver will wait on the driver busy status.
  * This event can be used to put the thread to sleep while waiting. This will be
called from the FileX I/O driver thread. */
       tx_thread_sleep(1);
    }
}
void rm_filex_block_media_callback_pend_example (void)
{
 /* Create semaphore for driver use */
    tx_semaphore_create(&g_operation_wait_semaphore, "operation_wait_semaphore", 0);
 /* Open media driver.*/
 fsp_err_t err = RM_FILEX_BLOCK_MEDIA_Open(&g_filex_block_media0_ctrl,
&g_filex_block_media0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Format the media */
    UINT fx_err =
fx_media_format(&g_fx_media0,                                    // Pointer to
FileX media control block.
 RM_FILEX_BLOCK_MEDIA_BlockDriver,                  // Driver entry
                                &g_filex_block_media0, // Pointer to Block Media
Driver
                                g_fx_media0_memory, // Media buffer pointer
 sizeof(g_fx_media0_memory),                        // Media buffer size
 "EXAMPLE_VOLUME",                                 // Volume Name
                                 RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_FATS,
// Number of FATs
                                 RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_DIRECTORY_ENTRIES,
```

```
// Directory Entries
                                    RM_FILEX_BLOCK_MEDIA_EXAMPLE_HIDDEN_SECTORS,
// Hidden sectors

RM_FILEX_BLOCK_MEDIA_EXAMPLE_TOTAL_SECTORS,         // Total sectors
                                    RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTOR_SIZE,
// Sector size

RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTORS_PER_CLUSTER,   // Sectors per cluster
                                    RM_FILEX_BLOCK_MEDIA_EXAMPLE_NUM_HEADS,
// Heads
                                    RM_FILEX_BLOCK_MEDIA_EXAMPLE_SECTORS_PER_TRACK);
// Sectors per track
    handle_fx_error(fx_err);
}
```

Media Insertion Example

This shows how to use the callback to wait for media insertion.

```
volatile uint32_t g_rm_filex_block_media_insertion_events = 0;
volatile uint32_t g_rm_filex_block_media_removal_events = 0;
/* Callback called by media driver when a removable device is inserted or removed. */
void rm_filex_block_media_test_callback (rm_filex_block_media_callback_args_t *
p_args)
{
 if (p_args->event & RM_BLOCK_MEDIA_EVENT_MEDIA_INSERTED)
    {
       g_rm_filex_block_media_insertion_events++;
    }
 if (p_args->event & RM_BLOCK_MEDIA_EVENT_MEDIA_REMOVED)
    {
       g_rm_filex_block_media_removal_events++;
    }
}
```

```
void rm_filex_block_media_media_insertion_example (void)
{
 /* Open media driver.*/
 fsp_err_t err = RM_FILEX_BLOCK_MEDIA_Open(&g_filex_block_media0_ctrl,
&g_filex_block_media0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Wait for media insertion. */
 while (0U == g_rm_filex_block_media_insertion_events)
    {
 /* Wait for media insertion. */
    }
 /* Open the media. If the media is removable, it must be inserted before calling
  * fx_media_open. This assumes the disk is already partitioned and formatted. */
    UINT fx_err = fx_media_open(&g_fx_media0,
 "filex_example_media",
 RM_FILEX_BLOCK_MEDIA_BlockDriver,
                             &g_filex_block_media0,
                             g_fx_media0_memory,
 sizeof(g_fx_media0_memory));
    handle_fx_error(fx_err);
}
```

Using FileX with Custom Block Media Implementations

When using a Custom Block Media implementation with rm_filex_block_media the custom implementation must call rm_filex_block_media_memory_callback upon the completion of a read/write operation. This callback should be called with an event of RM_BLOCK_MEDIA_EVENT_OPERATION_COMPLETE and p_context of rm_filex_block_media_instance_ctrl_t *. The following example shows how this should be done in the context of a demo RAM block media read function.

```
#define EXAMPLE_BLOCK_MEDIA_RAM_START_ADDR (0x20004AFE)
#define EXAMPLE_BLOCK_MEDIA_RAM_BLOCK_SIZE_BYTES (512)
/* Example implementation of rm_block_media_api_t::read(), user should define custom
block media RAM implementation. */
fsp_err_t RM_BLOCK_MEDIA_CUSTOM_RAM_Read (rm_block_media_ctrl_t * const p_ctrl,
```

```
                                       uint8_t * const
             p_dest_address,
                                       uint32_t const
block_address,
                                       uint32_t const                num_blocks)
{
 FSP_PARAMETER_NOT_USED(p_ctrl);
    memcpy(p_dest_address,
          (void *) (EXAMPLE_BLOCK_MEDIA_RAM_START_ADDR + (block_address *
EXAMPLE_BLOCK_MEDIA_RAM_BLOCK_SIZE_BYTES)),
          (EXAMPLE_BLOCK_MEDIA_RAM_BLOCK_SIZE_BYTES * num_blocks));
 /* Notify FileX port of operation complete through calling the callback, this is
required for custom block media/FileX port integration */
 rm_block_media_callback_args_t args;
    args.event    = RM_BLOCK_MEDIA_EVENT_OPERATION_COMPLETE;
    args.p_context = (void *) &g_filex_block_media0_ctrl;
    rm_filex_block_media_memory_callback(&args);
 return FSP_SUCCESS;
}
```

Data Structures

struct	rm_filex_block_media_instance_ctrl_t

Data Structure Documentation

◆ rm_filex_block_media_instance_ctrl_t

struct rm_filex_block_media_instance_ctrl_t
Common macro for FSP header files. There is also a corresponding FSP_FOOTER macro at the end of this file. FileX block media private control block. DO NOT MODIFY. Initialization occurs when RM_FILEX_BLOCK_MEDIA_Open is called.

Function Documentation

◆ RM_FILEX_BLOCK_MEDIA_Open()

fsp_err_t RM_FILEX_BLOCK_MEDIA_Open (rm_filex_block_media_ctrl_t *const *p_ctrl*, rm_filex_block_media_cfg_t const *const *p_cfg*)

The file system relies on the media to be formatted prior to creating directories and files The sector size and sector count will change depending on the media type and size.

The File Allocation Table (FAT) starts after the reserved sectors in the media. The FAT area is basically an array of 12-bit, 16-bit, or 32-bit entries that determine if that cluster is allocated or part of a chain of clusters comprising a subdirectory or a file. The size of each FAT entry is determined by the number of clusters that need to be represented. If the number of clusters (derived from the total sectors divided by the sectors per cluster) is less than 4,086, 12-bit FAT entries are used. If the total number of clusters is greater than 4,086 and less than or equal to 65,525, 16-bit FAT entries are used. Otherwise, if the total number of clusters is greater than 65,525, 32-bit FAT entries are used. Initializes callback and configuration for FileX Block Media interface. Call this before calling any FileX functions.

Implements rm_filex_block_media_api_t::open().

Return values

FSP_SUCCESS	Success.
FSP_ERR_ASSERTION	An input parameter was invalid.
FSP_ERR_ALREADY_OPEN	Module is already open.

Returns

See Common Error Codes or functions called by this function for other possible return codes.

◆ RM_FILEX_BLOCK_MEDIA_Close()

fsp_err_t RM_FILEX_BLOCK_MEDIA_Close (rm_filex_block_media_ctrl_t *const *p_ctrl*)

Closes media device.

Implements rm_filex_block_media_api_t::close().

Return values

FSP_SUCCESS	Media device closed.
FSP_ERR_ASSERTION	An input parameter was invalid.
FSP_ERR_NOT_OPEN	Module not open.

Returns

See Common Error Codes or functions called by this function for other possible return codes.

◆ RM_FILEX_BLOCK_MEDIA_BlockDriver()

void RM_FILEX_BLOCK_MEDIA_BlockDriver (FX_MEDIA * *p_fx_media*)

Access Block Media device functions open, close, read, write and control.

The RM_FILEX_BLOCK_MEDIA_BlockDriver function is called from the FileX file system driver and issues requests to a Block Media device through the FSP Block Media Interface. Uses block media driver for accesses.

Parameters

[in,out]	p_fx_media	FileX media control block. All information about each open media device are maintained in the FX_MEDIA data type. The I/O driver communicates the success or failure of the request through the fx_media_driver_status member of FX_MEDIA (p_fx_media->fx_media_driver_status). Possible values are documented in the FileX User Guide.

Return values

None	

Returns

Nothing, but updates FileX media control block.

4.2.92 Azure RTOS FileX LevelX I/O Driver (rm_filex_levelx_nor)

Modules

Functions

void	RM_FILEX_LEVELX_NOR_DeviceDriver (FX_MEDIA *p_fx_media) Access LevelX NOR device functions open, close, read, write and control. More...

Detailed Description

Middleware for the Azure RTOS FileX File System control using LevelX NOR on RA MCUs.

Overview

This module provides the hardware port layer for FileX file system. After initializing this module, refer to the FileX API reference to use the file system: https://docs.microsoft.com/en-us/azure/rtos/filex/

Features

The FileX LevelX NOR module supports the following features:

- ThreadX is typically required for FileX. To use FileX without ThreadX FX_STANDALONE_ENABLE must be defined.
- Unless FX_SINGLE_THREAD or FX_STANDALONE_ENABLE are defined, all FileX operations are thread safe.

Configuration

Build Time Configurations for rm_filex_levelx_nor

The following build time configurations are defined in fsp_cfg/middleware/rm_filex_levelx_nor_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	Selects if code for parameter checking is to be included in the build.

Configurations for Storage > FileX I/O (rm_filex_levelx_nor)

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_rm_filex_levelx_nor0	Module name.
Callback	Name must be a valid C symbol	g_rm_filex_levelx_nor_0_callback	A user callback function can be provided. If this callback function is provided, it will be called during operations by the lower level block media as a way for the user to provide their desired waiting functionality.
LevelX NOR Name (String)	Manual Entry	g_rm_filex_levelx_nor_0	String name to be input into LevelX API.

Build Time Configurations for fx

The following build time configurations are defined in fsp_cfg/azure/fx/fx_user.h:

Configuration	Options	Default	Description
Common > Max Long Name Len	Value must be greater than or equal to 13 and less than or equal to		Specifies the maximum file name size for FileX. If left blank the default

	256, or empty		value is 256. Legal values range between 13 and 256.
Common > Max Last Name Len	Value must be greater than or equal to 13 and less than or equal to 256, or empty		This value defines the maximum file name length, which includes full path name. If left blank the default value is 256. Legal values range between 13 and 256.
Common > Max Sector Cache	Value must be greater than 0 or empty		Specifies the maximum number of logical sectors that can be cached by FileX. The actual number of sectors that can be cached is lesser of this constant and how many sectors can fit in the amount of memory supplied at fx_media_open. The default value if left blank is 256. All values must be a power of 2.
Common > Fat Map Size	Value must be greater than 0 or empty		Specifies the number of sectors that can be represented in the FAT update map. The default value if left blank is 256. Larger values help reduce unneeded updates of secondary FAT sectors.
Common > Max Fat Cache	Value must be greater than 0 or empty		Specifies the number of entries in the internal FAT cache. The default value if left blank is 16. All values must be a power of 2.
Threading > Update Rate (Seconds)	Value must be greater than 0 or empty		Specifies rate at which system time in FileX is adjusted. Default value if left blank is 10, specifying that the FileX system time is updated every 10 seconds.
Threading > No Timer	• Enabled • Disabled	Disabled (default)	Eliminates the ThreadX timer setup to update

	(default)		the FileX system time and date. Doing so causes default time and date to be placed on all file operations.
Threading > Single Thread	• Enabled • Disabled (default)	Disabled (default)	Eliminates ThreadX protection logic from the FileX source. It should be used if FileX is being used only from one thread.
Threading > Standalone	• Enabled • Disabled (default)	Disabled (default)	Enables FileX to be used in standalone mode (without Azure RTOS).
Extra Features > Don't Update Open Files	• Enabled • Disabled (default)	Disabled (default)	When enabled, FileX does not update already opened files.
Extra Features > Media Search Cache	• Enabled (default) • Disabled	Enabled (default)	When disabled, the file search cache optimization is disabled.
Extra Features > Direct Data Read Cache Fill	• Enabled (default) • Disabled	Enabled (default)	When disabled, the direct read sector update of cache is disabled.
Extra Features > Media Statistics	• Enabled (default) • Disabled	Enabled (default)	When disabled, gathering of media statistics is disabled.
Extra Features > Single Open Legacy	• Enabled • Disabled (default)	Disabled (default)	When enabled, legacy single open logic for the same file is enabled.
Extra Features > Rename Path Inherit	• Enabled • Disabled (default)	Disabled (default)	When enabled, renaming inherits path information.
Extra Features > No Local Path	• Enabled • Disabled (default)	Disabled (default)	When enabled, removes local path logic from FileX, resulting in smaller code size.
Extra Features > 64-bit LBA	• Enabled • Disabled (default)	Disabled (default)	When enabled, 64-bits sector addresses are used in I/O driver.
Extra Features > Cache	• Enabled (default) • Disabled	Enabled (default)	Enables or disables the cache, default is enabled.

Extra Features > File Close	• Enabled (default) • Disabled	Enabled (default)	Enables or disables file close, default is enabled.
Extra Features > Fast Close	• Enabled (default) • Disabled	Enabled (default)	Enables or disables fast open, default is enabled.
Extra Features > Force Memory Operation	• Enabled (default) • Disabled	Enabled (default)	Enables or disables force memory operation, default is enabled.
Extra Features > Build Options	• Enabled (default) • Disabled	Enabled (default)	Enables or disables build options, default is enabled.
Extra Features > One Line Function	• Enabled (default) • Disabled	Enabled (default)	Enables or disables one line function, default is enabled.
Extra Features > FAT Entry Refresh	• Enabled (default) • Disabled	Enabled (default)	Enables or disables FAT entry refresh, default is enabled.
Extra Features > Consecutive Detect	• Enabled (default) • Disabled	Enabled (default)	Enables or disables consecutive detect, default is enabled.
Extra Features > Enable exFAT	• Enabled • Disabled (default)	Disabled (default)	Enables exFAT support in FileX.
Fault Tolerant > Fault Tolerant Service	• Enabled • Disabled (default)	Disabled (default)	When enabled, enables the FileX Fault Tolerant Module. Enabling Fault Tolerant automatically defines the symbol FX_FAULT_TOLERANT and FX_FAULT_TOLERANT_DATA.
Fault Tolerant > Fault Tolerant Data	• Enabled • Disabled (default)	Disabled (default)	When enabled, FileX immediately passes all file data write requests to the media's driver. This potentially decreases performance, but helps limit lost file data. Note that enabling this feature does not automatically enable FileX Fault Tolerant Module, which should be enabled separately.
Fault Tolerant > Fault Tolerant	• Enabled • Disabled	Disabled (default)	When enabled, FileX immediately passes

	(default)		write requests of all system sectors (boot, FAT, and directory sectors) to the media's driver. This potentially decreases performance, but helps limit corruption to lost clusters. Note that enabling this feature does not automatically enable FileX Fault Tolerant Module, which should be enabled separately.
Fault Tolerant > Fault Tolerant Boot Index	Value must be greater than or equal to 116 and less than or equal to 119		Defines byte offset in the boot sector where the cluster for the fault tolerant log is. By default if left blank this value is 116. This field takes 4 bytes. Bytes 116 through 119 are chosen because they are marked as reserved by FAT 12/16/32/exFAT specification.
Error Checking	• Enabled (default) • Disabled	Enabled (default)	

Configurations for Storage > Azure RTOS FileX on LevelX NOR

This module can be added to the Stacks tab via New Stack > Storage > Azure RTOS FileX on LevelX NOR.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_fx_media0	Symbol used for media_ptr parameter in FileX APIs
Volume Name	Name must be a valid C symbol	Volume 1	Volume name string, which is a maximum of 11 characters.
Number of FATs	Number of FATs must be an integer greater than 0	1	Number of FATs in the media. The minimal value is 1 for the primary FAT. Values greater than 1 result in additional FAT copies being maintained at run-time.

Directory Entries	Number of Directory Entries must be an integer greater than 0	256	Number of directory entries in the root directory.
Hidden Sectors	Number of Hidden Sectors must be an integer	0	Number of sectors hidden before this media's boot sector. If using media formatted with multiple partitions this number should correspond to the starting block number for the desired partition.
Total Sectors	Total Sectors must be an integer greater than 0	3751936	Total number of sectors in the media. When using a Renesas provided block media implementation, total sectors can be fetched by the infoGet from the block media API. Any removable media must be inserted and initialized first to retrieve this info.
Sectors per Cluster	Sectors per Cluster must be an integer greater than 0	1	Number of sectors in each cluster. The cluster is the minimum allocation unit in a FAT file system.
Volume Serial Number (exFAT only)	Volume Serial Number must be an integer greater than 0	12345	Serial number to be used for this volume. exFAT only.
Boundary Unit (exFAT only)	Boundary unit must be an integer greater than 0	128	Physical data area alignment size, in number of sectors. exFAT only.
Working media memory size	Memory size must be an integer greater than or equal to the size of one sector	512	Memory allocated for file system. Memory size must be an integer greater than or equal to the size of one sector.

Usage Notes

Pending during Write/Erase

If the underlying LevelX NOR driver performs a blocking operation that requires waiting to complete (such as a long write/erase on NOR SPI), a callback can be provided to provide a way to wait with an

OS-specific thread wait. This callback will also pass up block erase events.

Partitioned Media

Partitioned media is not supported directly by the FileX LevelX NOR port.

Examples

Basic Example

This is a basic example of FileX Block Media in an application.

```
#define RM_FILEX_LEVELX_NOR_EXAMPLE_FILE_NAME "TEST_FILE.txt"
#define RM_FILEX_LEVELX_NOR_EXAMPLE_BUFFER_SIZE_BYTES (10240)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_PARTITION_NUMBER (0)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_BLOCK_SIZE (512)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_DIRECTORY_ENTRIES (128)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_FATS (1)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_HIDDEN_SECTORS (0)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_TOTAL_SECTORS (512)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_SECTOR_SIZE (512)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_SECTORS_PER_CLUSTER (1)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_HEADS (1)
#define RM_FILEX_LEVELX_NOR_EXAMPLE_SECTORS_PER_TRACK (1)
extern rm_filex_levelx_nor_instance_t g_filex_levelx_nor0;
extern rm_filex_levelx_nor_instance_ctrl_t g_filex_levelx_nor0_ctrl;
extern rm_filex_levelx_nor_cfg_t g_filex_levelx_nor0_cfg;
extern FX_MEDIA g_fx_media0;
extern uint8_t g_fx_media0_memory[RM_FILEX_LEVELX_NOR_EXAMPLE_BLOCK_SIZE];
extern uint8_t g_file_data[RM_FILEX_LEVELX_NOR_EXAMPLE_BUFFER_SIZE_BYTES];
extern uint8_t g_read_buffer[RM_FILEX_LEVELX_NOR_EXAMPLE_BUFFER_SIZE_BYTES];
void rm_filex_levelx_nor_example (void)
{
 /* Initialize FileX */
    fx_system_initialize();
 /* Initialize LevelX */
    lx_nor_flash_initialize();
 /* Open the media. This assumes the flash is already formatted. */
```

```
    UINT fx_err = fx_media_open(&g_fx_media0,
 "filex_example_media",
 RM_FILEX_LEVELX_NOR_DeviceDriver,
                             &g_filex_levelx_nor0,
                             g_fx_media0_memory,
 sizeof(g_fx_media0_memory));

    handle_fx_error(fx_err);
 /* Open source file for writing. */
    FX_FILE sourceFile;
    fx_err = fx_file_open(&g_fx_media0, &sourceFile,
RM_FILEX_LEVELX_NOR_EXAMPLE_FILE_NAME, FX_OPEN_FOR_WRITE);
    handle_fx_error(fx_err);
 /* Write file data. */
    fx_err = fx_file_write(&sourceFile, g_file_data, sizeof(g_file_data));
    handle_fx_error(fx_err);
 /* Close the file. */
    fx_err = fx_file_close(&sourceFile);
    handle_fx_error(fx_err);
 /* Open the source file in read mode. */
    fx_err = fx_file_open(&g_fx_media0, &sourceFile,
RM_FILEX_LEVELX_NOR_EXAMPLE_FILE_NAME, FX_OPEN_FOR_READ);
    handle_fx_error(fx_err);
 /* Read file data. */
    ULONG actual_size_read;
    fx_err = fx_file_read(&sourceFile, g_read_buffer, sizeof(g_file_data),
&actual_size_read);
    handle_fx_error(fx_err);
    assert(sizeof(g_file_data) == actual_size_read);
 /* Close the file. */
    fx_err = fx_file_close(&sourceFile);
    handle_fx_error(fx_err);
```

```
 /* Verify the file data read matches the file written. */
    assert(0U == memcmp(g_file_data, g_read_buffer, sizeof(g_file_data)));
 /* Close the Media */
    fx_err = fx_media_close(&g_fx_media0);
    handle_fx_error(fx_err);
}
```

Format Example

This shows how to partition and format a disk if it is not already partitioned and formatted.

```
extern rm_levelx_nor_spi_cfg_t g_levelx_nor_spi0_cfg;
#define RM_FILEX_LEVELX_NOR_EXAMPLE_SPI_SECTOR_SIZE (4096)
void rm_filex_levelx_nor_format_example (void)
{
 spi_flash_instance_t * p_spi_flash_instance = (spi_flash_instance_t *)
g_levelx_nor_spi0_cfg.p_lower_lvl;
 spi_flash_status_t    status;
 /* Erase flash prior to usage */
 fsp_err_t err = p_spi_flash_instance->p_api->open(p_spi_flash_instance->p_ctrl,
p_spi_flash_instance->p_cfg);
    assert(FSP_SUCCESS == err);
 for (uint32_t i = g_levelx_nor_spi0_cfg.address_offset;
         i < g_levelx_nor_spi0_cfg.size;
         i += RM_FILEX_LEVELX_NOR_EXAMPLE_SPI_SECTOR_SIZE)
    {
       err = p_spi_flash_instance->p_api->erase(p_spi_flash_instance->p_ctrl,
                                                (uint8_t *)
g_levelx_nor_spi0_cfg.base_address + i,

RM_FILEX_LEVELX_NOR_EXAMPLE_SPI_SECTOR_SIZE);
      assert(FSP_SUCCESS == err);
       status.write_in_progress = true;
 while (status.write_in_progress)
      {
```

```
            err =
p_spi_flash_instance->p_api->statusGet(p_spi_flash_instance->p_ctrl, &status);
      assert(FSP_SUCCESS == err);
       }
    }
    err = p_spi_flash_instance->p_api->close(p_spi_flash_instance->p_ctrl);
    assert(FSP_SUCCESS == err);
 /* Format the media */
    UINT fx_err = fx_media_format(&g_fx_media0,
// Pointer to FileX media control block.
 RM_FILEX_LEVELX_NOR_DeviceDriver,                  // Driver entry
                                &g_filex_levelx_nor0, // Pointer to Block Media
Driver
                                g_fx_media0_memory, // Media buffer pointer
 sizeof(g_fx_media0_memory),                        // Media buffer size
 "EXAMPLE_VOLUME",                                  // Volume Name
                                 RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_FATS,
// Number of FATs
                                 RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_DIRECTORY_ENTRIES,
// Directory Entries
                                 RM_FILEX_LEVELX_NOR_EXAMPLE_HIDDEN_SECTORS,
// Hidden sectors

RM_FILEX_LEVELX_NOR_EXAMPLE_TOTAL_SECTORS,         // Total sectors
                                RM_FILEX_LEVELX_NOR_EXAMPLE_SECTOR_SIZE,
// Sector size

RM_FILEX_LEVELX_NOR_EXAMPLE_SECTORS_PER_CLUSTER,   // Sectors per cluster
                                 RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_HEADS,
// Heads
                                 RM_FILEX_LEVELX_NOR_EXAMPLE_SECTORS_PER_TRACK);
// Sectors per track
    handle_fx_error(fx_err);
}
```

Callback Wait Example

This shows how to use the I/O driver callback with ThreadX in order to wait for operations to complete.

```
/* Callback called by FileX block media I/O driver needs to wait on operation. */
void rm_filex_levelx_nor_test_callback_wait (rm_filex_levelx_nor_callback_args_t *
p_args)
{
 if (p_args->event & RM_FILEX_LEVELX_NOR_EVENT_BUSY)
    {
 /* Put the thread to sleep while waiting for operation to complete. */
       tx_thread_sleep(1);
    }
}
void rm_filex_levelx_nor_callback_wait_example (void)
{
 /* Format the media */
    UINT fx_err = fx_media_format(&g_fx_media0,
// Pointer to FileX media control block.
 RM_FILEX_LEVELX_NOR_DeviceDriver,                 // Driver entry
                                &g_filex_levelx_nor0, // Pointer to Block Media
Driver
                                g_fx_media0_memory, // Media buffer pointer
 sizeof(g_fx_media0_memory),                       // Media buffer size
 "EXAMPLE_VOLUME",                                 // Volume Name
                                 RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_FATS,
// Number of FATs
                                 RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_DIRECTORY_ENTRIES,
// Directory Entries
                                 RM_FILEX_LEVELX_NOR_EXAMPLE_HIDDEN_SECTORS,
// Hidden sectors

RM_FILEX_LEVELX_NOR_EXAMPLE_TOTAL_SECTORS,         // Total sectors
```

```
                                RM_FILEX_LEVELX_NOR_EXAMPLE_SECTOR_SIZE,
// Sector size

RM_FILEX_LEVELX_NOR_EXAMPLE_SECTORS_PER_CLUSTER,   // Sectors per cluster
                                RM_FILEX_LEVELX_NOR_EXAMPLE_NUM_HEADS,
// Heads
                                RM_FILEX_LEVELX_NOR_EXAMPLE_SECTORS_PER_TRACK);
// Sectors per track
    handle_fx_error(fx_err);
}
```

Data Structures

struct	rm_filex_levelx_nor_callback_args_t
struct	rm_filex_levelx_nor_cfg_t
struct	rm_filex_levelx_nor_instance_ctrl_t
struct	rm_filex_levelx_nor_instance_t

Enumerations

enum	rm_filex_levelx_nor_event_t

Data Structure Documentation

◆ rm_filex_levelx_nor_callback_args_t

struct rm_filex_levelx_nor_callback_args_t		
Callback function parameter data		
Data Fields		
rm_filex_levelx_nor_event_t	event	The event can be used to identify what caused the callback.
void const *	p_context	Placeholder for user data.

◆ rm_filex_levelx_nor_cfg_t

struct rm_filex_levelx_nor_cfg_t	
FileX LevelX configuration	
Data Fields	
UINT(*	nor_driver_initialize)(LX_NOR_FLASH *)

	Pointer to the initialization function.
LX_NOR_FLASH *	p_nor_flash
	NOR Flash instance.
CHAR *	p_nor_flash_name
	NOR Flash instance name.
fsp_err_t(*	close)()
	Pointer to underlying driver close.
void(*	p_callback)(rm_filex_levelx_nor_callback_args_t *p_args)
	Pointer to callback function.
void const *	p_context
	Placeholder for user data.

◆ rm_filex_levelx_nor_instance_ctrl_t

struct rm_filex_levelx_nor_instance_ctrl_t		
FileX block media private control block. DO NOT MODIFY. Initialization occurs when RM_FILEX_LEVELX_NOR_Open is called.		
Data Fields		
rm_filex_levelx_nor_cfg_t const *	p_cfg	Pointer to instance configuration.

◆ rm_filex_levelx_nor_instance_t

struct rm_filex_levelx_nor_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
rm_filex_levelx_nor_instance_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_filex_levelx_nor_cfg_t *const	p_cfg	Pointer to the configuration

		structure for this instance.

Enumeration Type Documentation

◆ rm_filex_levelx_nor_event_t

enum rm_filex_levelx_nor_event_t

Common macro for FSP header files. There is also a corresponding FSP_FOOTER macro at the end of this file. Options for the callback events.

Enumerator	
RM_FILEX_LEVELX_NOR_EVENT_BUSY	Pending operation, user can define their own wait functionality.

Function Documentation

◆ RM_FILEX_LEVELX_NOR_DeviceDriver()

void RM_FILEX_LEVELX_NOR_DeviceDriver (FX_MEDIA * *p_fx_media*)

Access LevelX NOR device functions open, close, read, write and control.

The RM_FILEX_LEVELX_NOR_DeviceDriver function is called from the FileX file system driver and issues requests to a LevelX NOR device through the LevelX API.

Parameters

[in,out]	p_fx_media	FileX media control block. All information about each open media device are maintained in the FX_MEDIA data type. The I/O driver communicates the success or failure of the request through the fx_media_driver_status member of FX_MEDIA (p_fx_media->fx_media_driver_status). Possible values are documented in the FileX User Guide.

Return values

None	

Returns

Nothing, but updates FileX media control block.

4.2.93 FreeRTOS+FAT Port (rm_freertos_plus_fat)

Modules

Functions

fsp_err_t	RM_FREERTOS_PLUS_FAT_DiskInit (rm_freertos_plus_fat_ctrl_t *const p_ctrl, rm_freertos_plus_fat_disk_cfg_t const *const p_disk_cfg, FF_Disk_t *const p_disk)
fsp_err_t	RM_FREERTOS_PLUS_FAT_DiskDeinit (rm_freertos_plus_fat_ctrl_t *const p_ctrl, FF_Disk_t *const p_disk)
fsp_err_t	RM_FREERTOS_PLUS_FAT_InfoGet (rm_freertos_plus_fat_ctrl_t *const p_ctrl, FF_Disk_t *const p_disk, rm_freertos_plus_fat_info_t *const p_info)
fsp_err_t	RM_FREERTOS_PLUS_FAT_Close (rm_freertos_plus_fat_ctrl_t *const p_ctrl)

Detailed Description

Middleware for the FAT File System control on RA MCUs.

Overview

This module provides the hardware port layer for FreeRTOS+FAT file system. After initializing this module, refer to the FreeRTOS+FAT API reference to use the file system: https://www.freertos.org/FreeRTOS-Plus/FreeRTOS_Plus_FAT/index.html

Features

The FreeRTOS+FAT port module supports the following features:

- Callbacks for insertion and removal for removable devices.
- Helper function to initialize FF_Disk_t
- Blocking read and write port functions that use FreeRTOS task notification to pend if FreeRTOS is used
- FreeRTOS is optional

Configuration

Build Time Configurations for rm_freertos_plus_fat

The following build time configurations are defined in fsp_cfg/middleware/rm_freertos_plus_fat_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Storage > FreeRTOS+FAT Port for RA (rm_freertos_plus_fat)

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_rm_freertos_plus_fat0	Module name.
Total Number of Sectors	Must be a non-negative integer	31293440	Enter the total number of sectors on the device. If this is not known, update rm_freertos_plus_fat_disk_cfg_t::num_blocks after calling RM_FREERTOS_PLUS_FAT_MediaInit().
Sector Size (bytes)	Must be a power of 2 multiple of 512	512	Select the sector size. Must match the underlying media sector size and at least 512. If this is not known, update rm_freertos_plus_fat_disk_cfg_t::num_blocks after calling RM_FREERTOS_PLUS_FAT_MediaInit().
Cache Size (bytes)	Must be a power of 2 multiple of 512	1024	Select the cache size. Must be a multiple of the sector size and at least 2 times the sector size.
Partition Number	Must be a non-negative integer	0	Select the partition number for this disk.
Callback	Name must be a valid C symbol	NULL	A user callback function can be provided. If this callback function is provided, it will be called when a card is inserted or removed.

Usage Notes

Pending during Read/Write

If the underlying driver supports non-blocking operations, the FreeRTOS+FAT port pends the active

FreeRTOS task during read and write operations so other tasks can run in the background.

If FreeRTOS is not used, the FreeRTOS+FAT port spins in a while loop waiting for read and write operations to complete.

FreeRTOS+FAT without FreeRTOS

To use FreeRTOS+FAT without FreeRTOS, copy FreeRTOSConfigMinimal.h to one of your project's include paths and rename it FreeRTOSConfig.h.

Also, update the Malloc function to malloc and the Free function to free in the Common configurations.

Examples

Basic Example

This is a basic example of FreeRTOS+FAT in an application.

```
#define RM_FREERTOS_PLUS_FAT_EXAMPLE_FILE_NAME "TEST_FILE.txt"
#define RM_FREERTOS_PLUS_FAT_EXAMPLE_BUFFER_SIZE_BYTES (10240)
#define RM_FREERTOS_PLUS_FAT_EXAMPLE_PARTITION_NUMBER (0)
extern rm_freertos_plus_fat_instance_ctrl_t g_freertos_plus_fat0_ctrl;
extern const rm_freertos_plus_fat_cfg_t g_freertos_plus_fat0_cfg;
extern rm_freertos_plus_fat_disk_cfg_t g_rm_freertos_plus_fat_disk_cfg;
extern uint8_t g_file_data[RM_FREERTOS_PLUS_FAT_EXAMPLE_BUFFER_SIZE_BYTES];
extern uint8_t g_read_buffer[RM_FREERTOS_PLUS_FAT_EXAMPLE_BUFFER_SIZE_BYTES];
void rm_freertos_plus_fat_example (void)
{
 /* Open media driver.*/
 fsp_err_t err = RM_FREERTOS_PLUS_FAT_Open(&g_freertos_plus_fat0_ctrl,
&g_freertos_plus_fat0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Initialize the media and the disk. If the media is removable, it must be inserted
before calling
  * RM_FREERTOS_PLUS_FAT_MediaInit. */
    err = RM_FREERTOS_PLUS_FAT_MediaInit(&g_freertos_plus_fat0_ctrl,
&g_rm_freertos_plus_fat_disk_cfg.device);
    assert(FSP_SUCCESS == err);
 /* Initialize one disk for each partition used in the application. */
```

```
    FF_Disk_t disk;
    err = RM_FREERTOS_PLUS_FAT_DiskInit(&g_freertos_plus_fat0_ctrl,
&g_rm_freertos_plus_fat_disk_cfg, &disk);
    assert(FSP_SUCCESS == err);
 /* Mount each disk. This assumes the disk is already partitioned and formatted. */
    FF_Error_t ff_err = FF_Mount(&disk,
RM_FREERTOS_PLUS_FAT_EXAMPLE_PARTITION_NUMBER);
    handle_ff_error(ff_err);
 /* Add the disk to the file system. */
    FF_FS_Add("/", &disk);
 /* Open a source file for writing. */
    FF_FILE * pxSourceFile = ff_fopen((const char *)
RM_FREERTOS_PLUS_FAT_EXAMPLE_FILE_NAME, "w");
    assert(NULL != pxSourceFile);
 /* Write file data. */
 size_t size_return = ff_fwrite(g_file_data, sizeof(g_file_data), 1, pxSourceFile);
    assert(1 == size_return);
 /* Close the file. */
 int close_err = ff_fclose(pxSourceFile);
    assert(0 == close_err);
 /* Open the source file in read mode. */
    pxSourceFile = ff_fopen((const char *) RM_FREERTOS_PLUS_FAT_EXAMPLE_FILE_NAME,
"r");
    assert(NULL != pxSourceFile);
 /* Read file data. */
    size_return = ff_fread(g_read_buffer, sizeof(g_file_data), 1, pxSourceFile);
    assert(1 == size_return);
 /* Close the file. */
    close_err = ff_fclose(pxSourceFile);
    assert(0 == close_err);
 /* Verify the file data read matches the file written. */
    assert(0U == memcmp(g_file_data, g_read_buffer, sizeof(g_file_data)));
}
```

Format Example

This shows how to partition and format a disk if it is not already partitioned and formatted.

```
void rm_freertos_plus_fat_format_example (void)
{
 /* Open media driver.*/
 fsp_err_t err = RM_FREERTOS_PLUS_FAT_Open(&g_freertos_plus_fat0_ctrl,
&g_freertos_plus_fat0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Initialize the media and the disk. If the media is removable, it must be inserted
before calling
  * RM_FREERTOS_PLUS_FAT_MediaInit. */
    err = RM_FREERTOS_PLUS_FAT_MediaInit(&g_freertos_plus_fat0_ctrl,
&g_rm_freertos_plus_fat_disk_cfg.device);
    assert(FSP_SUCCESS == err);
 /* Initialize one disk for each partition used in the application. */
    FF_Disk_t disk;
    err = RM_FREERTOS_PLUS_FAT_DiskInit(&g_freertos_plus_fat0_ctrl,
&g_rm_freertos_plus_fat_disk_cfg, &disk);
    assert(FSP_SUCCESS == err);
 /* Try to mount the disk. If the disk is not formatted, mount will fail. */
    FF_Error_t ff_err = FF_Mount(&disk,
RM_FREERTOS_PLUS_FAT_EXAMPLE_PARTITION_NUMBER);
 if (FF_isERR((uint32_t) ff_err))
    {
 /* The disk is likely not formatted. Partition and format the disk, then mount
again. */
       FF_PartitionParameters_t partition_params;
       partition_params.ulSectorCount   =
g_rm_freertos_plus_fat_disk_cfg.device.sector_count;
       partition_params.ulHiddenSectors = 1;
       partition_params.ulInterSpace    = 0;
       memset(partition_params.xSizes, 0, sizeof(partition_params.xSizes));
       partition_params.xSizes[RM_FREERTOS_PLUS_FAT_EXAMPLE_PARTITION_NUMBER] =
```

```
            (BaseType_t) partition_params.ulSectorCount - 1;
       partition_params.xPrimaryCount = 1;
       partition_params.eSizeType    = eSizeIsSectors;
       ff_err = FF_Partition(&disk, &partition_params);
      handle_ff_error(ff_err);
       ff_err = FF_Format(&disk, RM_FREERTOS_PLUS_FAT_EXAMPLE_PARTITION_NUMBER,
pdFALSE, pdFALSE);
      handle_ff_error(ff_err);
       ff_err = FF_Mount(&disk, RM_FREERTOS_PLUS_FAT_EXAMPLE_PARTITION_NUMBER);
      handle_ff_error(ff_err);
    }
}
```

Media Insertion Example

This shows how to use the callback to wait for media insertion.

```
#if 2 == BSP_CFG_RTOS
static EventGroupHandle_t xUSBEventGroupHandle = NULL;
#else
volatile uint32_t g_rm_freertos_plus_fat_insertion_events = 0;
volatile uint32_t g_rm_freertos_plus_fat_removal_events = 0;
#endif
/* Callback called by media driver when a removable device is inserted or removed. */
void rm_freertos_plus_fat_test_callback (rm_freertos_plus_fat_callback_args_t *
p_args)
{
#if 2 == BSP_CFG_RTOS
 /* Post an event if FreeRTOS is available. */
    BaseType_t xHigherPriorityTaskWoken = pdFALSE;
    xEventGroupSetBitsFromISR(xUSBEventGroupHandle, p_args->event,
&xHigherPriorityTaskWoken);
    portYIELD_FROM_ISR(xHigherPriorityTaskWoken);
#else
 /* If FreeRTOS is not used, set a global flag. */
```

```
 if (p_args->event & RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_INSERTED)
    {
       g_rm_freertos_plus_fat_insertion_events++;
    }
 if (p_args->event & RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_REMOVED)
    {
       g_rm_freertos_plus_fat_removal_events++;
    }
#endif
}
void rm_freertos_plus_fat_media_insertion_example (void)
{
#if 2 == BSP_CFG_RTOS
 /* Create event flags if FreeRTOS is used. */
    xUSBEventGroupHandle = xEventGroupCreate();
    TEST_ASSERT_NOT_EQUAL(NULL, xUSBEventGroupHandle);
#endif
 /* Open media driver.*/
 fsp_err_t err = RM_FREERTOS_PLUS_FAT_Open(&g_freertos_plus_fat0_ctrl,
&g_freertos_plus_fat0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Wait for media insertion. */
#if 2 == BSP_CFG_RTOS
    EventBits_t xEventGroupValue = xEventGroupWaitBits(xUSBEventGroupHandle,
 RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_INSERTED,
                                                       pdTRUE,
                                                       pdFALSE,
                                                       portMAX_DELAY);
    assert(RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_INSERTED ==
          (RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_INSERTED & xEventGroupValue));
#else
 while (0U == g_rm_freertos_plus_fat_insertion_events)
    {
```

```
 /* Wait for media insertion. */
    }
#endif
 /* Initialize the media and the disk. If the media is removable, it must be inserted
before calling
  * RM_FREERTOS_PLUS_FAT_MediaInit. */
    err = RM_FREERTOS_PLUS_FAT_MediaInit(&g_freertos_plus_fat0_ctrl,
&g_rm_freertos_plus_fat_disk_cfg.device);

&g_rm_freertos_plus_fat_disk_cfg, &disk);
    assert(FSP_SUCCESS == err);
}
```

Media Insertion Example for USB

This shows how to use the callback to read and write to USB media.

```
void rm_freertos_plus_fat_usb_example (void)
{
#if 2 == BSP_CFG_RTOS
 /* Create event flags if FreeRTOS is used. */
    xUSBEventGroupHandle = xEventGroupCreate();
#endif
 /* Open media driver.*/
 fsp_err_t err = RM_FREERTOS_PLUS_FAT_Open(&g_freertos_plus_fat0_ctrl,
&g_freertos_plus_fat0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Wait for the USB media to be attached. */
#if 2 == BSP_CFG_RTOS
    EventBits_t xEventGroupValue = xEventGroupWaitBits(xUSBEventGroupHandle,
 RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_INSERTED,
```

```
                                                    pdTRUE,
                                                    pdFALSE,
                                                    portMAX_DELAY);
    assert(RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_INSERTED ==
          (RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_INSERTED & xEventGroupValue));
#else
 while (0U == g_rm_freertos_plus_fat_insertion_events)
    {
 /* Wait for the USB media to be attached. */
    }
#endif
 /* Initialize the media and the disk. If the media is removable, it must be inserted
before calling
  * RM_FREERTOS_PLUS_FAT_MediaInit. */
    err = RM_FREERTOS_PLUS_FAT_MediaInit(&g_freertos_plus_fat0_ctrl,
&g_rm_freertos_plus_fat_disk_cfg.device);
    assert(FSP_SUCCESS == err);
 /* Initialize one disk for each partition used in the application. */
    FF_Disk_t disk;
    err = RM_FREERTOS_PLUS_FAT_DiskInit(&g_freertos_plus_fat0_ctrl,
&g_rm_freertos_plus_fat_disk_cfg, &disk);
    assert(FSP_SUCCESS == err);
 /* Mount each disk. This assumes the disk is already partitioned and formatted. */
    FF_Error_t ff_err = FF_Mount(&disk,
RM_FREERTOS_PLUS_FAT_EXAMPLE_PARTITION_NUMBER);
    handle_ff_error(ff_err);
 /* Add the disk to the file system. */
    FF_FS_Add("/", &disk);
 /* Open a source file for writing. */
    FF_FILE * pxSourceFile = ff_fopen((const char *)
RM_FREERTOS_PLUS_FAT_EXAMPLE_FILE_NAME, "w");
    assert(NULL != pxSourceFile);
 /* Write file data. */
 size_t size_return = ff_fwrite(g_file_data, sizeof(g_file_data), 1, pxSourceFile);
```

```
    assert(1 == size_return);
 /* Close the file. */
 int close_err = ff_fclose(pxSourceFile);
    assert(0 == close_err);
 /* Open the source file in read mode. */
    pxSourceFile = ff_fopen((const char *) RM_FREERTOS_PLUS_FAT_EXAMPLE_FILE_NAME,
"r");
    assert(NULL != pxSourceFile);
 /* Read file data. */
    size_return = ff_fread(g_read_buffer, sizeof(g_file_data), 1, pxSourceFile);
    assert(1 == size_return);
 /* Close the file. */
    close_err = ff_fclose(pxSourceFile);
    assert(0 == close_err);
 /* Verify the file data read matches the file written. */
    assert(0U == memcmp(g_file_data, g_read_buffer, sizeof(g_file_data)));
}
```

Data Structures

struct	rm_freertos_plus_fat_instance_ctrl_t

Data Structure Documentation

◆ rm_freertos_plus_fat_instance_ctrl_t

struct rm_freertos_plus_fat_instance_ctrl_t
FreeRTOS plus FAT private control block. DO NOT MODIFY. Initialization occurs when RM_FREERTOS_PLUS_FAT_Open is called.

Function Documentation

◆ RM_FREERTOS_PLUS_FAT_Open()

fsp_err_t RM_FREERTOS_PLUS_FAT_Open (rm_freertos_plus_fat_ctrl_t *const *p_ctrl*, rm_freertos_plus_fat_cfg_t const *const *p_cfg*)

Initializes lower layer media device.

Implements rm_freertos_plus_fat_api_t::open().

Return values

FSP_SUCCESS	Success.
FSP_ERR_ASSERTION	An input parameter was invalid.
FSP_ERR_ALREADY_OPEN	Module is already open.
FSP_ERR_OUT_OF_MEMORY	Not enough memory to create semaphore.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:
- rm_block_media_api_t::open

◆ RM_FREERTOS_PLUS_FAT_MediaInit()

fsp_err_t RM_FREERTOS_PLUS_FAT_MediaInit (rm_freertos_plus_fat_ctrl_t *const *p_ctrl*, rm_freertos_plus_fat_device_t *const *p_device*)

Initializes the media device. This function blocks until all identification and configuration commands are complete.

Implements rm_freertos_plus_fat_api_t::mediaInit().

Return values

FSP_SUCCESS	Module is initialized and ready to access the memory device.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module has not been initialized.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:
- rm_block_media_api_t::mediaInit
- rm_block_media_api_t::infoGet

◆ RM_FREERTOS_PLUS_FAT_DiskInit()

fsp_err_t RM_FREERTOS_PLUS_FAT_DiskInit (rm_freertos_plus_fat_ctrl_t *const *p_ctrl*, rm_freertos_plus_fat_disk_cfg_t const *const *p_disk_cfg*, FF_Disk_t *const *p_disk*)

Initializes a FreeRTOS+FAT disk structure. This function calls FF_CreateIOManger.

Implements rm_freertos_plus_fat_api_t::diskInit().

Return values

FSP_SUCCESS	Module is initialized and ready to access the memory device.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module has not been initialized.
FSP_ERR_INTERNAL	Call to FF_CreateIOManger failed.

◆ RM_FREERTOS_PLUS_FAT_DiskDeinit()

fsp_err_t RM_FREERTOS_PLUS_FAT_DiskDeinit (rm_freertos_plus_fat_ctrl_t *const *p_ctrl*, FF_Disk_t *const *p_disk*)

Deinitializes a FreeRTOS+FAT disk structure. This function calls FF_DeleteIOManger.

Implements rm_freertos_plus_fat_api_t::diskDeinit().

Return values

FSP_SUCCESS	Module is initialized and ready to access the memory device.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Module has not been initialized.

◆ RM_FREERTOS_PLUS_FAT_InfoGet()

fsp_err_t RM_FREERTOS_PLUS_FAT_InfoGet (rm_freertos_plus_fat_ctrl_t *const *p_ctrl*, FF_Disk_t *const *p_disk*, rm_freertos_plus_fat_info_t *const *p_info*)

Get partition information. This function can only be called after rm_freertos_plus_fat_api_t::diskInit() .

Implements rm_freertos_plus_fat_api_t::infoGet().

Return values

FSP_SUCCESS	Information stored in p_info.
FSP_ERR_ASSERTION	An input parameter was invalid.
FSP_ERR_NOT_OPEN	Module not open.
FSP_ERR_NOT_FOUND	The value of p_iomanager is NULL.

◆ RM_FREERTOS_PLUS_FAT_Close()

fsp_err_t RM_FREERTOS_PLUS_FAT_Close (rm_freertos_plus_fat_ctrl_t *const *p_ctrl*)

Closes media device.

Implements rm_freertos_plus_fat_api_t::close().

Return values

FSP_SUCCESS	Media device closed.
FSP_ERR_ASSERTION	An input parameter was invalid.
FSP_ERR_NOT_OPEN	Module not open.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- rm_block_media_api_t::close

4.2.94 FreeRTOS Plus TCP (rm_freertos_plus_tcp)

Modules

Middleware for using TCP on RA MCUs.

Overview

FreeRTOS Plus TCP is a TCP stack created for use with FreeRTOS.

This module provides the NetworkInterface required to use FreeRTOS Plus TCP with the Ethernet (r_ether) driver.

Please refer to the FreeRTOS Plus TCP documentation for further details.

Configuration

Build Time Configurations for FreeRTOS_Plus_TCP

The following build time configurations are defined in aws/FreeRTOSIPConfig.h:

Configuration	Options	Default	Description
Print debug messages	• Disable • Enable	Disable	If ipconfigHAS_DEBUG_PRINTF is set to 1 then FreeRTOS_debug_printf should be defined to the function used to print out the debugging messages.
Print info messages	• Disable • Enable	Disable	Set to 1 to print out non debugging messages, for example the output of the FreeRTOS_netstat() command, and ping replies. If ipconfigHAS_PRINTF is set to 1 then FreeRTOS_printf should be set to the function used to print out the messages.
Byte order of the target MCU	pdFREERTOS_LITTLE_ENDIAN	pdFREERTOS_LITTLE_ENDIAN	Define the byte order of the target MCU
IP/TCP/UDP checksums	• Disable • Enable	Enable	If the network card/driver includes checksum offloading (IP/TCP/UDP checksums) then set ipconfigDRIVER_INCLUDED_RX_IP_CHECKSUM to 1 to prevent the software stack repeating the checksum calculations.
Receive Block Time	Value must be a non-negative integer	10000	Amount of time FreeRTOS_recv() will

			block for. The timeouts can be set per socket, using setsockopt().
Send Block Time	Value must be a non-negative integer	10000	Amount of time FreeRTOS_send() will block for. The timeouts can be set per socket, using setsockopt().
DNS caching	• Disable • Enable	Enable	DNS caching
DNS Request Attempts	Value must be an integer	2	When a cache is present, ipconfigDNS_REQUEST_ATTEMPTS can be kept low and also DNS may use small timeouts.
IP stack task priority	Manual Entry	configMAX_PRIORITIES - 2	Set the priority of the task that executes the IP stack.
Stack size in words (not bytes)	Manual Entry	configMINIMAL_STACK_SIZE * 5	The size, in words (not bytes), of the stack allocated to the FreeRTOS+TCP stack.
Network Events call vApplicationIPNetworkEventHook	• Disable • Enable	Enable	vApplicationIPNetworkEventHook is called when the network connects or disconnects.
Max UDP send block time	Manual Entry	15000 / portTICK_PERIOD_MS	Max UDP send block time
Use DHCP	• Disable • Enable	Enable	If ipconfigUSE_DHCP is 1 then FreeRTOS+TCP will attempt to retrieve an IP address, netmask, DNS server address and gateway address from a DHCP server.
DHCP Register Hostname	• Disable • Enable	Enable	Register hostname when using DHCP
DHCP Uses Unicast	• Disable • Enable	Enable	DHCP uses unicast.
DHCP Send Discover After Auto IP	• Disable • Enable	Disable	DHCP Send Discover After Auto IP
DHCP callback function	• Disable • Enable	Disable	Provide an implementation of the DHCP callback function

			(xApplicationDHCPHook)
Interval between transmissions	Manual Entry	120000 / portTICK_PERIOD_MS	When ipconfigUSE_DHCP is set to 1, DHCP requests will be sent out at increasing time intervals until either a reply is received from a DHCP server and accepted, or the interval between transmissions reaches ipconfigMAXIMUM_DISCOVER_TX_PERIOD.
ARP Cache Entries	Value must be an integer	6	The maximum number of entries that can exist in the ARP table at any one time
ARP Request Retransmissions	Value must be an integer	5	ARP requests that do not result in an ARP response will be re-transmitted a maximum of ipconfigMAX_ARP_RETRANSMISSIONS times before the ARP request is aborted.
Maximum time before ARP table entry becomes stale	Value must be an integer	150	The maximum time between an entry in the ARP table being created or refreshed and the entry being removed because it is stale
Use string for IP Address	• Disable • Enable	Enable	Take an IP in decimal dot format (for example, "192.168.0.1") as its parameter FreeRTOS_inet_addr_quick() takes an IP address as four separate numerical octets (for example, 192, 168, 0, 1) as its parameters
Total number of available network buffers	Value must be an integer	10	Define the total number of network buffer that are available to the IP stack
Set the maximum	Please enter a valid	ipconfigNUM_NETWORK	Set the maximum

number of events	function name without spaces or funny characters	_BUFFER_DESCRIPTORS + 5	number of events that can be queued for processing at any one time. The event queue must be a minimum of 5 greater than the total number of network buffers
Enable FreeRTOS_sendto() without calling Bind	• Enable • Disable	Disable	Set to 1 then calling FreeRTOS_sendto() on a socket that has not yet been bound will result in the IP stack automatically binding the socket to a port number from the range socketAUTO_PORT_ALLOCATION_START_NUMBER to 0xffff. If ipconfigALLOW_SOCKET_SEND_WITHOUT_BIND is set to 0 then calling FreeRTOS_sendto() on a socket that has not yet been bound will result in the send operation being aborted.
TTL values for UDP packets	Value must be an integer	128	Define the Time To Live (TTL) values used in outgoing UDP packets
TTL values for TCP packets	Value must be an integer	128	Defines the Time To Live (TTL) values used in outgoing TCP packets
Use TCP and all its features	• Disable • Enable	Enable	Use TCP and all its features
Let TCP use windowing mechanism	• Disable • Enable	Disable	Let TCP use windowing mechanism
Maximum number of bytes the payload of a network frame can contain	Value must be an integer	1500	Maximum number of bytes the payload of a network frame can contain
Basic DNS client or resolver	• Disable • Enable	Enable	Set ipconfigUSE_DNS to 1 to include a basic DNS client/resolver. DNS is used through the FreeRTOS_gethostbyname() API function.
Reply to incoming ICMP	• Disable	Enable	If ipconfigREPLY_TO_IN

echo (ping) requests	• Enable		COMING_PINGS is set to 1 then the IP stack will generate replies to incoming ICMP echo (ping) requests.
FreeRTOS_SendPingRequest() is available	• Disable • Enable	Disable	If ipconfigSUPPORT_OUTGOING_PINGS is set to 1 then the FreeRTOS_SendPingRequest() API function is available.
FreeRTOS_select() (and associated) API function is available	• Disable • Enable	Disable	If ipconfigSUPPORT_SELECT_FUNCTION is set to 1 then the FreeRTOS_select() (and associated) API function is available
Filter out non Ethernet II frames.	• Disable • Enable	Enable	If ipconfigFILTER_OUT_NON_ETHERNET_II_FRAMES is set to 1 then Ethernet frames that are not in Ethernet II format will be dropped. This option is included for potential future IP stack developments
Responsibility of the Ethernet interface to filter out packets	• Disable • Enable	Disable	If ipconfigETHERNET_DRIVER_FILTERS_FRAME_TYPES is set to 1 then it is the responsibility of the Ethernet interface to filter out packets that are of no interest.
Send RST packets, when receive unknown packets.	• Disable • Enable	Enable	TCP will not send RST packets in reply to TCP unknown or out-of-order packets
Block time to simulate MAC interrupts	Please enter a valid function name without spaces or funny characters	20 / portTICK_PERIOD_MS	The windows simulator cannot really simulate MAC interrupts, and needs to block occasionally to allow other tasks to run
Access 32-bit fields in the IP packets	Value must be an integer	2	To access 32-bit fields in the IP packets with 32-bit memory instructions, all packets will be stored 32-bit-aligned, plus 16-bits. This has to do with the contents of the IP-packets: all 32-bit

			fields are 32-bit-aligned, plus 16-bit
Size of the pool of TCP window descriptors	Value must be an integer	240	Define the size of the pool of TCP window descriptors
Size of Rx buffer for TCP sockets	Value must be an integer	3000	Define the size of Rx buffer for TCP sockets
Size of Tx buffer for TCP sockets	Value must be an integer	3000	Define the size of Tx buffer for TCP sockets
TCP keep-alive	• Disable • Enable	Enable	TCP keep-alive is avaiable or not
TCP keep-alive interval	Value must be an integer	120	TCP keep-alive interval in second
The socket semaphore to unblock the MQTT task (USER_SEMAPHORE)	• Disable • Enable	Disable	The socket semaphore is used to unblock the MQTT task
The socket semaphore to unblock the MQTT task (WAKE_CALLBACK)	• Disable • Enable	Enable	The socket semaphore is used to unblock the MQTT task
The socket semaphore to unblock the MQTT task (USE_CALLBACKS)	• Disable • Enable	Disable	The socket semaphore is used to unblock the MQTT task
The socket semaphore to unblock the MQTT task (TX_DRIVER)	• Disable • Enable	Disable	The socket semaphore is used to unblock the MQTT task
The socket semaphore to unblock the MQTT task (RX_DRIVER)	• Disable • Enable	Disable	The socket semaphore is used to unblock the MQTT task
Possible optimisation for expert users	• Disable • Enable	Disable	Possible optimisation for expert users - requires network driver support. It is is useful when there is high network traffic. If non-zero value then instead of passing received packets into the IP task one at a time the network interface can chain received packets together and pass them into the IP task in one go. If set to 0 then only one buffer will be sent at a time.

Usage Notes

In order to use the NetworkInterface implementation provided by Renesas for RA devices:

- Configure an r_ether instance and provide a pointer to the instance of the NetworkInterface as follows:

```
/* Reference used by the NetworkInterface to access the ethernet instance. */
extern ether_instance_t const * gp_freertos_ether;
...
/* Make it reference the configured ether instance. */
ether_instance_t const * gp_freertos_ether = &g_ether_instance;
```

- Follow the TCP stack initialization procedure as described here: FreeRTOS+TCP Networking Tutorial: Initializing the TCP/IP Stack

Note

The MAC address passed to FreeRTOS_IPInit must match the MAC address configured in the r_ether instance.
g_ether_instance must have vEtherISRCallback configured as the callback.
The xApplicationGetRandomNumber and ulApplicationGetNextSequenceNumber functions should be implemented in systems using FreeRTOS Plus TCP without Secure Sockets.
To connect to a server using an IP address the macro ipconfigINCLUDE_FULL_INET_ADDR must be set to 1.

Limitations

- Zero-copy is not currently supported by the NetworkInterface.

4.2.95 FreeRTOS Port (rm_freertos_port)

Modules

FreeRTOS port for RA MCUs.

Overview

Note

The FreeRTOS Port does not provide any interfaces to the user. Consult the FreeRTOS documentation at https://www.freertos.org/Documentation for further information.

Features

The RA FreeRTOS port supports the following features:

- Standard FreeRTOS configurations
- Hardware stack monitor

Configuration

Build Time Configurations for all

The following build time configurations are defined in aws/FreeRTOSConfig.h:

Configuration	Options	Default	Description
General > Custom FreeRTOSConfig.h	Manual Entry		Add a path to your custom FreeRTOSConfig.h file. It can be used to override some or all of the configurations defined here, and to define additional configurations.
General > Use Preemption	• Enabled • Disabled	Enabled	Set to Enabled to use the preemptive RTOS scheduler, or Disabled to use the cooperative RTOS scheduler.
General > Use Port Optimised Task Selection	• Enabled • Disabled	Disabled	Some FreeRTOS ports have two methods of selecting the next task to execute - a generic method, and a method that is specific to that port. The Generic method: Is used when Use Port Optimized Task Selection is set to 0, or when a port specific method is not implemented. Can be used with all FreeRTOS ports. Is completely written in C, making it less efficient than a port specific method. Does not impose a limit on the maximum number of available priorities. A port specific method: Is not available for all ports. Is used when Use Port Optimized Task

			Selection is Enabled. Relies on one or more architecture specific assembly instructions (typically a Count Leading Zeros [CLZ] or equivalent instruction) so can only be used with the architecture for which it was specifically written. Is more efficient than the generic method. Typically imposes a limit of 32 on the maximum number of available priorities.
General > Use Tickless Idle	• Enabled • Disabled	Disabled	Set Use Tickless Idle to Enabled to use the low power tickless mode, or Disabled to keep the tick interrupt running at all times. Low power tickless implementations are not provided for all FreeRTOS ports.
General > Cpu Clock Hz	Manual Entry	SystemCoreClock	Enter the frequency in Hz at which the internal clock that drives the peripheral used to generate the tick interrupt will be executing - this is normally the same clock that drives the internal CPU clock. This value is required in order to correctly configure timer peripherals.
General > Tick Rate Hz	Must be an integer and greater than 0	1000	The frequency of the RTOS tick interrupt. The tick interrupt is used to measure time. Therefore a higher tick frequency means time can be measured to a higher resolution. However, a high tick frequency also means that the RTOS kernel will use more CPU time

			so be less efficient. The RTOS demo applications all use a tick rate of 1000Hz. This is used to test the RTOS kernel and is higher than would normally be required. More than one task can share the same priority. The RTOS scheduler will share processor time between tasks of the same priority by switching between the tasks during each RTOS tick. A high tick rate frequency will therefore also have the effect of reducing the 'time slice' given to each task.
General > Max Priorities	Must be an integer and greater than 0	5	The number of priorities available to the application tasks. Any number of tasks can share the same priority. Each available priority consumes RAM within the RTOS kernel so this value should not be set any higher than actually required by your application.
General > Minimal Stack Size	Must be an integer and greater than 0	128	The size of the stack used by the idle task. Generally this should not be reduced from the value set in the FreeRTOSConfig.h file provided with the demo application for the port you are using. Like the stack size parameter to the xTaskCreate() and xTaskCreateStatic() functions, the stack size is specified in words, not bytes. If each item placed on

			the stack is 32-bits, then a stack size of 100 means 400 bytes (each 32-bit stack item consuming 4 bytes).
General > Max Task Name Len	Must be an integer and greater than 0	16	The maximum permissible length of the descriptive name given to a task when the task is created. The length is specified in the number of characters including the NULL termination byte.
General > Use 16-bit Ticks	Disabled	Disabled	Time is measured in 'ticks' - which is the number of times the tick interrupt has executed since the RTOS kernel was started. The tick count is held in a variable of type TickType_t. Defining configUSE_16_BIT_TICKS as 1 causes TickType_t to be defined (typedef'ed) as an unsigned 16bit type. Defining configUSE_16_BIT_TICKS as 0 causes TickType_t to be defined (typedef'ed) as an unsigned 32bit type. Using a 16-bit type will greatly improve performance on 8- and 16-bit architectures, but limits the maximum specifiable time period to 65535 'ticks'. Therefore, assuming a tick frequency of 250Hz, the maximum time a task can delay or block when a 16bit counter is used is 262 seconds, compared to 17179869 seconds when using a 32-bit counter.

General > Idle Should Yield	• Enabled • Disabled	Enabled	This parameter controls the behaviour of tasks at the idle priority. It only has an effect if: The preemptive scheduler is being used. The application creates tasks that run at the idle priority. If Use Time Slicing is Enabled then tasks that share the same priority will time slice. If none of the tasks get preempted then it might be assumed that each task at a given priority will be allocated an equal amount of processing time - and if the priority is above the idle priority then this is indeed the case. When tasks share the idle priority the behaviour can be slightly different. If Idle Should Yield is Enabled then the idle task will yield immediately if any other task at the idle priority is ready to run. This ensures the minimum amount of time is spent in the idle task when application tasks are available for scheduling. This behaviour can however have undesirable effects (depending on the needs of your application) as depicted below: The diagram above shows the execution pattern of four tasks that are all running at the idle priority. Tasks A, B and C are

			application tasks. Task I is the idle task. A context switch occurs with regular period at times T0, T1, ..., T6. When the idle task yields task A starts to execute - but the idle task has already consumed some of the current time slice. This results in task I and task A effectively sharing the same time slice. The application tasks B and C therefore get more processing time than the application task A. This situation can be avoided by: If appropriate, using an idle hook in place of separate tasks at the idle priority. Creating all application tasks at a priority greater than the idle priority. Setting Idle Should Yield to Disabled. Setting Idle Should Yield to Disabled prevents the idle task from yielding processing time until the end of its time slice. This ensure all tasks at the idle priority are allocated an equal amount of processing time (if none of the tasks get pre-empted) - but at the cost of a greater proportion of the total processing time being allocated to the idle task.
General > Use Task Notifications	• Enabled • Disabled	Enabled	Setting Use Task Notifications to Enabled will include direct to

			task notification functionality and its associated API in the build. Setting Use Task Notifications to Disabled will exclude direct to task notification functionality and its associated API from the build. Each task consumes 8 additional bytes of RAM when direct to task notifications are included in the build.
General > Use Mutexes	• Enabled • Disabled	Disabled	Set to Enabled to include mutex functionality in the build, or Disabled to omit mutex functionality from the build. Readers should familiarise themselves with the differences between mutexes and binary semaphores in relation to the FreeRTOS functionality.
General > Use Recursive Mutexes	• Enabled • Disabled	Disabled	Set to Enabled to include recursive mutex functionality in the build, or Disabled to omit recursive mutex functionality from the build.
General > Use Counting Semaphores	• Enabled • Disabled	Enabled	Set to Enabled to include counting semaphore functionality in the build, or Disabled to omit counting semaphore functionality from the build.
General > Queue Registry Size	Must be an integer and greater than 0	10	The queue registry has two purposes, both of which are associated with RTOS kernel aware debugging:

			It allows a textual name to be associated with a queue for easy queue identification within a debugging GUI. It contains the information required by a debugger to locate each registered queue and semaphore. The queue registry has no purpose unless you are using a RTOS kernel aware debugger. Registry Size defines the maximum number of queues and semaphores that can be registered. Only those queues and semaphores that you want to view using a RTOS kernel aware debugger need be registered. See the API reference documentation for vQueueAddToRegistry( ) and vQueueUnregisterQueue() for more information.
General > Use Queue Sets	• Enabled • Disabled	Disabled	Set to Enabled to include queue set functionality (the ability to block, or pend, on multiple queues and semaphores), or Disabled to omit queue set functionality.
General > Use Time Slicing	• Enabled • Disabled	Disabled	If Use Time Slicing is Enabled, FreeRTOS uses prioritised preemptive scheduling with time slicing. That means the RTOS scheduler will always run the highest priority task that is in the Ready state, and will switch between tasks of equal priority on

			every RTOS tick interrupt. If Use Time Slicing is Disabled then the RTOS scheduler will still run the highest priority task that is in the Ready state, but will not switch between tasks of equal priority just because a tick interrupt has occurred.
General > Use Newlib Reentrant	• Enabled • Disabled	Disabled	If Use Newlib Reentrant is Enabled then a newlib reent structure will be allocated for each created task. Note Newlib support has been included by popular demand, but is not used by the FreeRTOS maintainers themselves. FreeRTOS is not responsible for resulting newlib operation. User must be familiar with newlib and must provide system-wide implementations of the necessary stubs. Be warned that (at the time of writing) the current newlib design implements a system-wide malloc() that must be provided with locks.
General > Enable Backward Compatibility	• Enabled • Disabled	Disabled	The FreeRTOS.h header file includes a set of #define macros that map the names of data types used in versions of FreeRTOS prior to version 8.0.0 to the names used in FreeRTOS version 8.0.0. The macros allow application code to update the version of FreeRTOS they are built against from a pre 8.0.0 version to a post 8.0.0 version without modification. Setting Enable Backward

			Compatibility to Disabled in FreeRTOSConfig.h excludes the macros from the build, and in so doing allowing validation that no pre version 8.0.0 names are being used.
General > Num Thread Local Storage Pointers	Must be an integer and greater than 0	5	Sets the number of indexes in each task's thread local storage array.
General > Stack Depth Type	Manual Entry	uint32_t	Sets the type used to specify the stack depth in calls to xTaskCreate(), and various other places stack sizes are used (for example, when returning the stack high water mark). Older versions of FreeRTOS specified stack sizes using variables of type UBaseType_t, but that was found to be too restrictive on 8-bit microcontrollers. Stack Depth Type removes that restriction by enabling application developers to specify the type to use.
General > Message Buffer Length Type	Manual Entry	size_t	FreeRTOS Message buffers use variables of type Message Buffer Length Type to store the length of each message. If Message Buffer Length Type is not defined then it will default to size_t. If the messages stored in a message buffer will never be larger than 255 bytes then defining Message Buffer Length Type to uint8_t will save 3 bytes per message on a 32-bit microcontroller.

		Likewise if the messages stored in a message buffer will never be larger than 65535 bytes then defining Message Buffer Length Type to uint16_t will save 2 bytes per message on a 32-bit microcontroller.
General > Library Max Syscall Interrupt Priority	MCU Specific Options	The highest interrupt priority that can be used by any interrupt service routine that makes calls to interrupt safe FreeRTOS API functions. DO NOT CALL INTERRUPT SAFE FREERTOS API FUNCTIONS FROM ANY INTERRUPT THAT HAS A HIGHER PRIORITY THAN THIS! (higher priorities are lower numeric values) Below is explanation for macros that are set based on this value from FreeRTOS website. In the RA port, configKERNEL_INTERRUPT_PRIORITY is not used and the kernel runs at the lowest priority. Note in the following discussion that only API functions that end in "FromISR" can be called from within an interrupt service routine. configMAX_SYSCALL_INTERRUPT_PRIORITY sets the highest interrupt priority from which interrupt safe FreeRTOS API functions can be called.

A full interrupt nesting model is achieved by setting configMAX_SYSCALL_INTERRUPT_PRIORITY above (that is, at a higher priority level) than configKERNEL_INTERRUPT_PRIORITY. This means the FreeRTOS kernel does not completely disable interrupts, even inside critical sections. Further, this is achieved without the disadvantages of a segmented kernel architecture.

Interrupts that do not call API functions can execute at priorities above configMAX_SYSCALL_INTERRUPT_PRIORITY and therefore never be delayed by the RTOS kernel execution.

A special note for ARM Cortex-M users: Please read the page dedicated to interrupt priority settings on ARM Cortex-M devices. As a minimum, remember that ARM Cortex-M cores use numerically low priority numbers to represent HIGH priority interrupts, which can seem counter-intuitive and is easy to forget! If you wish to assign an interrupt a low priority do NOT assign it a priority of 0 (or other low numeric value) as this can result in the interrupt actually having the highest priority in the system - and therefore potentially make your

			system crash if this priority is above config MAX_SYSCALL_INTERR UPT_PRIORITY. The lowest priority on a ARM Cortex-M core is in fact 255 - however different ARM Cortex-M vendors implement a different number of priority bits and supply library functions that expect priorities to be specified in different ways. For example, on the RA6M3 the lowest priority you can specify is 15 - and the highest priority you can specify is 0.
General > Assert	Manual Entry	assert(x)	The semantics of the configASSERT() macro are the same as the standard C assert() macro. An assertion is triggered if the parameter passed into configASSERT() is zero. configASSERT() is called throughout the FreeRTOS source files to check how the application is using FreeRTOS. It is highly recommended to develop FreeRTOS applications with configASSERT() defined. The example definition (shown at the top of the file and replicated below) calls vAssertCalled(), passing in the file name and line number of the triggering configASSERT() call (__FILE__ and __LINE__ are standard macros provided by most compilers). This is just

for demonstration as vAssertCalled() is not a FreeRTOS function, configASSERT() can be defined to take whatever action the application writer deems appropriate.

It is normal to define configASSERT() in such a way that it will prevent the application from executing any further. This if for two reasons; stopping the application at the point of the assertion allows the cause of the assertion to be debugged, and executing past a triggered assertion will probably result in a crash anyway.

Note defining configASSERT() will increase both the application code size and execution time. When the application is stable the additional overhead can be removed by simply commenting out the configASSERT() definition in FreeRTOSConfig.h.

/* Define configASSERT() to call vAssertCalled() if the assertion fails. The assertion
has failed if the value of the parameter passed into configASSERT() equals zero. */
#define configASSERT((x)) if((x) == 0) vAssertCalled(__FILE__, __LINE__)
If running FreeRTOS

			under the control of a debugger, then configASSERT() can be defined to just disable interrupts and sit in a loop, as demonstrated below. That will have the effect of stopping the code on the line that failed the assert test - pausing the debugger will then immediately take you to the offending line so you can see why it failed. /* Define configASSERT() to disable interrupts and sit in a loop. */ #define configASSERT((x)) if((x) == 0) { taskDISABLE_INTERRUPTS(); for(;;); }
General > Include Application Defined Privileged Functions	• Enabled • Disabled	Disabled	Include Application Defined Privileged Functions is only used by FreeRTOS MPU. If Include Application Defined Privileged Functions is Enabled then the application writer must provide a header file called "application_defined_privileged_functions.h", in which functions the application writer needs to execute in privileged mode can be implemented. Note that, despite having a .h extension, the header file should contain the implementation of the C functions, not just the functions' prototypes. Functions implemented in "application_defined_privileged_functions.h

			" must save and restore the processor's privilege state using the prvRaisePrivilege() function and portRESET_PRIVILEGE() macro respectively. For example, if a library provided print function accesses RAM that is outside of the control of the application writer, and therefore cannot be allocated to a memory protected user mode task, then the print function can be encapsulated in a privileged function using the following code:
			
			void MPU_debug_printf(const char *pcMessage)
			{
			/* State the privilege level of the processor when the function was called. */
			BaseType_t xRunningPrivileged = prvRaisePrivilege();
			
			/* Call the library function, which now has access to all RAM. */
			debug_printf(pcMessage);
			
			/* Reset the processor privilege level to its original value. */
			portRESET_PRIVILEGE(xRunningPrivileged);
			}
			This technique should only be use during development, and not deployment, as it circumvents the memory protection.

Hooks > Use Idle Hook	• Enabled	Enabled	Set to Enabled if you

	• Disabled		wish to use an idle hook, or Disabled to omit an idle hook.
Hooks > Use Malloc Failed Hook	• Enabled • Disabled	Disabled	The kernel uses a call to pvPortMalloc() to allocate memory from the heap each time a task, queue or semaphore is created. The official FreeRTOS download includes four sample memory allocation schemes for this purpose. The schemes are implemented in the heap_1.c, heap_2.c, heap_3.c, heap_4.c and heap_5.c source files respectively. Use Malloc Failed Hook is only relevant when one of these three sample schemes is being used. The malloc() failed hook function is a hook (or callback) function that, if defined and configured, will be called if pvPortMalloc() ever returns NULL. NULL will be returned only if there is insufficient FreeRTOS heap memory remaining for the requested allocation to succeed. If Use Malloc Failed Hook is Enabled then the application must define a malloc() failed hook function. If Use Malloc Failed Hook is set to Dosab;ed then the malloc() failed hook function will not be called, even if one is defined. Malloc() failed hook functions must have the name and prototype shown below.

			void vApplicationMallocFailedHook(void);
Hooks > Use Daemon Task Startup Hook	• Enabled • Disabled	Disabled	If Use Timers and Use Daemon Task Startup Hook are both Enabled then the application must define a hook function that has the exact name and prototype as shown below. The hook function will be called exactly once when the RTOS daemon task (also known as the timer service task) executes for the first time. Any application initialisation code that needs the RTOS to be running can be placed in the hook function. void void vApplicationDaemonTaskStartupHook(void);
Hooks > Use Tick Hook	• Enabled • Disabled	Disabled	Set to Enabled if you wish to use an tick hook, or Disabled to omit an tick hook.
Hooks > Check For Stack Overflow	• Enabled • Disabled	Disabled	The stack overflow detection page describes the use of this parameter. This is not recommended for RA MCUs with hardware stack monitor support. RA MCU designs should enable the RA hardware stack monitor instead.
Stats > Use Trace Facility	• Enabled • Disabled	Disabled	Set to Enabled if you wish to include additional structure members and functions to assist with execution visualisation and tracing.
Stats > Use Stats Formatting Functions	• Enabled • Disabled	Disabled	Set Use Trace Facility and Use Stats Formatting Functions to Enabled to include

			the vTaskList() and vTaskGetRunTimeStats() functions in the build. Setting either to Disabled will omit vTaskList() and vTaskGetRunTimeStates() from the build.
Stats > Generate Run Time Stats	• Enabled • Disabled	Disabled	The Run Time Stats page describes the use of this parameter.
Memory Allocation > Support Static Allocation	• Enabled • Disabled	Enabled	If Support Static Allocation is Enabled then RTOS objects can be created using RAM provided by the application writer. If Support Static Allocation is Disabled then RTOS objects can only be created using RAM allocated from the FreeRTOS heap. If Support Static Allocation is left undefined it will default to 0. If Support Static Allocation is Enabled then the application writer must also provide two callback functions: vApplicationGetIdleTaskMemory() to provide the memory for use by the RTOS Idle task, and (if Use Timers is Enabled) vApplicationGetTimerTaskMemory() to provide memory for use by the RTOS Daemon/Timer Service task. Examples are provided below. /* Support Static Allocation is Enabled, so the application must provide an implementation of vApplicationGetIdleTaskMe

```
mory() to provide the
memory that is
used by the Idle task. */
void vApplicationGetIdl
eTaskMemory(
StaticTask_t **ppxIdleT
askTCBBuffer,<br>
StackType_t **ppxIdleT
askStackBuffer,<br>
uint32_t
*pulIdleTaskStackSize )
{
/* If the buffers to be
provided to the Idle
task are declared
inside this
function then they
must be declared static
- otherwise they will be
allocated on
the stack and so not
exists after this
function exits. */
static StaticTask_t
xIdleTaskTCB;
static StackType_t
uxIdleTaskStack[ config
MINIMAL_STACK_SIZE ];

/* Pass out a pointer to
the StaticTask_t
structure in which the
Idle task's
state will be stored. */
*ppxIdleTaskTCBBuffer
=

/* Pass out the array
that will be used as the
Idle task's stack. */
*ppxIdleTaskStackBuffe
r = uxIdleTaskStack;

/* Pass out the size of
the array pointed to by
*ppxIdleTaskStackBuffe
r.
Note that, as the array
is necessarily of type
StackType_t,
configMINIMAL_STACK_
SIZE is specified in
words, not bytes. */
*pulIdleTaskStackSize
= configMINIMAL_STAC
```

```
K_SIZE;
}
/*-----------------------------
-----------------------------*/

/* Support Static
Allocation and Use
Timers are both
Enabled, so the
application must
provide an
implementation of vAp
plicationGetTimerTask
Memory()
to provide the memory
that is used by the
Timer service task. */
void vApplicationGetTi
merTaskMemory(
StaticTask_t **ppxTime
rTaskTCBBuffer,<br>
StackType_t **ppxTime
rTaskStackBuffer,<br>
uint32_t
*pulTimerTaskStackSiz
e )
{
/* If the buffers to be
provided to the Timer
task are declared
inside this
function then they
must be declared static
- otherwise they will be
allocated on
the stack and so not
exists after this
function exits. */
static StaticTask_t
xTimerTaskTCB;
static StackType_t
uxTimerTaskStack[ con
figTIMER_TASK_STACK_
DEPTH ];

/* Pass out a pointer to
the StaticTask_t
structure in which the
Timer
task's state will be
stored. */
*ppxTimerTaskTCBBuff
er =

/* Pass out the array
```

			that will be used as the Timer task's stack. */
			*ppxTimerTaskStackBuffer = uxTimerTaskStack;
			
			/* Pass out the size of the array pointed to by *ppxTimerTaskStackBuffer.
			Note that, as the array is necessarily of type StackType_t, configTIMER_TASK_STACK_DEPTH is specified in words, not bytes. */
			*pulTimerTaskStackSize = configTIMER_TASK_STACK_DEPTH;
			}
			
			Examples of the callback functions that must be provided by the application to supply the RAM used by the Idle and Timer Service tasks if Support Static Allocation is Enabled.
			
			See the Static Vs Dynamic Memory Allocation page for more information.

Memory Allocation > Support Dynamic Allocation	• Enabled • Disabled	Disabled	If Support Dynamic Allocation is Enabled then RTOS objects can be created using RAM that is automatically allocated from the FreeRTOS heap. If Support Dynamic Allocation is set to 0 then RTOS objects can only be created using RAM provided by the application writer. See the Static Vs Dynamic Memory Allocation page for more information.
Memory Allocation >	Must be an integer and	1024	The total amount of

Total Heap Size	greater than 0		RAM available in the FreeRTOS heap. This value will only be used if Support Dynamic Allocation is Enabled and the application makes use of one of the sample memory allocation schemes provided in the FreeRTOS source code download. See the memory configuration section for further details.
Memory Allocation > Application Allocated Heap	• Enabled • Disabled	Disabled	By default the FreeRTOS heap is declared by FreeRTOS and placed in memory by the linker. Setting Application Allocated Heap to Enabled allows the heap to instead be declared by the application writer, which allows the application writer to place the heap wherever they like in memory. If heap_1.c, heap_2.c or heap_4.c is used, and Application Allocated Heap is Enabled, then the application writer must provide a uint8_t array with the exact name and dimension as shown below. The array will be used as the FreeRTOS heap. How the array is placed at a specific memory location is dependent on the compiler being used - refer to your compiler's documentation. uint8_t ucHeap[configTOTAL_HEAP_SIZE];
Timers > Use Timers	• Enabled • Disabled	Enabled	Set to Enabled to include software timer

			functionality, or Disabled to omit software timer functionality. See the FreeRTOS software timers page for a full description.
Timers > Timer Task Priority	Must be an integer and greater than 0	3	Sets the priority of the software timer service/daemon task. See the FreeRTOS software timers page for a full description.
Timers > Timer Queue Length	Must be an integer and greater than 0	10	Sets the length of the software timer command queue. See the FreeRTOS software timers page for a full description.
Timers > Timer Task Stack Depth	Must be an integer and greater than 0	128	Sets the stack depth allocated to the software timer service/daemon task. See the FreeRTOS software timers page for a full description.
Optional Functions > vTaskPrioritySet() Function	• Enabled • Disabled	Enabled	Include vTaskPrioritySet() function in build

Clock Configuration

The FreeRTOS port uses the SysTick timer as the system clock. The timer rate is configured in the FreeRTOS component under General > Tick Rate Hz.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Hardware Stack Monitor (PSPLIM)

A UsageFault is generated if PSP goes out of the memory area for the stack allocated for the current task. If UsageFault is not enabled, it is escalated to HardFault.

Hardware Stack Monitor (SPMON)

The hardware stack monitor generates an NMI if the PSP goes out of the memory area for the stack allocated for the current task. A callback can be registered using R_BSP_GroupIrqWrite() to be called whenever a stack overflow or underflow of the PSP for a particular thread is detected.

Stack Monitor Underflow Detection

By default the hardware stack monitor only checks for overflow of the process stack. To check for underflow define configRECORD_STACK_HIGH_ADDRESS as 1 on the command line.

Low Power Modes

When FreeRTOS is configured to use tickless idle, the idle task executes WFI() when no task is ready to run. If the MCU is configured to enter software standby mode or deep software standby mode when the idle task executes WFI(), the RA FreeRTOS port changes the low power mode to sleep mode so the idle task can wake from SysTick. The low power mode settings are restored when the MCU wakes from sleep mode.

TrustZone Integration

When using an RTOS in a TrustZone project, ARM recommends keeping the RTOS in the non-secure project. Tasks may call non-secure callable functions if the task has allocated a secure context (using portALLOCATE_SECURE_CONTEXT).

The secure context can be freed by deleting the thread or using the portCLEAN_UP_TCB(pxTCB) macro.

Examples

Stack Monitor Example

This is an example of using the stack monitor in an application.

```
#if BSP_FEATURE_BSP_HAS_SP_MON
void stack_monitor_callback (bsp_grp_irq_t irq)
{
 FSP_PARAMETER_NOT_USED(irq);
 if (1U == R_MPU_SPMON->SP[0].CTL_b.ERROR)
    {
 /* Handle main stack monitor error here. */
    }
 if (1U == R_MPU_SPMON->SP[1].CTL_b.ERROR)
```

```
    {
 /* Handle process stack monitor error here. */
    }
}
void rm_freertos_port_stack_monitor_example (void)
{
 /* Register a callback to be called when the stack goes outside the allocated stack
area. */
 R_BSP_GroupIrqWrite(BSP_GRP_IRQ_MPU_STACK, stack_monitor_callback);
}
#else
/* Allocate stack space to return from UsageFault. */
uint32_t g_stack_overflow_exception_stack[8] BSP_ALIGN_VARIABLE(BSP_STACK_ALIGNMENT)
BSP_PLACE_IN_SECTION(
    BSP_SECTION_STACK);
/* MCUs that do not have an SPMON stack monitor use PSPLIM to detect stack overflows.
When a stack overflow error
 * occurs, the UsageFault_Handler fires if it has been enabled. */
void UsageFault_Handler (void)
{
 register uint32_t cfsr = SCB->CFSR;
 if (cfsr & SCB_CFSR_STKOF_Msk)
    {
 /* Update PSP and PSPLIM to point to an exception stack frame allocated for stack
overflows. */
 register uint32_t * p_exception_stack_frame = (uint32_t *)
(&g_stack_overflow_exception_stack);
       __set_PSP((uint32_t) p_exception_stack_frame);
       __set_PSPLIM((uint32_t) p_exception_stack_frame);
 /* Clear XPSR, only set T-bit. */
       p_exception_stack_frame[7] = 1U << 24;
 /* Set PC to stack overflow error while loop. When execution returns from the
UsageFault, it will go to the
  * stack_overflow_error_occurred function. It cannot return to the location where
```

```
the fault occurred because
  * the MCU does not save the exception stack frame to the stack when a stack
overflow error occurs. */
       p_exception_stack_frame[6] = (uint32_t) stack_overflow_error_occurred;
    }
 /* Clear flags. */
    SCB->CFSR = cfsr;
}
/* This function is called from UsageFault_Handler after a stack overflow occurs. */
void stack_overflow_error_occurred (void)
{
 /* When recovering from a stack overflow, move the task to a while(1) loop. */
 while (1)
    {
 /* Do nothing. */
    }
}
void rm_freertos_port_stack_monitor_example (void)
{
 /* Enable usage fault. */
    SCB->SHCSR |= SCB_SHCSR_USGFAULTENA_Msk;
}
#endif
```

TrustZone Example

This is an example of calling portALLOCATE_SECURE_CONTEXT before calling any non-secure callable functions in a task.

```
void rm_freertos_port_trustzone_task_example (void)
{
 /* When FreeRTOS is used in a non-secure TrustZone application,
portALLOCATE_SECURE_CONTEXT must be called prior
  * to calling any non-secure callable function in a task. The parameter is unused in
the FSP implementation. */
```

```
    portALLOCATE_SECURE_CONTEXT(0);
    rm_freertos_port_nsc_function();
}
```

4.2.96 RTOS Context Management (rm_tz_context)

Modules

RTOS Context Management for RA MCUs.

Overview

Add this module to a secure TrustZone project to allow the associated non-secure project to use an RTOS. It is used by an RTOS port for RA MCUs (for example, the FreeRTOS Port (rm_freertos_port), which is automatically added to RA projects when FreeRTOS is selected during project creation).

Note

The RTOS Context Management module does not provide any interfaces to the user. To use this module to port an RTOS, consult the Arm documentation at https://arm-software.github.io/CMSIS_5/Core/html/group__context__trustzone__functions.html for further information.

Configuration

Build Time Configurations for rm_tz_context

The following build time configurations are defined in fsp_cfg/rm_tz_context_cfg.h:

Configuration	Options	Default	Description
Process Stack Slots	Value must be a non-negative integer greater than 0	8	The maximum number of threads that can allocate a secure context. For applications using FreeRTOS, the Idle task requires 1 context as well.
Process Stack Size	Value must be a non-negative multiple of 8	256	The maximum stack size of all non-secure callable functions.

Clock Configuration

This module does not use peripheral clocks.

Pin Configuration

This module does not use I/O pins.

Usage Notes

TrustZone Integration

When using an RTOS in a TrustZone project, ARM recommends keeping the RTOS in the non-secure project. Tasks may call non-secure callable functions if the task has allocated a secure context. To allocate a secure context, reference the documentation for the RTOS port used. For example, reference TrustZone Integration when FreeRTOS is used.

Sealing the Process Stack

This module seals each process stack by placing the value 0xFEF5EDA5 above the stack top. For more information, refer to section 3.5 "Sealing a Stack" in "Secure software guidelines for ARMv8-M": https://developer.arm.com/documentation/100720/0300.

4.2.97 FS2012 Sensor Middleware (rm_fs2012)

Modules

Functions

fsp_err_t	RM_FS2012_Open (rm_fsxxxx_ctrl_t *const p_api_ctrl, rm_fsxxxx_cfg_t const *const p_cfg) Opens and configures the FS2012 Middle module. Implements rm_fsxxxx_api_t::open. More...
fsp_err_t	RM_FS2012_Close (rm_fsxxxx_ctrl_t *const p_api_ctrl) Disables specified FS2012 control block. Implements rm_fsxxxx_api_t::close. More...
fsp_err_t	RM_FS2012_Read (rm_fsxxxx_ctrl_t *const p_api_ctrl, rm_fsxxxx_raw_data_t *const p_raw_data) Reads ADC data from FS2012. Implements rm_fsxxxx_api_t::read. More...
fsp_err_t	RM_FS2012_DataCalculate (rm_fsxxxx_ctrl_t *const p_api_ctrl, rm_fsxxxx_raw_data_t *const p_raw_data, rm_fsxxxx_data_t *const p_fs2012_data) Calculates flow from ADC data. Unit of Gas flow is SLPM (Standard liter per minute) Unit of Liquid flow is SCCM (Standard cubic centimeter per minute) Implements rm_fsxxxx_api_t::dataCalculate. More...

Detailed Description

Middleware to implement the FS2012 sensor interface. This module implements the FSXXXX Middleware Interface.

Overview

Features

The FS2012 sensor interface implementation has the following key features:

- Getting ADC data from the sensor
- Calculating flow value from ADC data

Configuration

Build Time Configurations for rm_fs2012

The following build time configurations are defined in fsp_cfg/rm_fs2012_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Device Type	• FS2012-1020-NG • FS2012-1100-NG	FS2012-1100-NG	Select FS2012 device type.

Configurations for Sensor > FS2012 Flow Sensor (rm_fs2012)

This module can be added to the Stacks tab via New Stack > Sensor > FS2012 Flow Sensor (rm_fs2012).

Configuration	Options	Default	Description
Name	Manual Entry	g_fs2012_sensor0	Module name.
Callback	Name must be a valid C symbol	fs2012_callback	A user callback function can be provided.

Pin Configuration

This module uses SDA and SCL pins of I2C Master and SCI I2C.

Usage Notes

FS2012 datasheet is here. The module only supports FS2012-1020-NG and FS2012-1100-NG.

If an RTOS is used, blocking and bus lock is available.

- If blocking of an I2C bus is required, it is necessary to create a semaphore for blocking.
- If bus lock is required, it is necessary to create a mutex for bus lock. Bus lock is only available when a semaphore for blocking is used.

Bus Initialization

The FS2012 interface expects a bus instance to be opened before opening any FS2012 device. The interface will handle switching between devices on the bus but will not open or close the bus instance. The user should open the bus with the appropriate I2C Master Interface open call.

Examples

Basic Example

This is a basic example of minimal use of FS2012 sensor implementation in an application.

```
void rm_fs2012_basic_example (void)
{
 fsp_err_t            err = FSP_SUCCESS;
 rm_fsxxxx_raw_data_t fs2012_raw_data;
 rm_fsxxxx_data_t    fs2012_data;
 /* Open the I2C bus if it is not already open. */
    rm_comms_i2c_bus_extended_cfg_t * p_extend =
       (rm_comms_i2c_bus_extended_cfg_t *) g_fs2012_cfg.p_instance->p_cfg->p_extend;
 i2c_master_instance_t * p_driver_instance = (i2c_master_instance_t *)
p_extend->p_driver_instance;
    p_driver_instance->p_api->open(p_driver_instance->p_ctrl,
p_driver_instance->p_cfg);
#if BSP_CFG_RTOS
 /* Create a semaphore for blocking if a semaphore is not NULL */
 if (NULL != p_extend->p_blocking_semaphore)
    {
 #if BSP_CFG_RTOS == 1 // AzureOS
       tx_semaphore_create(p_extend->p_blocking_semaphore->p_semaphore_handle,
                           p_extend->p_blocking_semaphore->p_semaphore_name,
                           (ULONG) 0);
 #elif BSP_CFG_RTOS == 2 // FreeRTOS
       *(p_extend->p_blocking_semaphore->p_semaphore_handle) =
            xSemaphoreCreateCountingStatic((UBaseType_t) 1,
```

```
                                        (UBaseType_t) 0,

p_extend->p_blocking_semaphore->p_semaphore_memory);
 #endif
    }
 /* Create a recursive mutex for bus lock if a recursive mutex is not NULL */
 if (NULL != p_extend->p_bus_recursive_mutex)
    {
 #if BSP_CFG_RTOS == 1 // AzureOS
       tx_mutex_create(p_extend->p_bus_recursive_mutex->p_mutex_handle,
                       p_extend->p_bus_recursive_mutex->p_mutex_name,
                       TX_INHERIT);
 #elif BSP_CFG_RTOS == 2 // FreeRTOS
       *(p_extend->p_bus_recursive_mutex->p_mutex_handle) =
            xSemaphoreCreateRecursiveMutexStatic(p_extend->p_bus_recursive_mutex->p_m
utex_memory);
 #endif
    }
#endif
    err = RM_FS2012_Open(&g_fs2012_ctrl, &g_fs2012_cfg);
 /* Handle any errors. This function should be defined by the user. */
    handle_error(err);
 while (true)
    {
       g_flag = 0;
 /* Read ADC Data from FS2012 */
 RM_FS2012_Read(&g_fs2012_ctrl,
                     &fs2012_raw_data);
 while (0 == g_flag)
     {
 /* Wait callback */
     }
 /* Calculate Flow value from ADC data */
 RM_FS2012_DataCalculate(&g_fs2012_ctrl, &fs2012_raw_data, &fs2012_data);
```

```
    /* FS2012 sample rate. See table 4 on the page 5 of the datasheet. */
    /* Gas : 409.6ms, Liquid : 716.8ms */
    R_BSP_SoftwareDelay(FS2012_GAS_SAMPLE_RATE, BSP_DELAY_UNITS_MICROSECONDS);
    }
}
```

Data Structures

struct	rm_fs2012_instance_ctrl_t

Data Structure Documentation

◆ rm_fs2012_instance_ctrl_t

struct rm_fs2012_instance_ctrl_t	
FS2012 Control Block	
Data Fields	
uint32_t	open
	Open flag.
rm_fsxxxx_cfg_t const *	p_cfg
	Pointer to FS2012 Configuration.
rm_comms_instance_t const *	p_comms_i2c_instance
	Pointer of I2C Communications Middleware instance structure.
void const *	p_context
	Pointer to the user-provided context.

Function Documentation

◆ RM_FS2012_Open()

fsp_err_t RM_FS2012_Open (rm_fsxxxx_ctrl_t *const *p_api_ctrl*, rm_fsxxxx_cfg_t const *const *p_cfg*)

Opens and configures the FS2012 Middle module. Implements rm_fsxxxx_api_t::open.

Example:

```
    err = RM_FS2012_Open(&g_fs2012_ctrl, &g_fs2012_cfg);
```

Return values

FSP_SUCCESS	FS2012 successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.

◆ RM_FS2012_Close()

fsp_err_t RM_FS2012_Close (rm_fsxxxx_ctrl_t *const *p_api_ctrl*)

Disables specified FS2012 control block. Implements rm_fsxxxx_api_t::close.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_FS2012_Read()

fsp_err_t RM_FS2012_Read (rm_fsxxxx_ctrl_t *const *p_api_ctrl*, rm_fsxxxx_raw_data_t *const *p_raw_data*)

Reads ADC data from FS2012. Implements rm_fsxxxx_api_t::read.

Return values

FSP_SUCCESS	Successfully data decoded.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_FS2012_DataCalculate()

fsp_err_t RM_FS2012_DataCalculate (rm_fsxxxx_ctrl_t *const *p_api_ctrl*, rm_fsxxxx_raw_data_t *const *p_raw_data*, rm_fsxxxx_data_t *const *p_fs2012_data*)
Calculates flow from ADC data. Unit of Gas flow is SLPM (Standard liter per minute) Unit of Liquid flow is SCCM (Standard cubic centimeter per minute) Implements rm_fsxxxx_api_t::dataCalculate.

Return values

FSP_SUCCESS	Successfully data decoded.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_NOT_OPEN	Module is not open.

4.2.98 Azure RTOS GUIX Port (rm_guix_port)

Modules

Functions

UINT	rm_guix_port_hw_initialize (GX_DISPLAY *p_display)

Detailed Description

Overview

The Azure RTOS GUIX Port module provides the configuration and hardware acceleration support necessary for use of GUIX on RA products. The port provides full integration with the graphics peripherals (GLCDC, DRW and JPEG).

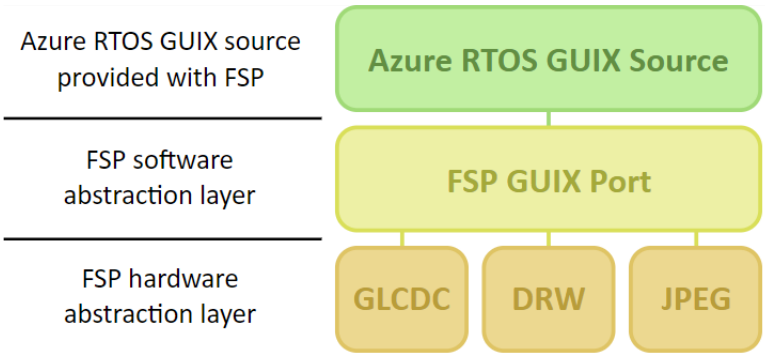

Figure 206: Azure RTOS GUIX Port Block Diagram

Note

This port layer primarily enables hardware acceleration and background handling of many display operations and does not contain code intended to be directly called by the user. For information about how to use GUIX and GUIX Studio (including example code) please consult the Azure RTOS GUIX documentation.

Hardware Acceleration

The following functions are currently performed with hardware acceleration:

- DRW Engine (D/AVE 2D Port Interface (r_drw))
  - Drawing bitmaps
  - 8, 4 and 1bpp uncompressed and compressed (RLE) font rendering
  - Line and shape drawing
  - Anti-aliased operations
    - Circle stroke and fill
    - Polygon stroke and fill
    - Lines and arcs
- JPEG Codec (r_jpeg)
  - JPEG decoding
- Graphics LCD Controller (r_glcdc)
  - Brightness, contrast and gamma correction
  - Pixel format conversion (framebuffer to LCD)

Configuration

Build Time Configurations for gx

The following build time configurations are defined in fsp_cfg/azure/gx/gx_user.h:

Configuration	Options	Default	Description
Hardware Acceleration > JPEG Codec Support	• Enabled • Disabled	Enabled	Select whether or not to use the JPEG Codec for hardware acceleration.
Hardware Acceleration > DRW Engine Support	• Enabled • Disabled	Enabled	Select whether or not to use the DRW Engine for hardware acceleration.
Hardware Acceleration > Max DRW Operations	Value must be a positive integer	85	Specifies the maximum number of DRW operations before flushing the display list. Reducing this value may reduce the peak heap used by the application but may reduce performance.
Internal Thread > Stack Size	Value must be greater than zero	4096	GUIX internal thread stack size in bytes. Must be greater than zero.
Internal Thread >	Value must be between	30	Priority of the GUIX

Priority	0 to 31		Internal Thread. The value must be between 0 to 31.
Internal Thread > Time Slice	Value must be a non-negative integer	10	Time Slice value of the GUIX Internal Thread. The value must be between 0 (TX_NO_TIME_SLICE) to 0xFFFFFFFF.
System Timer (ms)	Value must be greater than or equal to 10	20	GUIX system timer period (GX_SYSTEM_TIMER_MS). This value will be internally converted to RTOS ticks and will be rounded down to the next smallest multiple of the RTOS tick period (1000 / TX_TIMER_TICKS_PER_SECOND).
Multithread Support	• Disabled • Enabled	Enabled	Must be enabled if GUIX functions are called from multiple threads. Set to Disabled when calling GUIX from only one thread to reduce system overhead.
UTF8 Support	• Disabled • Enabled	Enabled	Select whether to enable or disable support for UTF8 characters.
Event Queue Size	Value must be greater than zero	48	Maximum number of events in the GUIX event queue.
Enable GX_WIDGET User Data	• Enabled • Disabled	Disabled	Set to Enabled to to use the gx_widget_user_data member in the GX_WIDGET structure.

Build Time Configurations for rm_guix_port

The following build time configurations are defined in fsp_cfg/middleware/rm_guix_port_cfg.h:

Configuration	Options	Default	Description
DRW Buffer Cache	• Enabled • Disabled	Enabled	Enabling this option significantly improves DRW Engine performance. Set to

			Disabled only if Display underflow events are triggered under high graphics load.

Configurations for Graphics > Azure RTOS GUIX Port (rm_guix_port)

Configuration	Options	Default	Description
Display Rotation > Screen Orientation	• None • CW (90 degrees) • FLIP (180 degrees) • CCW (270 degrees)	None	Select the display orientation specified in the GUIX Studio project. The Canvas Buffer must be enabled when rotating 180 degrees (FLIP).
Display Rotation > Use Canvas Buffer	• Enabled • Disabled	Disabled	When screen rotation is set to a value other than 0 a canvas buffer must be used. The canvas buffer size will be the same as a frame buffer for the display module.
Display Rotation > Canvas Buffer Memory Section	This property must be a valid section name	bss	Specify the memory section where the GUIX Canvas Buffer will be allocated.
JPEG Decoding > Work Buffer Size	Must be a valid integer	0xC800	Specify the JPEG work buffer size in bytes. A larger buffer can reduce JPEG decode/draw times. The buffer will not be allocated if JPEG Codec support is disabled. Unless you are sure of the subsampling used in and the size of the input JPEG images it is recommended to allocate at least 16 framebuffer lines of memory.
JPEG Decoding > Buffer Memory Section	This property must be a valid section name	bss	Specify the memory section where the JPEG Work Buffer will be allocated.
Name	Name must be a valid C symbol	g_rm_guix_port0	Module name.
Target Display Layer	• Graphics Layer	Graphics Layer 1	Specify which graphics

	1 • Graphics Layer 2		screen to inherit the buffer and display dimensions from.
Callback Function	Must be a valid C symbol	NULL	If a callback function is provided it will be called when Display events occur.

Hardware Configuration

No clocks or pins are directly required by this module. Please consult the submodules' documentation for their requirements.

Usage Notes

Getting Started

To get started with GUIX in an RA project the following must be performed:

1. In e2 studio, open the RA Configuration editor for your GUIX project
2. Select or create a thread
3. Add GUIX to your project in the Stacks view by clicking **New Stack -> Azure RTOS -> GUIX**
4. Ensure the configuration options for GUIX and the port layer are set as necessary for your application
5. Set the proporties for the GLCDC module to match the timing and memory requirements of your display panel
6. Set the input color format in the GLCDC module (Input -> Graphics Layer * -> General -> Color format) and the output color format in the JPEG Codec module if applicable (Decode -> Output color format) per your project specification
7. Click the BSP tab in the configuration editor and confirm the heap size in the Properties pane is sufficient (see Note below)
8. Click Generate Project Content to save and commit configuration changes
9. Drop the Quick Setup entry in Developer Assistance into the desired thread entry C file and update the items marked with TODO as necessary
10. Call the Quick Setup function from the thread entry function (or where desired)

At this point the project is now ready to build and run your GUIX Studio project. Please refer to the documentation for Azure RTOS GUIX and GUIX Studio for details on how to create and edit a GUI application.

Note

It is recommended to start with 8K-32K of heap to begin development. Actual heap use is typically far lower than this but must be characterized by the developer.

Using Hardware Acceleration

In most cases there is no need to perform additional configuration to ensure the DRW Engine is used. However, there are some guidelines that should be followed:

- Avoid transparent pixelmaps in 8-bit display mode as they are rendered in software. In particular, ensure PNGs to be used in 8bpp GUIX Studio projects are saved without transparency data if no transparency is needed.
- The following items may require a large heap to draw successfully:

    - Polygons (more sides = more heap)
    - Filled arcs and ellipses (more framebuffer lines occupied = more heap)
    - gx_canvas_pixelmap_tile (more tiles = more heap)
- When using hardware acceleration, images used for tile fill of shapes must have dimensions that are a power of 2. This limitation does not apply to gx_canvas_pixelmap_tile as well as certain arc/ellipse fill functions as GUIX manually draws pixelmaps to fill these shapes (at the expense of heap space).

Examples

Basic Example

This is a basic example demonstrating how to get GUIX up and running given an existing GUIX Studio project. A template for this code is available in Developer Assistance for the GUIX Port module.

Note

GUIX manages the GLCDC, DRW and JPEG Codec submodules internally; they do not need to be opened directly.

```
GX_WINDOW_ROOT * p_window_root;
void guix_user_start (void)
{
 /* Initialize GUIX */
    gx_system_initialize();
 /* Configure GUIX Studio project main display and get a pointer to the root window
*/
    gx_studio_display_configure(MAIN_DISPLAY,
 rm_guix_port_hw_initialize,
                                MAIN_DISPLAY_LANGUAGE_ENGLISH,
                                MAIN_DISPLAY_THEME,
                                &p_window_root);
 /* Set pointer to the first buffer generated by the configuration
(rm_guix_port_canvas) */
    gx_canvas_memory_define(p_window_root->gx_window_root_canvas,
                            rm_guix_port_canvas,

p_window_root->gx_window_root_canvas->gx_canvas_memory_size);
 /* Create and show the root window in the GUIX Studio project */
    gx_studio_named_widget_create("root_widget_name", (GX_WIDGET *) p_window_root,
GX_NULL);
```

```
    gx_widget_show(p_window_root);
 /* Start GUIX */
    gx_system_start();
 /* GUIX will continue to run in its own thread */
}
```

Data Structures

struct	rm_guix_port_callback_args_t

Enumerations

enum	rm_guix_port_device_t
enum	rm_guix_port_event_t

Data Structure Documentation

◆ rm_guix_port_callback_args_t

struct rm_guix_port_callback_args_t		
Callback arguments for the FSP GUIX Port		
Data Fields		
rm_guix_port_device_t	device	Device code.
rm_guix_port_event_t	event	Event code of the low level hardware.
uint32_t	error	Error code if RM_GUIX_PORT_EVENT_ERROR.

Enumeration Type Documentation

◆ rm_guix_port_device_t

enum rm_guix_port_device_t	
Low level device code for the GUIX	
Enumerator	
RM_GUIX_PORT_DEVICE_NONE	Non hardware.
RM_GUIX_PORT_DEVICE_DISPLAY	Display device.
RM_GUIX_PORT_DEVICE_DRW	2D Graphics Engine
RM_GUIX_PORT_DEVICE_JPEG	JPEG Codec.

◆ rm_guix_port_event_t

enum rm_guix_port_event_t	
Display event codes	
Enumerator	
RM_GUIX_PORT_EVENT_ERROR	Low level driver error occurs.
RM_GUIX_PORT_EVENT_DISPLAY_VSYNC	Display interface VSYNC.
RM_GUIX_PORT_EVENT_UNDERFLOW	Display interface underflow.

Function Documentation

◆ rm_guix_port_hw_initialize()

UINT rm_guix_port_hw_initialize (GX_DISPLAY * *p_display*)

Callback function to be passed to gx_studio_display_configure in order to start hardware modules.

Example:

```
 /* Configure GUIX Studio project main display and get a pointer to the root window
*/
    gx_studio_display_configure(MAIN_DISPLAY,
 rm_guix_port_hw_initialize,
                                MAIN_DISPLAY_LANGUAGE_ENGLISH,
                                MAIN_DISPLAY_THEME,
                                &p_window_root);
```

Note

This function should only be called by GUIX.

Return values

GX_SUCCESS	Device driver setup is successfully done.
GX_FAILURE	Device driver setup failed.

4.2.99 HS300X Sensor Middleware (rm_hs300x)

Modules

Functions

fsp_err_t	RM_HS300X_Open (rm_hs300x_ctrl_t *const p_api_ctrl, rm_hs300x_cfg_t const *const p_cfg) Opens and configures the HS300X Middle module. Implements rm_hs300x_api_t::open. More...
fsp_err_t	RM_HS300X_Close (rm_hs300x_ctrl_t *const p_api_ctrl) Disables specified HS300X control block. Implements rm_hs300x_api_t::close. More...
fsp_err_t	RM_HS300X_MeasurementStart (rm_hs300x_ctrl_t *const p_api_ctrl) This function should be called when start a measurement and when measurement data is stale data. Sends the slave address to the hs300x and start a measurement. Implements rm_hs300x_api_t::measurementStart. More...
fsp_err_t	RM_HS300X_Read (rm_hs300x_ctrl_t *const p_api_ctrl, rm_hs300x_raw_data_t *const p_raw_data) Reads ADC data from HS300X. Implements rm_hs300x_api_t::read. More...
fsp_err_t	RM_HS300X_DataCalculate (rm_hs300x_ctrl_t *const p_api_ctrl, rm_hs300x_raw_data_t *const p_raw_data, rm_hs300x_data_t *const p_hs300x_data) Calculates humidity [RH] and temperature [Celsius] from ADC data. Implements rm_hs300x_api_t::dataCalculate. More...
fsp_err_t	RM_HS300X_ProgrammingModeEnter (rm_hs300x_ctrl_t *const p_api_ctrl) This function must be called within 10ms after applying power to the sensor. Sends the commands to enter the programming mode. After calling this function, please wait 120us. Implements rm_hs300x_api_t::programmingModeEnter. More...
fsp_err_t	RM_HS300X_ResolutionChange (rm_hs300x_ctrl_t *const p_api_ctrl, rm_hs300x_data_type_t const data_type, rm_hs300x_resolution_t const resolution) This function must be called after calling the RM_HS300X_ProgrammingModeEnter function. Changes the sensor resolution. This function blocks for 120 us software delay plus 9 bytes on the I2C bus. After calling this function, 14ms must be waited. Failure to comply with these times may result in data corruption and introduce errors in sensor measurements. Implements rm_hs300x_api_t::resolutionChange. More...

fsp_err_t	RM_HS300X_SensorIdGet (rm_hs300x_ctrl_t *const p_api_ctrl, uint32_t *const p_sensor_id) This function must be called after calling the RM_HS300X_ProgrammingModeEnter function. Gets the sensor ID. This function blocks for 240 us software delay plus 12 bytes on the I2C bus. Implements rm_hs300x_api_t::sensorIdGet. More...
fsp_err_t	RM_HS300X_ProgrammingModeExit (rm_hs300x_ctrl_t *const p_api_ctrl) This function must be called after calling the RM_HS300X_ProgrammingModeEnter function. This function must be called to return to normal sensor operation and perform measurements. Sends the commands to exit the programming mode. Implements rm_hs300x_api_t::programmingModeExit. More...

Detailed Description

Middleware to implement the HS300X sensor interface. This module implements the HS300X Middleware Interface.

Overview

Features

The HS300X sensor interface implementation has the following key features:

- Starting a measurement at any time
- Getting ADC data from the sensor
- Calculating humidity and temperature value from getting ADC data
- Changing the sensor resolution
- Getting the sensor ID

Configuration

Build Time Configurations for rm_hs300x

The following build time configurations are defined in fsp_cfg/rm_hs300x_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Data type	• Both humidity and temperature • Humidity only	Both humidity and temperature	Select Getting humidity only and both humidity and temperature.

Programming Mode	• ON • OFF	OFF	If selected the programming mode can be entered.

Configurations for Sensor > HS300X Temperature/Humidity Sensor (rm_hs300x)

This module can be added to the Stacks tab via New Stack > Sensor > HS300X Temperature/Humidity Sensor (rm_hs300x).

Configuration	Options	Default	Description
Name	Manual Entry	g_hs300x_sensor0	Module name.
Callback	Name must be a valid C symbol	hs300x_callback	A user callback function can be provided.

Pin Configuration

This module use SDA and SCL pins of I2C Master and SCI I2C.

Usage Notes

HS300x datasheet is here.
If ADC data is valid and calculating humidity and temperature is finished, it is needed to start a measurement again. If ADC data is invalid, it is needed to read ADC data from HS300x again.

If changing the sensor resolution and getting the sensor ID, RM_HS300X_ProgrammingModeEnter function must be called within 10ms after applying power to the sensor. Entering the programming mode takes 120us. Thresore, after calling RM_HS300X_ProgrammingModeEnter function, please wait 120us. After calling RM_HS300X_ResolutionChange function, 14ms must be waited because failure to comply with these times may result in data corruption and introduce errors in sensor measurements.

If an RTOS is used, blocking and bus lock is available.

- If blocking of an I2C bus is required, it is necessary to create a semaphore for blocking.
- If bus lock is required, it is necessary to create a mutex for bus lock. Bus lock is only available when a semaphore for blocking is used.

Bus Initialization

The HS300X interface expects a bus instance to be opened before opening any HS300X device. The interface will handle switching between devices on the bus but will not open or close the bus instance. The user should open the bus with the appropriate I2C Master Interface open call.

Examples

Basic Example

This is a basic example of minimal use of HS300X sensor implementation in an application.

```
void rm_hs300x_basic_example (void)
{
```

```
 fsp_err_t            err = FSP_SUCCESS;
 rm_hs300x_raw_data_t hs300x_raw_data;
 rm_hs300x_data_t     hs300x_data;
    uint8_t             calculated_flag = 0;
 /* Open the I2C bus if it is not already open. */
    rm_comms_i2c_bus_extended_cfg_t * p_extend =
       (rm_comms_i2c_bus_extended_cfg_t *) g_hs300x_cfg.p_instance->p_cfg->p_extend;
 i2c_master_instance_t * p_driver_instance = (i2c_master_instance_t *)
p_extend->p_driver_instance;
    p_driver_instance->p_api->open(p_driver_instance->p_ctrl,
p_driver_instance->p_cfg);
#if BSP_CFG_RTOS
 /* Create a semaphore for blocking if a semaphore is not NULL */
 if (NULL != p_extend->p_blocking_semaphore)
    {
 #if BSP_CFG_RTOS == 1 // AzureOS
       tx_semaphore_create(p_extend->p_blocking_semaphore->p_semaphore_handle,
                           p_extend->p_blocking_semaphore->p_semaphore_name,
                           (ULONG) 0);
 #elif BSP_CFG_RTOS == 2 // FreeRTOS
       *(p_extend->p_blocking_semaphore->p_semaphore_handle) =
            xSemaphoreCreateCountingStatic((UBaseType_t) 1,
                                           (UBaseType_t) 0,

p_extend->p_blocking_semaphore->p_semaphore_memory);
 #endif
    }
 /* Create a recursive mutex for bus lock if a recursive mutex is not NULL */
 if (NULL != p_extend->p_bus_recursive_mutex)
    {
 #if BSP_CFG_RTOS == 1 // AzureOS
       tx_mutex_create(p_extend->p_bus_recursive_mutex->p_mutex_handle,
                       p_extend->p_bus_recursive_mutex->p_mutex_name,
                       TX_INHERIT);
```

```
 #elif BSP_CFG_RTOS == 2 // FreeRTOS
       *(p_extend->p_bus_recursive_mutex->p_mutex_handle) =
            xSemaphoreCreateRecursiveMutexStatic(p_extend->p_bus_recursive_mutex->p_m
utex_memory);
 #endif
    }
#endif
    err = RM_HS300X_Open(&g_hs300x_ctrl, &g_hs300x_cfg);
 /* Handle any errors. This function should be defined by the user. */
    handle_error(err);

Data Structures

struct	rm_hs300x_programmnig_mode_params_t
struct	rm_hs300x_instance_ctrl_t

Data Structure Documentation

◆ rm_hs300x_programmnig_mode_params_t

struct rm_hs300x_programmnig_mode_params_t
HS300X programming mode process block

Data Fields		
volatile bool	enter	Enter flag.
volatile bool	blocking	Blocking flag.
volatile bool	communication_finished	Communication flag for blocking.
volatile rm_hs300x_event_t	event	Callback event.

◆ rm_hs300x_instance_ctrl_t

struct rm_hs300x_instance_ctrl_t	
HS300x Control Block	
Data Fields	
uint32_t	open
	Open flag.
rm_hs300x_cfg_t const *	p_cfg
	Pointer to HS300X Configuration.
rm_comms_instance_t const *	p_comms_i2c_instance
	Pointer of I2C Communications Middleware instance structure.
void const *	p_context
	Pointer to the user-provided context.
rm_hs300x_programmnig_mode_params_t	programming_mode
	Programming mode flag.

Function Documentation

◆ RM_HS300X_Open()

fsp_err_t RM_HS300X_Open (rm_hs300x_ctrl_t *const *p_api_ctrl*, rm_hs300x_cfg_t const *const *p_cfg*)

Opens and configures the HS300X Middle module. Implements rm_hs300x_api_t::open.

Example:

```
    err = RM_HS300X_Open(&g_hs300x_ctrl, &g_hs300x_cfg);
```

Return values

FSP_SUCCESS	HS300X successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.

◆ RM_HS300X_Close()

fsp_err_t RM_HS300X_Close (rm_hs300x_ctrl_t *const *p_api_ctrl*)

Disables specified HS300X control block. Implements rm_hs300x_api_t::close.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_HS300X_MeasurementStart()

fsp_err_t RM_HS300X_MeasurementStart (rm_hs300x_ctrl_t *const *p_api_ctrl*)

This function should be called when start a measurement and when measurement data is stale data. Sends the slave address to the hs300x and start a measurement. Implements rm_hs300x_api_t::measurementStart.

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_HS300X_Read()

fsp_err_t RM_HS300X_Read (rm_hs300x_ctrl_t *const *p_api_ctrl*, rm_hs300x_raw_data_t *const *p_raw_data*)

Reads ADC data from HS300X. Implements rm_hs300x_api_t::read.

Return values

FSP_SUCCESS	Successfully data decoded.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_HS300X_DataCalculate()

fsp_err_t RM_HS300X_DataCalculate (rm_hs300x_ctrl_t *const *p_api_ctrl*, rm_hs300x_raw_data_t *const *p_raw_data*, rm_hs300x_data_t *const *p_hs300x_data*)

Calculates humidity [RH] and temperature [Celsius] from ADC data. Implements rm_hs300x_api_t::dataCalculate.

Return values

FSP_SUCCESS	Successfully data decoded.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_SENSOR_INVALID_DATA	Data is invalid.

◆ RM_HS300X_ProgrammingModeEnter()

fsp_err_t RM_HS300X_ProgrammingModeEnter (rm_hs300x_ctrl_t *const *p_api_ctrl*)

This function must be called within 10ms after applying power to the sensor. Sends the commands to enter the programming mode. After calling this function, please wait 120us. Implements rm_hs300x_api_t::programmingModeEnter.

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_UNSUPPORTED	Programming mode is not supported.

◆ RM_HS300X_ResolutionChange()

fsp_err_t RM_HS300X_ResolutionChange (rm_hs300x_ctrl_t *const *p_api_ctrl*, rm_hs300x_data_type_t const *data_type*, rm_hs300x_resolution_t const *resolution*)

This function must be called after calling the RM_HS300X_ProgrammingModeEnter function. Changes the sensor resolution. This function blocks for 120 us software delay plus 9 bytes on the I2C bus. After calling this function, 14ms must be waited. Failure to comply with these times may result in data corruption and introduce errors in sensor measurements. Implements rm_hs300x_api_t::resolutionChange.

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_MODE	Module is not entering the programming mode.
FSP_ERR_ABORTED	Communication is aborted.
FSP_ERR_TIMEOUT	Communication is timeout.
FSP_ERR_UNSUPPORTED	Programming mode is not supported.

◆ RM_HS300X_SensorIdGet()

fsp_err_t RM_HS300X_SensorIdGet (rm_hs300x_ctrl_t *const *p_api_ctrl*, uint32_t *const *p_sensor_id*)

This function must be called after calling the RM_HS300X_ProgrammingModeEnter function. Gets the sensor ID. This function blocks for 240 us software delay plus 12 bytes on the I2C bus. Implements rm_hs300x_api_t::sensorIdGet.

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_MODE	Module is not entering the programming mode.
FSP_ERR_ABORTED	Communication is aborted.
FSP_ERR_TIMEOUT	Communication is timeout.
FSP_ERR_UNSUPPORTED	Programming mode is not supported.

◆ RM_HS300X_ProgrammingModeExit()

fsp_err_t RM_HS300X_ProgrammingModeExit (rm_hs300x_ctrl_t *const *p_api_ctrl*)

This function must be called after calling the RM_HS300X_ProgrammingModeEnter function. This function must be called to return to normal sensor operation and perform measurements. Sends the commands to exit the programming mode. Implements rm_hs300x_api_t::programmingModeExit.

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_MODE	Module is not entering the programming mode.
FSP_ERR_UNSUPPORTED	Programming mode is not supported.

Detailed Description

Middleware for using Azure RTOS LevelX on NOR SPI memory.

Overview

This module provides the hardware port layer for LevelX on NOR SPI flash memory. Setup for this module is done solely through calling LevelX APIs. Please refer to the LevelX API reference: https://docs.microsoft.com/en-us/azure/rtos/levelx/

Configuration

Build Time Configurations for rm_levelx_nor_spi

The following build time configurations are defined in fsp_cfg/middleware/rm_levelx_nor_spi_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	Selects if code for parameter checking is to be included in the build.
Write Verify	• Enabled • Disabled	Disabled	When enabled reads back data written to SPI memory in order to verify it.
Page Buffer Size (bytes)	Size should be greater than zero	256	When direct read is enabled in LevelX a situation can occur where the driver has to write to SPI memory with the source locaiton also being within the SPI memory address range. In this situation the driver needs a buffer that is at least the same size as a page in order to

			temporarily store data to write out.

Configurations for Storage > LevelX NOR Port (rm_levelx_nor_spi)

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_rm_levelx_nor_spi0	Module name.
Memory Start Adress Offset (bytes)	Offset should be greater than or equal to zero	0	Enter the starting offset to use in the SPI memory. The starting address for LevelX memory will be the SPI memory base address plus this offset.
Memory Size (bytes)	Size should be greater than zero	33554432	Enter the size that the LevelX Memory should be. This can be smaller than the SPI memory size in order to use a subset of SPI memory.
Poll Status Count	Poll Status Count should be greater than or equal to zero	0xFFFFFFFF	Number of times to poll for operation complete status for blocking memory operations.

Build Time Configurations for lx

The following build time configurations are defined in fsp_cfg/azure/lx/lx_user.h:

Configuration	Options	Default	Description
NOR > Direct Read	• Enabled (default) • Disabled	Enabled (default)	When enabled, this option bypasses the NOR flash driver read routine in favor or reading the NOR memory directly, resulting in a significant performance increase.
NOR > Free Sector Data Verify	• Enabled • Disabled (default)	Disabled (default)	When enabled, this causes the LevelX NOR instance open logic to verify free NOR sectors are all ones.
NOR > Extended Cache	• Enabled (default) • Disabled	Enabled (default)	Enables the extended NOR cache.
NOR > Extended Cache Size	Manual Entry		If not set this value defaults to 8, which

			represents a maximum of 8 sectors that can be cached in a NOR instance.
NOR > Sector Mapping Cache Size	Value must be greater than or equal to 8 and a power of 2, or empty		If not set this value defaults to 16 and defines the logical sector mapping cache size. Large values improve performance, but cost memory. The minimum size is 8 and all values must be a power of 2.
NAND > Sector Mapping Cache Size	Value must be greater than or equal to 8 and a power of 2, or empty		If not set this value defaults to 128 and defines the logical sector mapping cache size. Large values improve performance, but cost memory. The minimum size is 8 and all values must be a power of 2.
NAND > Flash Direct Mapping Cache	• Enabled • Disabled (default)	Disabled (default)	When enabled, this creates a direct mapping cache, such that there are no cache misses. It also required that LX_NAND_SECTOR_MAPPING_CACHE_SIZE represents the exact number of total pages in your flash device.
Thread Safe	• Enabled • Disabled (default)	Disabled (default)	When enabled, this makes LevelX thread-safe by using a ThreadX mutex object throughout the API.
Standalone Mode	• Enabled • Disabled (default)	Disabled (default)	When enabled, allows LevelX to be used in standalone mode (without Azure RTOS).

Usage Notes

Pending during Erase/Write

The LevelX NOR SPI driver is blocking on all SPI operations and will poll device status for operation completion on Writes and Erases. A callback can be provided by the user to wait with an OS-specific thread wait in these instances.

Closing the driver

When lx_nor_flash_close is called to close the LevelX instance it does not call any services within the LevelX NOR SPI driver to close out the driver instance. The user should call the generated close function (i.e. g_rm_levelx_nor_spi0_close) in order to close out the driver instance.

Erasing Flash Memory Prior to Usage

The area of the flash memory being used for the LevelX instance should be erased using the lower level flash API prior to usage. Otherwise, LevelX API may fail on lx_nor_flash_open due to any areas in flash memory that have been written/set.

Examples

Basic Example

This is a basic example of using the LevelX NOR SPI driver with the LevelX API in an application.

```
#define RM_LEVELX_NOR_SPI_EXAMPLE_SECTOR_SIZE (512)
#define RM_LEVELX_NOR_SPI_EXAMPLE_BUFFER_FILL_VALUE (0xA5)
#define RM_LEVELX_NOR_SPI_EXAMPLE_SPI_SECTOR_SIZE (4096)
extern rm_levelx_nor_spi_instance_ctrl_t g_levelx_nor_spi0_ctrl;
extern rm_levelx_nor_spi_cfg_t g_levelx_nor_spi0_cfg;
extern LX_NOR_FLASH g_lx_nor_flash0;
void rm_levelx_nor_spi_example (void)
{
    uint8_t               read_buffer[RM_LEVELX_NOR_SPI_EXAMPLE_SECTOR_SIZE];
    uint8_t               write_buffer[RM_LEVELX_NOR_SPI_EXAMPLE_SECTOR_SIZE];
 spi_flash_instance_t * p_spi_flash_instance = (spi_flash_instance_t *)
g_levelx_nor_spi0_cfg.p_lower_lvl;
 spi_flash_status_t    status;
    memset(write_buffer, RM_LEVELX_NOR_SPI_EXAMPLE_BUFFER_FILL_VALUE, sizeof
(write_buffer));
 /* Erase flash prior to usage */
 fsp_err_t err = p_spi_flash_instance->p_api->open(p_spi_flash_instance->p_ctrl,
p_spi_flash_instance->p_cfg);
    assert(FSP_SUCCESS == err);
 for (uint32_t i = g_levelx_nor_spi0_cfg.address_offset;
         i < g_levelx_nor_spi0_cfg.size;
         i += RM_LEVELX_NOR_SPI_EXAMPLE_SPI_SECTOR_SIZE)
    {
```

```
      err = p_spi_flash_instance->p_api->erase(p_spi_flash_instance->p_ctrl,
                                               (uint8_t *)
g_levelx_nor_spi0_cfg.base_address + i,

RM_LEVELX_NOR_SPI_EXAMPLE_SPI_SECTOR_SIZE);
     assert(FSP_SUCCESS == err);
      status.write_in_progress = true;
 while (status.write_in_progress)
     {
          err =
p_spi_flash_instance->p_api->statusGet(p_spi_flash_instance->p_ctrl, &status);
     assert(FSP_SUCCESS == err);
      }
   }
   err = p_spi_flash_instance->p_api->close(p_spi_flash_instance->p_ctrl);
   assert(FSP_SUCCESS == err);
 /* Initialize LevelX */
   lx_nor_flash_initialize();
   UINT lx_err = lx_nor_flash_open(&g_lx_nor_flash0, "LX_NOR_SPI_EXAMPLE",
g_levelx_nor_spi0_initialize);
   handle_lx_error(lx_err);
 /* Write test value to sector 0 then read back to verify */
   lx_err = lx_nor_flash_sector_write(&g_lx_nor_flash0, 0, write_buffer);
   handle_lx_error(lx_err);
   lx_err = lx_nor_flash_sector_read(&g_lx_nor_flash0, 0, read_buffer);
   handle_lx_error(lx_err);
   assert(0 == memcmp(read_buffer, write_buffer, sizeof(read_buffer)));
}
```

Callback Wait Example

This shows how to use the LevelX NOR SPI driver callback with ThreadX in order to wait for operations to complete.

```
/* Callback called by LevelX NOR SPI driver needs to wait on operation. */
```

```
void rm_levelx_nor_spi_callback_wait_example (rm_levelx_nor_spi_callback_args_t *
p_args)
{
 if (p_args->event & RM_LEVELX_NOR_SPI_EVENT_BUSY)
    {
 /* Put the thread to sleep while waiting for operation to complete. */
       tx_thread_sleep(1);
    }
}
```

Data Structures

struct	rm_levelx_nor_spi_callback_args_t
struct	rm_levelx_nor_spi_cfg_t
struct	rm_levelx_nor_spi_instance_ctrl_t

Enumerations

enum	rm_levelx_nor_spi_event_t

Data Structure Documentation

◆ rm_levelx_nor_spi_callback_args_t

struct rm_levelx_nor_spi_callback_args_t		
RM_LEVELX_NOR_SPI callback arguments definitions		
Data Fields		
rm_levelx_nor_spi_event_t	event	LevelX NOR driver callback event.
void const *	p_context	Placeholder for user data.

◆ rm_levelx_nor_spi_cfg_t

struct rm_levelx_nor_spi_cfg_t	
SF_EL_LX_NOR Config Block Type	
Data Fields	
spi_flash_instance_t const *	p_lower_lvl
	Lower level memory pointer.
LX_NOR_FLASH *	p_lx_nor_flash

	Pointer to the LevelX nor flash instance.
uint32_t	base_address
	Base address of memory mapped region.
uint32_t	address_offset
	Offset to use subset of available flash size if desired.
uint32_t	size
	Size of the partitioned region.
uint32_t	poll_status_count
	Number of times to poll for operation complete status before returning an error.
void const *	p_context
	Placeholder for user data. Passed to the user callback.
void(*	p_callback)(rm_levelx_nor_spi_callback_args_t *p_args)
	Callback function.

◆ **rm_levelx_nor_spi_instance_ctrl_t**

struct rm_levelx_nor_spi_instance_ctrl_t		
SF_EL_LX_NOR Control Block Type		
Data Fields		
rm_levelx_nor_spi_cfg_t const *	p_cfg	Pointer to instance configuration.
uint32_t	start_address	Start address of partition to use within memory mapped region.
uint32_t	minimum_erase_size	Minimum erase size of SPI memory.

uint8_t	page_buffer[RM_LEVELX_NOR_SPI_CFG_BUFFER_SIZE]	Page buffer for situations when writing to SPI memory from a source within SPI memory.
uint32_t	open	Used to determine if module is initialized.

Enumeration Type Documentation

◆ rm_levelx_nor_spi_event_t

enum rm_levelx_nor_spi_event_t

Common macro for FSP header files. There is also a corresponding FSP_FOOTER macro at the end of this file. Options for the callback events.

Enumerator	
RM_LEVELX_NOR_SPI_EVENT_BUSY	Pending operation, user can define their own wait functionality.

Function Documentation

◆ RM_LEVELX_NOR_SPI_Open()

fsp_err_t RM_LEVELX_NOR_SPI_Open (rm_levelx_nor_spi_instance_ctrl_t *const *p_ctrl*, rm_levelx_nor_spi_cfg_t const *const *p_cfg*)

Initializes LevelX NOR SPI port read/write and control.

Calls lower level SPI memory functions.

Parameters

[in,out]	p_ctrl	Control block for the LevelX NOR SPI instance.
[in,out]	p_cfg	Configuration for LevelX NOR SPI port.

Return values

FSP_SUCCESS	LevelX NOR driver is successfully opened.
FSP_ERR_ASSERTION	p_ctrl or p_cfg is NULL.
FSP_ERR_ALREADY_OPEN	Driver is already in OPEN state.

Returns

See Common_Error_Codes or lower level drivers for other possible return codes. This function calls

- spi_flash_api_t:open

◆ RM_LEVELX_NOR_SPI_Read()

fsp_err_t RM_LEVELX_NOR_SPI_Read (rm_levelx_nor_spi_instance_ctrl_t *const *p_ctrl*, ULONG *const *p_flash_addr*, ULONG *const *p_dest*, ULONG *word_count*)

LevelX NOR driver "read sector" service.

This is responsible for reading a specific sector in a specific block of the NOR flash. All error checking and correcting logic is the responsibility of this service.

Parameters

[in]	p_ctrl	Control block for the LevelX NOR SPI instance.
[in]	p_flash_addr	Specifies the address of a logical sector within a NOR flash block of memory.
[in,out]	p_dest	Specifies where to place the sector contents.
[in]	word_count	Specifies how many 32-bit words to read.

Return values

FSP_SUCCESS	LevelX NOR flash sector read successful.
FSP_ERR_ASSERTION	p_ctrl, p_flash_addr or p_dest is NULL.
FSP_ERR_NOT_OPEN	Driver not in OPEN state for reading.

Returns

See Common_Error_Codes or lower level drivers for other possible return codes.

◆ RM_LEVELX_NOR_SPI_Write()

fsp_err_t RM_LEVELX_NOR_SPI_Write (rm_levelx_nor_spi_instance_ctrl_t *const *p_ctrl*, ULONG *const *p_flash_addr*, ULONG *const *p_src*, ULONG *word_count*)

LevelX NOR driver "write sector" service.

This is responsible for writing a specific sector into a block of the NOR flash. All error checking is the responsibility of the this service.

Parameters

[in]	p_ctrl	Control block for the LevelX NOR SPI instance.
[in,out]	p_flash_addr	Specifies the address of a logical sector within a NOR flash block of memory.
[in]	p_src	Specifies the source of the write.
[in]	word_count	Specifies how many 32-bit words to write.

Return values

FSP_SUCCESS	LevelX NOR flash sector write successful.
FSP_ERR_ASSERTION	p_ctrl, p_flash_addr or p_src is NULL.
FSP_ERR_NOT_OPEN	Driver not in OPEN state for writing.
FSP_ERR_TIMEOUT	Timeout occurred while waiting for operation to complete.
FSP_ERR_WRITE_FAILED	Verification of Write operation failed.
FSP_ERR_INVALID_ADDRESS	Write address or size falls outside of flash memory range.

Returns

See Common_Error_Codes or lower level drivers for other possible return codes. This function calls

- spi_flash_api_t:write

◆ RM_LEVELX_NOR_SPI_BlockErase()

fsp_err_t RM_LEVELX_NOR_SPI_BlockErase (rm_levelx_nor_spi_instance_ctrl_t *const *p_ctrl*, ULONG *block*, ULONG *erase_count*)

LevelX NOR driver "block erase" service.

This is responsible for erasing the specified block of the NOR flash.

Parameters

[in]	p_ctrl	Control block for the LevelX NOR SPI instance.
[in]	block	Specifies which NOR block to erase.
[in]	erase_count	Provided for diagnostic purposes(currently unused).

Return values

FSP_SUCCESS	LevelX NOR flash block erase successful.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Driver not in OPEN state for erasing.
FSP_ERR_TIMEOUT	Timeout occurred while waiting for operation to complete.

Returns

See Common_Error_Codes or lower level drivers for other possible return codes. This function calls

- spi_flash_api_t:erase

◆ RM_LEVELX_NOR_SPI_BlockErasedVerify()

fsp_err_t RM_LEVELX_NOR_SPI_BlockErasedVerify (rm_levelx_nor_spi_instance_ctrl_t *const *p_ctrl*, ULONG *block*)

LevelX NOR driver "block erased verify" service.

This is responsible for verifying the specified block of the NOR flash is erased.

Parameters

[in]	p_ctrl	Control block for the LevelX NOR SPI instance.
[in]	block	Specifies which block to verify that it is erased.

Return values

FSP_SUCCESS	LevelX flash block erase verification successful.
FSP_ERR_ASSERTION	p_ctrl or lower level driver is NULL.
FSP_ERR_NOT_OPEN	Driver not in OPEN state for verifying.
FSP_ERR_NOT_ERASED	The block is not erased properly.

Returns

See Common_Error_Codes or lower level drivers for other possible return codes.

◆ RM_LEVELX_NOR_SPI_Close()

fsp_err_t RM_LEVELX_NOR_SPI_Close (rm_levelx_nor_spi_instance_ctrl_t *const *p_ctrl*)

LevelX NOR driver close service.

This is responsible for closing the driver properly.

Parameters

[in]	p_ctrl	Control block for the LevelX NOR SPI instance.

Return values

FSP_SUCCESS	LevelX flash is available and is now open for read, write, and control access.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Driver not in OPEN state for closing.

Returns

See Common_Error_Codes or lower level drivers for other possible return codes. This function calls

- spi_flash_api_t:close

4.2.101 LittleFS Flash Port (rm_littlefs_flash)

Modules

Functions

fsp_err_t	RM_LITTLEFS_FLASH_Open (rm_littlefs_ctrl_t *const p_ctrl, rm_littlefs_cfg_t const *const p_cfg)
fsp_err_t	RM_LITTLEFS_FLASH_Close (rm_littlefs_ctrl_t *const p_ctrl)

Detailed Description

Middleware for the LittleFS File System control on RA MCUs.

Overview

This module provides the hardware port layer for the LittleFS file system. After initializing this module, refer to the LittleFS documentation to use the file system:
https://github.com/ARMmbed/littlefs

Configuration

Build Time Configurations for rm_littlefs_flash

The following build time configurations are defined in fsp_cfg/rm_littlefs_flash_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Storage > LittleFS on Flash (rm_littlefs_flash)

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_rm_littlefs0	Module name.
Read Size	Must be a non-negative integer	1	Minimum size of a block read. All read operations will be a multiple of this value.
Program Size	Must be a non-negative integer	4	Minimum size of a block program. All program operations will be a multiple of this value.

Block Size (bytes)	Must be a multiple of 64	128	Size of an erasable block. This does not impact RAM consumption and may be larger than the physical erase size. However, non-inlined files take up at minimum one block. Must be a multiple of the read and program sizes.
Block Count	Manual Entry	(BSP_DATA_FLASH_SIZE_BYTES/128)	Number of erasable blocks on the device.
Block Cycles	Must be an integer	1024	Number of erase cycles before LittleFS evicts metadata logs and moves the metadata to another block. Suggested values are in the range 100-1000, with large values having better performance at the cost of less consistent wear distribution. Set to -1 to disable block-level wear-leveling.
Cache Size	Must be a non-negative integer	64	Size of block caches. Each cache buffers a portion of a block in RAM. The LittleFS needs a read cache, a program cache, and one additional cache per file. Larger caches can improve performance by storing more data and reducing the number of disk accesses. Must be a multiple of the read and program sizes, and a factor of the block size.
Lookahead Size	Must be a non-negative multiple of 8	16	Size of the lookahead buffer in bytes. A larger lookahead buffer increases the number of blocks found during an allocation pass. The lookahead buffer is

			stored as a compact bitmap, so each byte of RAM can track 8 blocks. Must be a multiple of 8.

Common LittleFS Configuration

Build Time Configurations for LittleFS

The following build time configurations are defined in arm/littlefs/lfs_util.h:

Configuration	Options	Default	Description
Custom lfs_util.h	Manual Entry		Add a path to your custom lfs_util.h file. It can be used to override some or all of the configurations defined here, and to define additional configurations.
Thread Safe	• Enabled • Disabled	Disabled	Enables thread safety in LittleFS.
Use Malloc	• Enabled • Disabled	Enabled	Configures the use of malloc by LittleFS.
Use Assert	• Enabled • Disabled	Enabled	Configures the use of assert by LittleFS.
Debug Messages	• Enabled • Disabled	Disabled	Configures debug messages.
Warning Messages	• Enabled • Disabled	Disabled	Configures warning messages.
Error Messages	• Enabled • Disabled	Disabled	Configures error messages.
Trace Messages	• Enabled • Disabled	Disabled	Configures trace messages.
Intrinsics	• Enabled • Disabled	Enabled	Configures intrinsic functions such as __builtin_clz.
Instance Name for STDIO wrapper	Name must be a valid C symbol	g_rm_littlefs0	The rm_littlefs instance name to use with the STDIO wrapper.

Usage Notes

Blocking Read/Write/Erase

The LittleFS port blocks on Read/Write/Erase calls until the operation has completed.

Memory Constraints

The block size defined in the LittleFS configuration must be a multiple of the data flash erase size of the MCU. It must be greater than 104bytes which is the minimum block size of a LittleFS block. For information about data flash erase sizes refer to the "Specifications of the code flash memory and data flash memory" table of the "Flash Memory" chapter's "Overview" section.

Limitations

This module is not thread safe.

Examples

Basic Example

This is a basic example of LittleFS on Flash in an application.

```
extern const rm_littlefs_cfg_t g_rm_littlefs_flash0_cfg;
#ifdef LFS_NO_MALLOC
static uint8_t g_file_buffer[LFS_CACHE_SIZE];
static struct lfs_file_config g_file_cfg =
{
    .buffer = g_file_buffer
};
#endif
void rm_littlefs_example (void)
{
    uint8_t    buffer[30];
    lfs_file_t file;
 /* Open LittleFS Flash port.*/
 fsp_err_t err = RM_LITTLEFS_FLASH_Open(&g_rm_littlefs_flash0_ctrl,
&g_rm_littlefs_flash0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Format the filesystem. */
 int lfs_err = lfs_format(&g_rm_littlefs_flash0_lfs, &g_rm_littlefs_flash0_lfs_cfg);
    handle_lfs_error(lfs_err);
 /* Mount the filesystem. */
    lfs_err = lfs_mount(&g_rm_littlefs_flash0_lfs, &g_rm_littlefs_flash0_lfs_cfg);
    handle_lfs_error(lfs_err);
```

```
 /* Create a breakfast directory. */
    lfs_err = lfs_mkdir(&g_rm_littlefs_flash0_lfs, "breakfast");
    handle_lfs_error(lfs_err);
 /* Create a file toast in the breakfast directory. */
 const char * path = "breakfast/toast";
#ifdef LFS_NO_MALLOC
 /*********************************************************************************
**********************************
  * By default LittleFS uses malloc to allocate buffers. This can be disabled in the
RA Configuration editor.
  * Buffers will be generated from the configuration for the read, program and
lookahead buffers.
  * When opening a file a unique buffer must be passed in for use as a file buffer.
  * The buffer size must be equal to the cache size.
  *********************************************************************************
**********************************/
    lfs_err = lfs_file_opencfg(&g_rm_littlefs_flash0_lfs,
                               &file,
                               path,
                               LFS_O_WRONLY | LFS_O_CREAT | LFS_O_APPEND,
                               &g_file_cfg);
    handle_lfs_error(lfs_err);
#else
    lfs_err = lfs_file_open(&g_rm_littlefs_flash0_lfs, &file, path, LFS_O_WRONLY |
LFS_O_CREAT | LFS_O_APPEND);
    handle_lfs_error(lfs_err);
#endif
 const char * contents = "butter";
    lfs_size_t   len      = strlen(contents);
 /* Apply butter to toast 10 times. */
 for (uint32_t i = 0; i < 10; i++)
    {
       lfs_err = lfs_file_write(&g_rm_littlefs_flash0_lfs, &file, contents, len);
 if (lfs_err < 0)
```

```
      {
      handle_lfs_error(lfs_err);
       }
    }
 /* Close the file. */
    lfs_err = lfs_file_close(&g_rm_littlefs_flash0_lfs, &file);
    handle_lfs_error(lfs_err);
 /* Unmount the filesystem. */
    lfs_err = lfs_unmount(&g_rm_littlefs_flash0_lfs);
    handle_lfs_error(lfs_err);
 /* Remount the filesystem. */
    lfs_err = lfs_mount(&g_rm_littlefs_flash0_lfs, &g_rm_littlefs_flash0_lfs_cfg);
    handle_lfs_error(lfs_err);
 /* Open breakfast/toast. */
#ifdef LFS_NO_MALLOC
    lfs_err = lfs_file_opencfg(&g_rm_littlefs_flash0_lfs, &file, path, LFS_O_RDONLY,
&g_file_cfg);
    handle_lfs_error(lfs_err);
#else
    lfs_err = lfs_file_open(&g_rm_littlefs_flash0_lfs, &file, path, LFS_O_RDONLY);
    handle_lfs_error(lfs_err);
#endif
    handle_lfs_error(lfs_err);
 /* Verify the toast is buttered the correct amount. */
 for (uint32_t i = 0; i < 10; i++)
    {
       lfs_err = lfs_file_read(&g_rm_littlefs_flash0_lfs, &file, buffer, len);
 if (lfs_err < 0)
      {
      handle_lfs_error(lfs_err);
       }
       assert(0 == memcmp(buffer, contents, len));
    }
 /* Close the file. */
```

```
    lfs_err = lfs_file_close(&g_rm_littlefs_flash0_lfs, &file);
    handle_lfs_error(lfs_err);
}
```

Function Documentation

◆ RM_LITTLEFS_FLASH_Open()

fsp_err_t RM_LITTLEFS_FLASH_Open (rm_littlefs_ctrl_t *const *p_ctrl*, rm_littlefs_cfg_t const *const *p_cfg*)

Opens the driver and initializes lower layer driver.

Implements rm_littlefs_api_t::open().

Return values

FSP_SUCCESS	Success.
FSP_ERR_ASSERTION	An input parameter was invalid.
FSP_ERR_ALREADY_OPEN	Module is already open.
FSP_ERR_INVALID_SIZE	The provided block size is invalid.
FSP_ERR_INVALID_ARGUMENT	Flash BGO mode must be disabled.
FSP_ERR_INTERNAL	Failed to create the semaphore.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:
- flash_api_t::open

◆ RM_LITTLEFS_FLASH_Close()

fsp_err_t RM_LITTLEFS_FLASH_Close (rm_littlefs_ctrl_t *const *p_ctrl*)

Closes the lower level driver.

Implements rm_littlefs_api_t::close().

Return values

FSP_SUCCESS	Media device closed.
FSP_ERR_ASSERTION	An input parameter was invalid.
FSP_ERR_NOT_OPEN	Module not open.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:
- flash_api_t::close

4.2.102 MCUboot Port (rm_mcuboot_port)

Modules

MCUboot Port for RA MCUs.

Overview

Note

The MCUboot Port does not provide any interfaces to the user. Consult the MCUboot documentation at https://mcu-tools.github.io/mcuboot/ for further information.

Configuration

Build Time Configurations for MCUboot

The following build time configurations are defined in mcu-tools/include/mcuboot_config/mcuboot_config.h:

Configuration	Options	Default	Description
General > Custom mcuboot_config.h	Manual Entry		Add a path to your custom mcuboot_config.h file. It can be used to override some or all of the configurations defined here, and to define additional configurations.
General > Upgrade Mode	• Swap • Overwrite Only • Overwrite Only Fast • Direct XIP	Overwrite Only	Swap supports A/B image swapping with rollback. Other modes with simpler code path, which only supports overwriting the existing image with the update image or running the newest image directly from its flash partition, are also available.
General > Validate Primary Image	• Enabled • Disabled	Enabled	Always check the signature of the image in the primary slot before booting, even if no upgrade was performed. This is recommended if the

			boot time penalty is acceptable.
General > Downgrade Prevention (Overwrite Only)	• Enabled • Disabled	Disabled	Prevent downgrades by enforcing incrementing version numbers. When this option is set, any upgrade must have greater major version or greater minor version with equal major version. This mechanism only protects against some attacks against version downgrades (for example, a JTAG could be used to write an older version).
General > Number of Images Per Application	• 1 • 2 (TrustZone)	1	Number of separately updateable images.
General > Watchdog Feed	Manual Entry		This function might be implemented if the OS / HW watchdog is enabled while doing a swap upgrade and the time it takes for a swapping is long enough to cause an unwanted reset. If implementing this, the OS main.c must also enable the watchdog (if required)!
General > Measured Boot	• Enabled • Disabled	Disabled	Copies the boot data into the secure RAM, intended to be used by the secure App.
General > Data Sharing	• Enabled • Disabled	Disabled	Copies the user data into the secure RAM, intended to be used by the secure App.
Signing Options > TrustZone > Boot Record (Image 2)	String length must be 12 characters or less.		Create CBOR encoded boot record TLV for Image 2. Represents the role of the software component (e.g. CoFM for coprocessor firmware). [max. 12 characters]
Signing Options > TrustZone > Custom	Manual Entry	--confirm	Add any custom options to pass to

(Image 2)			imgtool.py here. --pad places a trailer on the image that indicates that the image should be considered an upgrade. Writing this image in the secondary slot will then cause the bootloader to upgrade to it. --confirm marks the image as confirmed, which causes the upgrade to be permanent.
Signing Options > Signature Type	• None • ECDSA P-256 • RSA 2048 • RSA 3072	ECDSA P-256	Configure the signature type.
Signing Options > Boot Record	String length must be 12 characters or less.		Create CBOR encoded boot record TLV. Represents the role of the software component (e.g. CoFM for coprocessor firmware). [max. 12 characters]
Signing Options > Custom	Manual Entry	--confirm	Add any custom options to pass to imgtool.py here. --pad places a trailer on the image that indicates that the image should be considered an upgrade. Writing this image in the secondary slot will then cause the bootloader to upgrade to it. --confirm marks the image as confirmed, which causes the upgrade to be permanent.
Signing Options > Python	Manual Entry	python	Name of the python command to use. Default is python, but can be updated to python3 for Linux or an absolute path if needed.
Flash Layout > TrustZone > Non-Secure Callable Region	Value must be an integer multiple of the 1024.	0x0	Size of the Non-Secure Callable region of the Secure image.

Size (Bytes)			
Flash Layout > TrustZone > Non-Secure Flash Area Size (Bytes) (TrustZone Non-Secure)	Value must be an integer multiple of the largest erase size on the mcu.	0x0	Size of the Non-Secure region. This must be non-zero for all TrustZone projects to ensure memory is partitioned correctly, even if the Secure and Non-Secure regions are treated as a single image. If the Non-Secure region can be updated separately, this size must account for the header and trailer.
Flash Layout > TrustZone > Non-Secure Callable RAM Region Size (Bytes)	Value must be an integer multiple of the 1024.	0x0	Size of the Non-Secure Callable RAM region of the Secure image.
Flash Layout > TrustZone > Non-Secure RAM Region Size (Bytes) (TrustZone Non-Secure)	Value must be an integer multiple of the 8192.	0x0	Size of the Non-Secure RAM region. This must be non-zero for all TrustZone projects to ensure memory is partitioned correctly, even if the Secure and Non-Secure regions are treated as a single image.
Flash Layout > TrustZone > Image 2 Header Size (Bytes)	Value must be an integer multiple of 0x80 (alignment required by VTOR).	0x200	Size of the flash reserved for the application image header for Image 2.
Flash Layout > Bootloader Flash Area Size (Bytes)	Value must be an integer multiple of the largest erase size on the mcu.	0x20000	Size of the flash reserved for the bootloader.
Flash Layout > Image 1 Header Size (Bytes)	Value must be an integer multiple of 0x80 (alignment required by VTOR).	0x200	Size of the flash reserved for the application image header. Must meet minimum VTOR alignment requirements for the core (0x100 for Cortex-M23, 0x80 for Cortex-M4 and Cortex-M33).
Flash Layout > Image 1 Flash Area Size (Bytes)	Value must be an integer multiple of the largest erase size on	0x20000	Size of the application image 1, including the header and trailer. For

	the mcu.		TrustZone projects, enter the combined size of the Secure and Non-Secure Callable regions if the Non-Secure image can be updated separately, or enter the size of the entire image slot if Secure, Non-Secure Callable, and Non-Secure regions are updated as a single image.
Flash Layout > Scratch Flash Area Size (Bytes)	Value must be an integer multiple of the largest erase size on the mcu.	0x0	Size of the scratch area. Only required for swap update method.
Data Sharing > Maximum Measured Boot Record Size (Bytes)	Value must be an integer.	0x64	Maximum size of the boot record.
Data Sharing > Shared Data Size (Bytes)	Value must be an integer.	0x380	Size of the shared RAM area. Required for Measured Boot.
Data Sharing > Shared Data Address	Value must be an integer	0x20000000	Shared RAM start address. Required for Measured Boot.

Clock Configuration

This module does not use peripheral clocks.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Getting Started: Creating an MCUboot Project

Start by creating a new project in e2 studio or RA SC. If the MCU supports TrustZone, select a Flat project. The bootloader resides entirely in Secure memory, but it is considered a flat project because it does not provide any Non-Secure Callable functions. On the Stacks tab, add New > Bootloader > MCUboot. Resolve any constraint errors and edit configurations as desired. Add either the example keys or generate your own key. The MCUboot key generation tool is provided at ra/mcu-tools/MCUboot/scripts/imgtool.py and documented at https://github.com/mcu-tools/mcuboot/blob/master/docs/imgtool.md. Install the following required python packages to use imgtool.py: https://github.com/mcu-tools/mcuboot/blob/master/scripts/requirements.txt.

In src/hal_entry.c, drag in Developer Assistance > HAL/Common > MCUboot > Quick Setup > Call Quick Setup. Add a call to mcuboot_quick_setup() in the application and make any desired updates.

Note

MCUboot will contain either the verificaton public key or its hash. During production it is necessary to permanently lock the flash region where MCUboot is programmed to prevent the keys or the code from being modified.

Getting Started: Signing Tool Prerequisite

To use the MCUboot signing tool, ensure you have Python 3.x installed on your system. Then install the Python packages required for the signing tool with the following command:

pip3 install --user -r ra/mcu-tools/MCUboot/scripts/requirements.txt

Getting Started: Converting a Project to an MCUboot Image

MCUboot application images must execute from the image slot defined by the MCUboot project. They are also limited to a single downloadable flash region. All of this is handled by specifying a BootloaderDataFile in the FSP Configuration tool.

Any existing project can be converted to an MCUboot image.

1. If the project was created with a version prior to FSP v3.0.0, update the linker script to the v3.0.0 version before using it as an MCUboot application image.
2. Right click the project to convert in e2 studio or RA SC and select Properties.
3. Open C/C++ Build and select Build Variables.
4. Click Add...
5. For Variable Name, enter BootloaderDataFile. For Type, select File. Browse to the *.bld file created alongside the *.elf file for the associated MCUboot project.
6. Click OK, then Apply and Close.

To convert a TrustZone image, follow the steps above for both the Secure project and the Non-Secure project.

MCUboot application images must also be signed to work with MCUboot. At a minimum, this involves adding a SHA and MCUboot specific constant data called boot magic in the image trailer.

Signing can be done on the as a post-build step in e2 studio. To sign the image as a post-build step:

1. If Linux is used to develop the application image, change the MCUboot property Signing > Python to python3.
2. Build the bootloader project to generate the *.bld file. Make sure to build the bootloader project on the same computer as the application image to ensure the path to the signing script is correct.
3. Define environment variables in the Properties of the application image project in e2 studio.
    a. Right click the application image project, and select **Properties**.
    b. Select **C/C++ Build > Environment** on the left.
    c. Click **Add...**
    d. Define the following environment variables one at a time:
        - MCUBOOT_IMAGE_VERSION: Set to the version of the application image.
        - MCUBOOT_IMAGE_SIGNING_KEY: Set the path to the key used for signing. If signing is not required, do not set this variable. If example keys are used, set MCUBOOT_IMAGE_SIGNING_KEY as follows (replace <boot_project> with the bootloader project path):
            - ECC: <boot_project>/ra/mcu-tools/MCUboot/root-ec-p256.pem
            - RSA 2K: <boot_project>/ra/mcu-tools/MCUboot/root-rsa-2048.pem

        - RSA 3K: <boot_project>/ra/mcu-tools/MCUboot/root-rsa-3072.pem
    - MCUBOOT_APP_BIN_CONVERTER: Optional. Set to path to objcopy, arm-none-eabi-objcopy, fromelf, or ielftool. Not required if one of these tools is on the path.
4. Build the project.
5. The signed image is output next to the application <project>.elf file with the name <project>bin.signed.

Getting Started: Download and Debug

For projects that do not use TrustZone, debug the MCUboot project using the default configuration. Before running, load the signed image to the address specified in the signing comment in ra_cfg/mcu-tools/include/mcuboot_config/mcuboot_config.h. This can be done with the Load Ancillary File button when debugging in e2 studio. Upgrade images can be loaded to the upgrade image slots using the same method.

For TrustZone projects, debug using the Secure project to ensure the IDAU is partitioned correctly when debugging in e2 studio. Make the following modifications before debugging in e2 studio:

1. In the Debug Configurations for your project, on the Startup tab, click Add... to add the MCUboot project *.elf file (Image and Symbols), and optionally the Non-Secure project *.elf file.
2. For the Secure and Non-Secure project *.elf file, load Symbols Only.
3. After starting to debug, load the signed Secure image and the signed Non-Secure image into the addresses specified in the signing comment in ra_cfg/mcu-tools/include/mcuboot_config/mcuboot_config.h. This can be done with the Load Ancillary File button when debugging in e2 studio. Upgrade images can be loaded to the upgrade image slots using the same method.

Confirming Upgrade in Swap Mode

In Swap Mode operation, if the upgrade image is signed with the –pad option, MCUboot will install that image as a temporary update where if nothing else is done, a reboot will cause MCUboot to revert to the image version that was swapped out during the upgrade. In order for the updated image to prevent this reversion and make the update permanent, the boot_set_confirmed() must be called from the application.

To avail this capability in the application image, from the Stacks tab, add New > Bootloader > MCUboot Image Utilities (Swap Mode). Resolve any constraint errors and edit configurations as desired.

In src/hal_entry.c, drag in Developer Assistance > HAL/Common > MCUboot Image Utilities > Quick Setup > Confirm Primary Image. Add a call to boot_set_confirmed() in the application and confirm the image in the primary slot.

XIP Mode operation

XIP mode is enabled selecting "Direct XIP" as the Upgrade Mode option in the configurator or by defining "MCUBOOT_DIRECT_XIP" in the mcuboot config file. The linker script defines the symbol "XIP_SECONDARY_SLOT_IMAGE" by default to 0. To link an application to the secondar slot in XIP mode, set XIP_SECONDARY_SLOT_IMAGE to 1 in the application linker script. Direct XIP mode does not support TrustZone projects.

Dual Bank operation

MCUboot can be used with Dual bank mode to leverage the advantages of dual bank flash operation. When Dual Bank mode is enabled, only the XIP upgrade mode can be used.

Note

Unlike in normal XIP Mode operation, the linker script symbol "XIP_SECONDARY_SLOT_IMAGE" must be undefined in Dual Bank mode. *An example flash layout in this configuration for a 1 MB is shown below. Note that there are 2 copies of the bootloader, one in Bank 0 and another in Bank 1.*

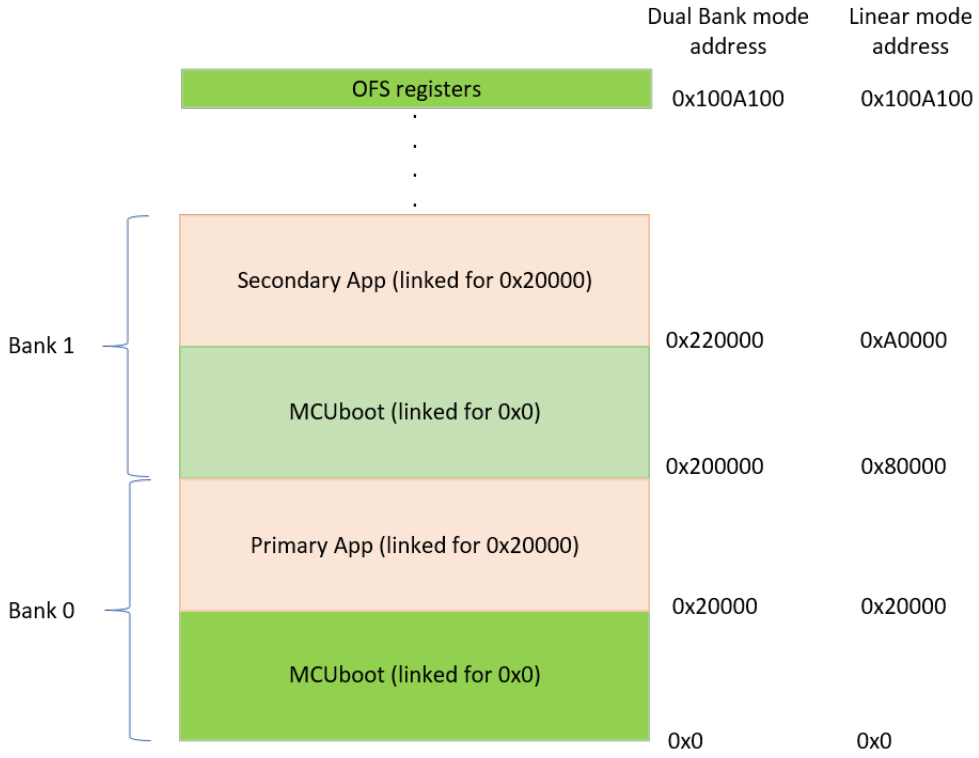

Figure 207: MCUboot Dual Bank layout for 1 MB Memory

For this example layout, the following files are generated when Dual Bank mode with XIP is enabled:

1. Bootloader Project: srec file linked to address 0 and includes the OFS region.
2. Application Project (Primary): signed bin file linked to address 0x20000.
3. Application Project (Secondary): signed bin file linked to address 0x20000.

In Dual Bank mode, the available flash memory is split into two halves and referred to as Bank 0 and 1. In this example Bank 0 would span from address 0x0 - 0x7FFFF and Bank 1 from 0x200000 - 0x27FFFF. In Linear mode, it is possible to program the Bank 1 area by programming to 0x80000 - 0xFFFFF.

Programming in Dual Bank Mode

The bootloader must be duplicated in Dual Bank mode. Bank 0 can be programmed using the srec file generated from the MCUboot project; this will also program the OFS region which contains the dual bank enable bit, so it must either be programmed last if each file is programmed independently. Another option is to combine all images: MCUboot in Bank 0, primary image, MCUboot in Bank 1 (no OFS), and secondary image (optional). To program MCUboot to Bank 1, offset MCUboot by half the flash size and cut off the OFS region (0x0100A100 to address 0x0100A2FF on CM33 MCUs that

support dual bank). Using srec-cat for a 1 MB flash MCU (0x80000 flash per bank), an example command to create the bootloader image for Bank 1: "srec_cat MCUboot_dualbank.srec -crop 0 0x80000 -offset 0x80000 -o MCUboot_dualbank_offset.srec". The application project for Bank 1 can be similarly offset using srec_cat: "srec_cat app1.bin.signed -binary -offset 0xA0000 -o app1_offset.srec", where 0xA0000 is 0x80000 (half the flash) + 0x20000 (MCUboot size). The signed binary file for Bank 0 can be converted to srec format using srec_cat: "srec_cat app0.bin.signed -binary -offset 0x20000 -o app0.srec"

To combine all the files into one srec file, use "srec_cat MCUboot_dualbank.srec MCUboot_dualbank_offset.srec app0.srec app1_offset.srec -o combined_srec".

External Memory Support

QSPI support for secondary image storage can be enabled in the configurator. The booloader expectes the QSPI memory to be pre-configured by user code in the bootloader for read/write operation. The bootloader code operates under the assumption that the user has configured the QSPI in Extended-SPI mode and that R_QSPI_Open() has been called prior to invoking boot_go();. For an example on how to initialize the QSPI device, refer to the QSPI module. The QSPI sector size must be the same as that of the MCU internal flash (BSP_FEATURE_FLASH_HP_CF_REGION1_BLOCK_SIZE) for swap mode operation.

MCUboot Memory Map

For single image projects with no external memory support, the default memory map looks like:

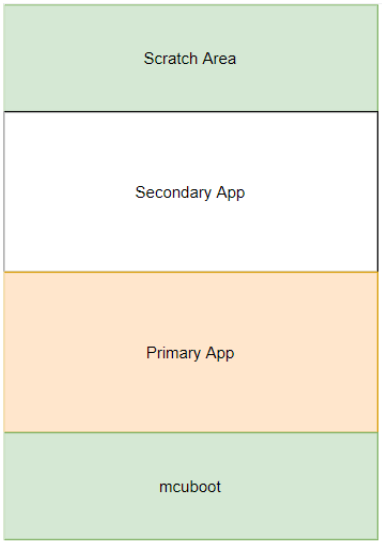

Figure 208: MCUboot Memory Map

For projects with 2 separately updateable images (used for TrustZone applications where the Secure and Non-Secure images can be updated separately), the default memory map with no external memory support looks like:

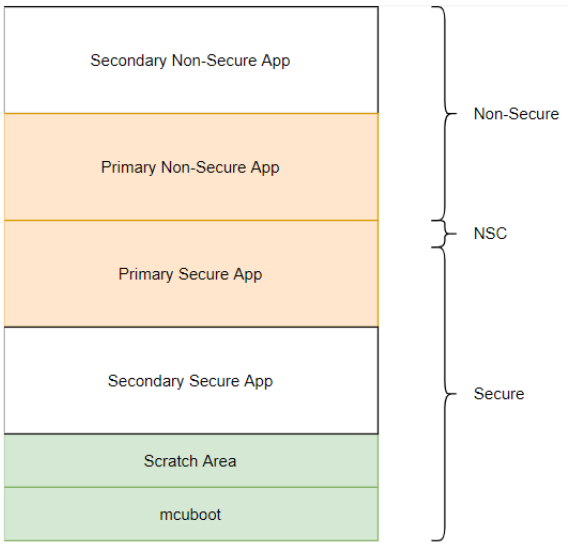

Figure 209: MCUboot Memory Map (TrustZone)

For single image projects with QSPI, the default memory map looks like:

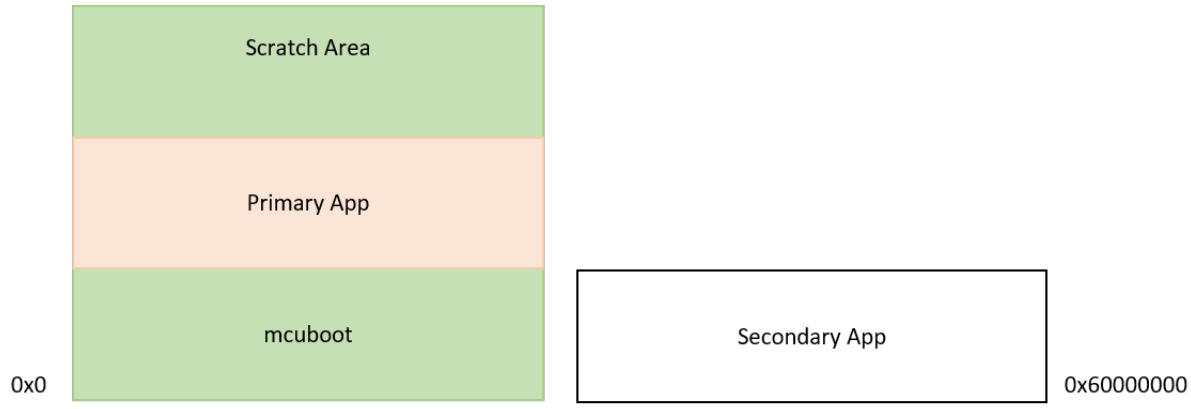

Figure 210: MCUboot Memory Map with QSPI

MCUboot Crypto Stack Options

The following crypto stacks can be used with MCUboot in FSP:

1. MbedTLS, which is hardware accelerated on all RA devices. On the RA2 which has an AES engine only, ECC/RSA/SHA operations are in software.
2. TinyCrypt (S/W Only) can be used with all devices.
3. TinyCrypt (H/W Accelerated) has AES operations accelerated for the RA2 family only. When using MCUboot without encryption there is no difference between using this or the S/W only version.
4. SCE9 Protected Mode on devices that have the SCE9 (eg: RA6M4, RA4M3, RA4M2)

MbedTLS provides the best performance for MCUBoot signature verification on the RA6 and RA4 devices but has a much larger code footprint compared to TinyCrypt. For RA2 devices TinyCrypt is the best option.

Using SCE9 Protected Mode Crypto Stack

Using this crypto stack with MCUBoot provides additional security by ensuring that any keys that are used were securely provisioned for the specific device. The Application Note R11AN0496 provides detailed steps on how to go about installing these keys. Since the section "Preparing Keys for Installation and Update Using RFP" document currently only provides information on how to install an AES key, this section will provide information on how to install an ECC public key.

Note

When using the SCE9 Protected Mode Stack with MCUboot it is required that the public keys in the format described in the "MCUboot Example Keys" module in the stack is also provided in the project.

1. Generate an ECC key pair. There are various ways to do this but you can use openSSL to do so: "openssl ecparam -name secp256k1 -genkey -noout -out my_ecc_secp256k1_key.pem".
2. Once the key is generated, in order to install the public key using RFP (Renesas Flash Programmer) the user needs to have their own UFPK (User Factory Programming Key) and W-UFPK (Wrapped User Factory Programming Key). Refer to R11AN0496 on how to obtain these keys.
3. Once the UFPK and W-UFPK are available, we need to extract the public key from the pem file. The public key can be viewed by using "openssl ec -noout -text -in my_ecc_secp256k1_key.pem". Note that when the ECC public key is printed out this way, it will contain a 0x04 ASN.1 demarcator at the start which should be discarded.
4. Use the rfp-util.exe utility from the RFP installation folder to wrap the public key using the UFPK and W-UFPK into a format that can be installed by RFP and the factory bootloader on the MCU.
5. Use RFP as described in R11AN0496 to install the key to the location of mcuboot_sce9_key section.

These are examples that install the default keys provided with MCUboot in ra/mcu-tools/MCUboot/. The examples assume that UFPK nd W-UFPK are already available.

```
  //Print out the EC-P256 Public Key using openSSL
C:\ openssl ec -noout -text -in root-ec-p256.pem
read EC key
Private-Key: (256 bit)

"16" /output "C:\ECC_pub_install.rkey"
// From the bootloader map file determine the address of mcuboot_sce9_key section
Use RFP to install "ECC_pub_install.rkey" as described in R11AN0496 to the address
where the mcuboot_sce9_key section is located.
```

Examples

Basic Example

This is an example of using MCUboot in an application.

```
void rm_mcuboot_port_example (void)
{
#ifdef MCUBOOT_USE_MBED_TLS
 /* Initialize mbedtls. */
 mbedtls_platform_context ctx = {0};
    assert(0 == mbedtls_platform_setup(&ctx));
#elif defined(MCUBOOT_USE_TINYCRYPT)
 /* Initialize TinyCrypt port. */
    assert(FSP_SUCCESS == RM_TINCYRYPT_PORT_Init());
#else
 /* Initialize SCE9 Protected Mode driver. */
 sce_instance_ctrl_t sce_ctrl;
 const sce_cfg_t    sce_cfg =
    {.lifecycle = SCE_SSD};
    assert(FSP_SUCCESS == R_SCE_Open(&sce_ctrl, &sce_cfg));
#endif
 /* (Optional) To check for updates, call boot_set_pending. */
```

```
bool update = 0;
if (update)
   {
      boot_set_pending(0);
   }
/* Verify the boot image and get its location. */
struct boot_rsp rsp;
   assert(0 == boot_go(&rsp));
/* Enter the application. */
   RM_MCUBOOT_PORT_BootApp(&rsp);
}
```

Detailed Description

Calculation process for the motor control on RA MCUs. This module implements the Interface.

Overview

The motor current is used to control the electric current of motor rotation in an appication. This module should be called cyclically after the A/D conversion of electric current of each phase in an application. This module calculates each phase voltage with input current reference, electric current and rotor angle.

Features

The motor 120 control hall module has below features.

- Calculate each phase(U/V/W) voltage.
- Decoupling control.
- Voltage error compensation.

Configuration

Build Time Configurations for rm_motor_120_control_hall

The following build time configurations are defined in fsp_cfg/rm_motor_120_control_hall_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Motor > 120-degree conduction control with Hall sensors (rm_motor_120_control_hall)

This module can be added to the Stacks tab via New Stack > Motor > 120-degree conduction control with Hall sensors (rm_motor_120_control_hall).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_120_control_hall0	Module name.

General > Conduction type	• First 60 degree PWM • Complementary First 60 degree PWM	First 60 degree PWM	Select conduction type
General > Timeout counts (msec)	Must be a valid non-negative value.	200	Counts to judge rotor unrotate
General > Maximum voltage (V)	Must be a valid non-negative value.	20.0	Maximum output voltage (V)
General > Minimum voltage (V)	Must be a valid non-negative value.	3.0	Minimum output voltage (V)
General > Speed PI decimation	Must be a valid non-negative value.	0	Speed PI control decimation count
General > Freerun timer frequency (MHz)	Must be a valid non-negative value.	120	Freerun timer frequency (MHz)
General > Speed LPF	Must be a valid non-negative value.	1.0	Speed LPF parameter
General > Step of speed reference change	Must be a valid non-negative value.	0.2	Speed ref change step
General > Start reference voltage (V)	Must be a valid non-negative value.	5.8	Reference voltage for boot mode (V)
General > Hall wait counts	Must be a valid non-negative value.	12	Wait counts of hall interrupts to start speed calculation
General > Stop judge time	Must be a valid non-negative value.	1000	Stop judge time
General > Minimum limit speed (rpm)	Must be a valid non-negative value.	550	Minimum limit speed (rpm) (mechanical angle)
General > PI control KP	Must be a valid non-negative value.	0.02	PI control gain of proportional term
General > PI control KI	Must be a valid non-negative value.	0.0005	PI control gain of integral term
General > PI control limit	Must be a valid non-negative value.	24.0	PI control limit of integral term
General > Hall interrupt mask value	Must be a valid non-negative value.	15	For limiting hall interrupt processing. Limited by the number of ADC interrupts
Motor Parameter > Pole pairs	Must be a valid non-negative value.	2	Pole pairs
Motor Parameter > Resistance (ohm)	Must be a valid non-negative value.	6.447	Resistance

Motor Parameter > Inductance of d-axis (H)	Must be a valid non-negative value.	0.0045	Inductance of d-axis
Motor Parameter > Inductance of q-axis (H)	Must be a valid non-negative value.	0.0045	Inductance of q-axis
Motor Parameter > Permanent magnetic flux (Wb)	Must be a valid non-negative value.	0.02159	Permanent magnetic flux
Motor Parameter > Rotor inertia (kgm^2)	Must be a valid non-negative value.	1.8	Rotor inertia
Interrupts > Callback	Name must be a valid C symbol	NULL	Callback function
Hall sensor port U	Manual Entry	BSP_IO_PORT_04_PIN_11	Hall sensor port U
Hall sensor port V	Manual Entry	BSP_IO_PORT_04_PIN_10	Hall sensor port V
Hall sensor port W	Manual Entry	BSP_IO_PORT_04_PIN_09	Hall sensor port W

Clock Configuration

This module doesn't depend on clock setting, because this module is a simple calculation process.

Pin Configuration

Depend on included ICU module.

Usage Notes

Limitations

- Set the period of current control with none-negative value.
- Set the reference voltage with none-negative value.

Examples

Basic Example

This is a basic example of minimal use of the motor 120 control hall in an application.

```
void motor_120_control_hall_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = RM_MOTOR_120_CONTROL_HALL_Open(g_motor_120_control_hall0.p_ctrl,
```

```
g_motor_120_control_hall0.p_cfg);
    assert(FSP_SUCCESS == err);
 /* Set speed reference before motor run */
    (void) RM_MOTOR_120_CONTROL_HALL_SpeedSet(g_motor_120_control_hall0.p_ctrl,
DEF_120_CONTROL_HALL_TEST_SPEED_REF);
 /* Start motor rotation */
    (void) RM_MOTOR_120_CONTROL_HALL_Run(g_motor_120_control_hall0.p_ctrl);
 /* Get current motor speed */
    (void) RM_MOTOR_120_CONTROL_HALL_SpeedGet(g_motor_120_control_hall0.p_ctrl,
&smpl_speed);
 /* Get current */
    (void) RM_MOTOR_120_CONTROL_HALL_CurrentGet(g_motor_120_control_hall0.p_ctrl,
&smpl_current_status);
 /* Get wait stop flag */
    (void)
RM_MOTOR_120_CONTROL_HALL_WaitStopFlagGet(g_motor_120_control_hall0.p_ctrl,
&smpl_wait_stop_flag);
 /* Get timeout error flag */
    (void)
RM_MOTOR_120_CONTROL_HALL_TimeoutErrorFlagGet(g_motor_120_control_hall0.p_ctrl,
&smpl_timeout_error_flag);
 /* Get pattern error flag */
    (void)
RM_MOTOR_120_CONTROL_HALL_PatternErrorFlagGet(g_motor_120_control_hall0.p_ctrl,
&smpl_pattern_error_flag);
 /* Get voltage ref */
    (void) RM_MOTOR_120_CONTROL_HALL_VoltageRefGet(g_motor_120_control_hall0.p_ctrl,
&smpl_voltage_ref);
    (void)
RM_MOTOR_120_CONTROL_HALL_ParameterUpdate(g_motor_120_control_hall0.p_ctrl,
g_motor_120_control_hall0.p_cfg);
 /* Stop motor rotation */
    (void) RM_MOTOR_120_CONTROL_HALL_Stop(g_motor_120_control_hall0.p_ctrl);
 /* Reset the process. */
```

```
    (void) RM_MOTOR_120_CONTROL_HALL_Reset(g_motor_120_control_hall0.p_ctrl);
 /* Close the module. */
    (void) RM_MOTOR_120_CONTROL_HALL_Close(g_motor_120_control_hall0.p_ctrl);
}
```

Data Structures

struct	motor_120_control_hall_extended_cfg_t
struct	motor_120_control_hall_instance_ctrl_t

Data Structure Documentation

◆ motor_120_control_hall_extended_cfg_t

struct motor_120_control_hall_extended_cfg_t		
Extended configurations for motor 120 control hall		
Data Fields		
bsp_io_port_pin_t	port_hall_sensor_u	Hall sensor port U.
bsp_io_port_pin_t	port_hall_sensor_v	Hall sensor port V.
bsp_io_port_pin_t	port_hall_sensor_w	Hall sensor port W.
float	f4_start_refv	Reference voltage for boot mode.
uint32_t	u4_hall_wait_cnt	Wait counts of hall interrupts for speed calculation.
uint32_t	u4_stop_judge_time	Stop judge time.
uint32_t	u4_min_speed_rpm	Minimum limit speed (rpm) (mechanical angle)
uint32_t	u4_hall_interrupt_mask_value	For limiting hall interrupt processing. Limited by the number of ADC interrupts.
motor_120_driver_instance_t const *	p_motor_120_driver_instance	Motor 120 driver access module.
timer_instance_t const *	p_speed_cyclic_timer_instance	Cyclic process of speed control timer module.
timer_instance_t const *	p_speed_calc_timer_instance	Speed calculate timer module.
external_irq_instance_t const *	p_u_hall_irq_instance	U phase hall interrupt.
external_irq_instance_t const *	p_v_hall_irq_instance	V phase hall interrupt.
external_irq_instance_t const *	p_w_hall_irq_instance	W phase hall interrupt.

◆ motor_120_control_hall_instance_ctrl_t

struct motor_120_control_hall_instance_ctrl_t		
120 control hall instance control block		
Data Fields		
uint32_t	open	Used to determine if the channel is configured.
motor_120_control_status_t	active	Flag to set active/inactive the motor 120 control.
motor_120_control_run_mode_t	run_mode	Drive mode.
motor_120_control_timeout_error_flag_t	timeout_error_flag	Timeout error status.
motor_120_control_pattern_error_flag_t	pattern_error_flag	Hall pattern error status.
motor_120_control_rotation_direction_t	direction	Rotational direction (0:CW ,1:CCW)
float	f4_speed_calc_base	Base counts to calculate rotation speed.
float	f_rpm2rad	Translate value to radian/second to rpm.
float	f4_v_ref	Voltage reference (output of speed PI control)
float	f4_ref_speed_rad	Motor speed reference.
float	f4_ref_speed_rad_ctrl	Motor speed reference for speed PI control.
float	f4_speed_rad	Motor speed.
uint32_t	u4_cnt_speed_pi	Counter for period of speed PI control.
motor_120_control_wait_stop_flag_t	flag_wait_stop	Flag for waiting for motor stop.
uint32_t	u4_cnt_wait_stop	Counter for waiting motor stop.
motor_120_driver_phase_pattern_t	v_pattern	Voltage pattern.
motor_120_control_speed_ref_t	flag_speed_ref	Speed reference flag.
motor_120_control_voltage_ref_t	flag_voltage_ref	Voltage reference flag.
uint32_t	u4_cnt_timeout	Counter for timeout error.
uint32_t	u4_hall_timer_cnt	Value of timer counter.
uint32_t	u4_pre_hall_timer_cnt	Previous value of timer counter.
int32_t	s4_timer_cnt_ave	Counts for 360 degrees.
uint32_t	u4_timer_cnt_buf[MOTOR_120_	Counts for 60 degrees.

	CONTROL_HALL_TIMES]	
uint32_t	u4_timer_cnt_num	Array element number before 360 degrees.
float	f4_pi_ctrl_err	PI control error.
float	f4_pi_ctrl_refi	PI control buffer of integral term.
uint32_t	u4_hall_intr_cnt	For start timing of speed calculation.
uint32_t	u4_adc_interrupt_cnt	Number of ADC interrupt processing.
motor_120_control_cfg_t const *	p_cfg	Pointer of configuration structure.
external_irq_callback_args_t	hall_interrupt_args	For call IRQ callbackSet function.
timer_callback_args_t	timer_args	For call timer callbackSet function.

Function Documentation

◆ RM_MOTOR_120_CONTROL_HALL_Open()

fsp_err_t RM_MOTOR_120_CONTROL_HALL_Open (motor_120_control_ctrl_t *const *p_ctrl*, motor_120_control_cfg_t const *const *p_cfg*)

Opens and configures the motor hall 120 detection module. Implements motor_120_control_api_t::open.

Example:

```
/* Initializes the module. */
   err = RM_MOTOR_120_CONTROL_HALL_Open(g_motor_120_control_hall0.p_ctrl,
g_motor_120_control_hall0.p_cfg);
```

Return values

FSP_SUCCESS	Motor 120 driver successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_HALL_Close()

fsp_err_t RM_MOTOR_120_CONTROL_HALL_Close (motor_120_control_ctrl_t *const *p_ctrl*)

Disables specified motor hall 120 detection module. Implements motor_120_control_api_t::close.

Example:

```
/* Close the module. */
   (void) RM_MOTOR_120_CONTROL_HALL_Close(g_motor_120_control_hall0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_CONTROL_HALL_Run()

fsp_err_t RM_MOTOR_120_CONTROL_HALL_Run (motor_120_control_ctrl_t *const *p_ctrl*)

Run motor (Start motor rotation). Implements motor_120_control_api_t::run.

Example:

```
/* Start motor rotation */
   (void) RM_MOTOR_120_CONTROL_HALL_Run(g_motor_120_control_hall0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_CONTROL_HALL_Stop()

fsp_err_t RM_MOTOR_120_CONTROL_HALL_Stop (motor_120_control_ctrl_t *const *p_ctrl*)

Stop motor (Stop motor rotation). Implements motor_120_control_api_t::stop.

Example:

```
/* Stop motor rotation */
   (void) RM_MOTOR_120_CONTROL_HALL_Stop(g_motor_120_control_hall0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_CONTROL_HALL_Reset()

fsp_err_t RM_MOTOR_120_CONTROL_HALL_Reset (motor_120_control_ctrl_t *const *p_ctrl*)

Reset variables of motor hall 120 detection module. Implements motor_120_control_api_t::reset.

Example:

```
/* Reset the process. */
   (void) RM_MOTOR_120_CONTROL_HALL_Reset(g_motor_120_control_hall0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully reset.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_CONTROL_HALL_SpeedSet()

fsp_err_t RM_MOTOR_120_CONTROL_HALL_SpeedSet (motor_120_control_ctrl_t *const *p_ctrl*, float const *speed_rpm*)

Set speed[rpm]. Implements motor_120_control_api_t::speedSet.

Example:

```
/* Set speed reference before motor run */
   (void) RM_MOTOR_120_CONTROL_HALL_SpeedSet(g_motor_120_control_hall0.p_ctrl,
DEF_120_CONTROL_HALL_TEST_SPEED_REF);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_CONTROL_HALL_SpeedGet()

fsp_err_t RM_MOTOR_120_CONTROL_HALL_SpeedGet (motor_120_control_ctrl_t *const *p_ctrl*, float *const *p_speed_rpm*)

Get speed. Implements motor_120_control_api_t::speedGet.

Example:

```
/* Get current motor speed */
   (void) RM_MOTOR_120_CONTROL_HALL_SpeedGet(g_motor_120_control_hall0.p_ctrl,
&smpl_speed);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_HALL_CurrentGet()

fsp_err_t RM_MOTOR_120_CONTROL_HALL_CurrentGet (motor_120_control_ctrl_t *const *p_ctrl*, motor_120_driver_current_status_t *const *p_current_status*)

Get current. Implements motor_120_control_api_t::currentGet.

Example:

```
/* Get current */
   (void) RM_MOTOR_120_CONTROL_HALL_CurrentGet(g_motor_120_control_hall0.p_ctrl,
&smpl_current_status);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_HALL_WaitStopFlagGet()

fsp_err_t RM_MOTOR_120_CONTROL_HALL_WaitStopFlagGet (motor_120_control_ctrl_t *const *p_ctrl*, motor_120_control_wait_stop_flag_t *const *p_flag*)

Get wait stop flag. Implements motor_120_control_api_t::waitStopFlagGet.

Example:

```
/* Get wait stop flag */
   (void)
RM_MOTOR_120_CONTROL_HALL_WaitStopFlagGet(g_motor_120_control_hall0.p_ctrl,
&smpl_wait_stop_flag);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_HALL_TimeoutErrorFlagGet()

fsp_err_t RM_MOTOR_120_CONTROL_HALL_TimeoutErrorFlagGet (motor_120_control_ctrl_t *const *p_ctrl*, motor_120_control_timeout_error_flag_t *const *p_timeout_error_flag*)

Get timeout error flag. Implements motor_120_control_api_t::timeoutErrorFlagGet.

Example:

```
/* Get timeout error flag */
   (void)
RM_MOTOR_120_CONTROL_HALL_TimeoutErrorFlagGet(g_motor_120_control_hall0.p_ctrl,
&smpl_timeout_error_flag);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_HALL_PatternErrorFlagGet()

fsp_err_t RM_MOTOR_120_CONTROL_HALL_PatternErrorFlagGet (motor_120_control_ctrl_t *const *p_ctrl*, motor_120_control_pattern_error_flag_t *const *p_pattern_error_flag*)

Get pattern error flag. Implements motor_120_control_api_t::patternErrorFlagGet.

Example:

```
/* Get pattern error flag */
   (void)
RM_MOTOR_120_CONTROL_HALL_PatternErrorFlagGet(g_motor_120_control_hall0.p_ctrl,
&smpl_pattern_error_flag);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_HALL_VoltageRefGet()

fsp_err_t RM_MOTOR_120_CONTROL_HALL_VoltageRefGet (motor_120_control_ctrl_t *const *p_ctrl*, motor_120_control_voltage_ref_t *const *p_voltage_ref*)

Get voltage ref. Implements motor_120_control_api_t::voltageRefGet.

Example:

```
/* Get voltage ref */
   (void) RM_MOTOR_120_CONTROL_HALL_VoltageRefGet(g_motor_120_control_hall0.p_ctrl,
&smpl_voltage_ref);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_HALL_ParameterUpdate()

fsp_err_t RM_MOTOR_120_CONTROL_HALL_ParameterUpdate (motor_120_control_ctrl_t *const *p_ctrl*, motor_120_control_cfg_t const *const *p_cfg*)

Update the parameters of hall 120 detection module. Implements motor_120_control_api_t::parameterUpdate.

Example:

```
   (void)
RM_MOTOR_120_CONTROL_HALL_ParameterUpdate(g_motor_120_control_hall0.p_ctrl,
g_motor_120_control_hall0.p_cfg);
```

Return values

FSP_SUCCESS	Successfully data was updated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

4.2.104 Motor 120 Control Sensorless (motor_120_control_sensorless)

Modules

Functions

fsp_err_t	RM_MOTOR_120_CONTROL_SENSORLESS_Open (motor_120_control_ctrl_t *const p_ctrl, motor_120_control_cfg_t const *const p_cfg) Opens and configures the motor sensorless 120 detection module. Implements motor_120_control_api_t::open. More...
fsp_err_t	RM_MOTOR_120_CONTROL_SENSORLESS_Close (motor_120_control_ctrl_t *const p_ctrl) Disables specified motor sensorless 120 detection module. Implements motor_120_control_api_t::close. More...

Detailed Description

Calculation process for the motor control on RA MCUs. This module implements the Interface.

Overview

The motor current is used to control the electric current of motor rotation in an appication. This module should be called cyclically after the A/D conversion of electric current of each phase in an application. This module calculates each phase voltage with input current reference, electric current

and rotor angle.

Features

The motor 120 control sensorless module has below features.

- Calculate each phase(U/V/W) voltage.
- Decoupling control.
- Voltage error compensation.

Configuration

Build Time Configurations for rm_motor_120_control_sensorless

The following build time configurations are defined in fsp_cfg/rm_motor_120_control_sensorless_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Motor > 120-degree conduction control sensorless (rm_motor_120_control_sensorless)

This module can be added to the Stacks tab via New Stack > Motor > 120-degree conduction control sensorless (rm_motor_120_control_sensorless).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_120_control_sensorless0	Module name.
General > Conduction type	• First 60 degree PWM • Complementary First 60 degree PWM	First 60 degree PWM	Select conduction type
General > Stop BEMF	Must be a valid non-negative value.	0.5	Value of stop motor BEMF (U+V+W)
General > Timeout counts (msec)	Must be a valid non-negative value.	2000	Undetected time
General > Maximum voltage for BOOT (V)	Must be a valid non-negative value.	8.0	Maximum output voltage for boot mode (V)
General > Maximum voltage (V)	Must be a valid non-negative value.	20.0	Maximum output voltage (V)
General > Minimum voltage (V)	Must be a valid non-negative value.	3.0	Minimum output voltage (V)
General > Carrier	Must be a valid non-	20.0	PWM carrier frequency

frequency (kHz)	negative value.		(kHz)
General > Adjusting angle	Manual Entry	0	Adjusting angle
General > Speed PI decimation	Must be a valid non-negative value.	1	Speed PI control decimation count
General > Free run timer frequency (MHz)	Must be a valid non-negative value.	120	Freerun timer frequency (MHz)
General > Speed LPF K	Must be a valid non-negative value.	1.0	Speed LPF parameter
General > Step of speed change	Must be a valid non-negative value.	0.2	Speed reference change step
General > Boot reference voltage (V)	Must be a valid non-negative value.	3.0	Voltage reference for boot mode
General > Voltage lamping time	Must be a valid non-negative value.	128	Voltage lamping time
General > Voltage constant adjust time	Must be a valid non-negative value.	64	Voltage constant adjust time value (msec)
General > Open loop start speed (rpm)	Manual Entry	150	Open loop start speed (rpm)
General > Open loop mode2 speed (rpm)	Manual Entry	185	to mode2 change speed (rpm)
General > Open loop mode3 speed (rpm)	Manual Entry	1000	to mode3 change speed (rpm)
General > Open loop start voltage (V)	Must be a valid non-negative value.	3.0	start reference voltage (V)
General > Open loop mode1 speed rate	Must be a valid non-negative value.	0.25	increase rate of reference speed (rpm/control period)
General > Open loop mode2 voltage rate	Must be a valid non-negative value.	0.00285	increase rate of reference voltage (v/control period)
General > Open loop mode2 speed rate	Must be a valid non-negative value.	0.71	increase rate of reference speed (rpm/control period)
General > Open loop mode3 voltage rate	Must be a valid non-negative value.	0.002	increase rate of reference voltage (v/control period)
General > Open loop maximum voltage (V)	Must be a valid non-negative value.	6.5	openloop maximum voltage (V)
General > PI control KP	Must be a valid non-negative value.	0.02	PI control gain of proportional term
General > PI control KI	Must be a valid non-negative value.	0.004	PI control gain of integral term

General > PI control limit	Must be a valid non-negative value.	24.0	PI control limit of integral term
Motor Parameter > Pole pairs	Must be a valid non-negative value.	2	Pole pairs
Motor Parameter > Resistance (ohm)	Must be a valid non-negative value.	6.447	Resistance
Motor Parameter > Inductance of d-axis (H)	Must be a valid non-negative value.	0.0045	Inductance of d-axis
Motor Parameter > Inductance of q-axis (H)	Must be a valid non-negative value.	0.0045	Inductance of q-axis
Motor Parameter > Permanent magnetic flux (Wb)	Must be a valid non-negative value.	0.02159	Permanent magnetic flux
Motor Parameter > Rotor inertia (kgm^2)	Must be a valid non-negative value.	1.8	Rotor inertia
Interrupts > Callback	Name must be a valid C symbol	NULL	callback function

Clock Configuration

This module doesn't depend on clock setting, because this module is a simple calculation process.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Limitations

- Set the period of current control with none-negative value.
- Set the reference voltage with none-negative value.

Examples

Basic Example

This is a basic example of minimal use of the motor 120 control sensorless in an application.

```
void motor_120_control_sensorless_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err =
```

```
RM_MOTOR_120_CONTROL_SENSORLESS_Open(g_motor_120_control_sensorless0.p_ctrl,
                                                g_motor_120_control_sensorless0.p_cfg);
    assert(FSP_SUCCESS == err);
 /* Set speed reference before motor run */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_SpeedSet(g_motor_120_control_sensorless0.p_ctrl,

DEF_120_CONTROL_SENSORLESSHALL_TEST_OVSPD_LIM);
 /* Start motor rotation */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_Run(g_motor_120_control_sensorless0.p_ctrl);
 /* Get current motor speed */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_SpeedGet(g_motor_120_control_sensorless0.p_ctrl,
&smpl_speed);
 /* Get current */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_CurrentGet(g_motor_120_control_sensorless0.p_ctrl,
&smpl_current_status);
 /* Get wait stop flag */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_WaitStopFlagGet
(g_motor_120_control_sensorless0.p_ctrl,
                                                        &smpl_wait_stop_flag);
 /* Get timeout error flag */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_TimeoutErrorFlagGet
(g_motor_120_control_sensorless0.p_ctrl,
                                                              &smpl_timeout_error_fl
ag);
 /* Get pattern error flag */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_PatternErrorFlagGet
(g_motor_120_control_sensorless0.p_ctrl,
```

```
                                                                    &smpl_pattern_error_fl
ag);
 /* Get voltage ref */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_VoltageRefGet(g_motor_120_control_sensorless0.p_ctrl,
&smpl_voltage_ref);
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_ParameterUpdate
(g_motor_120_control_sensorless0.p_ctrl,

g_motor_120_control_sensorless0.p_cfg);
 /* Stop motor rotation */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_Stop(g_motor_120_control_sensorless0.p_ctrl);
 /* Reset the process. */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_Reset(g_motor_120_control_sensorless0.p_ctrl);
 /* Close the module. */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_Close(g_motor_120_control_sensorless0.p_ctrl);
}
```

Data Structures

struct	motor_120_control_sensorless_extended_cfg_t
struct	motor_120_control_sensorless_instance_ctrl_t

Enumerations

enum	motor_120_control_sensorless_draw_in_position_t

Data Structure Documentation

◆ motor_120_control_sensorless_extended_cfg_t

struct motor_120_control_sensorless_extended_cfg_t
Extended configurations for motor 120 control sensorless

Data Fields		
float	f4_stop_bemf	Value of stop motor BEMF (U+V+W)
float	f4_max_boot_v	Max output voltage for boot mode (V)
float	f4_carrier_freq	Carrier wave frequency (kHz)
int32_t	s4_angle_shift_adjust	Adjusting angle.
float	f4_boot_ref_v	Voltage reference when zero speed (V)
uint32_t	u4_v_up_time	Voltage lamping time.
uint32_t	u4_v_const_time	Voltage constant adjust time value (ms)
int32_t	s4_ol_start_rpm	Start speed (rpm)
int32_t	s4_ol_mode1_change_rpm	To mode2 change speed (rpm)
int32_t	s4_ol_mode2_change_rpm	To mode3 change speed (rpm)
float	f4_ol_start_refv	Start reference voltage (V)
float	f4_ol_mode1_rate_rpm	Increase rate of reference speed (rpm/control period)
float	f4_ol_mode2_rate_refv	Increase rate of reference voltage (v/control period)
float	f4_ol_mode2_rate_rpm	Increase rate of reference speed (rpm/control period)
float	f4_ol_mode3_rate_refv	Increase rate of reference voltage (v/control period)
float	f4_ol_mode3_max_refv	Openloop max voltage (V)
motor_120_driver_instance_t const *	p_motor_120_driver_instance	Motor 120 driver access module.
timer_instance_t const *	p_speed_cyclic_timer_instance	Cyclic process of speed control timer module.
timer_instance_t const *	p_speed_calc_timer_instance	Speed calculate timer module.

◆ motor_120_control_sensorless_instance_ctrl_t

struct motor_120_control_sensorless_instance_ctrl_t		
120 control sensorless instance control block		
Data Fields		
uint32_t	open	Used to determine if the channel is configured.
motor_120_control_status_t	active	Flag to set active/inactive the motor 120 control.

motor_120_control_run_mode_t	run_mode	Drive mode.
motor_120_control_timeout_error_flag_t	timeout_error_flag	Timeout error status.
motor_120_control_pattern_error_flag_t	pattern_error_flag	Bemf pattern error status.
motor_120_control_rotation_direction_t	direction	Rotational direction (0:CW ,1:CCW)
float	f4_ol_pattern_set_calc	Counts to change timing of open loop pattern.
float	f4_speed_calc_base	Base counts to calculate rotation speed.
float	f_rpm2rad	Translate value to radian/second to rpm.
float	f4_v_ref	Voltage reference (output of speed PI control)
uint32_t	u4_pwm_duty	PWM duty.
float	f4_ref_speed_rad	Motor speed reference.
float	f4_ref_speed_rad_ctrl	Motor speed reference for speed PI control.
float	f4_speed_rad	Motor speed.
uint32_t	u4_cnt_speed_pi	Counter for period of speed PI control.
motor_120_control_wait_stop_flag_t	flag_wait_stop	Flag for waiting for motor stop.
float	f4_vn_ad	Neutral voltage.
uint32_t	u4_cnt_adj_v	Voltage lamping count adjustment.
motor_120_control_sensorless_draw_in_position_t	flag_draw_in	Status of draw in a initial position.
motor_120_driver_phase_pattern_t	v_pattern	Voltage pattern.
uint32_t	u4_v_pattern_num	Selecting pattern number for openloop drive.
uint32_t	u4_bemf_signal	Pattern of BEMF.
uint32_t	u4_pre_bemf_signal	Previous pattern of BEMF.
motor_120_control_sensorless_pattern_change_flag_t	flag_pattern_change	Pattern change flag.
motor_120_control_speed_ref_t	flag_speed_ref	Speed reference flag.
motor_120_control_voltage_ref_t	flag_voltage_ref	Voltage reference flag.

uint32_t	u4_ol_signal	Pattern of BEMF.
uint32_t	u4_ol_pattern_set	Openloop frequency.
uint32_t	u4_cnt_ol_pattern_set	Counter for openloop pattern change.
uint32_t	u4_cnt_timeout	Counter for timeout error.
uint32_t	u4_bemf_timer_cnt	Value of timer counter.
uint32_t	u4_pre_bemf_timer_cnt	Previous value of timer counter.
int32_t	s4_timer_cnt_ave	Counts for 360 degrees.
uint32_t	u4_timer_cnt_buf[MOTOR_120_CONTROL_SENSORLESS_TIMES]	Counts for 60 degrees.
uint32_t	u4_timer_cnt_num	Array element number before 360 degrees.
uint32_t	u4_cnt_carrier	Counter for carrier interrupt.
uint32_t	u4_pre_cnt_carrier	Previous carrier interrupt count.
uint32_t	u4_angle_shift_cnt	Shift degrees count.
float	f4_pi_ctrl_err	PI control error.
float	f4_pi_ctrl_refi	PI control buffer of integral term.
motor_120_control_cfg_t const *	p_cfg	Pointer of configuration structure.
timer_callback_args_t	timer_args	For call timer callbackSet function.

Enumeration Type Documentation

◆ motor_120_control_sensorless_draw_in_position_t

enum motor_120_control_sensorless_draw_in_position_t	
Draw in a initial position	
Enumerator	
MOTOR_120_CONTROL_SENSORLESS_DRAW_IN_POSITION_INIT	Inital parameter.
MOTOR_120_CONTROL_SENSORLESS_DRAW_IN_POSITION_1ST_TIME	Draw in a initial position of the 1st time.
MOTOR_120_CONTROL_SENSORLESS_DRAW_IN_POSITION_2ND_TIME	Draw in a initial position of the 2nd time.

◆ motor_120_control_sensorless_pattern_change_flag_t

enum motor_120_control_sensorless_pattern_change_flag_t	
Pattern change	
Enumerator	
MOTOR_120_CONTROL_SENSORLESS_PATTERN_CHANGE_FLAG_CLEAR	Inital parameter.
MOTOR_120_CONTROL_SENSORLESS_PATTERN_CHANGE_FLAG_SET	Voltage pattern change.

Function Documentation

◆ RM_MOTOR_120_CONTROL_SENSORLESS_Open()

fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_Open (motor_120_control_ctrl_t *const *p_ctrl*, motor_120_control_cfg_t const *const *p_cfg*)

Opens and configures the motor sensorless 120 detection module. Implements motor_120_control_api_t::open.

Example:

```
/* Initializes the module. */
   err =
RM_MOTOR_120_CONTROL_SENSORLESS_Open(g_motor_120_control_sensorless0.p_ctrl,
                                     g_motor_120_control_sensorless0.p_cfg);
```

Return values

FSP_SUCCESS	Motor driver successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_SENSORLESS_Close()

fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_Close (motor_120_control_ctrl_t *const *p_ctrl*)

Disables specified motor sensorless 120 detection module. Implements motor_120_control_api_t::close.

Example:

```
/* Close the module. */
   (void)
RM_MOTOR_120_CONTROL_SENSORLESS_Close(g_motor_120_control_sensorless0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_CONTROL_SENSORLESS_Run()

fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_Run (motor_120_control_ctrl_t *const *p_ctrl*)

Run motor (Start motor rotation). Implements motor_120_control_api_t::run.

Example:

```
/* Start motor rotation */
   (void)
RM_MOTOR_120_CONTROL_SENSORLESS_Run(g_motor_120_control_sensorless0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_CONTROL_SENSORLESS_Stop()

fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_Stop (motor_120_control_ctrl_t *const *p_ctrl*)

Stop motor (Stop motor rotation). Implements motor_120_control_api_t::stop.

Example:

```
/* Stop motor rotation */
   (void)
RM_MOTOR_120_CONTROL_SENSORLESS_Stop(g_motor_120_control_sensorless0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_CONTROL_SENSORLESS_Reset()

fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_Reset (motor_120_control_ctrl_t *const *p_ctrl*)

Reset variables of motor sensorless 120 detection module. Implements motor_120_control_api_t::reset.

Example:

```
/* Reset the process. */
   (void)
RM_MOTOR_120_CONTROL_SENSORLESS_Reset(g_motor_120_control_sensorless0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully reset.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_CONTROL_SENSORLESS_SpeedSet()

fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_SpeedSet (motor_120_control_ctrl_t *const *p_ctrl*, float const *speed_rpm*)

Set speed[rpm]. Implements motor_120_control_api_t::speedSet.

Example:

```
 /* Set speed reference before motor run */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_SpeedSet(g_motor_120_control_sensorless0.p_ctrl,

DEF_120_CONTROL_SENSORLESSHALL_TEST_OVSPD_LIM);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_CONTROL_SENSORLESS_SpeedGet()

fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_SpeedGet (motor_120_control_ctrl_t *const *p_ctrl*, float *const *p_speed_rpm*)

Get speed. Implements motor_120_control_api_t::speedGet.

Example:

```
 /* Get current motor speed */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_SpeedGet(g_motor_120_control_sensorless0.p_ctrl,
&smpl_speed);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_SENSORLESS_CurrentGet()

fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_CurrentGet (motor_120_control_ctrl_t *const *p_ctrl*, motor_120_driver_current_status_t *const *p_current_status*)

Get current. Implements motor_120_control_api_t::currentGet.

Example:

```
/* Get current */
   (void)
RM_MOTOR_120_CONTROL_SENSORLESS_CurrentGet(g_motor_120_control_sensorless0.p_ctrl,
&smpl_current_status);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_SENSORLESS_WaitStopFlagGet()

fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_WaitStopFlagGet (motor_120_control_ctrl_t *const *p_ctrl*, motor_120_control_wait_stop_flag_t *const *p_flag*)

Get wait stop flag. Implements motor_120_control_api_t::waitStopFlagGet.

Example:

```
/* Get wait stop flag */
   (void)
RM_MOTOR_120_CONTROL_SENSORLESS_WaitStopFlagGet
(g_motor_120_control_sensorless0.p_ctrl,
                                                  &smpl_wait_stop_flag);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_SENSORLESS_TimeoutErrorFlagGet()

fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_TimeoutErrorFlagGet (motor_120_control_ctrl_t *const *p_ctrl*, motor_120_control_timeout_error_flag_t *const *p_timeout_error_flag*)

Get timeout error flag. Implements motor_120_control_api_t::timeoutErrorFlagGet.

Example:

```
 /* Get timeout error flag */
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_TimeoutErrorFlagGet
(g_motor_120_control_sensorless0.p_ctrl,
                                                    &smpl_timeout_error_fl
ag);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_SENSORLESS_PatternErrorFlagGet()

fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_PatternErrorFlagGet (motor_120_control_ctrl_t *const *p_ctrl*, motor_120_control_pattern_error_flag_t *const *p_pattern_error_flag*)

Get pattern error flag. Implements motor_120_control_api_t::patternErrorFlagGet.

Example:

```
/* Get pattern error flag */
   (void)
RM_MOTOR_120_CONTROL_SENSORLESS_PatternErrorFlagGet
(g_motor_120_control_sensorless0.p_ctrl,
                                                    &smpl_pattern_error_fl
ag);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_SENSORLESS_VoltageRefGet()

fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_VoltageRefGet (motor_120_control_ctrl_t *const *p_ctrl*, motor_120_control_voltage_ref_t *const *p_voltage_ref*)

Get voltage ref. Implements motor_120_control_api_t::voltageRefGet.

Example:

```
/* Get voltage ref */
   (void)
RM_MOTOR_120_CONTROL_SENSORLESS_VoltageRefGet(g_motor_120_control_sensorless0.p_ctrl,
&smpl_voltage_ref);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_CONTROL_SENSORLESS_ParameterUpdate()

fsp_err_t RM_MOTOR_120_CONTROL_SENSORLESS_ParameterUpdate (motor_120_control_ctrl_t *const *p_ctrl*, motor_120_control_cfg_t const *const *p_cfg*)

Update the parameters of sensorless 120 detection module. Implements motor_120_control_api_t::parameterUpdate.

Example:

```
    (void)
RM_MOTOR_120_CONTROL_SENSORLESS_ParameterUpdate
(g_motor_120_control_sensorless0.p_ctrl,

g_motor_120_control_sensorless0.p_cfg);
```

Return values

FSP_SUCCESS	Successfully data was updated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

Detailed Description

Usual control of a SPM (Surface Permanent Magnet) motor on RA MCUs. This module implements the Motor 120 Degree (rm_motor_120_degree).

Overview

The motor 120 degree control is used to control a motor rotation in an appication. This module is implemented with using a SPM motor. User can start/stop motor rotation simply.

Features

The motor 120 degree module has below features.

- Start/Stop a motor rotation
- Error detection (over current, over speed, over voltage, low voltage)

Configuration

Build Time Configurations for rm_motor_120_degree

The following build time configurations are defined in fsp_cfg/rm_motor_120_degree_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Motor > Motor 120 degree control (rm_motor_120_degree)

This module can be added to the Stacks tab via New Stack > Motor > Motor 120 degree control (rm_motor_120_degree).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_120_degree0	Module name.
General > Limit of over current (A)	Must be a valid non-negative value.	4.0	Limit of over current.(Detection threshold)
General > Limit of over voltage (V)	Must be a valid non-negative value.	28.0	Limit of over voltage.(Detection threshold)

General > Limit of over speed (rpm)	Must be a valid non-negative value.	3000.0	Limit of over speed.(Detection threshold)
General > Limit of low voltage (V)	Must be a valid non-negative value.	14.0	Limit of low voltage.(Detection threshold)
Interrupts > Callback	Name must be a valid C symbol	NULL	A user callback function.

Clock Configuration

This module doesn't depend on clock setting, because this module is a simple status transition process.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Limitations

- Set the limit of electric current with non-negative value.
- Set the limit of input voltage with non-negative value.
- Set the limit of rotational speed with non-negative value.

Examples

Basic Example

This is a basic example of minimal use of the motor 120 degree in an application.

```
void motor_120_degree_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = RM_MOTOR_120_DEGREE_Open(g_motor_120_degree0.p_ctrl,
g_motor_120_degree0.p_cfg);
    assert(FSP_SUCCESS == err);
 /* Set speed reference before motor run */
    (void) RM_MOTOR_120_DEGREE_SpeedSet(g_motor_120_degree0.p_ctrl,
DEF_120_DEGREE_SPEED_REF);
 /* Start motor rotation */
    (void) RM_MOTOR_120_DEGREE_Run(g_motor_120_degree0.p_ctrl);
 /* Get current status */
```

```
    (void) RM_MOTOR_120_DEGREE_StatusGet(g_motor_120_degree0.p_ctrl, &smpl_status);
 /* Get current motor speed */
    (void) RM_MOTOR_120_DEGREE_SpeedGet(g_motor_120_degree0.p_ctrl, &smpl_speed);
 /* Get wait stop flag */
    (void) RM_MOTOR_120_DEGREE_WaitStopFlagGet(g_motor_120_degree0.p_ctrl,
&smpl_wait_stop_flag);
 /* Check error */
    (void) RM_MOTOR_120_DEGREE_ErrorCheck(g_motor_120_degree0.p_ctrl, &smpl_error);
 /* Stop motor rotation */
    (void) RM_MOTOR_120_DEGREE_Stop(g_motor_120_degree0.p_ctrl);
    (void) RM_MOTOR_120_DEGREE_ErrorSet(g_motor_120_degree0.p_ctrl,
MOTOR_ERROR_OVER_CURRENT_HW);
 /* Reset the process. */
    (void) RM_MOTOR_120_DEGREE_Reset(g_motor_120_degree0.p_ctrl);
 /* Close the module. */
    (void) RM_MOTOR_120_DEGREE_Close(g_motor_120_degree0.p_ctrl);
}
```

Data Structures

float	f_overcurrent_limit	Over-current limit (A)
float	f_overvoltage_limit	Over-voltage limit (V)
float	f_overspeed_limit	Over-speed limit (rad/s)
float	f_lowvoltage_limit	Low-voltage limit (V)

Enumeration Type Documentation

◆ motor_120_degree_ctrl_status_t

enum motor_120_degree_ctrl_status_t	
Control state	
Enumerator	
MOTOR_120_DEGREE_CTRL_STATUS_STOP	Stop mode.
MOTOR_120_DEGREE_CTRL_STATUS_RUN	Run mode.
MOTOR_120_DEGREE_CTRL_STATUS_ERROR	Error mode.

◆ motor_120_degree_ctrl_event_t

enum motor_120_degree_ctrl_event_t	
Control event	
Enumerator	
MOTOR_120_DEGREE_CTRL_EVENT_STOP	Stop event.
MOTOR_120_DEGREE_CTRL_EVENT_RUN	Run event.
MOTOR_120_DEGREE_CTRL_EVENT_ERROR	Error event.
MOTOR_120_DEGREE_CTRL_EVENT_RESET	Reset event.

Function Documentation

◆ RM_MOTOR_120_DEGREE_Open()

fsp_err_t RM_MOTOR_120_DEGREE_Open (motor_ctrl_t *const *p_ctrl*, motor_cfg_t const *const *p_cfg*)

Configure the motor in register start mode. Implements motor_api_t::open.

Example:

```
/* Initializes the module. */
   err = RM_MOTOR_120_DEGREE_Open(g_motor_120_degree0.p_ctrl,
g_motor_120_degree0.p_cfg);
```

Return values

FSP_SUCCESS	Successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.

Note

This function should only be called once as motor configuration registers can only be written to once so subsequent calls will have no effect.

◆ RM_MOTOR_120_DEGREE_Close()

fsp_err_t RM_MOTOR_120_DEGREE_Close (motor_ctrl_t *const *p_ctrl*)

Disables specified motor control block. Implements motor_api_t::close.

Example:

```
/* Close the module. */
   (void) RM_MOTOR_120_DEGREE_Close(g_motor_120_degree0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_120_DEGREE_Run()

fsp_err_t RM_MOTOR_120_DEGREE_Run (motor_ctrl_t *const *p_ctrl*)

Run motor (Start motor rotation). Implements motor_api_t::run.

Example:

```
/* Start motor rotation */
   (void) RM_MOTOR_120_DEGREE_Run(g_motor_120_degree0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_120_DEGREE_Stop()

fsp_err_t RM_MOTOR_120_DEGREE_Stop (motor_ctrl_t *const *p_ctrl*)

Stop motor (Stop motor rotation). Implements motor_api_t::stop.

Example:

```
/* Stop motor rotation */
   (void) RM_MOTOR_120_DEGREE_Stop(g_motor_120_degree0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully stopped.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_120_DEGREE_Reset()

fsp_err_t RM_MOTOR_120_DEGREE_Reset (motor_ctrl_t *const *p_ctrl*)

Reset motor control block. Implements motor_api_t::reset.

Example:

```
/* Reset the process. */
   (void) RM_MOTOR_120_DEGREE_Reset(g_motor_120_degree0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_120_DEGREE_ErrorSet()

fsp_err_t RM_MOTOR_120_DEGREE_ErrorSet (motor_ctrl_t *const *p_ctrl*, motor_error_t const *error*)

Set error information. Implements motor_api_t::errorSet.

Example:

```
   (void) RM_MOTOR_120_DEGREE_ErrorSet(g_motor_120_degree0.p_ctrl,
MOTOR_ERROR_OVER_CURRENT_HW);
```

Return values

FSP_SUCCESS	Successfully set error infomation.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_120_DEGREE_SpeedSet()

fsp_err_t RM_MOTOR_120_DEGREE_SpeedSet (motor_ctrl_t *const *p_ctrl*, float const *speed_rpm*)

Set speed reference[rpm]. Implements motor_api_t::speedSet.

Example:

```
/* Set speed reference before motor run */
   (void) RM_MOTOR_120_DEGREE_SpeedSet(g_motor_120_degree0.p_ctrl,
DEF_120_DEGREE_SPEED_REF);
```

Return values

FSP_SUCCESS	Successfully set speed reference.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_120_DEGREE_StatusGet()

fsp_err_t RM_MOTOR_120_DEGREE_StatusGet (motor_ctrl_t *const *p_ctrl*, uint8_t *const *p_status*)

Get current control status. Implements motor_api_t::statusGet.

Example:

```
/* Get current status */
   (void) RM_MOTOR_120_DEGREE_StatusGet(g_motor_120_degree0.p_ctrl, &smpl_status);
```

Return values

FSP_SUCCESS	Successfully got current control status.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_POINTER	Data received pointer is invalid.

Note

◆ RM_MOTOR_120_DEGREE_SpeedGet()

fsp_err_t RM_MOTOR_120_DEGREE_SpeedGet (motor_ctrl_t *const *p_ctrl*, float *const *p_speed_rpm*)

Get rotational speed. Implements motor_api_t::speedGet.

Example:

```
/* Get current motor speed */
   (void) RM_MOTOR_120_DEGREE_SpeedGet(g_motor_120_degree0.p_ctrl, &smpl_speed);
```

Return values

FSP_SUCCESS	Successfully got rotational speed.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_POINTER	Data received pointer is invalid.

Note

◆ RM_MOTOR_120_DEGREE_WaitStopFlagGet()

fsp_err_t RM_MOTOR_120_DEGREE_WaitStopFlagGet (motor_ctrl_t *const *p_ctrl*, motor_wait_stop_flag_t *const *p_flag_wait_stop*)

Get wait stop flag. Implements motor_api_t::waitStopFlagGet.

Example:

```
/* Get wait stop flag */
   (void) RM_MOTOR_120_DEGREE_WaitStopFlagGet(g_motor_120_degree0.p_ctrl,
&smpl_wait_stop_flag);
```

Return values

FSP_SUCCESS	Successfully got wait stop flag.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_POINTER	Data received pointer is invalid.

Note

◆ RM_MOTOR_120_DEGREE_ErrorCheck()

fsp_err_t RM_MOTOR_120_DEGREE_ErrorCheck (motor_ctrl_t *const *p_ctrl*, uint16_t *const *p_error*)

Check the occurunce of error. Implements motor_api_t::errorCheck.

Example:

```
/* Check error */
   (void) RM_MOTOR_120_DEGREE_ErrorCheck(g_motor_120_degree0.p_ctrl, &smpl_error);
```

Return values

FSP_SUCCESS	Successfully error checke process.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_POINTER	Data received pointer is invalid.

Note

◆ RM_MOTOR_120_DEGREE_PositionSet()

fsp_err_t RM_MOTOR_120_DEGREE_PositionSet (motor_ctrl_t *const *p_ctrl*, motor_speed_position_data_t const *const *p_position*)

Set position reference. Implements motor_api_t::positionSet.

Example:

Return values

FSP_ERR_UNSUPPORTED	Unsupported.

Note

◆ RM_MOTOR_120_DEGREE_AngleGet()

fsp_err_t RM_MOTOR_120_DEGREE_AngleGet (motor_ctrl_t *const *p_ctrl*, float *const *p_angle_rad*)
Set position reference. Implements motor_api_t::angleGet. Example: **Return values** FSP_ERR_UNSUPPORTED — Unsupported. ***Note***

Detailed Description

Calculation process for the motor control on RA MCUs. This module implements the Interface.

Overview

The motor 120 degree driver module is used to translate phase voltage to PWM duty and output PWM, and detect phase current, voltage and main line voltage. This module should be called cyclically at included A/D conversion finish interrupt.

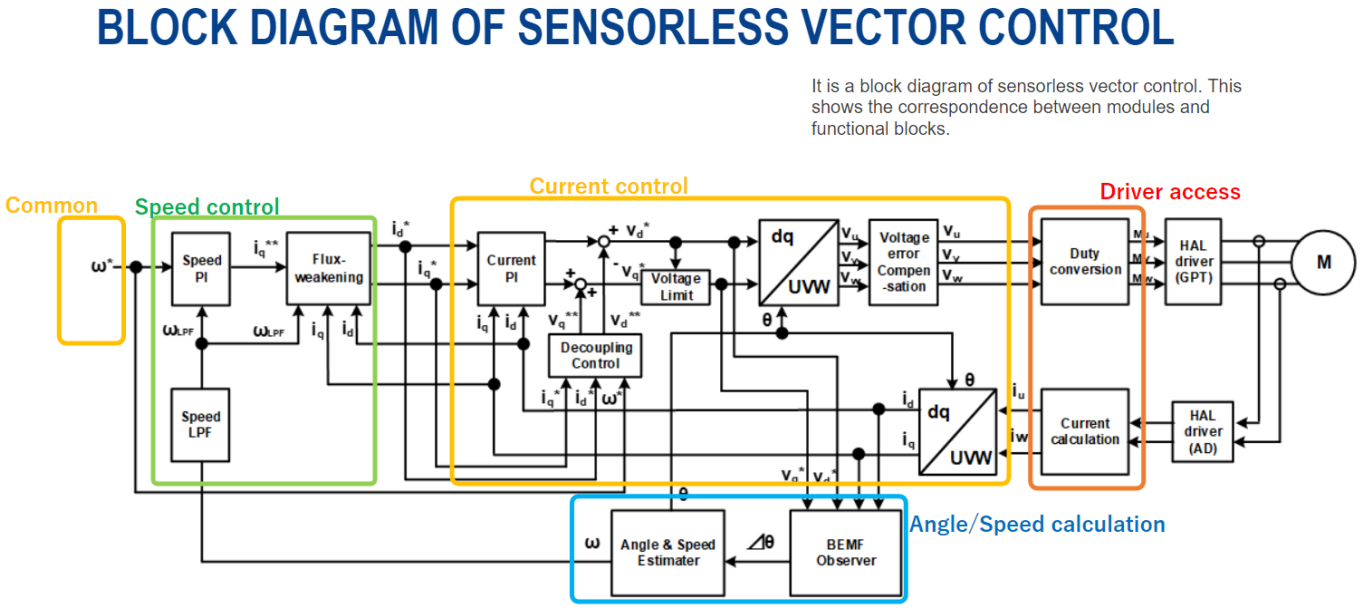

Figure 211: Image of Current Control Module(yellow block)

Features

The motor 120 degree driver module has below features.

- Calculate each phase(U/V/W) PWM duty according to reference and output PWM.
- Detect each phase current, phase voltage and main line voltage.
- Detect and correct A/D offset at phase current and voltage channel

Configuration

Build Time Configurations for rm_motor_120_driver

The following build time configurations are defined in fsp_cfg/rm_motor_120_driver_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Motor > ADC and PWM modulation (rm_motor_120_driver)

This module can be added to the Stacks tab via New Stack > Motor > ADC and PWM modulation (rm_motor_120_driver).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_120_driver0	Module name.

General > 120 degree control type	• Sensorless • Hall	Sensorless	120 degree control type
General > PWM output port UP	Manual Entry	BSP_IO_PORT_06_PIN_01	PWM output port UP
General > PWM output port UN	Manual Entry	BSP_IO_PORT_06_PIN_00	PWM output port UN
General > PWM output port VP	Manual Entry	BSP_IO_PORT_01_PIN_13	PWM output port VP
General > PWM output port VN	Manual Entry	BSP_IO_PORT_01_PIN_14	PWM output port VN
General > PWM output port WP	Manual Entry	BSP_IO_PORT_01_PIN_11	PWM output port WP
General > PWM output port WN	Manual Entry	BSP_IO_PORT_01_PIN_12	PWM output port WN
General > PWM timer frequency (MHz)	Must be a valid non-negative value.	120	GPT PWM timer frequency
General > PWM carrier period (Microseconds)	Must be a valid non-negative value.	50	GPT PWM carrier period
General > Dead time (Raw counts)	Must be a valid non-negative value.	240	GPT PWM dead time
General > Current range (A)	Must be a valid non-negative value.	27.5	Current range to measure(Maximum input current)
General > Voltage range (V)	Must be a valid non-negative value.	111.0	Voltage range to measure(Maximum input main line voltage)
General > Resolution of A/D conversion	Manual Entry	0xFFF	Resolution of A/D conversion
General > Offset of A/D conversion for current	Manual Entry	0x745	Offset of A/D conversion for current
General > Conversion level of A/D conversion for voltage	Must be a valid non-negative value.	0.66	Conversion level of A/D conversion for voltage
General > Counts for current offset measurement	Must be a valid non-negative value.	500	How many times to measure current offset
General > Input voltage	Must be a valid non-negative value.	24.0	Input voltage
General > A/D conversion channel for U phase current	Manual Entry	ADC_CHANNEL_0	Specify the A/D channel for U phase current
General > A/D	Manual Entry	ADC_CHANNEL_2	Specify the A/D

conversion channel for W phase current			channel for W phase current
General > A/D conversion channel for main line voltage	Manual Entry	ADC_CHANNEL_5	Specify the A/D channel for main line voltage
General > A/D conversion channel for U phase voltage	Manual Entry	ADC_CHANNEL_18	Specify the A/D channel for U phase voltage
General > A/D conversion channel for V phase voltage	Manual Entry	ADC_CHANNEL_20	Specify the A/D channel for V phase voltage
General > A/D conversion channel for W phase voltage	Manual Entry	ADC_CHANNEL_6	Specify the A/D channel for W phase voltage
General > GTIOCA stop level	• Pin Level Low • Pin Level High	Pin Level High	Select the behavior of the output pin when the timer is stopped.
General > GTIOCB stop level	• Pin Level Low • Pin Level High	Pin Level High	Select the behavior of the output pin when the timer is stopped.
Modulation > Maximum duty	Must be a valid non-negative value.	0.9375	Maximum duty of PWM
Interrupts > Callback	Name must be a valid C symbol	NULL	A user callback function. If this callback function is provided, it is called at A/D conversion finish interrupt.

Clock Configuration

Set used clock with included GPT timer.

Pin Configuration

Depend on included GPT three phase module and ADC module.

Usage Notes

Limitations

Basically no limitation exists.

Examples

Basic Example

This is a basic example of minimal use of the Motor 120 degree driver in an application.

```
void motor_120_driver_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = RM_MOTOR_120_DRIVER_Open(&g_motor_120_driver0.p_ctrl,
&g_motor_120_driver0.p_cfg);
 /* Start PWM output */
    err = RM_MOTOR_120_DRIVER_Run(&g_motor_120_driver0.p_ctrl);
    assert(FSP_SUCCESS == err);
 /* Basically run this module at cyclic interrupt (e.g. included GPT PWM carrier
intterupt).
  * This implementation is an example. */
 // while (true)
    {
 /* Application work here. */
 /* Caclutarion of current offset */
       (void) RM_MOTOR_120_DRIVER_CurrentOffsetCalc(&g_motor_120_driver0.p_ctrl);
 /* Get electric current, main line voltage and maximum voltage component */
       (void) RM_MOTOR_120_DRIVER_CurrentGet(&g_motor_120_driver0.p_ctrl,
&g_current_status);
 /* Get the flag of A/D convderted current offset */
       (void) RM_MOTOR_120_DRIVER_FlagCurrentOffsetGet(&g_motor_120_driver0.p_ctrl,
&u1_get_flg_offset);
 // Perform current control process here
 /* Set phase voltage */
       (void) RM_MOTOR_120_DRIVER_PhaseVoltageSet(&g_motor_120_driver0.p_ctrl, 1.0F,
1.0F, 1.0F);
 /* Set phase pattern */
       (void) RM_MOTOR_120_DRIVER_PhasePatternSet(&g_motor_120_driver0.p_ctrl,
MOTOR_120_DRIVER_API_VP_ON_WN_PWM);
       (void) RM_MOTOR_120_DRIVER_ParameterUpdate(&g_motor_120_driver0.p_ctrl,
&g_motor_120_driver0.p_cfg);
    }
    (void) RM_MOTOR_120_DRIVER_Stop(&g_motor_120_driver0.p_ctrl);
```

```
    (void) RM_MOTOR_120_DRIVER_Reset(&g_motor_120_driver0.p_ctrl);
 //

    (void) RM_MOTOR_120_DRIVER_Close(&g_motor_120_driver0.p_ctrl);
}
```

Function Documentation

◆ RM_MOTOR_120_DRIVER_Open()

fsp_err_t RM_MOTOR_120_DRIVER_Open (motor_120_driver_ctrl_t *const *p_ctrl*, motor_120_driver_cfg_t const *const *p_cfg*)

Opens and configures the motor 120 driver module. Implements motor_120_driver_api_t::open.

Example:

```
/* Initializes the module. */
   err = RM_MOTOR_120_DRIVER_Open(&g_motor_120_driver0.p_ctrl,
&g_motor_120_driver0.p_cfg);
```

Return values

FSP_SUCCESS	Motor 120 driver successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_DRIVER_Close()

fsp_err_t RM_MOTOR_120_DRIVER_Close (motor_120_driver_ctrl_t *const *p_ctrl*)

Disables specified motor 120 driver module. Implements motor_120_driver_api_t::close.

Example:

```
   (void) RM_MOTOR_120_DRIVER_Close(&g_motor_120_driver0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_DRIVER_Run()

fsp_err_t RM_MOTOR_120_DRIVER_Run (motor_120_driver_ctrl_t *const *p_ctrl*)

Run motor (Start motor rotation). Implements motor_120_driver_api_t::run.

Example:

```
/* Start PWM output */
   err = RM_MOTOR_120_DRIVER_Run(&g_motor_120_driver0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_DRIVER_Stop()

fsp_err_t RM_MOTOR_120_DRIVER_Stop (motor_120_driver_ctrl_t *const *p_ctrl*)

Stop motor (Stop motor rotation). Implements motor_120_driver_api_t::stop.

Example:

```
(void) RM_MOTOR_120_DRIVER_Stop(&g_motor_120_driver0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_DRIVER_Reset()

fsp_err_t RM_MOTOR_120_DRIVER_Reset (motor_120_driver_ctrl_t *const *p_ctrl*)

Reset variables of motor 120 driver module. Implements motor_120_driver_api_t::reset.

Example:

```
(void) RM_MOTOR_120_DRIVER_Reset(&g_motor_120_driver0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully reset.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_DRIVER_PhaseVoltageSet()

fsp_err_t RM_MOTOR_120_DRIVER_PhaseVoltageSet (motor_120_driver_ctrl_t *const *p_ctrl*, float const *u_voltage*, float const *v_voltage*, float const *w_voltage*)

Set phase voltage data to calculate PWM duty. Implements motor_120_driver_api_t::phaseVoltageSet.

Example:

```
/* Set phase voltage */
      (void) RM_MOTOR_120_DRIVER_PhaseVoltageSet(&g_motor_120_driver0.p_ctrl, 1.0F,
1.0F, 1.0F);
```

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_DRIVER_PhasePatternSet()

fsp_err_t RM_MOTOR_120_DRIVER_PhasePatternSet (motor_120_driver_ctrl_t *const *p_ctrl*, motor_120_driver_phase_pattern_t const *pattern*)

Set phase voltage pattern. Implements motor_120_driver_api_t::phasePatternSet.

Example:

```
/* Set phase pattern */
      (void) RM_MOTOR_120_DRIVER_PhasePatternSet(&g_motor_120_driver0.p_ctrl,
MOTOR_120_DRIVER_API_VP_ON_WN_PWM);
```

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_120_DRIVER_CurrentGet()

fsp_err_t RM_MOTOR_120_DRIVER_CurrentGet (motor_120_driver_ctrl_t *const *p_ctrl*, motor_120_driver_current_status_t *const *p_current_status*)

Get calculated phase current, Vdc & Va_max data. Implements motor_120_driver_api_t::currentGet .

Example:

```
/* Get electric current, main line voltage and maximum voltage component */
      (void) RM_MOTOR_120_DRIVER_CurrentGet(&g_motor_120_driver0.p_ctrl,
&g_current_status);
```

Return values

FSP_SUCCESS	Successful data get.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_DRIVER_CurrentOffsetCalc()

fsp_err_t RM_MOTOR_120_DRIVER_CurrentOffsetCalc (motor_120_driver_ctrl_t *const *p_ctrl*)

current offset detection. Implements motor_120_driver_api_t::currentOffsetCalc

Example:

```
/* Caclutarion of current offset */
      (void) RM_MOTOR_120_DRIVER_CurrentOffsetCalc(&g_motor_120_driver0.p_ctrl);
```

Return values

FSP_SUCCESS	Successful data get.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_DRIVER_FlagCurrentOffsetGet()

fsp_err_t RM_MOTOR_120_DRIVER_FlagCurrentOffsetGet (motor_120_driver_ctrl_t *const *p_ctrl*, motor_120_driver_flag_offset_calc_t *const *p_flag_offset*)

Get the flag of finish current offset detection. Implements motor_120_driver_api_t::flagCurrentOffsetGet.

Example:

```
/* Get the flag of A/D convderted current offset */
      (void) RM_MOTOR_120_DRIVER_FlagCurrentOffsetGet(&g_motor_120_driver0.p_ctrl,
&u1_get_flg_offset);
```

Return values

FSP_SUCCESS	Successful data get.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_120_DRIVER_ParameterUpdate()

fsp_err_t RM_MOTOR_120_DRIVER_ParameterUpdate (motor_120_driver_ctrl_t *const *p_ctrl*, motor_120_driver_cfg_t const *const *p_cfg*)

Update the parameters of 120 driver module. Implements motor_120_driver_api_t::parameterUpdate.

Example:

```
      (void) RM_MOTOR_120_DRIVER_ParameterUpdate(&g_motor_120_driver0.p_ctrl,
&g_motor_120_driver0.p_cfg);
```

Return values

FSP_SUCCESS	Successfully data was updated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

void	rm_motor_current_encoder_cyclic (motor_current_instance_t const *p_ctrl)

Detailed Description

Calculation process for the motor control on RA MCUs. This module implements the Motor current Interface.

Overview

The motor current is used to control the electric current of motor rotation in an appication. This module should be called cyclically after the A/D conversion of electric current of each phase in an application. This module calculates each phase voltage with input current reference, electric current and rotor angle.

Features

The Motor Current Module has below features.

- Calculate each phase(U/V/W) voltage.
- Decoupling Control.
- Voltage Error Compensation.

Configuration

Build Time Configurations for rm_motor_current

The following build time configurations are defined in fsp_cfg/rm_motor_current_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Motor > Motor Current Controller (rm_motor_current)

This module can be added to the Stacks tab via New Stack > Motor > Motor Current Controller (rm_motor_current).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_current0	Module name.
General > Sensor type	• Sensorless • Encoder	Sensorless	Select sensor type
General > Shunt type	• 1 shunt • 2 shunt • 3 shunt	2 shunt	Select shunt type
General > Current control decimation	Must be a valid non-negative value.	0	Decimation of current control.
General > PWM carrier frequency (kHz)	Must be a valid value	20.0F	PWM carrier frequency.
General > Input voltage (V)	Must be a valid value	24.0F	Input voltage for limitation of current PI control.
General > Sample delay compensation	• Disable • Enable	Enable	Select enable/disable sample delay compensation.
General > Voltage error compensation	• Disable • Enable	Enable	Select enable/disable voltage error compensation.
General > Voltage error compensation table of voltage 1	Must be a valid value	0.672F	Voltage error compensation table of voltage.
General > Voltage error compensation table of voltage 2	Must be a valid value	0.945F	Voltage error compensation table of voltage.
General > Voltage error compensation table of voltage 3	Must be a valid value	1.054F	Voltage error compensation table of voltage.
General > Voltage error compensation	Must be a valid value	1.109F	Voltage error compensation table of

table of voltage 4			voltage.
General > Voltage error compensation table of voltage 5	Must be a valid value	1.192F	Voltage error compensation table of voltage.
General > Voltage error compensation table of current 1	Must be a valid value	0.013F	Voltage error compensation table of current.
General > Voltage error compensation table of current 2	Must be a valid value	0.049F	Voltage error compensation table of current.
General > Voltage error compensation table of current 3	Must be a valid value	0.080F	Voltage error compensation table of current.
General > Voltage error compensation table of current 4	Must be a valid value	0.184F	Voltage error compensation table of current.
General > Voltage error compensation table of current 5	Must be a valid value	0.751F	Voltage error compensation table of current.
Interrupts > Callback	Name must be a valid C symbol	NULL	A user callback function. If this callback function is provided, it is called at A/D conversion finish interrupt.
Design Parameter > Current PI loop omega (Hz)	Must be a valid value	300.0F	Current PI loop omega
Design Parameter > Current PI loop zeta	Must be a valid value	1.0F	Current PI loop zeta
Motor Parameter > Pole pairs	Must be a valid non-negative value.	2	Pole pairs
Motor Parameter > Resistance (ohm)	Must be a valid value	8.5F	Resistance
Motor Parameter > Inductance of d-axis (H)	Must be a valid value	0.0045F	Inductance of d-axis
Motor Parameter > Inductance of q-axis (H)	Must be a valid value	0.0045F	Inductance of q-axis
Motor Parameter > Permanent magnetic flux (Wb)	Must be a valid value	0.02159F	Permanent magnetic flux
Motor Parameter > Rotor inertia (kgm^2)	Must be a valid value	0.0000028F	Rotor inertia

Clock Configuration

This module doesn't depend on clock setting, because this module is a simple calculation process.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Limitations

- Set the Period of Current Control with none-negative value.
- Set the Reference Voltage with none-negative value.

Examples

Basic Example

This is a basic example of minimal use of the Motor Current in an application.

```
void motor_current_basic_example (void)
{
 motor_current_input_current_t temp_input_current;
 motor_current_input_voltage_t temp_input_voltage;
 motor_current_get_voltage_t   temp_get_voltage;
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = RM_MOTOR_CURRENT_Open(g_test_motor_current.p_ctrl,
g_test_motor_current.p_cfg);
    assert(FSP_SUCCESS == err);
 /* Basically run this module at A/D conversion finish interrupt.
  * This implementation is an example. */
 // while (true)
    {
 /* Application work here. */
 /* Set current reference before get phase voltage */
       (void) RM_MOTOR_CURRENT_CurrentReferenceSet(g_test_motor_current.p_ctrl, 1.0F,
1.0F);
 /* Set speed and phase data before get phase voltage */
       (void) RM_MOTOR_CURRENT_SpeedPhaseSet(g_test_motor_current.p_ctrl, 104.72F,
```

```
1.0F);
       temp_input_current.iu    = 1.0F;
       temp_input_current.iv    = 1.0F;
       temp_input_current.iw    = 1.0F;
       temp_input_voltage.vdc    = 24.0F;
       temp_input_voltage.va_max = 24.0F;
 /* Set electric current and voltage before get phase voltage */
       (void) RM_MOTOR_CURRENT_CurrentSet(g_test_motor_current.p_ctrl,
temp_input_current, temp_input_voltage);
 /* Activate the process. */
       (void) RM_MOTOR_CURRENT_Run(g_test_motor_current.p_ctrl);
 /* Get d/q-axis current*/
       (void) RM_MOTOR_CURRENT_CurrentGet(g_test_motor_current.p_ctrl, &f_get_id,
&f_get_iq);
 /* Get the flag of PI control */
       (void) RM_MOTOR_CURRENT_PhaseVolageGet(g_test_motor_current.p_ctrl,
&temp_get_voltage);
 /* Get Output Parameter */
       (void) RM_MOTOR_CURRENT_ParameterGet(g_test_motor_current.p_ctrl,
&test_output);
       (void) RM_MOTOR_CURRENT_ParameterUpdate(g_test_motor_current.p_ctrl,
g_test_motor_current.p_cfg);
    }
 /* Reset the process. */
    (void) RM_MOTOR_CURRENT_Reset(g_test_motor_current.p_ctrl);
 /* Close the module. */
    (void) RM_MOTOR_CURRENT_Close(g_test_motor_current.p_ctrl);
}
```

Enumerations

enum	motor_current_shunt_type_t

Enumeration Type Documentation

◆ motor_current_shunt_type_t

enum motor_current_shunt_type_t	
Selection of shunt type	
Enumerator	
MOTOR_CURRENT_SHUNT_TYPE_1_SHUNT	Only use U phase current.
MOTOR_CURRENT_SHUNT_TYPE_2_SHUNT	Use U and W phase current.
MOTOR_CURRENT_SHUNT_TYPE_3_SHUNT	Use all phase current.

Function Documentation

◆ RM_MOTOR_CURRENT_Open()

fsp_err_t RM_MOTOR_CURRENT_Open (motor_current_ctrl_t *const *p_ctrl*, motor_current_cfg_t const *const *p_cfg*)

Opens and configures the Motor Current Module. Implements motor_current_api_t::open.

Return values

FSP_SUCCESS	Motor Current successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Configuration parameter error.

◆ RM_MOTOR_CURRENT_Close()

fsp_err_t RM_MOTOR_CURRENT_Close (motor_current_ctrl_t *const *p_ctrl*)

Disables specified Motor Current Module. Implements motor_current_api_t::close.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_CURRENT_Reset()

fsp_err_t RM_MOTOR_CURRENT_Reset (motor_current_ctrl_t *const *p_ctrl*)

Reset variables of Motor Current Module. Implements motor_current_api_t::reset.

Return values

FSP_SUCCESS	Successfully reset.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_CURRENT_Run()

fsp_err_t RM_MOTOR_CURRENT_Run (motor_current_ctrl_t *const *p_ctrl*)

Run(Start) the Current Control. Implements motor_current_api_t::run.

Return values

FSP_SUCCESS	Successfully run.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_CURRENT_ParameterSet()

fsp_err_t RM_MOTOR_CURRENT_ParameterSet (motor_current_ctrl_t *const *p_ctrl*,
motor_current_input_t const *const *p_st_input*)

Set (Input) Parameter Data. Implements motor_current_api_t::parameterSet.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input argument error.

◆ RM_MOTOR_CURRENT_CurrentReferenceSet()

fsp_err_t RM_MOTOR_CURRENT_CurrentReferenceSet (motor_current_ctrl_t *const *p_ctrl*, float const *id_reference*, float const *iq_reference*)

Set Current Reference Data. Implements motor_current_api_t::currentReferenceSet.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_CURRENT_SpeedPhaseSet()

fsp_err_t RM_MOTOR_CURRENT_SpeedPhaseSet (motor_current_ctrl_t *const *p_ctrl*, float const *speed*, float const *phase*)

Set Current Speed & rotor phase Data. Implements motor_current_api_t::speedPhaseSet.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_CURRENT_CurrentSet()

fsp_err_t RM_MOTOR_CURRENT_CurrentSet (motor_current_ctrl_t *const *p_ctrl*, motor_current_input_current_t const *const *p_st_current*, motor_current_input_voltage_t const *const *p_st_voltage*)

Set d/q-axis Current & Voltage Data. Implements motor_current_api_t::currentSet.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_CURRENT_ParameterGet()

fsp_err_t RM_MOTOR_CURRENT_ParameterGet (motor_current_ctrl_t *const *p_ctrl*, motor_current_output_t *const *p_st_output*)

Get Output Parameters. Implements motor_current_api_t::parameterGet.

Return values

FSP_SUCCESS	Successful data get.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_CURRENT_CurrentGet()

fsp_err_t RM_MOTOR_CURRENT_CurrentGet (motor_current_ctrl_t *const *p_ctrl*, float *const *p_id*, float *const *p_iq*)

Get d/q-axis Current. Implements motor_current_api_t::currentGet.

Return values

FSP_SUCCESS	Successful data get.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_CURRENT_PhaseVoltageGet()

fsp_err_t RM_MOTOR_CURRENT_PhaseVoltageGet (motor_current_ctrl_t *const *p_ctrl*, motor_current_get_voltage_t *const *p_voltage*)

Gets the set phase voltage. Implements motor_current_api_t::phaseVoltageGet.

Return values

FSP_SUCCESS	Successful data calculation.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_CURRENT_ParameterUpdate()

fsp_err_t RM_MOTOR_CURRENT_ParameterUpdate (motor_current_ctrl_t *const *p_ctrl*, motor_current_cfg_t const *const *p_cfg*)
Update the parameters of Current Control. Implements motor_current_api_t::parameterUpdate.

Return values

FSP_SUCCESS	Successfully data was updated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ rm_motor_current_encoder_cyclic()

void rm_motor_current_encoder_cyclic (motor_current_instance_t const * *p_ctrl*)
(end addtogroup MOTOR_CURRENT)

Detailed Description

Calculation process for the motor control on RA MCUs. This module implements the Motor driver Interface.

Overview

The motor driver module is used to translate phase voltage to PWM duty and output PWM, and detect phase current and main line voltage. This module should be called cyclically at included A/D Conversion finish interrupt.

Features

The Motor Driver Module has below features.

- Calculate each phase(U/V/W) PWM duty according to reference and output PWM.
- Detect each phase current and main line voltage.
- Detect and correct A/D offset at phase current channel

Configuration

Build Time Configurations for rm_motor_driver

The following build time configurations are defined in fsp_cfg/rm_motor_driver_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
ADC_B Support	• Enabled • Disabled	Disabled	Select ADC_B module support.

Configurations for Motor > ADC and PWM Modulation (rm_motor_driver)

This module can be added to the Stacks tab via New Stack > Motor > ADC and PWM Modulation (rm_motor_driver).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_driver0	Module name.
General > Shunt type	• 1 shunt • 2 shunt • 3 shunt	2 shunt	Select shunt type
General > Modulation method	• SVPWM • SPWM	SVPWM	Select PWM modulation method
General > PWM Timer Frequency (MHz)	Must be a valid non-negative value.	120	GPT PWM timer frequency
General > PWM Carrier Period (Microseconds)	Must be a valid non-negative value.	50	GPT PWM carrier period
General > Dead Time (Raw Counts)	Must be a valid non-negative value.	240	GPT PWM dead time
General > Current Range (A)	Must be a valid value	27.5F	Current range to measure(Maximum input current)
General > Voltage Range (V)	Must be a valid value	111.0F	Voltage range to measure(Maximum input Main Line Voltage)
General > Counts for current offset measurement	Must be a valid non-negative value.	500	How many times to measure current offset
General > A/D conversion channel for U Phase current	Manual Entry	0	Specify the A/D channel for U phase current
General > A/D conversion channel for W Phase current	Manual Entry	2	Specify the A/D channel for W phase current

General > A/D conversion channel for Main Line Voltage	Manual Entry	5	Specify the A/D channel for main line voltage
General > A/D conversion channel for V Phase current	Manual Entry	1	Specify the A/D channel for V phase current
General > Adjustment value to current A/D	Must be a valid non-negative value.	20.0	Value to adjust 1shunt A/D double buffer
General > Minimum difference of PWM duty	Manual Entry	300	Minimum difference of PWM duty
General > Adjustment delay of A/D conversion	Manual Entry	240	Adjustment delay of A/D conversion
General > Input Voltage (V)	Must be a valid value	24.0F	Input voltage
General > Resolution of A/D conversion	Manual Entry	0xFFF	Resolution of A/D conversion
General > Offset of A/D conversion for current	Manual Entry	0x745	Offset of A/D conversion for current
General > Conversion level of A/D conversion for voltage	Must be a valid value	0.66F	Conversion level of A/D conversion for voltage
General > GTIOCA Stop Level	• Pin Level Low • Pin Level High	Pin Level High	Select the behavior of the output pin when the timer is stopped.
General > GTIOCB Stop Level	• Pin Level Low • Pin Level High	Pin Level High	Select the behavior of the output pin when the timer is stopped.
Modulation > Maximum Duty	Must be a valid value	0.9375F	Maximum duty of PWM
Interrupts > Callback	Name must be a valid C symbol	NULL	A user callback function. If this callback function is provided, it is called at A/D conversion finish interrupt.

Clock Configuration

Set used clock with included GPT timer.

Pin Configuration

Depend on included GPT Three Phase Module and ADC Module.

Usage Notes

Limitations

Basically no limitation exists.

Examples

Basic Example

This is a basic example of minimal use of the Motor Driver in an application.

```
void motor_driver_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = RM_MOTOR_DRIVER_Open(&g_motor_driver0.p_ctrl, &g_motor_driver0.p_cfg);
    assert(FSP_SUCCESS == err);
 /* Basically run this module at cyclic interrupt (e.g. included GPT PWM Carrier
intterupt).
  * This implementation is an example. */
 // while (true)
    {
 /* Application work here. */
 /* Get electric current, main line voltage and maximum voltage component */
       (void) RM_MOTOR_DRIVER_CurrentGet(&g_motor_driver0.p_ctrl, &f_get_iu,
&f_get_iw, &f_get_vdc, &f_get_va_max);
 /* Get the flag of A/D convderted current offset */
       (void) RM_MOTOR_DRIVER_FlagCurrentOffsetGet(&g_motor_driver0.p_ctrl,
&u1_get_flg_offset);
 // Perform current control process here
 /* Set phase voltage */
       (void) RM_MOTOR_DRIVER_PhaseVoltageSet(&g_motor_driver0.p_ctrl, 1.0F, 1.0F,
1.0F);
       (void) RM_MOTOR_DRIVER_ParameterUpdate(&g_motor_driver0.p_ctrl,
&g_motor_driver0.p_cfg);
    }
    (void) RM_MOTOR_DRIVER_Reset(&g_motor_driver0.p_ctrl);
 //

    (void) RM_MOTOR_DRIVER_Close(&g_motor_driver0.p_ctrl);
```

```
}
```

Enumerations

enum	motor_driver_modulation_method_t

Enumeration Type Documentation

◆ motor_driver_modulation_method_t

enum motor_driver_modulation_method_t

Enumerator	
MOTOR_DRIVER_MODULATION_METHOD_SPWM	Sinusoidal pulse-width-modulation.
MOTOR_DRIVER_MODULATION_METHOD_SVPWM	Space vector pulse-width-modulation.

Function Documentation

◆ RM_MOTOR_DRIVER_Open()

fsp_err_t RM_MOTOR_DRIVER_Open (motor_driver_ctrl_t *const *p_ctrl*, motor_driver_cfg_t const *const *p_cfg*)

Opens and configures the Motor Driver module. Implements motor_driver_api_t::open.

Return values

FSP_SUCCESS	Motor Driver successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.

◆ RM_MOTOR_DRIVER_Close()

fsp_err_t RM_MOTOR_DRIVER_Close (motor_driver_ctrl_t *const *p_ctrl*)

Disables specified Motor Driver Module. Implements motor_driver_api_t::close.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_DRIVER_Reset()

fsp_err_t RM_MOTOR_DRIVER_Reset (motor_driver_ctrl_t *const *p_ctrl*)

Reset variables of Motor Driver Module. Implements motor_driver_api_t::reset.

Return values

FSP_SUCCESS	Successfully reset.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_DRIVER_PhaseVoltageSet()

fsp_err_t RM_MOTOR_DRIVER_PhaseVoltageSet (motor_driver_ctrl_t *const *p_ctrl*, float const *u_voltage*, float const *v_voltage*, float const *w_voltage*)

Set Phase Voltage Data to calculate PWM duty. Implements motor_driver_api_t::phaseVoltageSet.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_DRIVER_CurrentGet()

fsp_err_t RM_MOTOR_DRIVER_CurrentGet (motor_driver_ctrl_t *const *p_ctrl*, motor_driver_current_get_t *const *p_current_get*)

Get calculated phase Current, Vdc & Va_max data. Implements motor_driver_api_t::currentGet.

Return values

FSP_SUCCESS	Successful data get.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_DRIVER_FlagCurrentOffsetGet()

fsp_err_t RM_MOTOR_DRIVER_FlagCurrentOffsetGet (motor_driver_ctrl_t *const *p_ctrl*, uint8_t *const *p_flag_offset*)

Get the flag of finish current offset detection. Implements motor_driver_api_t::flagCurrentOffsetGet .

Return values

FSP_SUCCESS	Successful data get.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter error.

◆ RM_MOTOR_DRIVER_CurrentOffsetRestart()

fsp_err_t RM_MOTOR_DRIVER_CurrentOffsetRestart (motor_driver_ctrl_t *const *p_ctrl*)

Restart the current offset detection. Implements motor_driver_api_t::currentOffsetRestart.

Return values

FSP_SUCCESS	Successfully restarted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_DRIVER_ParameterUpdate()

fsp_err_t RM_MOTOR_DRIVER_ParameterUpdate (motor_driver_ctrl_t *const *p_ctrl*, motor_driver_cfg_t const *const *p_cfg*)

Update the parameters of Driver Module. Implements motor_driver_api_t::parameterUpdate.

Return values

FSP_SUCCESS	Successfully data was updated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Detailed Description

Control a SPM motor on RA MCUs. This module implements the Motor encoder vector control (rm_motor_encoder).

Overview

The motor encoder vector control is used to control motor rotation in an application. This module is meant to be used with Surface Permanent Magnet (SPM) motors and allows applications to start or stop motor rotation easily.

Features

The motor encoder module has below features.

- Start/stop motor rotation
- Error detection (over current, over speed, over voltage, low voltage)

Configuration

Build Time Configurations for rm_motor_encoder

The following build time configurations are defined in fsp_cfg/rm_motor_encoder_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP)	Default (BSP)	If selected code for

• Enabled • Disabled		parameter checking is included in the build.

Configurations for Motor > Motor Encoder Vector Control (rm_motor_encoder)

This module can be added to the Stacks tab via New Stack > Motor > Motor Encoder Vector Control (rm_motor_encoder).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_encoder0	Module name.
General > Limit of over current (A)	Must be a valid value	2.0F	Limit of over current.(Detection threshold)
General > Limit of over voltage (V)	Must be a valid value	28.0F	Limit of over voltage.(Detection threshold)
General > Limit of over speed (rpm)	Must be a valid value	2100.0F	Limit of over speed.(Detection threshold)
General > Limit of low voltage (V)	Must be a valid value	18.0F	Limit of low voltage.(Detection threshold)
Interrupts > Callback	Name must be a valid C symbol	NULL	A user callback function. If this callback function is provided, it is called at speed control cyclic interrupt.

Clock Configuration

This module doesn't depend on clock setting, because this module is a simple status transition process.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Limitations

Examples

Basic Example

This is a basic example of minimal use of the motor encoder module in an application.

```
void motor_encoder_basic_example (void)
```

```
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = RM_MOTOR_ENCODER_Open(g_motor_encoder0.p_ctrl, g_motor_encoder0.p_cfg);
    handle_error(err);
 /* Set speed reference before motor run */
    (void) RM_MOTOR_ENCODER_SpeedSet(g_motor_encoder0.p_ctrl,
RM_MOTOR_ENCODER_TEST_OVER_SPEED_LIMIT);
 /* Set position reference before motor run */
    (void) RM_MOTOR_ENCODER_PositionSet(g_motor_encoder0.p_ctrl, &g_posref_sample1);
 /* Start motor rotation */
    (void) RM_MOTOR_ENCODER_Run(g_motor_encoder0.p_ctrl);
 /* Get current status */
    (void) RM_MOTOR_ENCODER_StatusGet(g_motor_encoder0.p_ctrl, &smpl_status);
 /* Get current rotor angle */
    (void) RM_MOTOR_ENCODER_AngleGet(g_motor_encoder0.p_ctrl, &smpl_angle);
 /* Get current motor speed */
    (void) RM_MOTOR_ENCODER_SpeedGet(g_motor_encoder0.p_ctrl, &smpl_speed);
 /* Check error */
    (void) RM_MOTOR_ENCODER_ErrorCheck(g_motor_encoder0.p_ctrl, &smpl_error);
 /* Stop motor rotation */
    (void) RM_MOTOR_ENCODER_Stop(g_motor_encoder0.p_ctrl);
 /* Stop motor rotation */
    (void) RM_MOTOR_ENCODER_ErrorSet(g_motor_encoder0.p_ctrl,
MOTOR_ERROR_OVER_CURRENT_HW);
 /* Reset Speed Control */
    (void) RM_MOTOR_ENCODER_Reset(g_motor_encoder0.p_ctrl);
 /* Close Speed Control */
    (void) RM_MOTOR_ENCODER_Close(g_motor_encoder0.p_ctrl);
}
```

Function Documentation

◆ RM_MOTOR_ENCODER_Open()

fsp_err_t RM_MOTOR_ENCODER_Open (motor_ctrl_t *const *p_ctrl*, motor_cfg_t const *const *p_cfg*)

Configure the MOTOR in register start mode. Implements motor_api_t::open.

This function should only be called once as MOTOR configuration registers can only be written to once so subsequent calls will have no effect.

Example:

```
/* Initializes the module. */
   err = RM_MOTOR_ENCODER_Open(g_motor_encoder0.p_ctrl, g_motor_encoder0.p_cfg);
```

Return values

FSP_SUCCESS	MOTOR successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Configuration parameter error.

Note

◆ RM_MOTOR_ENCODER_Close()

fsp_err_t RM_MOTOR_ENCODER_Close (motor_ctrl_t *const *p_ctrl*)

Disables specified Motor Encoder Control block. Implements motor_api_t::close.

Example:

```
/* Close Speed Control */
   (void) RM_MOTOR_ENCODER_Close(g_motor_encoder0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_ENCODER_Run()

fsp_err_t RM_MOTOR_ENCODER_Run (motor_ctrl_t *const *p_ctrl*)

Run Motor (Start motor rotation). Implements motor_api_t::run.

Example:

```
/* Start motor rotation */
   (void) RM_MOTOR_ENCODER_Run(g_motor_encoder0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_ENCODER_Stop()

fsp_err_t RM_MOTOR_ENCODER_Stop (motor_ctrl_t *const *p_ctrl*)

Stop Motor (Stop motor rotation). Implements motor_api_t::stop.

Example:

```
/* Stop motor rotation */
   (void) RM_MOTOR_ENCODER_Stop(g_motor_encoder0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_ENCODER_Reset()

fsp_err_t RM_MOTOR_ENCODER_Reset (motor_ctrl_t *const *p_ctrl*)

Reset Motor Encoder Control block. Implements motor_api_t::reset.

Example:

```
/* Reset Speed Control */
   (void) RM_MOTOR_ENCODER_Reset(g_motor_encoder0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_ENCODER_ErrorSet()

fsp_err_t RM_MOTOR_ENCODER_ErrorSet (motor_ctrl_t *const *p_ctrl*, motor_error_t const *error*)

Set error information. Implements motor_api_t::errorSet.

Example:

```
/* Stop motor rotation */
   (void) RM_MOTOR_ENCODER_ErrorSet(g_motor_encoder0.p_ctrl,
MOTOR_ERROR_OVER_CURRENT_HW);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_ENCODER_SpeedSet()

fsp_err_t RM_MOTOR_ENCODER_SpeedSet (motor_ctrl_t *const *p_ctrl*, float const *speed_rpm*)

Set speed reference[rpm]. Implements motor_api_t::speedSet.

Example:

```
/* Set speed reference before motor run */
   (void) RM_MOTOR_ENCODER_SpeedSet(g_motor_encoder0.p_ctrl,
RM_MOTOR_ENCODER_TEST_OVER_SPEED_LIMIT);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_ENCODER_PositionSet()

fsp_err_t RM_MOTOR_ENCODER_PositionSet (motor_ctrl_t *const *p_ctrl*, motor_speed_position_data_t const *const *p_position*)

Set position reference[degree]. Implements motor_api_t::positionSet.

Example:

```
/* Set position reference before motor run */
   (void) RM_MOTOR_ENCODER_PositionSet(g_motor_encoder0.p_ctrl, &g_posref_sample1);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Data set pointer is invalid..

Note

◆ RM_MOTOR_ENCODER_StatusGet()

fsp_err_t RM_MOTOR_ENCODER_StatusGet (motor_ctrl_t *const *p_ctrl*, uint8_t *const *p_status*)

Get current control status. Implements motor_api_t::statusGet.

Example:

```
/* Get current status */
   (void) RM_MOTOR_ENCODER_StatusGet(g_motor_encoder0.p_ctrl, &smpl_status);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Data received pointer is invalid..

Note

◆ RM_MOTOR_ENCODER_AngleGet()

fsp_err_t RM_MOTOR_ENCODER_AngleGet (motor_ctrl_t *const *p_ctrl*, float *const *p_angle_rad*)

Get current rotor angle. Implements motor_api_t::angleGet.

Example:

```
/* Get current rotor angle */
   (void) RM_MOTOR_ENCODER_AngleGet(g_motor_encoder0.p_ctrl, &smpl_angle);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Data received pointer is invalid..

Note

◆ RM_MOTOR_ENCODER_SpeedGet()

fsp_err_t RM_MOTOR_ENCODER_SpeedGet (motor_ctrl_t *const *p_ctrl*, float *const *p_speed_rpm*)

Get rotational speed. Implements motor_api_t::speedGet.

Example:

```
/* Get current motor speed */
   (void) RM_MOTOR_ENCODER_SpeedGet(g_motor_encoder0.p_ctrl, &smpl_speed);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Data received pointer is invalid..

Note

◆ RM_MOTOR_ENCODER_ErrorCheck()

fsp_err_t RM_MOTOR_ENCODER_ErrorCheck (motor_ctrl_t *const *p_ctrl*, uint16_t *const *p_error*)

Check the occurunce of Error. Implements motor_api_t::errorCheck.

Example:

```
/* Check error */

   (void) RM_MOTOR_ENCODER_ErrorCheck(g_motor_encoder0.p_ctrl, &smpl_error);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Data received pointer is invalid..

Note

◆ RM_MOTOR_ENCODER_WaitStopFlagGet()

fsp_err_t RM_MOTOR_ENCODER_WaitStopFlagGet (motor_ctrl_t *const *p_ctrl*, motor_wait_stop_flag_t *const *p_flag*)

Get wait stop flag. Implements motor_api_t::waitStopFlagGet.

Example:

Return values

FSP_ERR_UNSUPPORTED	Unsupported.

Detailed Description

Calculation proccess for the motor control on RA MCUs. This module implements the Motor angle Interface.

Overview

The motor angle and speed estimation module is used to calculate rotor angle and rotational speed in an application. This module should be called cyclically after the A/D conversion of electric current of each phase in an application.

Features

The Motor Angle and Speed Estimation Module has below features.

- Calculate rotor angle [radian].
- Calculate rotational speed [radian/second].

Configuration

Build Time Configurations for rm_motor_estimate

The following build time configurations are defined in fsp_cfg/rm_motor_estimate_cfg.h:

Configuration	Options	Default	Description

Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Motor > Motor Angle (rm_motor_estimate)

This module can be added to the Stacks tab via New Stack > Motor > Motor Angle (rm_motor_estimate).

Configuration	Options	Default	Description
Motor Parameter > Pole pairs	Manual Entry	2	Pole pairs
Motor Parameter > Resistance[ohm]	Must be a valid value	8.5F	Resistance
Motor Parameter > Inductance of d-axis[H]	Must be a valid value	0.0045F	Inductance of d-axis
Motor Parameter > Inductance of q-axis[H]	Must be a valid value	0.0045F	Inductance of q-axis
Motor Parameter > Permanent magnetic flux[Wb]	Must be a valid value	0.02159F	Permanent magnetic flux
Motor Parameter > Rotor inertia[kgm^2]	Must be a valid value	0.0000028F	Rotor inertia
Name	Name must be a valid C symbol	g_motor_angle0	Module name.
Openloop damping	• Disable • Enable	Enable	Openloop damping functionally enable or disable
Natural frequency of BEMF observer	Must be a valid value	1000.0F	Natural frequency of BEMF observer
Damping ratio of BEMF observer	Must be a valid value	1.0F	Damping ratio of BEMF observer
Natural frequency of PLL Speed estimate loop	Must be a valid value	20.0F	Natural frequency of PLL Speed estimate loop
Damping ratio of PLL Speed estimate loop	Must be a valid value	1.0F	Damping ratio of PLL Speed estimate loop
Control period	Must be a valid value	0.00005F	Control period

Clock Configuration

This module doesn't depend on clock setting, because this module is a simple calculation process.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Limitations

Developers should be aware of the following limitations when using the Motor Angle and Speed Estimation:

Examples

Basic Example

This is a basic example of minimal use of the Motor Angle and Speed Estimation in an application.

```
void motor_estimate_basic_example (void)
{
 fsp_err_t             err = FSP_SUCCESS;
 motor_angle_current_t smpl_current:
 motor_angle_voltage_reference_t smpl_voltage;
 /* Initializes the module. */
    err = RM_MOTOR_ESTIMATE_Open(&g_mtr_angle0_ctrl, &g_mtr_angle_set0_cfg);
    assert(FSP_SUCCESS == err);
 /* Basically run this module at A/D conversion finish interrupt.
  * This implementation is an example. */
 while (true)
    {
 /* Application work here. */
 /* Set PI Control Flag before get Angle/Speed and Estimated Component */
       (void) RM_MOTOR_ESTIMATE_FlagPiCtrlSet(&g_mtr_angle0_ctrl, 1U);
       smpl_current.id = 1.0F;
       smpl_current.iq = 1.0F;
       smpl_voltage.vd = 10.0F;
       smpl_voltage.vq = 10.0F;
 /* Set Current and Speed data before get Angle/Speed and Estimated Component */
       (void) RM_MOTOR_ESTIMATE_CurrentSet(&g_mtr_angle0_ctrl, smpl_current,
smpl_voltage);
 /* Set Internal Speed Reference & damping speed data before get Angle/Speed and
Estimated Component */
       (void) RM_MOTOR_ESTIMATE_SpeedSet(&g_mtr_angle0_ctrl, 104.27F, 10.0F);
```

```
 /* Get Angle/Speed data */
       (void) RM_MOTOR_ESTIMATE_AngleSpeedGet(&g_mtr_angle0_ctrl, &f_get_angle,
&f_get_speed, &f_get_phase_err);
 /* Get Estimated Component */
       (void) RM_MOTOR_ESTIMATE_EstimatedComponentGet(&g_mtr_angle0_ctrl, &f_get_ed,
&f_get_eq);
    }
}
```

Function Documentation

◆ RM_MOTOR_ESTIMATE_Open()

fsp_err_t RM_MOTOR_ESTIMATE_Open (motor_angle_ctrl_t *const *p_ctrl*, motor_angle_cfg_t const *const *p_cfg*)

Opens and configures the Angle Estimation module. Implements motor_angle_api_t::open.

Return values

FSP_SUCCESS	MTR_ANGL_EST successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Configuration parameter error.

◆ RM_MOTOR_ESTIMATE_Close()

fsp_err_t RM_MOTOR_ESTIMATE_Close (motor_angle_ctrl_t *const *p_ctrl*)

Disables specified Angle Estimation module. Implements motor_angle_api_t::close.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_ESTIMATE_Reset()

fsp_err_t RM_MOTOR_ESTIMATE_Reset (motor_angle_ctrl_t *const *p_ctrl*)

Reset variables of Angle Estimation module. Implements motor_angle_api_t::reset.

Return values

FSP_SUCCESS	Successfully reset.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_ESTIMATE_CurrentSet()

fsp_err_t RM_MOTOR_ESTIMATE_CurrentSet (motor_angle_ctrl_t *const *p_ctrl*, motor_angle_current_t *const *p_st_current*, motor_angle_voltage_reference_t *const *p_st_voltage*)

Set d/q-axis Current Data & Voltage Reference. Implements motor_angle_api_t::currentSet.

Return values

FSP_SUCCESS	Successfully set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_ESTIMATE_SpeedSet()

fsp_err_t RM_MOTOR_ESTIMATE_SpeedSet (motor_angle_ctrl_t *const *p_ctrl*, float const *speed_ctrl*, float const *damp_speed*)

Set Speed Information. Implements motor_angle_api_t::speedSet.

Return values

FSP_SUCCESS	Successfully set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_ESTIMATE_FlagPiCtrlSet()

fsp_err_t RM_MOTOR_ESTIMATE_FlagPiCtrlSet (motor_angle_ctrl_t *const *p_ctrl*, uint32_t const *flag_pi*)

Set the flag of PI Control runs. Implements motor_angle_api_t::flagPiCtrlSet.

Return values

FSP_SUCCESS	Successfully set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_ESTIMATE_AngleSpeedGet()

fsp_err_t RM_MOTOR_ESTIMATE_AngleSpeedGet (motor_angle_ctrl_t *const *p_ctrl*, float *const *p_angle*, float *const *p_speed*, float *const *p_phase_err*)

Gets the current rotor's angle and rotation speed. Implements motor_angle_api_t::angleSpeedGet.

Return values

FSP_SUCCESS	Successful data get.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_ESTIMATE_EstimatedComponentGet()

fsp_err_t RM_MOTOR_ESTIMATE_EstimatedComponentGet (motor_angle_ctrl_t *const *p_ctrl*, float *const *p_ed*, float *const *p_eq*)

Gets estimated d/q-axis component. Implements motor_angle_api_t::estimatedComponentGet.

Return values

FSP_SUCCESS	Successfully data gotten.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_ESTIMATE_ParameterUpdate()

fsp_err_t RM_MOTOR_ESTIMATE_ParameterUpdate (motor_angle_ctrl_t *const *p_ctrl*, motor_angle_cfg_t const *const *p_cfg*)

Update the parameters of Angle&Speed Estimation. Implements motor_angle_api_t::parameterUpdate.

Return values

FSP_SUCCESS	Successfully data is update.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_ESTIMATE_InternalCalculate()

fsp_err_t RM_MOTOR_ESTIMATE_InternalCalculate (motor_angle_ctrl_t *const *p_ctrl*)

Calculate internal parameters. Implements motor_angle_api_t::internalCalculate.

Return values

FSP_ERR_UNSUPPORTED	Unsupported.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_ESTIMATE_AngleAdjust()

fsp_err_t RM_MOTOR_ESTIMATE_AngleAdjust (motor_angle_ctrl_t *const *p_ctrl*)

Angle Adjustment Process. Implements motor_angle_api_t::angleAdjust.

Return values

FSP_ERR_UNSUPPORTED	Unsupported.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_ESTIMATE_EncoderCyclic()

fsp_err_t RM_MOTOR_ESTIMATE_EncoderCyclic (motor_angle_ctrl_t *const *p_ctrl*)

Encoder Cyclic Process (Call in cyclic timer). Implements motor_angle_api_t::encoderCyclic.

Return values

FSP_ERR_UNSUPPORTED	Unsupported.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_ESTIMATE_InfoGet()

fsp_err_t RM_MOTOR_ESTIMATE_InfoGet (motor_angle_ctrl_t *const *p_ctrl*, motor_angle_encoder_info_t *const *p_info*)

Gets information of Encoder Angle Module. Implements motor_angle_api_t::infoGet.

Return values

FSP_ERR_UNSUPPORTED	Unsupported.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

4.2.111 Motor Position (rm_motor_position)

Modules

Functions

fsp_err_t	RM_MOTOR_POSITION_Open (motor_position_ctrl_t *const p_ctrl, motor_position_cfg_t const *const p_cfg) Opens and configures the Motor Position Module. Implements motor_position_api_t::open. More...
fsp_err_t	RM_MOTOR_POSITION_Close (motor_position_ctrl_t *const p_ctrl) Disables specified Motor Position Module. Implements motor_position_api_t::close. More...
fsp_err_t	RM_MOTOR_POSITION_Reset (motor_position_ctrl_t *const p_ctrl)

	Reset the variables of Motor Position Module. Implements motor_position_api_t::reset. More...
fsp_err_t	RM_MOTOR_POSITION_PositionGet (motor_position_ctrl_t *const p_ctrl, int16_t *const p_position) Get Rotor Position Data [degree]. Implements motor_position_api_t::positionGet. More...
fsp_err_t	RM_MOTOR_POSITION_PositionSet (motor_position_ctrl_t *const p_ctrl, float const position_rad) Set Position Data from Encoder [radian]. Implements motor_position_api_t::positionSet. More...

Detailed Description

Calculation process for the motor control on RA MCUs. This module implements the Motor position Interface.

Overview

The motor position is used to control the position of motor rotor in an appication. This module should be called cyclically in an application (e.g. in cyclic timer interrupt). This module calculates speed reference with inputted position reference and current rotational speed.

Features

The Motor Position Module has below features.

- Calculate speed reference.

Configuration

Build Time Configurations for rm_motor_position

The following build time configurations are defined in fsp_cfg/rm_motor_position_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Motor > Motor Position Controller (rm_motor_position)

This module can be added to the Stacks tab via New Stack > Motor > Motor Position Controller

(rm_motor_position).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_position0	Module name.
General > Position Dead Band	Manual Entry	1U	Ignored Area of Position Control.
General > Position Band Limit	Manual Entry	3U	Ignored Area of Position Control.
General > Speed Feedforward Ratio	Must be a valid value	0.8F	Speed Feedforward Ratio.
General > Encoder Counts per one rotation	Must be a valid value	1200.0F	Encoder Counts per one rotation.
General > Position Omega	Must be a valid value	10.0F	Position Control Omega.
General > Period of Speed Control[sec]	Must be a valid value	0.0005F	Period of Speed Control.
IPD > IPD LPF	• Disable • Enable	Disable	IPD LPF process enable or disable
IPD > Position Kp ratio	Must be a valid value	0.3F	Position Kp ratio.
IPD > Position Feedforward ratio	Must be a valid value	0.0F	Position Feedforward ratio.
IPD > Speed K ratio	Must be a valid value	2.0F	Speed K ratio
IPD > Error Limit #1	Must be a valid value	10.0F	Error Limitation #1
IPD > Error Limit #2	Must be a valid value	0.2F	Error Limitation #2
IPD > LPF Omega	Must be a valid value	500.0F	LPF Omega.
IPD > LPF Zeta	Must be a valid value	1.0F	LPF Zeta.
Position Profiling > Interval Time	Manual Entry	400U	Interval Time.
Position Profiling > Accel Time	Must be a valid value	0.3F	Accel Time.
Position Profiling > Maximum Accel Time	Must be a valid value	8117.96F	Maximum Accelaration Time [sec]
Position Profiling > Accelaration Maximum Speed	Must be a valid value	2000.0F	Accelaration Maximum Speed.
Position Profiling > Update Step of Timer	Must be a valid value	0.0005F	Update Step of Timer.
Motor Parameter > Pole Pair	Manual Entry	7	Pole Pair
Motor Parameter >	Must be a valid value	0.453F	Resistance

Resistance[ohm]			
Motor Parameter > Inductance of d-axis[H]	Must be a valid value	0.0009447F	Inductance of d-axis
Motor Parameter > Inductance of q-axis[H]	Must be a valid value	0.0009447F	Inductance of q-axis
Motor Parameter > Inertia[kgm^2]	Must be a valid value	0.006198F	Inertia
Motor Parameter > Motor Inertia[kgm^2]	Must be a valid value	0.00000962F	Motor Inertia

Clock Configuration

This module doesn't depend on clock setting, because this module is a simple calculation process.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Limitations

- Set the period of speed control with non-negative value.
- Set the limit of speed change step with non-negative value.
- Set the maximum speed with non-negative value.

Examples

Basic Example

This is a basic example of using the Motor Position module in an application.

```
void motor_position_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = RM_MOTOR_POSITION_Open(g_motor_position0.p_ctrl, g_motor_position0.p_cfg);
    handle_error(err);
 /* Set working mode */
    RM_MOTOR_POSITION_ModeSet(g_motor_position0.p_ctrl,
MOTOR_POSITION_CTRL_MODE_STEP);
 /* Set position reference */
 RM_MOTOR_POSITION_PositionReferenceSet(g_motor_position0.p_ctrl, 180U);
 /* Basically run this module at cyclic interrupt (e.g. AGT timer).
```

```
 * This implementation is an example. */
// while (true)
   {
/* Application work here. */
/* Perform Position Control Process */
RM_MOTOR_POSITION_PositionControl(g_motor_position0.p_ctrl);
/* Perform Speed IPD Control Process */
RM_MOTOR_POSITION_IpdSpeedPControl(g_motor_position0.p_ctrl, 0.0F, 0.0F,
&temp_iq_ref);
/* Get Position */
RM_MOTOR_POSITION_PositionGet(g_motor_position0.p_ctrl, &temp_position);
/* Update parameters */
RM_MOTOR_POSITION_ParameterUpdate(g_motor_position0.p_ctrl,
&g_motor_position0.p_cfg);
   }
/* Reset Speed Control */
RM_MOTOR_POSITION_Reset(g_motor_position0.p_ctrl);
/* Close Speed Control */
RM_MOTOR_POSITION_Close(g_motor_position0.p_ctrl);
}
```

Enumerations

enum motor_position_ipd_lpf_t

Enumeration Type Documentation

◆ motor_position_ipd_lpf_t

enum motor_position_ipd_lpf_t	
Enumerator	
MOTOR_POSITION_IPD_LPF_DISABLE	ipd control is disabled
MOTOR_POSITION_IPD_LPF_ENABLE	ipd control is enabled

Function Documentation

◆ RM_MOTOR_POSITION_Open()

fsp_err_t RM_MOTOR_POSITION_Open (motor_position_ctrl_t *const *p_ctrl*, motor_position_cfg_t const *const *p_cfg*)

Opens and configures the Motor Position Module. Implements motor_position_api_t::open.

Return values

FSP_SUCCESS	Motor Position Module successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Set parameter is invalid.

◆ RM_MOTOR_POSITION_Close()

fsp_err_t RM_MOTOR_POSITION_Close (motor_position_ctrl_t *const *p_ctrl*)

Disables specified Motor Position Module. Implements motor_position_api_t::close.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_POSITION_Reset()

fsp_err_t RM_MOTOR_POSITION_Reset (motor_position_ctrl_t *const *p_ctrl*)

Reset the variables of Motor Position Module. Implements motor_position_api_t::reset.

Return values

FSP_SUCCESS	Successfully reset.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_POSITION_PositionGet()

fsp_err_t RM_MOTOR_POSITION_PositionGet (motor_position_ctrl_t *const *p_ctrl*, int16_t *const *p_position*)

Get Rotor Position Data [degree]. Implements motor_position_api_t::positionGet.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Output pointer is NULL.

◆ RM_MOTOR_POSITION_PositionSet()

fsp_err_t RM_MOTOR_POSITION_PositionSet (motor_position_ctrl_t *const *p_ctrl*, float const *position_rad*)

Set Position Data from Encoder [radian]. Implements motor_position_api_t::positionSet.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_POSITION_PositionReferenceSet()

fsp_err_t RM_MOTOR_POSITION_PositionReferenceSet (motor_position_ctrl_t *const *p_ctrl*, int16_t const *position_reference_deg*)

Set Position Reference Data [degree]. Implements motor_position_api_t::positionReferenceSet.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_POSITION_ControlModeSet()

fsp_err_t RM_MOTOR_POSITION_ControlModeSet (motor_position_ctrl_t *const *p_ctrl*, motor_position_ctrl_mode_t const *mode*)

Set Position Control Mode. Implements motor_position_api_t::controlModeSet.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_POSITION_PositionControl()

fsp_err_t RM_MOTOR_POSITION_PositionControl (motor_position_ctrl_t *const *p_ctrl*)

Calculates internal position reference.(Main process of Position Control) Implements motor_position_api_t::positionControl.

Return values

FSP_SUCCESS	Successful data calculation.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_POSITION_IpdSpeedPControl()

fsp_err_t RM_MOTOR_POSITION_IpdSpeedPControl (motor_position_ctrl_t *const *p_ctrl*, float const *ref_speed_rad*, float const *speed_rad*, float *const *p_iq_ref*)

Calculates the q-axis current reference by P control. Implements motor_position_api_t::ipdSpeedPControl.

Return values

FSP_SUCCESS	Successful data calculation.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Output pointer is NULL.

◆ RM_MOTOR_POSITION_SpeedReferencePControlGet()

fsp_err_t RM_MOTOR_POSITION_SpeedReferencePControlGet (motor_position_ctrl_t *const *p_ctrl*, float *const *p_speed_ref*)

Get Speed Reference by P Control. Implements motor_position_api_t::speedReferencePControlGet.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Output pointer is NULL.

◆ RM_MOTOR_POSITION_SpeedReferenceIpdControlGet()

fsp_err_t RM_MOTOR_POSITION_SpeedReferenceIpdControlGet (motor_position_ctrl_t *const *p_ctrl*, float const *max_speed_rad*, float *const *p_speed_ref*)

Get Speed Reference by IPD Control. Implements motor_position_api_t::speedReferenceIpdControlGet.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Output pointer is NULL.

◆ RM_MOTOR_POSITION_SpeedReferenceFeedforwardGet()

fsp_err_t RM_MOTOR_POSITION_SpeedReferenceFeedforwardGet (motor_position_ctrl_t *const *p_ctrl*, float *const *p_speed_ref*)

Get Speed Reference by Feedforward. Implements motor_position_api_t::speedReferenceFeedforwardGet.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Output pointer is NULL.

◆ RM_MOTOR_POSITION_ParameterUpdate()

fsp_err_t RM_MOTOR_POSITION_ParameterUpdate (motor_position_ctrl_t *const *p_ctrl*, motor_position_cfg_t const *const *p_cfg*)
Update the parameters of Position Control Calculation. Implements motor_position_api_t::parameterUpdate. **Return values** FSP_SUCCESS — Successfully data was updated. FSP_ERR_ASSERTION — Null pointer. FSP_ERR_NOT_OPEN — Module is not open. FSP_ERR_INVALID_ARGUMENT — Configuration parameter error.

4.2.112 Motor Angle and Speed Calculation with an Encoder (rm_motor_sense_encoder)

Modules

Functions

fsp_err_t	RM_MOTOR_SENSE_ENCODER_Open (motor_angle_ctrl_t *const p_ctrl, motor_angle_cfg_t const *const p_cfg) Opens and configures the Angle Encoder module. Implements motor_angle_api_t::open. More...

Detailed Description

Calculation proccess for the motor control on RA MCUs. This module implements the Motor angle Interface.

Overview

The motor angle and speed calculation with an encoder module is used to calculate rotor angle and rotational speed in an application. This module is designed to be used with the motor current module (rm_motor_current).

Features

The motor angle and speed calculation with an encoder module has the features listed below.

- Calculate rotor angle [radian].
- Calculate rotational speed [radian/second].

Configuration

Build Time Configurations for rm_motor_sense_encoder

The following build time configurations are defined in fsp_cfg/rm_motor_sense_encoder_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Motor > Motor Angle (rm_motor_sense_encoder)

This module can be added to the Stacks tab via New Stack > Motor > Motor Angle (rm_motor_sense_encoder).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_sense_encoder0	Module name.
Motor Parameter > Pole pairs	Must be a valid non-negative value.	7	Pole pairs

Motor Parameter > Resistance (ohm)	Must be a valid value	0.453F	Resistance
Motor Parameter > Inductance of d-axis (H)	Must be a valid value	0.0009447F	Inductance of d-axis
Motor Parameter > Inductance of q-axis (H)	Must be a valid value	0.0009447F	Inductance of q-axis
Motor Parameter > Permanent magnetic flux (Wb)	Must be a valid value	0.006198F	Permanent magnetic flux
Motor Parameter > Rotor inertia (kgm^2)	Must be a valid value	0.00000962F	Rotor inertia
Control Type	• Speed • Position	Position	Select control Type
Period of Current control (kHz)	Must be a valid value	20.0F	Period of Current control
Period of Speed control (sec)	Must be a valid value	0.0005F	Period of Speed control
PWM Carrier Frequency (kHz)	Must be a valid value	20.0F	PWM Carrier Frequency
Decimation of Interrupt	Manual Entry	0U	Decimation of Interrupt
Counts per Rotation	Must be a valid non-negative value.	1200U	Encoder Counts per One Rotation
Counts for Angle Adjust	Must be a valid non-negative value.	512U	Counts for Angle Adjust (as working time)
Zero speed counts	Must be a valid non-negative value.	20000000U	Threshold counts to judge zero speed
Occupancy Time	Must be a valid value	0.30F	Occupancy time of carrier interrup
Carrier Time	Must be a valid value	0.000013F	Processing time of carrier interrupt
Process Time	Must be a valid value	0.000001F	Processing time of encoder interrupt
Highspeed Change Margin (rpm)	Must be a valid non-negative value.	150U	Margin of toggle speed for high speed mode
LPF parameter for Highspeed Filter	Must be a valid value	0.1F	Highspeed mode speed LPF parameter
Counts to change speed	Must be a valid non-negative value.	8U	Counts for mode change of position speed calculation

Clock Configuration

Pin Configuration

Usage Notes

Limitations

Developers should be aware of the following limitations when using the motor angle and speed calculation with an encoder: all configurations should be set as positive values.

Examples

Basic Example

This is a basic example of minimal use of the motor angle and speed calculation with an encoder in an application.

```
void motor_sense_encoder_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = RM_MOTOR_SENSE_ENCODER_Open(&g_mtr_angle0_ctrl, &g_mtr_angle_set0_cfg);
    assert(FSP_SUCCESS == err);
 /* Basically run this module at A/D conversion finish interrupt.
  * This implementation is an example. */
 // while (true)
    {
 /* Application work here. */
 /* Initialize motor with the encoder */
       (void) RM_MOTOR_SENSE_ENCODER_AngleAdjust(&g_mtr_angle0_ctrl);
 /* Perform cyclic encoder process*/
       (void) RM_MOTOR_SENSE_ENCODER_EncoderCyclic(&g_mtr_angle0_ctrl);
 /* Calculate information with encoder signal input */
       (void) RM_MOTOR_SENSE_ENCODER_InternalCalculate(&g_mtr_angle0_ctrl);
 /* Get angle/speed data */
       (void) RM_MOTOR_SENSE_ENCODER_AngleSpeedGet(&g_mtr_angle0_ctrl, &f_get_angle,
&f_get_speed, &f_get_phase_err);
 /* Get calculated component */
       (void) RM_MOTOR_SENSE_ENCODER_InfoGet(&g_mtr_angle0_ctrl, &temp_info);
    }
 /* Reset the module */
```

```
    (void) RM_MOTOR_SENSE_ENCODER_Reset(&g_mtr_angle0_ctrl);
 /* Close the module */
    (void) RM_MOTOR_SENSE_ENCODER_Close(&g_mtr_angle0_ctrl);
}
```

Enumerations

enum	motor_sense_encoder_loop_t
enum	motor_sense_encoder_mode_t

Enumeration Type Documentation

◆ motor_sense_encoder_loop_t

enum motor_sense_encoder_loop_t	
Enumerator	
MOTOR_SENSE_ENCODER_LOOP_SPEED	Speed control mode.
MOTOR_SENSE_ENCODER_LOOP_POSITION	Position control mode.

◆ motor_sense_encoder_mode_t

enum motor_sense_encoder_mode_t	
Enumerator	
MOTOR_SENSE_ENCODER_MODE_INIT	Initialize mode (Start status)
MOTOR_SENSE_ENCODER_MODE_BOOT	Boot mode (Angle adjustment status)
MOTOR_SENSE_ENCODER_MODE_DRIVE	Drive mode (Normal work status)

Function Documentation

◆ RM_MOTOR_SENSE_ENCODER_Open()

fsp_err_t RM_MOTOR_SENSE_ENCODER_Open (motor_angle_ctrl_t *const *p_ctrl*, motor_angle_cfg_t const *const *p_cfg*)

Opens and configures the Angle Encoder module. Implements motor_angle_api_t::open.

Return values

FSP_SUCCESS	Angle Encoder module successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Configuration parameter error.

◆ RM_MOTOR_SENSE_ENCODER_Close()

fsp_err_t RM_MOTOR_SENSE_ENCODER_Close (motor_angle_ctrl_t *const *p_ctrl*)

Disables specified Angle Encoder module. Implements motor_angle_api_t::close.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_SENSE_ENCODER_Reset()

fsp_err_t RM_MOTOR_SENSE_ENCODER_Reset (motor_angle_ctrl_t *const *p_ctrl*)

Reset variables of Angle Encoder module. Implements motor_angle_api_t::reset.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_SENSE_ENCODER_InternalCalculate()

fsp_err_t RM_MOTOR_SENSE_ENCODER_InternalCalculate (motor_angle_ctrl_t *const *p_ctrl*)

Calculate internal parameters. Implements motor_angle_api_t::internalCalculate.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_SENSE_ENCODER_AngleSpeedGet()

fsp_err_t RM_MOTOR_SENSE_ENCODER_AngleSpeedGet (motor_angle_ctrl_t *const *p_ctrl*, float *const *p_angle*, float *const *p_speed*, float *const *p_phase_err*)

Gets the current rotor's angle and rotation speed. Implements motor_angle_api_t::angleSpeedGet.

Return values

FSP_SUCCESS	Successfully data calculated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_SENSE_ENCODER_AngleAdjust()

fsp_err_t RM_MOTOR_SENSE_ENCODER_AngleAdjust (motor_angle_ctrl_t *const *p_ctrl*)

Angle Adjustment Process. Implements motor_angle_api_t::angleAdjust.

Return values

FSP_SUCCESS	Successfully data calculated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_SENSE_ENCODER_EncoderCyclic()

fsp_err_t RM_MOTOR_SENSE_ENCODER_EncoderCyclic (motor_angle_ctrl_t *const *p_ctrl*)

Encoder Cyclic Process (Call in cyclic timer). Implements motor_angle_api_t::encoderCyclic.

Return values

FSP_SUCCESS	Successfully data calculated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_SENSE_ENCODER_InfoGet()

fsp_err_t RM_MOTOR_SENSE_ENCODER_InfoGet (motor_angle_ctrl_t *const *p_ctrl*, motor_angle_encoder_info_t *const *p_info*)

Gets information of Encoder Angle Module. Implements motor_angle_api_t::infoGet.

Return values

FSP_SUCCESS	Successfully data calculated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_SENSE_ENCODER_ParameterUpdate()

fsp_err_t RM_MOTOR_SENSE_ENCODER_ParameterUpdate (motor_angle_ctrl_t *const *p_ctrl*, motor_angle_cfg_t const *const *p_cfg*)

Update the parameters of Angle&Speed calculation with an encoder. Implements motor_angle_api_t::parameterUpdate.

Return values

FSP_SUCCESS	Successfully data is update.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_SENSE_ENCODER_CurrentSet()

fsp_err_t RM_MOTOR_SENSE_ENCODER_CurrentSet (motor_angle_ctrl_t *const *p_ctrl*, motor_angle_current_t *const *p_st_current*, motor_angle_voltage_reference_t *const *p_st_voltage*)

Set d/q-axis Current Data & Voltage Reference. Implements motor_angle_api_t::currentSet.

Return values

FSP_ERR_UNSUPPORTED	Motor sense encoder software currentSet is not supported.

◆ RM_MOTOR_SENSE_ENCODER_SpeedSet()

fsp_err_t RM_MOTOR_SENSE_ENCODER_SpeedSet (motor_angle_ctrl_t *const *p_ctrl*, float const *speed_ctrl*, float const *damp_speed*)

Set Speed Information. Implements motor_angle_api_t::speedSet.

Return values

FSP_ERR_UNSUPPORTED	Motor sense encoder software speedSet is not supported.

◆ RM_MOTOR_SENSE_ENCODER_FlagPiCtrlSet()

fsp_err_t RM_MOTOR_SENSE_ENCODER_FlagPiCtrlSet (motor_angle_ctrl_t *const *p_ctrl*, uint32_t const *flag_pi*)

Set the flag of PI Control runs. Implements motor_angle_api_t::flagPiCtrlSet.

Return values

FSP_ERR_UNSUPPORTED	Motor sense encoder software flagPiCtrlSet is not supported.

◆ RM_MOTOR_SENSE_ENCODER_EstimatedComponentGet()

fsp_err_t RM_MOTOR_SENSE_ENCODER_EstimatedComponentGet (motor_angle_ctrl_t *const *p_ctrl*, float *const *p_ed*, float *const *p_eq*)
Gets estimated d/q-axis component. Implements motor_angle_api_t::estimatedComponentGet.

Return values

FSP_ERR_UNSUPPORTED	Motor sense encoder software estimatedComponentGet is not supported.

4.2.113 Motor Sensorless Vector Control (rm_motor_sensorless)

Modules

Functions

fsp_err_t	RM_MOTOR_SENSORLESS_Open (motor_ctrl_t *const p_ctrl, motor_cfg_t const *const p_cfg)
fsp_err_t	RM_MOTOR_SENSORLESS_Close (motor_ctrl_t *const p_ctrl) Disables specified Motor Sensorless Control block. Implements motor_api_t::close. More...
fsp_err_t	RM_MOTOR_SENSORLESS_Run (motor_ctrl_t *const p_ctrl) Run Motor (Start motor rotation). Implements motor_api_t::run. More...
fsp_err_t	RM_MOTOR_SENSORLESS_Stop (motor_ctrl_t *const p_ctrl) Stop Motor (Stop motor rotation). Implements motor_api_t::stop. More...
fsp_err_t	RM_MOTOR_SENSORLESS_Reset (motor_ctrl_t *const p_ctrl) Reset Motor Sensorless Control block. Implements motor_api_t::reset . More...
fsp_err_t	RM_MOTOR_SENSORLESS_ErrorSet (motor_ctrl_t *const p_ctrl, motor_error_t const error) Set error information. Implements motor_api_t::errorSet. More...

fsp_err_t	RM_MOTOR_SENSORLESS_SpeedSet (motor_ctrl_t *const p_ctrl, float const speed_rpm) Set speed reference[rpm]. Implements motor_api_t::speedSet. More...
fsp_err_t	RM_MOTOR_SENSORLESS_StatusGet (motor_ctrl_t *const p_ctrl, uint8_t *const p_status) Get current control status. Implements motor_api_t::statusGet. More...
fsp_err_t	RM_MOTOR_SENSORLESS_AngleGet (motor_ctrl_t *const p_ctrl, float *const p_angle_rad) Get current rotor angle. Implements motor_api_t::angleGet. More...
fsp_err_t	RM_MOTOR_SENSORLESS_SpeedGet (motor_ctrl_t *const p_ctrl, float *const p_speed_rpm) Get rotational speed. Implements motor_api_t::speedGet. More...
fsp_err_t	RM_MOTOR_SENSORLESS_ErrorCheck (motor_ctrl_t *const p_ctrl, uint16_t *const p_error) Check the occurunce of Error. Implements motor_api_t::errorCheck. More...
fsp_err_t	RM_MOTOR_SENSORLESS_PositionSet (motor_ctrl_t *const p_ctrl, motor_speed_position_data_t const *const p_position) Set position reference. Implements motor_api_t::positionSet. More...
fsp_err_t	RM_MOTOR_SENSORLESS_WaitStopFlagGet (motor_ctrl_t *const p_ctrl, motor_wait_stop_flag_t *const p_flag) Get wait stop flag. Implements motor_api_t::waitStopFlagGet. More...

Detailed Description

Usual control of a SPM motor on RA MCUs. This module implements the Motor Sensorless Vector Control (rm_motor_sensorless).

Overview

The motor sensorless vector control is used to control a motor rotation in an appication. This module is implemented with using SPM motor. User can start/stop motor rotation simply.

Features

The Motor Sensorless Module has below features.

- Start/Stop a motor rotation
- Error detection (over current, over speed, over voltage, low voltage)

Configuration

Build Time Configurations for rm_motor_sensorless

The following build time configurations are defined in fsp_cfg/rm_motor_sensorless_cfg.h:

Configuration	Options	Default	Description
Parameter checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Motor > Motor Sensorless Vector Control (rm_motor_sensorless)

This module can be added to the Stacks tab via New Stack > Motor > Motor Sensorless Vector Control (rm_motor_sensorless).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_sensorless0	Module name.
General > Limit of over current (A)	Must be a valid value	0.42F	Limit of over current.(Detection threshold)
General > Limit of over voltage (V)	Must be a valid value	28.0F	Limit of over voltage.(Detection threshold)
General > Limit of over speed (rpm)	Must be a valid value	3000.0F	Limit of over speed.(Detection threshold)
General > Limit of low voltage (V)	Must be a valid value	14.0F	Limit of low voltage.(Detection threshold)
Interrupts > Callback	Name must be a valid C symbol	NULL	A user callback function. If this callback function is provided, it is called at speed control cyclic interrupt.

Clock Configuration

This module doesn't depend on clock setting, because this module is a simple status transition process.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Limitations

- Set the limit of electric current with non-negative value.
- Set the limit of input voltage with non-negative value.
- Set the limit of rotational speed with non-negative value.

Examples

Basic Example

This is a basic example of minimal use of the Motor Sensorless in an application.

```
void motor_sensorless_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = RM_MOTOR_SENSORLESS_Open(g_motor_sensorless0.p_ctrl,
g_motor_sensorless0.p_cfg);
    assert(FSP_SUCCESS == err);
 /* Set speed reference before motor run */
    (void) RM_MOTOR_SENSORLESS_SpeedSet(g_motor_sensorless0.p_ctrl,
DEF_SENSORLESS_TEST_OVSPD_LIM);
 /* Start motor rotation */
    (void) RM_MOTOR_SENSORLESS_Run(g_motor_sensorless0.p_ctrl);
 /* Get current status */
    (void) RM_MOTOR_SENSORLESS_StatusGet(g_motor_sensorless0.p_ctrl, &smpl_status);
 /* Get current rotor angle */
    (void) RM_MOTOR_SENSORLESS_AngleGet(g_motor_sensorless0.p_ctrl, &smpl_angle);
 /* Get current motor speed */
    (void) RM_MOTOR_SENSORLESS_SpeedGet(g_motor_sensorless0.p_ctrl, &smpl_speed);
 /* Check error */
    (void) RM_MOTOR_SENSORLESS_ErrorCheck(g_motor_sensorless0.p_ctrl, &smpl_error);
 /* Stop motor rotation */
    (void) RM_MOTOR_SENSORLESS_Stop(g_motor_sensorless0.p_ctrl);
 /* Stop motor rotation */
```

```
    (void) RM_MOTOR_SENSORLESS_ErrorSet(g_motor_sensorless0.p_ctrl,
MOTOR_ERROR_OVER_CURRENT_HW);
 /* Reset Speed Control */
    (void) RM_MOTOR_SENSORLESS_Reset(g_motor_sensorless0.p_ctrl);
 /* Close Speed Control */
    (void) RM_MOTOR_SENSORLESS_Close(g_motor_sensorless0.p_ctrl);
}
```

Data Structures

struct	motor_sensorless_callback_args_t

Enumerations

enum	motor_sensorless_callback_event_t

Data Structure Documentation

◆ motor_sensorless_callback_args_t

struct motor_sensorless_callback_args_t		
Callback function parameter data		
Data Fields		
void const *	p_context	Placeholder for user data.
motor_sensorless_callback_event_t	event	

Enumeration Type Documentation

◆ motor_sensorless_callback_event_t

enum motor_sensorless_callback_event_t	
Events that can trigger a callback function	
Enumerator	
MOTOR_SENSORLESS_CALLBACK_EVENT_SPEED_FORWARD	Event forward Speed Control.
MOTOR_SENSORLESS_CALLBACK_EVENT_SPEED_BACKWARD	Event backward Speed Control.
MOTOR_SENSORLESS_CALLBACK_EVENT_CURRENT_FORWARD	Event forward Current Control.
MOTOR_SENSORLESS_CALLBACK_EVENT_CURRENT_BACKWARD	Event backward Current Control.

Function Documentation

◆ RM_MOTOR_SENSORLESS_Open()

fsp_err_t RM_MOTOR_SENSORLESS_Open (motor_ctrl_t *const *p_ctrl*, motor_cfg_t const *const *p_cfg*)

Configure the MOTOR in register start mode. Implements motor_api_t::open.

This function should only be called once as MOTOR configuration registers can only be written to once so subsequent calls will have no effect.

Example:

```
/* Initializes the module. */
   err = RM_MOTOR_SENSORLESS_Open(g_motor_sensorless0.p_ctrl,
g_motor_sensorless0.p_cfg);
```

Return values

FSP_SUCCESS	MOTOR successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Configuration parameter error.

Note

◆ RM_MOTOR_SENSORLESS_Close()

fsp_err_t RM_MOTOR_SENSORLESS_Close (motor_ctrl_t *const *p_ctrl*)

Disables specified Motor Sensorless Control block. Implements motor_api_t::close.

Example:

```
/* Close Speed Control */
   (void) RM_MOTOR_SENSORLESS_Close(g_motor_sensorless0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_SENSORLESS_Run()

fsp_err_t RM_MOTOR_SENSORLESS_Run (motor_ctrl_t *const *p_ctrl*)

Run Motor (Start motor rotation). Implements motor_api_t::run.

Example:

```
/* Start motor rotation */
   (void) RM_MOTOR_SENSORLESS_Run(g_motor_sensorless0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_SENSORLESS_Stop()

fsp_err_t RM_MOTOR_SENSORLESS_Stop (motor_ctrl_t *const *p_ctrl*)

Stop Motor (Stop motor rotation). Implements motor_api_t::stop.

Example:

```
/* Stop motor rotation */
   (void) RM_MOTOR_SENSORLESS_Stop(g_motor_sensorless0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_SENSORLESS_Reset()

fsp_err_t RM_MOTOR_SENSORLESS_Reset (motor_ctrl_t *const *p_ctrl*)

Reset Motor Sensorless Control block. Implements motor_api_t::reset.

Example:

```
/* Reset Speed Control */
   (void) RM_MOTOR_SENSORLESS_Reset(g_motor_sensorless0.p_ctrl);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_SENSORLESS_ErrorSet()

fsp_err_t RM_MOTOR_SENSORLESS_ErrorSet (motor_ctrl_t *const *p_ctrl*, motor_error_t const *error*)

Set error information. Implements motor_api_t::errorSet.

Example:

```
/* Stop motor rotation */
   (void) RM_MOTOR_SENSORLESS_ErrorSet(g_motor_sensorless0.p_ctrl,
MOTOR_ERROR_OVER_CURRENT_HW);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_SENSORLESS_SpeedSet()

fsp_err_t RM_MOTOR_SENSORLESS_SpeedSet (motor_ctrl_t *const *p_ctrl*, float const *speed_rpm*)

Set speed reference[rpm]. Implements motor_api_t::speedSet.

Example:

```
/* Set speed reference before motor run */
   (void) RM_MOTOR_SENSORLESS_SpeedSet(g_motor_sensorless0.p_ctrl,
DEF_SENSORLESS_TEST_OVSPD_LIM);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

Note

◆ RM_MOTOR_SENSORLESS_StatusGet()

fsp_err_t RM_MOTOR_SENSORLESS_StatusGet (motor_ctrl_t *const *p_ctrl*, uint8_t *const *p_status*)

Get current control status. Implements motor_api_t::statusGet.

Example:

```
/* Get current status */
   (void) RM_MOTOR_SENSORLESS_StatusGet(g_motor_sensorless0.p_ctrl, &smpl_status);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Data received pointer is invalid..

Note

◆ RM_MOTOR_SENSORLESS_AngleGet()

fsp_err_t RM_MOTOR_SENSORLESS_AngleGet (motor_ctrl_t *const *p_ctrl*, float *const *p_angle_rad*)

Get current rotor angle. Implements motor_api_t::angleGet.

Example:

```
/* Get current rotor angle */
   (void) RM_MOTOR_SENSORLESS_AngleGet(g_motor_sensorless0.p_ctrl, &smpl_angle);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Data received pointer is invalid..

Note

◆ RM_MOTOR_SENSORLESS_SpeedGet()

fsp_err_t RM_MOTOR_SENSORLESS_SpeedGet (motor_ctrl_t *const *p_ctrl*, float *const *p_speed_rpm*)

Get rotational speed. Implements motor_api_t::speedGet.

Example:

```
/* Get current motor speed */
   (void) RM_MOTOR_SENSORLESS_SpeedGet(g_motor_sensorless0.p_ctrl, &smpl_speed);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Data received pointer is invalid..

Note

◆ RM_MOTOR_SENSORLESS_ErrorCheck()

fsp_err_t RM_MOTOR_SENSORLESS_ErrorCheck (motor_ctrl_t *const *p_ctrl*, uint16_t *const *p_error*)

Check the occurunce of Error. Implements motor_api_t::errorCheck.

Example:

```
/* Check error */
   (void) RM_MOTOR_SENSORLESS_ErrorCheck(g_motor_sensorless0.p_ctrl, &smpl_error);
```

Return values

FSP_SUCCESS	Successfully resetted.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Data received pointer is invalid..

Note

◆ RM_MOTOR_SENSORLESS_PositionSet()

fsp_err_t RM_MOTOR_SENSORLESS_PositionSet (motor_ctrl_t *const *p_ctrl*, motor_speed_position_data_t const *const *p_position*)

Set position reference. Implements motor_api_t::positionSet.

Example:

Return values

FSP_ERR_UNSUPPORTED	Unsupported.

Note

◆ RM_MOTOR_SENSORLESS_WaitStopFlagGet()

fsp_err_t RM_MOTOR_SENSORLESS_WaitStopFlagGet (motor_ctrl_t *const *p_ctrl*, motor_wait_stop_flag_t *const *p_flag*)
Get wait stop flag. Implements motor_api_t::waitStopFlagGet. Example: **Return values** FSP_ERR_UNSUPPORTED — Unsupported. ***Note***

Detailed Description

Calculation process for the motor control on RA MCUs. This module implements the Motor speed Interface.

Overview

The motor speed is used to control the speed of motor rotation in an appication. This module should be called cyclically in an application (e.g. in cyclic timer interrupt). This module caliculates d/q-axis current reference with input speed reference, current rotational speed, and d/q-axis current.

Features

The motor speed module has below features.

- Calculate d/q-axis electric current reference.
- Flux weakening process at high speed rotation.
- Open loop damping control when using sensorless type.
- Low pass filter of input rotational speed.

- Speed observer function when using encoder type.

Configuration

Build Time Configurations for rm_motor_speed

The following build time configurations are defined in fsp_cfg/rm_motor_speed_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Postion Support	• Enabled • Disabled	Disabled	Enable position algorithm support.

Configurations for Motor > Motor Speed Controller (rm_motor_speed)

This module can be added to the Stacks tab via New Stack > Motor > Motor Speed Controller (rm_motor_speed).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_motor_speed0	Module name.
General > Speed control period (sec)	Must be a valid value	0.0005F	Period of speed control function.
General > Step of speed climbing (rpm)	Must be a valid value	0.5F	Step of speed change at start of open-loop.
General > Maximum rotational speed (rpm)	Manual Entry	2650	Maximum rotational speed (Limit speed).
General > Speed LPF omega	Must be a valid value	10.0F	Design parameter for speed LPF.
General > Speed at Id climbing (rpm)	Manual Entry	500	From this speed d-axis current is controlled climbing.
General > Limit of q-axis current (A)	Must be a valid value	0.42F	Limit of q-axis current.
General > Step of speed feedback at open-loop	Must be a valid value	0.20F	Step of speed feedback at open-loop.
General > Open-loop damping	• Disable • Enable	Enable	Select enable/disable Open-loop damping control.
General > Flux weakening	• Disable • Enable	Disable	Select enable/disable flux weakening control.
General > Torque compensation for	• Disable • Enable	Enable	Select enable/disable torque compensation

sensorless transition			for sensorless transition.
General > Speed observer	• Disable • Enable	Enable	Select enable/disable Speed observer process.
General > Control method	• PID • IPD	PID	Select the control method [PID or IPD].
General > Control type	• Sensoreless • Encoder	Sensoreless	
Open-Loop > Step of d-axis current climbing	Must be a valid value	0.3F	Step of d-axis current climbing
Open-Loop > Step of d-axis current descending	Must be a valid value	0.3F	Step of d-axis current descending
Open-Loop > Step of q-axis current descending ratio	Must be a valid value	1.0F	Step of q-axis current descending ratio
Open-Loop > Reference of d-axis current	Must be a valid value	0.3F	Reference of d-axis current
Open-Loop > Threshold of speed control descending	Manual Entry	600	When rotational speed reaches this speed, d-axis current is controlled descending.
Open-Loop > Threshold of speed control climbing	Manual Entry	500	Until rotational speed reaches this speed, d-axis current is controlled climbing.
Open-Loop > Period between open-loop to BEMF (sec)	Must be a valid value	0.025F	Margin time between open-loop control changes to BEMF PI control.
Open-Loop > Phase error(degree) to decide sensor-less switch timing	Manual Entry	10	Phase error(degree) to decide sensor-less switch timing.
Design parameter > Speed PI loop omega	Must be a valid value	5.0F	Speed PI loop omega
Design parameter > Speed PI loop zeta	Must be a valid value	1.0F	Speed PI loop zeta
Design parameter > Estimated d-axis HPF omega	Must be a valid value	2.5F	HPF cutoff frequency for ed (Hz)
Design parameter > Open-loop damping	Must be a valid value	1.0F	Damping ratio of open-loop damping control

zeta			
Design parameter > Cutoff frequency of phase error LPF	Must be a valid value	10.0F	Cutoff frequency of phase error LPF
Design parameter > Speed observer omega	Must be a valid value	200.0F	Speed observer loop omega
Design parameter > Speed observer zeta	Must be a valid value	1.0F	Speed observer loop zeta
Motor Parameter > Pole pairs	Manual Entry	2	Pole pairs
Motor Parameter > Resistance (ohm)	Must be a valid value	8.5F	Resistance
Motor Parameter > Inductance of d-axis (H)	Must be a valid value	0.0045F	Inductance of d-axis
Motor Parameter > Inductance of q-axis (H)	Must be a valid value	0.0045F	Inductance of q-axis
Motor Parameter > Permanent magnetic flux (Wb)	Must be a valid value	0.02159F	Permanent magnetic flux
Motor Parameter > Rotor inertia (kgm^2)	Must be a valid value	0.0000028F	Rotor inertia
Interrupts > Callback	Name must be a valid C symbol	NULL	A user callback function. If this callback function is provided, it is called at timer interrupt.
Interrupts > Input data	Name must be a valid C symbol	NULL	Structure for Speed control Input. If you set this content, Speed Control function read these data automatically. (No need to use Set API.)
Interrupts > Output data	Name must be a valid C symbol	NULL	Structure for Speed control Output. If you set this content, Speed Control function write need data automatically. (No need to use Get API.)

Clock Configuration

This module doesn't depend on clock setting, because this module is a simple calculation process.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Limitations

- Set the period of speed control with none-negative value.
- Set the limit of speed change step with none-negative value.
- Set the maximum speed with none-negative value.

Examples

Basic Example

This is a basic example of minimal use of the motor speed in an application.

```
void motor_speed_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = RM_MOTOR_SPEED_Open(g_motor_speed0.p_ctrl, g_motor_speed0.p_cfg);
    handle_error(err);
 /* Set speed reference before get current reference */
    (void) RM_MOTOR_SPEED_SpeedReferenceSet(g_motor_speed0.p_ctrl, 104.72F);
 /* Set position reference before get current reference
  * (Basically Exclusive to SpeedReferenceSet. This is only sample,) */
    (void) RM_MOTOR_SPEED_PositionReferenceSet(g_motor_speed0.p_ctrl,
&g_posref_sample);
 /* Basically run this module at cyclic interrupt (e.g. AGT timer).
  * This implementation is an example. */
 // while (true)
    {
 /* Application work here. */
 /* Set input parameter data before get current reference */
       (void) RM_MOTOR_SPEED_ParameterSet(g_motor_speed0.p_ctrl,
&g_test_speed_input);
 /* Activate Speed Process */
       (void) RM_MOTOR_SPEED_Run(g_motor_speed0.p_ctrl);
```

```
 /* Perform Speed Control Process */
       (void) RM_MOTOR_SPEED_SpeedControl(g_motor_speed0.p_ctrl);
 /* Get output parameters */
       (void) RM_MOTOR_SPEED_ParameterGet(g_motor_speed0.p_ctrl,
&g_test_speed_output);
 //

 /* Update parameters */
       (void) RM_MOTOR_SPEED_ParameterUpdate(g_motor_speed0.p_ctrl,
&g_motor_speed0.p_cfg);
    }
 /* Reset Speed Control */
    (void) RM_MOTOR_SPEED_Reset(g_motor_speed0.p_ctrl);
 /* Close Speed Control */
    (void) RM_MOTOR_SPEED_Close(g_motor_speed0.p_ctrl);
}
```

Enumerations

enum	motor_speed_control_type_t
enum	motor_speed_openloop_damping_t
enum	motor_speed_flux_weaken_t
enum	motor_speed_less_switch_t
enum	motor_speed_observer_switch_t
enum	motor_speed_ctrl_status_t

Enumeration Type Documentation

◆ motor_speed_control_type_t

enum motor_speed_control_type_t

Enumerator	
MOTOR_SPEED_CONTROL_TYPE_SENSORLESS	Sensorless type.
MOTOR_SPEED_CONTROL_TYPE_ENCODER	Encoder type.

◆ motor_speed_openloop_damping_t

enum motor_speed_openloop_damping_t	
Enumerator	
MOTOR_SPEED_OPENLOOP_DAMPING_DISABLE	Disable openloop damping.
MOTOR_SPEED_OPENLOOP_DAMPING_ENABLE	Enable openloop damping.

◆ motor_speed_flux_weaken_t

enum motor_speed_flux_weaken_t	
Enumerator	
MOTOR_SPEED_FLUX_WEAKEN_DISABLE	Disable flux-weakening control.
MOTOR_SPEED_FLUX_WEAKEN_ENABLE	Enable flux-weakening control.

◆ motor_speed_less_switch_t

enum motor_speed_less_switch_t	
Enumerator	
MOTOR_SPEED_LESS_SWITCH_DISABLE	Disable soft switching between open-loop mode and normal FOC mode.
MOTOR_SPEED_LESS_SWITCH_ENABLE	Enable soft switching between open-loop mode and normal FOC mode.

◆ motor_speed_observer_switch_t

enum motor_speed_observer_switch_t	
Enumerator	
MOTOR_SPEED_OBSERVER_SWITCH_DISABLE	Disable speed observer.
MOTOR_SPEED_OBSERVER_SWITCH_ENABLE	Enable speed observer.

◆ motor_speed_ctrl_status_t

enum motor_speed_ctrl_status_t	
Enumerator	
MOTOR_SPEED_CTRL_STATUS_INIT	Speed control status is INIT.
MOTOR_SPEED_CTRL_STATUS_BOOT	Speed control status is BOOT.
MOTOR_SPEED_CTRL_STATUS_RUN	Speed control status is RUN.

Function Documentation

◆ RM_MOTOR_SPEED_Open()

fsp_err_t RM_MOTOR_SPEED_Open (motor_speed_ctrl_t *const *p_ctrl*, motor_speed_cfg_t const *const *p_cfg*)

Opens and configures the Motor Speed Module. Implements motor_speed_api_t::open.

Return values

FSP_SUCCESS	Motor Speed Module successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Configuration parameter error.

◆ RM_MOTOR_SPEED_Close()

fsp_err_t RM_MOTOR_SPEED_Close (motor_speed_ctrl_t *const *p_ctrl*)

Disables specified Motor Speed Module. Implements motor_speed_api_t::close.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_SPEED_Reset()

fsp_err_t RM_MOTOR_SPEED_Reset (motor_speed_ctrl_t *const *p_ctrl*)

Reset the variables of Motor Speed Module. Implements motor_speed_api_t::reset.

Return values

FSP_SUCCESS	Successfully reset.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_SPEED_Run()

fsp_err_t RM_MOTOR_SPEED_Run (motor_speed_ctrl_t *const *p_ctrl*)

Run(Start) the Motor Speed Control. Implements motor_speed_api_t::run.

Return values

FSP_SUCCESS	Successfully start.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_SPEED_SpeedReferenceSet()

fsp_err_t RM_MOTOR_SPEED_SpeedReferenceSet (motor_speed_ctrl_t *const *p_ctrl*, float const *speed_reference_rpm*)

Set Speed Reference Data. Implements motor_speed_api_t::speedReferenceSet.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_SPEED_PositionReferenceSet()

fsp_err_t RM_MOTOR_SPEED_PositionReferenceSet (motor_speed_ctrl_t *const *p_ctrl*, motor_speed_position_data_t const *const *p_position_data*)

Set Position Reference Data. Implements motor_speed_api_t::positionReferenceSet.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input structure pointer is NULL.

◆ RM_MOTOR_SPEED_ParameterSet()

fsp_err_t RM_MOTOR_SPEED_ParameterSet (motor_speed_ctrl_t *const *p_ctrl*, motor_speed_input_t const *const *p_st_input*)

Set Input parameters. Implements motor_speed_api_t::parameterSet.

Return values

FSP_SUCCESS	Successfully data is set.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Output pointer is NULL.

◆ RM_MOTOR_SPEED_SpeedControl()

fsp_err_t RM_MOTOR_SPEED_SpeedControl (motor_speed_ctrl_t *const *p_ctrl*)

Calculates the d/q-axis current reference.(Main process of Speed Control) Implements motor_speed_api_t::speedControl.

Return values

FSP_SUCCESS	Successful data calculation.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MOTOR_SPEED_ParameterGet()

fsp_err_t RM_MOTOR_SPEED_ParameterGet (motor_speed_ctrl_t *const *p_ctrl*, motor_speed_output_t *const *p_st_output*)

Get Speed Control Parameters. Implements motor_speed_api_t::parameterGet.

Return values

FSP_SUCCESS	Successfully the flag is gotten.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Output pointer is NULL.

◆ RM_MOTOR_SPEED_ParameterUpdate()

fsp_err_t RM_MOTOR_SPEED_ParameterUpdate (motor_speed_ctrl_t *const *p_ctrl*, motor_speed_cfg_t const *const *p_cfg*)

Update the parameters of Speed Control Calculation. Implements motor_speed_api_t::parameterUpdate.

Return values

FSP_SUCCESS	Successfully data was updated.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Configuration parameter error.

4.2.115 Azure RTOS NetX Secure Crypto Hardware Acceleration (rm_netx_secure_crypto)

Modules

Detailed Description

Hardware acceleration for the Netx Crypto implementation of the Microsoft Azure RTOS NetX Crypto API.

Overview

Please refer to the NetXDuo - NetX Crypto documentation for further details.

HW Overview

Crypto Peripheral version	Devices
SCE9	RA6M4, RA4M3, RA4M2, RA6M5
SCE7	RA6M3, RA6M2, RA6M1, RA6T1
SCE5	RA4W1, RA4M1
AES Engine	RA2A1, RA2E1, RA2E2, RA2L1

Note

NetX Crypto hardware acceleration is unsupported on 'SCE5' and 'AES Engine' crypto peripherals listed above.

Features

This module provides SCE9 hardware support for the following NetX Crypto operations

- SHA256 calculation
- SHA224 calculation
- MAC Operations
  - HMAC with SHA224
  - HMAC with SHA256
- AES
  - Keybits - 128, 192, 256
    - Encryption and Decryption.
    - Chaining Modes: CBC, CTR, GCM mode

AES Chaining Mode	HW Acceleration
CBC	Fully accelerated
CTR	Fully accelerated
GCM	Encrypt - Fully accelerated; Decrypt - Only GHASH and block cipher unit is HW accelerated
CCM	Only block cipher unit is HW accelerated

- Random number generation
- ECC
  - ECDSA: Supported Curves - SECP384R1, SECP256R1, SECP224R1.
  - ECDH: Supported Curves - SECP384R1, SECP256R1, SECP224R1.
- RSA
  - Signature Generation - RSA 2048 (Plain or Wrapped private) key. (This can be used for decryption)
  - Signature Verification - RSA 2048, RSA 3072 and RSA 4096 keys. (This can be used for encryption)
  - Supported encoding scheme: PKCS1V15 This module provides SCE7 hardware support for the following NetX Crypto operations
- AES
  - Keybits - 128, 256
    - Encryption and Decryption.
    - Chaining Modes: CBC, CTR, GCM mode

AES Chaining Mode	HW Acceleration

CBC	Fully accelerated
CTR	Fully accelerated
GCM	Only block cipher unit is HW accelerated
CCM	Only block cipher unit is HW accelerated

Configuration

Build Time Configurations for rm_netx_secure_crypto_sw_port

The following build time configurations are defined in fsp_cfg/middleware/rm_netx_secure_crypto_cfg.h:

Configuration	Options	Default	Description
Standalone Usage	• Use Standalone Crypto Only • Use with TLS	Use Standalone Crypto Only	Defines NX_CRYPTO_STANDALONE_ENABLE.
Maximum RSA Modulus size (bits)	• 1024 • 2048 • 3072 • 4096	4096	

Build Time Configurations for rm_netx_secure_crypto

The following build time configurations are defined in fsp_cfg/middleware/rm_netx_secure_crypto_cfg.h:

Configuration	Options	Default	Description
Hardware Acceleration > Hash > SHA256/224	MCU Specific Options		Enables NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_SHA256_ALT.
Hardware Acceleration > Cipher > AES	MCU Specific Options		Enables NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_AES_ALT
Hardware Acceleration > Public Key Cryptography (PKC) > ECC > ECC	MCU Specific Options		Enables NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_ECC_ALT
Hardware Acceleration > Public Key Cryptography (PKC) > ECC > ECDSA Scratch Buffer Size (Bytes)	Value must be an integer	3016	Sets value of NX_CRYPTO_ECDSA_SCRATCH_BUFFER_SIZE
Hardware Acceleration > Public Key	Value must be an integer	2464	Sets value of NX_CRYPTO_ECDH_SCRATCH_BU

Cryptography (PKC) > ECC > ECDH Scratch Buffer Size (Bytes)			FFER_SIZE
Hardware Acceleration > Public Key Cryptography (PKC) > RSA > RSA	MCU Specific Options		Enables/Disables RSA HW support
Hardware Acceleration > Public Key Cryptography (PKC) > RSA > RSA 2048 (HW)	MCU Specific Options		Enables NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_RSA_2048_ALT to allow HW support
Hardware Acceleration > Public Key Cryptography (PKC) > RSA > RSA 3072 Verify/Encryption (HW)	MCU Specific Options		Enables NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_RSA_3072_ALT to allow HW support
Hardware Acceleration > Public Key Cryptography (PKC) > RSA > RSA 4096 Verify/Encryption (HW)	MCU Specific Options		Enables RSA NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_RSA_4096_ALT to allow HW support
Hardware Acceleration > Public Key Cryptography (PKC) > RSA > RSA Scratch Buffer Size (Bytes)	MCU Specific Options		Sets value of NX_CRYPTO_RSA_SCRATCH_BUFFER_SIZE
Hardware Acceleration > TRNG	• Enabled • Disabled	Enabled	Enables NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_TRNG_ALT.
Standalone Usage	• Use Standalone Crypto Only • Use with TLS	Use Standalone Crypto Only	Defines NX_CRYPTO_STANDALONE_ENABLE.

Random Number Generator Configuration

To enable hardware acceleration for the TRNG, the macro NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_TRNG_ALT must be defined in the configuration file. By default TRNG is enabled which can be disabled using the RA Configuration editor.

Once enabled 'rand' function will be mapped to HW TRNG; the 'srand' function is not supported, any calls to this function will have no effect. Functionality to re-seed the HW TRNG is not supported by the existing implementation.

If disabled, both 'rand' and 'srand' will be mapped to the C Standard Library. This would require setting up the heap as 'rand' implementation calls 'malloc'.

SHA256 Configuration

To enable hardware acceleration for the SHA256/224 calculation, the macro NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_SHA256_ALT must be defined in the configuration file. By default SHA256 is enabled which can be disabled using the RA Configuration editor.

AES Configuration

To enable hardware acceleration for the AES128/192/256 operation, the macro NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_AES_ALT must be defined in the configuration file. By default AES is enabled which can be disabled using the RA Configuration editor.

ECC Configuration

To enable hardware acceleration for the ECDSA and ECDH for curves SECP384R1, SECP256R1 and SECP224R1, the macro NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_ECC_ALT must be defined in the configuration file. By default ECC operations are enabled which can be disabled using the RA Configuration editor.

RSA Configuration

To enable hardware acceleration for the RSA Encrypt/Decrypt (or Sign/Verify) operation(s), the macro(s) below must be must be defined in the configuration file:

Configuration Macro	Feature / Operation
NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_RSA_2048_ALT	Signature Generation / Signature Verification (Encryption / Decryption)
NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_RSA_3072_ALT	Signature Verification (Encryption Only)
NETX_SECURE_CRYPTO_NX_CRYPTO_METHODS_RSA_4096_ALT	Signature Verification (Encryption Only)

By default RSA 2048 is enabled which can be disabled using the RA Configuration editor.

RSA software implementation is completely disabled when any of the above macros are enabled.

Usage Notes

Memory Alignment

Use 32bit aligned buffer pointers as arguments to APIs for best performance.

Hardware Initialization

_nx_crypto_initialize() must be invoked before using the NetX Crypto APIs to ensure that the SCE peripheral is initialized.

Memory Usage

Sufficient memory must be allocated to be used as 'crypto_metadata' for the chosen crypto operation(s). Refer Azure RTOS NetX Crypto API description for recommended 'crypto_metadata_size' based on selected crypto operations. Sufficient amount of memory must be allocated for the thread stack to support low level crypto operations when using this module in the standalone mode or through NetX Secure (TLS). A minimum stack of 0x1000 is required to use ECC and RSA. This is either the main stack in a bare metal application or the specific thread stack for an RTOS based application.

AES Usage

GCM mode

The first byte of the IV must indicate the length of the subsequent IV. For example if the IV is {0x00, 0x00, 0x00}, then the IV pointer passed to the _nx_crypto_method_aes_operation must store the IV as {0x03, 0x00, 0x00, 0x00}. Refer to the example code for actual usage.

CTR mode

For CTR mode the IV pointer must be as defined in Using Advanced Encryption Standard (AES) Counter Mode With IPsec Encapsulating Security Payload (ESP) under 'Figure 2. Counter Block Format'. The IV must be 8 bytes in length. The Nonce field in the reference above must be 4 bytes and should be passed to _nx_crypto_method_aes_operation through the key pointer stored after the actual AES key. For Example, if the AES 128-bit Plain Key is {0x00, 0x00, 0x00, 0x00, 0x00, 0x00, 0x00, 0x00} and the Nonce is {0x01, 0x07, 0xBD, 0xFD}, the key passed to the _nx_crypto_method_aes_operation during Encryption/Decryption should be set as {0x00, 0x00, 0x00, 0x00, 0x00, 0x00, 0x00, 0x00, 0x01, 0x07, 0xBD, 0xFD}. This format would also be valid for Wrapped keys where the Nonce is appended at the end of the actual Wrapped key. Refer to the example code for actual usage.

The 'Block Counter' field in the above reference is fixed to {0x00, 0x00, 0x00, 0x01} at the beginning and increments internally after every subsequent AES block is processed. Test vectors that have the initial Block Counter not set to {0x00, 0x00, 0x00, 0x01} cannnot be used in this implementation.

ECC Usage

ECC operations include ECDH and ECDSA. As a part of ECDSA operation the input message can be hashed before signing or verification, or the message digest can be provided directly. ECC Scratch buffer size can be optionally reduced as supported ECC computations are now done by the HW. This is controlled by NX_CRYPTO_ECDSA_SCRATCH_BUFFER_SIZE and NX_CRYPTO_ECDH_SCRATCH_BUFFER_SIZE macros for ECDSA and ECDH respectively.

Operation	Key Format
ECDSA Signature	Plain private key; Wrapped private key
ECDSA Signature-Verify	Uncompressed public key
Key Generation using ECDSA operation API	Wrapped private key; Uncompressed public key
ECDH private key import	Plain private key; Wrapped private key (Allows for Uncompressed and Formatted public key)
ECDH public key export	Uncompressed public key
ECDH setup	Uncompressed public key
ECDH shared secret calculate	Uncompressed public key
Key Generation using ECDH operation API	Wrapped private key; Uncompressed public key

Note:

- Uncompressed public key is of the form (0x04 || Qx || Qy). Refer Section 2.2. Subject Public Key under RFC5480
- Formatted public key is of the form (Key Info (4 bytes) || Qx || Qy || Key Info (16 bytes)). This is the key which is used internally by SCE peripheral. (Qx and Qy are zero padded for

224 bit curves).

RSA Usage

Wrapped Key Usage

To use the NetX Crypto stack with wrapped private keys (for signature generation/decryption), a dummy pointer (non-NULL) should be passed to the 'key' parameter during _nx_crypto_method_rsa_init API call. However, the 'key_size_in_bits' parameter should be equal to the intended RSA modulus length in bits. The actual wrapped key must be passed as the 'key' parameter to the _nx_crypto_method_rsa_operation API call with its length in bits passed through the 'key_size_in_bits' parameter.

For PKCS1V15 operation 'key' and 'key_size_in_bits' parameters of _nx_crypto_method_pkcs1_v1_5_init are unused. These can be passed as NULL and 0 respectively. The actual wrapped key must be passed as the 'key' parameter to the _nx_crypto_method_pkcs1_v1_5_operation API call and the intended modulus length in bits must be passed through the 'key_size_in_bits' parameter.

Limitations

- Only little endian mode is supported.
- RSA CRT keys are not supported.
- ECJPAKE related operations are unsupported for NIST 224, 256 and 384 bit curves when HW ECC is eanbled.

Examples

Initialization Example

This example shows how to initialize the HW crypto engine. This step must be performed before any crypto algorithm is used.

```
/* Setup the platform; initialize the SCE and the TRNG */
   err = _nx_crypto_initialize();
   assert(NX_CRYPTO_SUCCESS == err);
```

Hash Example

This is an example on calculating the SHA256 hash using the NetX Crypto API.

```
extern NX_CRYPTO_METHOD crypto_method_sha256;
const uint8_t NIST_SHA256ShortMsgLen200[] =
{
    0x2e, 0x7e, 0xa8, 0x4d, 0xa4, 0xbc, 0x4d, 0x7c, 0xfb, 0x46, 0x3e, 0x3f, 0x2c,
0x86, 0x47, 0x05,
    0x7a, 0xff, 0xf3, 0xfb, 0xec, 0xec, 0xa1, 0xd2, 00
```

```
};
const uint8_t NIST_SHA256ShortMsgLen200_expected[] =
{
    0x76, 0xe3, 0xac, 0xbc, 0x71, 0x88, 0x36, 0xf2, 0xdf, 0x8a, 0xd2, 0xd0, 0xd2,
0xd7, 0x6f, 0x0c,
    0xfa, 0x5f, 0xea, 0x09, 0x86, 0xbe, 0x91, 0x8f, 0x10, 0xbc, 0xee, 0x73, 0x0d,

```

4.2.116 Azure RTOS NetX Duo Ether Driver (rm_netxduo_ether)

Modules

Overview

This module provides a NetX Duo driver that is implemented using the Ethernet Interface.

Please refer to the NetXDuo documentation for further details.

Features

- Packet Types Supported
  - ARP
  - IPv4
  - IPv6
- Link status callback
- Configurable IP MTU

Configuration

Configurations for Networking > NetX Duo Ethernet Driver (rm_netxduo_ether)

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_netxduo_ether_0	Module name.
IP MTU	Value must be in the range [576, 1500] bytes.	1500	IP MTU

Usage Notes

Calculating the Packet Size for an IP instance

In order to ensure that there is enough space to store an entire Ethernet frame, the packet pool used for receiving packets must have a payload size that is 32 bytes larger than the configured ether_cfg_t::ether_buffer_size. The extra 32 bytes is needed in order to ensure that the allocated packets are properly aligned to 32 bytes.

ether_cfg_t::ether_buffer_size is calcualted from the IP MTU using the following formula:

ceil((rm_netxduo_ether_cfg_t::mtu + Ethernet Header (14) + Padding Bytes (2)) / 32) * 32

Examples

Basic Example

This is a basic example of minimal use of the NetX Duo Ether Driver in an application.

```
#define NETXDUO_EXAMPLE_IP_STACK_SIZE (2048U)
```

```
#define NETXDUO_EXAMPLE_ARP_CACHE_SIZE (2048U)
#define NETXDUO_EXAMPLE_PACKET_SIZE (1568U)
#define NETXDUO_EXAMPLE_PACKET_NUM (100U)
#define NETXDUO_EXAMPLE_PACKET_POOL_SIZE ((sizeof(NX_PACKET) +
NETXDUO_EXAMPLE_PACKET_SIZE) * \
  NETXDUO_EXAMPLE_PACKET_NUM)
static NX_IP g_ip;
static NX_PACKET_POOL g_packet_pool;
static uint8_t g_ip_stack_memory[NETXDUO_EXAMPLE_IP_STACK_SIZE]
BSP_ALIGN_VARIABLE(4);
static uint8_t g_packet_pool_memory[NETXDUO_EXAMPLE_PACKET_POOL_SIZE]
BSP_ALIGN_VARIABLE(4);
static uint8_t g_ip_arp_cache_memory[NETXDUO_EXAMPLE_ARP_CACHE_SIZE]
BSP_ALIGN_VARIABLE(4);
static void rm_netxduo_ether0 (NX_IP_DRIVER * driver_req_ptr)
{
 /* Pass the driver request and ethernet driver configuration to the NetX Duo Ether
Driver. */
    rm_netxduo_ether(driver_req_ptr, &g_netxduo_ether_instance);
}
void rm_netxduo_ether_example ()
{
    UINT status;
    nx_system_initialize();
 /* Create a packet pool for the IP instance. */
    status = nx_packet_pool_create(&g_packet_pool,
 "Packet Pool",
                                   NETXDUO_EXAMPLE_PACKET_SIZE,
                                   &g_packet_pool_memory[0],
                                   NETXDUO_EXAMPLE_PACKET_POOL_SIZE);
    assert(NX_SUCCESS == status);
 /* Create an IP instance using the rm_netxduo_ether driver and packet pool instance.
*/
    status = nx_ip_create(&g_ip,
```

```
 "IP Instance",
                         IP_ADDRESS(192, 168, 1, 2),
                         IP_ADDRESS(255, 255, 255, 0),
                         &g_packet_pool,
                         rm_netxduo_ether0,
                         &g_ip_stack_memory[0],
 sizeof(g_ip_stack_memory),
                         0);
    assert(NX_SUCCESS == status);
 /* Enable all modules that are required by the application. */
    status = nx_arp_enable(&g_ip, g_ip_arp_cache_memory, sizeof
(g_ip_arp_cache_memory));
    assert(NX_SUCCESS == status);
    status = nx_tcp_enable(&g_ip);
    assert(NX_SUCCESS == status);
    status = nx_icmp_enable(&g_ip);
    assert(NX_SUCCESS == status);
}
```

4.2.117 Azure RTOS NetX Duo WiFi Driver (rm_netxduo_wifi)

Modules

Overview

This module provides a NetX Duo driver that is implemented using the rm_wifi_onchip_silex driver.

Please refer to the NetXDuo documentation for further details.

Features

- Packet Types Supported
  - TCP/IPv4
  - UDP
- Configurable IP MTU

Configuration

Build Time Configurations for rm_netxduo_wifi

The following build time configurations are defined in fsp_cfg/middleware/rm_netxduo_wifi_cfg.h:

Configuration	Options	Default	Description
IP MTU (bytes)	Value must be in the range [576, 1500] bytes.	1500	IP MTU

Usage Notes

Connecting to a Wireless Network

NetX Duo does not support connecting to a wireless network directly and instead the driver functions should be called directly to establish a connection.

- rm_wifi_onchip_silex_open() should be called to initialize the WiFi module driver.
- rm_wifi_onchip_silex_scan() should be used to scan for access points.
- rm_wifi_onchip_silex_connect() should be used before opening a NetX IP instance in order to connect it to a network.
- rm_wifi_onchip_silex_network_info_get() should be used after an access point connection has been established to get DHCP acquired IP address, subnet mask, and gateway.

Unsupported NetX Duo Features

TCP client sockets are the sole feature supported by both the hardware TCP/IP feature in NetX Duo and the WiFi driver as well. Any protocol that does not utilize a TCP client socket will be unsupported.

- TCP server mode is not currently supported.
- DNS is not supported. The user can preform a DNS lookup by calling rm_wifi_onchip_silex_dns_query.
- ICMP is not supported. The user can perform a ping by calling rm_wifi_onchip_silex_ping.
- ARP is not supported. This should be handled directly by the WiFi module.
- SNTP is not supported. See the public APIs for communication with time servers Wifi Middleware (rm_wifi_onchip_silex).
- Static address assignment is not currently supported by the rm_wifi_onchip_silex driver. You must use DHCP.

Examples

Basic Example

This is a basic example of minimal use of the NetX Duo WiFi Driver in an application.

```
#define NETXDUO_EXAMPLE_IP_STACK_SIZE (2048U)

#define NETXDUO_EXAMPLE_ARP_CACHE_SIZE (2048U)

#define NETXDUO_EXAMPLE_PACKET_SIZE (1568U)

#define NETXDUO_EXAMPLE_PACKET_NUM (100U)
```

```
#define NETXDUO_EXAMPLE_PACKET_POOL_SIZE ((sizeof(NX_PACKET) +

}
```

UDP Example

This is a basic example of connecting a UDP socket.

```
#define NETXDUO_TESTS_SOCKET_TIMEOUT (3000)
#define NETXDUO_TESTS_UDP_TX_PORT (5000)
#define NETXDUO_TESTS_SERVER_IP (0xC0A80064)
void rm_netxduo_wifi_udp_example (void)
{
    NX_UDP_SOCKET udp_client_socket;
 /* IP Address of the remote socket. */
    NXD_ADDRESS g_ip_address = NETXDUO_TESTS_SERVER_IP;
 /* Create the socket. */
    nx_udp_socket_create(&g_ip, &udp_client_socket, "Socket 0", NX_IP_NORMAL,
```

```
NX_FRAGMENT_OKAY, 0, 5);
 /* Bind to the UDP port. */
    nx_udp_socket_bind(&udp_client_socket, NETXDUO_TESTS_UDP_TX_PORT,
TX_WAIT_FOREVER);
    NX_PACKET * p_nx_packet = NX_NULL;
 /* Allocate a packet for message data */
    nx_packet_allocate(&g_packet_pool0, &p_nx_packet, NX_UDP_PACKET,
NETXDUO_TESTS_SOCKET_TIMEOUT)
 /* Append message data to packet */
    nx_packet_data_append(&p_nx_packet, "Hello World", 12, &g_packet_pool0,
NX_WAIT_FOREVER);
 /* Send UDP message to server */
    nx_udp_socket_send(&udp_client_socket, &p_nx_packet, &g_ip_address,
NETXDUO_TESTS_UDP_TX_PORT);
    NX_PACKET * p_nx_packet_recv;
 /* Receive any response from UDP server */
    nx_udp_socket_receive(&udp_client_socket, &p_nx_packet_recv,
NETXDUO_TESTS_SOCKET_TIMEOUT);
 /* Unbind and delete the udp socket. */
    nx_udp_socket_unbind(&udp_client_socket);
    nx_udp_socket_delete(&udp_client_socket);
}
```

4.2.118 Crypto Middleware (rm_psa_crypto)

Modules

Functions

fsp_err_t	RM_PSA_CRYPTO_TRNG_Read (uint8_t *const p_rngbuf, uint32_t num_req_bytes, uint32_t *p_num_gen_bytes) Reads requested length of random data from the TRNG. Generate nbytes of random bytes and store them in p_rngbuf buffer. More...

void	mbedtls_platform_teardown (mbedtls_platform_context *ctx)

Detailed Description

Hardware acceleration for the mbedCrypto implementation of the ARM PSA Crypto API.

Overview

Note

The PSA Crypto module does not provide any interfaces to the user. This release uses the Mbed TLSversion 2.24.0 which conforms to the PSA Crypto API 1.0 specification. Consult the ARM documentation at https://armmbed.github.io/mbed-crypto/psa/#application-programming-interface for further information. *FSP 3.0 onward adopts a change by ARM where mbedCrypto has been integrated back to MbedTLS and the term mbedCrypto has been deprecated. The mbedCrypto term in FSP now refers to the crypto portion of the MbedTLS module.*

HW Overview

Crypto Peripheral version	Devices
SCE9	RA6M4, RA4M3, RA4M2, RA6M5
SCE7	RA6M3, RA6M2, RA6M1, RA6T1
SCE5	RA4W1, RA4M1
AES Engine	RA2A1, RA2E1, RA2E2, RA2L1

Features

The PSA_Crypto module provides hardware support for the following PSA Crypto operations

- SHA256 calculation
- SHA224 calculation
    - MAC Operations
- AES
    - Keybits - 128, 192, 256
    - Plain-Text Key Generation
    - Wrapped Key Generation
    - Encryption and Decryption with no padding and with PKCS7 padding.
    - CBC, CTR, CCM and GCM modes
    - MAC operations
    - Export and Import for Plaintext and Wrapped keys
- ECC
    - Curves:
        - SECP256R1
        - SECP256K1
        - Brainpool256R1
        - SECP384R1
        - Brainpool384R1
    - Plain-Text Key Generation (Unavailable on SCE9)
    - Wrapped Key Generation
    - Signing and Verification
    - Export and Import for Plaintext and Wrapped keys
    - ECDH Support
- RSA

    - Keybits - 2048. Verification only for 3072 and 4096 bits
    - Plain-Text Key Generation (Unavailable on SCE9)
    - Wrapped Key Generation
    - Signature Generation
    - Verification
    - Encryption and Decryption with PKCS1V15 and OAEP padding
    - Export and Import for Plaintext and Wrapped keys
- Random number generation
- Persistent Key Storage

Configuration

Build Time Configurations for mbedCrypto

The following build time configurations are defined in arm/mbedtls/config.h:

Configuration	Options	Default	Description
Hardware Acceleration > Key Format > AES	MCU Specific Options		Select AES key formats used
Hardware Acceleration > Key Format > ECC	MCU Specific Options		Select ECC key formats used
Hardware Acceleration > Key Format > RSA	MCU Specific Options		Select RSA key formats used
Hardware Acceleration > Hash > SHA256/224	MCU Specific Options		Defines MBEDTLS_SHA256_ALT and MBEDTLS_SHA256_PROCESS_ALT.
Hardware Acceleration > Cipher > AES	MCU Specific Options		Defines MBEDTLS_AES_ALT, MBEDTLS_AES_SETKEY_ENC_ALT, MBEDTLS_AES_SETKEY_DEC_ALT, MBEDTLS_AES_ENCRYPT_ALT and MBEDTLS_AES_DECRYPT_ALT
Hardware Acceleration > Public Key Cryptography (PKC) > ECC	MCU Specific Options		Defines MBEDTLS_ECP_ALT
Hardware Acceleration > Public Key Cryptography (PKC) > ECDSA	MCU Specific Options		Defines MBEDTLS_ECDSA_SIGN_ALT and MBEDTLS_ECDSA_VERIFY_ALT
Hardware Acceleration > Public Key Cryptography (PKC) > RSA	MCU Specific Options		Defines MBEDTLS_RSA_ALT.
Hardware Acceleration	MCU Specific Options		Enables RSA 3072

> Public Key Cryptography (PKC) > RSA 3072 Verify			Verify.
Hardware Acceleration > Public Key Cryptography (PKC) > RSA 4096 Verify	MCU Specific Options		Enables RSA 4096 Verify.
Hardware Acceleration > TRNG	Enabled	Enabled	Defines MBEDTLS_ENTROPY_HARDWARE_ALT.
Hardware Acceleration > Secure Crypto Engine Initialization	Enabled	Enabled	MBEDTLS_PLATFORM_SETUP_TEARDOWN_ALT
Platform > Alternate > MBEDTLS_PLATFORM_EXIT_ALT	• Define • Undefine	Undefine	MBEDTLS_PLATFORM_EXIT_ALT
Platform > Alternate > MBEDTLS_PLATFORM_TIME_ALT	• Define • Undefine	Undefine	MBEDTLS_PLATFORM_TIME_ALT
Platform > Alternate > MBEDTLS_PLATFORM_FPRINTF_ALT	• Define • Undefine	Undefine	MBEDTLS_PLATFORM_FPRINTF_ALT
Platform > Alternate > MBEDTLS_PLATFORM_PRINTF_ALT	• Define • Undefine	Undefine	MBEDTLS_PLATFORM_PRINTF_ALT
Platform > Alternate > MBEDTLS_PLATFORM_SNPRINTF_ALT	• Define • Undefine	Undefine	MBEDTLS_PLATFORM_SNPRINTF_ALT

SHA256 Configuration

To enable hardware acceleration for the SHA256/224 calculation, the macro MBEDTLS_SHA256_ALT and MBEDTLS_SHA256_PROCESS_ALT must be defined in the configuration file. By default SHA256 is enabled. SHA256 can be disabled, but SHA512 then needs to be enabled (software version) because the PSA implementation uses it for the entropy accumulator. This can be done using the RA Configuration editor.

AES Configuration

To enable hardware acceleration for the AES128/256 operation, the macro MBEDTLS_AES_SETKEY_ENC_ALT, MBEDTLS_AES_SETKEY_DEC_ALT, MBEDTLS_AES_ENCRYPT_ALT and MBEDTLS_AES_DECRYPT_ALT must be defined in the configuration file. By default AES is enabled. AES cannot be disabled because the PSA implementation requires it for the CTR_DRBG random number generator. This can be done using the RA Configuration editor.

ECC Configuration

To enable hardware acceleration for the ECC Key Generation operation, the macro MBEDTLS_ECP_ALT must be defined in the configuration file. For ECDSA, the macros MBEDTLS_ECDSA_SIGN_ALT and MBEDTLS_ECDSA_VERIFY_ALT must be defined. By default ECC, ECDSA and ECDHE are enabled. To disable ECC, undefine MBEDTLS_ECP_C, MBEDTLS_ECDSA_C and MBEDTLS_ECDH_C. This can be done using the RA Configuration editor.

RSA Configuration

To enable hardware acceleration for the RSA2048 operation, the macro MBEDTLS_RSA_ALT must be defined in the configuration file. By default RSA is enabled. To disable RSA, undefine MBEDTLS_RSA_C, MBEDTLS_PK_C, MBEDTLS_PK_PARSE_C, MBEDTLS_PK_WRITE_C. This can be done using the RA Configuration editor.

Wrapped Key Usage

To use the Secure Crypto Engine to generate and use wrapped keys, use PSA_KEY_TYPE_AES_WRAPPED or PSA_KEY_TYPE_ECC_KEY_PAIR_WRAPPED(curve) or PSA_KEY_TYPE_RSA_KEY_PAIR when setting the key type attribute. Setting the key's type attribute using this value will cause the SCE to use wrapped key mode for all operations related to that key. The user can use the export functionality to save the wrapped keys to user ROM and import it later

for usage. This mode requires that Wrapped Key functionality for the algorithm is enabled in the project configuration.

Note

On the SCE9 devices, only the RSA public key can be exported. A file system must be used to store the internally generated private key.

Persistent Key Storage

Persistent key storage can be enabled by defining MBEDTLS_FS_IO, MBEDTLS_PSA_CRYPTO_STORAGE_C, and MBEDTLS_PSA_ITS_FILE_C. The key lifetime must also be specifed as PSA_KEY_LIFETIME_PERSISTENT. A lower level storage module must be added in the RA Configuration editor and initialized in the code before generating persistent keys. Persistent storage supports the use of plaintext and vendor keys. Refer to the lower level storage module documentation for information on how it should be initialized. To generate a persistent key the key must be assigned a unique id prior to calling generate using the psa_set_key_id api.

```
if (PSA_KEY_LIFETIME_IS_PERSISTENT(lifetime))
   {
/* Set the id to a positive integer. */
      psa_set_key_id(&attributes, (psa_key_id_t) 5);
   }
```

Platform Configuration

To run the mbedCrypto implementation of the PSA Crypto API on the MCU, the macro MBEDTLS_PLATFORM_SETUP_TEARDOWN_ALT must be defined in the configuration file. This enables code that will initialize the SCE. Parameter checking (General|MBEDTLS_CHECK_PARAMS) is enabled by default. To reduce code size, disable parameter checking.

Random Number Configuration

To run the mbedCrypto implementation of the PSA Crypto API on the MCU, the macro MBEDTLS_ENTROPY_HARDWARE_ALT must be defined in the configuration file. This enables using the TRNG as an entropy source. None of the other cryptographic operations (even in software only mode) will work without this feature.

Usage Notes

Hardware Initialization

mbedtls_platform_setup() must be invoked before using the PSA Crypto API to ensure that the SCE peripheral is initialized.

Memory Usage

In general, depending on the mbedCrypto features being used a heap size of 0x1000 to 0x5000 bytes is required. The total allocated heap should be the **sum** of the heap requirements of the individual algorithms:

Algorithm	Required Heap (bytes)
SHA256/224	None
AES	0x200
Hardware ECC	0x400
Software ECC	0x1800
RSA	0x1500

A minimum stack of 0x1000 is required where the module is used. This is either the main stack in a bare metal application or the task stack of the task used for crypto operations.

Limitations

- Only little endian mode is supported.

SCE9 Usage

The SCE9 is used in Compatibility Mode for mbedCrypto acceleration. The crypto capabilities in this mode on the SCE9 are different which results in the below usage limitations with mbedCrypto:

- The module includes **both** wrapped and plaintext keys code irrespective of whether the application requires it.
- Plaintext key generation is not supported for RSA and ECC; only wrapped keys can be generated.
- If ECDH is used, only wrapped key will be generated on SCE9 and will not return an error even if the user context is somehow set for plain key. This may be relevant only if the psa_key_agreement() function with plaintext key on SCE9 is attempted.

Note

For a detailed description of the different SCE9 operating modes, refer to Application Note R11AN0498.

Using PSA Crypto with TrustZone

Unlike FSP drivers, PSA Crypto cannot be configured as Non-secure callable in the RA Configurator for a secure project. The reason for this is that in order to achieve the security objective of controlling access to protected keys, both the PSA Crypto code as well as the keys must be placed in the secure region. Since the PSA Crypto API requires access to the keys directly during initialization and later via a key handle, allowing non-secure code to use the API by making it Non-secure callable will require the keys to be stored in non-secure memory.

This section will provide a short explanation of how to add PSA Crypto to a secure project and have it usable by the non-secure project without exposing the keys. In this example the secure project will contain an RSA private key and the non-secure project is expected to be able to perform sign and verify operations using that key.

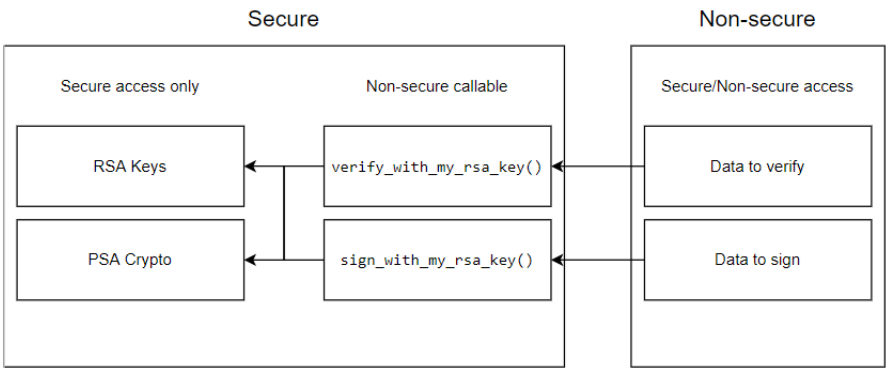

Figure 212: PSA Crypto Non-secure callable example

- Secure project
  - During secure project boot-up, psa_crypto_init() is called.
  - The RSA private key is programmed into secure flash either at the factory or by calling psa_generate_key() in persistent mode. Note that the data-flash area used by the LittleFS will have to be in the secure region if the key is generated as a persistent.
  - psa_import_key()/psa_open_key() are called with the resultant handle held in secure RAM.
  - The Non-secure callable section contains the following **user-defined** functions
  - verify_with_my_rsa_key(input_signature, input_hash, verification_result)
  - The implementation of this function in secure region will call psa_verify_hash() and return the result via verification_result.
  - sign_with_my_rsa_key(input_hash, output_signature)
  - The implementation of this function in secure region will call psa_sign_hash() and return the signature via output_signature.

- Non-secure project

  - Calls verify_with_my_rsa_key() to verify a signature. The implementation will use the public key that is present in the secure project.
  - Calls sign_with_my_rsa_key() to generate a signature. The implementation will use the private key that is present on the secure project.

  For more details on how to add user-code to the Non-secure callable region refer to the "Security Design with Arm TrustZone - IP Protection (R11AN0467EU0100)" Application Note.

Examples

Hash Example

This is an example on calculating the SHA256 hash using the PSA Crypto API.

```
const uint8_t NIST_SHA256ShortMsgLen200[] =
{
    0x2e, 0x7e, 0xa8, 0x4d, 0xa4, 0xbc, 0x4d, 0x7c, 0xfb, 0x46, 0x3e, 0x3f, 0x2c,
```

```
0x86, 0x47, 0x05,
    0x7a, 0xff, 0xf3, 0xfb, 0xec, 0xec, 0xa1, 0xd2, 00
};
const uint8_t NIST_SHA256ShortMsgLen200_expected[] =
{
    0x76, 0xe3, 0xac, 0xbc, 0x71, 0x88, 0x36, 0xf2, 0xdf, 0x8a, 0xd2, 0xd0, 0xd2,
0xd7, 0x6f, 0x0c,
    0xfa, 0x5f, 0xea, 0x09, 0x86, 0xbe, 0x91, 0x8f, 0x10, 0xbc, 0xee, 0x73, 0x0d,
0xf4, 0x41, 0xb9
};

/* All the operations succeeded for MAC verification */
   }
```

ECC Example

This is an example on using the PSA Crypto API to generate an ECC-P256R1 key, signing and verifying data after hashing it first using SHA256.

Note

Unlike RSA, ECDSA does not have any padding schemes. Thus the hash argument for the ECC sign operation MUST have a size larger than or equal to the curve size; i.e. for PSA_ECC_CURVE_SECP256R1 the payload size

must be at least 256/8 bytes. nist.fips.186-4: " A hash function that provides a lower security strength than the security strength associated with the bit length of 'n' ordinarily should not be used, since this would reduce the security strength of the digital signature process to a level no greater than that provided by the hash function."

```
#define ECC_256_BIT_LENGTH 256
#define ECC_256_EXPORTED_SIZE 500
uint8_t exportedECC_SECP256R1Key[ECC_256_EXPORTED_SIZE];
size_t exportedECC_SECP256R1Keylength = 0;
void psa_ecc256R1_example (void)
{
/* This example generates an ECC-P256R1 keypair, performs signing and verification
operations.
 * It then exports the generated key into ASN1 DER format to a RAM array which can
then be programmed to flash.
 * It then re-imports that key, and performs signing and verification operations. */

    }
 /* Verify signature2 using the public key */
 if (PSA_SUCCESS !=
       psa_verify_hash(key_handle, PSA_ALG_RSA_PKCS1V15_SIGN_RAW, payload,
sizeof(payload), signature2,
                       signature_length2))
    {
       debugger_break();
    }
 /* Compare signatures to verify that the same signature was generated */
 if (0 != memcmp(signature2, signature1, signature_length2))
    {
       debugger_break();
    }
    mbedtls_psa_crypto_free();
 mbedtls_platform_teardown(&ctx);
```

```
}
```

Function Documentation

◆ RM_PSA_CRYPTO_TRNG_Read()

fsp_err_t RM_PSA_CRYPTO_TRNG_Read (uint8_t *const *p_rngbuf*, uint32_t *num_req_bytes*, uint32_t * *p_num_gen_bytes*)

Reads requested length of random data from the TRNG. Generate nbytes of random bytes and store them in p_rngbuf buffer.

Return values

FSP_SUCCESS	Random number generation successful
FSP_ERR_ASSERTION	NULL input parameter(s).
FSP_ERR_CRYPTO_UNKNOWN	An unknown error occurred.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- s_generate_16byte_random_data

◆ mbedtls_platform_setup()

int mbedtls_platform_setup (mbedtls_platform_context * *ctx*)

This function initializes the SCE and the TRNG. It **must** be invoked before the crypto library can be used. This implementation is used if MBEDTLS_PLATFORM_SETUP_TEARDOWN_ALT is defined.

Example:

```
mbedtls_platform_context ctx = {0};

/* Setup the platform; initialize the SCE and the TRNG */

if (PSA_SUCCESS != mbedtls_platform_setup(&ctx))
```

Return values

0	Initialization was successful.
MBEDTLS_ERR_PLATFORM_HW_ACCEL_FAILED	SCE Initialization error.

◆ mbedtls_platform_teardown()

void mbedtls_platform_teardown (mbedtls_platform_context * *ctx*)

This implementation is used if MBEDTLS_PLATFORM_SETUP_TEARDOWN_ALT is defined. It is intended to de-initialize any items that were initialized in the mbedtls_platform_setup() function, but currently is only a placeholder function.
Example:
`/* De-initialize the platform. This is currently a placeholder function which does not do anything. */`
`mbedtls_platform_teardown(&ctx);`
Return values
N/A

4.2.119 Azure RTOS ThreadX Port (rm_threadx_port)

Modules

ThreadX port for RA MCUs.

Overview

Note

The ThreadX Port does not provide any interfaces to the user. Consult the ThreadX documentation at https://docs.microsoft.com/en-us/azure/rtos/threadx/ for further information.

Features

The RA ThreadX port supports the following features:

- Standard ThreadX configurations
- Hardware stack monitor

Configuration

Build Time Configurations for ThreadX

The following build time configurations are defined in fsp_cfg/azure/tx/tx_user.h:

Configuration	Options	Default	Description
General > Custom tx_user.h	Manual Entry		Add a path to your custom tx_user.h file. It

			can be used to override some or all of the configurations defined here, and to define additional configurations.
General > Error Checking	• Enabled • Disabled	Enabled	The ThreadX basic API error checking can be bypassed by compiling with the symbol TX_DISABLE_ERROR_CHECKING defined.
General > Max Priorities	Value must be a multiple of 32 or empty	32	Define the priority levels for ThreadX. Legal values range from 32 to 1024 and MUST be evenly divisible by 32.
General > Minimum Stack	Value must be greater than 0 or empty	200	Define the minimum stack for a ThreadX thread on this processor. If the size supplied during thread creation is less than this value, the thread create call will return an error.
General > Stack Filling	• Enabled • Disabled	Enabled	Determine is stack filling is enabled. By default, ThreadX stack filling is enabled, which places an 0xEF pattern in each byte of each thread's stack. This is used by debuggers with ThreadX-awareness and by the ThreadX run-time stack checking feature.
General > Preemption Threshold	• Enabled • Disabled	Disabled	Determine if preemption-threshold should be disabled. By default, preemption-threshold is disabled. If the application does not use preemption-threshold, it may be disabled to reduce code size and improve performance.
General > Notify	• Enabled	Disabled	Determine if the notify

Callbacks	• Disabled		callback option should be disabled. By default, notify callbacks are disabled. If the application does not use notify callbacks, they may be disabled to reduce code size and improve performance.
General > Inline Thread Resume Suspend	• Enabled • Disabled	Disabled	Determine if the tx_thread_resume and tx_thread_suspend services should have their internal code in-line. This results in a larger image, but improves the performance of the thread resume and suspend services.
General > Not Interruptable	• Enabled • Disabled	Disabled	Determine if the internal ThreadX code is non-interruptable. This results in smaller code size and less processing overhead, but increases the interrupt lockout time.
General > IAR Library Support	• Enabled • Disabled	Disabled	Enable IAR library support (IAR compiler only). When IAR Library Support is Enabled, enable the linker option --threaded_lib. In the IAR IDE, this can be enabled in Project > Options > General Options > Library Configuration > Enable thread support in library.
General > BSD Support	• Enabled • Disabled	Disabled	Defines TX_THREAD_EXTENSION_1 to bsd_err_no in order to support NXD BSD.
General > FileX Pointer	• Enabled • Disabled	Enabled	Determine if there is a FileX pointer in the thread control block. By default, the pointer is there for legacy/backwards

			compatibility. The pointer must also be there for applications using FileX. Disable this to save space in the thread control block.
Timer > Timer Ticks Per Second	Value must be greater than 0 or empty	100	Define the number of times the system timer runs per second. Default is 100 ticks per second, which results in a tick every 10ms.
Timer > Timer Thread Stack Size	Value must be greater than 0 or empty	1024	Define the system timer thread's default stack size and priority. These are only applicable if TX_TIMER_PROCESS_IN_ISR is disabled.
Timer > Timer Thread Priority	Value must be greater than 0 or empty	0	Define the system timer thread's default stack size and priority. These are only applicable if TX_TIMER_PROCESS_IN_ISR is disabled.
Timer > Timer Process In ISR	• Enabled • Disabled	Enabled	Determine if timer expirations (application timers, timeouts, and tx_thread_sleep calls should be processed within the a system timer thread or directly in the timer ISR. When disabled, the timer thread is used. When enabled, timer expiration processing is done directly from the timer ISR, thereby eliminating the timer thread control block, stack, and context switching to activate it.
Timer > Reactivate Inline	• Enabled • Disabled	Disabled	Determine if in-line timer reactivation should be used within the timer expiration processing. By default, this is disabled and a function call is used. When enabled,

			reactivating is performed in-line resulting in faster timer processing but slightly larger code size.
Timer > Timer	• Enabled • Disabled	Enabled	Determine if no timer processing is required. This option will help eliminate the timer processing when not needed.
Trace > Event Trace	• Enabled • Disabled	Disabled	Determine if the trace event logging code should be enabled. This causes slight increases in code size and overhead, but provides the ability to generate system trace information which is available for viewing in TraceX.
Trace > Trace Buffer Name	Name must be a valid C symbol	g_tx_trace_buffer	Name of trace buffer symbol, only used if Event Trace is enabled.
Trace > Memory section for Trace Buffer	Manual Entry	.bss	Specify the memory section where the Trace Buffer will be allocated, only used if Event Trace is enabled. To view TraceX data, export this buffer as raw binary data to a file (.trx extension recommended) and open it with Microsoft Azure RTOS TraceX.
Trace > Trace Buffer Size	Value must be greater than 0	65536	Trace buffer size in bytes, only used if Event Trace is enabled
Trace > Trace Buffer Number of Registries	Value must be greater than 0	30	Number of registries available to TraceX, only used if Event Trace is enabled
Performance > Block Pool Performance Info	• Enabled • Disabled	Disabled	When enabled, ThreadX gathers block pool performance information.
Performance > Byte Pool Performance Info	• Enabled • Disabled	Disabled	When enabled, ThreadX gathers byte

			pool performance information.
Performance > Event Flags Performance Info	• Enabled • Disabled	Disabled	When enabled, ThreadX gathers event flags performance information.
Performance > Mutex Performance Info	• Enabled • Disabled	Disabled	When enabled, ThreadX gathers mutex performance information.
Performance > Queue Performance Info	• Enabled • Disabled	Disabled	When enabled, ThreadX gathers queue performance information.
Performance > Semaphore Performance Info	• Enabled • Disabled	Disabled	When enabled, ThreadX gathers semaphore performance information.
Performance > Thread Performance Info	• Enabled • Disabled	Disabled	When enabled, ThreadX gathers thread performance information.
Performance > Timer Performance Info	• Enabled • Disabled	Disabled	When enabled, ThreadX gathers timer performance information.
RA > Hardware Thread Stack Monitoring	MCU Specific Options		Use RA Hardware Stack Monitors to monitor thread stacks for overflow. Not available on MCUs that support PSPLIM.
Interrupts > SysTick Interrupt Priority	MCU Specific Options		Select the Systick interrupt priority.
Interrupts > Maximum Interrupt Priority	MCU Specific Options		The maximum priority (lowest numerical value) an interrupt can have and use scheduler services. Interrupts with higher priority can interrupt most scheduler critical sections. Setting this to Priority 0 (highest) disables this feature. This feature is not available on MCUs that do not have the

BASEPRI register.

Clock Configuration

The ThreadX port uses the SysTick timer as the system clock. The timer rate is configured in the ThreadX component under General > Timer Ticks Per Second.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Interrupt Priorities

When no threads are ready to run, the ThreadX port spins in the PendSV_Handler, which is fixed at the lowest interrupt priority. The MCU does not service any other interrupts of the lowest priority while no threads are ready to run.

To get around this limitation, the application can create an idle thread that is always ready to run. If the idle thread enters a lower power mode, make sure all interrupts that are required to resume the scheduler can wake the MCU in the configured power mode. If the application expects to wake after a certain number of ticks, the idle thread should not enter standby mode because the SysTick cannot wake the MCU from standby mode. See Low Power Modes (r_lpm) for more information regarding low power modes.

Warning

Do not attempt to wake a thread from an interrupt with the lowest available interrupt priority unless the application has created an idle thread.

Hardware Stack Monitor

The hardware stack monitor generates an NMI if the PSP goes out of the memory area for the stack allocated for the current thread. A callback can be registered using R_BSP_GroupIrqWrite() to be called whenever a stack overflow or underflow of the PSP for a particular thread is detected.

Low Power Modes

The idle processing executes WFI() when no thread is ready to run. If the MCU is configured to enter software standby mode or deep software standby mode when the idle processing executes WFI(), the RA ThreadX port changes the low power mode to sleep mode so the idle processing can wake from SysTick. The low power mode settings are restored when the MCU wakes from sleep mode.

TrustZone Integration

When using an RTOS in a TrustZone project, ARM recommends keeping the RTOS in the non-secure project. Tasks may call non-secure callable functions if the thread has allocated a secure context (using tx_thread_secure_stack_allocate).

The secure context can be freed by deleting the thread or calling tx_thread_secure_stack_free.

Examples

Stack Monitor Example

This is an example of using the stack monitor in an application.

```
#if BSP_FEATURE_BSP_HAS_SP_MON
void stack_monitor_callback(bsp_grp_irq_t irq);
void stack_monitor_callback (bsp_grp_irq_t irq)
{
 FSP_PARAMETER_NOT_USED(irq);
 if (1U == R_MPU_SPMON->SP[0].CTL_b.ERROR)
    {
 /* Handle main stack monitor error here. */
    }
 if (1U == R_MPU_SPMON->SP[1].CTL_b.ERROR)
    {
 /* Handle process stack monitor error here. */
    }
}
void rm_threadx_port_stack_monitor_example (void)
{
 /* Register a callback to be called when the stack goes outside the allocated stack
area. */
 R_BSP_GroupIrqWrite(BSP_GRP_IRQ_MPU_STACK, stack_monitor_callback);
}
#else
/* Allocate stack space to return from UsageFault. */
uint32_t g_stack_overflow_exception_stack[8] BSP_ALIGN_VARIABLE(BSP_STACK_ALIGNMENT)
BSP_PLACE_IN_SECTION(
    BSP_SECTION_STACK);
/* MCUs that do not have an SPMON stack monitor use PSPLIM to detect stack overflows.
When a stack overflow error
 * occurs, the UsageFault_Handler fires if it has been enabled. */
void UsageFault_Handler (void)
{
 register uint32_t cfsr = SCB->CFSR;
 if (cfsr & SCB_CFSR_STKOF_Msk)
    {
```

```
 /* Update PSP and PSPLIM to point to an exception stack frame allocated for stack
overflows. */
 register uint32_t * p_exception_stack_frame = (uint32_t *)
(&g_stack_overflow_exception_stack);
       __set_PSP((uint32_t) p_exception_stack_frame);
       __set_PSPLIM((uint32_t) p_exception_stack_frame);
 /* Clear XPSR, only set T-bit. */
       p_exception_stack_frame[7] = 1U << 24;
 /* Set PC to stack overflow error while loop. When execution returns from the
UsageFault, it will go to the
  * stack_overflow_error_occurred function. It cannot return to the location where
the fault occurred because
  * the MCU does not save the exception stack frame to the stack when a stack
overflow error occurs. */
       p_exception_stack_frame[6] = (uint32_t) stack_overflow_error_occurred;
    }
 /* Clear flags. */
    SCB->CFSR = cfsr;
}
/* This function is called from UsageFault_Handler after a stack overflow occurs. */
void stack_overflow_error_occurred (void)
{
 /* When recovering from a stack overflow, move the thread to a while(1) loop. */
 while (1)
    {
 /* Do nothing. */
    }
}
void rm_threadx_port_stack_monitor_example (void)
{
 /* Enable usage fault. */
    SCB->SHCSR |= SCB_SHCSR_USGFAULTENA_Msk;
}
#endif
```

TrustZone Example

This is an example of calling tx_thread_secure_stack_allocate before calling any non-secure callable functions in a thread.

```
extern TX_THREAD * _tx_thread_current_ptr;

void rm_threadx_port_trustzone_thread_example (void)

{

 /* When ThreadX is used in a non-secure TrustZone application,

tx_thread_secure_stack_allocate must be called prior

  * to calling any non-secure callable function in a thread. The first parameter is a

pointer to the thread control block.

  * This function can be called when the thread is created or in the thread before an

non-secure callable function is

  * called. The second parameter is unused in the FSP implementation. */

    UINT status = tx_thread_secure_stack_allocate(_tx_thread_current_ptr, 0);

    assert(TX_SUCCESS == status);

    rm_threadx_port_nsc_function();

}
```

Detailed Description

AES128 Hardware acceleration for TinyCrypt on the RA2 family.

Overview

Note

The TinyCrypt port module does not provide any interfaces to the user. Consult the documentation at https://github.com/intel/tinycrypt/blob/master/documentation/tinycrypt.rst for further information.

TinyCrypt is designed as a small footprint software crypto implementation to be used on resource constrained devices. The software only module is available in FSP on all RA devices. Hardware acceleration for AES-128 is provided only for the RA2 family. This release uses TinyCrypt v0.2.8.

Hardware Overview

Crypto Peripheral version	Devices
AES Engine	RA2A1, RA2E1, RA2L1

Features

For features supported by the software-only version, refer to the TinyCrypt documentation.

The TinyCrypt port module provides hardware support for the following operations

- AES
  - Keybits - 128
  - ECB, CBC, CTR, CCM and CMAC modes -TRNG

Configuration

Build Time Configurations for TinyCrypt_Acceleration

The following build time configurations are defined in fsp_cfg/rm_tinycrypt_port_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

AES Configuration

To enable hardware acceleration for the AES128 operation, choose TinyCrypt (H/W Accelerated) from the stack options . This feature is only supported on the RA2 family.

Usage Notes

Hardware Initialization

Invoke RM_TINCYRYPT_PORT_Init () to initialize the hardware before using Tinycrypt if either hardware acceleration or the TRNG is to be used.

Random Number Generation

There are two Pseudo-random Number Generators (PRNG) provided in TinyCrypt

- CTR-PRNG which uses AES128 internally in its implementation. Enabling AES128 hardware acceleration will improve the performance of this module.
- HMAC-PRNG which uses SHA256 internally in its implementation.

Both these implementations will only be able to provide a random pseudo-random number sequence if they are seeded with truly random data. The TRNG module that is present in hardware and available in rm_tinycrypt_port must be used to seed these modules. When using CTR-PRNG or HMAC-PRNG, use the RM_TINCYRYPT_PORT_TRNG_Read() function to obtain random data from the TRNG hardware and use that to seed the PRNG modules before invoking the pseudo-random number generation. If purely random data is sufficient for the application, then RM_TINCYRYPT_PORT_TRNG_Read() can be used directly instead. The hardware TRNG implements the CTR_DRBG spec.

Default CSPRNG

The TinyCrypt ECC implementation requires a platform specific implementation of the default_CSPRNG() function. This function has been implemented using the hardware TRNG in the port to support software ECC usage. When using TinyCrypt in S/W mode, it is necessary to implement default_CSPRNG() if using ECC signature generation (ECDSA) or key derivation (ECDH).

AES-128 Usage

The AES ECB mode implementation is provided in aes_encrypt.decrypt.c. All the other modes of AES operation including CBC, CCN, CMAC and CTR use the ECB mode for the block operation. On the RA2, the ECB mode has been hardware accelerated which improves performance of the other modes as well. Additionally the CBC and CTR modes are also accelerated.

To use the different AES modes, first initialize the hardware (on the RA2) and then use the functions defined in the header file of each AES mode. Note that TinyCrypt does not provide any type of padding or buffering so the data provided to these modes should be multiples of AES block size.

Memory Usage

TinyCrypt does not use dynamic allocation so there is no heap requirement.

Limitations

Usage with RA4 and RA6 devices

TinyCrypt (S/W Only) can be used on RA4 and RA6 devices. However, since ECC signature generation (ECDSA) and key derivation (ECDH) requires a random number source, that operation is currently not supported on these devices when using TinyCrypt (S/W Only). In order to support those operations the function default_CSPRNG() must be implemented in the user code.

TinyCrypt

- No padding is supported; the user is expected to provide adequately padded data depending on the algorithm used.
- AES Key generation is not supported.
- Key encoding/decoding is not supported.

Using TinyCrypt with TrustZone

Unlike FSP drivers, TinyCrypt cannot be configured as Non-secure callable in the RA Configurator for a secure project. The reason for this is that in order to achieve the security objective of controlling access to protected keys, both the crypto code as well as the keys must be placed in the secure region. Since the tinyCrypt API requires access to the keys directly during initialization and later via a key handle, allowing non-secure code to use the API by making it Non-secure callable will require the keys to be stored in non-secure memory.

This limitation is identical to that for PSA Crypto. Refer to the documentation of that module on how to create a crypto Non-Secure Callable layer to be used in such situations.

Examples

AES-CBC Example

This is an example on using TinyCrypt to encrypt and decrypt data using an AES-128 key in CBC mode.

```
#define TC_INPUT_PLAINTEXT_SIZE 64U
#define TF_AES_IV_SIZE TC_AES_BLOCK_SIZE
#define TC_OUTPUT_CIPHERTEXT_SIZE (TC_INPUT_PLAINTEXT_SIZE + TF_AES_IV_SIZE)

```

AES-CTR Example

This is an example on using TinyCrypt to encrypt and decrypt data using an AES-128 key in CTR mode.

```
#define TC_CTR_INPUT_PLAINTEXT_SIZE 64U
#define TF_AES_IV_SIZE TC_AES_BLOCK_SIZE
#define TC_CTR_OUTPUT_CIPHERTEXT_SIZE (TC_CTR_INPUT_PLAINTEXT_SIZE + TF_AES_IV_SIZE)
/*
 * NIST SP 800-38a CTR Test for encryption and decryption.
 */
const uint8_t ctr_key[TC_AES_KEY_SIZE] =
{

```

Function Documentation

◆ RM_TINCYRYPT_PORT_TRNG_Read()

fsp_err_t RM_TINCYRYPT_PORT_TRNG_Read (uint8_t *const *p_rngbuf*, uint32_t *num_req_bytes*)

Reads requested length of random data from the TRNG. Generate num_req_bytes of random bytes and store them in p_rngbuf buffer.

Return values

FSP_SUCCESS	Random number generation successful
FSP_ERR_ASSERTION	NULL input parameter(s).
FSP_ERR_CRYPTO_UNKNOWN	An unknown error occurred.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:
- HW_SCE_RNG_Read

◆ RM_TINCYRYPT_PORT_Init()

fsp_err_t RM_TINCYRYPT_PORT_Init ( )

Initialize the SCE.

◆ default_CSPRNG()

int default_CSPRNG (uint8_t * *dest*, unsigned int *size*)

Implements the Cryptographically Secure Pseudo-Random Number Generator function required byt TinyCrypt.

Return values

TC_CRYPTO_SUCCESS	Random number generation successful
TC_CRYPTO_FAIL	Random number generation failed.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:
- RM_TINCYRYPT_PORT_TRNG_Read

4.2.121 Capacitive Touch Middleware (rm_touch)

Modules

Functions

fsp_err_t	RM_TOUCH_Open (touch_ctrl_t *const p_ctrl, touch_cfg_t const *const p_cfg) Opens and configures the TOUCH Middle module. Implements touch_api_t::open. More...
fsp_err_t	RM_TOUCH_ScanStart (touch_ctrl_t *const p_ctrl) This function should be called each time a periodic timer expires. If initial offset tuning is enabled, The first several calls are used to tuning for the sensors. Before starting the next scan, first get the data with RM_TOUCH_DataGet(). If a different control block scan should be run, check the scan is complete before executing. Implements touch_api_t::scanStart. More...
fsp_err_t	RM_TOUCH_DataGet (touch_ctrl_t *const p_ctrl, uint64_t *p_button_status, uint16_t *p_slider_position, uint16_t *p_wheel_position) Gets the 64-bit mask indicating which buttons are pressed. Also, this function gets the current position of where slider or wheel is being pressed. If initial offset tuning is enabled, The first several calls are used to tuning for the sensors. Implements touch_api_t::dataGet. More...
fsp_err_t	RM_TOUCH_PadDataGet (touch_ctrl_t *const p_ctrl, uint16_t *p_pad_rx_coordinate, uint16_t *p_pad_tx_coordinate, uint8_t *p_pad_num_touch) This function gets the current position of pad is being pressed. Implements touch_api_t::padDataGet , g_touch_on_ctsu. More...
fsp_err_t	RM_TOUCH_ScanStop (touch_ctrl_t *const p_ctrl) Scan stop specified TOUCH control block. Implements touch_api_t::scanStop. More...
fsp_err_t	RM_TOUCH_CallbackSet (touch_ctrl_t *const p_api_ctrl, void(*p_callback)(touch_callback_args_t *), void const *const p_context, touch_callback_args_t *const p_callback_memory)
fsp_err_t	RM_TOUCH_Close (touch_ctrl_t *const p_ctrl) Disables specified TOUCH control block. Implements touch_api_t::close. More...
fsp_err_t	RM_TOUCH_SensitivityRatioGet (touch_ctrl_t *const p_ctrl, touch_sensitivity_info_t *p_touch_sensitivity_info) Get the touch sensitivity ratio. Implements

	touch_api_t::sensitivityRatioGet. More...
fsp_err_t	RM_TOUCH_ThresholdAdjust (touch_ctrl_t *const p_ctrl, touch_sensitivity_info_t *p_touch_sensitivity_info) Adjust the touch judgment threshold. Implements touch_api_t::thresholdAdjust. More...
fsp_err_t	RM_TOUCH_DriftControl (touch_ctrl_t *const p_ctrl, uint16_t input_drift_freq) Control drift correction. Implements touch_api_t::driftControl. More...

Detailed Description

This module supports the Capacitive Touch Sensing Unit (CTSU). It implements the Touch Middleware Interface.

Overview

The Touch Middleware uses the Capacitive Touch Sensing Unit (r_ctsu) API and provides application-level APIs for scanning touch buttons, sliders, and wheels. This module is configured via the QE for Capacitive Touch.

Features

- Supports touch buttons (Self and Mutual), sliders, and wheels
- Can retrieve the status of up to 64 buttons at once
- Software and external triggering
- Callback on scan end
- Collects and calculates usable scan results:
  - Slider position from 1 to 100 (percent)
  - Wheel position from 1 to 360 (degrees)
- Dynamic touch-judgment-threshold adjustment
- Calculate the XY coordinates of the pad(CTSU2)
- Optional (build time) support for real-time monitoring functionality through the QE tool over UART
- Optional (build time) support for tuning function through the QE Standalone Version tool over UART
- TrustZone Support

Configuration

Note

This module is configured via the QE for Capacitive Touch. For information on how to use the QE tool, once the tool is installed click Help -> Help Contents in e2 studio and search for "QE".

This module supports the QE monitor function. The monitor determines whether to use debugger or serial communications, determines the type of the information from QE and sends only the

necessary information. This module supports the serial tuning function with the standalone version of QE. Generates a configuration configuration file by UART communication with QE.

Note

Multiple configurations can be defined within a single project allowing for different scan procedures or button layouts.

Build Time Configurations for rm_touch

The following build time configurations are defined in fsp_cfg/rm_touch_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Support for QE monitoring using UART	• Enabled • Disabled	Disabled	Enable SCI_UART support for QE monitoring.
Support for QE Tuning using UART	• Enabled • Disabled	Disabled	Enable SCI_UART support for QE Tuning.

Configurations for CapTouch > Touch (rm_touch)

This module can be added to the Stacks tab via New Stack > CapTouch > Touch (rm_touch). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description

Interrupt Configuration

Refer to the Capacitive Touch Sensing Unit (r_ctsu) section for details.

Clock Configuration

Refer to the Capacitive Touch Sensing Unit (r_ctsu) section for details.

Pin Configuration

Refer to the Capacitive Touch Sensing Unit (r_ctsu) section for details.

Usage Notes

Measurements and Data Processing

The module determines whether the button has been touched based on the change in capacitance and detects the position of the slider or wheel. This requires continued periodic measurements of capacitance. When developing your application, make sure to periodically call RM_TOUCH_ScanStart() and RM_TOUCH_DataGet(). For more details, refer to the sample application.

Button Touch Determination

Creating reference value and threshold

A touch button is not a mechanical button in which the ON/OF state is switched by hardware. The ON/OFF state is determined via software.
First, a reference value is created based on measurement results in the non-touch state. The initial reference value is the first measured value. The threshold is then determined with an arbitrary offset. If a measured value exceeds the threshold, the button is determined to be in the ON state, if it does not exceed the threshold, it is in the OFF state.
Processing for self-capacitance and mutual capacitance are basically the same. However, because the amount of capacitance decreases when a mutual capacitance button is touched, the user needs to set the threshold based on decreasing measured values to determine the ON/OFF state.
You can set the threshold for each button separately in the configuration settings (threshold in touch_button_cfg_t). The following functions are also included to deal with issues such as chattering suppression and changes in the external environment which affect actual touch recognition.

Positive Noise Filter/Negative Noise Filter

As a chattering countermeasure, you can confirm the ON/OFF state after a set number of consecutive ON or OFF determinations.
In the configuration settings (on_freq and off_freq in touch_cfg_t) set the number of consecutive ON or OFF states. You can do this for all buttons in the touch interface configuration. Be aware that, although this is an effective solution to improving chattering, the greater the number of consecutive states, the slower the response to actual touch.

Hysteresis

This is another chattering countermeasure. Offset the constant to the threshold after the state goes to ON, and prevent chattering by using hysteresis as the OFF-to-ON and ON-to-OFF threshold.
You can set the hysteresis value for each button in the configuration settings (hysteresis in touch_button_cfg_t). The larger the hysteresis, the more effective the countermeasure is in suppressing chattering. However, keep in mind that this will make it more difficult to return the state from ON-to-OFF of OFF-to-ON.

Drift Correction Process

As a countermeasure for changes in the external environment, the drift correction process refreshes the reference value.
After averaging the measured value in the OFF state over a set period, if the button is in the touch OFF state after a set period, the reference value is refreshed. The drift correction is only executed in the OFF state and is cleared when touch ON is determined.
Set the period in the configuration settings (drift_freq in touch_cfg_t). You can do this for all buttons in the touch interface configuration. This allows you to adjust the ability to determine the touch state despite changes in the external environment.

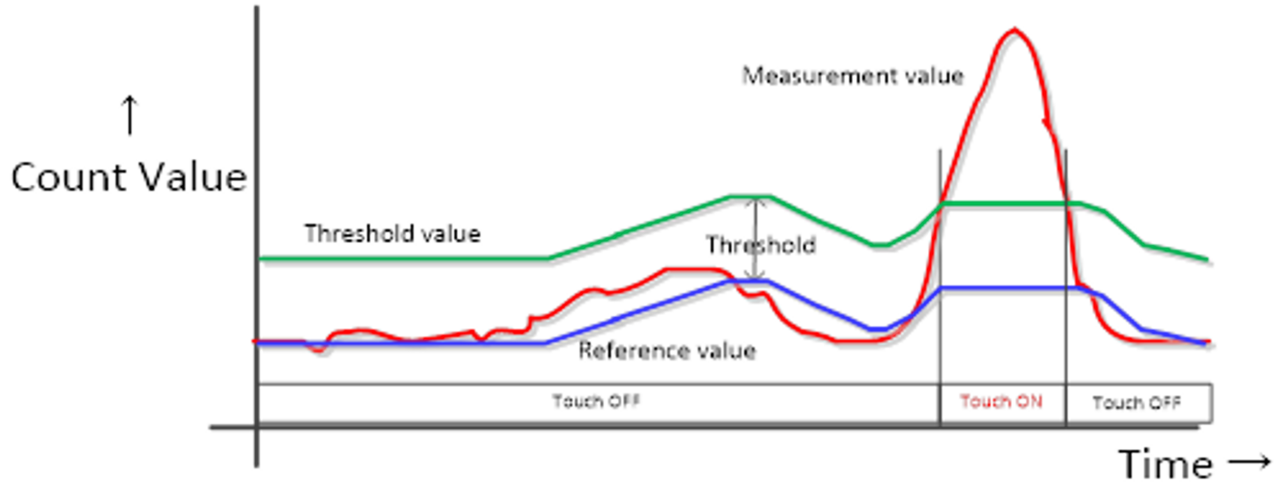

Figure 213: Button Touch Determination

Press and hold cancel

Strong noise or other sudden environment changes can disable the drift correction process, preventing return from the ON state. The press and hold cancel function implements the drift correction process and returns the button from the ON state by forcibly turning the state to OFF after a certain number of consecutive ON state periods.
Set the number of consecutive ON periods required for the press and hold cancel function to return the button to the OFF state in the configuration settings (cancel_freq in touch_cfg_t). You can do this for all buttons in the touch interface configuration.

Touch Position Detection of Slider/Wheel

Configure a slider with multiple terminals to be measured (TS) physically arranged in a straight line.
Configure a wheel with multiple terminals physically arranged in a circle.
The touch position is calculated from the measured values of the TS in the configuration. The calculation method for sliders and wheels is fundamentally the same.

1. Detect the maximum value (TS_MAX) among the terminals in the configuration.
2. Calculate the difference (d1, d2) between TS_MAX and the terminals on either side. (If the TS_MAX terminal is at one end of the slider, use the values of the two terminals to the right or left, accordingly.)
3. If the total of d1 and d2 exceeds the threshold, position calculation is initiated. If the total amount does not exceed the threshold, the position calculation process is ended.
4. With TS_MAX as the middle position, the ratio of d1 to d2 is used to calculate the position. The slider has a range of 1 to 100, and the while has a range of 1 to 360.

	Slider	Wheel
Electrode type	Self capacitance only	Self capacitance only
Number of electrodes	3-10	4+
Touch position output range	1-100	1-360
Default value (no touch)	0xFFFF	0xFFFF

Tuning the Touch Determination Adjustment

When QE tuning, a measurement is performed with a finger touching the button and the tuned parameters are output in the configuration file. The setting value of the threshold is 60% of the touch sensitivity between touch and non-touch state, and the setting value of the hysteresis coefficient is 5% of the threshold.
This module provides the functions for dynamic adjusting of these threshold and hysteresis coefficient.
They are two functions as below.

Adjusting the threshold and hysteresis coefficient to an arbitrary ratio.
Use RM_TOUCH_ThresholdAdjust().

When changing the touch determination threshold ratio from 60% QE set to 70% user specified, the touch determination thresholds are as below.
If you want to make this setting, set the member of the second argument as follows. It is also necessary to set the ratio of the amount of touch change and the hysteresis value.

*p_touch_sensitivity_ratio = 100,
old_threshold_ratio = 60,
new_threshold_ratio = 70,
new_hysteresis_ratio = 5

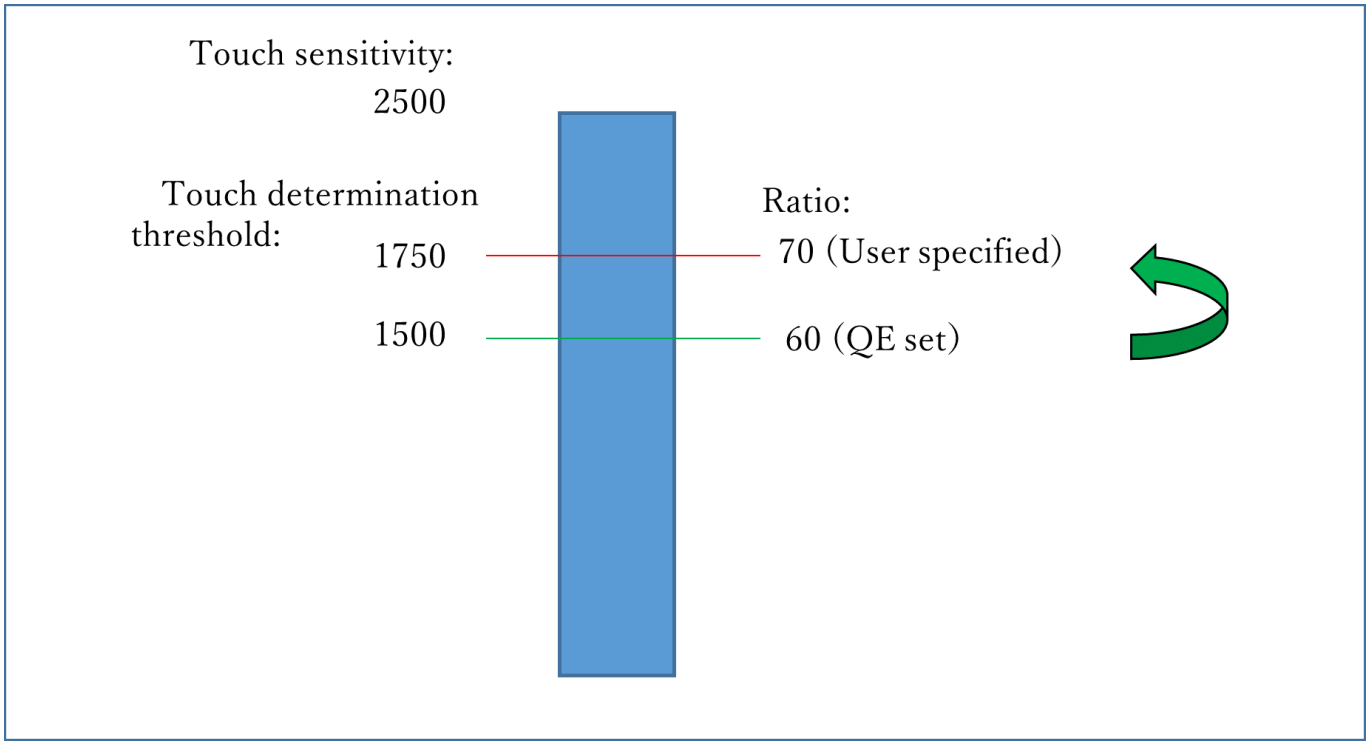

Figure 214: Example of changing the threshold ratio

Adjusting the threshold and hysteresis coefficient according to the current touch sensitivity.
Use RM_TOUCH_SensitivityRatioGet(), RM_TOUCH_ThresholdAdjust(), and RM_TOUCH_DriftControl().

When changing the kind of the overlay panel, the touch sensitivity differs from the one QE tuned. Wanting to use the software as it is without re-tuning. If you use a thicker overlay than that at QE tuning, the touch sensitivity decreases, and a touch may not be determined because of the same

touch determination threshold. This function adjusts the touch determination threshold based on the ratio of the touch sensitivity after changing the overlay to the touch sensitivity at the QE tuning.

RM_TOUCH_SensitivityRatioGet() outputs the ratio of the current touch sensitivity assuming that the touch sensitivity at the QE setting is 100%.
The following figure shows the case where an overlay panel is thinner and the touch sensitivity increases.

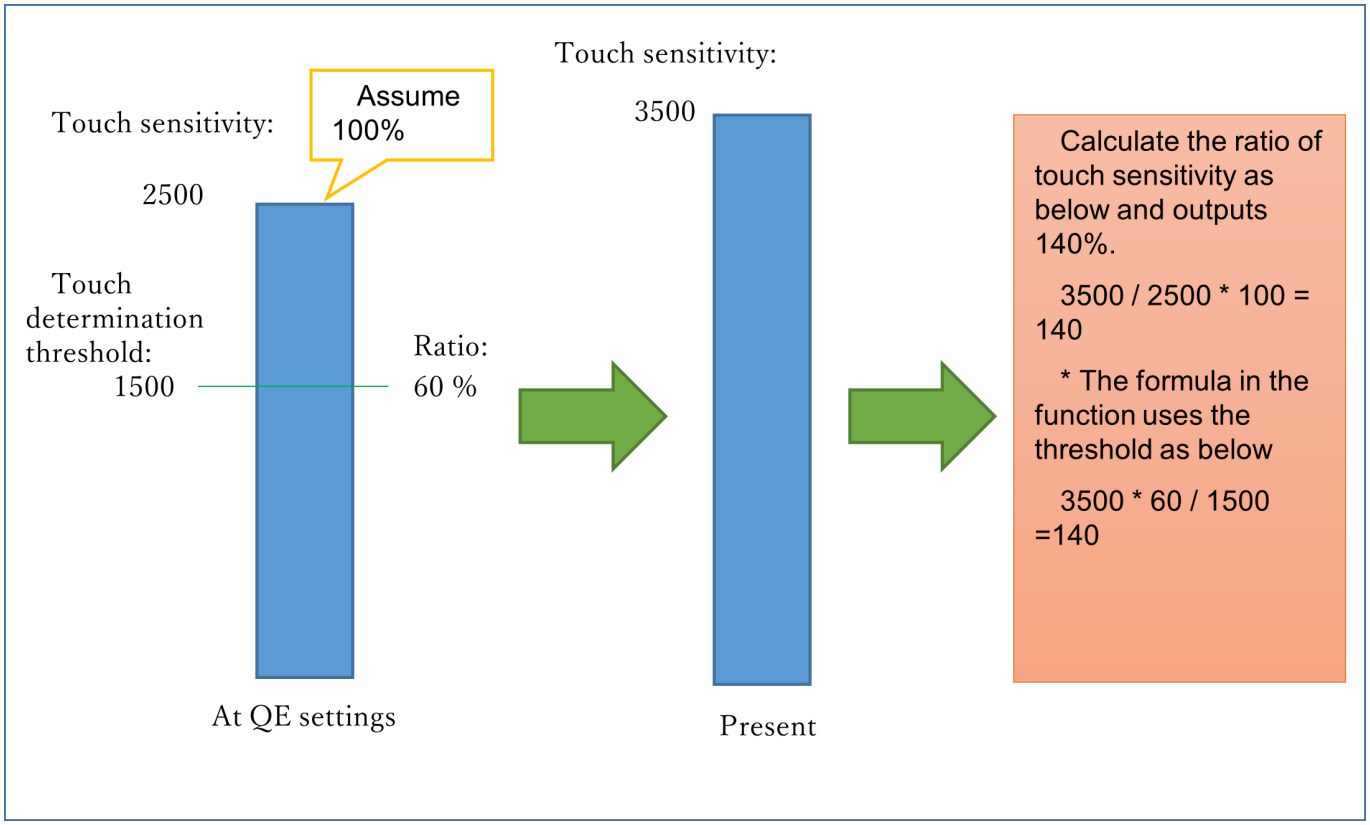

Figure 215: Example of increase touch sensitivity for thin overlay panels

Following figure shows the case where an overlay panel is thicker and the touch sensitivity decreases.

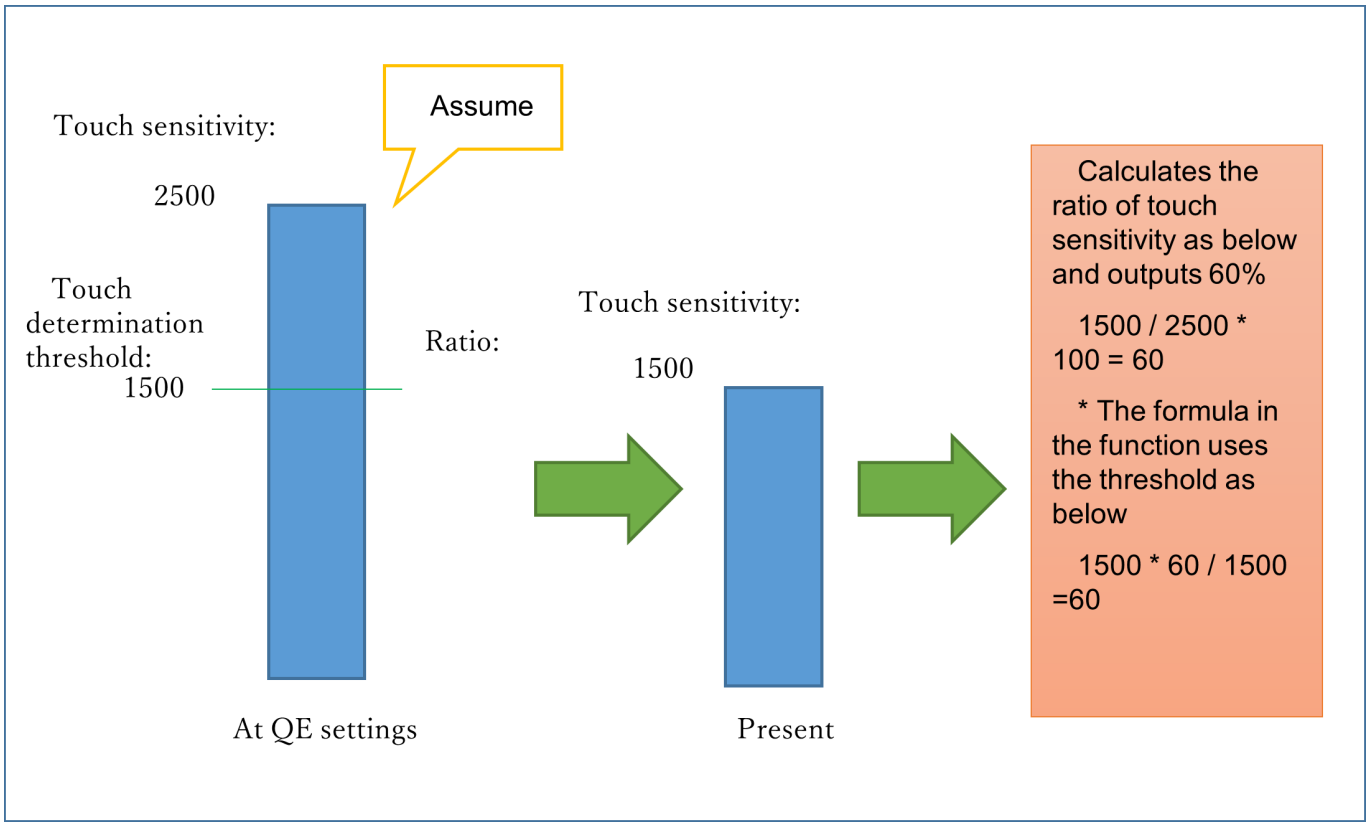

Figure 216: Example of decrease touch sensitivity for thicker overlay panels

RM_TOUCH_ThresholdAdjust() sets the new touch determination threshold and the hysteresis value by using the touch sensitivity ratio obtained with RM_TOUCH_SensitivityRatioGet() as arguments.

Example of calculation 1:
The touch sensitivity ratio is 140%, and the threshold set by QE is 1500.
Threshold = 140 * 1500 / 100 = 2100

*p_touch_sensitivity_ratio = 140,
old_threshold_ratio = 60,
new_threshold_ratio = 60,
new_hysteresis_ratio = 5

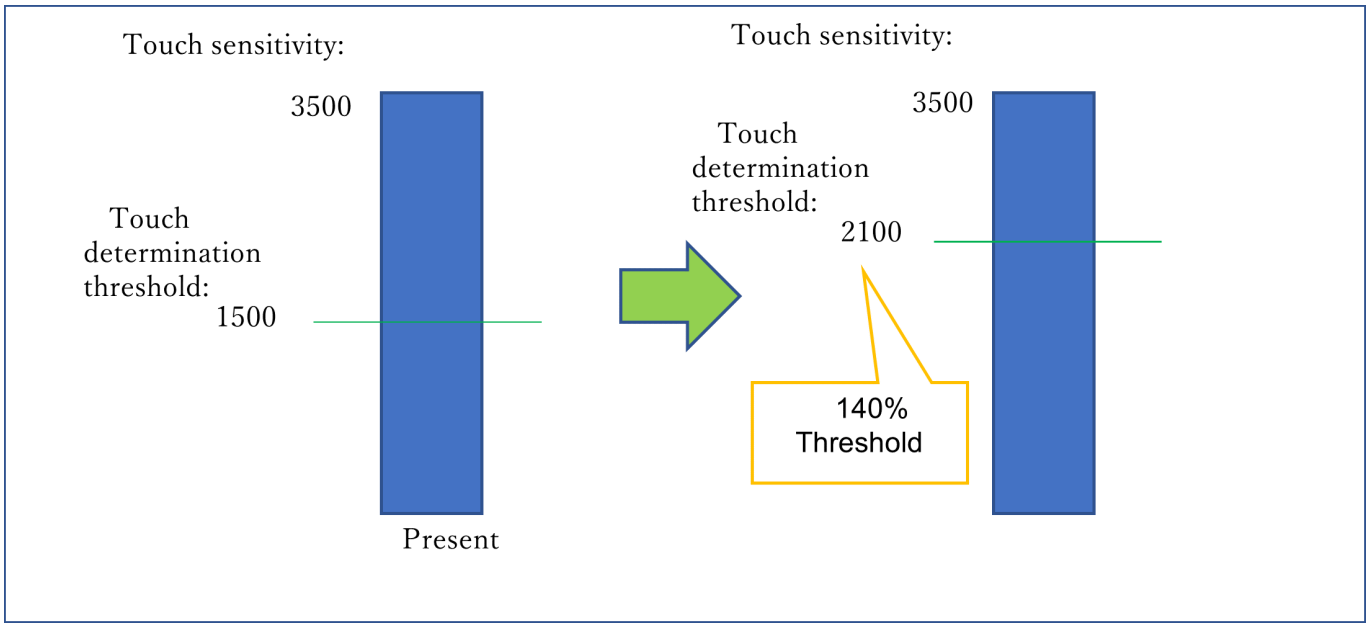

Figure 217: Example of calculation 1

Example of calculation 2:
The touch sensitivity ratio is 60%, and the threshold set by QE is 1500.
Threshold = 60 * 1500 / 100 = 900

*p_touch_sensitivity_ratio = 60,
old_threshold_ratio = 60,
new_threshold_ratio = 60,
new_hysteresis_ratio = 5

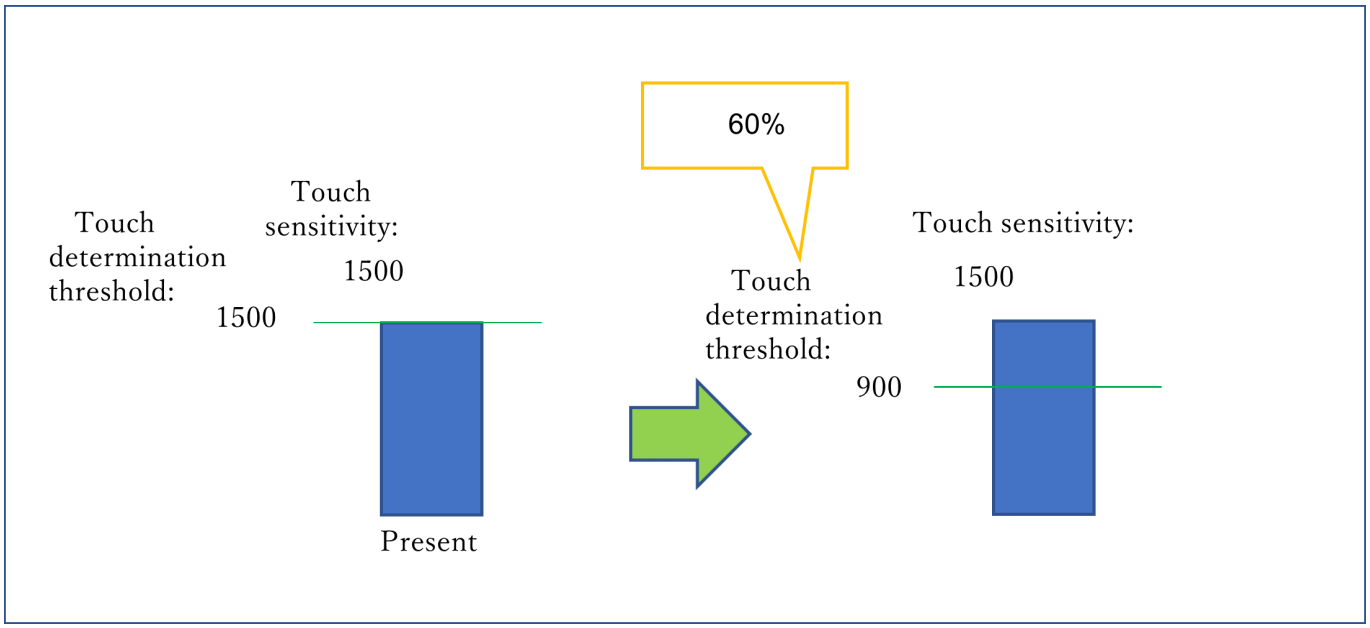

Figure 218: Example of calculation 2

RM_TOUCH_DriftContorol() set the second argument to 0 to stop the drift correction function.

When calculating the ratio of the touch change amount using RM_TOUCH_SensitivityRatioGet(), the touch change amount decreases due to the thick overlay, and the threshold value is not exceeded even if touched. Prevents the reference value from drifting.

Example of the application for adjustment using data flash without re-tuning or software rewriting

Enable UART communication to PC and 'tuning mode'. In tuning mode, the MCU transmits the ratio of the touch sensitivity in the touch state to the PC in real time. A user sends a command to decide the ratio while monitoring on the PC. The MCU stores the received ratio in the data flash. Make sure that the ratio stored in the data flash is read at the software activation, and the touch determination threshold is adjusted based on this stored value.

Pad

Configure a pad with multiple terminals physically arranged in cross.
The current position is Calculated from the measured values of the CTSU mutual scanning in the configuration.
Use RM_TOUCH_PadDataGet().
Pad is subject so some limitations:

	Pad
Electrode type	CFC mutual capacitance only
Number of electrodes	RX(TS-CFC)3+, TX(Any TS)3+
Touch position output range	rx_coodinate:(0 ~ rx_pixel), tx_coodinate:(0 ~ tx_pixsel)
Default value (no touch)	rx_coodinate:0xFFFF, tx_coodinate:0xFFFF
Pixel range	rx_pixel:(1 ~ 65535), tx_pixsel:(1 ~ 65535)

Pitch for each terminal can be set with QE. Pitch's default value is 64.
The relationship between pixel and pitch : Pixel = Pitch × number of TS - 1

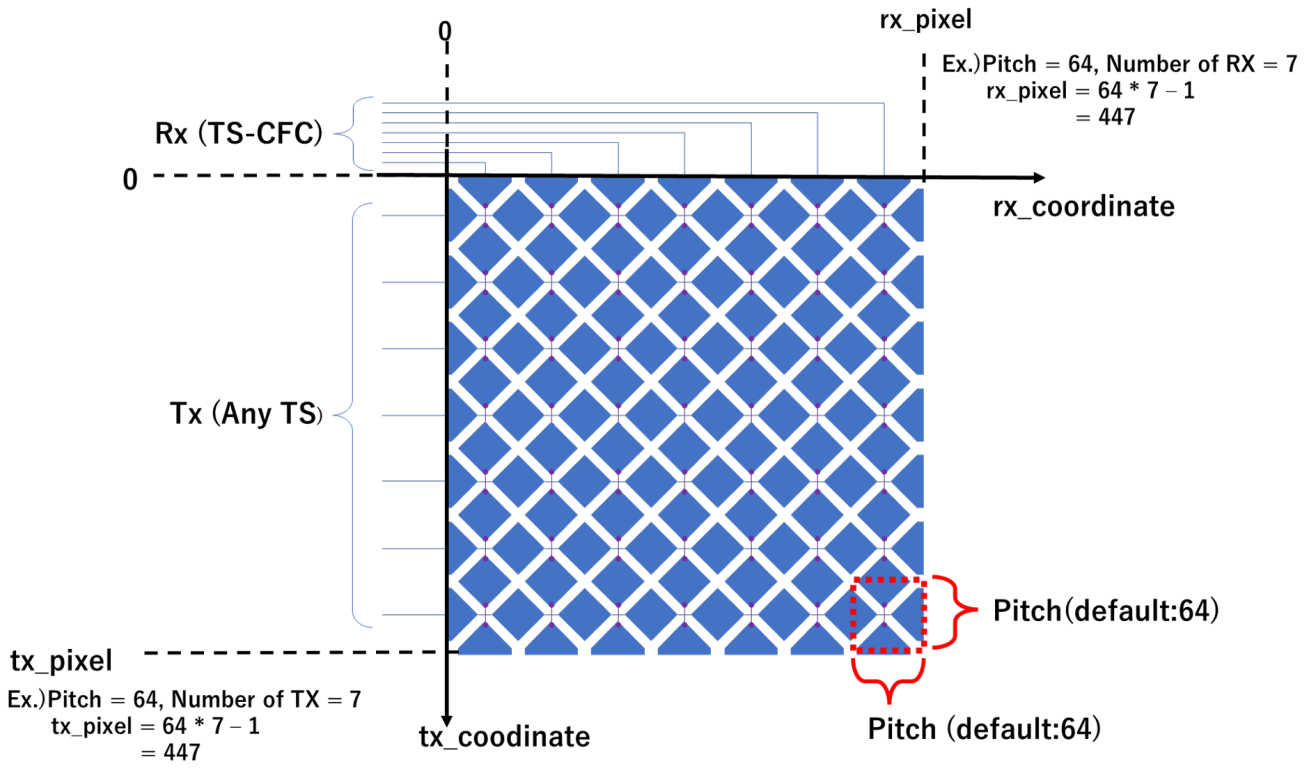

Figure 219: Example of Pad

TrustZone Support

In r_ctsu and rm_touch module, Non-Secure Callable Guard Functions are only generated from QE for Capacitive Touch. QE can be used for tuning in secure or flat project, but not in non-secure project. If you want to use in non-secure project, copy the output file from secure or flat project. Refer to QE Help for more information.

Examples

Basic Example

This is a basic example of minimal use of the TOUCH in an application.

```
void touch_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
    err = RM_TOUCH_Open(&g_touch_ctrl, &g_touch_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 while (true)
    {
 RM_TOUCH_ScanStart(&g_touch_ctrl);
```

```
 while (0 == g_flag)
      {
 /* Wait scan end callback */
       }
       g_flag = 0;
       err = RM_TOUCH_DataGet(&g_touch_ctrl, &button, slider, wheel);
 if (FSP_SUCCESS == err)
      {
 /* Application specific data processing. */
       }
    }
}
```

Multi Mode Example

This is a optional example of using both Self-capacitance and Mutual-capacitance. Refer to the Multi Mode Example in CTSU usage notes.

```
void touch_optional_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
    err = RM_TOUCH_Open(&g_touch_ctrl, &g_touch_cfg);
    assert(FSP_SUCCESS == err);
    err = RM_TOUCH_Open(&g_touch_ctrl_mutual, &g_touch_cfg_mutual);
    assert(FSP_SUCCESS == err);
 while (true)
    {
 RM_TOUCH_ScanStart(&g_touch_ctrl);
 while (0 == g_flag)
      {
 /* Wait scan end callback */
       }
       g_flag = 0;
 RM_TOUCH_ScanStart(&g_touch_ctrl_mutual);
 while (0 == g_flag)
```

```
     {
/* Wait scan end callback */
      }
      g_flag = 0;
      err = RM_TOUCH_DataGet(&g_touch_ctrl, &button, slider, wheel);
if (FSP_SUCCESS == err)
     {
/* Application specific data processing. */
      }
      err = RM_TOUCH_DataGet(&g_touch_ctrl_mutual, &button, slider, wheel);
if (FSP_SUCCESS == err)
     {
/* Application specific data processing. */
      }
   }
}
```

uint16_t *	p_position	Calculated Position data. g_touch_wheel_position[] is set by Open API.

uint16_t *	p_threshold	Copy from config by Open API. g_touch_wheel_threshold[] is set by Open API.

◆ touch_pad_info_t

struct touch_pad_info_t		
Information of pad		
Data Fields		
uint16_t *	p_rx_coordinate	RX coordinate.
uint16_t *	p_tx_coordinate	TX coordinate.
uint16_t *	p_num_touch	number of touch
uint16_t *	p_threshold	Coordinate calculation threshold value.
uint16_t *	p_base_buf	ScanData Base Value Buffer.
uint16_t *	p_rx_pixel	X coordinate resolution.
uint16_t *	p_tx_pixel	Y coordinate resolution.
uint8_t *	p_max_touch	Maximum number of touch judgments used by the pad.
int32_t *	p_drift_buf	Drift reference value. g_touch_button_drift_buf[] is set by Open API.
uint16_t *	p_drift_count	Drift counter. g_touch_button_drift_count[] is set by Open API.
uint8_t	num_drift	Copy from config by Open API.

◆ touch_instance_ctrl_t

struct touch_instance_ctrl_t		
TOUCH private control block. DO NOT MODIFY. Initialization occurs when RM_TOUCH_Open() is called.		
Data Fields		
uint32_t	open	Whether or not driver is open.
touch_button_info_t	binfo	Information of button.
touch_slider_info_t	sinfo	Information of slider.
touch_wheel_info_t	winfo	Information of wheel.
bool	serial_tuning_enable	Flag of serial tuning status.
touch_pad_info_t	pinfo	Information of pad.
touch_cfg_t const *	p_touch_cfg	Pointer to initial configurations.
ctsu_instance_t const *	p_ctsu_instance	Pointer to CTSU instance.

Function Documentation

◆ RM_TOUCH_Open()

fsp_err_t RM_TOUCH_Open (touch_ctrl_t *const *p_ctrl*, touch_cfg_t const *const *p_cfg*)

Opens and configures the TOUCH Middle module. Implements touch_api_t::open.

Example:

```
err = RM_TOUCH_Open(&g_touch_ctrl, &g_touch_cfg);
```

Return values

FSP_SUCCESS	TOUCH successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Configuration parameter error.

◆ RM_TOUCH_ScanStart()

fsp_err_t RM_TOUCH_ScanStart (touch_ctrl_t *const *p_ctrl*)

This function should be called each time a periodic timer expires. If initial offset tuning is enabled, The first several calls are used to tuning for the sensors. Before starting the next scan, first get the data with RM_TOUCH_DataGet(). If a different control block scan should be run, check the scan is complete before executing. Implements touch_api_t::scanStart.

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_CTSU_SCANNING	Scanning this instance or other.
FSP_ERR_CTSU_NOT_GET_DATA	The previous data has not been retrieved by DataGet.

◆ RM_TOUCH_DataGet()

fsp_err_t RM_TOUCH_DataGet (touch_ctrl_t *const *p_ctrl*, uint64_t * *p_button_status*, uint16_t * *p_slider_position*, uint16_t * *p_wheel_position*)

Gets the 64-bit mask indicating which buttons are pressed. Also, this function gets the current position of where slider or wheel is being pressed. If initial offset tuning is enabled, The first several calls are used to tuning for the sensors. Implements touch_api_t::dataGet.

Return values

FSP_SUCCESS	Successfully data decoded.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_CTSU_SCANNING	Scanning this instance.
FSP_ERR_CTSU_INCOMPLETE_TUNING	Incomplete initial offset tuning.

◆ RM_TOUCH_PadDataGet()

fsp_err_t RM_TOUCH_PadDataGet (touch_ctrl_t *const *p_ctrl*, uint16_t * *p_pad_rx_coordinate*, uint16_t * *p_pad_tx_coordinate*, uint8_t * *p_pad_num_touch*)

This function gets the current position of pad is being pressed. Implements touch_api_t::padDataGet , g_touch_on_ctsu.

Return values

FSP_SUCCESS	Successfully data decoded.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_CTSU_SCANNING	Scanning this instance.

◆ RM_TOUCH_ScanStop()

fsp_err_t RM_TOUCH_ScanStop (touch_ctrl_t *const *p_ctrl*)

Scan stop specified TOUCH control block. Implements touch_api_t::scanStop.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_TOUCH_CallbackSet()

fsp_err_t RM_TOUCH_CallbackSet (touch_ctrl_t *const *p_api_ctrl*, void(*)(touch_callback_args_t *) *p_callback*, void const *const *p_context*, touch_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements touch_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.

◆ RM_TOUCH_Close()

fsp_err_t RM_TOUCH_Close (touch_ctrl_t *const *p_ctrl*)

Disables specified TOUCH control block. Implements touch_api_t::close.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_TOUCH_SensitivityRatioGet()

fsp_err_t RM_TOUCH_SensitivityRatioGet (touch_ctrl_t *const *p_ctrl*, touch_sensitivity_info_t * *p_touch_sensitivity_info*)

Get the touch sensitivity ratio. Implements touch_api_t::sensitivityRatioGet.

Return values

FSP_SUCCESS	Successfully touch sensitivity ratio got.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_CTSU_SCANNING	Scanning this instance.
FSP_ERR_CTSU_INCOMPLETE_TUNING	Incomplete initial offset tuning.

◆ RM_TOUCH_ThresholdAdjust()

fsp_err_t RM_TOUCH_ThresholdAdjust (touch_ctrl_t *const *p_ctrl*, touch_sensitivity_info_t * *p_touch_sensitivity_info*)
Adjust the touch judgment threshold. Implements touch_api_t::thresholdAdjust.

Return values

FSP_SUCCESS	Successfully touch judgment threshold was adjusted.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_TOUCH_DriftControl()

fsp_err_t RM_TOUCH_DriftControl (touch_ctrl_t *const *p_ctrl*, uint16_t *input_drift_freq*)
Control drift correction. Implements touch_api_t::driftControl.

Return values

FSP_SUCCESS	Successfully drift correction was controlled.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

4.2.122 USBX Porting Layer (rm_usbx_port)

Modules

Functions

Refer to USB (r_usb_basic) for the common API (r_usb_basic) to be called from the application.

Overview

This USB driver works by combining USBX and r_usb_basic module.

How to Configuration

- Using a class other than HMSC and OTG. The following describes how to configure USBX

using PCDC as an example.

1.Select [New Stack]->[Connectivity]->[Azure RTOS PCDC]

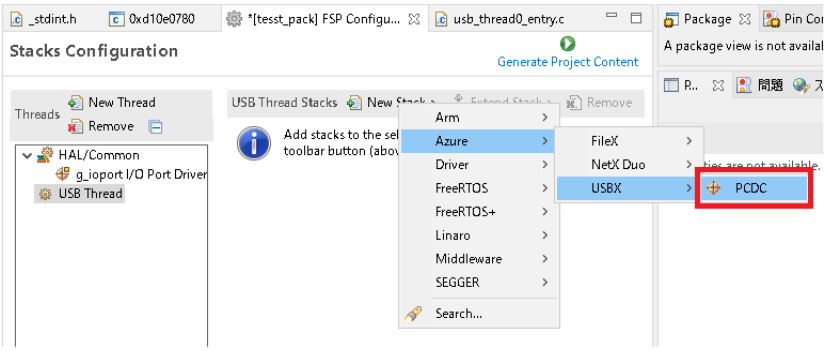

Figure 220: Select USB Device Class

2.Select the USB pipe to use.

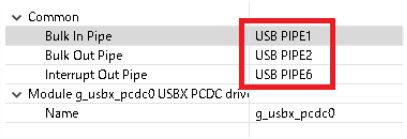

Figure 221: Select using USB Pipe

- Using HMSC. Since HMSC is used in a different way from other USBX modules, the usage is described below.
  1.Select [New Stack]->[Storage]->[Azure RTOS FileX on USBX]

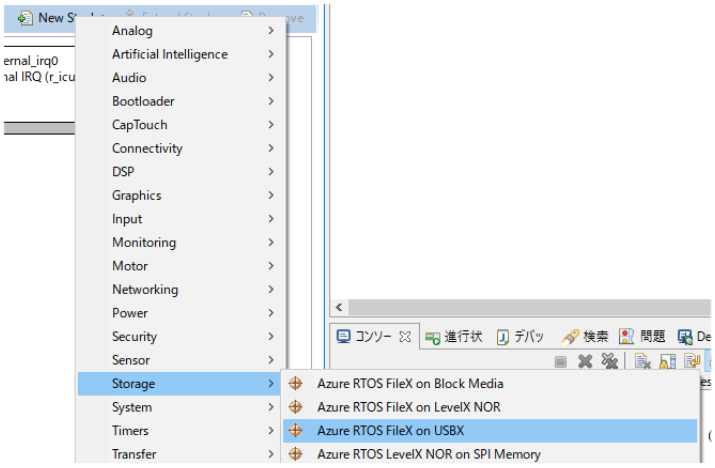

Figure 222: Select USB Device Class

2.The following is displayed when selecting Filex on USBX.

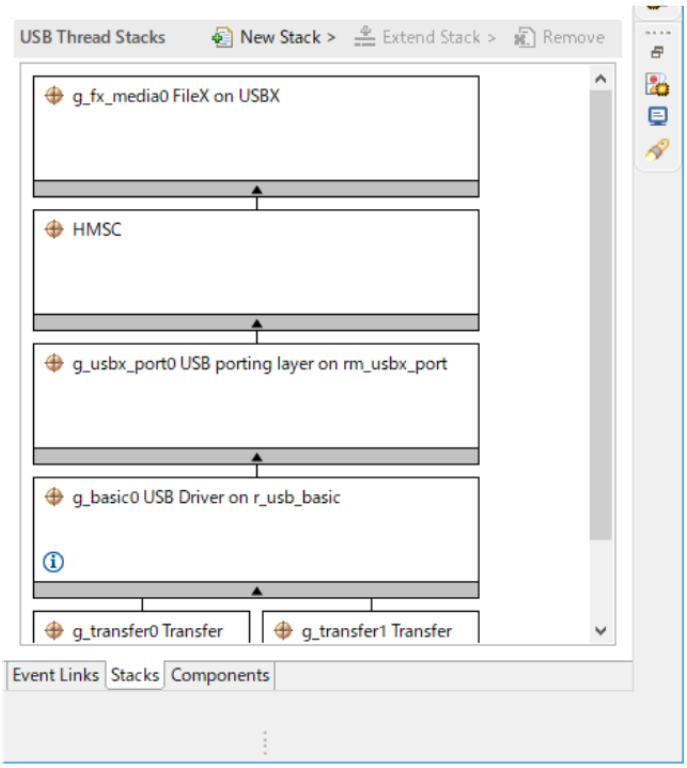

Figure 223: FileX on USBX Stack

- Using OTG. The following describes how to configure USBX using CDC as an example.

  1.Select [New Stack]->[Connectivity]->[Azure RTOS USBX OTG CDC]

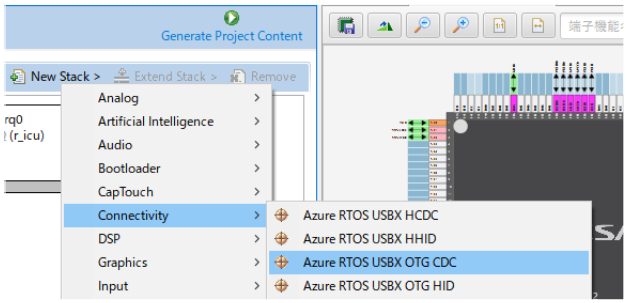

Figure 224: Select USB Device Class for OTG

2.Select [New Stack]->[Input] -> [External IRQ(r_icu)] (Be sure to select "r_icu" in OTG. The "r_icu" is used to detect the attaching of A cable.)

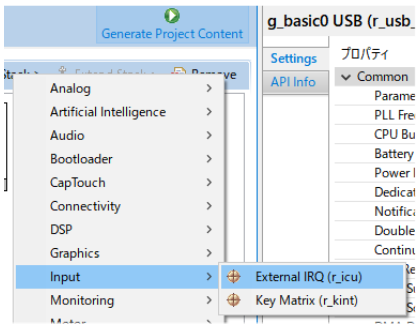

Figure 225: Select USB Device Class for OTG

3.Be sure to set the following to each item in "r_icu". (1). Specify "7" to "Channel" item. (2). Specify "Both Edges" to "Trigger" item. (3). Specify "Enabled" to "Digital Filtering" item. (4). Specify "usb_otg_irq_callback" to "Callback" item.

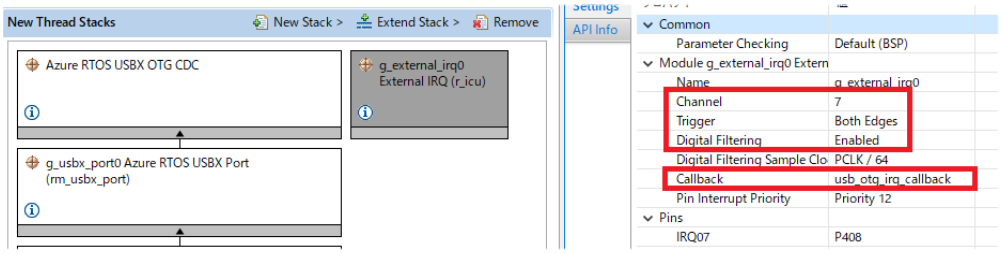

Figure 226: Select USB Device Class for OTG

1. Set "Full Speed" to "USB Speed" item in r_usb_basic.
2. Set "USB_IP0 Port" to "USB Module Number" item in r_usb_basic.
3. Set "Not Supported" to "USBFS Resume Priority" item in r_usb_basic.

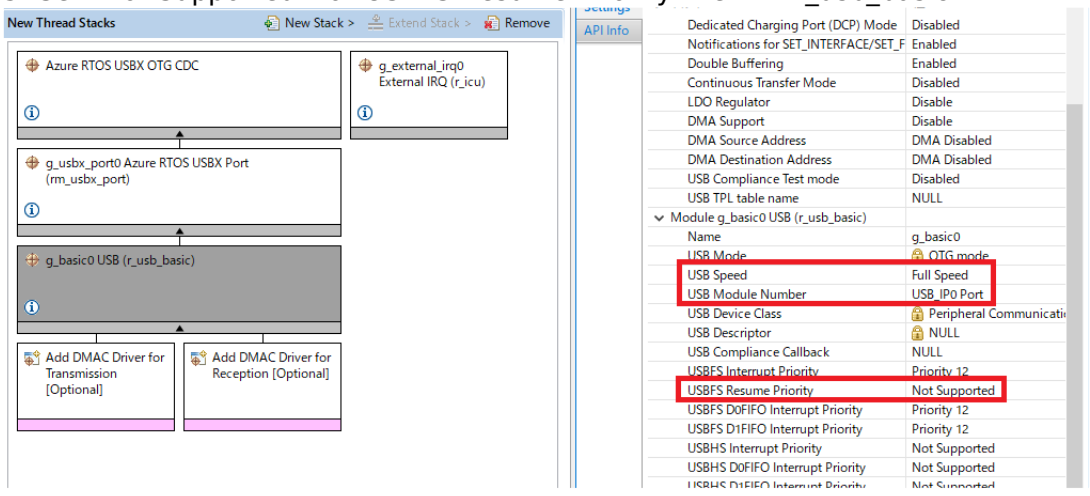

Figure 227: Select USB Device Class

1. Set the following pins for USB (r_usb_basic).

   (1). VBUSEN

(2). VBUS

(3). EXICEN

2. Set the following pins for IRQ (r_icu). (1). IRQ07

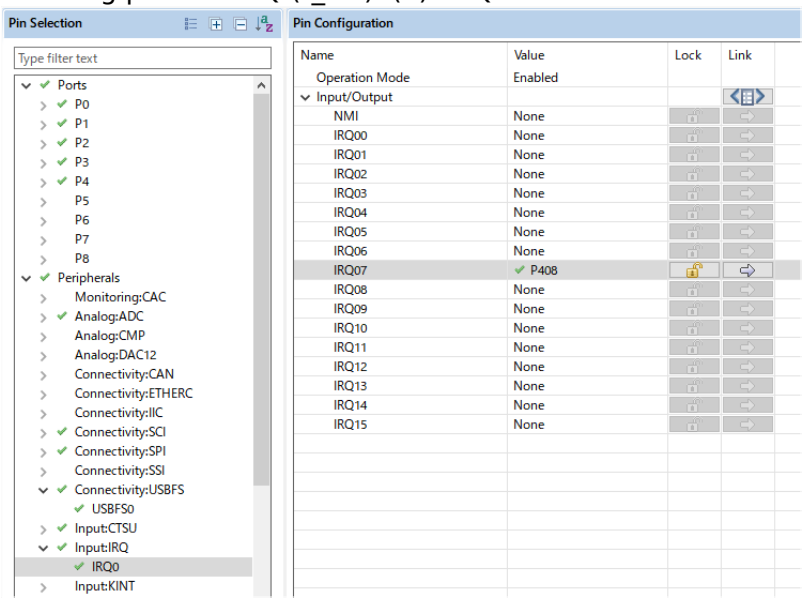

Figure 228: IRQ Pin Setting

Note

- The following are notes on using the ux_host_class_cdc_acm_read function or the ux_device_class_cdc_acm_read function.

1. Please specify a multiple of MaxPacketSize to the 3rd argument(requested_length). since If the value of the 3rd argument is not multiple of MaxPacketSize, all data sent by USB Host or USB Peripheral may not be received correctly.
2. Please specify start address of thr area allocated a size larger than 3rd argument(requested_length) to the 2nd argument(data_pointer or buffer).

- HMSC uses FileX. For more information on FileX, please refer to the following URL. https://docs.microsoft.com/en-us/azure/rtos/filex/
- OTG

1. Be able to set UX_OTG_HOST_REQUEST_FLAG in USB Peripheral mode or call ux_host_stack_role_swap() function in USB Host mode when data other than control transfer is not being transferred.
2. Register the callback function for the application using R_USB_OtgCallbackSet() function. This callback function is called when switching the operation mode(UX_OTG_MODE_IDLE/UX_OTG_MODE_SLAVE/UX_OTG_MODE_HOST).
3. Use R_USB_OtgSRP() function when doing SRP(Session Request Protocol). The R_USB_OtgSRP() function does not support VBUS pulsing.
4. After starting up MCU, USB is initialized as USB peripheral mode until connecting A cable.
5. When A cable is connected, USB module is initialized as USB Host mode.
6. Call R_ICU_ExternalIrqOpen() and R_ICU_ExternalIrqEnable() function in the application program since the IRQ interrupt is used to detect attaching or detaching of A cable.
7. Add the OTG descriptor in the configuration descriptor in each descriptor file.

Offset	Field	Size	Value	Description
0	bLength	1	5	Size of Descriptor
1	bDescriptor Type	1	9	OTG type = 9
2	bmAttribute	1	3 or 2	D1: HNP support D0: SRP support
3	bcdOTG	2	0x200	Binary Code Descimal

1. Please ignore the suspend or resume event occurs when attaching or detaching the USB cable.

Limitations

1.Please call the initialization function in the application program. Please be sure to call R_USB_Open() function after calling the following functions.

- Peripheral
  - PCDC / PHID / PAUD / OTG
    - ux_system_initialize
    - ux_device_stack_initialize
    - ux_device_stack_class_register
  - PMSC
    - ux_system_initialize
    - ux_device_stack_initialize
- Host
  - HCDC / HHID / OTG
    - ux_system_initialize
    - ux_host_stack_initialize
  - HMSC
    - ux_system_initialize
    - ux_host_stack_initialize
    - fx_system_initialize

2.Set the value for 1000 Ticks per second in the "Timer Ticks Per Second" item.

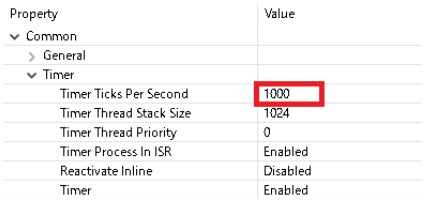

Figure 229: Specify value of Timer Ticks Per Second

3.Set the Thread priority to a value of 21.

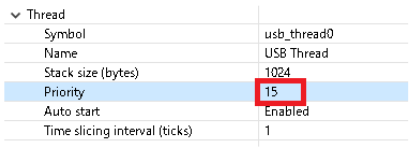

Figure 230: Specify value of Thread priority

4.When using the following functions, call the following functions in the following order after calling the R_USB_Close function. NOTE : Do not call R_USB_Close function in Peripheral Audio Class.

- Peripheral
  - PCDC / PHID
    - _ux_device_stack_class_unregister
    - _ux_device_stack_uninitialize
  - PMSC
    - _ux_device_stack_uninitialize
- Host
  - _ux_host_stack_uninitialize

5.The USBX HID class does not support OUT transfer.

6.When using USBX HHID, please use Wired device.

7.This module does not support the MCU(RA4M1 and RA2A1) since the RAM size is small.

8.The OTG for High-speed is not supported.

9.The OTG does not support the DMA transfer.

Descriptor

Templates for USBX descriptors can be found in ra/fsp/src/rm_usbx_port folder. Also, please be sure to use your vendor ID.
Change the descriptor.c.template file for each class as follows if High-speed mode is used.

- rm_usbx_pcdc_descriptor.c.template
  1. Comment on lines 108 and 243.
  2. Delete the "//" on lines 109 and 242.
- rm_usbx_pmsc_descriptor.c.template
  1. Comment on lines 78 and 153.
  2. Delete the "//" on lines 79 and 152.
- rm_usbx_paud_descriptor.c.template
  1. Comment on lines 167 and 485.
  2. Delete the "//" on lines 168 and 486.

There are two types of templates for PHID descriptor.
Keyboard templates should be referred to rm_usbx_phid_descriptor_keyboard.c.template.
Mouse templates should be referred to rm_usbx_phid_descriptor_mouse.c.template.

Examples

USBX PCDC Example

PCDC loopback example is as follows.

```
 #define VALUE_105 (105)
 #define VALUE_2 (2)
 #define VALUE_103 (103)

```

USBX HCDC Example

The main functions of the HCDC loopback example are as follows:

1. Virtual UART control settings are configured by transmitting the class request SET_LINE_CODING to the CDC device.
2. Sends receive (Bulk In transfer) requests to a CDC peripheral device and receives data.
3. Loops received data back to the peripheral by means of Bulk Out transfers.

The main loop performs loopback processing in which data received from a CDC peripheral device is transmitted unaltered back to the peripheral.

```
 #define VALUE_100 (100)
UINT ux_host_usr_event_notification (ULONG event, UX_HOST_CLASS * host_class, VOID *
instance)

Detailed Description

Virtual EEPROM on RA MCUs. This module implements the Virtual EEPROM Interface.

Overview

This VEE module emulates basic EEPROM capabilities. Support is provided for reading and writing both common records and reference data (originally programmed during product assembly or test). A count of the number of segments erased throughout the lifetime of the application is maintained and can be accessed at any time. Wear leveling is handled automatically by the driver.

Features

- Writing and reading user defined records of any length to data flash.
- Wear leveling is handled automatically.
- Reference data such as calibration data programmed at assembly or test time is preserved.
- Reference data can be updated at run time.
- Fault resilient design.

Data Flash Segmentation

Wear leveling is handled by changing the location in the data flash where a record is stored every time that it is updated. This change in physical location of the record is transparent to the user. Any

time an update for a specific record ID is written, it is written to the next unused location in data flash and its location is stored in RAM for quick look-up later. When required, only the most recent version of these records is automatically copied to the next blank segment in data flash. The data flash area is divided into a number of equal-size segments. There is only one segment active at a time. A segment contains two areas- the record area (which is the vast majority of the segment) and the reference data area which contains optional data typically programmed during assembly or final test. Records and updated reference data are written to this segment until one of the two areas becomes full. The record area must be able to hold at least one of every record ID possible and still have space left over for record updates.

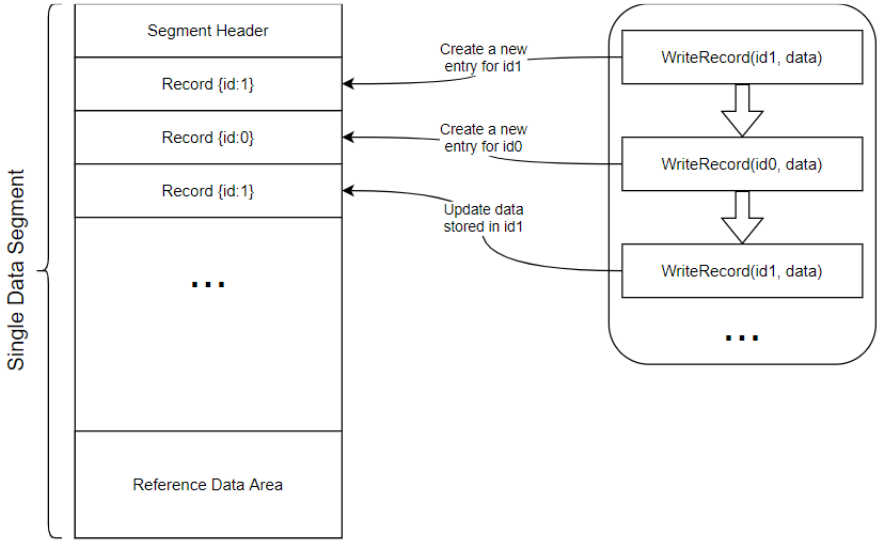

Figure 231: Segment Data Format

When a segment does not have sufficient space for additional records or updated reference data, a Refresh occurs. This process copies the most recent record for each ID as well as the latest version of reference data (if any) to the next segment. The very first time VEE runs on an MCU, it marks the last segment as active whether there is reference data configured or not. The end of VEE data flash area is used to provide an easily identified physical flash address that can be used while programming reference data without requiring Virtual EEPROM middleware.

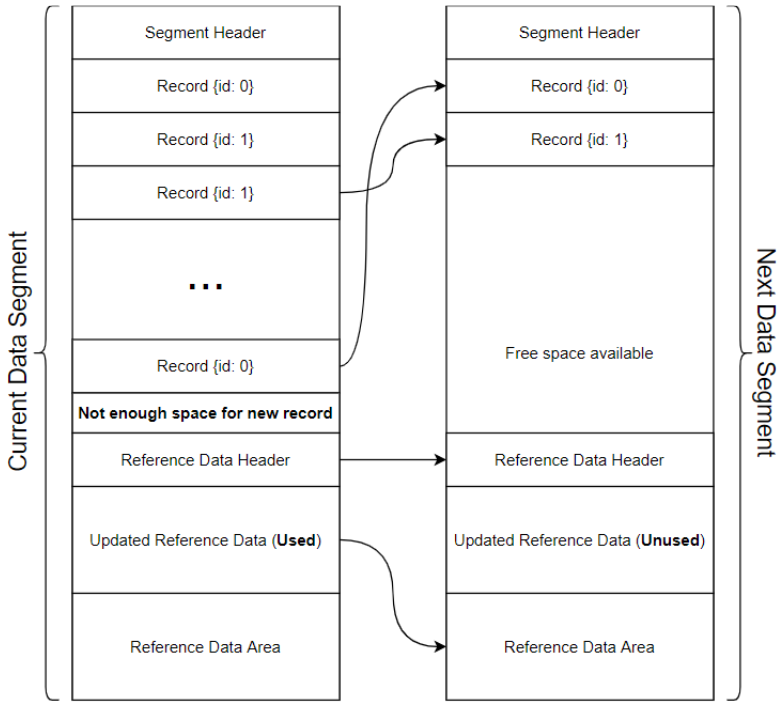

Figure 232: Refresh Operation

Record Format

Each record begins with a header that contains the record size, followed by the data, and the trailer. The trailer contains a validation code which is used for internal purposes only and is not a 16-bit CRC or ECC value. If that level of error checking is desired, the user should include that in the record data passed to the driver. Padding is added between the end of user data and the trailer to ensure the trailer is aligned properly.

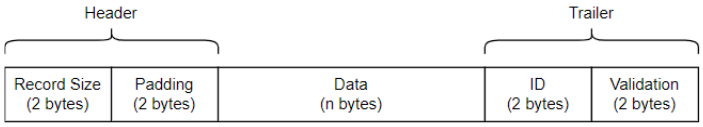

Figure 233: Record Format

Reference Data Area

VEE can be configured for the presence of reference data. The original programmed reference data must be located at the end of the VEE data flash area. An area of equal size is reserved below this in case updated reference data becomes available later. Below that is a header which indicates whether the update area has been written to.

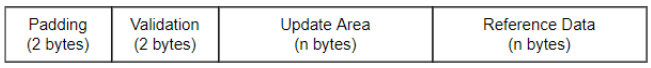

Figure 234: Reference Data Area Format

Just as with records, the validation code is used for internal purposes only and is not a 16-bit CRC or

ECC value. If that level of error checking is desired, the user should include that in the updated reference data passed to the driver.

Fault Tolerance

The Virtual EEPROM has a fault tolerant design. If for any reason an operation fails before it is completed the next time the module is opened a refresh will occur. Any corrupted data will be discarded.

Configuration

Build Time Configurations for rm_vee_flash

The following build time configurations are defined in fsp_cfg/rm_vee_flash_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Reference Data Support	• Enabled • Disabled	Disabled	Support writing reference data to the end of the segment.
Refresh Buffer Size	Value must be an integer greater than 0 and a multiple of 4 bytes.	32	The size of the internal buffer used to copying data from one flash segment to another during a refresh operation. This is required because data flash to data flash transfers are not supported by the hardware.

Configurations for Storage > Virtual EEPROM on Flash (rm_vee_flash)

This module can be added to the Stacks tab via New Stack > Storage > Virtual EEPROM on Flash (rm_vee_flash). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_vee0	Module name.
Record Max ID	Value must be an integer.	16	Set this value to the highest record ID in use.
Number of Segments	Value must be an integer.	2	Set value to number of segments desired in data flash (minimum 2). The fewer the

			segments, the fewer refreshes occur, but the longer refreshes take to complete (erase time).
Start Address	Manual Entry	BSP_FEATURE_FLASH_DATA_FLASH_START	Start address of the flash area used by Virtual EEPROM.
Total Size	Manual Entry	BSP_DATA_FLASH_SIZE_BYTES	The total size (In bytes) of the flash area used by Virtual EEPROM.
Reference Data Size	Value must be an integer.	0	The size of the reference area (In bytes) used by Virtual EEPROM.
Callback	Name must be a valid C symbol	vee_callback	A user callback function can be provided. If this callback function is provided, it will be called from the flash interrupt service routine (ISR).

Clock Configuration

There is no clock configuration for the RM_VEE_FLASH module.

Pin Configuration

This module does not use I/O pins.

Usage Notes

A refresh buffer is required to copy data between segments. Data flash cannot be simultaneously read from and written to. Data will be temporarily copied into RAM during refresh operations.

Examples

Basic Example

This is a basic example of minimal use of the RM_VEE_FLASH module in an application.

```
volatile bool callback_called = false;
/* Record ID to use for storing pressure data. */
#define ID_PRESSURE (0U)
/* Example data structure. */
typedef struct st_pressure
```

```
{
    uint32_t timestamp;
    uint16_t low;
    uint16_t average;
    uint16_t high;
} pressure_t;
void rm_vee_example ()
{
 /* Open the Virtual EEPROM Module. */
 fsp_err_t err = RM_VEE_FLASH_Open(&g_vee_ctrl, &g_vee_cfg);
 if (FSP_SUCCESS != err)
    {
       error_handler();
    }
 /* Read pressure data from external sensor. */
    pressure_t pressure_data;
    get_pressure_data(&pressure_data);
 /* Write the pressure data to a Virtual EEPROM Record. */
    err = RM_VEE_FLASH_RecordWrite(&g_vee_ctrl, ID_PRESSURE, (uint8_t *)
&pressure_data, sizeof(pressure_t));
 if (FSP_SUCCESS != err)
    {
       error_handler();
    }
 /* Wait for the Virtual EEPROM callback to indicate it finished writing data. */
 while (false == callback_called)
    {
       ;
    }
 /* Get a pointer to the record that is stored in data flash. */
    uint32_t    length;
    pressure_t * p_pressure_data;
    err = RM_VEE_FLASH_RecordPtrGet(&g_vee_ctrl, ID_PRESSURE, (uint8_t **)
&p_pressure_data, &length);
```

```
 if (FSP_SUCCESS != err)
    {
       error_handler();
    }
 /* Close the Virtual EEPROM Module. */
    err = RM_VEE_FLASH_Close(&g_vee_ctrl);
 if (FSP_SUCCESS != err)
    {
       error_handler();
    }
}
void rm_vee_tests_callback (rm_vee_callback_args_t * p_args)
{
    callback_called = true;
 FSP_PARAMETER_NOT_USED(p_args);
}
```

Data Structures

struct	rm_vee_flash_cfg_t
struct	rm_vee_flash_instance_ctrl_t

Data Structure Documentation

◆ rm_vee_flash_cfg_t

struct rm_vee_flash_cfg_t		
User configuration structure, used in open function		
Data Fields		
flash_instance_t const *	p_flash	Pointer to a flash instance.

◆ rm_vee_flash_instance_ctrl_t

struct rm_vee_flash_instance_ctrl_t
Instance control block. This is private to the FSP and should not be used or modified by the application.

Function Documentation

◆ RM_VEE_FLASH_Open()

fsp_err_t RM_VEE_FLASH_Open (rm_vee_ctrl_t *const *p_api_ctrl*, rm_vee_cfg_t const *const *p_cfg*)

Open the RM_VEE_FLASH driver module

Implements rm_vee_api_t::open

Initializes the driver's internal structures and opens the Flash driver. The Flash driver must be closed prior to opening VEE. The error code FSP_SUCCESS_RECOVERY indicates that VEE detected corrupted data; most likely due to a power loss during a data flash write or erase. In these cases, an automatic internal Refresh is performed and the partially written data is lost.

Return values

FSP_SUCCESS	Successful. FSP_SUCCESS_RECOVERY changed to FSP_SUCCESS
FSP_ERR_ASSERTION	An input parameter is NULL.
FSP_ERR_ALREADY_OPEN	This function has already been called.
FSP_ERR_PE_FAILURE	This error indicates that a flash programming, erase, or blankcheck operation has failed in hardware.
FSP_ERR_TIMEOUT	Interrupts disabled outside of VEE
FSP_ERR_NOT_INITIALIZED	Corruption found. A refresh is required.
FSP_ERR_INVALID_ARGUMENT	The supplied configuration is invalid.

◆ RM_VEE_FLASH_RecordWrite()

fsp_err_t RM_VEE_FLASH_RecordWrite (rm_vee_ctrl_t *const *p_api_ctrl*, uint32_t const *rec_id*, uint8_t const *const *p_rec_data*, uint32_t const *num_bytes*)

Writes a record to data flash.

Implements rm_vee_api_t::recordWrite

This function writes num_bytes of data pointed to by p_rec_data to data flash. This function returns immediately after starting the flash write. BE SURE NOT TO MODIFY the data buffer contents until after the write completes. This includes exiting the calling function when the data buffer is a local variable (stack may be used by another function and corrupt the data buffer contents).

Return values

FSP_SUCCESS	Write started successfully.
FSP_ERR_NOT_OPEN	The module has not been opened.
FSP_ERR_ASSERTION	An input parameter is NULL.
FSP_ERR_INVALID_ARGUMENT	An argument contains an illegal value.
FSP_ERR_INVALID_MODE	The operation cannot be started in the current mode.
FSP_ERR_IN_USE	Last API call still executing.
FSP_ERR_PE_FAILURE	This error indicates that a flash programming, erase, or blankcheck operation has failed in hardware.
FSP_ERR_TIMEOUT	Flash write timed out (Should not be possible when flash bgo is used).
FSP_ERR_NOT_INITIALIZED	Corruption found. A refresh is required.

◆ RM_VEE_FLASH_RecordPtrGet()

fsp_err_t RM_VEE_FLASH_RecordPtrGet (rm_vee_ctrl_t *const *p_api_ctrl*, uint32_t const *rec_id*, uint8_t **const *pp_rec_data*, uint32_t *const *p_num_bytes*)

Gets a pointer to the most recent record data.

Implements rm_vee_api_t::recordPtrGet

This function sets the argument pointer to the most recent version of the record data in flash. Flash cannot be accessed for reading and writing at the same time. Therefore, reading the data at p_ref_data must be completed prior to initiating any type of Flash write.

Return values

FSP_SUCCESS	Successful.
FSP_ERR_NOT_OPEN	The module has not been opened.
FSP_ERR_IN_USE	Last API call still executing.
FSP_ERR_ASSERTION	p_ref_data is NULL.
FSP_ERR_INVALID_ARGUMENT	Record data not configured.
FSP_ERR_NOT_FOUND	The record associated with the requested ID could not be found.

◆ RM_VEE_FLASH_RefDataWrite()

fsp_err_t RM_VEE_FLASH_RefDataWrite (rm_vee_ctrl_t *const *p_api_ctrl*, uint8_t const *const *p_ref_data*)

Writes new Reference data to the reference update area.

Implements rm_vee_api_t::refDataWrite

This function writes VEE_CFG_REF_DATA_SIZE bytes pointed to by p_ref_data to data flash. This function returns immediately after starting the flash write. BE SURE NOT TO MODIFY the data buffer contents until after the write completes.

Return values

FSP_SUCCESS	Write started successfully.
FSP_ERR_NOT_OPEN	The module has not been opened.
FSP_ERR_IN_USE	Last API call still executing.
FSP_ERR_ASSERTION	An input parameter is NULL.
FSP_ERR_INVALID_MODE	The operation cannot be started in the current mode.
FSP_ERR_PE_FAILURE	This error indicates that a flash programming, erase, or blankcheck operation has failed in hardware.
FSP_ERR_TIMEOUT	Flash write timed out (Should not be possible when flash bgo is used).
FSP_ERR_UNSUPPORTED	Reference data is not supported in the current configuration.
FSP_ERR_NOT_INITIALIZED	Corruption found. A refresh is required.

◆ RM_VEE_FLASH_RefDataPtrGet()

fsp_err_t RM_VEE_FLASH_RefDataPtrGet (rm_vee_ctrl_t *const *p_api_ctrl*, uint8_t **const *pp_ref_data*)

Gets a pointer to the most recent reference data.

Implements rm_vee_api_t::recordPtrGet

This function sets the argument pointer to the most recent version of the reference data in flash. Flash cannot be accessed for reading and writing at the same time.

Return values

FSP_SUCCESS	Successful.
FSP_ERR_NOT_OPEN	The module has not been opened.
FSP_ERR_IN_USE	Last API call still executing.
FSP_ERR_ASSERTION	An input parameter is NULL.
FSP_ERR_UNSUPPORTED	Reference data is not supported in the current configuration.
FSP_ERR_NOT_FOUND	No reference data was found.

◆ RM_VEE_FLASH_StatusGet()

fsp_err_t RM_VEE_FLASH_StatusGet (rm_vee_ctrl_t *const *p_api_ctrl*, rm_vee_status_t *const *p_status*)

Get the current status of the driver.

Implements rm_vee_api_t::statusGet

This command is typically used to verify that the last Write or Refresh command has completed before attempting to perform another API call.

Return values

FSP_SUCCESS	Successful.
FSP_ERR_NOT_OPEN	The module has not been opened.
FSP_ERR_ASSERTION	An input parameter is NULL.

◆ RM_VEE_FLASH_Refresh()

fsp_err_t RM_VEE_FLASH_Refresh (rm_vee_ctrl_t *const *p_api_ctrl*)

Manually start a refresh operation

Implements rm_vee_api_t::refresh

This function is used to start a segment Refresh at any time. The Refresh process by default occurs automatically when no more record or reference data space is available and a Write is requested. However, the app may desire to force a refresh when it knows it is running low on space and large amounts of data are about to be recorded.

Return values

FSP_SUCCESS	Successful.
FSP_ERR_NOT_OPEN	The module has not been opened.
FSP_ERR_ASSERTION	An input parameter is NULL.
FSP_ERR_IN_USE	Last API call still executing.
FSP_ERR_PE_FAILURE	This error indicates that a flash programming, erase, or blankcheck operation has failed in hardware.
FSP_ERR_INVALID_MODE	The operation cannot be started in the current mode.
FSP_ERR_TIMEOUT	Flash write timed out (Should not be possible when flash bgo is used).
FSP_ERR_NOT_INITIALIZED	Corruption found. A refresh is required.

◆ RM_VEE_FLASH_Format()

fsp_err_t RM_VEE_FLASH_Format (rm_vee_ctrl_t *const *p_api_ctrl*, uint8_t const *const *p_ref_data*)

Start a manual format operation.

Implements rm_vee_api_t::format

Return values

FSP_SUCCESS	Successful.
FSP_ERR_NOT_OPEN	The module has not been opened.
FSP_ERR_IN_USE	Last API call still executing.
FSP_ERR_PE_FAILURE	This error indicates that a flash programming, erase, or blankcheck operation has failed
FSP_ERR_ASSERTION	An input parameter is NULL.
FSP_ERR_TIMEOUT	Flash write timed out (Should not be possible when flash bgo is used).
FSP_ERR_NOT_INITIALIZED	Corruption found. A refresh is required.

◆ RM_VEE_FLASH_CallbackSet()

fsp_err_t RM_VEE_FLASH_CallbackSet (rm_vee_ctrl_t *const *p_api_ctrl*, void(*)(rm_vee_callback_args_t *) *p_callback*, void const *const *p_context*, rm_vee_callback_args_t *const *p_callback_memory*)

Updates the user callback with the option to provide memory for the callback argument structure.

Implements rm_vee_api_t::callbackSet.

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

◆ **RM_VEE_FLASH_Close()**

fsp_err_t RM_VEE_FLASH_Close (rm_vee_ctrl_t *const *p_api_ctrl*)

Closes the Flash driver and VEE driver.

Implements rm_vee_api_t::close

Return values

FSP_SUCCESS	Successful.
FSP_ERR_NOT_OPEN	The module has not been opened.
FSP_ERR_ASSERTION	An input parameter is NULL.

4.2.124 AWS Device Provisioning

Modules

AWS Device Provisioning example software.

Overview

Terminology

The terminology defined below will be used in the following sections.

Term	Description
Service Provider	Entity that provides the cloud infrastructure and associated services, for example, AWS/Azure.
Device Manufacturer	Entity that provides the MCU, for example, Renesas.
OEM	Entity that uses the MCU to create a product.
Customer	End user of OEM product.

Device ID

For systems that intend to use Public Key Certificate (PKC), the Device ID is in the form of a key pair (RSA or ECC). A PKC comprises of a **public key**, metadata, and finally a signature over all that. This signature is generated by the entity that issues the certificate and is known as a CA (Certificate Authority). The most common format for a public certificate is the X.509 format which is typically PEM (base 64) encoded such that the certificate is human-readable. It can also be DER encoded which is binary encoding and thus not human readable. The **public key** portion of the Device ID is used for the Device Certificate.

Provisioning

Device Provisioning refers to the process by which a service provider links a certificate to a Device ID and thus a device. Depending on the provisioning model, an existing certificate from the device may be used or a new one will be issued at this stage. Provisioning (also referred to as Registration) occurs with respect to a particular service provider, for example, AWS or Azure. It is necessary that the certificate is issued by the service provider or a CA known to those providers. When a device is provisioned with AWS for example, the AWS IoT service associates the Device ID (and thus the device) with a specific certificate. The certificate will be programmed into the device and for all future transactions with AWS, the certificate will be used as the means of identifying the device. The public and private key are also stored on the MCU.

Provisioning Models

Provisioning services vary between service providers. There are essentially three general provisioning models.

1. Provisioning happens on the production line. This requires the provisioning Infrastructure to be present on the production line. This is the most secure model, but is expensive.
2. Devices are programmed with a shared credential that is linked into the code at build time and the provisioning occurs when a customer uses the device for the first time. The shared credential and a unique device serial number are used to uniquely identify the device during the provisioning process. So long as the product only has the shared credential, it will only operate with limited (as defined by certificate policy) functionality .Once the provisioning is done, then the device will be fully functional. This is the most common use case for consumer products where no sensitive information is being transmitted. AWS provides an example of this model.
3. Devices have no identity programmed in the factory; provisioning occurs through some other device like a smartphone which is already trusted by the service provider.

In all these cases, the Device Identity

1. Is unique to the device
2. Must have restricted access within the device
3. Can be used to issue more than one certificate and the certificates themselves have to be updatable in the field.

AWS uses the PKCS11 API to erase, store and retrieve certificates. These PKCS11 functions (Write, Read and Erase) are separated out into a Physical Abstraction Layer (PAL) which the OEM/Device Manufacturer is expected to implement for the type of memory that they intend to use. The internal rm_aws_pkcs11_pal module implements these requirements on RA MCU data flash.

AWS Provisioning Example

AWS provides an **example** implementation to support device provisioning. This implementation uses the PKCS11 API to store device credentials into the PKCS11 defined memory. The implementation (aws_dev_mode_key_provisioning.c) exposes two functions:

1. vDevModeKeyProvisioning()
2. vAlternateKeyProvisioning()

Both of these functions require that the device credentials be provided in PEM format. Using either of these example functions as is in production is not recommended; but vAlternateKeyProvisioning() provides more flexibility because of the ability to provide credentials as arguments.

Credentials can be created as follows:

- Create your own CA and use that to generate the device certificate. This CA will have to be registered with the service provider with which the product will be used, for example Register your CA with AWS.
- Use AWS to generate the device certificate.

Examples

Basic Example

This is a basic example of provisioning a device using the AWS demo implementation.

```

 /* Provision device with provided credentials. The provided credentials are written
to data flash.
  * In production, the credentials can be provided over a comms channel instead of
being linked into the image.
  * The same example provisioning function, vAlternateKeyProvisioning, can be used in
```

```
that case. */
    params.pucClientPrivateKey       = (uint8_t *) keyCLIENT_PRIVATE_KEY_PEM;
    params.pucClientCertificate      = (uint8_t *) keyCLIENT_CERTIFICATE_PEM;
    params.ulClientPrivateKeyLength = 1 + strlen((const char *)
params.pucClientPrivateKey);
    params.ulClientCertificateLength = 1 + strlen((const char *)
params.pucClientCertificate);
    params.pucJITPCertificate       = NULL;
    params.ulJITPCertificateLength   = 0;
    vAlternateKeyProvisioning(&params);
}
```

Limitations

The provisioning code is an example provided by AWS. It must be modified to meet product requirements.

4.2.125 AWS HTTPS

Modules

This module provides the AWS HTTPS integration documentation.

Overview

The AWS HTTPS core library can be used to send HTTP and HTTPS requests. The documentation for the library can be found at the following link: coreHTTP.

Features

- Secure and Non-secure HTTP requests
- Mutually authenticated connections

Configuration

Memory Usage

The AWS HTTPS library relies heavily on dynamic memory allocation for thread/task creation as well as other uses. It is recommended to tweak the thread stack configuration values based on usage. Noteable values are:

AWS IoT Common

- IoT Thread Default Stack Size
- IoT Network Receive Task Stack Size

FreeRTOS Thread

- General|Minimal Stack Size

FreeRTOS Plus TCP

- Stack size in words (not bytes)

Usage Notes

Limitations

- MbedTLS must be initialized and key provisioning must be done before starting a secure connection. Refer to AWS Secure Sockets.

Examples

HTTPS GET request

```
/* Certificate copied from https://www.amazontrust.com/repository/AmazonRootCA1.pem
*/
static const char g_server_certificate[] = "-----BEGIN CERTIFICATE-----\n" \

 /* The HTTPS request has completed. The result is stored in xResponse. */
}
```

4.2.126 AWS MQTT

Modules

This module provides the AWS MQTT integration documentation.

Overview

The AWS MQTT library can connect to either AWS or a third party MQTT broker such as Mosquitto. The documentation for the library can be found at the following link: coreMQTT.

Features

- MQTT connections over TLS to an AWS IoT Endpoint or Mosquitto server
- Unsecure MQTT connections to Mosquitto servers. This is not recommended for production and should only be done to a local server for testiing.

Configuration

Memory Usage

The AWS MQTT library relies heavily on dynamic memory allocation for thread/task creation as well as other uses. Depending on the configuration it may be required to provde as much as 110k heap. To decrease this it is recommended to tweak the thread stack configuration values based on usage. Noteable values are:

AWS IoT Common

- IoT Thread Default Stack Size
- IoT Network Receive Task Stack Size

FreeRTOS Thread

- General|Minimal Stack Size

FreeRTOS Plus TCP

- Stack size in words (not bytes)

Usage Notes

The AWS MQTT library utilizes a system taskpool to queue up messages. This system task pool must be created before calling into the MQTT library. iot_init.c has been provided for easy initialization of this taskpool via IotSdk_Init().

The AWS MQTT Demo has been provided to easily demonstrate MQTT functionality. An example of initializiing the system taskpool and running the MQTT demo has been provided below.

Limitations

- aws_clientcredential.h and aws_clientcredential_keys.h need to be added manually.
- The IoT Thread must have a higher priorty than the Network Receive Thread.
- MbedTLS must be initialized and key provisioning must be done before starting a secure connection. Refer to AWS Secure Sockets.

Examples

Non-secure connection to a Mosquitto server

```
#define IOT_LOG_STACK_SIZE (256)
const uint8_t g_ip_address[4] = {169, 254, 57, 49};
const uint8_t g_net_mask[4] = {255, 255, 0, 0};
const uint8_t g_gateway_address[4] = {169, 254, 57, 49};
const uint8_t g_dns_address[4] = {8, 8, 8, 8};
const uint8_t g_mac_address[6] = {0x66, 0x66, 0x66, 0x66, 0x66, 0x66};
void mqtt_non_secure_example ()
{
 /* Initialize IOT FreeRTOS Libraries */
    SYSTEM_Init();
 /* Initialize the crypto hardware acceleration. */
 mbedtls_platform_setup(NULL);
    xLoggingTaskInitialize(IOT_LOG_STACK_SIZE, 1, 10);
 /* Start up the network stack. */
    FreeRTOS_IPInit(g_ip_address, g_net_mask, g_gateway_address, g_dns_address,
g_mac_address);
 while (pdFALSE == FreeRTOS_IsNetworkUp())
    {
       vTaskDelay(1);
    }
 /* AWS MQTT APIs can now be called. Please refer to the documentation linked above.
*/
```

```
 /* If using the MQTT Wrapper IotSdk_Init() must be called prior to using MQTT. */
}
```

Secure connection to a Mosquitto server

Note

MbedTLS must be initialized and key provisioning must be done before starting a secure connection. Refer to AWS Secure Sockets.

```
#define keyCLIENT_CERTIFICATE_PEM \
  "-----BEGIN CERTIFICATE-----\n" \
  "example_certificate_formatting\n" \
  "-----END CERTIFICATE-----"
#define keyCLIENT_PRIVATE_KEY_PEM \
  "-----BEGIN RSA PRIVATE KEY-----\n" \
  "example_certificate_formatting\n" \
  "-----END RSA PRIVATE KEY-----"
void mqtt_secure_example ()
{
 /* Initialize IOT FreeRTOS Libraries */
    SYSTEM_Init();
 /* Initialize the crypto hardware acceleration. */
 mbedtls_platform_setup(NULL);
    xLoggingTaskInitialize(IOT_LOG_STACK_SIZE, 1, 10);
    ProvisioningParams_t params;
 /* Write the keys into a secure region in data flash. */
    params.pucClientPrivateKey       = (uint8_t *) keyCLIENT_PRIVATE_KEY_PEM;
    params.pucClientCertificate      = (uint8_t *) keyCLIENT_CERTIFICATE_PEM;
    params.ulClientPrivateKeyLength = 1 + strlen((const char *)
params.pucClientPrivateKey);
    params.ulClientCertificateLength = 1 + strlen((const char *)
params.pucClientCertificate);
    params.pucJITPCertificate       = NULL;
    params.ulJITPCertificateLength   = 0;
    vAlternateKeyProvisioning(&params);
 /* Start up the network stack. */
```

```
    FreeRTOS_IPInit(g_ip_address, g_net_mask, g_gateway_address, g_dns_address,
g_mac_address);
 while (pdFALSE == FreeRTOS_IsNetworkUp())
    {
       vTaskDelay(1);
    }
 /* AWS MQTT APIs can now be called. Please refer to the documentation linked above.
*/
 /* If using the MQTT Wrapper IotSdk_Init() must be called prior to using MQTT. */
}
```

4.2.127 Wifi Middleware (rm_wifi_onchip_silex)

Modules

Functions

fsp_err_t	RM_WIFI_ONCHIP_SILEX_EpochTimeGet (time_t *p_utc_time)
fsp_err_t	RM_WIFI_ONCHIP_SILEX_LocalTimeGet (uint8_t *p_local_time, uint32_t size_string)
fsp_err_t	RM_WIFI_ONCHIP_SILEX_SntpEnableSet (wifi_onchip_silex_sntp_enable_t enable)
fsp_err_t	RM_WIFI_ONCHIP_SILEX_SntpServerIpAddressSet (uint8_t *p_ip_address)
fsp_err_t	RM_WIFI_ONCHIP_SILEX_SntpTimeZoneSet (int32_t hours, uint32_t minutes, wifi_onchip_silex_sntp_daylight_savings_enable_t daylightSavingsEnable)

Detailed Description

Wifi and Socket implementation using the Silex SX-ULPGN WiFi module on RA MCUs.

Overview

This Middleware module supplies an implementation for the FreeRTOS Secure Sockets and WiFi interfaces using the Silex SX-ULPGN module.

You can find specifics about the WiFi and Secure Socket interface APIs supported by this module at these web sites: Secure Sockets API or Wifi API.

The SX-ULPGN is a low-power, compact IEEE 802.11b/g/n 2.4GHz 1x1 Wireless LAN module equipped with the Qualcomm® QCA4010 Wireless SOC. The module comes readily equipped with radio certification for Japan, North America and Europe. More information about this module can be found at the Silex Web Site

Features

The WiFi Onchip Silex Middleware driver supplies these features:

- Supports connect/disconnect to a b/g/n (2.4GHz) WiFi Access Point using Open, WPA, and WPA2 security. Encryption types can be either TKIP, or CCMP(AES).
- Supports retrieval of the module device MAC address.
- Once connected you can acquire the assigned module device IP.
- Supports a WiFi network scan capability to get a list of local Access Points.
- Supports a Ping function to test network connectivity.
- Supports a DNS Query call to retrieve the IPv4 address of a supplied URL.
- Supports a BSD style Secure Socket interface.
- Supports both TCP and UDP client sockets.
- Drive supports 1 or 2 UARTs for interfacing with the SX-ULPGN module. The second UART is considered optional.

Configuration

Build Time Configurations for rm_wifi_onchip_silex

The following build time configurations are defined in fsp_cfg/rm_wifi_onchip_silex_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Number of supported socket instances	Refer to the RA Configuration tool for available options.	1	Enable number of socket instances
Size of RX buffer for socket	Manual Entry	4096	
Size of TX buffer for CMD Port	Manual Entry	1500	
Size of RX buffer for CMD Port	Manual Entry	3000	
Semaphore maximum timeout	Manual Entry	10000	
Number of retries for AT commands	Manual Entry	10	
Module Reset Port	Refer to the RA Configuration tool for available options.	06	Specify the module reset pin port for the MCU.
Module Reset Pin	Refer to the RA	03	Specify the module

	Configuration tool for available options.		reset pin for the MCU.
Enable SNTP Client	• Enabled • Disabled	Disabled	Should the SNTP client of the module be enabled

Configurations for Networking > WiFi Onchip Silex Driver using r_sci_uart (rm_wifi_onchip_silex)

Configuration	Options	Default	Description
SNTP server IPv4 address	Must be a valid IPv4 address	0.0.0.0	
STNP Timezone Offset from UTC Hours	Must be between 12 and -12 hours	0	Value in hours from 12 to -12
STNP Timezone Offset from UTC Minutes	Must be between 0 and 59 minutes	0	Value in minutes from 0 to 59
Use Daylight Savings Time	• Enabled • Disabled	Disabled	Specify if daytime savings should be used for local time calulation

Note: It is suggested that when using the Silex Module that DTC and FIFO are enabled in the UART configuration to facilitate a more reliable data transfer between module and MCU.

Note: If you wish to use flow control then you must enable flow control in the RA Configuration editor. This can be found in the UART setting. It is advantageous to use flow control all the time since it allows the hardware to gate the flow of data across the serial bus. Without hardware flow control for faster data rate you will most likely see an overflow condition between MCU and the module device.

Note: Higher baud rates are supported in the RA Configuration editor and should be changed in the first UART configuration. There is no need to change the second UART baud rate since it is only used as an AT command channel.

Note: It is a good idea to also enable the FIFO in the UART configuration settings if you plan to use higher baud rates.

Interrupt Configuration

Refer to Serial Communications Interface (SCI) UART (r_sci_uart). R_SCI_UART_Open() is called by Wifi Middleware (rm_wifi_onchip_silex).

Clock Configuration

Refer to Serial Communications Interface (SCI) UART (r_sci_uart).

Pin Configuration

Refer to Serial Communications Interface (SCI) UART (r_sci_uart). R_SCI_UART_Open() is called by Wifi Middleware (rm_wifi_onchip_silex)

Usage Notes

Limitations

- WiFi AP connections do not currently support WEP security.
- When operating with a single UART only single socket connections are possible. To support multiple sockets two UART channels must be connected to the module. When using the Renesas-provided SX-ULPGN PMOD board the second UART channel is on pins 9 and 10 of the PMOD header.
- Network connection parameters SSID and Passphrase for the Access Point can not contain any commas. This is a current limitation of the Silex module firmware. The rm_wifi_onchip_silex_connect() function will return an error if a comma is detected.
- When operating with a single UART and there is an active socket connection you cannot call WIFI_Scan(), WIFI_Ping(), SOCKETS_GetHostByName(), WIFI_GetMAC(), or WIFI_GetIPInfo(). Calling one of these function will return an error code in this situation. These commands are blocked in the one UART case during an active socket connection because they could cause data loss. To avoid this limitation please configure the hardware to use both UARTs.
- The Silex WiFi modules SNTP support requires all configuration changes to made when the WiFi is disconnected from an Access Point. This is a limitation of the Silex module firmware. If changes to the default SNTP settings are required then the application will have to close the current AP connection, make the necessary SNTP changes, and then re-establish the original connection.

Examples

Basic Example

This is a basic example of minimal use of WiFi Middleware in an application.

```
void wifi_onchip_basic_example (void)
{
    WIFIReturnCode_t wifi_err;
 /* Setup Access Point connection parameters */
    WIFINetworkParams_t net_params =
    {
       .ucChannel                  = 0,
       .xPassword.xWPA.cPassphrase = "password",
       .ucSSID                     = "access_point_ssid",
       .xPassword.xWPA.ucLength = 8,
       .ucSSIDLength            = 17,
       .xSecurity               = eWiFiSecurityWPA2,
    };
    SocketsSockaddr_t addr            = {0};
    int32_t          number_bytes_rx = 0;
    int32_t          number_bytes_tx = 0;
    memset(scan_data, 0, sizeof(WIFIScanResult_t) * MAX_WIFI_SCAN_RESULTS);
```

```
    memset(g_socket_recv_buffer, 0, sizeof(uint8_t) * SX_WIFI_SOCKET_RX_BUFFER_SIZE);
 /* Open connection to the Wifi Module */
    wifi_err = WIFI_On();
    assert(eWiFiSuccess == wifi_err);
 /* Connect to the Access Point */
    wifi_err = WIFI_ConnectAP(&net_params);
    assert(eWiFiSuccess == wifi_err);
 /* Get address assigned by AP */
    WIFIIPConfiguration_t ipInfo;
    wifi_err = WIFI_GetIPInfo(&ipInfo);
    assert(eWiFiSuccess == wifi_err);
 /* Ping an address accessible on the network */
    uint8_t       ip_address[4] = {216, 58, 194, 174}; // NOLINT
 const uint16_t ping_count    = 3;
 const uint32_t intervalMS    = 100;
    wifi_err = WIFI_Ping(&ip_address[0], ping_count, intervalMS);
    assert(eWiFiSuccess == wifi_err);
 /* Scan the local Wifi network for other APs */
    wifi_err = WIFI_Scan(&scan_data[0], MAX_WIFI_SCAN_RESULTS);
    assert(eWiFiSuccess == wifi_err);
 /* Do a DNS Query for IP address of server */
    addr.ulAddress = SOCKETS_GetHostByName("www.renesas.com");
    addr.usPort    = SOCKETS_htons(80);
 /* Initialize the Socket Interface */
    BaseType_t sock_err = SOCKETS_Init();
    assert(pdPASS == sock_err);
 /* Create a socket instance */
    Socket_t socket1 = SOCKETS_Socket(SOCKETS_AF_INET, SOCKETS_SOCK_STREAM,
SOCKETS_IPPROTO_TCP);
    assert(NULL != socket1);
 /* Connect to an server using address */
    sock_err = SOCKETS_Connect(socket1, &addr, sizeof(SocketsSockaddr_t));
    assert(pdPASS == sock_err);
 /* Send a HTTP Get call to server */
```

```
    number_bytes_tx = SOCKETS_Send(socket1, HTTP_GET_string, strlen(HTTP_GET_string),
0);
    assert(number_bytes_tx > 0);
 /* Receive the HTTP GET call reply */
    number_bytes_rx = SOCKETS_Recv(socket1, g_socket_recv_buffer,
SX_WIFI_SOCKET_RX_BUFFER_SIZE, 0);
    assert(number_bytes_rx > 0);
 /* Close the socket connection */
    SOCKETS_Close(socket1);
 /* Shutdown the WIFI and Socket Interfaces */
    WIFI_Off();
}
```

SNTP example

An example of using Simple Network Time Protocol (SNTP) on WiFi in an application.

```
#define RM_WIFI_ONCHIP_SILEX_TEMP_BUFFER_SIZE (64)
/*
 * Example of the use of SNTP with Wifi. Example gets the epoch time and local
 * system time strings. It is also demonstrated how the user will need to disconnect
 * from the access point to make changes to the SNTP configuration during runtime.
 *
 * Function assumes that the SNTP has been enabled and configured with proper
 * SNTP server address. For brevity error checking has not been implemented.
 *
 */
void wifi_onchip_sntp_example (void)
{
 /* Setup Access Point connection parameters */
    WIFINetworkParams_t net_params =
    {
       .ucSSID                   = "access_point_ssid",
       .ucSSIDLength             = 17,
       .xPassword.xWPA.cPassphrase = "password",
```

```
       .xPassword.xWPA.ucLength    = 8,
       .ucChannel                  = 0,
       .xSecurity                  = eWiFiSecurityWPA2
    };
    uint8_t local_time[RM_WIFI_ONCHIP_SILEX_TEMP_BUFFER_SIZE];
    time_t current_sys_time = 0;
 // SNTP IP address
    uint8_t ip_address_sntp_server_valid[4] = {216, 239, 35, 0}; // NOLINT : Static
IP address
    memset(local_time, 0, sizeof(local_time));
 /* Open connection to the Wifi Module */
    WIFI_On();
 /* Connect to the Access Point */
    WIFI_ConnectAP(&net_params);
 /* Get the Epoch time in seconds since Jan 1, 1970 UTC */
 RM_WIFI_ONCHIP_SILEX_EpochTimeGet(&current_sys_time);
 /* Get the local time string */
 RM_WIFI_ONCHIP_SILEX_LocalTimeGet((uint8_t *) local_time, sizeof(local_time));
 /* Disconnect from the access point to make changes to the SNTP configuration */
    WIFI_Disconnect();
 /* Change the IP address of the server */
 RM_WIFI_ONCHIP_SILEX_SntpServerIpAddressSet((uint8_t *)
ip_address_sntp_server_valid);
 /* Change the timezone to PST with daylight saving enabled */
 RM_WIFI_ONCHIP_SILEX_SntpTimeZoneSet(-7, 0,
WIFI_ONCHIP_SILEX_SNTP_DAYLIGHT_SAVINGS_ENABLE);
 /* Connect back to the access point */
    WIFI_ConnectAP(&net_params);
 /* Get the Epoch time in seconds since Jan 1, 1970 UTC */
 RM_WIFI_ONCHIP_SILEX_EpochTimeGet(&current_sys_time);
 /* Get the local time string in format [DayOfWeek Month DayOfMonth Year
Hour:Minute:Second] */
 RM_WIFI_ONCHIP_SILEX_LocalTimeGet((uint8_t *) local_time, sizeof(local_time));
 /* Disconnect from the Access Point and shutdown the WIFI module*/
```

```
    WIFI_Disconnect();
    WIFI_Off();
}
```

UDP example

An example of using a UDP client socket to send and receive data from UDP server.

```
/*
 * Example of the use of an UDP client with Wifi. It is assumed for this test that
the UDP server that is connected to is an echo server.
 *
 * For brevity error checking has not been implemented.
 *
 */
void wifi_onchip_udp_example (void)
{
 /* Setup Access Point connection parameters */
    WIFINetworkParams_t net_params =
    {
       .ucSSID                    = "access_point_ssid",
       .ucSSIDLength              = 17,
       .xPassword.xWPA.cPassphrase = "password",
       .xPassword.xWPA.ucLength    = 8,
       .ucChannel                 = 0,
       .xSecurity                 = eWiFiSecurityWPA2
    };
 /* Fill in appropriate UDP echo server address and port */
    SocketsSockaddr_t sock_addr;
    sock_addr.ulAddress = SOCKETS_inet_addr_quick(udp_server_ip_addr[0],
                                                  udp_server_ip_addr[1],
                                                  udp_server_ip_addr[2],
                                                  udp_server_ip_addr[3]);
    sock_addr.usPort = SOCKETS_htons(UDP_SERVER_PORT);
 /* Open connection to the Wifi Module */
```

```
   WIFI_On();
 /* Connect to the Access Point */
   WIFI_ConnectAP(&net_params);
 /* Create a UPD socket */
   Socket_t sock1 = SOCKETS_Socket(SOCKETS_AF_INET, SOCKETS_SOCK_DGRAM,
SOCKETS_IPPROTO_UDP);
 /* Connect UDP socket */
   SOCKETS_Connect(sock1, &sock_addr, sizeof(SocketsSockaddr_t));
 /* Send data to UDP echo server */
   SOCKETS_Send(sock1, (void *) &udp_test_string[0], sizeof(udp_test_string), 0);
 /* Receive data from UDP echo server */
 while (bytes_recv <= 0)
   {
      bytes_recv = SOCKETS_Recv(sock1, &udp_recv_buffer[0], sizeof(udp_recv_buffer),
0);
      vTaskDelay(10);
 if ((--retry_counter) <= 0)
     {
 break;
      }
   }
 /* Close UDP sockect */
   SOCKETS_Close(sock1);
 /* Disconnect from the Access Point and shutdown the WIFI module*/
   WIFI_Disconnect();
   WIFI_Off();
}
```

Multi-Socket Example

Data Structures

struct	wifi_onchip_silex_cfg_t
struct	ulpgn_socket_t
struct	wifi_onchip_silex_instance_ctrl_t

enum	sx_ulpgn_socket_status_t
enum	sx_ulpgn_socket_rw
enum	wifi_onchip_silex_sntp_enable_t
enum	wifi_onchip_silex_sntp_daylight_savings_enable_t

Data Structure Documentation

◆ wifi_onchip_silex_cfg_t

struct wifi_onchip_silex_cfg_t		
User configuration structure, used in open function		
Data Fields		
const uint32_t	num_uarts	Number of UART interfaces to use.
const uint32_t	num_sockets	Number of sockets to initialize.
const bsp_io_port_pin_t	reset_pin	Reset pin used for module.
const uart_instance_t *	uart_instances[WIFI_ONCHIP_SILEX_CFG_MAX_NUMBER_UART_PORTS]	SCI UART instances.
const wifi_onchip_silex_sntp_enable_t	sntp_enabled	Enable/Disable the SNTP Client.
const uint8_t *	sntp_server_ip	The SNTP server IP address string.
const int32_t	sntp_timezone_offset_from_utc_hours	Timezone offset from UTC in (+/-) hours.
const uint32_t	sntp_timezone_offset_from_utc_minutes	Timezone offset from UTC in minutes.
const wifi_onchip_silex_sntp_daylight_savings_enable_t	sntp_timezone_use_daylight_savings	Enable/Disable use of daylight saving time.
void const *	p_context	User defined context passed into callback function.
void const *	p_extend	Pointer to extended configuration by instance of interface.

◆ ulpgn_socket_t

struct ulpgn_socket_t

Silex ULPGN Wifi internal socket instance structure		
Data Fields		
StreamBufferHandle_t	socket_byteq_hdl	Socket stream buffer handle.
StaticStreamBuffer_t	socket_byteq_struct	Structure to hold stream buffer info.
uint8_t	socket_recv_buff[WIFI_ONCHIP_SILEX_CFG_MAX_SOCKET_RX_SIZE]	Socket receive buffer used by byte queue.
uint32_t	socket_status	Current socket status.
uint32_t	socket_recv_error_count	Socket receive error count.
uint32_t	socket_create_flag	Flag to determine in socket has been created.
uint32_t	socket_read_write_flag	flag to determine if read and/or write channels are active.

◆ wifi_onchip_silex_instance_ctrl_t

struct wifi_onchip_silex_instance_ctrl_t		
WIFI_ONCHIP_SILEX private control block. DO NOT MODIFY.		
Data Fields		
uint32_t	open	Flag to indicate if wifi instance has been initialized.
wifi_onchip_silex_cfg_t const *	p_wifi_onchip_silex_cfg	Pointer to initial configurations.
bsp_io_port_pin_t	reset_pin	Wifi module reset pin.
uint32_t	num_uarts	number of UARTS currently used for communication with module
uint32_t	tx_data_size	Size of the data to send.
uint32_t	num_creatable_sockets	Number of simultaneous sockets supported.
uint32_t	curr_cmd_port	Current UART instance index for AT commands.
uint32_t	curr_data_port	Current UART instance index for data.
uint8_t	cmd_rx_queue_buf[WIFI_ONCHIP_SILEX_CFG_CMD_RX_BUF_SIZE]	Command port receive buffer used by byte queue // FreeRTOS.
StreamBufferHandle_t	socket_byteq_hdl	Socket stream buffer handle.
StaticStreamBuffer_t	socket_byteq_struct	Structure to hold stream buffer info.
volatile uint32_t	curr_socket_index	Currently active socket

		instance.
uint8_t	cmd_tx_buff[WIFI_ONCHIP_SILEX_CFG_CMD_TX_BUF_SIZE]	Command send buffer.
uint8_t	cmd_rx_buff[WIFI_ONCHIP_SILEX_CFG_CMD_RX_BUF_SIZE]	Command receive buffer.
uint32_t	at_cmd_mode	Current command mode.
uint8_t	curr_ipaddr[4]	Current IP address of module.
uint8_t	curr_subnetmask[4]	Current Subnet Mask of module.
uint8_t	curr_gateway[4]	Current GAteway of module.
SemaphoreHandle_t	tx_sem	Transmit binary semaphore handle.
SemaphoreHandle_t	rx_sem	Receive binary semaphore handle.
uint8_t	last_data[WIFI_ONCHIP_SILEX_RETURN_TEXT_LENGTH]	Tailing buffer used for command parser.
uart_instance_t *	uart_instance_objects[WIFI_ONCHIP_SILEX_CFG_MAX_NUMBER_UART_PORTS]	UART instance objects.
SemaphoreHandle_t	uart_tei_sem[WIFI_ONCHIP_SILEX_CFG_MAX_NUMBER_UART_PORTS]	UART transmission end binary semaphore.
ulpgn_socket_t	sockets[WIFI_ONCHIP_SILEX_CFG_NUM_CREATEABLE_SOCKETS]	Internal socket instances.

Enumeration Type Documentation

◆ sx_ulpgn_socket_status_t

enum sx_ulpgn_socket_status_t
Silex ULPGN Wifi socket status types

◆ sx_ulpgn_socket_rw

enum sx_ulpgn_socket_rw
Silex socket shutdown channels

◆ wifi_onchip_silex_sntp_enable_t

enum wifi_onchip_silex_sntp_enable_t
Silex WiFi module enable/disable for SNTP

Silex WiFi module enable/disable for SNTP

Function Documentation

◆ RM_WIFI_ONCHIP_SILEX_EpochTimeGet()

fsp_err_t RM_WIFI_ONCHIP_SILEX_EpochTimeGet (time_t * *p_utc_time*)

Get the current system time as the number of seconds since epoch 1970-01-01 00:00:00 UTC

This will retrieve time info from an NTP server at the address entered via an during configuration. If the server isn't set or the client isn't enabled, then it will return an error. The date/time is retrieved as the number of seconds since 00:00:00 UTC January 1, 1970

Parameters

[out]	p_utc_time	Returns the epoch time in seconds.

Return values

FSP_SUCCESS	Successfully retrieved the system time from module.
FSP_ERR_ASSERTION	The parameter utc_time or p_instance_ctrl is NULL.
FSP_ERR_WIFI_FAILED	Error occurred with command to Wifi module.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_WIFI_ONCHIP_SILEX_LocalTimeGet()

fsp_err_t RM_WIFI_ONCHIP_SILEX_LocalTimeGet (uint8_t * *p_local_time*, uint32_t *size_string*)

Get the current local time based on current timezone in a string format

Get the current local time based on current timezone in a string . Exp: Wed Oct 15 1975 07:06:00

Parameters

[out]	p_local_time	Returns local time in string format.
[in]	size_string	Size of p_local_time string buffer.The size of this string needs to be at least 25 bytes

Return values

FSP_SUCCESS	Successfully returned the local time string.
FSP_ERR_ASSERTION	The parameter local_time or p_instance_ctrl is NULL.
FSP_ERR_WIFI_FAILED	Error occurred with command to Wifi module.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_SIZE	String size value passed in exceeds maximum.

◆ RM_WIFI_ONCHIP_SILEX_SntpEnableSet()

fsp_err_t RM_WIFI_ONCHIP_SILEX_SntpEnableSet (wifi_onchip_silex_sntp_enable_t *enable*)

Enable or Disable the SNTP Client Service

Set the SNTP Client to Enable or Disable

Parameters

[in]	enable	Can be set to enable/disable for SNTP support.

Return values

FSP_SUCCESS	Successfully set the value.
FSP_ERR_WIFI_FAILED	Error occurred with command to Wifi module.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_WIFI_ONCHIP_SILEX_SntpServerIpAddressSet()

fsp_err_t RM_WIFI_ONCHIP_SILEX_SntpServerIpAddressSet (uint8_t * *p_ip_address*)

Update the SNTP Server IP Address

Set the SNTP Client Server IP Address

Parameters

[in]	p_ip_address	Pointer to IP address of SNTP server in byte array format.

Return values

FSP_SUCCESS	Successfully set the value.
FSP_ERR_ASSERTION	The parameter p_ip_address or p_instance_ctrl is NULL.
FSP_ERR_WIFI_FAILED	Error occurred with command to Wifi module.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_WIFI_ONCHIP_SILEX_SntpTimeZoneSet()

fsp_err_t RM_WIFI_ONCHIP_SILEX_SntpTimeZoneSet (int32_t *hours*, uint32_t *minutes*, wifi_onchip_silex_sntp_daylight_savings_enable_t *daylightSavingsEnable*)

Update the SNTP Timezone

Set the SNTP Client Timezone

Parameters

[in]	hours	Number of hours (+/-) used for timezone offset from GMT.
[in]	minutes	Number of minutes used for timezone offset from GMT.
[in]	daylightSavingsEnable	Enable/Disable daylight saving in the timezone calculation.

Return values

FSP_SUCCESS	Successfully set the value.
FSP_ERR_WIFI_FAILED	Error occurred with command to Wifi module.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Parameter passed into function was invalid.

4.2.128 AWS Secure Sockets

Modules

This module provides the AWS Secure Sockets implementation.

Overview

Features

Information about the features provided by the AWS Secure Sockets Library is available in the FreeRTOS Libraries User Guide.

The FSP implementation supports using Secure Sockets with either Ethernet or WiFi. These stacks can be added in FSP via the RA Configuration editor under FreeRTOS | Secure Sockets.

Dependencies

The Secure Sockets library has two dependencies:

1. A TCP/IP implementation
2. A TLS implementation

For TCP/IP, AWS have provided the FreeRTOS TCP/IP implementation. For TLS, AWS have chosen mbedTLS, but use PKCS11 for storage and invoking the crypto portion of mbedTLS. For more information about AWS Secure Sockets, refer to the AWS documentation. An example of Secure Sockets usage is on the same page.

mbedTLS

mbedTLS is ARM's implementation of the TLS and SSL protocols as well as the cryptographic primitives required by those implementations. mbedTLS is also solely used for its cryptographic features even if the TLS/SSL portions are not used. With PSA, ARM have created a separate API for cryptography. Starting with mbedTLS3, crypto implementation has been moved out to a new module called mbedCrypto (PSA Crypto API) and a build time configuration can direct the mbedTLS3 implementation to use either the old mbedtls cryptography functions or use the new PSA Crypto API. Since the current version of mbedCrypto (PSA Crypto API) implements both the old mbedtls crypto API as well as the new PSA Crypto API, either option is functional for now.

CipherSuites

During the TLS connection setup stage, the client has to indicate to the server the type of cryptographic operations that it supports. This is referred to as the ciphersuite. The entire list of ciphersuites supported by mbedTLS can be found in mbedtls/ssl_ciphersuites.h.

Configuration

In FSP, Secure Sockets can be added as a new stack via FreeRTOS | Secure Sockets | Secure Sockets on WiFi or Secure Sockets on FreeRTOS Plus TCP. All required dependant modules, except heap, are automatically added. To complete the configuration,

- Add a heap instance and use the same one for all dependencies.
- Resolve the module configuration requirements.

Usage Notes

For detailed documentation on Secure Sockets consult the AWS documentation.

Examples

Basic Example

This is a basic example of using the Secure Sockets API with Ethernet. The message "hello, world!" is sent to a remote socket.

```

4.2.129 ZMOD4XXX Sensor Middleware (rm_zmod4xxx)

Modules

Functions

fsp_err_t	RM_ZMOD4XXX_Open (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_cfg_t const *const p_cfg) This function should be called when start a measurement and when measurement data is stale data. Sends the slave address to the zmod4xxx and start a measurement. Implements rm_zmod4xxx_api_t::open. More...
fsp_err_t	RM_ZMOD4XXX_MeasurementStart (rm_zmod4xxx_ctrl_t *const p_api_ctrl)

	This function should be called when start a measurement. Implements rm_zmod4xxx_api_t::measurementStart. More...
fsp_err_t	RM_ZMOD4XXX_MeasurementStop (rm_zmod4xxx_ctrl_t *const p_api_ctrl) This function should be called when stop a measurement. Implements rm_zmod4xxx_api_t::measurementStop. More...
fsp_err_t	RM_ZMOD4XXX_StatusCheck (rm_zmod4xxx_ctrl_t *const p_api_ctrl) This function should be called when polling is used. It reads the status of sensor. Implements rm_zmod4xxx_api_t::statusCheck. More...
fsp_err_t	RM_ZMOD4XXX_Read (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data) This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements rm_zmod4xxx_api_t::read. More...
fsp_err_t	RM_ZMOD4XXX_TemperatureAndHumiditySet (rm_zmod4xxx_ctrl_t *const p_api_ctrl, float temperature, float humidity) This function is valid only for OAQ_2nd_Gen and IAQ_2nd_Gen_ULP. This function should be called before DataCalculate. Humidity and temperature measurements are needed for ambient compensation. Implements rm_zmod4xxx_api_t::temperatureAndHumiditySet. More...
fsp_err_t	RM_ZMOD4XXX_DeviceErrorCheck (rm_zmod4xxx_ctrl_t *const p_api_ctrl) This function is valid only for IAQ_2nd_Gen and IAQ_2nd_Gen_ULP. This function should be called before Read and DataCalculate. Check for unexpected reset occurs or getting unvalid ADC data. Implements rm_zmod4xxx_api_t::deviceErrorCheck. More...
fsp_err_t	RM_ZMOD4XXX_Iaq1stGenDataCalculate (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_iaq_1st_data_t *const p_zmod4xxx_data) This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements rm_zmod4xxx_api_t::iaq1stGenDataCalculate. More...
fsp_err_t	RM_ZMOD4XXX_Iaq2ndGenDataCalculate (rm_zmod4xxx_ctrl_t

	*const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_iaq_2nd_data_t *const p_zmod4xxx_data) This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements rm_zmod4xxx_api_t::iaq2ndGenDataCalculate. More...
fsp_err_t	RM_ZMOD4XXX_OdorDataCalculate (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_odor_data_t *const p_zmod4xxx_data) This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements rm_zmod4xxx_api_t::odorDataCalculate. More...
fsp_err_t	RM_ZMOD4XXX_SulfurOdorDataCalculate (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_sulfur_odor_data_t *const p_zmod4xxx_data) This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements rm_zmod4xxx_api_t::sulfurOdorDataCalculate. More...
fsp_err_t	RM_ZMOD4XXX_Oaq1stGenDataCalculate (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_1st_data_t *const p_zmod4xxx_data) This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements rm_zmod4xxx_api_t::oaq1stGenDataCalculate. More...
fsp_err_t	RM_ZMOD4XXX_Oaq2ndGenDataCalculate (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_2nd_data_t *const p_zmod4xxx_data) This function should be called when measurement finishes. Detailed Description

Middleware to implement the ZMOD4XXX sensor interface. This module implements the ZMOD4XXX Middleware Interface.

Overview

This module provides an API for configuring and controlling the ZMOD4XXX sensor. Supported ZMOD4XXX sensors are below.

- ZMOD4410
- ZMOD4510

I2C communication with the ZMOD4XXX sensor is realized by connecting with the rm_comms_i2c module.

Features

The ZMOD4XXX sensor interface implementation has the following key features:

- Initialize the sensor for measurement
- Start a measurement at any time
- Read status register for wait until the measurement is done. This will also be signaled by an interrupt
- Get the ADC data from the sensor
- Input the ADC data and acquire the air quality values by calculation in the library.

Configuration

RM_ZMOD4XXX_CFG_OPERATION_MODE is set according to the library selected.

Build Time Configurations for rm_zmod4xxx

The following build time configurations are defined in fsp_cfg/rm_zmod4xxx_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Build Time Configurations for rm_zmod4410_iaq_1st

The following build time configurations are defined in fsp_cfg/rm_zmod4xxx_lib_cfg.h:

Configuration	Options	Default	Description
[DEPRECATED] Power mode (This will be removed in FSP v4.0.0)	• Continuous • Low Power	Continuous	Select power mode

Configurations for Sensor > ZMOD4XXX Gas Sensor (rm_zmod4xxx)

This module can be added to the Stacks tab via New Stack > Sensor > ZMOD4XXX Gas Sensor (rm_zmod4xxx).

Configuration	Options	Default	Description
Name	Manual Entry	g_zmod4xxx_sensor0	Module name.

Comms I2C Callback	Name must be a valid C symbol	zmod4xxx_comms_i2c_callback	A user COMMS I2C callback function can be provided.
IRQ Callback	Name must be a valid C symbol	zmod4xxx_irq_callback	A user IRQ callback function can be provided.

Configurations for Sensor > ZMOD4410 IAQ 1st Generation (rm_zmod4xxx)

Configuration	Options	Default	Description
Operation Mode	• Continuous • Low Power	Continuous	Select the operation mode.

Pin Configuration

This module use SDA and SCL pins of I2C Master and SCI I2C.

Usage Notes

ZMOD4410 datasheet is here.
The ZMOD4410 has five modes of operation.
The ZMOD4410 will respond to TVOC immediately upon start-up; however, a conditioning period of 48 hours followed by a sensor module restart in an ambient environment is recommended to improve stability and obtain maximum performance.
Best results are achieved with continuous operation because the module algorithm can learn about the environment over time.

Method	Description
IAQ 1st Generation Continuous	Measurement of UBA levels for IAQ and eCO2, provides continuous data
IAQ 1st Generation Low Power	Measurement of UBA levels for IAQ and eCO2, fixed sampling interval of 6 seconds
IAQ 2nd Generation	Using AI for improved ppm TVOC, IAQ and eCO2 functionality (recommended for new designs)
IAQ 2nd Generation Ultra Low Power	Using AI for improved ppm TVOC, IAQ and eCO2 functionality. This method offers a much lower power consumption
Odor	Control signal based on Air Quality Changes
Sulfur-based Odor Discrimination	The odors in "sulfur" (sulfur based) and "acceptable" (organic based) and shows an intensity level of the smell

ZMOD4510 datasheet is here.
The ZMOD4510 has two modes of operation.
The ZMOD4510 in OAQ 1st Gen operation will respond to typical outdoor gases after a warm-up time of 60 min, consisting of 20 min for stabilization and 40 min for baseline finding.
For OAQ 2nd Gen operation a response to ozone will be seen after a warmup time of 30 min.
In all operation modes a conditioning period of 48 hours followed by a sensor module restart in an ambient environment is recommended to improve stability and obtain maximum performance.

Method	Description
OAQ 1st Generation	Measurement of Air Quality
OAQ 2nd Generation	Selective Ozone featuring Ultra-Low Power

A library corresponding to each of these modes is required. By setting in RA Configuration, the library will be generated in the ra/fsp/lib/rm_zmod4xxx folder of your project.

If an RTOS is used, blocking and bus lock is available.

- If blocking of an I2C bus is required, it is necessary to create a semaphore for blocking.
- If bus lock is required, it is necessary to create a mutex for bus lock. Bus lock is only available when a semaphore for blocking is used.

Bus Initialization

The ZMOD4XXX interface expects a bus instance to be opened before opening any ZMOD4XXX device. The interface will handle switching between devices on the bus but will not open or close the bus instance. The user should open the bus with the appropriate I2C Master Interface open call.

Initialization

Initialize with RM_ZMOD4XXX_Open(). One channel of timer is required to measure the waiting time at initialization.

From measurement start to data acquisition

After normal completion, start the measurement with RM_ZMOD4XXX_MeasurementStart(). An endless loop continuously checks the status of the ZMOD4XXX sensor and reads its data. The raw data is subsequently processed, and the air quality values are calculated.

If IRQ is enabled

1. Call RM_ZMOD4XXX_MeasurementStart().
2. Wait until RM_ZMOD4XXX_EVENT_MEASUREMENT_COMPLETE is received via IRQ callback.
3. Call RM_ZMOD4XXX_Read(). This function will read the ADC data.
4. Wait until RM_ZMOD4XXX_EVENT_SUCCESS is received.
5. Call the DataCalculate API according to the mode.

If IRQ is disabled

1. Call RM_ZMOD4XXX_MeasurementStart().
2. Wait until RM_ZMOD4XXX_EVENT_SUCCESS is received.
3. Call RM_ZMOD4XXX_StatusCheck(). This function will execute a status check over I2C.
4. If RM_ZMOD4XXX_EVENT_MEASUREMENT_NOT_COMPLETE is received in callback, user should wait some time and then call RM_ZMOD4XXX_StatusCheck() again.
5. Wait until RM_ZMOD4XXX_EVENT_MEASUREMENT_COMPLETE is received.
6. Call RM_ZMOD4XXX_Read() and read the ADC data.
7. Wait until RM_ZMOD4XXX_EVENT_SUCCESS is received.
8. Call the DataCalculate API according to the mode.

Checking device error for IAQ 2nd Gen.

1. Call RM_ZMOD4XXX_DeviceErrorCheck(). This function will execute a device error check

over I2C.
2. If any device error occurs, RM_ZMOD4XXX_EVENT_DEV_ERR_POWER_ON_RESET or RM_ZMOD4XXX_EVENT_DEV_ERR_ACCESS_CONFLICT are received in callback. If no device error, RM_ZMOD4XXX_EVENT_SUCCESS is received in callback.

Examples

Basic Example

These are basic examples of minimal use of ZMOD4XXX sensor implementation in an application.

IAQ 1st Gen. Continuous mode

```
void rm_zmod4xxx_iaq_1st_gen_continuous_basic_example (void)

Enumerations

enum	rm_zmod4xxx_lib_type_t

Data Structure Documentation

◆ rm_zmod4xxx_init_process_params_t

struct rm_zmod4xxx_init_process_params_t		
ZMOD4XXX initialization process block		
Data Fields		
volatile uint32_t	delay_ms	Delay milliseconds.
volatile bool	communication_finished	Communication flag for blocking.
volatile bool	measurement_finished	IRQ flag.
volatile rm_zmod4xxx_event_t	event	Callback event.

◆ rm_zmod4xxx_instance_ctrl_t

struct rm_zmod4xxx_instance_ctrl_t	
ZMOD4XXX control block	
Data Fields	
uint32_t	open
	Open flag.
uint8_t	buf [RM_ZMOD4XXX_MAX_I2C_BUF_SIZE]
	Buffer for I2C communications.
uint8_t	register_address
	Register address to access.
rm_zmod4xxx_status_params_t	status
	Status parameter.
volatile bool	dev_err_check
	Flag for checking device error.
volatile rm_zmod4xxx_event_t	event

	Callback event.
rm_zmod4xxx_init_process_params_t	init_process_params
	For the initialization process.
rm_zmod4xxx_cfg_t const *	p_cfg
	Pointer of configuration block.
rm_comms_instance_t const *	p_comms_i2c_instance
	Pointer of I2C Communications Middleware instance structure.
rm_zmod4xxx_lib_extended_cfg_t *	p_zmod4xxx_lib
	Pointer of ZMOD4XXX Lib extended configuration.
void const *	p_irq_instance
	Pointer to IRQ instance.
void const *	p_context
	Pointer to the user-provided context.
void(*	p_comms_callback)(rm_zmod4xxx_callback_args_t *p_args)
	I2C Communications callback.
void(*	p_irq_callback)(rm_zmod4xxx_callback_args_t *p_args)
	IRQ callback.

Enumeration Type Documentation

◆ rm_zmod4xxx_lib_type_t

enum rm_zmod4xxx_lib_type_t
ZMOD4XXX Library type

Function Documentation

◆ RM_ZMOD4XXX_Open()

fsp_err_t RM_ZMOD4XXX_Open (rm_zmod4xxx_ctrl_t *const *p_api_ctrl*, rm_zmod4xxx_cfg_t const *const *p_cfg*)

This function should be called when start a measurement and when measurement data is stale data. Sends the slave address to the zmod4xxx and start a measurement. Implements rm_zmod4xxx_api_t::open.

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_ALREADY_OPEN	Module is already open.
FSP_ERR_UNSUPPORTED	Unsupport product ID.
FSP_ERR_TIMEOUT	communication is timeout.
FSP_ERR_ABORTED	communication is aborted.

◆ RM_ZMOD4XXX_MeasurementStart()

fsp_err_t RM_ZMOD4XXX_MeasurementStart (rm_zmod4xxx_ctrl_t *const *p_api_ctrl*)

This function should be called when start a measurement. Implements rm_zmod4xxx_api_t::measurementStart.

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.
FSP_ERR_TIMEOUT	communication is timeout.
FSP_ERR_ABORTED	communication is aborted.

◆ RM_ZMOD4XXX_MeasurementStop()

fsp_err_t RM_ZMOD4XXX_MeasurementStop (rm_zmod4xxx_ctrl_t *const *p_api_ctrl*)

This function should be called when stop a measurement. Implements rm_zmod4xxx_api_t::measurementStop.

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.
FSP_ERR_TIMEOUT	communication is timeout.
FSP_ERR_ABORTED	communication is aborted.

◆ RM_ZMOD4XXX_StatusCheck()

fsp_err_t RM_ZMOD4XXX_StatusCheck (rm_zmod4xxx_ctrl_t *const *p_api_ctrl*)

This function should be called when polling is used. It reads the status of sensor. Implements rm_zmod4xxx_api_t::statusCheck.

Return values

FSP_SUCCESS	Successfully started.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.
FSP_ERR_TIMEOUT	communication is timeout.
FSP_ERR_ABORTED	communication is aborted.

◆ RM_ZMOD4XXX_Read()

fsp_err_t RM_ZMOD4XXX_Read (rm_zmod4xxx_ctrl_t *const *p_api_ctrl*, rm_zmod4xxx_raw_data_t *const *p_raw_data*)

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements rm_zmod4xxx_api_t::read.

Return values

FSP_SUCCESS	Successfully results are read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.
FSP_ERR_TIMEOUT	Communication is timeout.
FSP_ERR_ABORTED	Communication is aborted.
FSP_ERR_SENSOR_MEASUREMENT_NOT_FINISHED	Measurement is not finished.

◆ RM_ZMOD4XXX_TemperatureAndHumiditySet()

fsp_err_t RM_ZMOD4XXX_TemperatureAndHumiditySet (rm_zmod4xxx_ctrl_t *const *p_api_ctrl*, float *temperature*, float *humidity*)

This function is valid only for OAQ_2nd_Gen and IAQ_2nd_Gen_ULP. This function should be called before DataCalculate. Humidity and temperature measurements are needed for ambient compensation. Implements rm_zmod4xxx_api_t::temperatureAndHumiditySet.

Return values

FSP_SUCCESS	Successfully results are read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.

◆ RM_ZMOD4XXX_DeviceErrorCheck()

fsp_err_t RM_ZMOD4XXX_DeviceErrorCheck (rm_zmod4xxx_ctrl_t *const *p_api_ctrl*)

This function is valid only for IAQ_2nd_Gen and IAQ_2nd_Gen_ULP. This function should be called before Read and DataCalculate. Check for unexpected reset occurs or getting unvalid ADC data. Implements rm_zmod4xxx_api_t::deviceErrorCheck.

Return values

FSP_SUCCESS	Successfully results are read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.
FSP_ERR_TIMEOUT	communication is timeout.
FSP_ERR_ABORTED	communication is aborted.

◆ RM_ZMOD4XXX_Iaq1stGenDataCalculate()

fsp_err_t RM_ZMOD4XXX_Iaq1stGenDataCalculate (rm_zmod4xxx_ctrl_t *const *p_api_ctrl*, rm_zmod4xxx_raw_data_t *const *p_raw_data*, rm_zmod4xxx_iaq_1st_data_t *const *p_zmod4xxx_data*)

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements rm_zmod4xxx_api_t::iaq1stGenDataCalculate .

Return values

FSP_SUCCESS	Successfully results are read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.

◆ RM_ZMOD4XXX_Iaq2ndGenDataCalculate()

fsp_err_t RM_ZMOD4XXX_Iaq2ndGenDataCalculate (rm_zmod4xxx_ctrl_t *const *p_api_ctrl*, rm_zmod4xxx_raw_data_t *const *p_raw_data*, rm_zmod4xxx_iaq_2nd_data_t *const *p_zmod4xxx_data*)

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements rm_zmod4xxx_api_t::iaq2ndGenDataCalculate.

Return values

FSP_SUCCESS	Successfully results are read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.

◆ RM_ZMOD4XXX_OdorDataCalculate()

fsp_err_t RM_ZMOD4XXX_OdorDataCalculate (rm_zmod4xxx_ctrl_t *const *p_api_ctrl*, rm_zmod4xxx_raw_data_t *const *p_raw_data*, rm_zmod4xxx_odor_data_t *const *p_zmod4xxx_data*)

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements rm_zmod4xxx_api_t::odorDataCalculate.

Return values

FSP_SUCCESS	Successfully results are read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.

◆ RM_ZMOD4XXX_SulfurOdorDataCalculate()

fsp_err_t RM_ZMOD4XXX_SulfurOdorDataCalculate (rm_zmod4xxx_ctrl_t *const *p_api_ctrl*, rm_zmod4xxx_raw_data_t *const *p_raw_data*, rm_zmod4xxx_sulfur_odor_data_t *const *p_zmod4xxx_data*)

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements rm_zmod4xxx_api_t::sulfurOdorDataCalculate.

Return values

FSP_SUCCESS	Successfully results are read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.

◆ RM_ZMOD4XXX_Oaq1stGenDataCalculate()

fsp_err_t RM_ZMOD4XXX_Oaq1stGenDataCalculate (rm_zmod4xxx_ctrl_t *const *p_api_ctrl*, rm_zmod4xxx_raw_data_t *const *p_raw_data*, rm_zmod4xxx_oaq_1st_data_t *const *p_zmod4xxx_data*)

This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements rm_zmod4xxx_api_t::oaq1stGenDataCalculate.

Return values

FSP_SUCCESS	Successfully results are read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.

◆ RM_ZMOD4XXX_Oaq2ndGenDataCalculate()

fsp_err_t RM_ZMOD4XXX_Oaq2ndGenDataCalculate (rm_zmod4xxx_ctrl_t *const *p_api_ctrl*, rm_zmod4xxx_raw_data_t *const *p_raw_data*, rm_zmod4xxx_oaq_2nd_data_t *const *p_zmod4xxx_data*)
This function should be called when measurement finishes. To check measurement status either polling or busy/interrupt pin can be used. Implements rm_zmod4xxx_api_t::oaq2ndGenDataCalculate.

Return values

FSP_SUCCESS	Successfully results are read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not opened configured.

◆ RM_ZMOD4XXX_Close()

fsp_err_t RM_ZMOD4XXX_Close (rm_zmod4xxx_ctrl_t *const *p_api_ctrl*)
This function should be called when close the sensor. Implements rm_zmod4xxx_api_t::close.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

4.3 Interfaces

Detailed Description

The FSP interfaces provide APIs for common functionality. They can be implemented by one or more modules. Modules can use other modules as dependencies using this interface layer.

Modules

	ADC Interface Interface for A/D Converters.
	BLE Interface Interface for Bluetooth Low Energy functions.

	CAC Interface Interface for clock frequency accuracy measurements.
	CAN Interface Interface for CAN peripheral.
	CEC Interface Interface for CEC peripheral.
	CGC Interface Interface for clock generation.
	Comparator Interface Interface for comparators.
	CRC Interface Interface for cyclic redundancy checking.
	CTSU Interface Interface for Capacitive Touch Sensing Unit (CTSU) functions.
	DAC Interface Interface for D/A converters.
	Display Interface Interface for LCD panel displays.
	DOC Interface Interface for the Data Operation Circuit.
	ELC Interface Interface for the Event Link Controller.

	Ethernet Interface Interface for Ethernet functions.
	Ethernet PHY Interface Interface for Ethernet PHY functions.
	External IRQ Interface Interface for detecting external interrupts.
	Flash Interface Interface for the Flash Memory.
	I2C Master Interface Interface for I2C master communication.
	I2C Slave Interface Interface for I2C slave communication.
	I2S Interface Interface for I2S audio communication.
	I3C Interface Interface for I3C.
	IIR Interface Interface for IIR filter functionality.
	I/O Port Interface Interface for accessing I/O ports and configuring I/O functionality.
	JPEG Codec Interface Interface for JPEG functions.
	Key Matrix Interface

	Interface for key matrix functions.
	Low Power Modes Interface Interface for accessing low power modes.
	Low Voltage Detection Interface Interface for Low Voltage Detection.
	OPAMP Interface Interface for Operational Amplifiers.
	PDC Interface Interface for PDC functions.
	POEG Interface Interface for the Port Output Enable for GPT.
	PTP Interface Interface for PTP functions.
	RTC Interface Interface for accessing the Realtime Clock.
	SD/MMC Interface Interface for accessing SD, eMMC, and SDIO devices.
	SLCDC Interface Interface for Segment LCD controllers.
	SPI Interface Interface for SPI communications.
	SPI Flash Interface Interface for accessing external SPI flash devices.

	Three-Phase Interface Interface for three-phase timer functions.
	Timer Interface Interface for timer functions.
	Transfer Interface Interface for data transfer functions.
	UART Interface Interface for UART communications.
	USB Interface Interface for USB functions.
	USB HCDC Interface Interface for USB HCDC functions.
	USB HHID Interface Interface for USB HHID functions.
	USB HMSC Interface Interface for USB HMSC functions.
	USB PCDC Interface Interface for USB PCDC functions.
	USB PHID Interface Interface for USB PHID functions.
	USB PMSC Interface Interface for USB PMSC functions.

	WDT Interface Interface for watch dog timer functions.
	ADPCM Decoder Interface Interface for ADPCM decoder.
	AUDIO PLAYBACK Interface Interface for the Audio Playback.
	BLE ABS Interface Interface for Bluetooth Low Energy Abstraction functions.
	BLE Mesh Access Interface Interface for Bluetooth Low Energy Mesh Access functions.
	BLE Mesh Interface Interface for Bluetooth Low Energy Abstraction functions.
	BLE Mesh Bearer Interface Interface for Bluetooth Low Energy Mesh Bearer functions.
	BLE Mesh Model Configuration Client Interface Interface for Bluetooth Low Energy Mesh Model Configuration Client functions.
	BLE Mesh Health Server Interface Interface for Bluetooth Low Energy Mesh Model Health Server functions.
	BLE Mesh Lower Trans Interface Interface for Bluetooth Low Energy Mesh Lower Trans functions.
	BLE Mesh Model Client Interface Interface for Bluetooth Low Energy Mesh Model Model Client functions.

	BLE Mesh Model Server Interface Interface for Bluetooth Low Energy Mesh Model Model Server functions.
	BLE Mesh Network Interface Interface for Bluetooth Low Energy Mesh Network functions.
	BLE Mesh Provision Interface Interface for Bluetooth Low Energy Mesh Provision functions.
	BLE Mesh Scene Server Interface Interface for Bluetooth Low Energy Mesh Model Scene Server functions.
	BLE Mesh Upper Trans Interface Interface for Bluetooth Low Energy Mesh Upper Trans functions.
	Block Media Interface Interface for block media memory access.
	Communicatons Middleware Interface Interface for Communications Middleware functions.
	FileX Block Media Port Interface Interface for FileX Block Media port.
	FreeRTOS+FAT Port Interface Interface for FreeRTOS+FAT port.
	FSXXXX Middleware Interface Interface for FSXXXX Middleware functions.
	HS300X Middleware Interface Interface for HS300X Middleware functions.

	LittleFS Interface Interface for LittleFS access.
	BLE Mesh Bearer Platform Interface Interface for Bluetooth Low Energy Mesh Bearer Platform functions.
	Interface Interface for motor 120 control functions.
	Interface Interface for motor driver functions.
	Motor angle Interface Interface for motor angle and speed calculation functions.
	Motor Interface Interface for Motor functions.
	Motor current Interface Interface for motor current functions.
	Motor driver Interface Interface for motor driver functions.
	Motor position Interface Interface for motor position functions.
	Motor speed Interface Interface for motor speed functions.
	Touch Middleware Interface Interface for Touch Middleware functions.

	Virtual EEPROM Interface Interface for Virtual EEPROM access.
	ZMOD4XXX Middleware Interface Interface for ZMOD4XXX Middleware functions.
	SCE Interface Interface for Secure Crypto Engine (SCE) functions.

4.3.1 ADC Interface

Interfaces

Detailed Description

Interface for A/D Converters.

Summary

The ADC interface provides standard ADC functionality including one-shot mode (single scan), continuous scan and group scan. It also allows configuration of hardware and software triggers for starting scans. After each conversion an interrupt can be triggered, and if a callback function is provided, the call back is invoked with the appropriate event information.

Implemented by: Analog to Digital Converter (r_adc)

Data Structures

struct	adc_status_t
struct	adc_callback_args_t
struct	adc_info_t
struct	adc_cfg_t
struct	adc_api_t
struct	adc_instance_t

Typedefs

typedef void	adc_ctrl_t

Enumerations

enum	adc_mode_t
enum	adc_resolution_t
enum	adc_alignment_t
enum	adc_trigger_t
enum	adc_event_t
enum	adc_channel_t
enum	adc_group_id_t
enum	adc_group_mask_t
enum	adc_state_t

Data Structure Documentation

◆ adc_status_t

struct adc_status_t		
ADC status.		
Data Fields		
adc_state_t	state	Current state.

◆ adc_callback_args_t

struct adc_callback_args_t		
ADC callback arguments definitions		
Data Fields		
uint16_t	unit	ADC device in use.
adc_event_t	event	ADC callback event.
void const *	p_context	Placeholder for user data.
adc_channel_t	channel	Channel of conversion result. Only valid for r_adc ADC_EVENT _CONVERSION_COMPLETE.
uint64_t	channel_mask	Channel mask for conversion result. Only valid for r_adc_b.
adc_group_mask_t	group_mask	Group Mask.

◆ adc_info_t

struct adc_info_t		
ADC Information Structure for Transfer Interface		
Data Fields		
__I void *	p_address	The address to start reading the data from.
uint32_t	length	The total number of transfers to read.
transfer_size_t	transfer_size	The size of each transfer.
elc_peripheral_t	elc_peripheral	Name of the peripheral in the ELC list.
elc_event_t	elc_event	Name of the ELC event for the peripheral.
uint32_t	calibration_data	Temperature sensor calibration data (0xFFFFFFFF if unsupported) for reference voltage.
int16_t	slope_microvolts	Temperature sensor slope in microvolts/degrees C.
bool	calibration_ongoing	Calibration is in progress.

◆ **adc_cfg_t**

struct adc_cfg_t	
ADC general configuration	
Data Fields	
uint16_t	unit
	ADC unit to be used.
adc_mode_t	mode
	ADC operation mode.
adc_resolution_t	resolution
	ADC resolution.
adc_alignment_t	alignment
	Specify left or right alignment; ignored if addition used.

adc_trigger_t	trigger
	Default and Group A trigger source.
IRQn_Type	scan_end_irq
	Scan end IRQ number.
IRQn_Type	scan_end_b_irq
	Scan end group B IRQ number.
uint8_t	scan_end_ipl
	Scan end interrupt priority.
uint8_t	scan_end_b_ipl
	Scan end group B interrupt priority.
void(*	p_callback)(adc_callback_args_t *p_args)
	Callback function; set to NULL for none.
void const *	p_context
	Placeholder for user data. Passed to the user callback in adc_callback_args_t.
void const *	p_extend
	Extension parameter for hardware specific settings.

◆ adc_api_t

struct adc_api_t
ADC functions implemented at the HAL layer will follow this API.

Data Fields	
fsp_err_t(*	open)(adc_ctrl_t *const p_ctrl, adc_cfg_t const *const p_cfg)
fsp_err_t(*	scanCfg)(adc_ctrl_t *const p_ctrl, void const *const p_extend)
fsp_err_t(*	scanStart)(adc_ctrl_t *const p_ctrl)
fsp_err_t(*	scanGroupStart)(adc_ctrl_t *p_ctrl, adc_group_mask_t group_mask)
fsp_err_t(*	scanStop)(adc_ctrl_t *const p_ctrl)
fsp_err_t(*	scanStatusGet)(adc_ctrl_t *const p_ctrl, adc_status_t *p_status)
fsp_err_t(*	read)(adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, uint16_t *const p_data)
fsp_err_t(*	read32)(adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, uint32_t *const p_data)
fsp_err_t(*	calibrate)(adc_ctrl_t *const p_ctrl, void const *p_extend)
fsp_err_t(*	offsetSet)(adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, int32_t const offset)
fsp_err_t(*	callbackSet)(adc_ctrl_t *const p_api_ctrl, void(*p_callback)(adc_callback_args_t *), void const *const p_context, adc_callback_args_t *const p_callback_memory)
fsp_err_t(*	close)(adc_ctrl_t *const p_ctrl)
fsp_err_t(*	infoGet)(adc_ctrl_t *const p_ctrl, adc_info_t *const p_adc_info)

Field Documentation

◆ open

fsp_err_t(* adc_api_t::open) (adc_ctrl_t *const p_ctrl, adc_cfg_t const *const p_cfg)

Initialize ADC Unit; apply power, set the operational mode, trigger sources, interrupt priority, and configurations common to all channels and sensors.

Implemented as

- R_ADC_Open()
- R_ADC_B_Open()
- R_SDADC_Open()

Precondition

Configure peripheral clocks, ADC pins and IRQs prior to calling this function.

Parameters

[in]	p_ctrl	Pointer to control handle structure
[in]	p_cfg	Pointer to configuration structure

◆ scanCfg

fsp_err_t(* adc_api_t::scanCfg) (adc_ctrl_t *const p_ctrl, void const *const p_extend)

Configure the scan including the channels, groups, and scan triggers to be used for the unit that was initialized in the open call. Some configurations are not supported for all implementations. See implementation for details.

Implemented as

- R_ADC_ScanCfg()
- R_ADC_B_ScanCfg()
- R_SDADC_ScanCfg()

Parameters

[in]	p_ctrl	Pointer to control handle structure
[in]	p_extend	See implementation for details

◆ scanStart

fsp_err_t(* adc_api_t::scanStart) (adc_ctrl_t *const p_ctrl)

Start the scan (in case of a software trigger), or enable the hardware trigger.

Implemented as

- R_ADC_ScanStart()
- R_SDADC_ScanStart()

Parameters

[in]	p_ctrl	Pointer to control handle structure

◆ scanGroupStart

fsp_err_t(* adc_api_t::scanGroupStart) (adc_ctrl_t *p_ctrl, adc_group_mask_t group_mask)

Start the scan group (in case of a software trigger), or enable the hardware trigger.

Implemented as

- R_ADC_B_ScanGroupStart()

Parameters

[in]	p_ctrl	Pointer to control handle structure
[in]	group_mask	Mask of groups to start

◆ scanStop

fsp_err_t(* adc_api_t::scanStop) (adc_ctrl_t *const p_ctrl)

Stop the ADC scan (in case of a software trigger), or disable the hardware trigger.

Implemented as

- R_ADC_ScanStop()
- R_SDADC_ScanStop()

Parameters

[in]	p_ctrl	Pointer to control handle structure

◆ scanStatusGet

fsp_err_t(* adc_api_t::scanStatusGet) (adc_ctrl_t *const p_ctrl, adc_status_t *p_status)

Check scan status.

Implemented as

- R_ADC_StatusGet()
- R_ADC_B_StatusGet()
- R_SDADC_StatusGet()

Parameters

[in]	p_ctrl	Pointer to control handle structure
[out]	p_status	Pointer to store current status in

◆ read

fsp_err_t(* adc_api_t::read) (adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, uint16_t *const p_data)

Read ADC conversion result.

Implemented as

- R_ADC_Read()
- R_ADC_B_Read()
- R_SDADC_Read()

Parameters

[in]	p_ctrl	Pointer to control handle structure
[in]	reg_id	ADC channel to read (see enumeration adc_channel_t)
[in]	p_data	Pointer to variable to load value into.

◆ read32

fsp_err_t(* adc_api_t::read32) (adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, uint32_t *const p_data)

Read ADC conversion result into a 32-bit word.

Implemented as

- R_ADC_Read32()
- R_ADC_B_Read32()
- R_SDADC_Read32()

Parameters

[in]	p_ctrl	Pointer to control handle structure
[in]	reg_id	ADC channel to read (see enumeration adc_channel_t)
[in]	p_data	Pointer to variable to load value into.

◆ calibrate

fsp_err_t(* adc_api_t::calibrate) (adc_ctrl_t *const p_ctrl, void const *p_extend)

Calibrate ADC or associated PGA (programmable gain amplifier). The driver may require implementation specific arguments to the p_extend input. Not supported for all implementations. See implementation for details.

Implemented as

- R_ADC_Calibrate()
- R_ADC_B_Calibrate()
- R_SDADC_Calibrate()

Parameters

[in]	p_ctrl	Pointer to control handle structure
[in]	p_extend	Pointer to implementation specific arguments

◆ offsetSet

fsp_err_t(* adc_api_t::offsetSet) (adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, int32_t const offset)

Set offset for input PGA configured for differential input. Not supported for all implementations. See implementation for details.

Implemented as

- R_SDADC_OffsetSet()

Parameters

[in]	p_ctrl	Pointer to control handle structure
[in]	reg_id	ADC channel to read (see enumeration adc_channel_t)
[in]	offset	See implementation for details.

◆ callbackSet

fsp_err_t(* adc_api_t::callbackSet) (adc_ctrl_t *const p_api_ctrl, void(*p_callback)(adc_callback_args_t *), void const *const p_context, adc_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_ADC_CallbackSet()
- R_ADC_B_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the ADC control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ close

fsp_err_t(* adc_api_t::close) (adc_ctrl_t *const p_ctrl)

Close the specified ADC unit by ending any scan in progress, disabling interrupts, and removing power to the specified A/D unit.

Implemented as

- R_ADC_Close()
- R_ADC_B_Close()
- R_SDADC_Close()

Parameters

[in]	p_ctrl	Pointer to control handle structure

◆ infoGet

fsp_err_t(* adc_api_t::infoGet) (adc_ctrl_t *const p_ctrl, adc_info_t *const p_adc_info)

Return the ADC data register address of the first (lowest number) channel and the total number of bytes to be read in order for the DTC/DMAC to read the conversion results of all configured channels. Return the temperature sensor calibration and slope data.

Implemented as

- R_ADC_InfoGet()
- R_ADC_B_InfoGet()
- R_SDADC_InfoGet()

Parameters

[in]	p_ctrl	Pointer to control handle structure
[out]	p_adc_info	Pointer to ADC information structure

◆ adc_instance_t

struct adc_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields		
adc_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
adc_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
void const *	p_channel_cfg	Pointer to the channel configuration structure for this instance.
adc_api_t const *	p_api	Pointer to the API structure for

		this instance.

Typedef Documentation

◆ adc_ctrl_t

typedef void adc_ctrl_t
ADC control block. Allocate using driver instance control structure from driver instance header file.

Enumeration Type Documentation

◆ adc_mode_t

enum adc_mode_t	
ADC operation mode definitions	
Enumerator	
ADC_MODE_SINGLE_SCAN	Single scan - one or more channels.
ADC_MODE_GROUP_SCAN	Two trigger sources to trigger scan for two groups which contain one or more channels.
ADC_MODE_CONTINUOUS_SCAN	Continuous scan - one or more channels.

◆ adc_resolution_t

enum adc_resolution_t	
ADC data resolution definitions	
Enumerator	
ADC_RESOLUTION_12_BIT	12 bit resolution
ADC_RESOLUTION_10_BIT	10 bit resolution
ADC_RESOLUTION_8_BIT	8 bit resolution
ADC_RESOLUTION_14_BIT	14 bit resolution
ADC_RESOLUTION_16_BIT	16 bit resolution
ADC_RESOLUTION_24_BIT	24 bit resolution

◆ adc_alignment_t

enum adc_alignment_t	
ADC data alignment definitions	
Enumerator	
ADC_ALIGNMENT_RIGHT	Data alignment right.
ADC_ALIGNMENT_LEFT	Data alignment left.

◆ adc_trigger_t

enum adc_trigger_t	
ADC trigger mode definitions	
Enumerator	
ADC_TRIGGER_SOFTWARE	Software trigger; not for group modes.
ADC_TRIGGER_SYNC_ELC	Synchronous trigger via ELC.
ADC_TRIGGER_ASYNC_EXTERNAL	External asynchronous trigger; not for group modes.

◆ adc_event_t

enum adc_event_t	
ADC callback event definitions	
Enumerator	
ADC_EVENT_SCAN_COMPLETE	Normal/Group A scan complete.
ADC_EVENT_SCAN_COMPLETE_GROUP_B	Group B scan complete.
ADC_EVENT_CALIBRATION_COMPLETE	Calibration complete.
ADC_EVENT_CONVERSION_COMPLETE	Conversion complete.
ADC_EVENT_CALIBRATION_REQUEST	Calibration requested.
ADC_EVENT_CONVERSION_ERROR	Scan error.
ADC_EVENT_OVERFLOW	Overflow occurred.
ADC_EVENT_LIMIT_CLIP	Limiter clipping occurred.
ADC_EVENT_FIFO_READ_REQUEST	FIFO read requested.
ADC_EVENT_FIFO_OVERFLOW	FIFO overflow occurred.
ADC_EVENT_WINDOW_COMPARE_A	Window A comparison condition met.
ADC_EVENT_WINDOW_COMPARE_B	Window B comparison condition met.

◆ adc_channel_t

enum adc_channel_t	
ADC channels	
Enumerator	
ADC_CHANNEL_0	ADC channel 0.
ADC_CHANNEL_1	ADC channel 1.
ADC_CHANNEL_2	ADC channel 2.
ADC_CHANNEL_3	ADC channel 3.
ADC_CHANNEL_4	ADC channel 4.

ADC_CHANNEL_5	ADC channel 5.
ADC_CHANNEL_6	ADC channel 6.
ADC_CHANNEL_7	ADC channel 7.
ADC_CHANNEL_8	ADC channel 8.
ADC_CHANNEL_9	ADC channel 9.
ADC_CHANNEL_10	ADC channel 10.
ADC_CHANNEL_11	ADC channel 11.
ADC_CHANNEL_12	ADC channel 12.
ADC_CHANNEL_13	ADC channel 13.
ADC_CHANNEL_14	ADC channel 14.
ADC_CHANNEL_15	ADC channel 15.
ADC_CHANNEL_16	ADC channel 16.
ADC_CHANNEL_17	ADC channel 17.
ADC_CHANNEL_18	ADC channel 18.
ADC_CHANNEL_19	ADC channel 19.
ADC_CHANNEL_20	ADC channel 20.
ADC_CHANNEL_21	ADC channel 21.
ADC_CHANNEL_22	ADC channel 22.
ADC_CHANNEL_23	ADC channel 23.
ADC_CHANNEL_24	ADC channel 24.
ADC_CHANNEL_25	ADC channel 25.
ADC_CHANNEL_26	ADC channel 26.
ADC_CHANNEL_27	ADC channel 27.
ADC_CHANNEL_28	ADC channel 28.

ADC_CHANNEL_DUPLEX_A	Data duplexing register A.
ADC_CHANNEL_DUPLEX_B	Data duplexing register B.
ADC_CHANNEL_DUPLEX	Data duplexing register.
ADC_CHANNEL_TEMPERATURE	Temperature sensor output.
ADC_CHANNEL_VOLT	Internal reference voltage.
ADC_CHANNEL_0	ADC channel 0.
ADC_CHANNEL_1	ADC channel 1.
ADC_CHANNEL_2	ADC channel 2.
ADC_CHANNEL_3	ADC channel 3.
ADC_CHANNEL_4	ADC channel 4.
ADC_CHANNEL_5	ADC channel 5.
ADC_CHANNEL_6	ADC channel 6.
ADC_CHANNEL_7	ADC channel 7.
ADC_CHANNEL_8	ADC channel 8.
ADC_CHANNEL_9	ADC channel 9.
ADC_CHANNEL_10	ADC channel 10.
ADC_CHANNEL_11	ADC channel 11.
ADC_CHANNEL_12	ADC channel 12.
ADC_CHANNEL_13	ADC channel 13.
ADC_CHANNEL_14	ADC channel 14.
ADC_CHANNEL_15	ADC channel 15.
ADC_CHANNEL_16	ADC channel 16.
ADC_CHANNEL_17	ADC channel 17.
ADC_CHANNEL_18	ADC channel 18.

ADC_CHANNEL_19	ADC channel 19.
ADC_CHANNEL_20	ADC channel 20.
ADC_CHANNEL_21	ADC channel 21.
ADC_CHANNEL_22	ADC channel 22.
ADC_CHANNEL_23	ADC channel 23.
ADC_CHANNEL_24	ADC channel 24.
ADC_CHANNEL_25	ADC channel 25.
ADC_CHANNEL_26	ADC channel 26.
ADC_CHANNEL_27	ADC channel 27.
ADC_CHANNEL_28	ADC channel 28.
ADC_CHANNEL_SELF_DIAGNOSIS	Self-Diagnosis channel.
ADC_CHANNEL_TEMPERATURE	Temperature sensor output.
ADC_CHANNEL_VOLT	Internal reference voltage.
ADC_CHANNEL_DA0	D/A Converter Channel 0.
ADC_CHANNEL_DA1	D/A Converter Channel 1.
ADC_CHANNEL_DA2	D/A Converter Channel 2.
ADC_CHANNEL_DA3	D/A Converter Channel 3.

◆ adc_group_id_t

enum adc_group_id_t	
Enumerator	
ADC_GROUP_ID_0	Group ID 0.
ADC_GROUP_ID_1	Group ID 1.
ADC_GROUP_ID_2	Group ID 2.
ADC_GROUP_ID_3	Group ID 3.
ADC_GROUP_ID_4	Group ID 4.
ADC_GROUP_ID_5	Group ID 5.
ADC_GROUP_ID_6	Group ID 6.
ADC_GROUP_ID_7	Group ID 7.
ADC_GROUP_ID_8	Group ID 8.

◆ adc_group_mask_t

enum adc_group_mask_t	
Enumerator	
ADC_GROUP_MASK_NONE	Group Mask Unknown or None.
ADC_GROUP_MASK_0	Group Mask 0.
ADC_GROUP_MASK_1	Group Mask 1.
ADC_GROUP_MASK_2	Group Mask 2.
ADC_GROUP_MASK_3	Group Mask 3.
ADC_GROUP_MASK_4	Group Mask 4.
ADC_GROUP_MASK_5	Group Mask 5.
ADC_GROUP_MASK_6	Group Mask 6.
ADC_GROUP_MASK_7	Group Mask 7.
ADC_GROUP_MASK_8	Group Mask 8.
ADC_GROUP_MASK_ALL	All Groups.

◆ adc_state_t

enum adc_state_t	
ADC states.	
Enumerator	
ADC_STATE_IDLE	ADC is idle.
ADC_STATE_SCAN_IN_PROGRESS	ADC scan in progress.

4.3.2 BLE Interface

Interfaces

Functions

ble_status_t	R_BLE_Open (void) Open the BLE protocol stack. More...
ble_status_t	R_BLE_Close (void) Close the BLE protocol stack. More...
ble_status_t	R_BLE_Execute (void) Execute the BLE task. More...
uint32_t	R_BLE_IsTaskFree (void) Check the BLE task queue is free or not. More...
ble_status_t	R_BLE_SetEvent (ble_event_cb_t cb) Set event. More...
uint32_t	R_BLE_GetVersion (void) Get the BLE FIT module version. More...
uint32_t	R_BLE_GetLibType (void) Get the type of BLE protocol stack library. More...

Detailed Description

Interface for Bluetooth Low Energy functions.

Summary

The BLE interface for the Bluetooth Low Energy (BLE) peripheral provides Bluetooth Low Energy functionality.

The Bluetooth Low Energy interface can be implemented by:

- Bluetooth Low Energy Library of Extended Configuration (r_ble)
- Bluetooth Low Energy Library of Balance Configuration (r_ble)
- Bluetooth Low Energy Library of Compact Configuration (r_ble)

Modules

	GAP

	GATT_COMMON
	GATT_SERVER
	GATT_CLIENT
	L2CAP
	VS

Macros

#define	BLE_VERSION_MAJOR
#define	BLE_VERSION_MINOR
#define	BLE_LIB_EXTENDED
#define	BLE_LIB_BALANCE
#define	BLE_LIB_COMPACT

Typedefs

typedef void(*	ble_event_cb_t) (void) ble_event_cb_t is the callback function type for R_BLE_SetEvent(). More...

Macro Definition Documentation

◆ BLE_VERSION_MAJOR

#define BLE_VERSION_MAJOR
BLE Module Major Version.

◆ BLE_VERSION_MINOR

#define BLE_VERSION_MINOR
BLE Module Minor Version.

◆ BLE_LIB_EXTENDED

#define BLE_LIB_EXTENDED
BLE Protocol Stack Library Extended type.

◆ BLE_LIB_BALANCE

#define BLE_LIB_BALANCE
BLE Protocol Stack Library Balance type.

◆ BLE_LIB_COMPACT

#define BLE_LIB_COMPACT
BLE Protocol Stack Library Compacy type.

Typedef Documentation

◆ ble_event_cb_t

ble_event_cb_t
ble_event_cb_t is the callback function type for R_BLE_SetEvent(). **Parameters** [in] void **Returns** none

Function Documentation

◆ R_BLE_Open()

ble_status_t R_BLE_Open (void)
Open the BLE protocol stack. This function should be called once before using the BLE protocol stack. **Return values** BLE_SUCCESS(0x0000) Success

◆ R_BLE_Close()

ble_status_t R_BLE_Close (void)

Close the BLE protocol stack.

This function should be called once to close the BLE protocol stack.

Return values

BLE_SUCCESS(0x0000)	Success

◆ R_BLE_Execute()

ble_status_t R_BLE_Execute (void)

Execute the BLE task.

This handles all the task queued in the BLE protocol stack internal task queue and return. This function should be called repeatedly in the main loop.

Return values

BLE_SUCCESS(0x0000)	Success

◆ R_BLE_IsTaskFree()

uint32_t R_BLE_IsTaskFree (void)

Check the BLE task queue is free or not.

This function returns the BLE task queue free status. When this function returns 0x0, call R_BLE_Execute() to execute the BLE task.

Return values

0x0	BLE task queue is not free
0x1	BLE task queue is free

◆ R_BLE_SetEvent()

ble_status_t R_BLE_SetEvent (ble_event_cb_t *cb*)

Set event.

This function add an event in the BLE protocol stack internal queue. The event is handled in R_BLE_Execute just like Bluetooth event. This function is intended to be called in hardware interrupt context. Even if calling this function with the same cb before the cb is invoked, only one event is registered. The maximum number of the events can be registered at a time is eight.

Parameters

cb	The callback for the event.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_ALREADY_IN_PROGRESS(0x000A)	The event already registered with the callback.
BLE_ERR_CONTEXT_FULL(0x000B)	No free slot for the event.

◆ R_BLE_GetVersion()

uint32_t R_BLE_GetVersion (void)

Get the BLE FIT module version.

This function returns the BLE FIT module version.
The major version(BLE_VERSION_MAJOR) is contained in the two most significant bytes, and the minor version(BLE_VERSION_MINOR) occupies the remaining two bytes.

Return values

BLE_VERSION_MAJOR | BLE_VERSION_MINOR	

◆ R_BLE_GetLibType()

uint32_t R_BLE_GetLibType (void)
Get the type of BLE protocol stack library. This function returns the type of BLE protocol stack library. **Return values** BLE_LIB_EXTENDED(0x00) — Extended BLE_LIB_BALANCE(0x01) — Balance BLE_LIB_COMPACT(0x02) — Compact

4.3.2.1 GAP

Interfaces » BLE Interface

Functions

ble_status_t	R_BLE_GAP_Init (ble_gap_app_cb_t gap_cb) Initialize the Host Stack. More...
ble_status_t	R_BLE_GAP_Terminate (void) Terminate the Host Stack. More...
ble_status_t	R_BLE_GAP_UpdConn (uint16_t conn_hdl, uint8_t mode, uint16_t accept, st_ble_gap_conn_param_t *p_conn_updt_param) Update the connection parameters. More...
ble_status_t	R_BLE_GAP_SetDataLen (uint16_t conn_hdl, uint16_t tx_octets, uint16_t tx_time) Update the packet size and the packet transmit time. More...
ble_status_t	R_BLE_GAP_Disconnect (uint16_t conn_hdl, uint8_t reason) Disconnect the link. More...
ble_status_t	R_BLE_GAP_SetPhy (uint16_t conn_hdl, st_ble_gap_set_phy_param_t *p_phy_param) Set the phy for connection. More...

ble_status_t	R_BLE_GAP_SetDefPhy (st_ble_gap_set_def_phy_param_t *p_def_phy_param) Set the default phy which allows remote device to change. More...
ble_status_t	R_BLE_GAP_SetPrivMode (st_ble_dev_addr_t *p_addr, uint8_t *p_privacy_mode, uint8_t device_num) Set the privacy mode. More...
ble_status_t	R_BLE_GAP_ConfWhiteList (uint8_t op_code, st_ble_dev_addr_t *p_addr, uint8_t device_num) Set White List. More...
ble_status_t	R_BLE_GAP_GetVerInfo (void) Get the version number of the Controller and the host stack. More...
ble_status_t	R_BLE_GAP_ReadPhy (uint16_t conn_hdl) Get the phy settings. More...
ble_status_t	R_BLE_GAP_ConfRslvList (uint8_t op_code, st_ble_dev_addr_t *p_addr, st_ble_gap_rslv_list_key_set_t *p_peer_irk, uint8_t device_num) Set Resolving List. More...
ble_status_t	R_BLE_GAP_EnableRpa (uint8_t enable) Enable/Disable address resolution and generation of a resolvable private address. More...
ble_status_t	R_BLE_GAP_SetRpaTo (uint16_t rpa_timeout) Set the update time of resolvable private address. More...
ble_status_t	R_BLE_GAP_ReadRpa (st_ble_dev_addr_t *p_addr) Get the resolvable private address of local device. More...
ble_status_t	R_BLE_GAP_ReadRssi (uint16_t conn_hdl) Get RSSI. More...

ble_status_t	R_BLE_GAP_ReadChMap (uint16_t conn_hdl) Get the Channel Map. More...
ble_status_t	R_BLE_GAP_SetRandAddr (uint8_t *p_random_addr) Set a random address. More...
ble_status_t	R_BLE_GAP_SetAdvParam (st_ble_gap_adv_param_t *p_adv_param) Set advertising parameters. More...
ble_status_t	R_BLE_GAP_SetAdvSresData (st_ble_gap_adv_data_t *p_adv_srsp_data) Set advertising data/scan response data/periodic advertising data. More...
ble_status_t	R_BLE_GAP_StartAdv (uint8_t adv_hdl, uint16_t duration, uint8_t max_extd_adv_evts) Start advertising. More...
ble_status_t	R_BLE_GAP_StopAdv (uint8_t adv_hdl) Stop advertising. More...
ble_status_t	R_BLE_GAP_SetPerdAdvParam (st_ble_gap_perd_adv_param_t *p_perd_adv_param) Set periodic advertising parameters. More...
ble_status_t	R_BLE_GAP_StartPerdAdv (uint8_t adv_hdl) Start periodic advertising. More...
ble_status_t	R_BLE_GAP_StopPerdAdv (uint8_t adv_hdl) Stop periodic advertising. More...
ble_status_t	R_BLE_GAP_GetRemainAdvBufSize (uint16_t *p_remain_adv_data_size, uint16_t *p_remain_perd_adv_data_size) Get buffer size for advertising data/scan response data/periodic advertising data in the Controller. More...

ble_status_t	R_BLE_GAP_RemoveAdvSet (uint8_t op_code, uint8_t adv_hdl) Delete advertising set. More...
ble_status_t	R_BLE_GAP_CreateConn (st_ble_gap_create_conn_param_t *p_param) Request for a link establishment. More...
ble_status_t	R_BLE_GAP_CancelCreateConn (void) Cancel the request for a link establishment. More...
ble_status_t	R_BLE_GAP_SetChMap (uint8_t *p_channel_map) Set the Channel Map. More...
ble_status_t	R_BLE_GAP_StartScan (st_ble_gap_scan_param_t *p_scan_param, st_ble_gap_scan_on_t *p_scan_enable) Set scan parameter and start scan. More...
ble_status_t	R_BLE_GAP_StopScan (void) Stop scan. More...
ble_status_t	R_BLE_GAP_CreateSync (st_ble_dev_addr_t *p_addr, uint8_t adv_sid, uint16_t skip, uint16_t sync_to) Request for a periodic sync establishment. More...
ble_status_t	R_BLE_GAP_CancelCreateSync (void) Cancel the request for a periodic sync establishment. More...
ble_status_t	R_BLE_GAP_TerminateSync (uint16_t sync_hdl) Terminate the periodic sync. More...
ble_status_t	R_BLE_GAP_ConfPerdAdvList (uint8_t op_code, st_ble_dev_addr_t *p_addr, uint8_t *p_adv_sid_set, uint8_t device_num) Set Periodic Advertiser List. More...
ble_status_t	R_BLE_GAP_AuthorizeDev (uint16_t conn_hdl, uint8_t author_flag)

	Authorize a remote device. More...
ble_status_t	R_BLE_GAP_GetRemDevInfo (uint16_t conn_hdl) Get the information about remote device. More...
ble_status_t	R_BLE_GAP_SetPairingParams (st_ble_gap_pairing_param_t *p_pair_param) Set the parameters using pairing. More...
ble_status_t	R_BLE_GAP_SetLocIdInfo (st_ble_dev_addr_t *p_lc_id_addr, uint8_t *p_lc_irk) Set the IRK and the identity address distributed to a remote device. More...
ble_status_t	R_BLE_GAP_SetLocCsrk (uint8_t *p_local_csrk) Set the CSRK distributed to a remote device. More...
ble_status_t	R_BLE_GAP_StartPairing (uint16_t conn_hdl) Start pairing. More...
ble_status_t	R_BLE_GAP_ReplyPairing (uint16_t conn_hdl, uint8_t response) Reply the pairing request from a remote device. More...
ble_status_t	R_BLE_GAP_StartEnc (uint16_t conn_hdl) Encryption the link. More...
ble_status_t	R_BLE_GAP_ReplyPasskeyEntry (uint16_t conn_hdl, uint32_t passkey, uint8_t response) Reply the passkey entry request. More...
ble_status_t	R_BLE_GAP_ReplyNumComp (uint16_t conn_hdl, uint8_t response) Reply the numeric comparison request. More...
ble_status_t	R_BLE_GAP_NotifyKeyPress (uint16_t conn_hdl, uint8_t key_press) Notify the input key type which a remote device inputs in the passkey entry. More...

ble_status_t	R_BLE_GAP_GetDevSecInfo (uint16_t conn_hdl, st_ble_gap_auth_info_t *p_sec_info) Get the security information about the remote device. More...
ble_status_t	R_BLE_GAP_ReplyExKeyInfoReq (uint16_t conn_hdl) Distribute the keys of local device. More...
ble_status_t	R_BLE_GAP_SetRemOobData (st_ble_dev_addr_t *p_addr, uint8_t oob_data_flag, st_ble_gap_oob_data_t *p_oob) Set the oob data from a remote device. More...
ble_status_t	R_BLE_GAP_CreateScOobData (void) Create data for oob in secure connection. More...
ble_status_t	R_BLE_GAP_SetBondInfo (st_ble_gap_bond_info_t *p_bond_info, uint8_t device_num, uint8_t *p_set_num) Set the bonding information stored in non-volatile memory to the host stack. More...
void	R_BLE_GAP_DeleteBondInfo (int32_t local, int32_t remote, st_ble_dev_addr_t *p_addr, ble_gap_del_bond_cb_t gap_del_bond_cb) This function deletes the bonding information in Host Stack. When a function for deleting the bonding information stored in non-volatile area is registered by the gap_del_bond_cb parameter, it is deleted as well as the bonding information in Host Stack. More...
ble_status_t	R_BLE_GAP_ReplyLtkReq (uint16_t conn_hdl, uint16_t ediv, uint8_t *p_peer_rand, uint8_t response) Reply the LTK request from a remote device. More...

Data Structure Documentation

◆ st_ble_evt_data_t

struct st_ble_evt_data_t		
st_ble_evt_data_t is the type of the data notified in a GAP Event.		
Data Fields		
uint16_t	param_len	The size of GAP Event parameters.
void *	p_param	GAP Event parameters. This parameter differs in each GAP Event.

◆ st_ble_dev_addr_t

struct st_ble_dev_addr_t		
st_ble_dev_addr_t is the type of bluetooth device address(BD_ADDR). ***Note*** *The BD address setting format is little endian.* *If the address is "AA:BB:CC:DD:EE:FF", set the byte array in the order {0xFF, 0xEE, 0xDD, 0xCC, 0xBB, 0xAA}.*		
Data Fields		
uint8_t	addr[BLE_BD_ADDR_LEN]	BD_ADDR.

uint8_t	type	Bluetooth address type. macro: BLE_GAP_ADDR_PUBLIC(0x00) — Public Address. BLE_GAP_ADDR_RAND(0x01) — Random Address.

◆ st_ble_gap_ext_adv_param_t

struct st_ble_gap_ext_adv_param_t

Advertising parameters.

Data Fields

uint8_t	adv_hdl	Advertising handle identifying the advertising set to be set the advertising parameters. Valid range is 0x00 - 0x03. In the first advertising parameters setting, the advertising set specified by adv_hdl is generated. The Advertising Set ID(Advertising SID) of the advertising set is same as adv_hdl.
uint16_t	adv_prop_type	Advertising packet type. Legacy advertising PDU type, or bitwise or of Extended advertising PDU type and Extended advertising option. category: Legacy Advertising PDU type BLE_GAP_LEGACY_PROP_ADV_IND(0x0013) — Connectable and scannable undirected Legacy Advertising Packet BLE_GAP_LEGACY_PROP_ADV_DIRECT_IND(— Connectable directed (low duty

				0x0015)	cycle) Legacy Advertising Packet
				BLE_GAP_LEGACY_PROP_ADV_HDC_DIRECT_IND(0x001D)	Connectable directed (high duty cycle) Legacy Advertising Packet
				BLE_GAP_LEGACY_PROP_ADV_SCAN_IND(0x0012)	Scannable undirected Legacy Advertising Packet
				BLE_GAP_LEGACY_PROP_ADV_NONCONN_IND(0x0010)	Non-connectable and non-scannable undirected Legacy Advertising Packet
			Extended Advertising PDU type	BLE_GAP_EXT_PROP_ADV_CONN_NOSCAN_UNDIRECT(0x0001)	Connectable and non-scannable undirected Extended Advertising Packet
				BLE_GAP_EXT_PROP_ADV_CONN_NOSCAN_DIRECT(0x0005)	Connectable and non-scannable directed (low duty cycle) Extended Advertising Packet
				BLE_GAP_EXT_PR	Connectable and

			OP_ADV_CONN_NOSCAN_HDC_DIRECT(0x000D) non-scannable directed (high duty cycle) Extended Advertising Packet
			BLE_GAP_EXT_PROP_ADV_NOCONN_SCAN_UNDIRECT(0x0002) Non-connectable and scannable undirected Extended Advertising Packet
			BLE_GAP_EXT_PROP_ADV_NOCONN_SCAN_DIRECT(0x0006) Non-connectable and scannable directed (low duty cycle) Extended Advertising Packet
			BLE_GAP_EXT_PROP_ADV_NOCONN_SCAN_HDC_DIRECT(0x000E) Non-connectable and scannable directed (high duty cycle) Extended Advertising Packet
			BLE_GAP_EXT_PROP_ADV_NOCONN_NOSCAN_UNDIRECT(0x0000) Non-connectable and non-scannable undirected Extended Advertising

				Packet
			BLE_GAP_EXT_PROP_ADV_NOCONN_NOSCAN_DIRECT(0x0004)	Non-connectable and non-scannable directed (low duty cycle) Extended Advertising Packet
			BLE_GAP_EXT_PROP_ADV_NOCONN_NOSCAN_HDC_DIRECT(0x000C)	Non-connectable and non-scannable directed (high duty cycle) Extended Advertising Packet
		Extended Advertising Option	BLE_GAP_EXT_PROP_ADV_ANONYMOUS(0x0020)	Omit the advertiser address from Extended Advertising Packet.
			BLE_GAP_EXT_PROP_ADV_INCLUDE_TX_POWER(0x0040)	Indicate that the advertising data includes TX Power.
uint32_t	adv_intv_min	Minimum advertising interval. Time(ms) = adv_intv_min * 0.625. Valid range is 0x00000020 - 0x00FFFFFF.		
uint32_t	adv_intv_max	Maximum Advertising interval.		

<table>
<tr><td></td><td></td><td>Time(ms) = adv_intv_max * 0.625.
Valid range is 0x00000020 - 0x00FFFFFF.</td></tr>
<tr><td>uint8_t</td><td>adv_ch_map</td><td>The adv_ch_map is channels used in advertising with primary advertising channels.

It is a bitwise OR of the following values.
<table><tr><th>macro</th><th>description</th></tr><tr><td>BLE_GAP_ADV_CH_37(0x01)</td><td>Use 37 CH.</td></tr><tr><td>BLE_GAP_ADV_CH_38(0x02)</td><td>Use 38 CH.</td></tr><tr><td>BLE_GAP_ADV_CH_39(0x04)</td><td>Use 39 CH.</td></tr><tr><td>BLE_GAP_ADV_CH_ALL(0x07)</td><td>Use 37 - 39 CH.</td></tr></table></td></tr>

<tr><td>uint8_t</td><td>adv_phy</td><td>Primary ADV PHY.

In this parameter, only 1M PHY and Coded PHY can be specified, and 2M PHY cannot be specified.<table><tr><th>macro</th><th>description</th></tr><tr><td>BLE_GAP_ADV_PHY_1M(0x01)</td><td>Use 1M PHY as Primary Advertising PHY.
When the adv_prop_typ</td></tr></table></td></tr>
</table>

		e field is Legacy Advertising PDU type, this field shall be set to BLE_GAP_ADV_PHY_1M. BLE_GAP_ADV_PHY_CD(0x03) Use Coded PHY(S=8) as Primary Advertising PHY. Coding scheme is configured by R_BLE_VS_SetCodingScheme().
uint8_t	sec_adv_max_skip	Secondary ADV Max Skip. Valid range is 0x00 - 0xFF. When this field is 0x00, AUX_ADV_IND is sent before the next advertising event. When the adv_prop_type field is Legacy Advertising PDU, this field is ignored.
uint8_t	sec_adv_phy	Secondary ADV Phy. When the adv_prop_type is Legacy Advertising PDU, this field is ignored. macro / description BLE_GAP_ADV_PHY_1M(0x01) Use 1M PHY as Secondary Advertising PHY. BLE_GAP_ADV_PHY_2M(0x02) Use 2M PHY as Secondary Advertising PHY. BLE_GAP_ADV_PHY_CD(0x03) Use Coded PHY(S=8) as Secondary Advertising PHY. Coding scheme is configured by R_BLE_VS_SetCodingScheme().
uint8_t	scan_req_ntf_flag	Scan Request Notifications Flag.

		When the adv_prop_type field is non-scannable Advertising PDU, this field is ignored. macro / description BLE_GAP_SCAN_REQ_NTF_DISABLE(0x00) — Disable Scan Request Notification. BLE_GAP_SCAN_REQ_NTF_ENABLE(0x01) — Enable Scan Request Notification. When a Scan Request Packet from Scanner has been received, the BLE_GAP_EVENT_SCAN_REQ_RECV event is notified.

◆ st_ble_gap_adv_data_t

struct st_ble_gap_adv_data_t		
Advertising data/scan response data/periodic advertising data.		
Data Fields		
uint8_t	adv_hdl	Advertising handle identifying the advertising set to be set advertising data/scan response/periodic advertising data. Valid range is 0x00 - 0x03.
uint8_t	data_type	Data type. macro / description BLE_GAP_ADV_DATA_MODE(0x00) — Advertising data. BLE_GAP_SCAN_RSP_DATA_MODE(0x01) — Scan response data. BLE_GAP_PERD_ADV_DATA_MODE(0x02) — Periodic advertising data.
uint16_t	data_length	The length of advertising

<table>
<tr><td></td><td></td><td>data/scan response data/periodic advertising data (in bytes).

In case of Legacy Advertising PDU, the length is 0 - 31 bytes.
In case of Extended Advertising PDU, the length is 0 - 1650 bytes.
Note that the length of the advertising data/scan response data in the BLE_MAX_NO_OF_ADV_SETS_SUPPORTED number of the advertising sets may not exceed the buffer size(4250 bytes) in Controller.

In case of periodic advertising data, the length is 0 - 1650 bytes.
Note that the length of the periodic advertising data in the BLE_MAX_NO_OF_ADV_SETS_SUPPORTED number of the advertising sets may not exceed the buffer size(4306 bytes) in Controller.

When this field is 0, the operations specified by the zero_length_flag is executed.</td></tr>
<tr><td>uint8_t *</td><td>p_data</td><td>Advertising data/scan response data/periodic advertising data.

When the data_length field is 0, this field is ignored.</td></tr>
<tr><td>uint8_t</td><td>zero_length_flag</td><td>Operation when the data_length field is 0.

If the data_length is other than 0, this field is ignored.

<table><tr><th>macro</th><th>description</th></tr><tr><td>BLE_GAP_DATA_0_CLEAR(0x01)</td><td>Clear the advertising data/scan response data/periodic advertising data in the advertising set.</td></tr></table></td></tr>
</table>

		BLE_GAP_DATA_0_DID_UPD(0x02)	Update Advertising DID without changing advertising data. If the data_type field is BLE_GAP_ADV_DATA_MODE, this value is allowed.

◆ st_ble_gap_perd_adv_param_t

struct st_ble_gap_perd_adv_param_t

Periodic advertising parameter.

Data Fields

uint8_t	adv_hdl	Advertising handle identifying the advertising set to be set periodic advertising parameter. Valid range is 0x00 - 0x03.
uint16_t	prop_type	Periodic ADV Properties. The prop_type field is set to the following values. If the type of the periodic advertising data cannot be applied from the following, set 0x0000. macro: BLE_GAP_PERD_PROP_TX_POWER(0x0040) — description: Indicate that periodic advertising data includes Tx Power.
uint16_t	perd_intv_min	Minimum Periodic Advertising Interval. Time(ms) = perd_intv_min * 1.25. Valid range is 0x0006 - 0xFFFF.
uint16_t	perd_intv_max	Maximum Periodic Advertising Interval. Time(ms) = perd_intv_max * 1.25. Valid range is 0x0006 - 0xFFFF.

◆ st_ble_gap_scan_phy_param_t

struct st_ble_gap_scan_phy_param_t

Scan parameters per scan PHY.

In case of start scanning with both 1M PHY and Coded PHY, adjust scan windows and scan intervals according to the following.
p_phy_param_1M->scan_window / p_phy_param_1M->scan_intv + p_phy_param_coded->scan_window / p_phy_param_coded->scan_intv <= 1

Data Fields

uint8_t	scan_type	Scan type. macro: description BLE_GAP_SCAN_PASSIVE(0x00): Passive Scan. BLE_GAP_SCAN_ACTIVE(0x01): Active Scan.
uint16_t	scan_intv	Scan interval. interval(ms) = scan_intv * 0.625. Valid range is 0x0000 and 0x0004 - 0xFFFF.
uint16_t	scan_window	Scan window. window(ms) = scan_window * 0.625. Valid range is 0x0000 and 0x0004 - 0xFFFF.

◆ st_ble_gap_ext_scan_param_t

struct st_ble_gap_ext_scan_param_t

Scan parameters.

Data Fields

uint8_t	o_addr_type	Own BD Address Type. In case of passive scan, this field is ignored. macro: description BLE_GAP_ADDR_PUBLIC(0x00): Public Address BLE_GAP_ADDR_RAND(0x01): Random Address

		BLE_GAP_ADDR_RPA_ID_PUBLIC(0x02)	Resolvable Private Address. If the IRK of local device has not been registered in Resolving List, public address is used.
		BLE_GAP_ADDR_RPA_ID_RANDOM(0x03)	Resolvable Private Address. If the IRK of local device has not been registered in Resolving List, the random address set by R_BLE_GAP_SetRandAddr() is used.
uint8_t	filter_policy	Scan Filter Policy.	
		macro	description
		BLE_GAP_SCAN_ALLOW_ADV_ALL(0x00)	Accept all advertising and scan response PDUs except directed advertising PDUs not addressed to local device.
		BLE_GAP_SCAN_ALLOW_ADV_WLST(0x01)	Accept only advertising and scan response PDUs from remote devices whose address is registered in the White List. Directed advertising PDUs which are not addressed to

				local device is ignored.
			BLE_GAP_SCAN_ALLOW_ADV_EXCEPT_DIRECTED(0x02)	Accept all advertising and scan response PDUs except directed advertising PDUs whose the target address is identity address but doesn't address local device. However directed advertising PDUs whose the target address is the local resolvable private address are accepted.
			BLE_GAP_SCAN_ALLOW_ADV_EXCEPT_DIRECTED_WLST(0x03)	Accept all advertising and scan response PDUs. The following are excluded. • Advertising and scan response PDUs where the advertiser's identity address is not in the White

		List. • Directed advertising PDUs whose the target address is identity address but doesn't address local device. However directed advertising PDUs whose the target address is the local resolvable private address are accepted.
st_ble_gap_scan_phy_param_t *	p_phy_param_1M	Scan parameters 1M PHY. When this field is NULL, Controller doesn't set the scan parameters for 1M PHY.
st_ble_gap_scan_phy_param_t *	p_phy_param_coded	Scan parameters Coded PHY. When this field is NULL, Controller doesn't set the scan parameters for Coded PHY.

◆ st_ble_gap_scan_on_t

struct st_ble_gap_scan_on_t

Parameters configured when scanning starts.

Data Fields

uint8_t	proc_type	Procedure type. macro: description BLE_GAP_SC_PROC_OBS(0x00): Observation Procedure. Notify all advertising PDUs. BLE_GAP_SC_PROC_LIM(0x01): Limited Discovery Procedure. Notify advertising PDUs from only devices in the limited discoverable mode. BLE_GAP_SC_PROC_GEN(0x02): General Discovery Procedure. Notify advertising PDUs from devices in the limited discoverable mode and the general discoverable mode.
uint8_t	filter_dups	Filter duplicates. macro: description BLE_GAP_SCAN_FILT_DUPLIC_DISABLE(0x00): Duplicate filter disabled. BLE_GAP_SCAN_FILT_DUPLIC_ENABLE(0x01): Duplicate filter enabled. BLE_GAP_SCAN_FILT_DUPLIC_ENABLE_FOR_PERIOD(0x02): Duplicate filtering enabled, reset for each scan period

uint16_t	duration	Scan duration. Time(ms) = duration * 10. Valid range is 0x0000 - 0xFFFF. If this field is set to 0x0000, scanning is continued until R_BLE_GAP_StopScan() is called. When the period field is zero and the time specified the duration field expires, BLE_GAP_EVENT_SCAN_TO event notifies the application layer that scanning stops.
uint16_t	period	Scan period. Time(s) = N * 1.28. Valid range is 0x0000 - 0xFFFF. If the duration field is set to 0x0000, this field is ignored.

◆ st_ble_gap_conn_param_t

struct st_ble_gap_conn_param_t		
Connection parameters included in connection interval, slave latency, supervision timeout, ce length. This structure is used in R_BLE_GAP_CreateConn() and R_BLE_GAP_UpdConn(). Set the fields in this structure to match the following condition. Supervision_timeout(ms) >= (1 + conn_latency) * conn_intv_max_Time(ms) conn_intv_max_Time(ms) = conn_intv_max * 1.25 Supervision_timeout(ms) = sup_to * 10		
Data Fields		
uint16_t	conn_intv_min	Minimum connection interval. Time(ms) = conn_intv_min * 1.25. Valid range is 0x0006 - 0x0C80.
uint16_t	conn_intv_max	Maximum connection interval. Time(ms) = conn_intv_max * 1.25. Valid range is 0x0006 - 0x0C80.
uint16_t	conn_latency	Slave latency. Valid range is 0x0000 - 0x01F3.
uint16_t	sup_to	Supervision timeout.

		Time(ms) = sup_to * 10. Valid range is 0x000A - 0x0C80.
uint16_t	min_ce_length	Minimum CE Length. Valid range is 0x0000 - 0xFFFF.
uint16_t	max_ce_length	Maximum CE Length. Valid range is 0x0000 - 0xFFFF.

◆ st_ble_gap_conn_phy_param_t

struct st_ble_gap_conn_phy_param_t		
Connection parameters per PHY.		
Data Fields		
uint16_t	scan_intv	Scan interval. Time(ms) = scan_intv * 0.625. Valid range is 0x0004 - 0xFFFF.
uint16_t	scan_window	Scan window. Time(ms) = scan_window * 0.625. Valid range is 0x0004 - 0xFFFF.
st_ble_gap_conn_param_t *	p_conn_param	Connection interval, slave latency, supervision timeout, and CE length.

◆ st_ble_gap_create_conn_param_t

struct st_ble_gap_create_conn_param_t		
Connection parameters used in R_BLE_GAP_CreateConn().		
Data Fields		
uint8_t	init_filter_policy	This field specifies whether the White List is used or not, when connecting with a remote device. macro: BLE_GAP_INIT_FILT_USE_ADDR(0x00) — description: White List is not used. The remote device to be connected is specified by the *remote_bd_addr* field and the

		remote_bd_addr_type field is used. BLE_GAP_INIT_FILT_USE_WLST(0x01): White List is used. The remote device registered in White List is connected with local device. The *remote_bd_addr* field and the *remote_bd_addr_type* field are ignored.
uint8_t	remote_bd_addr[BLE_BD_ADDR_LEN]	Address of the device to be connected. *Note* *The BD address setting format is little endian. If the address is "AA:BB:CC:DD:EE:FF", set the byte array in the order {0xFF, 0xEE, 0xDD, 0xCC, 0xBB, 0xAA}.*
uint8_t	remote_bd_addr_type	Address type of the device to be connected. BLE_GAP_ADDR_PUBLIC(0x00): Public Address or Public Identity Address BLE_GAP_ADDR_RAND(0x01): Random Address or Random (Static) Identity Address
uint8_t	own_addr_type	Address type which local device uses in creating a link with the remote device. BLE_GAP_ADDR_PUBLIC(0x0: Public Address

		0) BLE_GAP_ADDR_RAND(0x01) Random Address BLE_GAP_ADDR_RPA_ID_PUBLIC(0x02) Resolvable Private Address. If the IRK of local device has not been registered in Resolving List, public address is used. BLE_GAP_ADDR_RPA_ID_RANDOM(0x03) Resolvable Private Address. If the IRK of local device has not been registered in Resolving List, the random address set by R_BLE_GAP_SetRandAddr().
st_ble_gap_conn_phy_param_t *	p_conn_param_1M	Connection parameters for 1M PHY. If this field is set to NULL, 1M PHY is not used in connecting.
st_ble_gap_conn_phy_param_t *	p_conn_param_2M	Connection parameters for 2M PHY. If this field is set to NULL, 2M PHY is not used in connecting.
st_ble_gap_conn_phy_param_t *	p_conn_param_coded	Connection parameters for Coded PHY. If this field is set to NULL, Coded PHY is not used in connecting.

◆ st_ble_gap_rslv_list_key_set_t

struct st_ble_gap_rslv_list_key_set_t		
IRK of a remote device and IRK type of local device used in R_BLE_GAP_ConfRslvList().		
Data Fields		

uint8_t	remote_irk[BLE_GAP_IRK_SIZE]	IRK of a remote device to be registered in the Resolving List.
uint8_t	local_irk_type	IRK type of the local device to be registered in the Resolving List. macro: BLE_GAP_RL_LOC_KEY_ALL_ZERO(0x00) — All-zero IRK. macro: BLE_GAP_RL_LOC_KEY_REGISTERED(0x01) — The IRK registered by R_BLE_GAP_SetLocIdInfo().

◆ st_ble_gap_set_phy_param_t

struct st_ble_gap_set_phy_param_t

PHY configuration parameters used in R_BLE_GAP_SetPhy().

Data Fields

uint8_t	tx_phys	Transmitter PHY preference. The tx_phys field is set to a bitwise OR of the following values. All other values are ignored. macro: BLE_GAP_SET_PHYS_HOST_PREF_1M(0x01) — Use 1M PHY for Transmitter PHY. macro: BLE_GAP_SET_PHYS_HOST_PREF_2M(0x02) — Use 2M PHY for Transmitter PHY. macro: BLE_GAP_SET_PHYS_HOST_PREF_CD(0x04) — Use Coded PHY for Transmitter PHY.
uint8_t	rx_phys	Receiver PHY preference. The rx_phys field is set to a bitwise OR of the following values. All other values are ignored. macro | description

		BLE_GAP_SET_PHYS_HOST_PREF_1M(0x01) Use 1M PHY for Receiver PHY. BLE_GAP_SET_PHYS_HOST_PREF_2M(0x02) Use 2M PHY for Receiver PHY. BLE_GAP_SET_PHYS_HOST_PREF_CD(0x04) Use Coded PHY for Receiver PHY.
uint16_t	phy_options	Coding scheme used in Coded PHY. Select one of the following. macro / description BLE_GAP_SET_PHYS_OP_HOST_NO_PREF(0x00) No preferred coding. BLE_GAP_SET_PHYS_OP_HOST_PREF_S_2(0x01) Use S=2 coding. BLE_GAP_SET_PHYS_OP_HOST_PREF_S_8(0x02) Use S=8 coding.

◆ st_ble_gap_set_def_phy_param_t

struct st_ble_gap_set_def_phy_param_t		
PHY preferences which allows a remote device to set used in R_BLE_GAP_SetDefPhy().		
Data Fields		
uint8_t	tx_phys	Transmitter PHY preferences which a remote device may change. The tx_phys field is set to a bitwise OR of the following values. All other values are ignored. macro / description BLE_GAP_SET_PHYS_HOST_ Allow a remote device

		PREF_1M(0x01) to set 1M PHY for transmitter PHY. BLE_GAP_SET_PHYS_HOST_PREF_2M(0x02) Allow a remote device to set 2M PHY for transmitter PHY. BLE_GAP_SET_PHYS_HOST_PREF_CD(0x04) Allow a remote device to set Coded PHY for transmitter PHY.
uint8_t	rx_phys	Receiver PHY preferences which a remote device may change. The rx_phys field is set to a bitwise OR of the following values. All other values are ignored.

macro	description
BLE_GAP_SET_PHYS_HOST_PREF_1M(0x01)	Allow a remote device to set 1M PHY for receiver PHY.
BLE_GAP_SET_PHYS_HOST_PREF_2M(0x02)	Allow a remote device to set 2M PHY for receiver PHY.
BLE_GAP_SET_PHYS_HOST_PREF_CD(0x04)	Allow a remote device to set Coded PHY for receiver PHY.

◆ st_ble_gap_auth_info_t

struct st_ble_gap_auth_info_t		
Pairing parameters required from a remote device or information about keys distributed from a remote device.		
Data Fields		
uint8_t	security	Security level.

		value / description 0x01 The remote device requests Unauthenticated pairing. 0x02 The remote device requests Authenticated pairing.
uint8_t	pair_mode	Pairing mode. value / description 0x01 The remote device requests Legacy pairing. 0x02 The remote device requests Secure Connections.
uint8_t	bonding	Bonding policy. value / description 0x00 The remote device does not store the Bonding information. 0x01 The remote device stores the Bonding information.
uint8_t	ekey_size	Encryption key size.

◆ st_ble_gap_key_dist_t

struct st_ble_gap_key_dist_t		
Keys distributed from a remote device.		
Data Fields		
uint8_t	enc_info[BLE_GAP_LTK_SIZE]	LTK.
uint8_t	mid_info[BLE_GAP_EDIV_SIZE +BLE_GAP_RAND_64_BIT_SIZE]	Ediv and rand. The first two bytes is ediv, the remaining bytes are rand.

uint8_t	id_info[BLE_GAP_IRK_SIZE]	IRK.
uint8_t	id_addr_info[BLE_GAP_ID_ADDR_SIZE]	Identity address. The first byte is address type. The remaining bytes are device address.
uint8_t	sign_info[BLE_GAP_CSRK_SIZE]	CSRK.

◆ st_ble_gap_key_ex_param_t

struct st_ble_gap_key_ex_param_t		
This structure includes the distributed keys and negotiated LTK size.		
Data Fields		
st_ble_gap_key_dist_t *	p_keys_info	Key information.
uint8_t	keys	Type of the distributed keys. This field is a bitwise OR of the following values. Bit Number / description 0 — LTK and Master Identification. LTK is distributed in Secure Connections, even if the bit is 1. 1 — IRK and Identity Address Information. 2 — CSRK
uint8_t	ekey_size	The negotiated LTK size.

◆ st_ble_gap_pairing_param_t

struct st_ble_gap_pairing_param_t		
Pairing parameters used in R_BLE_GAP_SetPairingParams().		
Data Fields		
uint8_t	iocap	IO capabilities of local device. Select one of the following. macro / description BLE_GAP_IOC — Output

			AP_DISPLAY_ONLY(0x00)	function : Local device has the ability to display a 6 digit decimal number. Input function : None
			BLE_GAP_IOCAP_DISPLAY_YESNO(0x01)	Output function : Output function : Local device has the ability to display a 6 digit decimal number. Input function : Local device has the ability to indicate 'yes' or 'no'
			BLE_GAP_IOCAP_KEYBOARD_ONLY(0x02)	Output function : None Input function : Local device has the ability to input the number '0' - '9'.
			BLE_GAP_IOCAP_NOINPUT_NOOUTPUT(0x03)	Output function : None Input function : None
			BLE_GAP_IOCAP_KEYBOARD_DISPLAY(0x04)	Output function : Output function : Local device has the ability to display a 6 digit decimal number. Input function : Local device has the ability

<table>
<tr><td></td><td></td><td>to input the number '0' - '9'.</td></tr>
<tr><td>uint8_t</td><td>mitm</td><td>MITM protection policy.

Select one of the following.

<table><tr><th>macro</th><th>description</th></tr><tr><td>BLE_GAP_SEC_MITM_BEST_EFFORT(0x00)</td><td>MITM Protection not required.</td></tr><tr><td>BLE_GAP_SEC_MITM_STRICT (0x01)</td><td>MITM Protection required.</td></tr></table></td></tr>
<tr><td>uint8_t</td><td>bonding</td><td>Bonding policy.<table><tr><th>macro</th><th>description</th></tr><tr><td>BLE_GAP_BONDING_NONE(0x00)</td><td>Local device doesn't stores Bonding information.</td></tr><tr><td>BLE_GAP_BONDING (0x01)</td><td>Local device stores Bonding information.</td></tr></table></td></tr>
<tr><td>uint8_t</td><td>max_key_size</td><td>Maximum LTK size(in bytes).

Valid range is 7 - 16.
This field shall be set to a value not less than the min_key_size field.</td></tr>
<tr><td>uint8_t</td><td>min_key_size</td><td>Minimum LTK size(in bytes).

Valid range is 7 - 16.
This field shall be set to a value not more than the max_key_size field.</td></tr>
<tr><td>uint8_t</td><td>loc_key_dist</td><td>Type of keys to be distributed from local device.

The loc_key_dist field is set to a bitwise OR of the following values.

<table><tr><th>macro</th><th>description</th></tr><tr><td>BLE_GAP_KEY_DIST_ENCKEY</td><td>LTK</td></tr></table></td></tr>
</table>

		(0x01) BLE_GAP_KEY_DIST_IDKEY(0x02) IRK and Identity Address. BLE_GAP_KEY_DIST_SIGNKEY(0x04) CSRK
uint8_t	rem_key_dist	Type of keys which local device requests a remote device to distribute. The rem_key_dist field is set to a bitwise OR of the following values. macro / description BLE_GAP_KEY_DIST_ENCKEY(0x01) LTK. In case of Secure Connections, LTK is notified even if this bit is not set. BLE_GAP_KEY_DIST_IDKEY(0x02) IRK and Identity Address. BLE_GAP_KEY_DIST_SIGNKEY(0x04) CSRK
uint8_t	key_notf	Support for Key Press Notification in Passkey Entry. macro / description BLE_GAP_SC_KEY_PRESS_NTF_NOT_SPRT(0x00) Not support for Key Press Notification. BLE_GAP_SC_KEY_PRESS_NTF_SPRT(0x01) Support for Key Press Notification.
uint8_t	sec_conn_only	Determine whether to accept only Secure Connections or not. macro / description BLE_GAP_SC_BEST_EFFORT(0x00) Accept Legacy pairing and Secure

			Connections.
		BLE_GAP_SC_STRICT(0x01)	Accept only Secure Connections.

◆ st_ble_gap_oob_data_t

struct st_ble_gap_oob_data_t		
Oob data received from the remote device. This is used in R_BLE_GAP_SetRemOobData().		
Data Fields		
uint8_t	legacy_oob[BLE_GAP_LEGACY_OOB_SIZE]	OOB data used in Legacy Pairing.
uint8_t	sc_cnf_val[BLE_GAP_OOB_CONFIRM_VAL_SIZE]	OOB confirmation value used in Secure Connections.
uint8_t	sc_rand[BLE_GAP_OOB_RANDOM_VAL_SIZE]	OOB rand used in Secure Connections.

◆ st_ble_gap_ver_num_t

struct st_ble_gap_ver_num_t		
Version number of host stack.		
Data Fields		
uint8_t	major	Major version number.
uint8_t	minor	Minor version number.
uint8_t	subminor	Subminor version number.

◆ st_ble_gap_loc_ver_info_t

struct st_ble_gap_loc_ver_info_t		
Version number of Controller. Refer Bluetooth SIG Assigned Number(https://www.bluetooth.com/specifications/assigned-numbers).		
Data Fields		
uint8_t	hci_ver	Bluetooth HCI version.
uint16_t	hci_rev	Bluetooth HCI revision.
uint8_t	lmp_ver	Link Layer revision.
uint16_t	mnf_name	Manufacturer ID.
uint16_t	lmp_sub_ver	Link Layer subversion.

◆ st_ble_gap_loc_dev_info_evt_t

struct st_ble_gap_loc_dev_info_evt_t

Version information of local device.		
Data Fields		
st_ble_dev_addr_t	l_dev_addr	Bluetooth Device Address.
st_ble_gap_ver_num_t	l_ver_num	Version number of host stack in local device.
st_ble_gap_loc_ver_info_t	l_bt_info	Version number of Controller in local device.

◆ st_ble_gap_hw_err_evt_t

struct st_ble_gap_hw_err_evt_t		
Hardware error that is notified from Controller.		
Data Fields		
uint8_t	hw_code	The hw_code field indicates the cause of the hardware error.

◆ st_ble_gap_cmd_err_evt_t

struct st_ble_gap_cmd_err_evt_t		
HCI Command error.		
Data Fields		
uint16_t	op_code	The opcode of HCI Command which caused the error.
uint32_t	module_id	Module ID which caused the error.

◆ st_ble_gap_adv_rept_t

struct st_ble_gap_adv_rept_t		
Advertising Report.		
Data Fields		
uint8_t	num	The number of Advertising Reports received.
uint8_t	adv_type	Type of Advertising Packet. valuer: 0x00 — description: Connectable and scannable undirected advertising(ADV_IND). valuer: 0x01 — description: Connectable directed advertising(ADV_DIRECT_IND).

<table>
<tr><td></td><td></td><td>0x02 Scannable undirected advertising(ADV_SCAN_IND).
0x03 Non-connectable undirected advertising(ADV_NONCONN_IND).
0x04 Scan response(SCAN_RSP).</td></tr>
<tr><td>uint8_t</td><td>addr_type</td><td>Address type of the advertiser.<table><tr><th>value</th><th>description</th></tr><tr><td>0x00</td><td>Public Address.</td></tr><tr><td>0x01</td><td>Random Address.</td></tr><tr><td>0x02</td><td>Public Identity Address which could be resolved in Controller.</td></tr><tr><td>0x03</td><td>Random Identity Address which could be resolved in Controller.</td></tr></table></td></tr>
<tr><td>uint8_t *</td><td>p_addr</td><td>Address of the advertiser.

Note
The BD address setting format is little endian.</td></tr>
<tr><td>uint8_t</td><td>len</td><td>Length of Advertising data(in bytes).

Valid range is 0 - 31.</td></tr>
<tr><td>int8_t</td><td>rssi</td><td>RSSI(in dBm).

Valid range is -127 <= tx_pwr <= 20 and 127.
If the tx_pwr is 127, it means that RSSI could not be retrieved.</td></tr>
<tr><td>uint8_t *</td><td>p_data</td><td>Advertising data/Scan Response Data.</td></tr>
</table>

◆ st_ble_gap_ext_adv_rept_t

struct st_ble_gap_ext_adv_rept_t

Extended Advertising Report.

Data Fields

uint8_t	num	The number of Advertising Reports received.
uint16_t	adv_type	Type of Advertising Packet. Bit Number: description 0: Connectable advertising. 1: Scannable advertising. 2: Directed advertising. 3: Scan response. 4: Legacy advertising PDU. 5-6: The status of Advertising Data/Scan Response Data. Data Status: 00b = Complete 01b = Incomplete, more data come 10b = Incomplete, data truncated, no more to come All other bits: Reserved for future use
uint8_t	addr_type	Address type of the advertiser. value: description 0x00: Public Address. 0x01: Random

<table>
<tr><td></td><td></td><td>Address.
0x02 Public Identity Address which could be resolved in Controller.
0x03 Random Identity Address which could be resolved in Controller.
0xFF Anonymous advertisement.</td></tr>
<tr><td>uint8_t *</td><td>p_addr</td><td>Address of the advertiser.
Note
The BD address setting format is little endian.</td></tr>
<tr><td>uint8_t</td><td>adv_phy</td><td>The primary PHY configuration of the advertiser.
The primary PHY configuration of the advertiser.
value | description
0x01 1M PHY
0x03 Coded PHY</td></tr>
<tr><td>uint8_t</td><td>sec_adv_phy</td><td>The secondary PHY configuration of the advertiser.
value | description
0x00 Nothing has been received with Secondary Advertising Channel.
0x01 The Secondary Advertising PHY configuration was 1M PHY.
0x02 The Secondary Advertising</td></tr>
</table>

		PHY configuration was 2M PHY. 0x03 The Secondary Advertising PHY configuration was Coded PHY.
uint8_t	adv_sid	Advertising SID included in the received Advertising Report. Valid range is 0 <= adv_sid <= 0x0F and 0xFF. If the adv_sid is 0xFF, there is no field which includes SID.
int8_t	tx_pwr	TX power(in dBm). Valid range is -127 <= tx_pwr <= 20 and 127. If the tx_pwr is 127, it means that Tx power could not be retrieved.
int8_t	rssi	RSSI(in dBm). Valid range is -127 <= tx_pwr <= 20 and 127. If the tx_pwr is 127, it means that RSSI could not be retrieved.
uint16_t	perd_adv_intv	Periodic Advertising interval. If the perd_adv_intv is 0x0000, it means that this advertising is not periodic advertising. If the perd_adv_intv is 0x0006 - 0xFFFF, it means that this field is the Periodic Advertising interval. Periodic Advertising interval = per_adv_intr * 1.25ms.
uint8_t	dir_addr_type	The address type of Direct Advertising PDU. value: description 0x00: Public Address. 0x01: Random Address.

		0x02 Public Identity Address which could be resolved in Controller. 0x03 Random Identity Address which could be resolved in Controller. 0xFE Resolvable Privacy Address which could not be resolved in Controller.
uint8_t *	p_dir_addr	Address of Direct Advertising PDU. *Note* *The BD address setting format is little endian.*
uint8_t	len	Length of Advertising data(in bytes). Valid range is 0 - 229.
uint8_t *	p_data	Advertising data/Scan Response Data.

◆ st_ble_gap_perd_adv_rept_t

struct st_ble_gap_perd_adv_rept_t		
Periodic Advertising Report.		
Data Fields		
uint16_t	sync_hdl	Sync handle. Valid range is 0x0000 - 0x0EFF.
int8_t	tx_pwr	TX power(in dBm). Valid range is -127 <= tx_pwr <= 20 and 127. If tx_pwr is 127, it means that Tx power could not be retrieved.
int8_t	rssi	RSSI(in dBm). Valid range is -127 <= rssi <=

		20 and 127. If rssi is 127, it means that RSSI could not be retrieved.
uint8_t	rfu	Reserved for future use.
uint8_t	data_status	Reserved for future use. value / description: 0x00 — Data Complete. 0x01 — Data incomplete, more data to come. 0x02 — Data incomplete, data truncated, no more to come.
uint8_t	len	Length of Periodic Advertising data(in bytes). Valid range is 0 - 247.
uint8_t *	p_data	Periodic Advertising data.

◆ st_ble_gap_adv_rept_evt_t

struct st_ble_gap_adv_rept_evt_t		
Advertising report.		
Data Fields		
uint8_t	adv_rpt_type	Data type. value / description: 0x00 — Advertising Report. 0x01 — Extended Advertising Report. 0x02 — Periodic Advertising Report. If the BLE Protocol Stack library type is "extended", the adv_rpt_type field in a Legacy Advertising Report event is 0x01.

union st_ble_gap_adv_rept_evt_t	param	Advertising Report.

◆ st_ble_gap_adv_rept_evt_t.param

union st_ble_gap_adv_rept_evt_t.param		
Advertising Report.		
Data Fields		
st_ble_gap_adv_rept_t *	p_adv_rpt	Advertising Report.
st_ble_gap_ext_adv_rept_t *	p_ext_adv_rpt	Extended Advertising Report.
st_ble_gap_perd_adv_rept_t *	p_per_adv_rpt	Periodic Advertising Report.

◆ st_ble_gap_adv_set_evt_t

struct st_ble_gap_adv_set_evt_t		
Advertising handle.		
Data Fields		
uint8_t	adv_hdl	Advertising handle specifying the advertising set configured advertising parameters.

◆ st_ble_gap_adv_off_evt_t

struct st_ble_gap_adv_off_evt_t		
Information about the advertising set which stops advertising.		
Data Fields		
uint8_t	adv_hdl	Advertising handle identifying the advertising set which has stopped advertising. Valid range is 0x00 - 0x03.
uint8_t	reason	The reason for stopping advertising. value: 0x01 — description: Advertising has been stopped by R_BLE_GAP_StopAdv(). value: 0x02 — description: Because the duration specified by R_BLE_GAP_StartAdv() was expired, advertising

		has terminated. 0x03 Because the max_extd_adv_evts parameter specified by R_BLE_GAP_StartAdv() was reached, advertising has terminated. 0x04 Because the connection was established with the remote device, advertising has terminated.
uint16_t	conn_hdl	Connection handle. If the reason field is 0x04, this field indicates connection handle identifying the remote device connected with local device. If other reasons, ignore this field.
uint8_t	num_comp_ext_adv_evts	The number of the advertising event that has been received until advertising has terminated. If max_extd_adv_evts by R_BLE_GAP_StartAdv() is not 0, this parameter is valid.

◆ st_ble_gap_adv_data_evt_t

struct st_ble_gap_adv_data_evt_t		
This structure notifies that advertising data has been set to Controller by R_BLE_GAP_SetAdvSresData().		
Data Fields		
uint8_t	adv_hdl	Advertising handle identifying the advertising set to which advertising data/scan response data/periodic advertising data is set.

uint8_t	data_type	Type of the data set to the advertising set. value: BLE_GAP_ADV_DATA_MODE(0x00) — Advertising data BLE_GAP_SCAN_RSP_DATA_MODE(0x01) — Scan response data BLE_GAP_PERD_ADV_DATA_MODE(0x02) — Periodic advertising data

◆ st_ble_gap_rem_adv_set_evt_t

struct st_ble_gap_rem_adv_set_evt_t		
This structure notifies that an advertising set has been removed.		
Data Fields		
uint8_t	remove_op	This field indicates that the advertising set has been removed or cleared. value: 0x01 — The advertising set has been removed. 0x02 — The advertising set has been cleared.
uint8_t	adv_hdl	Advertising handle identifying the advertising set which has been removed. If the advertising set has been cleared, this field is ignored.

◆ st_ble_gap_conn_evt_t

struct st_ble_gap_conn_evt_t		
This structure notifies that a link has been established.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the created link.
uint8_t	role	The role of the link.

		value / description 0x00 Master 0x01 Slave
uint8_t	remote_addr_type	Address type of the remote device. value / description 0x00 Public Address 0x01 Random Address 0x02 Public Identity Address. It indicates that the Controller could resolve the resolvable private address of the remote device. 0x03 Random Identity Address. It indicates that the Controller could resolve the resolvable private address of the remote device.
uint8_t	remote_addr[BLE_BD_ADDR_LEN]	Address of the remote device. *Note* *The BD address setting format is little endian.*
uint8_t	local_rpa[BLE_BD_ADDR_LEN]	Resolvable private address that local device used in connection procedure. The local device address used in creating the link when the address type was set to BLE_GAP_ADDR_RPA_ID_PUBLIC or BLE_GAP_ADDR_RPA_ID_RANDOM by

		R_BLE_GAP_SetAdvParam() or R_BLE_GAP_CreateConn(). If the address type was set to other than BLE_GAP_ADDR_RPA_ID_PUBLIC and BLE_GAP_ADDR_RPA_ID_RANDOM, this field is set to all-zero. *Note* *The BD address setting format is little endian.*
uint8_t	remote_rpa[BLE_BD_ADDR_LEN]	Resolvable private address that the remote device used in connection procedure. This field indicates the remote resolvable private address when remote_addr_type is 0x02 or 0x03. If remote_addr_type is other than 0x02 and 0x03, this field is set to all-zero. *Note* *The BD address setting format is little endian.*
uint16_t	conn_intv	Connection interval. Valid range is 0x0006 - 0x0C80. Time(ms) = conn_intv * 1.25.
uint16_t	conn_latency	Slave latency. Valid range is 0x0000 - 0x01F3.
uint16_t	sup_to	Supervision timeout. Valid range is 0x000A - 0x0C80.Time(ms) = sup_to * 10.
uint8_t	clk_acc	Master_Clock_Accuracy. value / description 0x00 500ppm 0x01 250ppm 0x02 150ppm 0x03 100ppm 0x04 75ppm 0x05 50ppm

		0x06	30ppm
		0x07	20ppm

◆ st_ble_gap_disconn_evt_t

struct st_ble_gap_disconn_evt_t		
This structure notifies that a link has been disconnected.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the link disconnected.
uint8_t	reason	The reason for disconnection. Refer Core Specification Vol.2 Part D ,"2 Error Code Descriptions".

◆ st_ble_gap_rd_ch_map_evt_t

struct st_ble_gap_rd_ch_map_evt_t		
This structure notifies that Channel Map has been retrieved by R_BLE_GAP_ReadChMap().		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the link whose Channel Map was retrieved.
uint8_t	ch_map[BLE_GAP_CH_MAP_SIZE]	Channel Map.

◆ st_ble_gap_rd_rssi_evt_t

struct st_ble_gap_rd_rssi_evt_t		
This structure notifies that RSSI has been retrieved by R_BLE_GAP_ReadRssi().		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the link whose RSSI was retrieved.
int8_t	rssi	RSSI(in dBm). Valid range is -127 < rssi < 20 and 127. If this field is 127, it indicates that RSSI could not be retrieved.

◆ st_ble_gap_dev_info_evt_t

struct st_ble_gap_dev_info_evt_t

This structure notifies that information about remote device has been retrieved by R_BLE_GAP_GetRemDevInfo().

Data Fields		
uint16_t	conn_hdl	Connection handle identifying the remote device whose information has been retrieved.
uint8_t	get_status	Information about the remote device. This field is a bitwise OR of the following values. bit0: Address bit1: Version, company_id, subversion bit2: Feature All other bits: Reserved for future use
st_ble_dev_addr_t	addr	Address of the remote device.
uint8_t	version	The version of Link Layer of the remote device. Refer to Bluetooth SIG Assigned Number (https://www.bluetooth.com/specifications/assigned-numbers) regarding defined number.
uint16_t	company_id	The manufacturer ID of the remote device. Refer to Bluetooth SIG Assigned Number (https://www.bluetooth.com/specifications/assigned-numbers) regarding defined number.
uint16_t	subversion	The subversion of Link Layer.
uint8_t	features[BLE_GAP_REM_FEATURE_SIZE]	LE feature supported in the remote device. Refer to Core Spec Vol 6, Part B 4.6 FEATURE SUPPORT.

◆ st_ble_gap_conn_upd_evt_t

struct st_ble_gap_conn_upd_evt_t

This structure notifies that connection parameters has been updated.

Data Fields		
uint16_t	conn_hdl	Connection handle identifying the connection whose parameters has been updated.
uint16_t	conn_intv	Updated Connection Interval. Valid range is 0x0006 - 0x0C80. Time(ms) = conn_intv * 1.25.
uint16_t	conn_latency	Updated slave latency. Valid range is 0x0000 - 0x01F3.
uint16_t	sup_to	Updated supervision timeout. Valid range is 0x000A - 0x0C80. Time(ms) = sup_to * 10.

◆ st_ble_gap_conn_upd_req_evt_t

struct st_ble_gap_conn_upd_req_evt_t

This structure notifies that a request for connection parameters update has been received.

Data Fields		
uint16_t	conn_hdl	Connection handle identifying the link that was requested to update connection parameters.
uint16_t	conn_intv_min	Minimum connection interval. Valid range is 0x0006 - 0x0C80. Time(ms) = conn_intv_min * 1.25.
uint16_t	conn_intv_max	Maximum connection interval. Valid range is 0x0006 - 0x0C80. Time(ms) = conn_intv_max * 1.25.
uint16_t	conn_latency	Slave latency. Valid range is 0x0000 - 0x01F3.
uint16_t	sup_to	Supervision timeout. Valid range is 0x000A - 0x0C80. Time(ms) = sup_to * 10

◆ st_ble_gap_conn_hdl_evt_t

struct st_ble_gap_conn_hdl_evt_t

This structure notifies that a GAP Event that includes only connection handle has occurred.		
Data Fields		
uint16_t	conn_hdl	Connection handle.

◆ st_ble_gap_data_len_chg_evt_t

struct st_ble_gap_data_len_chg_evt_t		
This structure notifies that the packet data length has been updated.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the link that updated Data Length.
uint16_t	tx_octets	Updated transmission packet size(in bytes). Valid range is 0x001B - 0x00FB.
uint16_t	tx_time	Updated transmission time(us). Valid range is 0x0148 - 0x4290.
uint16_t	rx_octets	Updated receive packet size(in bytes). Valid range is 0x001B - 0x00FB.
uint16_t	rx_time	Updated receive time(us). Valid range is 0x0148 - 0x4290.

◆ st_ble_gap_rd_rpa_evt_t

struct st_ble_gap_rd_rpa_evt_t		
This structure notifies that the local resolvable private address has been retrieved by R_BLE_GAP_ReadRpa().		
Data Fields		
st_ble_dev_addr_t	addr	The resolvable private address of local device.

◆ st_ble_gap_phy_upd_evt_t

struct st_ble_gap_phy_upd_evt_t		
This structure notifies that PHY for a connection has been updated.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying

		the link that has been updated.
uint8_t	tx_phy	Transmitter PHY. value: description 0x01: The transmitter PHY has been updated to 1M PHY. 0x02: The transmitter PHY has been updated to 2M PHY. 0x03: The transmitter PHY has been updated to Coded PHY.
uint8_t	rx_phy	Receiver PHY. value: description 0x01: The receiver PHY has been updated to 1M PHY. 0x02: The receiver PHY has been updated to 2M PHY. 0x03: The receiver PHY has been updated to Coded PHY.

◆ st_ble_gap_phy_rd_evt_t

struct st_ble_gap_phy_rd_evt_t		
This structure notifies that the PHY settings has been retrieved by R_BLE_GAP_ReadPhy().		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the link that has been retrieved the PHY settings.
uint8_t	tx_phy	Transmitter PHY. value: description 0x01: The transmitter

		PHY has been updated to 1M PHY. 0x02 The transmitter PHY has been updated to 2M PHY. 0x03 The transmitter PHY has been updated to Coded PHY.
uint8_t	rx_phy	Receiver PHY. value: description 0x01: The receiver PHY has been updated to 1M PHY. 0x02: The receiver PHY has been updated to 2M PHY. 0x03: The receiver PHY has been updated to Coded PHY.

◆ st_ble_gap_scan_req_recv_evt_t

struct st_ble_gap_scan_req_recv_evt_t		
This structure notifies that a Scan Request packet has been received from a Scanner.		
Data Fields		
uint8_t	adv_hdl	Advertising handle identifying the advertising set that has received the Scan Request.
uint8_t	scanner_addr_type	Address type of the Scanner. value: description 0x00: Public Address. 0x01: Random Address. 0x02: Public Identity Address which could be resolved in

		Controller. 0x03 Random Identity Address which could be resolved in Controller.
uint8_t	scanner_addr[BLE_BD_ADDR_LEN]	Address of the Scanner. *Note* *The BD address setting format is little endian.*

◆ st_ble_gap_sync_est_evt_t

struct st_ble_gap_sync_est_evt_t		
This structure notifies that a Periodic sync has been established.		
Data Fields		
uint16_t	sync_hdl	Sync handle identifying the Periodic Sync that has been established.
uint8_t	adv_sid	Advertising SID identifying the advertising set that has established the Periodic Sync.
uint8_t	adv_addr_type	Address type of the advertiser. value: description 0x00: Public Address. 0x01: Random Address. 0x02: Public Identity Address which could be resolved in Controller. 0x03: Random Identity Address which could be resolved in Controller.
uint8_t *	p_adv_addr	Address of the advertiser. *Note* *The BD address setting format is little endian.*

uint8_t	adv_phy	Advertising PHY. value: 0x01 — Advertiser PHY is 1M PHY. 0x02 — Advertiser PHY is 2M PHY. 0x03 — Advertiser PHY is Coded PHY.
uint16_t	perd_adv_intv	Periodic Advertising Interval. Valid range is 0x0006 - 0xFFFF. Time(ms) = perd_adv_intv * 1.25.
uint8_t	adv_clk_acc	Advertiser Clock Accuracy. value: 0x00 — 500ppm 0x01 — 250ppm 0x02 — 150ppm 0x03 — 100ppm 0x04 — 75ppm 0x05 — 50ppm 0x06 — 30ppm 0x07 — 20ppm

◆ st_ble_gap_sync_hdl_evt_t

struct st_ble_gap_sync_hdl_evt_t		
This structure notifies that a GAP Event that includes only sync handle has occurred.		
Data Fields		
uint16_t	sync_hdl	Sync handle.

◆ st_ble_gap_white_list_conf_evt_t

struct st_ble_gap_white_list_conf_evt_t		
This structure notifies that White List has been configured.		
Data Fields		
uint8_t	op_code	The operation for White List. value / description

		0x01 A device was added to White List. 0x02 A device was deleted from White List. 0x03 White List was cleared.
uint8_t	num	The number or devices which have been added to or deleted from White List.

◆ st_ble_gap_rslv_list_conf_evt_t

struct st_ble_gap_rslv_list_conf_evt_t

This structure notifies that Resolving List has been configured.

Data Fields

uint8_t	op_code	The operation for Resolving List. value: description 0x01: A device was added to Resolving List. 0x02: A device was deleted from Resolving List. 0x03: Resolving List was cleared.
uint8_t	num	The number or devices which have been added to or deleted from Resolving List.

◆ st_ble_gap_perd_list_conf_evt_t

struct st_ble_gap_perd_list_conf_evt_t

This structure notifies that Periodic Advertiser List has been configured.

Data Fields

uint8_t	op_code	The operation for Periodic Advertiser List. value: description 0x01: A device was added to Periodic Advertiser List.

		0x02 A device was deleted from Periodic Advertiser List. 0x03 Periodic Advertiser List was cleared.
uint8_t	num	The number or devices which have been added to or deleted from Periodic Advertiser List.

◆ **st_ble_gap_set_priv_mode_evt_t**

struct st_ble_gap_set_priv_mode_evt_t		
This structure notifies that Privacy Mode has been configured.		
Data Fields		
uint8_t	num	The number or devices which have been set privacy mode.

◆ **st_ble_gap_pairing_req_evt_t**

struct st_ble_gap_pairing_req_evt_t		
This structure notifies that a pairing request from a remote device has been received.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the remote device that sent the pairing request.
st_ble_dev_addr_t	bd_addr	The address of the remote device.
st_ble_gap_auth_info_t	auth_info	The Pairing parameters of the remote device.

◆ **st_ble_gap_passkey_display_evt_t**

struct st_ble_gap_passkey_display_evt_t		
This structure notifies that a request for Passkey display in pairing has been received.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the remote device that requested Passkey display.
uint32_t	passkey	Passkey. This field is a 6 digit decimal number(000000-999999).

◆ **st_ble_gap_num_comp_evt_t**

struct st_ble_gap_num_comp_evt_t		
This structure notifies that a request for Numeric Comparison in pairing has been received.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the remote device that requested Numeric Comparison.
uint32_t	numeric	The number to be confirmed in Numeric Comparison. This field is a 6 digit decimal number(000000-999999).

◆ st_ble_gap_key_press_ntf_evt_t

struct st_ble_gap_key_press_ntf_evt_t		
This structure notifies that the remote device has input a key in Passkey Entry.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the remote device that input a key.
uint8_t	key_type	Type of the key that the remote device input. value: description 0x00: Passkey entry started. 0x01: Passkey digit entered. 0x02: Passkey digit erased. 0x03: Passkey cleared. 0x04: Passkey entry completed.

◆ st_ble_gap_pairing_info_evt_t

struct st_ble_gap_pairing_info_evt_t		
This structure notifies that the pairing has completed.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the remote device that the pairing has been done with.
st_ble_dev_addr_t	bd_addr	Address of the remote device.

st_ble_gap_auth_info_t	auth_info	Key information exchanged in pairing. If local device supports bonding, store the information in non-volatile memory in order to set it to host stack after power re-supply.

◆ st_ble_gap_enc_chg_evt_t

struct st_ble_gap_enc_chg_evt_t		
This structure notifies that the encryption status of a link has been changed.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the link that has been changed.
uint8_t	enc_status	Encryption Status. value: description 0x00: Encryption OFF. 0x01: Encryption ON. 0x03: Encryption updated by Encryption Key Refresh Completed.

◆ st_ble_gap_peer_key_info_evt_t

struct st_ble_gap_peer_key_info_evt_t		
This structure notifies that the remote device has distributed the keys.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the remote device that has distributed the keys.
st_ble_dev_addr_t	bd_addr	Address of the remote device.
st_ble_gap_key_ex_param_t	key_ex_param	Distributed keys. If local device supports bonding, store the keys in non-volatile memory and at power re-supply set to the host stack by R_BLE_GAP_SetBondInfo().

◆ st_ble_gap_ltk_req_evt_t

struct st_ble_gap_ltk_req_evt_t		
This structure notifies that a LTK request from a remote device has been received.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the remote device which requests for the LTK.
uint16_t	ediv	Ediv.
uint8_t *	p_peer_rand	Rand.

◆ st_ble_gap_ltk_rsp_evt_t

struct st_ble_gap_ltk_rsp_evt_t		
This structure notifies that local device has replied to the LTK request from the remote device.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the remote device to be sent the response to the LTK request.
uint8_t	response	The response to the LTK request. value: 0x00 — description: Local device replied with the stored LTK. value: 0x01 — description: Local device rejected the LTK request, because the LTK was not found.

◆ st_ble_gap_sc_oob_data_evt_t

struct st_ble_gap_sc_oob_data_evt_t		
This structure notifies that OOB data for Secure Connections has been generated by R_BLE_GAP_CreateScOobData().		
Data Fields		
uint8_t *	p_sc_oob_conf	Confirmation value(16 bytes) of OOB Data.
uint8_t *	p_sc_oob_rand	Rand(16bytes) of OOB Data.

◆ st_ble_gap_bond_info_t

struct st_ble_gap_bond_info_t

Bonding information used in R_BLE_GAP_SetBondInfo().		
Data Fields		
st_ble_dev_addr_t *	p_addr	Address of the device which exchanged the keys.
st_ble_gap_auth_info_t *	p_auth_info	Information about the keys.
st_ble_gap_key_ex_param_t *	p_keys	Keys distributed from the remote device in paring.

Macro Definition Documentation

◆ BLE_BD_ADDR_LEN

#define BLE_BD_ADDR_LEN
Bluetooth Device Address Size

◆ BLE_MASTER

#define BLE_MASTER
Master Role.

◆ BLE_SLAVE

#define BLE_SLAVE
Slave Role.

◆ BLE_GAP_ADDR_PUBLIC

#define BLE_GAP_ADDR_PUBLIC
Public Address.

◆ BLE_GAP_ADDR_RAND

#define BLE_GAP_ADDR_RAND
Random Address.

◆ BLE_GAP_ADDR_RPA_ID_PUBLIC

```
#define BLE_GAP_ADDR_RPA_ID_PUBLIC
```

Resolvable Private Address.

If the IRK of local device has not been registered in Resolving List, public address is used.

◆ BLE_GAP_ADDR_RPA_ID_RANDOM

```
#define BLE_GAP_ADDR_RPA_ID_RANDOM
```

Resolvable Private Address.

If the IRK of local device has not been registered in Resolving List, random address is used.

◆ BLE_GAP_SCAN_ALLOW_ADV_EXCEPT_DIRECTED_WLST

```
#define BLE_GAP_SCAN_ALLOW_ADV_EXCEPT_DIRECTED_WLST
```

Accept all advertising and scan response PDUs.
The following are excluded.

- Advertising and scan response PDUs where the advertiser's identity address is not in the White List.
- Directed advertising PDUs whose the target address is identity address but doesn't address local device. However directed advertising PDUs whose the target address is the local resolvable private address are accepted.

◆ BLE_GAP_IOCAP_DISPLAY_ONLY

```
#define BLE_GAP_IOCAP_DISPLAY_ONLY
```

Display Only iocapability.

Output function : Local device has the ability to display a 6 digit decimal number.
Input function : None

◆ BLE_GAP_IOCAP_DISPLAY_YESNO

```
#define BLE_GAP_IOCAP_DISPLAY_YESNO
```

Display Yes/No iocapability.

Output function : Output function : Local device has the ability to display a 6 digit decimal number.
Input function : Local device has the ability to indicate 'yes' or 'no'

◆ BLE_GAP_IOCAP_KEYBOARD_ONLY

#define BLE_GAP_IOCAP_KEYBOARD_ONLY
Keyboard Only iocapability. Output function : None Input function : Local device has the ability to input the number '0' - '9'.

◆ BLE_GAP_IOCAP_NOINPUT_NOOUTPUT

#define BLE_GAP_IOCAP_NOINPUT_NOOUTPUT
No Input No Output iocapability. Output function : None Input function : None

◆ BLE_GAP_IOCAP_KEYBOARD_DISPLAY

#define BLE_GAP_IOCAP_KEYBOARD_DISPLAY
Keyboard Display iocapability. Output function : Output function : Local device has the ability to display a 6 digit decimal number. Input function : Local device has the ability to input the number '0' - '9'.

Typedef Documentation

◆ ble_gap_app_cb_t

ble_gap_app_cb_t

ble_gap_app_cb_t is the GAP Event callback function type.

Parameters

[in]	event_type	The type of GAP Event.
[in]	event_result	The result of API call which generates the GAP Event.
[in]	p_event_data	Data notified in the GAP Event.

Returns

none

◆ ble_gap_del_bond_cb_t

ble_gap_del_bond_cb_t

ble_gap_del_bond_cb_t is the type of the callback function for delete bonding information stored in non-volatile area.
This type is used in R_BLE_GAP_DeleteBondInfo().

Parameters

[in]	p_addr	The parameter returns the address of the remote device whose keys are deleted by R_BLE_GAP_DeleteBondInfo(). If R_BLE_GAP_DeleteBondInfo() deletes the keys of all remote devices, the parameter returns NULL.

Returns

none

◆ st_ble_gap_adv_param_t

typedef st_ble_gap_ext_adv_param_t st_ble_gap_adv_param_t

Advertising parameters.

See also

st_ble_gap_ext_adv_param_t

◆ st_ble_gap_scan_param_t

typedef st_ble_gap_ext_scan_param_t st_ble_gap_scan_param_t

Scan parameters.

See also

st_ble_gap_ext_scan_param_t

Enumeration Type Documentation

◆ e_ble_gap_evt_t

enum e_ble_gap_evt_t

GAP Event Identifier.

Enumerator	
BLE_GAP_EVENT_INVALID	Invalid GAP Event. **Event Code: 0x1001** **Event Data:** none
BLE_GAP_EVENT_STACK_ON	Host Stack has been initialized. When initializing host stack by R_BLE_GAP_Init() has been completed, BLE_GAP_EVENT_STACK_ON event is notified. **Event Code: 0x1002** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** none
BLE_GAP_EVENT_STACK_OFF	Host Stack has been terminated. When terminating host stack by R_BLE_GAP_Terminate() has been completed, BLE_GAP_EVENT_STACK_OFF event is notified. **Event Code: 0x1003** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_INVALID_STATE(0x0008) When function was called, host stack has not yet been initialized. **Event Data:** none
BLE_GAP_EVENT_LOC_VER_INFO	Version information of local device.

	When version information of local device has been retrieved by R_BLE_GAP_GetVerInfo(), BLE_GAP_EVENT_LOC_VER_INFO event is notified. **Event Code: 0x1004** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_gap_loc_dev_info_evt_t
BLE_GAP_EVENT_HW_ERR	Hardware Error. When hardware error has been received from Controller, BLE_GAP_EVENT_HW_ERR event is notified. **Event Code: 0x1005** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_gap_hw_err_evt_t
BLE_GAP_EVENT_CMD_ERR	Command Status Error. When the error of HCI Command has occurred after a R_BLE GAP API call, BLE_GAP_EVENT_CMD_ERR event is notified. **Event Code: 0x1101** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_gap_cmd_err_evt_t
BLE_GAP_EVENT_ADV_REPT_IND	Advertising Report. When advertising PDUs has been received after scanning was started by R_BLE_GAP_StartScan().

	Event Code: 0x1102 **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_gap_adv_rept_evt_t
BLE_GAP_EVENT_ADV_PARAM_SET_COMP	Advertising parameters have been set. Advertising parameters have been configured by R_BLE_GAP_SetAdvParam(). **Event Code: 0x1103** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_INVALID_ARG(0x0003) The advertising type that doesn't support advertising data/scan response data was specified to the advertising set which has already set advertising data/scan response data. BLE_ERR_INVALID_OPERATION(0x0009) The reason for this error is as follows. • Advertising parameters were configured to the advertising set in advertising. • The sec_adv_phy field in adv_paran was not

	specified when Periodic Advertising was started. **Event Data:** st_ble_gap_adv_set_evt_t
BLE_GAP_EVENT_ADV_DATA_UPD_COMP	Advertising data has been set. This event notifies that Advertising Data/Scan Response Data/Periodic Advertising Data has been set to the advertising set by R_BLE_GAP_SetAdvSresData(). **Event Code: 0x1104** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_INVALID_OPERATION(0x0009) The reason for this error is as follows. • The advertising set that doesn't support advertising data/scan response data was set to the data. • The advertising set that supports legacy advertising was set to advertising data/scan response data larger than 31 bytes.

	• The advertising set that has advertising data/scan response data greater than or equal to 252 bytes was set the data in advertising . • The advertising set that has periodic advertising data greater than or equal to 253 bytes was set the data in advertising . BLE_ERR_MEM_ALLOC_FAILED(0x000C) Length exceeded the length that the advertising set could be set. BLE_ERR_INVALID_HDL(0x000E) The advertising set specified by R_BLE_GAP_SetAdvSresData() has not been created. **Event Data:** st_ble_gap_adv_data_evt_t
BLE_GAP_EVENT_ADV_ON	Advertising has started. When advertising has been started by R_BLE_GAP_StartAdv(), this event is notified to the application layer. **Event Code: 0x1105**

result:

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The reason for this error is as follows. • The advertising data length set to the advertising set for connectable extended advertising was invalid. • If o_addr_type field in adv_param used in R_BLE_GAP_SetAdvParam() is 0x03, the address which is set in o_addr field of adv_param has not been registered in Resolving List.
BLE_ERR_INVALID_OPERATION(0x0009)	Setting of advertising data/scan response data has not been completed.
BLE_ERR_INVALID_HDL(0x000E)	The advertising set specified by R_BLE_GAP_StartAdv() has not been created.

	BLE_ERR_LIMIT_EXCEEDED(0x0010) When the maximum connections are established, a new connectable advertising tried starting. **Event Data:** st_ble_gap_adv_set_evt_t
BLE_GAP_EVENT_ADV_OFF	Advertising has stopped. This event notifies the application layer that advertising has stopped. **Event Code: 0x1106** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_INVALID_HDL(0x000E) The advertising set specified by R_BLE_GAP_StopAdv() has not been created. **Event Data:** st_ble_gap_adv_off_evt_t
BLE_GAP_EVENT_PERD_ADV_PARAM_SET_COMP	Periodic advertising parameters have been set. This event notifies the application layer that Periodic Advertising Parameters has been configured by R_BLE_GAP_SetPerdAdvParam(). **Event Code: 0x1107** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_INVALID_ARG(0x0003) The advertising set was the setting for anonymous advertising. BLE_ERR_INVALID_OPERATION(0x0009) The advertising set was configured to the parameters in

	periodic advertising. BLE_ERR_INVALID_HDL(0x000E) The advertising set specified by R_BLE_GAP_SetPerdAdvParam() has not been created. **Event Data:** st_ble_gap_adv_set_evt_t
BLE_GAP_EVENT_PERD_ADV_ON	Periodic advertising has started. When Periodic Advertising has been started by R_BLE_GAP_StartPerdAdv(), this event is notified to the application layer. **Event Code: 0x1108** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_INVALID_OPERATION(0x0009) The periodic advertising data set in the advertising set has not been completed. BLE_ERR_INVALID_HDL(0x000E) The advertising set specified by R_BLE_GAP_StartPerdAdv() has not been created. **Event Data:** st_ble_gap_adv_set_evt_t
BLE_GAP_EVENT_PERD_ADV_OFF	Periodic advertising has stopped. When Periodic Advertising has terminated by R_BLE_GAP_StopPerdAdv(), this event is notified to the application layer. **Event Code: 0x1109** **result:** BLE_SUCCESS(0x0000) Success

	BLE_ERR_INVALID_HDL(0x000E) The advertising set specified by R_BLE_GAP_StopPerdAdv() has not been created. **Event Data:** st_ble_gap_adv_set_evt_t
BLE_GAP_EVENT_ADV_SET_REMOVE_COMP	Advertising set has been deleted. When the advertising set has been removed by R_BLE_GAP_RemoveAdvSet(), this event is notified to the application layer. **Event Code: 0x110A** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_INVALID_OPERATION(0x0009) When the advertising set was in advertising, R_BLE_GAP_RemoveAdvSet() was called. BLE_ERR_INVALID_HDL(0x000E) The advertising set specified by R_BLE_GAP_RemoveAdvSet() has not been created. **Event Data:** st_ble_gap_rem_adv_set_evt_t
BLE_GAP_EVENT_SCAN_ON	Scanning has started. When scanning has started by R_BLE_GAP_StartScan(), this event is notified to the application layer. **Event Code: 0x110B** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_INVALID_ARG(0x0003) The reason for this error is as follows:

	• Scan interval or scan window was invalid. • When filter_dup field in scan_enable was BLE_GAP_SCAN_FILT_DUPLIC_ENABLE_FOR_PERIOD(0x02), period field in scan_enable was 0. • duration field in scan_enable was larger than period in scan_enable. BLE_ERR_INVALID_OPERATION(0x0009) In scanning, R_BLE_GAP_StartScan() was called. **Event Data:** none
BLE_GAP_EVENT_SCAN_OFF	Scanning has stopped. When scanning has been stopped by R_BLE_GAP_StopScan(), this event is notified to the application layer. **Event Code: 0x110C** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** none
BLE_GAP_EVENT_SCAN_TO	Scanning has stopped, because duration specified by API expired.

	When the scan duration specified by R_BLE_GAP_StartScan() has expired, this event notifies scanning has stopped. **Event Code: 0x110D** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** none
BLE_GAP_EVENT_CREATE_CONN_COMP	Connection Request has been sent to Controller. This event notifies a request for a connection has been sent to Controller. **Event Code: 0x110E** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_INVALID_ARG(0x0003) The reason for this error is as follows: • Scan interval or scan windows specified by R_BLE_GAP_CreateConn() is invalid. • Although the own_addr_type field in p_param was set to 0x03, random address had not been registered in Resolving

	List. BLE_ERR_INVALID_OPERATION(0x0009) — R_BLE_GAP_CreateConn() was called while creating a link by previous R_BLE_GAP_CreateConn() call . BLE_ERR_LIMIT_EXCEEDED(0x0010) — When the maximum connections are established, R_BLE_GAP_CreateConn() was called. **Event Data:** none
BLE_GAP_EVENT_CONN_IND	Link has been established. Function Documentation

◆ R_BLE_GAP_Init()

ble_status_t R_BLE_GAP_Init (ble_gap_app_cb_t *gap_cb*)

Initialize the Host Stack.

Host stack is initialized with this function. Before using All the R_BLE APIs, it's necessary to call this function. A callback function is registered with this function. In order to receive the GAP event, it's necessary to register a callback function. The result of this API call is notified in BLE_GAP_EVENT_STACK_ON event.

Parameters

[in]	gap_cb	A callback function registered with this function.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	gap_cb is specified as NULL.
BLE_ERR_INVALID_STATE(0x0008)	The reason for this error is as follows: • Host Stack was already initialized. • The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_Terminate()

ble_status_t R_BLE_GAP_Terminate (void)

Terminate the Host Stack.

Host stack is terminated with this function. In order to reset all the Bluetooth functions, it's necessary to call this function. The result of this API call is notified in BLE_GAP_EVENT_STACK_OFF event.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	Host stack hasn't been initialized.

◆ R_BLE_GAP_UpdConn()

ble_status_t R_BLE_GAP_UpdConn (uint16_t *conn_hdl*, uint8_t *mode*, uint16_t *accept*, st_ble_gap_conn_param_t * *p_conn_updt_param*)

Update the connection parameters.

This function updates the connection parameters or replies a request for updating connection parameters notified by BLE_GAP_EVENT_CONN_PARAM_UPD_REQ event. When the connection parameters has been updated, BLE_GAP_EVENT_CONN_PARAM_UPD_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the link to be updated.
[in]	mode	Connection parameter update request or response. macro: BLE_GAP_CONN_UPD_MODE_REQ (0x01) — Request for updating the connection parameters. macro: BLE_GAP_CONN_UPD_MODE_RSP (0x02) — Reply a connection parameter update request.
[in]	accept	When mode is BLE_GAP_CONN_UPD_MODE_RSP, accept or reject the connection parameters update request. If mode is BLE_GAP_CONN_UPD_MODE_REQ, accept is ignored. macro: BLE_GAP_CONN_UPD_ACCEPT (0x0000) — Accept the update request. macro: BLE_GAP_CONN_UPD_REJECT (0x0001) — Reject the update request.
[in]	p_conn_updt_param	Connection parameters to be updated. When mode is BLE_GAP_CONN_UPD_MODE_RSP and accept is

		BLE_GAP_CONN_UPD_REJECT, p_conn_updt_param is ignored.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	When accept is BLE_GAP_CONN_UPD_ACCEPT, p_conn_updt_param is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The following is out of range. • mode • accept • conn_intv_min field in p_conn_updt_param • conn_intv_max field in p_conn_updt_param • conn_latency in p_conn_updt_param • sup_to in p_conn_updt_param • conn_hdl
BLE_ERR_INVALID_STATE(0x0008)	Not connected with the remote device.
BLE_ERR_CONTEXT_FULL(0x000B)	Sending a L2CAP command, an error occurred.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.

◆ R_BLE_GAP_SetDataLen()

ble_status_t R_BLE_GAP_SetDataLen (uint16_t *conn_hdl*, uint16_t *tx_octets*, uint16_t *tx_time*)

Update the packet size and the packet transmit time.

This function requests for changing the maximum transmission packet size and the maximum packet transmission time. When Controller has received the request from host stack, BLE_GAP_EVENT_SET_DATA_LEN_COMP event is notified to the application layer. When the transmission packet size or the transmission time has been changed, BLE_GAP_EVENT_DATA_LEN_CHG event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the link whose the transmission packet size or the transmission time to be changed.
[in]	tx_octets	Maximum transmission packet size. Valid range is 0x001B - 0x00FB.
[in]	tx_time	Maximum transmission time(us). Valid range is 0x0148 - 0x4290.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_Disconnect()

ble_status_t R_BLE_GAP_Disconnect (uint16_t *conn_hdl*, uint8_t *reason*)

Disconnect the link.

This function disconnects a link. When the link has disconnected, BLE_GAP_EVENT_DISCONN_IND event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the link to be disconnected.
[in]	reason	The reason for disconnection. Usually, set 0x13 which indicates that a user disconnects the link. If setting other than 0x13, refer the error code described in Core Specification Vol.2 Part D ,"2 Error Code Descriptions".

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	conn_hdl is out of range.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.

◆ R_BLE_GAP_SetPhy()

ble_status_t R_BLE_GAP_SetPhy (uint16_t *conn_hdl*, st_ble_gap_set_phy_param_t * *p_phy_param*)

Set the phy for connection.

This function sets the PHY preferences for the connection. The result of this API call is notified in BLE_GAP_EVENT_PHY_SET_COMP event. When the PHY has been updated, BLE_GAP_EVENT_PHY_UPD event is notified to the application layer.

After PHY update, the PHY accept configuration of local device is the same as the values in BLE_GAP_EVENT_PHY_UPD event.
For example, after calling R_BLE_GAP_SetPhy(), if tx_phy, rx_phy by BLE_GAP_EVENT_PHY_UPD event are updated to 2M PHY, the PHY accept configuration is 2M PHY only.
Therefore after receiving BLE_GAP_EVENT_PHY_UPD event, if local device wants to accept the other PHY configuration, it needs to call R_BLE_GAP_SetPhy() with the desired PHY accept configuration.

Because the maximum transmission packet size or the maximum transmission time might be updated by PHY update, if the same packet size or transmission time as the previous one is desired, change the maximum transmission packet size or the maximum transmission time by R_BLE_GAP_SetDataLen().

Parameters

[in]	conn_hdl	Connection handle identifying the link whose PHY to be updated.
[in]	p_phy_param	PHY preferences.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_phy_param is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	conn_hdl or option field in p_phy_param is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_SetDefPhy()

ble_status_t R_BLE_GAP_SetDefPhy (st_ble_gap_set_def_phy_param_t * *p_def_phy_param*)

Set the default phy which allows remote device to change.

This function sets the PHY preferences which a remote device may change. The result of this API call is notified in BLE_GAP_EVENT_DEF_PHY_SET_COMP event.

Parameters

[in]	p_def_phy_param	The PHY preference which a remote device may change.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_def_phy_param is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	tx_phys or tx_phys field in p_def_phy_param is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_SetPrivMode()

ble_status_t R_BLE_GAP_SetPrivMode (st_ble_dev_addr_t * *p_addr*, uint8_t * *p_privacy_mode*, uint8_t *device_num*)

Set the privacy mode.

This function sets privacy mode for the remote device registered in Resolving List. By default, Network Privacy Mode is set.
The result of this API call is notified in BLE_GAP_EVENT_PRIV_MODE_SET_COMP event.

Parameters

[in]	p_addr	An array of identity address of the remote device to set privacy mode. The number of elements is specified by device_num.
[in]	p_privacy_mode	An array of privacy mode to set to remote device. The number of elements is specified by device_num. The following value is set as

		the privacy mode. macro: BLE_GAP_NET_PRIV_MODE (0x00) — Network Privacy Mode. BLE_GAP_DEV_PRIV_MODE (0x01) — Device Privacy Mode.
[in]	device_num	The number of devices to set privacy mode. Valid range is 1-BLE_GAP_RSLV_LIST_MAX_ENTRY.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_addr or p_privacy_mode is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The following parameter is out of range. • The address type in p_addr. • The privacy mode specified by p_privacy_mode. • device_num
BLE_ERR_INVALID_STATE(0x0008)	The reason for this error is as follows: • While configuring privacy mode, this function was called. • The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_ConfWhiteList()

ble_status_t R_BLE_GAP_ConfWhiteList (uint8_t *op_code*, st_ble_dev_addr_t * *p_addr*, uint8_t *device_num*)

Set White List.

This function supports the following operations regarding White List.

- Add the device to White List.
- Delete the device from White List.

- Clear White List.

  The total number of White List entries is defined as BLE_GAP_WHITE_LIST_MAX_ENTRY. The result of this API call is notified in BLE_GAP_EVENT_WHITE_LIST_CONF_COMP event.

Parameters

[in]	op_code	The operation for White List. macro: BLE_GAP_LIST_ADD_DEV(0x01) — Add the device to the list. BLE_GAP_LIST_REM_DEV(0x02) — Delete the device from the list. BLE_GAP_LIST_CLR(0x03) — Clear the list.
[in]	p_addr	An array of device address to add / delete to the list. The number of elements is specified by device_num. If op_code is BLE_GAP_LIST_CLR, p_addr is ignored.
[in]	device_num	The number of devices add / delete to the list. Valid range is 1-BLE_GAP_WHITE_LIST_MAX_ENTRY. If op_code is BLE_GAP_LIST_CLR, device_num is ignored.

Return values

BLE_SUCCESS(0x0000)	Success

BLE_ERR_INVALID_PTR(0x0001)	When op_code is BLE_GAP_LIST_ADD_DEV or BLE_GAP_LIST_REM_DEV, p_addr is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	op_code or address type field in p_addr is out of range.
BLE_ERR_INVALID_STATE(0x0008)	The reason for this error is as follows: • While operating White List, this function was called. • The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for operating the White List.

◆ R_BLE_GAP_GetVerInfo()

ble_status_t R_BLE_GAP_GetVerInfo (void)

Get the version number of the Controller and the host stack.

This function retrieves the version information of local device. The result of this API call is notified in BLE_GAP_EVENT_LOC_VER_INFO event.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_ReadPhy()

ble_status_t R_BLE_GAP_ReadPhy (uint16_t *conn_hdl*)

Get the phy settings.

This function gets the PHY settings for the connection. The result of this API call is notified in BLE_GAP_EVENT_PHY_RD_COMP event.

Parameters

[in]	conn_hdl	Connection handle identifying the link whose PHY settings to be retrieved.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	conn_hdl is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_ConfRslvList()

ble_status_t R_BLE_GAP_ConfRslvList (uint8_t *op_code*, st_ble_dev_addr_t * *p_addr*, st_ble_gap_rslv_list_key_set_t * *p_peer_irk*, uint8_t *device_num*)

Set Resolving List.

This function supports the following operations regarding Resolving List.

- Add the device to Resolving List.
- Delete the device from Resolving List.

- Clear Resolving List.

  In order to generate a resolvable private address, a local IRK needs to be registered by R_BLE_GAP_SetLocIdInfo(). If communicating with the identity address, register all-zero IRK as local IRK. In order to resolve resolvable private address of the remote device, the IRK distributed from the remote device needs to be added to Resolving List. The total number of Resolving List entries is defined as BLE_GAP_RESOLV_LIST_MAX_ENTRY. The result of this API call is notified in BLE_GAP_EVENT_RSLV_LIST_CONF_COMP event.

Parameters

[in]	op_code	The operation for Resolving List. macro: BLE_GAP_LIST_ADD_DEV(0x01) — Add the device to the list. BLE_GAP_LIST_REM_DEV(0x02) — Delete the device from the list. BLE_GAP_LIST_CLR(0x03) — Clear the list.
[in]	p_addr	An array of Identity Addresses to add / delete to the list. The number of elements is specified by device_num. If op_code is BLE_GAP_LIST_CLR, p_addr is ignored.
[in]	p_peer_irk	The remote IRK and the type of local IRK added to Resolving List. If op_code is other than BLE_GAP_LIST_ADD_DEV, p_peer_irk is ignored. The number of elements is

		specified by device_num.
[in]	device_num	The number of devices add / delete to the list. Valid range is 1-BLE_GAP_RSLV_LIST_MAX_ENTRY. If op_code is BLE_GAP_LIST_CLR, device_num is ignored.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The reason for this error is as follows: • When added to or deleted from the list, p_addr is specified as NULL. • When added to the list, p_peer_irk is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The reason for this error is as follows: • op_code is out of range. • When op_code is BLE_GAP_LIST_ADD_DEV or BLE_GAP_LIST_REM_DEV, device_num is out of range. • When op_code is BLE_GAP_LIST_ADD_DEV or BLE_GAP_LIST_REM_DEV, address type field in p_addr is out of range.
BLE_ERR_INVALID_STATE(0x0008)	The reason for this error is as follows: • While operating Resolving List, this function was called. • The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for operating the Resolving List.
BLE_ERR_INVALID_HDL(0x000E)	The specified Identity Address was not found in Resolving List.

◆ R_BLE_GAP_EnableRpa()

ble_status_t R_BLE_GAP_EnableRpa (uint8_t *enable*)

Enable/Disable address resolution and generation of a resolvable private address.

This function enables or disables RPA functionality. The RPA functionality includes the following.

- Generation of local resolvable private address
- Resolution of remote resolvable private address

In order to do advertising, scanning or creating a link with local resolvable private address, the RPA functionality needs to be enabled. After enabling the RPA functionality and the identity address of remote device and the IRKs of local/remote device is registered, local device can generate own resolvable private address in the time interval set by R_BLE_GAP_SetRpaTo(), and can resolve a resolvable private address of a remote device. It is recommended that the RPA functionality is called immediately after the initialization by R_BLE_GAP_Init(). The result of this API call is notified in BLE_GAP_EVENT_RPA_EN_COMP event.

Parameters

[in]	enable	Enable or disable address resolution function. macro: description BLE_GAP_RPA_DISABLED(0x00): Disable RPA generation/resolution. BLE_GAP_RPA_ENABLED(0x01): Enable RPA generation/resolution.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	enable is out of range.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_SetRpaTo()

ble_status_t R_BLE_GAP_SetRpaTo (uint16_t *rpa_timeout*)

Set the update time of resolvable private address.

This function sets the time interval to update the resolvable private address. The result of this API call is notified in BLE_GAP_EVENT_SET_RPA_TO_COMP event.

Parameters

[in]	rpa_timeout	Time interval to update resolvable private address in seconds. Valid range is 0x003C - 0xA1B8. Default is 900s.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_ReadRpa()

ble_status_t R_BLE_GAP_ReadRpa (st_ble_dev_addr_t * *p_addr*)

Get the resolvable private address of local device.

This function retrieves the local resolvable private address. Before getting the address, enable the resolvable private address function by R_BLE_GAP_EnableRpa(). The result of this API call is notified in BLE_GAP_EVENT_RD_RPA_COMP event.

Parameters

[in]	p_addr	Identity address registered in Resolving List.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_addr is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	Address type in p_addr is out of range.
BLE_ERR_INVALID_STATE(0x0008)	The reason for this error is as follows. • When retrieving the local resolvable private address, this function was called. • The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_ReadRssi()

ble_status_t R_BLE_GAP_ReadRssi (uint16_t *conn_hdl*)

Get RSSI.

This function retrieves RSSI. The result of this API call is notified in BLE_GAP_EVENT_RSSI_RD_COMP event.

Parameters

[in]	conn_hdl	Connection handle identifying the link whose RSSI to be retrieved.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	conn_hdl is out of range.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_ReadChMap()

ble_status_t R_BLE_GAP_ReadChMap (uint16_t *conn_hdl*)

Get the Channel Map.

This function retrieves the channel map. The result of this API call is notified in BLE_GAP_EVENT_CH_MAP_RD_COMP event.

Parameters

[in]	conn_hdl	Connection handle identifying the link whose channel map to be retrieved.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	conn_hdl is out of range.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_SetRandAddr()

ble_status_t R_BLE_GAP_SetRandAddr (uint8_t * *p_random_addr*)

Set a random address.

This function sets static address or non-resolvable private address to Controller. Refer to Core Specification Vol 6, PartB, "1.3.2 Random Device Address" regarding the format of the random address. Resolvable private address cannot set by this API. The result of this API call is notified in BLE_GAP_EVENT_RAND_ADDR_SET_COMP event.

Parameters

[in]	p_random_addr	Static address or non-resolvable private address. The BD address setting format is little endian.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_random_addr is specified as NULL.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_SetAdvParam()

ble_status_t R_BLE_GAP_SetAdvParam (st_ble_gap_adv_param_t * *p_adv_param*)

Set advertising parameters.

This function sets advertising parameters. It's possible to do advertising where the advertising parameters are different every each advertising set. The number of advertising set in the Controller is defined as BLE_MAX_NO_OF_ADV_SETS_SUPPORTED. Each advertising set is identified with advertising handle (0x00-0x03). Create an advertising set with this function before start advertising, setting periodic advertising parameters, start periodic advertising, setting advertising data/scan response data/periodic advertising data. The result of this API call is notified in BLE_GAP_EVENT_ADV_PARAM_SET_COMP event.

Parameters

[in]	p_adv_param	Advertising parameters.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_adv_param is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The below p_adv_param field value is out of range. • adv_handle • adv_intv_min/adv_intv_max • adv_ch_map • o_addr_type • p_addr_type • adv_phy • sec_adv_phy • scan_req_ntf_flag
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_SetAdvSresData()

ble_status_t R_BLE_GAP_SetAdvSresData (st_ble_gap_adv_data_t * *p_adv_srsp_data*)

Set advertising data/scan response data/periodic advertising data.

This function sets advertising data/scan response data/periodic advertising data to the advertising set. It is necessary to create an advertising set by R_BLE_GAP_SetAdvParam(), before calling this function. Set advertising data/scan response data/periodic advertising data, after allocating the memory for the data. The following shall be applied regarding the adv_prop_type field and the data_type field in st_ble_gap_adv_param_t parameter specified in R_BLE_GAP_SetAdvParam().

The following shall be applied regarding the adv_prop_type field and the data_type field in st_ble_gap_adv_param_t parameter specified in R_BLE_GAP_SetAdvParam().

- When adv_prop_type is Legacy Advertising PDU type,
    - it's possible to set advertising data/scan response data up to 31 bytes.
    - advertising data/scan response data can be updated by this function in advertising.
- When adv_prop_type is Extended Advertising PDU type,
    - it's possible to set at most 1650 bytes of data as advertising data/scan response data per 1 advertising set.
    - the total buffer size in Controller for advertising data/scan response data is 4250 bytes. Therefore please note that more than 4250 bytes of advertising data/scan response data can not be set to all the advertising sets. Please refer to Figure 1.1 and Figure 1.2 about examples of setting advertising data/scan response data.
    - it's possible to update advertising data/scan response data in advertising, if the data_length field in st_ble_gap_adv_data_t parameter is up to 251 bytes.

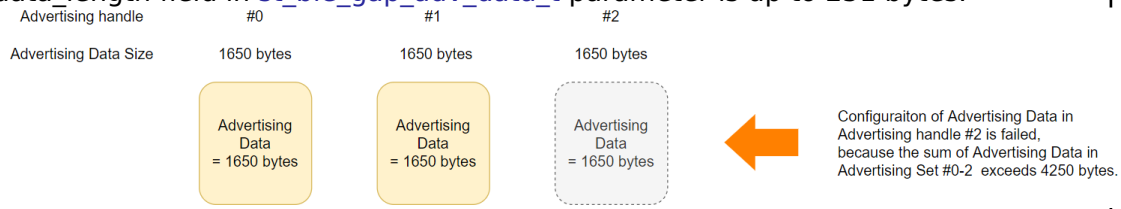

Figure 235: Figure 1.1

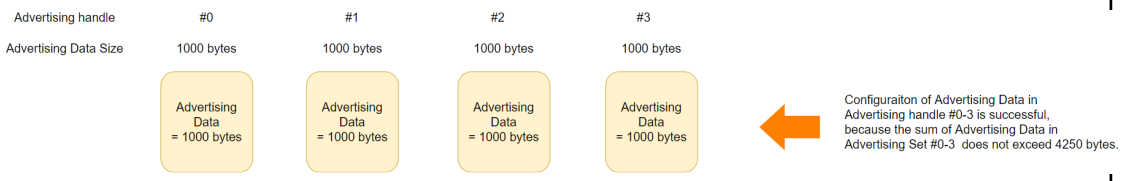

Figure 236: Figure 1.2

- When periodic advertising data is set,
  - At most 1650 bytes of data can be set to 1 advertising set.
  - The total buffer size in Controller for periodic advertising data is 4306 bytes. Therefore please note that more than 4306 bytes of periodic advertising data can not be set to all the advertising sets.
  - it's possible to update periodic advertising data in advertising, if the data_length field in st_ble_gap_adv_data_t parameter is up to 252 bytes.

The result of this API call is notified in BLE_GAP_EVENT_ADV_DATA_UPD_COMP event.

Parameters

[in]	p_adv_srsp_data	Advertising data/scan response data/periodic advertising data.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The reason for this error is as follows: • p_adv_srsp_data is specified as NULL. • data_length field in p_adv_srsp_data parameter is not 0 and p_data field is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The following field in p_adv_srsp_data parameter is out of range. • adv_hdl • data_type • data_length • zero_length_flag
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_StartAdv()

ble_status_t R_BLE_GAP_StartAdv (uint8_t *adv_hdl*, uint16_t *duration*, uint8_t *max_extd_adv_evts*)

Start advertising.

This function starts advertising. Create the advertising set specified with adv_hdl by R_BLE_GAP_SetAdvParam(), before calling this function. The result of this API call is notified in BLE_GAP_EVENT_ADV_ON event.

Parameters

[in]	adv_hdl	The advertising handle pointing to the advertising set which starts advertising. The valid range is 0x00 - 0x03.
[in]	duration	The duration for which the advertising set identified by adv_hdl is enabled. Time = duration * 10ms. When the duration expires, BLE_GAP_EVENT_ADV_OFF event notifies that advertising is stopped. The valid range is 0x0000 - 0xFFFF. The duration parameter is ignored when the value is set to 0x0000.
[in]	max_extd_adv_evts	The maximum number of advertising events that be sent during advertising. When all the advertising events(max_extd_adv_evts) have been sent, BLE_GAP_EVENT_ADV_OFF event notifies that advertising is stopped. The max_extd_adv_evts parameter is ignored when the value is set to 0x00.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	adv_hdl is out of range.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_StopAdv()

ble_status_t R_BLE_GAP_StopAdv (uint8_t *adv_hdl*)

Stop advertising.

This function stops advertising. The result of this API call is notified in BLE_GAP_EVENT_ADV_OFF event.

Parameters

[in]	adv_hdl	The advertising handle pointing to the advertising set which stops advertising. The valid range is 0x00 - 0x03.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	adv_hdl is out of range.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_SetPerdAdvParam()

ble_status_t R_BLE_GAP_SetPerdAdvParam (st_ble_gap_perd_adv_param_t * *p_perd_adv_param*)

Set periodic advertising parameters.

This function sets periodic advertising parameters. Create the advertising set which supports Non-Connectable, Non-Scannable advertising by R_BLE_GAP_SetAdvParam() before setting periodic advertising parameters. The result of this API call is notified in BLE_GAP_EVENT_PERD_ADV_PARAM_SET_COMP event.

Parameters

[in]	p_perd_adv_param	Periodic advertising parameters.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_perd_adv_param is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The following field in the p_perd_adv_param parameter is out of range. • adv_hdl • perd_intv_min or perd_intv_max • prop_type is neither 0x0000 nor 0x0040(BLE_GAP_PERD_PROP_TX_POWER)
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_StartPerdAdv()

ble_status_t R_BLE_GAP_StartPerdAdv (uint8_t *adv_hdl*)

Start periodic advertising.

This function starts periodic advertising. Set periodic advertising parameters to the advertising set, before starting periodic advertising. The result of this API call is notified in BLE_GAP_EVENT_PERD_ADV_ON event.

Parameters

[in]	adv_hdl	Advertising handle identifying the advertising set which starts periodic advertising.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	adv_hdl is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_StopPerdAdv()

ble_status_t R_BLE_GAP_StopPerdAdv (uint8_t *adv_hdl*)

Stop periodic advertising.

This function stops periodic advertising. If the return value of this API is BLE_SUCCESS, the result is notified in BLE_GAP_EVENT_PERD_ADV_OFF event.

Parameters

[in]	adv_hdl	Specify the handle of Advertising Set to stop Periodic Advertising.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	adv_hdl is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_GetRemainAdvBufSize()

ble_status_t R_BLE_GAP_GetRemainAdvBufSize (uint16_t * *p_remain_adv_data_size*, uint16_t * *p_remain_perd_adv_data_size*)

Get buffer size for advertising data/scan response data/periodic advertising data in the Controller.

This function gets the total size of advertising data/scan response data/periodic advertising data which can be currently set to Controller(all of the advertising sets). The application layer gets the data sizes via the parameters. By this API function call, no events occur.

Parameters

[out]	p_remain_adv_data_size	The free buffer size of Controller to which advertising data/scan response data can be currently set.
[out]	p_remain_perd_adv_data_size	The free buffer size of Controller to which periodic advertising data can be currently set.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_remain_adv_data_size or p_remain_perd_adv_data_size is specified as NULL.

◆ R_BLE_GAP_RemoveAdvSet()

ble_status_t R_BLE_GAP_RemoveAdvSet (uint8_t *op_code*, uint8_t *adv_hdl*)

Delete advertising set.

This function deletes an advertising set or deletes all the advertising sets. The result of this API call is notified in BLE_GAP_EVENT_ADV_SET_REMOVE_COMP event.

Parameters

[in]	op_code	The operation for delete or clear. macro: description BLE_GAP_RMV_ADV_SET_REM_OP(0x01): Delete an advertising set. BLE_GAP_RMV_ADV_SET_CLR_OP(0x02): Delete all the advertising sets.
[in]	adv_hdl	Advertising handle identifying the advertising set deleted. If op_code is BLE_GAP_RMV_ADV_SET_CLR_OP, adv_hdl is ignored.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The reason for this error is as follows: • op_code is out of range. • When op_code is BLE_GAP_RMV_ADV_SET_REM_OP(0x01), adv_hdl is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_CreateConn()

ble_status_t R_BLE_GAP_CreateConn (st_ble_gap_create_conn_param_t * *p_param*)

Request for a link establishment.

This function sends a connection request to a remote device to create a link. When Controller has received a request for establishment of a link from host stack, BLE_GAP_EVENT_CREATE_CONN_COMP event is notified to the application layer. When the link is established, BLE_GAP_EVENT_CONN_IND event is notified to the application layer.

Parameters

[in]	p_param	Connection parameters.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The reason for this error is as follows: • p_param is specified as NULL. • p_conn_param_1M field and p_conn_param_2M and p_conn_param_coded field in p_param are specified as NULL. • When creating a link with 1M PHY, p_conn_param in p_conn_param_1M field in p_param is specified as NULL. • When creating a link with 2M PHY, p_conn_param in p_conn_param_2M field in p_param is specified as NULL. • When creating a link with coded MPHY, p_conn_param in p_conn_param_coded field in p_param is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The reason for this error is as follows: • init_filter_policy in p_param is out of range. • remote_bd_addr_type field or own_addr_type address field in p_param is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_CancelCreateConn()

ble_status_t R_BLE_GAP_CancelCreateConn (void)

Cancel the request for a link establishment.

This function cancels a request for establishing a link. When Controller has received the cancel request from host stack, BLE_GAP_EVENT_CONN_CANCEL_COMP event is notified to the application layer. When the cancel procedure has completed, BLE_GAP_EVENT_CONN_IND event is notified to the application layer.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_SetChMap()

ble_status_t R_BLE_GAP_SetChMap (uint8_t * *p_channel_map*)

Set the Channel Map.

This function sets the channel map. The result of this API call is notified in BLE_GAP_EVENT_CH_MAP_SET_COMP event.

Parameters

[in]	p_channel_map	Channel map.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_channel_map is specified as NULL.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_StartScan()

ble_status_t R_BLE_GAP_StartScan (st_ble_gap_scan_param_t * *p_scan_param*, st_ble_gap_scan_on_t * *p_scan_enable*)

Set scan parameter and start scan.

This function starts scanning. When scanning for the first time, set the p_scan_param. Setting scan parameters can be omitted by specifying p_scan_param as NULL after next time. The result of this API call is notified in BLE_GAP_EVENT_SCAN_ON event. Advertising report is notified in BLE_GAP_EVENT_ADV_REPT_IND event. Figure 1.3 shows the relationship between scan period, scan duration, scan interval and scan window.

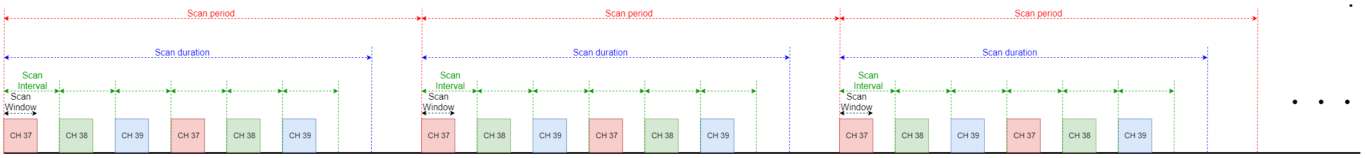

Figure 237: Figure 1.3

When scan duration is non-zero, scan period is zero and scan duration expires, BLE_GAP_EVENT_SCAN_TO event is notified to the application layer.

Parameters

[in]	p_scan_param	Scan parameter. When p_scan_param is specified as NULL, host stack doesn't set scan parameters and start scanning with the previous parameters.
[in]	p_scan_enable	Scan period, scan duration, duplicate filter and procedure type.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The reason for this error is as follows: • p_scan_enable is specified as NULL. • p_phy_param_1M field and p_phy_param_coded field in p_scan_param are specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The reason for this error is as follows: • proc_type field in p_scan_enable is out of range. • filter_dups in p_scan_enable is out of range. • o_addr_type in p_scan_param is out of range. • filter_policy in p_scan_param is out of range. • scan_type of p_scan_param's p_phy_param_1M or p_phy_param_coded is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_StopScan()

ble_status_t R_BLE_GAP_StopScan (void)

Stop scan.

This function stops scanning. The result of this API call is notified in BLE_GAP_EVENT_SCAN_OFF event.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_CreateSync()

ble_status_t R_BLE_GAP_CreateSync (st_ble_dev_addr_t * *p_addr*, uint8_t *adv_sid*, uint16_t *skip*, uint16_t *sync_to*)

Request for a periodic sync establishment.

This function sends a request for establishment of a periodic sync to a advertiser. In order to create a periodic sync, scan needs to be starting by R_BLE_GAP_StartScan(). When Controller has received the request from host stack, BLE_GAP_EVENT_CREATE_SYNC_COMP event is notified to the application layer. When the periodic sync is established, BLE_GAP_EVENT_SYNC_EST event is notified to the application layer.

Parameters

[in]	p_addr	The address of periodic advertiser.When p_addr is specified as NULL, local device creates a periodic sync with the advertiser registered in Periodic Advertiser List.
[in]	adv_sid	Advertising SID. When p_addr is specified as NULL, adv_sid is ignored. Valid range is 0x00 - 0x0F.
[in]	skip	The number of consecutive periodic advertising packets that local device may skip after receiving a periodic advertising packet. Valid range is 0x0000 - 0x01F3.

[in]	sync_to	The maximum permitted time between successful receives.When sync_to expires, the periodic sync is lost. Time(ms) = sync_to * 10. Valid range is 0x000A - 0x4000.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_addr is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The following parameter is out of range. • address type in p_addr • adv_sid • skip • sync_to
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_CancelCreateSync()

ble_status_t R_BLE_GAP_CancelCreateSync (void)

Cancel the request for a periodic sync establishment.

This function cancels a request for establishing a periodic sync. The result of this API call is notified in BLE_GAP_EVENT_SYNC_CREATE_CANCEL_COMP event.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_TerminateSync()

ble_status_t R_BLE_GAP_TerminateSync (uint16_t *sync_hdl*)

Terminate the periodic sync.

This function terminates a periodic sync. The result of this API call is notified in BLE_GAP_EVENT_SYNC_TERM event.

Parameters

[in]	sync_hdl	Sync handle identifying the periodic sync to be terminated.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	sync_hdl is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_ConfPerdAdvList()

ble_status_t R_BLE_GAP_ConfPerdAdvList (uint8_t *op_code*, st_ble_dev_addr_t * *p_addr*, uint8_t * *p_adv_sid_set*, uint8_t *device_num*)

Set Periodic Advertiser List.

This function supports the following operations regarding Periodic Advertiser List.

- Add the device to Periodic Advertiser List.
- Delete the device from Periodic Advertiser List.

- Clear Periodic Advertiser List.

  The total number of Periodic Advertiser List entries is defined as BLE_GAP_PERD_LIST_MAX_ENTRY. The result of this API call is notified in BLE_GAP_EVENT_PERD_LIST_CONF_COMP event.

Parameters

[in]	op_code	The operation for Periodic Advertiser List. macro: BLE_GAP_LIST_ADD_DEV(0x01) — Add the device to the list. BLE_GAP_LIST_REM_DEV(0x02) — Delete the device from the list. BLE_GAP_LIST_CLR(0x03) — Clear the list.
[in]	p_addr	An array of device address to add / delete to the list. The number of elements is specified by device_num. If op_code is BLE_GAP_LIST_CLR, p_addr is ignored.
[in]	p_adv_sid_set	An array of SID of the advertiser to add / delete to the list. The number of elements is specified by device_num. If op_code is BLE_GAP_LIST_CLR, p_adv_sid_set is ignored.
[in]	device_num	The number of devices add / delete to the list.

		Valid range is 1-BLE_GAP_PERD_LIST_MAX_ENTRY. If op_code is BLE_GAP_LIST_CLR, device_num is ignored.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	When op_code is BLE_GAP_LIST_ADD_DEV or BLE_GAP_LIST_REM_DEV, p_addr or p_adv_sid_set is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	op_code or address type field in p_addr or p_adv_sid_set or device_num is out of range.
BLE_ERR_UNSUPPORTED(0x0007)	Not supported.
BLE_ERR_INVALID_STATE(0x0008)	The reason for this error is as follows: • While operating Periodic Advertiser List, this function was called. • The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for operating periodic advertiser.

◆ R_BLE_GAP_AuthorizeDev()

ble_status_t R_BLE_GAP_AuthorizeDev (uint16_t *conn_hdl*, uint8_t *author_flag*)

Authorize a remote device.

User authorizes a remote device by this function. This function is used when a remote device accesses a GATT Characteristic in local device which requests user authorization. The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device to be authorized or not by user.
[in]	author_flag	Authorize or not the remote device. macro: description BLE_GAP_NOT_AUTHORIZED(0x00): Not authorize the remote device. BLE_GAP_AUTHORIZED(0x01): Authorize the remote device.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	author_flag is out of range.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.

◆ R_BLE_GAP_GetRemDevInfo()

ble_status_t R_BLE_GAP_GetRemDevInfo (uint16_t *conn_hdl*)

Get the information about remote device.

This function retrieves information about the remote device. The information includes BD_ADDR, the version number and LE features. The result of this API call is notified in BLE_GAP_EVENT_GET_REM_DEV_INFO event.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device whose information to be retrieved.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_SetPairingParams()

ble_status_t R_BLE_GAP_SetPairingParams (st_ble_gap_pairing_param_t * *p_pair_param*)

Set the parameters using pairing.

This function sets the parameters used in pairing. The parameters set by this API are sent to the remote device when pairing occurred. The result of this API call is returned by a return value.

Parameters

[in]	p_pair_param	Pairing parameters.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The following field in p_pair_param is out of range. • iocap • max_key_size • mitm • bonding • key_notf • sec_conn_only

◆ R_BLE_GAP_SetLocIdInfo()

ble_status_t R_BLE_GAP_SetLocIdInfo (st_ble_dev_addr_t * *p_lc_id_addr*, uint8_t * *p_lc_irk*)

Set the IRK and the identity address distributed to a remote device.

This function registers local IRK and identity address of local device in host stack. The IRK and the identity address are distributed to a remote device in pairing. The result of this API call is returned by a return value.

Parameters

[in]	p_lc_id_addr	Identity address to be registered in host stack.
[in]	p_lc_irk	IRK to be registered in host stack.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_lc_id_addr or p_lc_irk is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	Address type field in p_lc_id_addr is out of range.

◆ R_BLE_GAP_SetLocCsrk()

ble_status_t R_BLE_GAP_SetLocCsrk (uint8_t * *p_local_csrk*)

Set the CSRK distributed to a remote device.

This function registers local CSRK in host stack. The CSRK is distributed to a remote device in pairing. The result of this API call is returned by a return value.

Parameters

[in]	p_local_csrk	CSRK to be registered in host stack.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_local_csrk is specified as NULL.

◆ R_BLE_GAP_StartPairing()

ble_status_t R_BLE_GAP_StartPairing (uint16_t *conn_hdl*)

Start pairing.

This function starts pairing with a remote device. The result of this API call is returned by a return value. The result of pairing is notified in BLE_GAP_EVENT_PAIRING_COMP event.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device which local device starts pairing with.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	While generating OOB data, this function was called.
BLE_ERR_CONTEXT_FULL(0x000B)	While pairing, this function was called.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.

◆ R_BLE_GAP_ReplyPairing()

ble_status_t R_BLE_GAP_ReplyPairing (uint16_t *conn_hdl*, uint8_t *response*)

Reply the pairing request from a remote device.

This function replies to the pairing request from the remote device. The pairing request from the remote device is notified in BLE_GAP_EVENT_PAIRING_REQ event. The result of this API call is returned by a return value. The result of pairing is notified in BLE_GAP_EVENT_PAIRING_COMP event.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device which local device starts pairing with.
[in]	response	Accept or reject the pairing request from the remote device. macro: description BLE_GAP_PAIRING_ACCEPT(0x00): Accept the pairing request. BLE_GAP_PAIRING_REJECT(0x01): Reject the pairing request.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	response is out of range.
BLE_ERR_INVALID_STATE(0x0008)	While generating OOB data, this function was called.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.
BLE_ERR_NOT_YET_READY(0x0012)	When this function was called, host stack has not yet received BLE_GAP_EVENT_PAIRING_REQ event.

◆ R_BLE_GAP_StartEnc()

ble_status_t R_BLE_GAP_StartEnc (uint16_t *conn_hdl*)

Encryption the link.

This function starts encryption of the link. In case of master device, the local device requests for the encryption to a remote device. In case of slave device, the local device sends a Security Request to a remote device. After receiving the Security Request, the remote device requests for the encryption to the local device. The result of the encryption is returned in BLE_GAP_EVENT_ENC_CHG event.

Parameters

[in]	conn_hdl	Connection handle identifying the link which is encrypted.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The reason for this error is as follows: • Pairing has not been completed. • The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.

◆ R_BLE_GAP_ReplyPasskeyEntry()

ble_status_t R_BLE_GAP_ReplyPasskeyEntry (uint16_t *conn_hdl*, uint32_t *passkey*, uint8_t *response*)

Reply the passkey entry request.

When BLE_GAP_EVENT_PASSKEY_ENTRY_REQ event is notified, the response to passkey entry is sent by this function. The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device which the reply to passkey entry is sent.
[in]	passkey	Passkey. The valid range is 000000 - 999999 in decimal.
[in]	response	Active or negative reply to passkey entry. macro: description BLE_GAP_PAIRING_ACCEPT(0x00): Accept the passkey entry pairing. BLE_GAP_PAIRING_REJECT(0x01): Reject the passkey entry pairing.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	passkey or response is out of range.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.
BLE_ERR_NOT_YET_READY(0x0012)	When this function was called, pairing has not yet started.

◆ R_BLE_GAP_ReplyNumComp()

ble_status_t R_BLE_GAP_ReplyNumComp (uint16_t *conn_hdl*, uint8_t *response*)

Reply the numeric comparison request.

When BLE_GAP_EVENT_NUM_COMP_REQ event is notified, the response to Numeric Comparison is sent by this function. The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device which the reply to Numeric Comparison is sent.
[in]	response	Active or negative reply in Numeric Comparison. macro: BLE_GAP_PAIRING_ACCEPT(0x00) — The number displayed in the local is the same as the one of the remote. macro: BLE_GAP_PAIRING_REJECT(0x01) — The number displayed in the local is differs from the one of the remote.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	response is out of range.
BLE_ERR_INVALID_STATE(0x0008)	When this function was called, host stack has not yet received BLE_GAP_EVENT_NUM_COMP_REQ event.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.
BLE_ERR_NOT_YET_READY(0x0012)	When this function was called, pairing has not yet started.

◆ R_BLE_GAP_NotifyKeyPress()

ble_status_t R_BLE_GAP_NotifyKeyPress (uint16_t *conn_hdl*, uint8_t *key_press*)

Notify the input key type which a remote device inputs in the passkey entry.

This function notifies the input key type to the remote device in passkey entry. The result is returned from this API.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device to which the key notification is sent.
[in]	key_press	Input key type. macro / description BLE_GAP_LESC_PASSKEY_ENTRY_STARTED(0x00) — Notify that passkey entry started. BLE_GAP_LESC_PASSKEY_DIGIT_ENTERED(0x01) — Notify that passkey digit entered. BLE_GAP_LESC_PASSKEY_DIGIT_ERASED(0x02) — Notify that passkey digit erased. BLE_GAP_LESC_PASSKEY_CLEARED(0x03) — Notify that passkey cleared. BLE_GAP_LESC_PASSKEY_ENTRY_COMPLETED(0x04) — Notify that passkey entry completed.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	key_press parameter is out of range.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.
BLE_ERR_NOT_YET_READY(0x0012)	When this function was called, pairing has not yet started.

◆ R_BLE_GAP_GetDevSecInfo()

ble_status_t R_BLE_GAP_GetDevSecInfo (uint16_t *conn_hdl*, st_ble_gap_auth_info_t * *p_sec_info*)

Get the security information about the remote device.

This function gets the parameters which has been negotiated with the remote device in pairing. The parameters can be retrieved after pairing. The result is returned by p_sec_info.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device whose bonding information is retrieved.
[in]	p_sec_info	Return the security information which has been negotiated in pairing.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_sec_info is specified as NULL.
BLE_ERR_INVALID_STATE(0x0008)	The remote device bonding information has not been set to host stack.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.

◆ R_BLE_GAP_ReplyExKeyInfoReq()

ble_status_t R_BLE_GAP_ReplyExKeyInfoReq (uint16_t *conn_hdl*)

Distribute the keys of local device.

When key exchange request is notified by BLE_GAP_EVENT_EX_KEY_REQ event at pairing, keys of the local device are distributed. The result is returned from this API.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device to which the key is distributed.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.
BLE_ERR_NOT_YET_READY(0x0012)	When this function was called, pairing has not yet started.

◆ R_BLE_GAP_SetRemOobData()

ble_status_t R_BLE_GAP_SetRemOobData (st_ble_dev_addr_t * *p_addr*, uint8_t *oob_data_flag*, st_ble_gap_oob_data_t * *p_oob*)

Set the oob data from a remote device.

This function registers the OOB data received from a remote device. When oob_data_flag indicates that the OOB data has been received, the setting regarding OOB data is reflected in pairing. In order to do OOB pairing, set the OOB data received from the remote device before pairing. The result is returned from this API.

Parameters

[in]	p_addr	The remote device address.
[in]	oob_data_flag	This parameter indicates whether the local device has received the OOB data from the remote device or not. macro: BLE_GAP_OOB_DATA_NOT_PRESENT(0x00) — Reply that No OOB data has been received when pairing. macro: BLE_GAP_OOB_DATA_PRESENT(0x01) — Reply that the OOB data has been received when pairing.
[in]	p_oob	The OOB data received from the remote device.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The reason for this error is as follows. • p_addr is specified as NULL. • oob_data_flag is BLE_GAP_OOB_DATA_PRESENT and p_oob is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	oob_data_flag is out of range.
BLE_ERR_CONTEXT_FULL(0x000B)	There is no room to register the OOB data received from a remote device.

◆ R_BLE_GAP_CreateScOobData()

ble_status_t R_BLE_GAP_CreateScOobData (void)

Create data for oob in secure connection.

This function generates the OOB data distributed to a remote device in Secure Connections. The result of this API call is notified in BLE_GAP_EVENT_SC_OOB_CREATE_COMP event.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The reason for this error is as follows: • This function was called in pairing. • The task for host stack is not running.
BLE_ERR_ALREADY_IN_PROGRESS(0x000A)	This function was called in creating OOB data.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.

◆ R_BLE_GAP_SetBondInfo()

ble_status_t R_BLE_GAP_SetBondInfo (st_ble_gap_bond_info_t * *p_bond_info*, uint8_t *device_num*, uint8_t * *p_set_num*)

Set the bonding information stored in non-volatile memory to the host stack.

Set the bonding information of the remote device in the host stack. After power re-supply, when the remote device bonding information stored in non-volatile memory is set to host stack, this function is used. Host stack can be set the number specified by the device_num parameter of bonding information.

Parameters

[in]	p_bond_info	An array of bonding information. The number of elements is specified by device_num.
[in]	device_num	The number of the devices of which host stack registers bonding information.
[in]	p_set_num	The number of the devices whose bonding information was registered in host stack.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_bond_info or p_set_num is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	device_num is out of range.
BLE_ERR_CONTEXT_FULL(0x000B)	Host stack already has the maximum number of bonding information.

◆ R_BLE_GAP_DeleteBondInfo()

void R_BLE_GAP_DeleteBondInfo (int32_t *local*, int32_t *remote*, st_ble_dev_addr_t * *p_addr*, ble_gap_del_bond_cb_t *gap_del_bond_cb*)

This function deletes the bonding information in Host Stack.
When a function for deleting the bonding information stored in non-volatile area is registered by the gap_del_bond_cb parameter, it is deleted as well as the bonding information in Host Stack.

Parameters

[in]	local	The type of the local bonding information to be deleted. macro: description BLE_GAP_SEC_DEL_LOC_NONE(0x00): Delete no local keys. BLE_GAP_SEC_DEL_LOC_IRK(0x01): Delete local IRK and identity address. BLE_GAP_SEC_DEL_LOC_CSRK(0x02): Delete local CSRK. BLE_GAP_SEC_DEL_LOC_ALL(0x03): Delete all local keys.
[in]	remote	The type of the remote bonding information to be deleted. macro: description BLE_GAP_SEC_DEL_REM_NONE(0x00): Delete no remote device keys. BLE_GAP_SEC_DEL_REM_SA(0x01): Delete the keys specified by the p_addr parameter. BLE_GAP_SEC_DEL_REM_NOT_CONN(0x02): Delete keys of not connected remote devices. BLE_GAP_SEC_DEL_REM_ALL(0x03): Delete all remote device keys.

[in]	p_addr	p_addr is specified as the address of the remote device whose keys are deleted when the rem_info parameter is set to BLE_GAP_SEC_DEL_REM_SA(0x01).
[in]	gap_del_bond_cb	This parameter is a callback function which deletes the bonding information stored in non-volatile area. After deleting the bonding information stored in Host Stack, the callback function is called. If no bonding information is stored in non-volatile area, specify the parameter as NULL.

Return values

none	

◆ R_BLE_GAP_ReplyLtkReq()

ble_status_t R_BLE_GAP_ReplyLtkReq (uint16_t *conn_hdl*, uint16_t *ediv*, uint8_t * *p_peer_rand*, uint8_t *response*)

Reply the LTK request from a remote device.

This function replies to the LTK request in BLE_GAP_EVENT_LTK_REQ event from a remote device. The result of the LTK reply is returned in BLE_GAP_EVENT_LTK_RSP_COMP event. When the link encryption has completed, BLE_GAP_EVENT_ENC_CHG event is notified.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device which sent the LTK request.
[in]	ediv	Ediv notified in BLE_GAP_EVENT_LTK_REQ event.
[in]	p_peer_rand	Rand notified in BLE_GAP_EVENT_LTK_REQ event.
[in]	response	Response to the LTK request. If

		"BLE_GAP_LTK_REQ_ACCEPT " is specified, when no LTK has been exchanged in pairing, reject the LTK request. macro: BLE_GAP_LTK_REQ_ACCEPT(0x00) — Reply for the LTK request. BLE_GAP_LTK_REQ_DENY(0x01) — Reject the LTK request.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	p_peer_rand is specified as NULL in case of legacy pairing.
BLE_ERR_INVALID_ARG(0x0003)	response is out of range.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.

Function Documentation

◆ R_BLE_GATT_GetMtu()

ble_status_t R_BLE_GATT_GetMtu (uint16_t *conn_hdl*, uint16_t * *p_mtu*)

This function gets the current MTU used in GATT communication.

Both GATT server and GATT Client can use this function.
The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server or the GATT Client.
[in]	p_mtu	The Current MTU. Before MTU exchange, this parameter is 23 bytes. After MTU exchange, this parameter is the negotiated MTU.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The mtu parameter is NULL.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server or the GATT Client specified by conn_hdl was not found.

Data Structure Documentation

◆ st_ble_gatt_value_t

struct st_ble_gatt_value_t		
Attribute Value.		
Data Fields		
uint16_t	value_len	Length of the attribute value.
uint8_t *	p_value	Attribute Value.

◆ st_ble_gatt_hdl_value_pair_t

struct st_ble_gatt_hdl_value_pair_t		
Attribute handle and attribute Value.		
Data Fields		
uint16_t	attr_hdl	Attribute Handle.
st_ble_gatt_value_t	value	Attribute Value.

◆ st_ble_gatt_queue_att_val_t

struct st_ble_gatt_queue_att_val_t
Queued writes Attribute Value.
Data Fields

uint8_t *	p_value	Attribute Value for Queued Write .
uint16_t	value_len	Length of the attribute value.
uint16_t	padding	padding.

◆ st_ble_gatt_queue_pair_t

struct st_ble_gatt_queue_pair_t		
Queued writes Attribute Value.		
Data Fields		
st_ble_gatt_queue_att_val_t	queue_value	Attribute Value for Queued Write.
uint16_t	attr_hdl	Attribute Handle.

◆ st_ble_gatt_queue_elm_t

struct st_ble_gatt_queue_elm_t		
Prepare Write Queue element for long chracteristic.		
Data Fields		
st_ble_gatt_queue_pair_t	queue_value_pair	Part of Long Characteristic Value and Characteristic Value Handle.
uint16_t	offset	Offset that indicates the location to be written.

◆ st_ble_gatt_pre_queue_t

struct st_ble_gatt_pre_queue_t		
Prepare Write Queue for long chracteristic.		
Data Fields		
uint8_t *	p_buf_start	Buffer start address for Write Long Characteristic Request.
st_ble_gatt_queue_elm_t *	p_queue	Prepare Write Queue for Long Characteristic Value.
uint16_t	buffer_len	Buffer length.
uint16_t	conn_hdl	Connection Handle.
uint16_t	buf_offset	Current buffer offset.
uint8_t	queue_size	Number of elements in the prepare write queue.
uint8_t	queue_idx	Index of Prepare Write Queue.

◆ st_ble_gatts_db_params_t

struct st_ble_gatts_db_params_t

Attribute value to be set to or retrieved from the GATT Database and the access type from the GATT Client.		
Data Fields		
st_ble_gatt_value_t	value	Attribute value to be set to or retrieved from the GATT Database. Note that the address of the value field in the value field is invalid in case of read access.
uint16_t	attr_hdl	Attribute handle identifying the attribute to be set or retrieved.
uint8_t	db_op	Type of the access to GATT Database from the GATT Client. See also access_type_to_gatt_database

◆ st_ble_gatts_db_conn_hdl_t

struct st_ble_gatts_db_conn_hdl_t		
Information about the service or the characteristic that the attribute belongs to.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the GATT Client that accesses to the GATT DataBase.
uint8_t	service_id	ID of the service that the attribute belongs to.
uint8_t	char_id	ID of the Characteristic that the attribute belongs to.

◆ st_ble_gatts_db_access_evt_t

struct st_ble_gatts_db_access_evt_t		
This structure notifies that the GATT Database has been accessed from a GATT Client.		
Data Fields		
st_ble_gatts_db_conn_hdl_t *	p_handle	Information about the service or the characteristic that the attribute belongs to.
st_ble_gatts_db_params_t *	p_params	Attribute value to be set to or retrieved from the GATT Database and the access type from the GATT Client.

◆ st_ble_gatts_conn_evt_t

struct st_ble_gatts_conn_evt_t

This structure notifies that the link with the GATT Client has been established.		
Data Fields		
st_ble_dev_addr_t *	p_addr	Address of the GATT Client.

◆ **st_ble_gatts_disconn_evt_t**

struct st_ble_gatts_disconn_evt_t		
This structure notifies that the link with the GATT Client has been disconnected.		
Data Fields		
st_ble_dev_addr_t *	p_addr	Address of the GATT Client.

◆ **st_ble_gatts_ex_mtu_req_evt_t**

struct st_ble_gatts_ex_mtu_req_evt_t		
This structure notifies that a MTU Exchange Request PDU has been received from a GATT Client.		
Data Fields		
uint16_t	mtu	Maximum receive MTU size by GATT Client.

◆ **st_ble_gatts_cfm_evt_t**

struct st_ble_gatts_cfm_evt_t		
This structure notifies that a Confirmation PDU has been received from a GATT Client.		
Data Fields		
uint16_t	attr_hdl	Attribute handle identifying the Characteristic sent by the Indication PDU.

◆ **st_ble_gatts_read_by_type_rsp_evt_t**

struct st_ble_gatts_read_by_type_rsp_evt_t		
This structure notifies that a Read By Type Response PDU has been sent from GATT Server.		
Data Fields		
uint16_t	attr_hdl	Attribute handle identifying the Characteristic read by the Read By Type Request PDU.

◆ **st_ble_gatts_read_rsp_evt_t**

struct st_ble_gatts_read_rsp_evt_t		
This structure notifies that a Read Response PDU has been sent from GATT Server.		
Data Fields		
uint16_t	attr_hdl	Attribute handle identifying the Characteristic read by the Read Request PDU.

◆ st_ble_gatts_read_blob_rsp_evt_t

struct st_ble_gatts_read_blob_rsp_evt_t		
This structure notifies that a Read Blob Response PDU has been sent from GATT Server.		
Data Fields		
uint16_t	attr_hdl	Attribute handle identifying the Characteristic read by the Read Blob Request PDU.

◆ st_ble_gatts_read_multi_rsp_evt_t

struct st_ble_gatts_read_multi_rsp_evt_t		
This structure notifies that a Read Multiple Response PDU has been sent from GATT Server.		
Data Fields		
uint8_t	count	The number of attribute read by the Read Multiple Request PDU.
uint16_t *	p_attr_hdl_list	The list of attribute read by the Read Multiple Request PDU.

◆ st_ble_gatts_write_rsp_evt_t

struct st_ble_gatts_write_rsp_evt_t		
This structure notifies that a Write Response PDU has been sent from GATT Server.		
Data Fields		
uint16_t	attr_hdl	Attribute handle identifying the Characteristic written by the Write Request PDU.

◆ st_ble_gatts_prepare_write_rsp_evt_t

struct st_ble_gatts_prepare_write_rsp_evt_t		
This structure notifies that a Prepare Write Response PDU has been sent from GATT Server.		
Data Fields		
uint16_t	attr_hdl	Attribute handle identifying the Characteristic written by the Prepare Write Request PDU.
uint16_t	length	The length of written bytes by the Prepare Write Request PDU.
uint16_t	offset	The offset of the first octet to be written.

◆ st_ble_gatts_exe_write_rsp_evt_t

struct st_ble_gatts_exe_write_rsp_evt_t		
This structure notifies that a Execute Write Response PDU has been sent from GATT Server.		
Data Fields		

uint8_t	exe_flag	The flag that indicates whether execution or cancellation. value: 0x00 — Cancellation. value: 0x01 — Execution.

◆ **st_ble_gatts_db_uuid_cfg_t**

struct st_ble_gatts_db_uuid_cfg_t		
A structure that defines the information on the position where UUIDs are used.		
Data Fields		
uint16_t	offset	The position of the defined UUID is specified by offset value in uuid_table of st_ble_gatts_db_cfg_t.
uint16_t	first	The attribute handle that indicates the first position in st_ble_gatts_db_attr_cfg_t for the defined UUID is specified.
uint16_t	last	The attribute handle that indicates the last position in st_ble_gatts_db_attr_cfg_t for the defined UUID is specified.

◆ **st_ble_gatts_db_attr_cfg_t**

struct st_ble_gatts_db_attr_cfg_t		
A structure that defines the detailed information of the attributes.		
Data Fields		
uint8_t	desc_prop	The properties of attribute are specified. Set the following properties by a bitwise OR. macro: BLE_GATT_DB_READ(0x01) — description: Allow clients to read. macro: BLE_GATT_DB_WRITE(0x02) — description: Allow clients to write. macro: BLE_GATT_DB_WRITE_WITHOUT_RSP(0x04) — description: Allow clients to write. macro: BLE_GATT_DB — description: Allow clients

		_READ_WRITE (0x07) to access of all.
uint8_t	aux_prop	The auxiliary properties of attribute are specified. Set the following properties by a bitwise OR. macro / description BLE_GATT_DB_NO_AUXILIARY_PROPERTY(0x00) No auxiliary properties. It is invalid when used with other properties at the same time. BLE_GATT_DB_FIXED_LENGTH_PROPERTY(0x01) Fixed length attribute value. BLE_GATT_DB_AUTHORIZATION_PROPERTY(0x02) Attributes requiring authorization. BLE_GATT_DB_ATTR_DISABLED(0x10) The attribute is disabled. If this value is set, the attribute cannot be found and accessed by a GATT Client. It is invalid when used with other properties at the same time. BLE_GATT_DB_128_BIT_UUID_FORMAT(0x20) Attribute with 128 bit UUID. If this macro is not set, the attribute value is 16-bits UUID. BLE_GATT_DB_PEER_SPECIFIC_VAL_PROPE Attribute managed by each GATT

		RTY(0x40) Client. BLE_GATT_DB_CONST_ATTR_VAL_PROPERTY(0x80) Fixed attribute value. Writing from Client and setting from Server are prohibited.
uint16_t	length	The length of the attribute value is specified.
uint16_t	next	The position of the next attribute with the same UUID as the defined attribute is specified by an attribute handle.
uint16_t	uuid_offset	The storage area of attribute value. UUID of the defined attribute is set by specifying the position of the UUID registered in uuid_table of st_ble_gatts_db_cfg_t with the array offset value.
uint8_t *	p_data_offset	Storage area of attribute value. The address in the array registered in No.1-No.4 is specified to set the attribute value storage area of the defined attribute.

◆ st_ble_gatts_db_attr_list_t

struct st_ble_gatts_db_attr_list_t		
The number of attributes are stored.		
Data Fields		
uint8_t	count	The number of the services or the characteristics.

◆ st_ble_gatts_db_char_cfg_t

struct st_ble_gatts_db_char_cfg_t		
A structure that defines the detailed information of the characteristics.		
Data Fields		
st_ble_gatts_db_attr_list_t	list	The total number of attributes in the defined characteristic is

		specified.
uint16_t	start_hdl	The first attribute handle of the characteristic is specified.
uint8_t	service_id	The index of service to which the characteristic belongs is specified.

◆ st_ble_gatts_db_serv_cfg_t

struct st_ble_gatts_db_serv_cfg_t

A structure that defines the detailed information of the characteristics.

Data Fields

st_ble_gatts_db_attr_list_t	list	The total number of service declarations in the defined service is specified.
uint32_t	desc	The properties of the defined service are specified. Set the security level, the security mode and the key size with a bitwise OR. The bit0-bit3 are specified as the security level. Select one of the following. macro / description BLE_GATT_DB_SER_SECURITY_UNAUTH(0x00000001) — Unauthenticated pairing(Security Mode1 Security Level 2, Security Mode 2 Security Level 1) Unauthenticated pairing is required to access the service. BLE_GATT_DB_SER_SECURITY_AUTH(0x00000002) — Authenticated pairing(Security Mode1 Security Level 3, Security Mode 2 Security Level 2) Authenticated pairing is required to

			access the service.
			BLE_GATT_DB_SER_SECURITY_SECONN(0x00000004) Authenticated LE secure connections that generates 16bytes LTK(Security Mode1 Security Level 4) Authenticated LE secure connections pairing that generates 16bytes LTK is required to access the service. If this bit is set, bit24-27 are ignored.
			The bit4 is specified as the security mode.

macro	description
BLE_GATT_DB_SER_SECURITY_ENC(0x00000010)	Encryption Encryption by the LTK exchanged in pairing is required to access.

If the security requirement of the service is not needed, specify the bit0-bit4 to BLE_GATT_DB_SER_NO_SECURITY_PROPERTY(0x00000000) .(Security Mode1 Security Level 1)
The bit24-bit27 are specified as the key size required by the defined service.
Select one of the following.

macro	description
BLE_GATT_DB_SER_ENCRYP	7-byte encryption

			T_KEY_SIZE_7(0x01000000)	key.
			BLE_GATT_DB_SER_ENCRYPT_KEY_SIZE_8(0x02000000)	8-byte encryption key.
			BLE_GATT_DB_SER_ENCRYPT_KEY_SIZE_9(0x03000000)	9-byte encryption key.
			BLE_GATT_DB_SER_ENCRYPT_KEY_SIZE_10(0x04000000)	10-byte encryption key.
			BLE_GATT_DB_SER_ENCRYPT_KEY_SIZE_11(0x05000000)	11-byte encryption key.
			BLE_GATT_DB_SER_ENCRYPT_KEY_SIZE_12(0x06000000)	12-byte encryption key.
			BLE_GATT_DB_SER_ENCRYPT_KEY_SIZE_13(0x07000000)	13-byte encryption key.
			BLE_GATT_DB_SER_ENCRYPT_KEY_SIZE_14(0x08000000)	14-byte encryption key.
			BLE_GATT_DB_SER_ENCRYPT_KEY_SIZE_15(0x09000000)	15-byte encryption key.
			BLE_GATT_DB_SER_ENCRYPT_KEY_SIZE_16(0x0A000000)	16-byte encryption key.
			BLE_GATT_DB_SER_ENC_KEY_SIZE_DONT_CARE(0x0000	7-byte or larger encryption key.

		0000) Other bits are reserved.
uint16_t	start_hdl	The start attribute handle of the defined service is specified.
uint16_t	end_hdl	The end attribute handle of the defined service is specified.
uint8_t	char_start_idx	The start index of the characteristic that belongs to the defined service is specified.
uint8_t	char_end_idx	The end index of the characteristic that belongs to the defined service is specified.

◆ st_ble_gatts_db_cfg_t

struct st_ble_gatts_db_cfg_t		
This is the structure of GATT Database that is specified in R_BLE_GATTS_SetDbInst().		
Data Fields		
const uint8_t *	p_uuid_table	The array to register the UUID to be used.
uint8_t *	p_attr_val_table	The array to register variable attribute values.
const uint8_t *	p_const_attr_val_table	The array to register fixed attribute values.
uint8_t *	p_rem_spec_val_table	The array to manage the attribute values handled for each GATT client.
const uint8_t *	p_const_rem_spec_val_table	The array to register the default of the attribute value handled by each GATT client.
const st_ble_gatts_db_uuid_cfg_t *	p_uuid_cfg	The array to register information on the position where UUIDs are used.
const st_ble_gatts_db_attr_cfg_t *	p_attr_cfg	The array to register the detailed information of attributes.
const st_ble_gatts_db_char_cfg_t *	p_char_cfg	The array to register the detailed information of characteristics.
const st_ble_gatts_db_serv_cfg_t *	p_serv_cfg	The array to register the detailed information of services.
uint8_t	serv_cnt	The number of services included in the GATT Database.

uint8_t	char_cnt	The number of characteristics included in the GATT Database.
uint8_t	uuid_type_cnt	The number of UUIDs included in the GATT Database.
uint8_t	peer_spec_val_cnt	The total size of attribute value that needs to be managed for each GATT client.

◆ st_ble_gatts_evt_data_t

struct st_ble_gatts_evt_data_t		
st_ble_gatts_evt_data_t is the type of the data notified in a GATT Server Event.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the GATT Client.
uint16_t	param_len	The size of GATT Server Event parameters.
void *	p_param	GATT Server Event parameters. This parameter differs in each GATT Server Event.

Typedef Documentation

◆ ble_gatts_app_cb_t

ble_gatts_app_cb_t

ble_gatts_app_cb_t is the GATT Server Event callback function type.

Parameters

[in]	event_type	The type of GATT Server Event.
[in]	event_result	The result of GATT Server Event
[in]	p_event_data	Data notified by GATT Server Event.

Returns

none

Enumeration Type Documentation

◆ e_r_ble_gatts_evt_t

enum e_r_ble_gatts_evt_t	
GATT Server Event Identifier.	
Enumerator	
BLE_GATTS_EVENT_EX_MTU_REQ	MTU Exchange Request has been received. This event notifies the application layer that a MTU Exchange Request PDU has been received from a GATT Client. Need to reply to the request by R_BLE_GATTS_RspExMtu(). **Event Code: 0x3002** **Event Data:** st_ble_gatts_ex_mtu_req_evt_tBLE_GATTS_EVENT_EX_MTU_REQ
BLE_GATTS_EVENT_READ_BY_TYPE_RSP_COMP	Read By Type Response has been sent. This event notifies the application layer that a Read By Type Response PDU has been sent from GATT Server to the GATT Client. **Event Code: 0x3009** **Event Data:** st_ble_gatts_read_by_type_rsp_evt_tBLE_GATTS_EVENT_READ_BY_TYPE_RSP_COMP
BLE_GATTS_EVENT_READ_RSP_COMP	Read Response has been sent. This event notifies the application layer that a Read Response PDU has been sent from GATT Server to the GATT Client. **Event Code: 0x300B** **Event Data:** st_ble_gatts_read_rsp_evt_tBLE_GATTS_EVENT_READ_RSP_COMP
BLE_GATTS_EVENT_READ_BLOB_RSP_COMP	Read Blob Response has been sent. This event notifies the application layer that a Read Blob Response PDU has been sent from GATT Server to the GATT Client. **Event Code: 0x300D** **Event Data:**

	st_ble_gatts_read_blob_rsp_evt_tBLE_GATTS_EVENT_READ_BLOB_RSP_COMP
BLE_GATTS_EVENT_READ_MULTI_RSP_COMP	Read Multiple Response has been sent. This event notifies the application layer that a Read Multiple Response PDU has been sent from GATT Server to the GATT Client. **Event Code: 0x300F** **Event Data:** st_ble_gatts_read_multi_rsp_evt_tBLE_GATTS_EVENT_READ_MULTI_RSP_COMP
BLE_GATTS_EVENT_WRITE_RSP_COMP	Write Response has been sent. This event notifies the application layer that a Write Response PDU has been sent from GATT Server to the GATT Client. **Event Code: 0x3013** **Event Data:** st_ble_gatts_write_rsp_evt_tBLE_GATTS_EVENT_WRITE_RSP_COMP
BLE_GATTS_EVENT_PREPARE_WRITE_RSP_COMP	Prepare Write Response has been sent. This event notifies the application layer that a Prepare Write Response PDU has been sent from GATT Server to the GATT Client. **Event Code: 0x3017** **Event Data:** st_ble_gatts_prepare_write_rsp_evt_tBLE_GATTS_EVENT_PREPARE_WRITE_RSP_COMP
BLE_GATTS_EVENT_EXE_WRITE_RSP_COMP	Execute Write Response has been sent. This event notifies the application layer that a Execute Write Response PDU has been sent from GATT Server to the GATT Client. **Event Code: 0x3019** **Event Data:** st_ble_gatts_exe_write_rsp_evt_tBLE_GATTS_EVENT_EXE_WRITE_RSP_COMP
BLE_GATTS_EVENT_HDL_VAL_CNF	Confirmation has been received. This event notifies the application layer that a

	Confirmation PDU has been received from a GATT Client. **Event Code: 0x301E** **Event Data:** st_ble_gatts_cfm_evt_tBLE_GATTS_EVENT_HDL_VAL_CNF
BLE_GATTS_EVENT_DB_ACCESS_IND	The GATT Database has been accessed from a GATT Client. This event notifies the application layer that the GATT Database has been accessed from a GATT Client. **Event Code: 0x3040** **Event Data:** st_ble_gatts_db_access_evt_tBLE_GATTS_EVENT_DB_ACCESS_IND
BLE_GATTS_EVENT_CONN_IND	A connection has been established. This event notifies the application layer that the link with the GATT Client has been established. **Event Code: 0x3081** **Event Data:** st_ble_gatts_conn_evt_tBLE_GATTS_EVENT_CONN_IND
BLE_GATTS_EVENT_DISCONN_IND	A connection has been disconnected. This event notifies the application layer that the link with the GATT Client has been disconnected. **Event Code: 0x3082** **Event Data:** st_ble_gatts_disconn_evt_tBLE_GATTS_EVENT_DISCONN_IND
BLE_GATTS_EVENT_INVALID	Invalid GATT Server Event. **Event Code: 0x30FF** **Event Data:** noneBLE_GATTS_EVENT_INVALID

Function Documentation

◆ R_BLE_GATTS_Init()

ble_status_t R_BLE_GATTS_Init (uint8_t *cb_num*)

This function initializes the GATT Server and registers the number of the callbacks for GATT Server event.

Specify the cb_num parameter to a value between 1 and BLE_GATTS_MAX_CB.
R_BLE_GATTS_RegisterCb() registers the callback.
The result of this API call is returned by a return value.

Parameters

[in]	cb_num	The number of callbacks to be registered.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The cb_num parameter is out of range.

◆ R_BLE_GATTS_SetDbInst()

ble_status_t R_BLE_GATTS_SetDbInst (st_ble_gatts_db_cfg_t * *p_db_inst*)

This function sets GATT Database to host stack.

The result of this API call is returned by a return value.

Parameters

[in]	p_db_inst	GATT Database to be set.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The reason for this error is as follows. • The db_inst parameter is specified as NULL. • The array in the db_inst is specified as NULL.

◆ R_BLE_GATTS_RegisterCb()

ble_status_t R_BLE_GATTS_RegisterCb (ble_gatts_app_cb_t *cb*, uint8_t *priority*)

This function registers a callback for GATT Server event.

The number of the callback that may be registered by this function is the value specified by R_BLE_GATTS_Init().
The result of this API call is returned by a return value.

Parameters

[in]	cb	Callback function for GATT Server event.
[in]	priority	The priority of the callback function. Valid range is 1 <= priority <= BLE_GATTS_MAX_CB. A lower priority number means a higher priority level.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The cb parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The priority parameter is out of range.
BLE_ERR_CONTEXT_FULL(0x000B)	Host stack has already registered the maximum number of callbacks.

◆ R_BLE_GATTS_DeregisterCb()

ble_status_t R_BLE_GATTS_DeregisterCb (ble_gatts_app_cb_t *cb*)

This function deregisters the callback function for GATT Server event.

The result of this API call is returned by a return value.

Parameters

[in]	cb	The callback function to be deregistered.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The cb parameter is specified as NULL.
BLE_ERR_NOT_FOUND(0x000D)	The callback has not been registered.

◆ R_BLE_GATTS_Notification()

ble_status_t R_BLE_GATTS_Notification (uint16_t *conn_hdl*, st_ble_gatt_hdl_value_pair_t * *p_ntf_data*)

This function sends a notification of an attribute's value.

The maximum length of the attribute value that can be sent with notification is MTU-3.
The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device to be sent the notification.
[in]	p_ntf_data	The attribute value to send.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_ntf_data parameter or the value field in the value field in the p_ntf_data parameter is NULL.
BLE_ERR_INVALID_ARG(0x0003)	The value_len field in the value field in the p_ntf_data parameter is 0 or the attr_hdl field in the p_ntf_data parameters is 0.
BLE_ERR_INVALID_OPERATION(0x0009)	This function was called while processing other request.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl was not found.

◆ R_BLE_GATTS_Indication()

ble_status_t R_BLE_GATTS_Indication (uint16_t *conn_hdl*, st_ble_gatt_hdl_value_pair_t * *p_ind_data*)

This function sends a indication of an attribute's value.

The maximum length of the attribute value that can be sent with indication is MTU-3.
The result of this API call is returned by a return value.
The remote device that receives a indication sends a confirmation.
BLE_GATTS_EVENT_HDL_VAL_CNF event notifies the application layer that the confirmation has been received.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device to be sent the indication.
[in]	p_ind_data	The attribute value to send.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_ind_data parameter or the value field in the value field in the p_ind_data parameter is NULL.
BLE_ERR_INVALID_ARG(0x0003)	The value_len field in the value field in the p_ind_data parameter is 0 or the attr_hdl field in the p_ind_data parameters is 0.
BLE_ERR_INVALID_OPERATION(0x0009)	This function was called while processing other request.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl was not found.

◆ R_BLE_GATTS_GetAttr()

ble_status_t R_BLE_GATTS_GetAttr (uint16_t *conn_hdl*, uint16_t *attr_hdl*, st_ble_gatt_value_t * *p_value*)

This function gets a attribute value from the GATT Database.

The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	If the attribute value that has information about the remote device is retrieved, specify the remote device with the conn_hdl parameter. When information about the remote device is not required, set the conn_hdl parameter to BLE_GAP_INVALID_CONN_HDL.
[in]	attr_hdl	The attribute handle of the attribute value to be retrieved.
[out]	p_value	The attribute value to be retrieved.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_value parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The attr_hdl parameter is 0 or larger than the last attribute handle of GATT Database.
BLE_ERR_INVALID_STATE(0x0008)	The attribute is not in a state to be read.
BLE_ERR_INVALID_OPERATION(0x0009)	The attribute cannot be read.
BLE_ERR_NOT_FOUND(0x000D)	The attribute specified by the attr_hdl parameter is not belonging to any services or characteristics.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by the conn_hdl parameter was not found.

◆ R_BLE_GATTS_SetAttr()

ble_status_t R_BLE_GATTS_SetAttr (uint16_t *conn_hdl*, uint16_t *attr_hdl*, st_ble_gatt_value_t * *p_value*)

This function sets an attribute value to the GATT Database.

The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	If the attribute value that has information about the remote device is retrieved, specify the remote device with the conn_hdl parameter. When information about the remote device is not required, set the conn_hdl parameter to BLE_GAP_INVALID_CONN_HDL.
[in]	attr_hdl	The attribute handle of the attribute value to be set.
[in]	p_value	The attribute value to be set.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_value parameter is specified as NULL.
BLE_ERR_INVALID_DATA(0x0002)	The write size is larger than the length of the attribute value.
BLE_ERR_INVALID_ARG(0x0003)	The attr_hdl parameter is 0 or larger than the last attribute handle of GATT Database.
BLE_ERR_INVALID_STATE(0x0008)	The attribute is not in a state to be written.
BLE_ERR_INVALID_OPERATION(0x0009)	The attribute cannot be written.
BLE_ERR_NOT_FOUND(0x000D)	The attribute specified by the attr_hdl parameter is not belonging to any services or characteristics.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by the conn_hdl parameter was not found.

◆ R_BLE_GATTS_SendErrRsp()

ble_status_t R_BLE_GATTS_SendErrRsp (uint16_t *error_code*)

This function sends an error response to a remote device.

The result is returned from the API.
The error code specified in the callback is notified as Error Response to the remote device.
The result of this API call is returned by a return value.

Parameters

[in]	error_code	The error codes to be notified the client. It is a bitwise OR of GATT Error Group ID : 0x3000 and the following error codes defined in Core Spec and Core Spec Supplement.

Error Code	description
BLE_ERR_GATT_INVALID_HANDLE(0x3001)	Invalid attribute handle
BLE_ERR_GATT_READ_NOT_PERMITTED(0x3002)	The attribute cannot be read.
BLE_ERR_GATT_WRITE_NOT_PERMITTED(0x3003)	The attribute cannot be written.
BLE_ERR_GATT_INVALID_PDU(0x3004)	Invalid PDU.
BLE_ERR_GATT_INSUFFICIENT_AUTHENTICATION(0x3005)	The authentication to access the attribute is insufficient.
BLE_ERR_GATT_REQUEST_NOT_SUPPORTED(0x3006)	The request is not supported.
BLE_ERR_GATT_INVALID_OFFSET(0x3007)	The specified offset is larger than the length of the attribute value.
BLE_ERR_GATT_INSUFFICIENT_AUTHO	Authorization is required to access

				RIZATION(0x3008)	the attribute.
				BLE_ERR_GATT_PREPARE_WRITE_QUEUE_FULL(0x3009)	The Write Queue in the GATT Server is full.
				BLE_ERR_GATT_ATTRIBUTE_NOT_FOUND(0x300A)	The specified attribute is not found.
				BLE_ERR_GATT_ATTRIBUTE_NOT_LONG(0x300B)	The attribute cannot be read by Read Blob Request.
				BLE_ERR_GATT_INSUFFICIENT_ENC_KEY_SIZE(0x300C)	The Encryption Key Size is insufficient.
				BLE_ERR_GATT_INVALID_ATTRIBUTE_LEN(0x300D)	The length of the specified attribute is invalid.
				BLE_ERR_GATT_UNLIKELY_ERROR(0x300E)	Because an error has occurred, the process cannot be advanced.
				BLE_ERR_GATT_INSUFFICIENT_ENCRYPTION(0x300F)	Encryption is required to access the attribute.
				BLE_ERR_GATT_UNSUPPORTED_GROUP_TYPE(0x3010)	The type of the specified attribute is not supported.
				BLE_ERR_GATT_INSUFFICIENT_RESOURCES(0x3011)	The resource to complete the request is insufficient.
				0x3080 -	Application

			0x309F	Error. The upper layer defines the error codes.
			0x30E0 - 0x30FF	The error code defined in Common Profile and Service Error Core Specification Supplement(CSS). CSS ver.7 defines the error codes from 0x30FC to 0x30FF.
			BLE_ERR_GATT_WRITE_REQ_REJECTED(0x30FC)	The Write Request has not been completed due to the reason other than Permission.
			BLE_ERR_GATT_CCCD_IMPROPERLY_CFG(0x30FD)	The CCCD is set to be invalid.
			BLE_ERR_GATT_PROC_ALREADY_IN_PROGRESS(0x30FE)	The request is now in progress.
			BLE_ERR_GATT_OUT_OF_RANGE(0x30FF)	The attribute value is out of range.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The Group ID of the error_code parameter is not 0x3000, or it is 0x3000.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other error response,this function was called.

◆ R_BLE_GATTS_RspExMtu()

ble_status_t R_BLE_GATTS_RspExMtu (uint16_t *conn_hdl*, uint16_t *mtu*)

This function replies to a MTU Exchange Request from a remote device.

BLE_GATTS_EVENT_EX_MTU_REQ event notifies the application layer that a MTU Exchange Request has been received. Therefore when the callback has received the event, call this function.
The new MTU is the minimum of the mtu parameter specified by this function and the mtu field in BLE_GATTS_EVENT_EX_MTU_REQ event.
Default MTU size is 23 bytes.
The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device to be sent MTU Exchange Response.
[in]	mtu	The maximum size(in bytes) of the GATT PDU that GATT Server can receive. Valid range is 23 <= mtu <= 247.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The mtu parameter is out of range.
BLE_ERR_INVALID_OPERATION(0x0009)	This function was called while processing other request.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl was not found.

◆ R_BLE_GATTS_SetPrepareQueue()

ble_status_t R_BLE_GATTS_SetPrepareQueue (st_ble_gatt_pre_queue_t * *p_pre_queues*, uint8_t *queue_num*)

Register prepare queue and buffer in Host Stack.

This function registers the prepare queue and buffer for long chracteristic write and reliable writes. The result of this API call is returned by a return value.

Parameters

[in]	p_pre_queues	The prepare write queues to be registered.
[in]	queue_num	The number of prepare write queues to be registered.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_pre_queue parameter is specified as NULL.

enum	e_r_ble_gattc_evt_t GATT Client Event Identifier. More...

Data Structure Documentation

◆ st_ble_gatt_hdl_range_t

struct st_ble_gatt_hdl_range_t		
Attribute handle range.		
Data Fields		
uint16_t	start_hdl	Start Attribute Handle.
uint16_t	end_hdl	End Attribute Handle.

◆ st_ble_gattc_reliable_writes_char_pair_t

struct st_ble_gattc_reliable_writes_char_pair_t		
This is used in R_BLE_GATTC_ReliableWrites() to specify the pair of Characteristic Value and Characteristic Value Handle.		
Data Fields		

st_ble_gatt_hdl_value_pair_t	write_data	Pair of Characteristic Value and Characteristic Value Handle.
uint16_t	offset	Offset that indicates the location to be written. Normally, set 0 to this parameter. If this parameter sets to a value other than 0,Adjust the offset parameter and the length of the value to be written not to exceed the length of the Characteristic.

◆ st_ble_gattc_conn_evt_t

struct st_ble_gattc_conn_evt_t		
This structure notifies that the link with the GATT Server has been established.		
Data Fields		
st_ble_dev_addr_t *	p_addr	Address of the GATT Server.

◆ st_ble_gattc_disconn_evt_t

struct st_ble_gattc_disconn_evt_t		
This structure notifies that the link with the GATT Server has been disconnected.		
Data Fields		
st_ble_dev_addr_t *	p_addr	Address of the GATT Server.

◆ st_ble_gattc_ex_mtu_rsp_evt_t

struct st_ble_gattc_ex_mtu_rsp_evt_t		
This structure notifies that a MTU Exchange Response PDU has been received from a GATT Server.		
Data Fields		
uint16_t	mtu	MTU size(in bytes) that GATT Server can receive.

◆ st_ble_gattc_serv_16_evt_t

struct st_ble_gattc_serv_16_evt_t		
This structure notifies that a 16-bit UUID Service has been discovered.		
Data Fields		
st_ble_gatt_hdl_range_t	range	Attribute handle range of the 16-bit UUID service.
uint16_t	uuid_16	Service UUID.

◆ st_ble_gattc_serv_128_evt_t

struct st_ble_gattc_serv_128_evt_t

This structure notifies that a 128-bit UUID Service has been discovered.		
Data Fields		
st_ble_gatt_hdl_range_t	range	Attribute handle range of the 128-bit UUID service.
uint8_t	uuid_128[BLE_GATT_128_BIT_UUID_SIZE]	Service UUID.

◆ st_ble_gattc_inc_serv_16_evt_t

struct st_ble_gattc_inc_serv_16_evt_t		
This structure notifies that a 16-bit UUID Included Service has been discovered.		
Data Fields		
uint16_t	decl_hdl	Service Declaration handle of the 16-bit UUID Included Service.
st_ble_gattc_serv_16_evt_t	service	The contents of the Included Service.

◆ st_ble_gattc_inc_serv_128_evt_t

struct st_ble_gattc_inc_serv_128_evt_t		
This structure notifies that a 128-bit UUID Included Service has been discovered.		
Data Fields		
uint16_t	decl_hdl	Service Declaration handle of the 128-bit UUID Included Service.
st_ble_gattc_serv_128_evt_t	service	The contents of the Included Service.

◆ st_ble_gattc_char_16_evt_t

struct st_ble_gattc_char_16_evt_t		
This structure notifies that a 16-bit UUID Characteristic has been discovered.		
Data Fields		
uint16_t	decl_hdl	Attribute handle of Characteristic Declaration.
uint8_t	cproperty	Characteristic Properties. It is a bitwise OR of the following values. Refer to Core Spec [Vol.3] Generic Attribute Profile(GATT) "3.3.1.1 Characteristic Properties" regarding the details of the Characteristic Properties.

		value / description 0x01 Broadcast property 0x02 Read property 0x04 Write Without Response property 0x08 Write property 0x10 Notify property 0x20 Indicate property 0x40 Authenticated Signed Writes property 0x80 Extended Properties property
uint16_t	value_hdl	Value Handle of the Characteristic.
uint16_t	uuid_16	Characteristic UUID.

◆ st_ble_gattc_char_128_evt_t

struct st_ble_gattc_char_128_evt_t		
This structure notifies that a 128-bit UUID Characteristic has been discovered.		
Data Fields		
uint16_t	decl_hdl	Attribute Handle of Characteristic Declaration.
uint8_t	cproperty	Characteristic Properties. It is a bitwise OR of the following values. Refer to Core Spec [Vol.3] Generic Attribute Profile(GATT) "3.3.1.1 Characteristic Properties" regarding the details of the Characteristic Properties. value / description 0x01 Broadcast property

		0x02	Read property
		0x04	Write Without Response property
		0x08	Write property
		0x10	Notify property
		0x20	Indicate property
		0x40	Authenticated Signed Writes property
		0x80	Extended Properties property
uint16_t	value_hdl	Value Handle of the Characteristic.	
uint8_t	uuid_128[BLE_GATT_128_BIT_UUID_SIZE]	Characteristic UUID.	

◆ st_ble_gattc_char_desc_16_evt_t

struct st_ble_gattc_char_desc_16_evt_t		
This structure notifies that a 16-bit UUID Characteristic Descriptor has been discovered.		
Data Fields		
uint16_t	desc_hdl	Attribute Handle of Characteristic Descriptor.
uint16_t	uuid_16	Characteristic Descriptor UUID.

◆ st_ble_gattc_char_desc_128_evt_t

struct st_ble_gattc_char_desc_128_evt_t		
This structure notifies that a 128-bit UUID Characteristic Descriptor has been discovered.		
Data Fields		
uint16_t	desc_hdl	Attribute Handle of Characteristic Descriptor.
uint8_t	uuid_128[BLE_GATT_128_BIT_UUID_SIZE]	Characteristic Descriptor UUID.

◆ st_ble_gattc_err_rsp_evt_t

struct st_ble_gattc_err_rsp_evt_t
This structure notifies that a Error Response PDU has been received from a GATT Server.

<table>
<tr><th colspan="3">Data Fields</th></tr>
<tr><td>uint8_t</td><td>op_code</td><td>The op code of the ATT Request that causes the Error Response.
<table><tr><th>op_code</th></tr><tr><td>Exchange MTU Request(0x02)</td></tr><tr><td>Find Information Request(0x04)</td></tr><tr><td>Find By Type Value Request(0x06)</td></tr><tr><td>Read By Type Request(0x08)</td></tr><tr><td>Read Request(0x0A)</td></tr><tr><td>Read Blob Request(0x0C)</td></tr><tr><td>Read Multiple Request(0x0E)</td></tr><tr><td>Read by Group Type Request(0x10)</td></tr><tr><td>Write Request(0x12)</td></tr><tr><td>Prepare Write Request(0x16)</td></tr><tr><td>Execute Write Request(0x18)</td></tr></table></td></tr>
<tr><td>uint16_t</td><td>attr_hdl</td><td>Attribute handle that is target for the request.</td></tr>
<tr><td>uint16_t</td><td>rsp_code</td><td>The error codes notified from the GATT Server.

It is a bitwise OR of GATT Error Group ID : 0x3000 and the following error codes defined in Core Spec and Core Spec Supplement.
<table><tr><th>Error Code</th><th>description</th></tr><tr><td>BLE_ERR_GATT_INVALID_HANDLE(0x3001)</td><td>Invalid attribute handle</td></tr><tr><td>BLE_ERR_GATT_READ_NOT_PERMITTED(0x3002)</td><td>The attribute cannot be read.</td></tr><tr><td>BLE_ERR_GATT_WRITE_NOT_PERMITTED(0x3003)</td><td>The attribute cannot be written.</td></tr><tr><td>BLE_ERR_GAT</td><td>Invalid PDU.</td></tr></table></td></tr>
</table>

			T_INVALID_PDU(0x3004)	
			BLE_ERR_GATT_INSUFFICIENT_AUTHENTICATION(0x3005)	The authentication to access the attribute is insufficient.
			BLE_ERR_GATT_REQUEST_NOT_SUPPORTED(0x3006)	The request is not supported.
			BLE_ERR_GATT_INVALID_OFFSET(0x3007)	The specified offset is larger than the length of the attribute value.
			BLE_ERR_GATT_INSUFFICIENT_AUTHORIZATION(0x3008)	Authorization is required to access the attribute.
			BLE_ERR_GATT_PREPARE_WRITE_QUEUE_FULL(0x3009)	The Write Queue in the GATT Server is full.
			BLE_ERR_GATT_ATTRIBUTE_NOT_FOUND(0x300A)	The specified attribute is not found.
			BLE_ERR_GATT_ATTRIBUTE_NOT_LONG(0x300B)	The attribute cannot be read by Read Blob Request.
			BLE_ERR_GATT_INSUFFICIENT_ENC_KEY_SIZE(0x300C)	The Encryption Key Size is insufficient.
			BLE_ERR_GATT_INVALID_ATTRIBUTE_LEN(0x300D)	The length of the specified attribute is invalid.
			BLE_ERR_GATT_UNLIKELY_ERROR(0x300E)	Because an error has occurred, the process cannot be advanced.

			BLE_ERR_GATT_INSUFFICIENT_ENCRYPTION(0x300F)	Encryption is required to access the attribute.
			BLE_ERR_GATT_UNSUPPORTED_GROUP_TYPE(0x3010)	The type of the specified attribute is not supported.
			BLE_ERR_GATT_INSUFFICIENT_RESOURCES(0x3011)	The resource to complete the request is insufficient.
			0x3080 - 0x309F	Application Error. The upper layer defines the error codes.
			0x30E0 - 0x30FF	The error code defined in Common Profile and Service Error Core Specification Supplement(CSS). CSS ver.7 defines the error codes from 0x30FC to 0x30FF.
			BLE_ERR_GATT_WRITE_REQ_REJECTED(0x30FC)	The Write Request has not been completed due to the reason other than Permission.
			BLE_ERR_GATT_CCCD_IMPROPERLY_CFG(0x30FD)	The CCCD is set to be invalid.
			BLE_ERR_GATT_PROC_ALREADY_IN_PROGRESS(0x30FE)	The request is now in progress.
			BLE_ERR_GATT_OUT_OF_RA	The attribute value is out of

		NGE(0x30FF) range.

◆ st_ble_gattc_ntf_evt_t

struct st_ble_gattc_ntf_evt_t		
This structure notifies that a Notification PDU has been received from a GATT Server.		
Data Fields		
st_ble_gatt_hdl_value_pair_t	data	Characteristic that causes the Notification.

◆ st_ble_gattc_ind_evt_t

struct st_ble_gattc_ind_evt_t		
This structure notifies that a Indication PDU has been received from a GATT Server.		
Data Fields		
st_ble_gatt_hdl_value_pair_t	data	Characteristic that causes the Indication.

◆ st_ble_gattc_rd_char_evt_t

struct st_ble_gattc_rd_char_evt_t		
This structure notifies that read response to R_BLE_GATTC_ReadChar() or R_BLE_GATTC_ReadCharUsingUuid() has been received from a GATT Server.		
Data Fields		
st_ble_gatt_hdl_value_pair_t	read_data	The contents of the Characteristic that has been read.

◆ st_ble_gattc_wr_char_evt_t

struct st_ble_gattc_wr_char_evt_t		
This structure notifies that write response to R_BLE_GATTC_WriteChar() has been received from a GATT Server.		
Data Fields		
uint16_t	value_hdl	Value Handle of the Characteristic/Characteristic Descriptor that has been written.

◆ st_ble_gattc_rd_multi_char_evt_t

struct st_ble_gattc_rd_multi_char_evt_t		
This structure notifies that read response to R_BLE_GATTC_ReadMultiChar() has been received from a GATT Server.		
Data Fields		
uint16_t	value_hdl_num	The number of Value Handles of the Characteristics that has

		been read.
st_ble_gatt_value_t	multi_char_val	The contents of multiple Characteristics that have been read.

◆ st_ble_gattc_char_part_wr_evt_t

struct st_ble_gattc_char_part_wr_evt_t		
This structure notifies that write response to R_BLE_GATTC_WriteLongChar() or R_BLE_GATTC_ReliableWrites() has been received from a GATT Server.		
Data Fields		
st_ble_gatt_hdl_value_pair_t	write_data	The data to be written to the Characteristic/Long Characteristic/Long Characteristic Descriptor.
uint16_t	offset	Offset that indicates the location to be written.

◆ st_ble_gattc_reliable_writes_comp_evt_t

struct st_ble_gattc_reliable_writes_comp_evt_t		
This structure notifies that a response to R_BLE_GATTC_ExecWrite() has been received from a GATT Server.		
Data Fields		
uint8_t	exe_flag	This field indicates the command of the Execute Write that has been done. value: 0x00 — Cancel the write. value: 0x01 — Execute the write.

◆ st_ble_gattc_rd_multi_req_param_t

struct st_ble_gattc_rd_multi_req_param_t		
This is used in R_BLE_GATTC_ReadMultiChar() to specify multiple Characteristics to be read.		
Data Fields		
uint16_t *	p_hdl_list	List of Value Handles that point the Characteristics to be read.
uint16_t	list_count	The number of Value Handles included in the hdl_list parameter.

◆ st_ble_gattc_evt_data_t

struct st_ble_gattc_evt_data_t

st_ble_gattc_evt_data_t is the type of the data notified in a GATT Client Event.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the GATT Server.
uint16_t	param_len	The size of GATT Client Event parameters.
void *	p_param	GATT Client Event parameters. This parameter differs in each GATT Client Event.

◆ st_ble_gatt_value_t

struct st_ble_gatt_value_t		
Attribute Value.		
Data Fields		
uint16_t	value_len	Length of the attribute value.
uint8_t *	p_value	Attribute Value.

◆ st_ble_gatt_hdl_value_pair_t

struct st_ble_gatt_hdl_value_pair_t		
Attribute handle and attribute Value.		
Data Fields		
uint16_t	attr_hdl	Attribute Handle.
st_ble_gatt_value_t	value	Attribute Value.

Macro Definition Documentation

◆ BLE_GATTC_EXECUTE_WRITE_CANCEL_FLAG

#define BLE_GATTC_EXECUTE_WRITE_CANCEL_FLAG
GATT Execute Write Cancel Flag.

◆ BLE_GATTC_EXECUTE_WRITE_EXEC_FLAG

#define BLE_GATTC_EXECUTE_WRITE_EXEC_FLAG
GATT Execute Write Execute Flag.

Typedef Documentation

◆ ble_gattc_app_cb_t

ble_gattc_app_cb_t

ble_gattc_app_cb_t is the GATT Client Event callback function type.

Parameters

[in]	event_type	The type of GATT Client Event.
[in]	event_result	The result of GATT Client Event
[in]	p_event_data	Data notified by GATT Client Event.

Returns

none

Enumeration Type Documentation

◆ e_r_ble_gattc_evt_t

enum e_r_ble_gattc_evt_t

GATT Client Event Identifier.

Enumerator	
BLE_GATTC_EVENT_ERROR_RSP	This event notifies the application layer that a problem has occurred in the GATT Server while processing a request from GATT Client. When GATT Client has received a Error Response PDU from a GATT Server, BLE_GATTC_EVENT_ERROR_RSP event is notified the application layer. **Event Code: 0x4001** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_gattc_err_rsp_evt_tBLE_GATTC_EVENT_ERROR_RSP
BLE_GATTC_EVENT_EX_MTU_RSP	This event notifies the application layer that a MTU Exchange Response PDU has been received from a GATT Server.

	Event Code: 0x4003 **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_RSP_TIMEOUT(0x0011) 30 seconds or more have passed without receiving a Exchange MTU Response since GATT Client sent a Exchange MTU Request PDU to the GATT Server. **Event Data:** st_ble_gattc_ex_mtu_rsp_evt_tBLE_GATTC_EVENT_EX_MTU_RSP
BLE_GATTC_EVENT_CHAR_READ_BY_UUID_RSP	When the read of Characteristic specified by UUID has been completed, this event is notified to the application layer. **Event Code: 0x4009** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_RSP_TIMEOUT(0x0011) 30 seconds or more have passed without receiving a Exchange MTU Response since GATT Client sent a Exchange MTU Request PDU to the GATT Server. **Event Data:** st_ble_gattc_rd_char_evt_tBLE_GATTC_EVENT_CHAR_READ_BY_UUID_RSP
BLE_GATTC_EVENT_CHAR_READ_RSP	When the read of Characteristic/Characteristic Descriptor has been completed, this event is notified to the application layer. **Event Code: 0x400B** **result:**

	BLE_SUCCESS(0x0000) Success BLE_ERR_RSP_TIMEOUT(0x0011) 30 seconds or more have passed without receiving a read response since GATT Client sent a request for read by R_BLE_GATTC_ReadCharUsingUuid() to the GATT Server. **Event Data:** st_ble_gattc_rd_char_evt_tBLE_GATTC_EVENT_CHAR_READ_RSP
BLE_GATTC_EVENT_CHAR_PART_READ_RSP	After calling R_BLE_GATTC_ReadLongChar(), this event notifies the application layer that the partial contents of Long Characteristic/Long Characteristic Descriptor has been received from the GATT Server. **Event Code: 0x400D** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_RSP_TIMEOUT(0x0011) 30 seconds or more have passed without receiving a read response since GATT Client sent a request for read by R_BLE_GATTC_ReadLongChar() to the GATT Server. **Event Data:** st_ble_gattc_rd_char_evt_tBLE_GATTC_EVENT_CHAR_PART_READ_RSP
BLE_GATTC_EVENT_MULTI_CHAR_READ_RSP	This event notifies the application layer that the read of multiple Characteristics has been completed. **Event Code: 0x400F**

	result: BLE_SUCCESS(0x0000) Success BLE_ERR_RSP_TIMEOUT(0x0011) 30 seconds or more have passed without receiving a read response since GATT Client sent a request for read by R_BLE_GATTC_ReadMultiChar() to the GATT Server. **Event Data:** st_ble_gattc_rd_multi_char_evt_tBLE_GATTC_EVENT_MULTI_CHAR_READ_RSP
BLE_GATTC_EVENT_CHAR_WRITE_RSP	This event notifies the application layer that the write of Characteristic/Characteristic Descriptor has been completed. **Event Code: 0x4013** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_RSP_TIMEOUT(0x0011) 30 seconds or more have passed without receiving a write response since GATT Client sent a request for write by R_BLE_GATTC_WriteChar() to the GATT Server. **Event Data:** st_ble_gattc_wr_char_evt_tBLE_GATTC_EVENT_CHAR_WRITE_RSP
BLE_GATTC_EVENT_CHAR_PART_WRITE_RSP	This event notifies the application layer of the one of the following. • A segmentation to be written to Long Characteristic/Long Characteristic Descriptor has been sent to the GATT

	Server. • The data written to one Characteristic by Reliable Writes has been sent to the GATT Server. **Event Code: 0x4017** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_RSP_TIMEOUT(0x0011) 30 seconds or more have passed without receiving a response since GATT Client sent a request for segmentation write by R_BLE_GATTC_WriteLongChar(), or 1 Characteristic write by R_BLE_GATTC_ReliableWrites() to the GATT Server. **Event Data:** st_ble_gattc_char_part_wr_evt_tBLE_GATTC_EVENT_CHAR_PART_WRITE_RSP
BLE_GATTC_EVENT_HDL_VAL_NTF	This event notifies the application layer that a Notification has been received from a GATT Server. **Event Code: 0x401B** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_gattc_ntf_evt_tBLE_GATTC_EVENT_HDL_VAL_NTF
BLE_GATTC_EVENT_HDL_VAL_IND	This event notifies the application layer that a Indication has been received from a GATT Server. When the GATT Client has received a Indication, host stack automatically sends a

	Confirmation to the GATT Server. **Event Code: 0x401D** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_MEM_ALLOC_FAILED(0x000C) Insufficient resource is needed to generate the confirmation packet. **Event Data:** st_ble_gattc_ind_evt_tBLE_GATTC_EVENT_HDL_VAL_IND
BLE_GATTC_EVENT_CONN_IND	This event notifies the application layer that the link with the GATT Server has been established. **Event Code: 0x4081** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_gattc_conn_evt_tBLE_GATTC_EVENT_CONN_IND
BLE_GATTC_EVENT_DISCONN_IND	This event notifies the application layer that the link with the GATT Server has been disconnected. **Event Code: 0x4082** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_gattc_disconn_evt_tBLE_GATTC_EVENT_DISCONN_IND
BLE_GATTC_EVENT_PRIM_SERV_16_DISC_IND	This event notifies the application layer that 16-bit UUID Primary Service has been

	discovered. **Event Code: 0x40E0** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_gattc_serv_16_evt_tBLE_GATTC_EVENT_PRIM_SERV_16_DISC_IND
BLE_GATTC_EVENT_PRIM_SERV_128_DISC_IND	This event notifies the application layer that 128-bit UUID Primary Service has been discovered. **Event Code: 0x40E1** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_gattc_serv_128_evt_tBLE_GATTC_EVENT_PRIM_SERV_128_DISC_IND
BLE_GATTC_EVENT_ALL_PRIM_SERV_DISC_COMP	When the Primary Service discovery by R_BLE_GATTC_DiscAllPrimServ() has been completed, this event is notified to the application layer. **Event Code: 0x40E2** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** noneBLE_GATTC_EVENT_ALL_PRIM_SERV_DISC_COMP
BLE_GATTC_EVENT_PRIM_SERV_DISC_COMP	When the Primary Service discovery by R_BLE_GATTC_DiscPrimServ() has been completed, this event is notified to the application layer. **Event Code: 0x40E3**

	result: BLE_SUCCESS(0x0000) Success **Event Data:** noneBLE_GATTC_EVENT_PRIM_SERV_DISC_COMP
BLE_GATTC_EVENT_SECOND_SERV_16_DISC_IND	This event notifies the application layer that 16-bit UUID Secondary Service has been discovered. **Event Code: 0x40E4** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_gattc_serv_16_evt_tBLE_GATTC_EVENT_SECOND_SERV_16_DISC_IND

Function Documentation

◆ R_BLE_GATTC_Init()

ble_status_t R_BLE_GATTC_Init (uint8_t *cb_num*)

This function initializes the GATT Client and registers the number of the callbacks for GATT Client event.

Specify the cb_num parameter to a value between 1 and BLE_GATTC_MAX_CB.
R_BLE_GATTC_RegisterCb() registers the callback.
The result of this API call is returned by a return value.

Parameters

[in]	cb_num	The number of callbacks to be registered.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The cb_num parameter is out of range.

◆ R_BLE_GATTC_RegisterCb()

ble_status_t R_BLE_GATTC_RegisterCb (ble_gattc_app_cb_t *cb*, uint8_t *priority*)

This function registers a callback function for GATT Client event.

The number of the callback that may be registered by this function is the value specified by R_BLE_GATTC_Init().
The result of this API call is returned by a return value.

Parameters

[in]	cb	Callback function for GATT Client event.
[in]	priority	The priority of the callback function. Valid range is 1 <= priority <= BLE_GATTC_MAX_CB. A lower priority number means a higher priority level.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The cb parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The priority parameter is out of range.
BLE_ERR_CONTEXT_FULL(0x000B)	Host stack has already registered the maximum number of callbacks.

◆ R_BLE_GATTC_DeregisterCb()

ble_status_t R_BLE_GATTC_DeregisterCb (ble_gattc_app_cb_t *cb*)

This function deregisters the callback function for GATT Client event.

The result of this API call is returned by a return value.

Parameters

[in]	cb	The callback function to be deregistered.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The cb parameter is specified as NULL.
BLE_ERR_NOT_FOUND(0x000D)	The callback has not been registered.

◆ R_BLE_GATTC_ReqExMtu()

ble_status_t R_BLE_GATTC_ReqExMtu (uint16_t *conn_hdl*, uint16_t *mtu*)

This function sends a MTU Exchange Request PDU to a GATT Server in order to change the current MTU.

MTU Exchange Response is notified by BLE_GATTC_EVENT_EX_MTU_RSP event.
The new MTU is the minimum value of the mtu parameter specified by this function and the mtu field in BLE_GATTC_EVENT_EX_MTU_RSP event. Default MTU size is 23 bytes.
The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be sent.
[in]	mtu	The maximum size(in bytes) of the GATT PDU that GATT Client can receive. Valid range is 23 <= mtu <= 247.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The mtu parameter is out of range.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_DiscAllPrimServ()

ble_status_t R_BLE_GATTC_DiscAllPrimServ (uint16_t *conn_hdl*)

This function discovers all Primary Services in a GATT Server.

When 16-bit UUID Primary Service has been discovered,
BLE_GATTC_EVENT_PRIM_SERV_16_DISC_IND event is notified to the application layer.
When 128-bit UUID Primary Service has been discovered,
BLE_GATTC_EVENT_PRIM_SERV_128_DISC_IND event is notified to the application layer.
When the Primary Service discovery has been completed,
BLE_GATTC_EVENT_ALL_PRIM_SERV_DISC_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be discovered.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_OPERATION(0x0009)	This function was called while processing other request.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_DiscPrimServ()

ble_status_t R_BLE_GATTC_DiscPrimServ (uint16_t *conn_hdl*, uint8_t * *p_uuid*, uint8_t *uuid_type*)

This function discovers Primary Service specified by p_uuid in a GATT Server.

When Primary Service whose uuid is the same as the specified uuid has been discovered,
BLE_GATTC_EVENT_PRIM_SERV_16_DISC_IND event or
BLE_GATTC_EVENT_PRIM_SERV_128_DISC_IND event is notified to the application layer.
When the Primary Service discovery has been completed,
BLE_GATTC_EVENT_PRIM_SERV_DISC_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be discovered.
[in]	p_uuid	UUID of Primary Service to be discovered.
[in]	uuid_type	UUID type(16-bit or 128-bit). macro: description BLE_GATT_16_BIT_UUID_FORMAT(0x01): 16-bit UUID BLE_GATT_128_BIT_UUID_FORMAT(0x02): 128-bit UUID

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_uuid parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The uuid_type parameter is out of range.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_DiscAllSecondServ()

ble_status_t R_BLE_GATTC_DiscAllSecondServ (uint16_t *conn_hdl*)

This function discovers all Secondary Services in a GATT Server.

When a 16-bit UUID Secondary Service has been discovered,
BLE_GATTC_EVENT_SECOND_SERV_16_DISC_IND event is notified to the application layer.
When a 128-bit UUID Secondary Service has been discovered,
BLE_GATTC_EVENT_SECOND_SERV_128_DISC_IND event is notified to the application layer.
When the Secondary Service discovery has been completed,
BLE_GATTC_EVENT_ALL_SECOND_SERV_DISC_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be discovered.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_DiscIncServ()

ble_status_t R_BLE_GATTC_DiscIncServ (uint16_t *conn_hdl*, st_ble_gatt_hdl_range_t * *p_range*)

This function discovers Included Services within the specified attribute handle range in a GATT Server.

When Included Service that includes 16-bit UUID Service has been discovered, BLE_GATTC_EVENT_INC_SERV_16_DISC_IND event is notified to the application layer.
When Included Service that includes 128-bit UUID Service has been discovered, BLE_GATTC_EVENT_INC_SERV_128_DISC_IND event is notified to the application layer.
When the Included Service discovery has been completed, BLE_GATTC_EVENT_INC_SERV_DISC_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be discovered.
[in]	p_range	Retrieval range of Included Service.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_range parameter is specified as NULL.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_DiscAllChar()

ble_status_t R_BLE_GATTC_DiscAllChar (uint16_t *conn_hdl*, st_ble_gatt_hdl_range_t * *p_range*)

This function discovers Characteristic within the specified attribute handle range in a GATT Server.

When 16-bit UUID Characteristic has been discovered, BLE_GATTC_EVENT_CHAR_16_DISC_IND event is notified to the application layer.
When 128-bit UUID Characteristic has been discovered, BLE_GATTC_EVENT_CHAR_128_DISC_IND event is notified to the application layer.
When the Characteristic discovery has been completed, BLE_GATTC_EVENT_ALL_CHAR_DISC_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be discovered.
[in]	p_range	Retrieval range of Characteristic.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_range parameter is specified as NULL.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_DiscCharByUuid()

ble_status_t R_BLE_GATTC_DiscCharByUuid (uint16_t *conn_hdl*, uint8_t * *p_uuid*, uint8_t *uuid_type*, st_ble_gatt_hdl_range_t * *p_range*)

This function discovers Characteristic specified by uuid within the specified attribute handle range in a GATT Server.

When 16-bit UUID Characteristic has been discovered, BLE_GATTC_EVENT_CHAR_16_DISC_IND event is notified to the application layer.
When 128-bit UUID Characteristic has been discovered, BLE_GATTC_EVENT_CHAR_128_DISC_IND event is notified to the application layer.
When the Characteristic discovery has been completed, BLE_GATTC_EVENT_CHAR_DISC_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be discovered.
[in]	p_uuid	UUID of Characteristic to be discovered.
[in]	uuid_type	UUID type of Characteristic to be discovered. macro: BLE_GATT_16_BIT_UUID_FORMAT(0x01) — The p_uuid parameter is 16-bit UUID. macro: BLE_GATT_128_BIT_UUID_FORMAT(0x02) — The p_uuid parameter is 128-bit UUID.
[in]	p_range	Retrieval range of Characteristic.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_uuid parameter or the p_range parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The uuid_type parameter is out of range.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_DiscAllCharDesc()

ble_status_t R_BLE_GATTC_DiscAllCharDesc (uint16_t *conn_hdl*, st_ble_gatt_hdl_range_t * *p_range*)

This function discovers Characteristic Descriptor within the specified attribute handle range in a GATT Server.

When 16-bit UUID Characteristic Descriptor has been discovered, BLE_GATTC_EVENT_CHAR_DESC_16_DISC_IND event is notified to the application layer. When 128-bit UUID Characteristic Descriptor has been discovered, BLE_GATTC_EVENT_CHAR_DESC_128_DISC_IND event is notified to the application layer. When the Characteristic Descriptor discovery has been completed, BLE_GATTC_EVENT_ALL_CHAR_DESC_DISC_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be discovered.
[in]	p_range	Retrieval range of Characteristic Descriptor.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_range parameter is specified as NULL.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_ReadChar()

ble_status_t R_BLE_GATTC_ReadChar (uint16_t *conn_hdl*, uint16_t *value_hdl*)

This function reads a Characteristic/Characteristic Descriptor in a GATT Server.

The result of the read is notified in BLE_GATTC_EVENT_CHAR_READ_RSP event.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be read.
[in]	value_hdl	Value handle of the Characteristic/Characteristic Descriptor to be read.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	0 is specified in the value_hdl parameter.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_ReadCharUsingUuid()

ble_status_t R_BLE_GATTC_ReadCharUsingUuid (uint16_t *conn_hdl*, uint8_t * *p_uuid*, uint8_t *uuid_type*, st_ble_gatt_hdl_range_t * *p_range*)

This function reads a Characteristic in a GATT Server using a specified UUID.

The result of the read is notified in BLE_GATTC_EVENT_CHAR_READ_BY_UUID_RSP event.

Parameters

[in]	conn_hdl	Connection handle that identifies Characteristic to be read to GATT Server.
[in]	p_uuid	UUID of the Characteristic to be read.
[in]	uuid_type	UUID type of the Characteristic to be read. macro / description BLE_GATT_16_BIT_UUID_FORMAT(0x01) — The p_uuid parameter is 16-bit UUID. BLE_GATT_128_BIT_UUID_FORMAT(0x02) — The p_uuid parameter is 128-bit UUID.
[in]	p_range	Retrieval range of Characteristic.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_uuid parameter or the p_range parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The uuid_type parameter is out of range.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_ReadLongChar()

ble_status_t R_BLE_GATTC_ReadLongChar (uint16_t *conn_hdl*, uint16_t *value_hdl*, uint16_t *offset*)

This function reads a Long Characteristic in a GATT Server.

The contents of the Long Characteristic that has been read is notified every MTU-1 bytes to the application layer by BLE_GATTC_EVENT_CHAR_READ_RSP event.
When all of the contents has been received in GATT Client,
BLE_GATTC_EVENT_LONG_CHAR_READ_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be read.
[in]	value_hdl	Value handle of the Long Characteristic to be read.
[in]	offset	Offset that indicates the location to be read. Normally, set 0 to this parameter.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	0 is specified in the value_hdl parameter.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_ReadMultiChar()

ble_status_t R_BLE_GATTC_ReadMultiChar (uint16_t *conn_hdl*, st_ble_gattc_rd_multi_req_param_t * *p_list*)

This function reads multiple Characteristics in a GATT Server.

The contents of the multiple Characteristics that has been read is notified to the application layer by BLE_GATTC_EVENT_MULTI_CHAR_READ_RSP event.

Parameters

[in]	conn_hdl	Connection handle that identifies Characteristic to be read to GATT Server.
[in]	p_list	List of Value Handles that point the Characteristics to be read.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_list parameter or the p_hdl_list field in the p_list parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	0 is specified in the list_count field in the p_list parameter.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_WriteCharWithoutRsp()

ble_status_t R_BLE_GATTC_WriteCharWithoutRsp (uint16_t *conn_hdl*, st_ble_gatt_hdl_value_pair_t * *p_write_data*)

This function writes a Characteristic in a GATT Server without response.

The result is returned from the API.

Parameters

[in]	conn_hdl	Connection handle that identifies Characteristic to be read to GATT Server.
[in]	p_write_data	Value to be written to the Characteristic.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_write_data parameter or the p_value field in the value field in the p_write_data parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The reason for this error is as follows: • 0 is specified in the value_len field in the p_value field in the p_write_data parameter. • 0 is specified in the attr_hdl field in the p_write_data parameter.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_SignedWriteChar()

ble_status_t R_BLE_GATTC_SignedWriteChar (uint16_t *conn_hdl*, st_ble_gatt_hdl_value_pair_t * *p_write_data*)

This function writes Signed Data to a Characteristic in a GATT Server without response.

The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be written.
[in]	p_write_data	Signed Data to be written to the Characteristic.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_write_data parameter or the p_value field in the value field in the p_write_data parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The reason for this error is as follows: • 0 is specified in the value_len field in the value field in the p_write_data parameter. • 0 is specified in the attr_hdl field in the p_write_data parameter.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function or Signed Data.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_WriteChar()

ble_status_t R_BLE_GATTC_WriteChar (uint16_t *conn_hdl*, st_ble_gatt_hdl_value_pair_t * *p_write_data*)

This function writes a Characteristic in a GATT Server.

The result of the write is notified in BLE_GATTC_EVENT_CHAR_WRITE_RSP event.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be written.
[in]	p_write_data	Value to be written to the Characteristic.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_write_data parameter or the p_value field in the value field in the p_write_data parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The reason for this error is as follows: • 0 is specified in the value_len field in the value field in the p_write_data parameter. • 0 is specified in the attr_hdl field in the p_write_data parameter.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_WriteLongChar()

ble_status_t R_BLE_GATTC_WriteLongChar (uint16_t *conn_hdl*, st_ble_gatt_hdl_value_pair_t * *p_write_data*, uint16_t *offset*)

This function writes a Long Characteristic in a GATT Server.

The result of a write that has been done every segmentation is notified to the application layer in BLE_GATTC_EVENT_CHAR_PART_WRITE_RSP event.
The maximum writable size to a Long Characteristic with this function is 512 bytes.
When all of the contents has been written to the Long Characteristic,
BLE_GATTC_EVENT_LONG_CHAR_WRITE_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be written.
[in]	p_write_data	Value to be written to the Long Characteristic.
[in]	offset	Offset that indicates the location to be written. Normally, set 0 to this parameter. If this parameter sets to a value other than 0, adjust the offset parameter and the length of the value to be written not to exceed the length of the Long Characteristic.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_write_data parameter or the p_value field in the value field in the p_write_data parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The reason for this error is as follows: • The value_len field in the value field in the p_write_data parameter is 0. • The sum of the value_len field in the value field in the p_write_data parameter and the offset parameter larger than 512. • The attr_hdl field in the p_write_data parameter is 0.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_ReliableWrites()

ble_status_t R_BLE_GATTC_ReliableWrites (uint16_t *conn_hdl*,
st_ble_gattc_reliable_writes_char_pair_t * *p_char_pair*, uint8_t *pair_num*, uint8_t *auto_flag*)

This function performs the Reliable Writes procedure described in GATT Specification.

When the data written to the Characteristic has been transmitted, BLE_GATTC_EVENT_CHAR_PART_WRITE_RSP event is notified to the application layer.
If the data included in the event is different from the data that GATT Client has sent, host stack automatically cancels the Reliable Writes.
After all of the contents has been sent to the GATT Server, if the auto_flag parameter has been set to BLE_GATTC_EXEC_AUTO, the GATT Server automatically writes the data to the Characteristic.
If the auto_flag parameter has been set to BLE_GATTC_EXEC_NOT_AUTO, BLE_GATTC_EVENT_RELIABLE_WRITES_TX_COMP event notifies the application layer in GATT Client that all of the contents has been sent to the GATT Server. Then GATT Client requests for writing the data to the Characteristic to the GATT Server with R_BLE_GATTC_ExecWrite().
When the write has been done, BLE_GATTC_EVENT_RELIABLE_WRITES_COMP event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the GATT Server to be written.
[in]	p_char_pair	Pair of Characteristic Value and Characteristic Value Handle identifying the Characteristic to be written by Reliable Writes.
[in]	pair_num	The number of the pairs specified by the p_char_pair parameter. Valid range is 0 < pair_num <= BLE_GATTC_RELIABLE_WRITES_MAX_CHAR_PAIR.
[in]	auto_flag	The flag that indicates whether auto execution or not. macro: BLE_GATTC_EXEC_AUTO(0x01) — description: Auto execution. macro: BLE_GATTC_EXEC_NOT_AUTO (0x02) — description: Not auto execution.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The reason for this error is as follows:

	• The p_char_pair parameter is specified as NULL. • The p_value field in the value field in the write_data field in the p_char_pair parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The reason for this error is as follows: • The pair_num parameter or the auto_flag parameter is out of range. • The value_len field in the value field in the write_data field in the p_char_pair parameter is 0.
BLE_ERR_INVALID_OPERATION(0x0009)	While processing other request, this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function or to store the temporary write data.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

◆ R_BLE_GATTC_ExecWrite()

ble_status_t R_BLE_GATTC_ExecWrite (uint16_t *conn_hdl*, uint8_t *exe_flag*)

If the auto execute of Reliable Writes is not specified by R_BLE_GATTC_ReliableWrites(), this function is used to execute a write to Characteristic.

When all of the contents has been sent to the GATT Server,
BLE_GATTC_EVENT_RELIABLE_WRITES_TX_COMP event notifies the application layer.
After this event has been received, execute the write by this function.
The result of the write is notified by BLE_GATTC_EVENT_RELIABLE_WRITES_COMP event.

Parameters

[in]	conn_hdl	Connection handle identifying the target GATT Server.
[in]	exe_flag	The flag that indicates whether execution or cancellation. macro: BLE_GATTC_EXECUTE_WRITE_CANCEL_FLAG(0x00) — description: Execute the write. macro: BLE_GATTC_EXECUTE_WRITE_EXEC_FLAG(0x01) — description: Cancel the write.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The exe_flag parameter is out of range.
BLE_ERR_INVALID_OPERATION(0x0009)	The reason for this error is as follows: • GATT Client has not requested for Reliable Writes by R_BLE_GATTC_ReliableWrites(). • Although auto execution has been specified by R_BLE_GATTC_ReliableWrites(), this function was called.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The GATT Server specified by conn_hdl was not found.

Data Structure Documentation

◆ st_ble_l2cap_conn_req_param_t

struct st_ble_l2cap_conn_req_param_t		
L2CAP CBFC Channel connection request parameters.		
Data Fields		
uint16_t	local_psm	Identifier indicating the

		protocol/profile that uses L2CAP CBFC Channel on local device.
uint16_t	remote_psm	Identifier indicating the protocol/profile that uses L2CAP CBFC Channel on remote device.
uint16_t	mtu	MTU size(byte) receivable on L2CAP CBFC Channel.
uint16_t	mps	MPS size(byte) receivable on L2CAP CBFC Channel.
uint16_t	credit	The number of LE-Frame that local device can receive.

◆ st_ble_l2cap_conn_rsp_param_t

struct st_ble_l2cap_conn_rsp_param_t		
L2CAP CBFC Channel connection response parameters.		
Data Fields		
uint16_t	lcid	CID identifying the L2CAP CBFC Channel on local device. The valid range is 0x40-0x40 + BLE_L2CAP_MAX_CBFC_PSM - 1.
uint16_t	response	The response to the connection request. Select one of the following. macro: description BLE_L2CAP_CF_RSP_SUCCESS(0x0000): Notify the remote device that the connection can be established. BLE_L2CAP_CF_RSP_RFSD_INSF_AUTH(0x0005): Notify the remote device that the connection can not be established because of insufficient authentication. BLE_L2CAP_CF_RSP_RFSD_INSF_AUTRZ(0x0006): Notify the remote device that the connection can not be established

			because of insufficient Authorization.
		BLE_L2CAP_CF_RSP_RFSD_INSF_ENC_KEY (0x0007)	Notify the remote device that the connection can not be established because of Encryption Key Size.
		BLE_L2CAP_CF_RSP_RFSD_INSF_ENC(0x0008)	Notify the remote device that the connection can not be established because of Encryption.
		BLE_L2CAP_CF_RSP_RFSD_UNAC_PARAM(0x000B)	Notify the remote device that the connection can not be established because the parameters is unacceptable to local device.
uint16_t	mtu	MTU(byte) of packet that L2CAP CBFC Channel on local device can receive.	
uint16_t	mps	MPS(byte) of packet that L2CAP CBFC Channel on local device can receive.	
uint16_t	credit	The number of LE-Frame that L2CAP CBFC Channel on local device can receive.	

◆ st_ble_l2cap_cf_conn_evt_t

struct st_ble_l2cap_cf_conn_evt_t		
L2CAP CBFC Channel connection parameters.		
Data Fields		
uint16_t	cid	CID identifying the L2CAP CBFC Channel.
uint16_t	psm	PSM allocated by the cid field.

uint16_t	mtu	MTU of local/remote device.
uint16_t	mps	MPS of local/remote device.
uint16_t	credit	Credit of local/remote device.

◆ st_ble_l2cap_cf_data_evt_t

struct st_ble_l2cap_cf_data_evt_t		
Sent/Received Data parameters.		
Data Fields		
uint16_t	cid	CID identifying the L2CAP CBFC Channel that has sent or received the data .
uint16_t	psm	PSM allocated by the cid field.
uint16_t	data_len	Data length.
uint8_t *	p_data	Sent/Received data.

◆ st_ble_l2cap_cf_credit_evt_t

struct st_ble_l2cap_cf_credit_evt_t		
Credit parameters of local or remote device.		
Data Fields		
uint16_t	cid	CID identifying the L2CAP CBFC Channel.
uint16_t	psm	PSM allocated by the cid field.
uint16_t	credit	Current credit of local/remote device.

◆ st_ble_l2cap_cf_disconn_evt_t

struct st_ble_l2cap_cf_disconn_evt_t		
Disconnection parameters.		
Data Fields		
uint16_t	cid	CID identifying the L2CAP CBFC Channel that has been disconnected.

◆ st_ble_l2cap_rej_evt_t

struct st_ble_l2cap_rej_evt_t		
Command Reject parameters.		
Data Fields		
uint16_t	reason	The reason that the remote device has sent Command Reject.

uint16_t	data_1	Optional information about the reason that the remote device has sent Command Reject.
uint16_t	data_2	Optional information about the reason that the remote device has sent Command Reject.

◆ st_ble_l2cap_cf_evt_data_t

struct st_ble_l2cap_cf_evt_data_t		
st_ble_l2cap_cf_evt_data_t is the type of the data notified in a L2CAP Event.		
Data Fields		
uint16_t	conn_hdl	Connection handle identifying the remote device.
uint16_t	param_len	The size of L2CAP Event parameters.
void *	p_param	L2CAP Event parameters. This parameter differs in each L2CAP Event.

Typedef Documentation

◆ ble_l2cap_cf_app_cb_t

ble_l2cap_cf_app_cb_t

ble_l2cap_cf_app_cb_t is the L2CAP Event callback function type.

Parameters

[in]	event_type	The type of L2CAP Event.
[in]	event_result	The result of L2CAP Event
[in]	p_event_data	Data notified by L2CAP Event.

Returns

none

Enumeration Type Documentation

◆ e_r_ble_l2cap_cf_evt_t

enum e_r_ble_l2cap_cf_evt_t

L2CAP Event Identifier.

Enumerator	
BLE_L2CAP_EVENT_CF_CONN_CNF	After the connection request for L2CAP CBFC Channel has been sent with R_BLE_L2CAP_ReqCfConn(), when the L2CAP CBFC Channel connection response has been received, BLE_L2CAP_EVENT_CF_CONN_CNF event occurs. **Event Code: 0x5001** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_RSP_TIMEOUT(0x0011) L2CAP Command timeout. BLE_ERR_L2CAP_PSM_NOT_SUPPORTED(0x4002) PSM specified by R_BLE_L2CAP_ReqCfConn() is not supported. BLE_ERR_L2CAP_NO_RESOURCE(0x4004) No resource for connection. BLE_ERR_L2CAP_INSUF_AUTHEN(0x4005) Insufficient authentication. BLE_ERR_L2CAP_INSUF_AUTHOR(0x4006) Insufficient authorization. BLE_ERR_L2CAP_INSUF_ENC_KEY_SIZE(0x4007) Insufficient encryption key size. BLE_ERR_L2CAP_REFUSE_INSUF_ENC(0x4008) Insufficient encryption. BLE_ERR_L2CAP_REFUSE_INVALID_SCID(0x4009) Invalid Source CID. BLE_ERR_L2CAP_REFUSE_SCID_ALREADY_ALLOC(0x400A) Source CID already allocated.

	BLE_ERR_L2CAP_REFUSE_UNACCEPTABLE_PARAM(0x400B) Unacceptable parameters. **Event Data:** st_ble_l2cap_cf_conn_evt_t
BLE_L2CAP_EVENT_CF_CONN_IND	When a connection request for L2CPA CBFC Channel has been received from a remote device, BLE_L2CAP_EVENT_CF_CONN_IND event occurs. **Event Code: 0x5002** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_NOT_FOUND(0x000D) CF connection request has not been received or lcid not found. BLE_ERR_L2CAP_PSM_NOT_SUPPORTED(0x4002) PSM specified by R_BLE_L2CAP_ReqCfConn() is not supported. **Event Data:** st_ble_l2cap_cf_conn_evt_t
BLE_L2CAP_EVENT_CF_DISCONN_CNF	After local device has sent a disconnection request for L2CAP CBFC Channel by R_BLE_L2CAP_DisconnectCf(), when the local device has received the response, BLE_L2CAP_EVENT_CF_DISCONN_CNF event occurs. **Event Code: 0x5003** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_l2cap_cf_disconn_evt_t
BLE_L2CAP_EVENT_CF_DISCONN_IND	When local device has received a disconnection request for L2CAP CBFC Channel

	from the remote device, BLE_L2CAP_EVENT_CF_DISCONN_IND event occurs. Host stack automatically replies the to the disconnection request. **Event Code: 0x5004** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_l2cap_cf_disconn_evt_t
BLE_L2CAP_EVENT_CF_RX_DATA_IND	When local device has received data on L2CAP CBFC Channel, BLE_L2CAP_EVENT_CF_RX_DATA_IND event occurs. **Event Code: 0x5005** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_l2cap_cf_data_evt_t
BLE_L2CAP_EVENT_CF_LOW_RX_CRD_IND	When the credit of the L2CAP CBFC Channel has reached the Low Water Mark, BLE_L2CAP_EVENT_CF_LOW_RX_CRD_IND event occurs. **Event Code: 0x5006** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_l2cap_cf_credit_evt_t
BLE_L2CAP_EVENT_CF_TX_CRD_IND	When local device has received credit from a remote device, BLE_L2CAP_EVENT_CF_TX_CRD_IND event occurs.

	Event Code: 0x5007 **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_l2cap_cf_credit_evt_t
BLE_L2CAP_EVENT_CF_TX_DATA_CNF	When the data transmission has been completed from host stack to Controller, BLE_L2CAP_EVENT_CF_TX_DATA_CNF event occurs. **Event Code: 0x5008** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_DISCONNECTED(0x000F) While transmitting data, L2CAP CBFC Channel has been disconnected. **Event Data:** st_ble_l2cap_cf_data_evt_t
BLE_L2CAP_EVENT_CMD_REJ	When local device has received Command Reject PDU, BLE_L2CAP_EVENT_CMD_REJ event occurs. **Event Code: 0x5009** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_l2cap_rej_evt_t

Function Documentation

◆ R_BLE_L2CAP_RegisterCfPsm()

ble_status_t R_BLE_L2CAP_RegisterCfPsm (ble_l2cap_cf_app_cb_t *cb*, uint16_t *psm*, uint16_t *lwm*)

This function registers PSM that uses L2CAP CBFC Channel and a callback for L2CAP event.

Only one callback is available per PSM. Configure in each PSM the Low Water Mark of the LE-Frames that the local device can receive.
When the number of the credit reaches the Low Water Mark,
BLE_L2CAP_EVENT_CF_LOW_RX_CRD_IND event is notified to the application layer.
The number of PSM is defined as BLE_L2CAP_MAX_CBFC_PSM.
The result of this API call is returned by a return value.

Parameters

[in]	cb	Callback function for L2CAP event.
[in]	psm	Identifier indicating the protocol/profile that uses L2CAP CBFC Channel.

type	range	description
Fixed, SIG assigned	0x0001 - 0x007F	PSM defined by SIG. For more information on PSM, refer Bluetooth SIG Assigned Number (https://www.bluetooth.com/specifications/assigned-numbers).
Dynamic	0x0080 - 0x00FF	Statically allocated PSM by custom protocol or dynamicall

		y allocated PSM by GATT Service.
[in]	lwm	Low Water Mark that indicates the LE-Frame numbers that the local device can receive.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The cb parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The psm parameter is out of range.
BLE_ERR_CONTEXT_FULL(0x000B)	More than BLE_L2CAP_MAX_CBFC_PSM+1 PSMs, callbacks has been registered.

◆ R_BLE_L2CAP_DeregisterCfPsm()

ble_status_t R_BLE_L2CAP_DeregisterCfPsm (uint16_t *psm*)

This function stops the use of the L2CAP CBFC Channel specified by the psm parameter and deregisters the callback function for L2CAP event.

The result of this API call is returned by a return value.

Parameters

[in]	psm	PSM that is to be stopped to use the L2CAP CBFC Channel. Set the PSM registered by R_BLE_L2CAP_RegisterCfPsm().

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_NOT_FOUND(0x000D)	The callback function allocated by the psm parameter is not found.

◆ R_BLE_L2CAP_ReqCfConn()

ble_status_t R_BLE_L2CAP_ReqCfConn (uint16_t *conn_hdl*, st_ble_l2cap_conn_req_param_t * *p_conn_req_param*)

This function sends a connection request for L2CAP CBFC Channel.

The connection response is notified by BLE_L2CAP_EVENT_CF_CONN_CNF event.
The result of this API call is returned by a return value.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device that the connection request is sent to.
[in]	p_conn_req_param	Connection request parameters.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_conn_req_param parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The mtu parameter or the mps parameter is out of range.
BLE_ERR_INVALID_STATE(0x0008)	CF Channel connection has not been established.
BLE_ERR_CONTEXT_FULL(0x000B)	New CF Channel can not be registered or other L2CAP Command is processing.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	Insufficient memory is needed to generate this function.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by conn_hdl is not found.
BLE_ERR_NOT_YET_READY(0x0012)	The psm parameter is not registered.

◆ R_BLE_L2CAP_RspCfConn()

ble_status_t R_BLE_L2CAP_RspCfConn (st_ble_l2cap_conn_rsp_param_t * *p_conn_rsp_param*)

This function replies to the connection request for L2CAP CBFC Channel from the remote device.

The connection request is notified by BLE_L2CAP_EVENT_CF_CONN_IND event. The result of this API call is returned by a return value.

Parameters

[in]	p_conn_rsp_param	Connection response parameters.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_conn_rsp_param parameter is specified as NULL.
BLE_ERR_NOT_FOUND(0x000D)	A connection request for L2CAP CBFC Channel has not been received, or CID specified by the lcid field in the p_conn_rsp_param parameter is not found.

◆ R_BLE_L2CAP_DisconnectCf()

ble_status_t R_BLE_L2CAP_DisconnectCf (uint16_t *lcid*)

This function sends a disconnection request for L2CAP CBFC Channel.

When L2CAP CBFC Channel has been disconnected, BLE_L2CAP_EVENT_CF_DISCONN_CNF event is notified to the application layer.

Parameters

[in]	lcid	CID identifying the L2CAP CBFC Channel that has been disconnected. The valid range is 0x40 - (0x40 + BLE_L2CAP_MAX_CBFC_PSM - 1).

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_OPERATION(0x0009)	CF Channel connection has not been established.
BLE_ERR_CONTEXT_FULL(0x000B)	This function was called while processing other L2CAP command.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for L2CAP Command.
BLE_ERR_NOT_FOUND(0x000D)	CID specified the lcid parameter is not found.

◆ R_BLE_L2CAP_SendCfCredit()

ble_status_t R_BLE_L2CAP_SendCfCredit (uint16_t *lcid*, uint16_t *credit*)

This function sends credit to a remote device.

In L2CAP CBFC communication, if credit is 0, the remote device stops data transmission.
Therefore when processing the received data has been completed and local device affords to receive data, the remote device is notified of the number of LE-Frame that local device can receive by this function and local device can continue to receive data from the remote device.
The result of this API call is returned by a return value.

Parameters

[in]	lcid	CID identifying the L2CAP CBFC Channel on local device that sends credit.
[in]	credit	Credit to be sent to the remote device.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The credit parameter is set to 0.
BLE_ERR_CONTEXT_FULL(0x000B)	This function was called while processing other L2CAP command.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for L2CAP Command.

◆ R_BLE_L2CAP_SendCfData()

ble_status_t R_BLE_L2CAP_SendCfData (uint16_t *conn_hdl*, uint16_t *lcid*, uint16_t *data_len*, uint8_t * *p_sdu*)

This function sends the data to a remote device via L2CAP CBFC Channel.

When the data transmission to Controller has been completed, BLE_L2CAP_EVENT_CF_TX_DATA_CNF event is notified to the application layer.

Parameters

[in]	conn_hdl	Connection handle identifying the remote device to be sent the data.
[in]	lcid	CID identifying the L2CAP CBFC Channel on local device used in the data transmission.
[in]	data_len	Length of the data.
[in]	p_sdu	Service Data Unit. Input the data length specified by the data_len parameter to the first 2 bytes (Little Endian).

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_data parameter is specified as NULL.
BLE_ERR_INVALID_ARG(0x0003)	The length parameter is out of range.
BLE_ERR_INVALID_STATE(0x0008)	CF Channel connection has not been established or the data whose length exceeds the MTU has been sent.
BLE_ERR_ALREADY_IN_PROGRESS(0x000A)	Data transmission has been already started.
BLE_ERR_CONTEXT_FULL(0x000B)	L2CAP task queue is full.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for L2CAP Command.
BLE_ERR_NOT_FOUND(0x000D)	CID specified the lcid parameter is not found.
BLE_ERR_INVALID_HDL(0x000E)	The remote device specified by the conn_hdl parameter is not found.

Data Structure Documentation

◆ st_ble_vs_tx_test_param_t

struct st_ble_vs_tx_test_param_t		
This is the extended transmitter test parameters used in R_BLE_VS_StartTxTest().		
Data Fields		
uint8_t	ch	Channel used in Tx test.
uint8_t	test_data_len	Length(in bytes) of the packet used in Tx Test.
uint8_t	packet_payload	Packet Payload.
uint8_t	phy	Transmitter PHY used in test.
uint8_t	tx_power	Tx Power Level used in DTM Tx Test.
uint8_t	option	Option.
uint16_t	num_of_packet	The number of packet to be sent.

◆ st_ble_vs_rx_test_param_t

struct st_ble_vs_rx_test_param_t		
This is the extended receiver test parameters used in R_BLE_VS_StartRxTest().		
Data Fields		
uint8_t	ch	Channel used in Rx test.
uint8_t	phy	Receiver PHY used in the test.

◆ st_ble_vs_set_rf_ctrl_param_t

struct st_ble_vs_set_rf_ctrl_param_t		
This is the RF parameters used in R_BLE_VS_SetRfControl().		
Data Fields		
uint8_t	power	RF power on/off.
uint8_t	option	This field indicates whether the parameters change in RF power on.
uint8_t	clval	RF rapid clock frequency adjust value(OSC internal CL adjust).

uint8_t	slow_clock	RF slow clock configurations.
uint8_t	tx_power	Set tx power in power on.
uint8_t	rf_option	Set RF option.

◆ st_ble_vs_test_end_evt_t

struct st_ble_vs_test_end_evt_t		
This structure notifies that the extended test has been terminated.		
Data Fields		
uint16_t	num_of_packet	The number of packet successfully received in the receiver test.
uint16_t	num_of_crc_err_packet	The number of CRC error packets in the receiver test.
int8_t	ave_rssi	Average RSSI(dBm) in the receiver test.
int8_t	max_rssi	Maximum RSSI(dBm) in the receiver test.
int8_t	min_rssi	Minimum RSSI(dBm) in the receiver test.

◆ st_ble_vs_set_tx_pwr_comp_evt_t

struct st_ble_vs_set_tx_pwr_comp_evt_t		
This structure notifies that tx power has been set.		
Data Fields		
uint16_t	conn_hdl	Connection handle that identifying the link whose tx power has been set.
int8_t	curr_tx_pwr	Tx power that has been set(dBm).

◆ st_ble_vs_get_tx_pwr_comp_evt_t

struct st_ble_vs_get_tx_pwr_comp_evt_t		
This structure notifies that tx power has been retrieved.		
Data Fields		
uint16_t	conn_hdl	Connection handle that identifying the link whose tx power has been retrieved.
int8_t	curr_tx_pwr	Current tx power(dBm).
int8_t	max_tx_pwr	Maximum tx power(dBm).

◆ st_ble_vs_set_rf_ctrl_comp_evt_t

struct st_ble_vs_set_rf_ctrl_comp_evt_t		
This structure notifies that RF has been configured.		
Data Fields		
uint8_t	ctrl	The result of RF power control.

◆ **st_ble_vs_get_bd_addr_comp_evt_t**

struct st_ble_vs_get_bd_addr_comp_evt_t		
This structure notifies that BD_ADDR has been retrieved.		
Data Fields		
uint8_t	area	The area that public/random address has been retrieved. value: BLE_VS_ADDR_AREA_REG(0x00) — Register. value: BLE_VS_ADDR_AREA_DATA_FLASH(0x01) — Data Flash.
st_ble_dev_addr_t	addr	The address that has been retrieved.

◆ **st_ble_vs_get_rand_comp_evt_t**

struct st_ble_vs_get_rand_comp_evt_t		
This structure notifies that random number has been generated.		
Data Fields		
uint8_t	rand_size	Length of random number.
uint8_t *	p_rand	Random number.

◆ **st_ble_vs_tx_flow_chg_evt_t**

struct st_ble_vs_tx_flow_chg_evt_t		
This structure notifies that the state transition of TxFlow has been changed.		
Data Fields		
uint8_t	state	The state of the flow control. value: BLE_VS_TX_FLOW_CTL_ON(0x00) — The number of buffer has reached the High Water Mark from flow off state.

		BLE_VS_TX_FLOW_CTL_OFF(0x01) The number of buffer has reached the Low Water Mark from flow on state.
uint32_t	buffer_num	The number of the current transmission buffers.

◆ st_ble_vs_evt_data_t

struct st_ble_vs_evt_data_t		
st_ble_vs_evt_data_t is the type of the data notified in a Vendor Specific Event.		
Data Fields		
uint16_t	param_len	The size of Vendor Specific Event parameters.
void *	p_param	Vendor Specific Event parameters. This parameter differs in each Vendor Specific Event.

◆ st_ble_vs_get_scan_ch_map_comp_evt_t

struct st_ble_vs_get_scan_ch_map_comp_evt_t		
This structure notifies that current scan channel map.		
Data Fields		
uint8_t	ch_map	The result of current scan channel map.

Typedef Documentation

◆ ble_vs_app_cb_t

ble_vs_app_cb_t

ble_vs_app_cb_t is the Vendor Specific Event callback function type.

Parameters

[in]	event_type	The type of Vendor Specific Event.
[in]	event_result	The result of API call which generates the Vendor Specific Event.
[in]	p_event_data	Data notified in the Vendor Specific Event.

Returns

none

Enumeration Type Documentation

◆ e_r_ble_vs_evt_t

enum e_r_ble_vs_evt_t

Vendor Specific Event Identifier.

Enumerator	
BLE_VS_EVENT_SET_TX_POWER	This event notifies that the tx power has been set by R_BLE_VS_SetTxPower(). **Event Code: 0x8001** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_INVALID_ARG(0x0003) The tx_power parameter specified by R_BLE_VS_SetTxPower() is out of range. BLE_ERR_INVALID_HDL(0x000E) The link identified with the conn_hdl specified by R_BLE_VS_SetTxPower() is not found. **Event Data:** st_ble_vs_set_tx_pwr_comp_evt_t
BLE_VS_EVENT_GET_TX_POWER	This event notifies that the tx power has been retrieved by R_BLE_VS_GetTxPower(). **Event Code: 0x8002** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_INVALID_HDL(0x000E) The link identified with the conn_hdl specified by R_BLE_VS_GetTxPower() is not found. **Event Data:**

	st_ble_vs_get_tx_pwr_comp_evt_t
BLE_VS_EVENT_TX_TEST_START	This event notifies that the extended transmitter test has been started by R_BLE_VS_StartTxTest(). **Event Code: 0x8003** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_INVALID_ARG(0x0003) The parameter specified by R_BLE_VS_StartTxTest() is out of range. **Event Data:** none
BLE_VS_EVENT_TX_TEST_TERM	This event notifies that the number specified by R_BLE_VS_StartTxTest() of packets has been sent. **Event Code: 0x8004** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** none
BLE_VS_EVENT_RX_TEST_START	This event notifies that the extended receiver test has been started by R_BLE_VS_StartRxTest(). **Event Code: 0x8005** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_INVALID_ARG(0x0003) The parameter specified by R_BLE_VS_StartRxTest() is out of range.

	Event Data: none
BLE_VS_EVENT_TEST_END	This event notifies that the extended test has been terminated by R_BLE_VS_EndTest(). **Event Code: 0x8006** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_vs_test_end_evt_t
BLE_VS_EVENT_SET_CODING_SCHEME_COMP	This event notifies that the coding scheme has been configured by R_BLE_VS_SetCodingScheme(). **Event Code: 0x8007** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_INVALID_ARG(0x0003) The coding_scheme parameter specified by R_BLE_VS_SetCodingScheme() is out of range. **Event Data:** none
BLE_VS_EVENT_RF_CONTROL_COMP	This event notifies that the RF has been configured by R_BLE_VS_SetRfControl(). **Event Code: 0x8008** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_INVALID_ARG(0x0003) The parameter specified by R_BLE_VS_SetRfControl() is out of

	range. BLE_ERR_INVALID_OPERATION(0x0009) During the power on or the power off, the same power state is specified by R_BLE_VS_SetRfControl(). **Event Data:** st_ble_vs_set_rf_ctrl_comp_evt_t
BLE_VS_EVENT_SET_ADDR_COMP	This event notifies that public/random address has been set by R_BLE_VS_SetBdAddr(). **Event Code: 0x8009** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_INVALID_ARG(0x0003) The area parameter or the type field in the p_addr parameter specified by R_BLE_VS_SetBdAddr() is out of range. **Event Data:** none
BLE_VS_EVENT_GET_ADDR_COMP	This event notifies that public/random address has been retrieved by R_BLE_VS_GetBdAddr(). **Event Code: 0x800A** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_INVALID_ARG(0x0003) The area parameter or the type field in the p_addr parameter specified by R_BLE_VS_GetBdAddr() is out of range.

	Event Data: st_ble_vs_get_bd_addr_comp_evt_t
BLE_VS_EVENT_GET_RAND	This event notifies the application layer that random number has been generated by R_BLE_VS_GetRand(). **Event Code: 0x800B** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_INVALID_ARG(0x0003) The rand_size parameter specified by R_BLE_VS_GetRand() is out of range. **Event Data:** st_ble_vs_get_rand_comp_evt_t
BLE_VS_EVENT_TX_FLOW_STATE_CHG	This event notifies the application layer of the state transition of TxFlow. **Event Code: 0x800C** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_vs_tx_flow_chg_evt_t
BLE_VS_EVENT_FAIL_DETECT	This event notifies a failure occurs in RF. After receiving the event, reset MCU or RF. **Event Code: 0x800D** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** None
BLE_VS_EVENT_SET_SCAN_CH_MAP	This event notifies that scan channel map has

	been set by R_BLE_VS_SetScanChMap(). **Event Code: 0x800E** **result:** BLE_SUCCESS(0x0000) Success BLE_ERR_INVALID_ARG(0x0003) The ch_map parameter specified by R_BLE_VS_SetScanChMap() is out of range. **Event Data:** none
BLE_VS_EVENT_GET_SCAN_CH_MAP	This event notifies that scan channel map has been retrieved by R_BLE_VS_GetScanChMap(). **Event Code: 0x800F** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** st_ble_vs_get_scan_ch_map_comp_evt_t
BLE_VS_EVENT_INVALID	Invalid VS Event. **Event Code: 0x80FF** **result:** BLE_SUCCESS(0x0000) Success **Event Data:** none

Function Documentation

◆ R_BLE_VS_Init()

ble_status_t R_BLE_VS_Init (ble_vs_app_cb_t *vs_cb*)

This function initializes Vendor Specific API and registers a callback function for Vendor Specific Event.

The result of this API call is returned by a return value.

Parameters

[in]	vs_cb	Callback function to be registered.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The vs_cb parameter is specified as NULL.
BLE_ERR_CONTEXT_FULL(0x000B)	Callback function has already been registered.

◆ R_BLE_VS_StartTxTest()

ble_status_t R_BLE_VS_StartTxTest (st_ble_vs_tx_test_param_t * *p_tx_test_param*)

This function starts extended Transmitter Test.

The following extended transmitter test functions of DTM Tx are supported by this function.

- Tx Power
- Tx Modulation Enable/Modulation Disable
- Tx packet transmission/continuous transmission
- Tx packets count

The result of this API call is notified in BLE_VS_EVENT_TX_TEST_START event.
If the num_of_packet field in the p_tx_test_param parameter is other than 0x0000, BLE_VS_EVENT_TX_TEST_TERM event notifies the application layer that the number of packet has been sent.
If R_BLE_VS_EndTest() is called before the specified number of packets completions, BLE_VS_EVENT_TX_TEST_TERM event is not notified to the application layer.

The condition that phy field in the p_tx_test_param parameter is BLE_VS_EH_TEST_PHY_CODED_S_8(0x03) and option field is modulation(bit0:0) & continuous transmission(bit1:1) is not supported.

Parameters

[in]	p_tx_test_param	Tx Test parameters.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_tx_test_param parameter is specified as NULL.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ R_BLE_VS_StartRxTest()

ble_status_t R_BLE_VS_StartRxTest (st_ble_vs_rx_test_param_t * *p_rx_test_param*)

This function starts extended Receiver Test.

The result of this API call is notified in BLE_VS_EVENT_RX_TEST_START event. The following extended receiver test functions of DTM Rx are supported by this function.

- Calculating the maximum, the minimum and the average of RSSI in the receiver test.
- The number of CRC error packets in the receiver test.

The transmitter is configured to one of the following, the receiver can't receive the packets by this function.

- Tx Non-Modulation Enable
- Tx continuous transmission
  After R_BLE_VS_EndTest() has been called, the receiver test result value are notified in BLE_VS_EVENT_TEST_END event.

Parameters

[in]	p_rx_test_param	The extended receiver test parameters.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_rx_test_param parameter is specified as NULL.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ R_BLE_VS_EndTest()

ble_status_t R_BLE_VS_EndTest (void)

This function terminates the extended transmitter or receiver test.

The result of this API call is notified in BLE_VS_EVENT_TEST_END event. In case of extended receiver test, this event notifies the application layer of the result of the extended receiver test.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ R_BLE_VS_SetTxPower()

ble_status_t R_BLE_VS_SetTxPower (uint16_t *conn_hdl*, uint8_t *tx_power*)

This function configures transmit power.

This function configures the following transmit power.

- The transmit power used in sending advertising PDU, scan request PDU, connection request PDU (in not connected state)
- The transmit power used in sending PDU in connected state. When configuring the transmit power used in not connected state, set the conn_hdl parameter to BLE_GAP_INIT_CONN_HDL(0xFFFF).
  When the transmit power used in connected state is configured, set the conn_hdl parameter to the connection handle of the link.
  Select one of the following transmit power levels.
- High
- Middle
- Low

Max transmit power of "High" is dependent on the configuration of the firmware. The result of this API call is notified in BLE_VS_EVENT_SET_TX_POWER event.

Parameters

[in]	conn_hdl	Connection handle identifying the link whose transmit power to be configured. If non connected state, set BLE_GAP_INIT_CONN_HDL(0xFFFF).
[in]	tx_power	Transmission power. Select one of the following. • BLE_VS_TX_POWER_HIGH(0x00) • BLE_VS_TX_POWER_MID(0x01) • BLE_VS_TX_POWER_LOW(0x02)

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ R_BLE_VS_GetTxPower()

ble_status_t R_BLE_VS_GetTxPower (uint16_t *conn_hdl*)

This function gets transmit power.

This function gets the following transmit power.

- The transmit power used in sending advertising PDU, scan request PDU, connection request PDU (in not connected state)
- The transmit power used in sending PDU in connected state. When getting the transmit power used in not connected state, set the conn_hdl parameter to BLE_GAP_INIT_CONN_HDL(0xFFFF).
  When the transmit power used in connected state is retrieved, set the conn_hdl parameter to the connection handle of the link. The result of this API call is notified in BLE_VS_EVENT_GET_TX_POWER event.

Parameters

[in]	conn_hdl	Connection handle identifying the link whose transmit power to be retrieved. If non connected state, set BLE_GAP_INIT_CONN_HDL(0xFFFF).

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ R_BLE_VS_SetCodingScheme()

ble_status_t R_BLE_VS_SetCodingScheme (uint8_t *coding_scheme*)

This function configure default Coding scheme(S=8 or S=2) that is used in the case of selecting Coded PHY in Primary advertising PHY or Secondary advertising PHY advertising or request for link establishment.

After setting the default Coding scheme by this function, configure the advertising parameters by R_BLE_GAP_SetAdvParam() or send a request for link establishment.
The result of this API call is notified in BLE_VS_EVENT_SET_CODING_SCHEME_COMP event.

Parameters

[in]	coding_scheme	Coding scheme for Primary advertising PHY, Secondary advertising PHY, request for link establishment.The coding_scheme field is set to a bitwise OR of the following values.

bit	description
bit0	Coding scheme for Primary Advertising PHY(0:S=8/1:S=2).
bit1	Coding scheme for Secondary Advertising PHY(0:S=8/1:S=2).
bit2	Coding scheme for request for link establishment(0:S=8/1:S=2).
All other bits	Reserved for future use.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ R_BLE_VS_SetRfControl()

ble_status_t R_BLE_VS_SetRfControl (st_ble_vs_set_rf_ctrl_param_t * *p_rf_ctrl*)

This function performs power control on RF.

If BLE communication is not used for a long time, RF reduces the power consumption by moving to the RF Power-Down Mode.
When RF power on, RF initialization processing is executed.
After RF power off by this function, API functions other than this are not available until RF power on again.
The result of this API call is notified in BLE_VS_EVENT_RF_CONTROL_COMP event. After RF power on again with this function, call R_BLE_GAP_Terminate(), R_BLE_GAP_Init() in order to restart the host stack.

Parameters

[in]	p_rf_ctrl	RF parameters.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_rf_ctrl parameter is specified as NULL.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ R_BLE_VS_SetBdAddr()

ble_status_t R_BLE_VS_SetBdAddr (uint8_t *area*, st_ble_dev_addr_t * *p_addr*)

This function sets public/random address of local device to the area specified by the parameter.

If the address is written in non-volatile area, the address is used as default address on the next MCU reset.
For more information on the random address, refer to Core Specification Vol 6, PartB, "1.3.2 Random Device Address".
The result of this API call is notified in BLE_VS_EVENT_SET_ADDR_COMP event.

Parameters

[in]	area	The area that the address is to be written in. Select one of the following. macro: description BLE_VS_ADDR_AREA_REG(0x00): Address writing to non-volatile area is not performed. Only the address in register is written. BLE_VS_ADDR_AREA_DATA_FLASH(0x01): Address wiring to DataFlash area is performed.
[in]	p_addr	The address to be set to the area. Set BLE_GAP_ADDR_PUBLIC(0x00) or BLE_GAP_ADDR_RAND(0x01) to the type field in the p_addr parameter.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_addr parameter is specified as NULL.
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ R_BLE_VS_GetBdAddr()

ble_status_t R_BLE_VS_GetBdAddr (uint8_t *area*, uint8_t *addr_type*)

This function gets currently configured public/random address.

The area parameter specifies the place where this function retrieves public/random address.
The result of this API call is notified in BLE_VS_EVENT_GET_ADDR_COMP event.

Parameters

[in]	area	The area that the address is to be retrieved. Select one of the following.

macro	description
BLE_VS_ADDR_AREA_REG(0x00)	Retrieve the address in register.
BLE_VS_ADDR_AREA_DATA_FLASH(0x01)	Retrieve the address in DataFlash area.

[in]	addr_type	The address type that is type of the address to be retrieved.

macro	description
BLE_GAP_ADDR_PUBLIC(0x00)	Public address.
BLE_GAP_ADDR_RAND(0x01)	Random address.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ R_BLE_VS_GetRand()

ble_status_t R_BLE_VS_GetRand (uint8_t *rand_size*)

This function generates 4-16 bytes of random number used in creating keys.

The result of this API call is notified in BLE_VS_EVENT_GET_RAND event.

Parameters

[in]	rand_size	Length of the random number (byte). The valid range is 4<=rand_size<=16.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_STATE(0x0008)	The task for host stack is not running.
BLE_ERR_MEM_ALLOC_FAILED(0x000C)	There are no memories for Vendor Specific Command.

◆ R_BLE_VS_StartTxFlowEvtNtf()

ble_status_t R_BLE_VS_StartTxFlowEvtNtf (void)

This function starts the notification(BLE_VS_EVENT_TX_FLOW_STATE_CHG event) of the state transition of TxFlow.

If the number of the available transmission packet buffers is the following, BLE_VS_EVENT_TX_FLOW_STATE_CHG event notifies the application layer of the state of the TxFlow.

- The number of the available transmission packet buffers is less than Low Water Mark.
- The number of the available transmission packet buffers is more than High Water Mark. The result of this API call is returned by a return value.

Return values

BLE_SUCCESS(0x0000)	Success

◆ R_BLE_VS_StopTxFlowEvtNtf()

ble_status_t R_BLE_VS_StopTxFlowEvtNtf (void)

This function stops the notification(BLE_VS_EVENT_TX_FLOW_STATE_CHG event) of the state transition of TxFlow.

The result of this API call is returned by a return value.

Return values

BLE_SUCCESS(0x0000)	Success

◆ R_BLE_VS_GetTxBufferNum()

ble_status_t R_BLE_VS_GetTxBufferNum (uint32_t * *p_buffer_num*)

This function retrieves the number of the available transmission packet buffers.

The maximum number of the available buffers is 10.
The result of this API call is returned by a return value.

Parameters

[out]	p_buffer_num	The number of the available transmission packet buffers.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_PTR(0x0001)	The p_buffer_num parameter is specified as NULL.

◆ R_BLE_VS_SetTxLimit()

ble_status_t R_BLE_VS_SetTxLimit (uint32_t *tx_queue_lwm*, uint32_t *tx_queue_hwm*)

This function sets the threshold for notifying the application layer of the TxFlow state.

Call this function before the notification(BLE_VS_EVENT_TX_FLOW_STATE_CHG event) has been started by R_BLE_VS_StartTxFlowEvtNtf().
The result is returned from this API.
Vendor Specific API supports the flow control function(TxFlow) for the transmission on L2CAP fixed channel in Basic Mode such as GATT.
Host stack has 10 transmission packet buffers for the transmission.
When the number of the available transmission packet buffers has been less than Low Water Mark, the state of TxFlow transmits into the TxFlow OFF state from the TxFlow ON state that is the initial state and host stack notifies the application layer of timing to stop packet transmission.
When host stack has sent the transmission packets to Controller and the number of the available transmission packet buffers has been more than High Water Mark, the state of TxFlow transmits into the TxFlow ON state from the TxFlow OFF state and host stack notifies the application layer of

timing to restart packet transmission.
It is possible to perform flow control on a fixed channel by using the event notification.

Parameters

[in]	tx_queue_lwm	Low Water Mark. Set 0-9 less than tx_queue_hwm to the parameter. When the number of the available transmission packet buffers has been less than the value specified by the tx_queue_lwm parameter, host stack notifies the application layer of the timing to stop packet transmission.
[in]	tx_queue_hwm	High Water Mark. Set 1-10 more than tx_queue_lwm to the parameter. When the number of the available transmission packet buffers has been more than the value specified by the tx_queue_hwm parameter, host stack notifies the application layer of the timing to restart packet transmission.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The tx_queue_lwm parameter or the tx_queue_hwm parameter is out of range.

◆ R_BLE_VS_SetScanChMap()

ble_status_t R_BLE_VS_SetScanChMap (uint16_t *ch_map*)

This function sets the scan channel map.

Set specify the scan channel for use.
At least one channel must be enabled.

Note

Calling this API while Scan is already running will not change the channel map.

Parameters

[in]	ch_map	Specify the channel map for use.

bit	description
bit0	Enable channel 37 for use (0:disable, 1:enable)
bit1	Enable channel 38 for use (0:disable, 1:enable)
bit2	Enable channel 39 for use (0:disable, 1:enable)
All other bits	Reserved for future use.

Return values

BLE_SUCCESS(0x0000)	Success
BLE_ERR_INVALID_ARG(0x0003)	The ch_map parameter is out of range.

◆ R_BLE_VS_GetScanChMap()

ble_status_t R_BLE_VS_GetScanChMap (void)
This function gets currently scan channel map. The result of this API call is notified in BLE_VS_EVENT_GET_SCAN_CH_MAP event. **Return values** BLE_SUCCESS(0x0000) — Success

4.3.3 CAC Interface

Interfaces

Detailed Description

Interface for clock frequency accuracy measurements.

Summary

The interface for the clock frequency accuracy measurement circuit (CAC) peripheral is used to check a system clock frequency with a reference clock signal by counting the number of pulses of the clock to be measured.

Implemented by: Clock Frequency Accuracy Measurement Circuit (r_cac)

Data Structures

struct	cac_ref_clock_config_t
struct	cac_meas_clock_config_t
struct	cac_callback_args_t
struct	cac_cfg_t
struct	cac_api_t
struct	cac_instance_t

Typedefs

typedef void	cac_ctrl_t

Enumerations

enum	cac_event_t
enum	cac_clock_type_t
enum	cac_clock_source_t
enum	cac_ref_divider_t
enum	cac_ref_digfilter_t
enum	cac_ref_edge_t
enum	cac_meas_divider_t

Data Structure Documentation

◆ cac_ref_clock_config_t

struct cac_ref_clock_config_t		
Structure defining the settings that apply to reference clock configuration.		
Data Fields		
cac_ref_divider_t	divider	Divider specification for the Reference clock.
cac_clock_source_t	clock	Clock source for the Reference clock.
cac_ref_digfilter_t	digfilter	Digital filter selection for the CACREF ext clock.
cac_ref_edge_t	edge	Edge detection for the Reference clock.

◆ cac_meas_clock_config_t

struct cac_meas_clock_config_t		
Structure defining the settings that apply to measurement clock configuration.		
Data Fields		
cac_meas_divider_t	divider	Divider specification for the Measurement clock.
cac_clock_source_t	clock	Clock source for the Measurement clock.

◆ cac_callback_args_t

struct cac_callback_args_t
Callback function parameter data
Data Fields

cac_event_t	event	The event can be used to identify what caused the callback.
void const *	p_context	Value provided in configuration structure.

◆ cac_cfg_t

struct cac_cfg_t	
CAC Configuration	
Data Fields	
cac_ref_clock_config_t	cac_ref_clock
	Reference clock specific settings.
cac_meas_clock_config_t	cac_meas_clock
	Measurement clock specific settings.
uint16_t	cac_upper_limit
	The upper limit counter threshold.
uint16_t	cac_lower_limit
	The lower limit counter threshold.
IRQn_Type	mendi_irq
	Measurement End IRQ number.
IRQn_Type	ovfi_irq
	Measurement Overflow IRQ number.
IRQn_Type	ferri_irq
	Frequency Error IRQ number.

uint8_t	mendi_ipl
	Measurement end interrupt priority.
uint8_t	ovfi_ipl
	Overflow interrupt priority.
uint8_t	ferri_ipl
	Frequency error interrupt priority.
void(*	p_callback)(cac_callback_args_t *p_args)
	Callback provided when a CAC interrupt ISR occurs.
void const *	p_context
	Passed to user callback in cac_callback_args_t.
void const *	p_extend
	CAC hardware dependent configuration */.

◆ cac_api_t

struct cac_api_t	
CAC functions implemented at the HAL layer API	
Data Fields	
fsp_err_t(*	open)(cac_ctrl_t *const p_ctrl, cac_cfg_t const *const p_cfg)
fsp_err_t(*	startMeasurement)(cac_ctrl_t *const p_ctrl)
fsp_err_t(*	stopMeasurement)(cac_ctrl_t *const p_ctrl)
fsp_err_t(*	read)(cac_ctrl_t *const p_ctrl, uint16_t *const p_counter)

fsp_err_t(*	callbackSet)(cac_ctrl_t *const p_api_ctrl, void(*p_callback)(cac_callback_args_t *), void const *const p_context, cac_callback_args_t *const p_callback_memory)
fsp_err_t(*	close)(cac_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* cac_api_t::open) (cac_ctrl_t *const p_ctrl, cac_cfg_t const *const p_cfg)

Open function for CAC device.

Parameters

[out]	p_ctrl	Pointer to CAC device control. Must be declared by user.
[in]	cac_cfg_t	Pointer to CAC configuration structure.

◆ startMeasurement

fsp_err_t(* cac_api_t::startMeasurement) (cac_ctrl_t *const p_ctrl)

Begin a measurement for the CAC peripheral.

Parameters

[in]	p_ctrl	Pointer to CAC device control.

◆ stopMeasurement

fsp_err_t(* cac_api_t::stopMeasurement) (cac_ctrl_t *const p_ctrl)

End a measurement for the CAC peripheral.

Parameters

[in]	p_ctrl	Pointer to CAC device control.

◆ read

fsp_err_t(* cac_api_t::read) (cac_ctrl_t *const p_ctrl, uint16_t *const p_counter)

Read function for CAC peripheral.

Parameters

[in]	p_ctrl	Control for the CAC device context.
[in]	p_counter	Pointer to variable in which to store the current CACNTBR register contents.

◆ callbackSet

fsp_err_t(* cac_api_t::callbackSet) (cac_ctrl_t *const p_api_ctrl, void(*p_callback)(cac_callback_args_t *), void const *const p_context, cac_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_CAC_CallbackSet()

Parameters

[in]	p_ctrl	Control block set in cac_api_t::open call
[in]	p_callback	Callback function to register
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ close

fsp_err_t(* cac_api_t::close) (cac_ctrl_t *const p_ctrl)

Close function for CAC device.

Parameters

[in]	p_ctrl	Pointer to CAC device control.

◆ cac_instance_t

struct cac_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
cac_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
cac_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
cac_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ cac_ctrl_t

typedef void cac_ctrl_t
CAC control block. Allocate an instance specific control block to pass into the CAC API calls. **Implemented as** ◦ cac_instance_ctrl_t

Enumeration Type Documentation

◆ cac_event_t

enum cac_event_t	
Event types returned by the ISR callback when used in CAC interrupt mode	
Enumerator	
CAC_EVENT_FREQUENCY_ERROR	Frequency error.
CAC_EVENT_MEASUREMENT_COMPLETE	Measurement complete.
CAC_EVENT_COUNTER_OVERFLOW	Counter overflow.

◆ cac_clock_type_t

enum cac_clock_type_t	
Enumeration of the two possible clocks.	
Enumerator	
CAC_CLOCK_MEASURED	Measurement clock.
CAC_CLOCK_REFERENCE	Reference clock.

◆ cac_clock_source_t

enum cac_clock_source_t	
Enumeration of the possible clock sources for both the reference and measurement clocks.	
Enumerator	
CAC_CLOCK_SOURCE_MAIN_OSC	Main clock oscillator.
CAC_CLOCK_SOURCE_SUBCLOCK	Sub-clock.
CAC_CLOCK_SOURCE_HOCO	HOCO (High speed on chip oscillator)
CAC_CLOCK_SOURCE_MOCO	MOCO (Middle speed on chip oscillator)
CAC_CLOCK_SOURCE_LOCO	LOCO (Low speed on chip oscillator)
CAC_CLOCK_SOURCE_PCLKB	PCLKB (Peripheral Clock B)
CAC_CLOCK_SOURCE_IWDT	IWDT-dedicated on-chip oscillator.
CAC_CLOCK_SOURCE_EXTERNAL	Externally supplied measurement clock on CACREF pin.

◆ cac_ref_divider_t

enum cac_ref_divider_t	
Enumeration of available dividers for the reference clock.	
Enumerator	
CAC_REF_DIV_32	Reference clock divided by 32.
CAC_REF_DIV_128	Reference clock divided by 128.
CAC_REF_DIV_1024	Reference clock divided by 1024.
CAC_REF_DIV_8192	Reference clock divided by 8192.

◆ cac_ref_digfilter_t

enum cac_ref_digfilter_t	
Enumeration of available digital filter settings for an external reference clock.	
Enumerator	
CAC_REF_DIGITAL_FILTER_OFF	No digital filter on the CACREF pin for reference clock.
CAC_REF_DIGITAL_FILTER_1	Sampling clock for digital filter = measuring frequency.
CAC_REF_DIGITAL_FILTER_4	Sampling clock for digital filter = measuring frequency/4.
CAC_REF_DIGITAL_FILTER_16	Sampling clock for digital filter = measuring frequency/16.

◆ cac_ref_edge_t

enum cac_ref_edge_t	
Enumeration of available edge detect settings for the reference clock.	
Enumerator	
CAC_REF_EDGE_RISE	Rising edge detect for the Reference clock.
CAC_REF_EDGE_FALL	Falling edge detect for the Reference clock.
CAC_REF_EDGE_BOTH	Both Rising and Falling edges detect for the Reference clock.

◆ cac_meas_divider_t

enum cac_meas_divider_t	
Enumeration of available dividers for the measurement clock	
Enumerator	
CAC_MEAS_DIV_1	Measurement clock divided by 1.
CAC_MEAS_DIV_4	Measurement clock divided by 4.
CAC_MEAS_DIV_8	Measurement clock divided by 8.
CAC_MEAS_DIV_32	Measurement clock divided by 32.

4.3.4 CAN Interface

Interfaces

Detailed Description

Interface for CAN peripheral.

Summary

The CAN interface provides common APIs for CAN HAL drivers. CAN interface supports following features.

- Full-duplex CAN communication
- Generic CAN parameter setting

- Interrupt driven transmit/receive processing
- Callback function support with returning event code
- Hardware resource locking during a transaction

Implemented by:

- Controller Area Network (r_can)
- Controller Area Network - Flexible Data (r_canfd)

Data Structures

struct	can_info_t
struct	can_bit_timing_cfg_t
struct	can_frame_t
struct	can_callback_args_t
struct	can_cfg_t
struct	can_api_t
struct	can_instance_t

Typedefs

typedef void	can_ctrl_t

Enumerations

enum	can_event_t
enum	can_operation_mode_t
enum	can_test_mode_t
enum	can_id_mode_t
enum	can_frame_type_t

Data Structure Documentation

◆ can_info_t

struct can_info_t		
CAN status info		
Data Fields		
uint32_t	status	Useful information from the CAN status register.

uint32_t	rx_mb_status	RX Message Buffer New Data flags.
uint32_t	rx_fifo_status	RX FIFO Empty flags.
uint8_t	error_count_transmit	Transmit error count.
uint8_t	error_count_receive	Receive error count.
uint32_t	error_code	Error code, cleared after reading.

◆ can_bit_timing_cfg_t

struct can_bit_timing_cfg_t		
CAN bit rate configuration.		
Data Fields		
uint32_t	baud_rate_prescaler	Baud rate prescaler. Valid values: 1 - 1024.
uint32_t	time_segment_1	Time segment 1 control.
uint32_t	time_segment_2	Time segment 2 control.
uint32_t	synchronization_jump_width	Synchronization jump width.

◆ can_frame_t

struct can_frame_t		
CAN data Frame		
Data Fields		
uint32_t	id	CAN ID.
can_id_mode_t	id_mode	Standard or Extended ID (IDE).
can_frame_type_t	type	Frame type (RTR).
uint8_t	data_length_code	CAN Data Length Code (DLC).
uint32_t	options	Implementation-specific options.
uint8_t	data[CAN_DATA_BUFFER_LENGTH]	CAN data.

◆ can_callback_args_t

struct can_callback_args_t		
CAN callback parameter definition		
Data Fields		
uint32_t	channel	Device channel number.
can_event_t	event	Event code.
uint32_t	error	Error code.

union can_callback_args_t	__unnamed__	
can_frame_t *	p_frame	
void const *	p_context	Context provided to user during callback.
can_frame_t	frame	Received frame data.

◆ can_cfg_t

struct can_cfg_t	
CAN Configuration	
Data Fields	
uint32_t	channel
	CAN channel.
can_bit_timing_cfg_t *	p_bit_timing
	CAN bit timing.
void(*	p_callback)(can_callback_args_t *p_args)
	Pointer to callback function.
void const *	p_context
	User defined callback context.
void const *	p_extend
	CAN hardware dependent configuration.
uint8_t	ipl
	Error/Transmit/Receive interrupt priority.
IRQn_Type	error_irq
	Error IRQ number.

IRQn_Type	rx_irq
	Receive IRQ number.
IRQn_Type	tx_irq
	Transmit IRQ number.

◆ can_api_t

struct can_api_t	
Shared Interface definition for CAN	
Data Fields	
fsp_err_t(*	open)(can_ctrl_t *const p_ctrl, can_cfg_t const *const p_cfg)
fsp_err_t(*	write)(can_ctrl_t *const p_ctrl, uint32_t buffer_number, can_frame_t *const p_frame)
fsp_err_t(*	read)(can_ctrl_t *const p_ctrl, uint32_t buffer_number, can_frame_t *const p_frame)
fsp_err_t(*	close)(can_ctrl_t *const p_ctrl)
fsp_err_t(*	modeTransition)(can_ctrl_t *const p_api_ctrl, can_operation_mode_t operation_mode, can_test_mode_t test_mode)
fsp_err_t(*	infoGet)(can_ctrl_t *const p_ctrl, can_info_t *const p_info)
fsp_err_t(*	callbackSet)(can_ctrl_t *const p_api_ctrl, void(*p_callback)(can_callback_args_t *), void const *const p_context, can_callback_args_t *const p_callback_memory)

Field Documentation

◆ open

fsp_err_t(* can_api_t::open) (can_ctrl_t *const p_ctrl, can_cfg_t const *const p_cfg)

Open function for CAN device

Implemented as

- R_CAN_Open()
- R_CANFD_Open()

Parameters

[in,out]	p_ctrl	Pointer to the CAN control block. Must be declared by user. Value set here.
[in]	can_cfg_t	Pointer to CAN configuration structure. All elements of this structure must be set by user.

◆ write

fsp_err_t(* can_api_t::write) (can_ctrl_t *const p_ctrl, uint32_t buffer_number, can_frame_t *const p_frame)

Write function for CAN device

Implemented as

- R_CAN_Write()
- R_CANFD_Write()

Parameters

[in]	p_ctrl	Pointer to the CAN control block.
[in]	buffer	Buffer number (mailbox or message buffer) to write to.
[in]	p_frame	Pointer for frame of CAN ID, DLC, data and frame type to write.

◆ read

fsp_err_t(* can_api_t::read) (can_ctrl_t *const p_ctrl, uint32_t buffer_number, can_frame_t *const p_frame)

Read function for CAN device

Implemented as

- R_CANFD_Read()

Parameters

[in]	p_ctrl	Pointer to the CAN control block.
[in]	buffer	Message buffer (number) to read from.
[in]	p_frame	Pointer to store the CAN ID, DLC, data and frame type.

◆ close

fsp_err_t(* can_api_t::close) (can_ctrl_t *const p_ctrl)

Close function for CAN device

Implemented as

- R_CAN_Close()

Parameters

[in]	p_ctrl	Pointer to the CAN control block.

◆ modeTransition

fsp_err_t(* can_api_t::modeTransition) (can_ctrl_t *const p_api_ctrl, can_operation_mode_t operation_mode, can_test_mode_t test_mode)

Mode Transition function for CAN device

Implemented as

- R_CAN_ModeTransition()
- R_CANFD_ModeTransition()

Parameters

[in]	p_ctrl	Pointer to the CAN control block.
[in]	operation_mode	Destination CAN operation state.
[in]	test_mode	Destination CAN test state.

◆ infoGet

fsp_err_t(* can_api_t::infoGet) (can_ctrl_t *const p_ctrl, can_info_t *const p_info)

Get CAN channel info.

Implemented as

- R_CAN_InfoGet()
- R_CANFD_InfoGet()

Parameters

[in]	p_ctrl	Handle for channel (pointer to channel control block)
[out]	p_info	Memory address to return channel specific data to.

◆ callbackSet

fsp_err_t(* can_api_t::callbackSet) (can_ctrl_t *const p_api_ctrl, void(*p_callback)(can_callback_args_t *), void const *const p_context, can_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_CAN_CallbackSet()
- R_CANFD_CallbackSet()

Parameters

[in]	p_ctrl	Control block set in can_api_t::open call.
[in]	p_callback	Callback function to register
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ can_instance_t

struct can_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
can_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.

can_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
can_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ can_ctrl_t

typedef void can_ctrl_t

CAN control block. Allocate an instance specific control block to pass into the CAN API calls.

Implemented as

- can_instance_ctrl_t
- canfd_instance_ctrl_t

Enumeration Type Documentation

◆ can_event_t

enum can_event_t	
CAN event codes	
Enumerator	
CAN_EVENT_ERR_WARNING	Error Warning event.
CAN_EVENT_ERR_PASSIVE	Error Passive event.
CAN_EVENT_ERR_BUS_OFF	Bus Off event.
CAN_EVENT_BUS_RECOVERY	Bus Off Recovery event.
CAN_EVENT_MAILBOX_MESSAGE_LOST	Mailbox has been overrun.
CAN_EVENT_ERR_BUS_LOCK	Bus lock detected (32 consecutive dominant bits).
CAN_EVENT_ERR_CHANNEL	Channel error has occurred.
CAN_EVENT_TX_ABORTED	Transmit abort event.
CAN_EVENT_RX_COMPLETE	Receive complete event.
CAN_EVENT_TX_COMPLETE	Transmit complete event.
CAN_EVENT_ERR_GLOBAL	Global error has occurred.
CAN_EVENT_TX_FIFO_EMPTY	Transmit FIFO is empty.

◆ can_operation_mode_t

enum can_operation_mode_t	
CAN Operation modes	
Enumerator	
CAN_OPERATION_MODE_NORMAL	CAN Normal Operation Mode.
CAN_OPERATION_MODE_RESET	CAN Reset Operation Mode.
CAN_OPERATION_MODE_HALT	CAN Halt Operation Mode.
CAN_OPERATION_MODE_SLEEP	CAN Sleep Operation Mode.

◆ can_test_mode_t

enum can_test_mode_t	
CAN Test modes	
Enumerator	
CAN_TEST_MODE_DISABLED	CAN Test Mode Disabled.
CAN_TEST_MODE_LISTEN	CAN Test Listen Mode.
CAN_TEST_MODE_LOOPBACK_EXTERNAL	CAN Test External Loopback Mode.
CAN_TEST_MODE_LOOPBACK_INTERNAL	CAN Test Internal Loopback Mode.
CAN_TEST_MODE_INTERNAL_BUS	CANFD Internal CAN Bus Communication Test Mode.

◆ can_id_mode_t

enum can_id_mode_t	
CAN ID modes	
Enumerator	
CAN_ID_MODE_STANDARD	Standard IDs of 11 bits used.
CAN_ID_MODE_EXTENDED	Extended IDs of 29 bits used.

◆ can_frame_type_t

enum can_frame_type_t	
CAN frame types	
Enumerator	
CAN_FRAME_TYPE_DATA	Data frame.
CAN_FRAME_TYPE_REMOTE	Remote frame.

4.3.5 CEC Interface

Interfaces

Detailed Description

Interface for CEC peripheral.

Summary

The CEC interface provides common APIs for CEC HAL drivers and supports the following features:

- Opening and closing the CEC module.
- Allocation for full range of local address settings (TV, Recording Device, Playback Device, etc.)
- Supports a user-callback function (required), invoked when transmit, receive, or error interrupts are received.

Implemented by:

- Consumer Electronics Control (r_cec)

Data Structures

union	cec_message_t
struct	cec_callback_args_t
struct	cec_cfg_t
struct	cec_api_t
struct	cec_instance_t

Typedefs

typedef void	cec_ctrl_t

Enumerations

enum	cec_addr_t
enum	cec_clock_source_t
enum	cec_state_t
enum	cec_error_t
enum	cec_event_t

Data Structure Documentation

◆ cec_message_t

union cec_message_t

CEC message		
Data Fields		
struct cec_message_t	__unnamed__	
uint8_t	raw_data[CEC_DATA_BUFFER_LENGTH+2 *sizeof(uint8_t)]	Contiguous raw data.

◆ cec_callback_args_t

struct cec_callback_args_t		
CEC callback parameter definition		
Data Fields		
cec_event_t	event	Event code.
void const *	p_context	Context provided to user during callback.
bool	addr_match	Local addresss matches message destination.
uint8_t	data_byte	Received data byte (INTDA)
cec_status_t	status	CEC Module status data.
cec_error_t	errors	Error code bitfield.

◆ cec_cfg_t

struct cec_cfg_t	
CEC Configuration	
Data Fields	
cec_timing_t const *	bit_timing_cfg
	CEC Bit Timing Configuration.
uint16_t	rx_data_sample_time
	Receive Data Sample Time Setting.
uint16_t	rx_data_bit_reference_width
	Receive Data Bit Reference Width.
void(*	p_callback)(cec_callback_args_t *p_args)
	Pointer to callback function.

void const *	p_context
	User defined callback context.
uint8_t	ipl
	Error/Data/Message interrupt priority level.
IRQn_Type	error_irq
	Error IRQ number.
IRQn_Type	data_irq
	Data IRQ number.
IRQn_Type	msg_irq
	Communication Complete IRQ number.
void *	p_extend
	Pointer to extended configuration structure.

◆ cec_api_t

struct cec_api_t	
Shared Interface definition for CEC	
Data Fields	
fsp_err_t(*	open)(cec_ctrl_t *const p_ctrl, cec_cfg_t const *const p_cfg)
fsp_err_t(*	mediaInit)(cec_ctrl_t *const p_ctrl, cec_addr_t local_address)
fsp_err_t(*	write)(cec_ctrl_t *const p_ctrl, cec_message_t const *const p_message, uint32_t message_size)

fsp_err_t(*	close)(cec_ctrl_t *const p_ctrl)
fsp_err_t(*	statusGet)(cec_ctrl_t *const p_ctrl, cec_status_t *const p_status)
fsp_err_t(*	callbackSet)(cec_ctrl_t *const p_ctrl, void(*p_callback)(cec_callback_args_t *), void const *const p_context, cec_callback_args_t *const p_callback_memory)

Field Documentation

◆ open

fsp_err_t(* cec_api_t::open) (cec_ctrl_t *const p_ctrl, cec_cfg_t const *const p_cfg)

Open function for CEC device

Implemented as

- R_CEC_Open()

Parameters

[in,out]	p_ctrl	Pointer to the CEC control block. Must be declared by user. Value set here.
[in]	p_cfg	Pointer to CEC configuration structure. All elements of this structure must be set by user.

◆ mediaInit

fsp_err_t(* cec_api_t::mediaInit) (cec_ctrl_t *const p_ctrl, cec_addr_t local_address)

Initializes the CEC device. May be called any time after the CEC module has been opened. This API blocks until the device initialization procedure is complete.

Implemented as

- R_CEC_MediaInit()

Parameters

[in]	p_ctrl	Pointer to CEC instance control block.
[out]	local_address	Desired Logical address for local device.

◆ write

fsp_err_t(* cec_api_t::write) (cec_ctrl_t *const p_ctrl, cec_message_t const *const p_message, uint32_t message_size)

Write function for CEC device

Implemented as

- R_CEC_Write()

Parameters

[in]	p_ctrl	Pointer to CEC instance control block
[in]	p_message	Message data
[in]	message_size	Total size of entire message

◆ close

fsp_err_t(* cec_api_t::close) (cec_ctrl_t *const p_ctrl)

Close function for CEC device

Implemented as

- R_CEC_Close()

Parameters

[in]	p_ctrl	Pointer to CEC instance control block
[out]	p_message	Message data

◆ statusGet

fsp_err_t(* cec_api_t::statusGet) (cec_ctrl_t *const p_ctrl, cec_status_t *const p_status)

Get CEC channel info.

Implemented as

- R_CEC_StatusGet()

Parameters

[in]	p_ctrl	Pointer to CEC instance control block
[out]	p_status	Memory address to return channel specific data to.

◆ callbackSet

fsp_err_t(* cec_api_t::callbackSet) (cec_ctrl_t *const p_ctrl, void(*p_callback)(cec_callback_args_t *), void const *const p_context, cec_callback_args_t *const p_callback_memory)

Specify callback function, optional context pointer and working memory pointer.

Implemented as

- R_CEC_CallbackSet()

Parameters

[in]	p_ctrl	Control block set in cec_api_t::open call.
[in]	p_callback	Callback function to register
[in]	p_context	Pointer to send to callback function
[in]	p_callback_memory	Pointer to volatile memory where callback structure cec be allocated. Callback arguments allocated here are only valid during the callback.

◆ cec_instance_t

struct cec_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
cec_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
cec_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
cec_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ cec_ctrl_t

typedef void cec_ctrl_t

CEC control block. Allocate an instance specific control block to pass into the CEC API calls.

Implemented as

- cec_instance_ctrl_t

Enumeration Type Documentation

◆ cec_addr_t

enum cec_addr_t	
CEC Addresses	
Enumerator	
CEC_ADDR_TV	CEC Address for TV.
CEC_ADDR_RECORDING_DEVICE_1	CEC Address for Recording Device 1.
CEC_ADDR_RECORDING_DEVICE_2	CEC Address for Recording Devide 2.
CEC_ADDR_TUNER_1	CEC Address for Tuner 1.
CEC_ADDR_PLAYBACK_DEVICE_1	CEC Address for Playback Device 1.
CEC_ADDR_AUDIO_SYSTEM	CEC Address for Audio System.
CEC_ADDR_TUNER_2	CEC Address for Tuner 2.
CEC_ADDR_TUNER_3	CEC Address for Tuner 3.
CEC_ADDR_PLAYBACK_DEVICE_2	CEC Address for Playback Device 2.
CEC_ADDR_RECORDING_DEVICE_3	CEC Address for Recording Device 3.
CEC_ADDR_TUNER_4	CEC Address for Tuner 4.
CEC_ADDR_PLAYBACK_DEVICE_3	CEC Address for Playback Device 3.
CEC_ADDR_SPECIFIC_USE	CEC Address for Specific Use.
CEC_ADDR_UNREGISTERED	CEC Address for Unregistered Devices.
CEC_ADDR_BROADCAST	CEC Broadcast message.

◆ cec_clock_source_t

enum cec_clock_source_t	
CEC Source Clock	
Enumerator	
CEC_CLOCK_SOURCE_PCLKB_DIV_32	PCLKB / 32 is the source of the CEC Clock.
CEC_CLOCK_SOURCE_PCLKB_DIV_64	PCLKB / 64 is the source of the CEC Clock.
CEC_CLOCK_SOURCE_PCLKB_DIV_128	PCLKB / 128 is the source of the CEC Clock.
CEC_CLOCK_SOURCE_PCLKB_DIV_256	PCLKB / 256 is the source of the CEC Clock.
CEC_CLOCK_SOURCE_PCLKB_DIV_512	PCLKB / 512 is the source of the CEC Clock.
CEC_CLOCK_SOURCE_PCLKB_DIV_1024	PCLKB / 1024 is the source of the CEC Clock.
CEC_CLOCK_SOURCE_CECCLK	CECCLK is the source of the CEC Clock.
CEC_CLOCK_SOURCE_CECCLK_DIV_256	CECCLK / 256 is the source of the CEC Clock.

◆ cec_state_t

enum cec_state_t	
CEC State	
Enumerator	
CEC_STATE_UNINIT	Module requires initialization.
CEC_STATE_READY	Module ready for operation.
CEC_STATE_TX_ACTIVE	Transmit in progress, either direct or broadcast.
CEC_STATE_RX_ACTIVE	Receive in progress, either direct or broadcast.
CEC_STATE_BUSY	CEC Signal Free Time has not yet elapsed.

◆ cec_error_t

enum cec_error_t	
CEC Error Code	
Enumerator	
CEC_ERROR_NONE	No errors currently active.
CEC_ERROR_OERR	Overrun error.
CEC_ERROR_UERR	Unterrun Error.
CEC_ERROR_ACKERR	ACK Error.
CEC_ERROR_TERR	Timing Error.
CEC_ERROR_TXERR	Transmission Error.
CEC_ERROR_AERR	Bus arbitration Loss.
CEC_ERROR_BLERR	Bus lock error.
CEC_ERROR_ADDR	Address allocation error.

◆ cec_event_t

enum cec_event_t	
CEC event codes	
Enumerator	
CEC_EVENT_RX_DATA	Receive Data byte event.
CEC_EVENT_RX_COMPLETE	Receive complete event.
CEC_EVENT_TX_COMPLETE	Transmit complete event.
CEC_EVENT_READY	CEC Address allocated and module is now ready.
CEC_EVENT_ERR	Error has occurred.

4.3.6 CGC Interface

Interfaces

Detailed Description

Interface for clock generation.

Summary

The CGC interface provides the ability to configure and use all of the CGC module's capabilities. Among the capabilities is the selection of several clock sources to use as the system clock source. Additionally, the system clocks can be divided down to provide a wide range of frequencies for various system and peripheral needs.

Clock stability can be checked and clocks may also be stopped to save power when not needed. The API has a function to return the frequency of the system and system peripheral clocks at run time. There is also a feature to detect when the main oscillator has stopped, with the option of calling a user provided callback function.

The CGC interface is implemented by:

- Clock Generation Circuit (r_cgc)

Data Structures

struct	cgc_callback_args_t
struct	cgc_pll_cfg_t
union	cgc_divider_cfg_t
struct	cgc_cfg_t
struct	cgc_clocks_cfg_t
struct	cgc_api_t
struct	cgc_instance_t

Typedefs

typedef void	cgc_ctrl_t

Enumerations

enum	cgc_event_t
enum	cgc_clock_t
enum	cgc_pll_div_t
enum	cgc_pll_mul_t

enum	cgc_sys_clock_div_t
enum	cgc_usb_clock_div_t
enum	cgc_clock_change_t

Data Structure Documentation

◆ cgc_callback_args_t

struct cgc_callback_args_t		
Callback function parameter data		
Data Fields		
cgc_event_t	event	The event can be used to identify what caused the callback.
void const *	p_context	Placeholder for user data.

◆ cgc_pll_cfg_t

struct cgc_pll_cfg_t		
Clock configuration structure - Used as an input parameter to the cgc_api_t::clockStart function for the PLL clock.		
Data Fields		
cgc_clock_t	source_clock	PLL source clock (main oscillator or HOCO)
cgc_pll_div_t	divider	PLL divider.
cgc_pll_mul_t	multiplier	PLL multiplier.

◆ cgc_divider_cfg_t

union cgc_divider_cfg_t		
Clock configuration structure - Used as an input parameter to the cgc_api_t::systemClockSet and cgc_api_t::systemClockGet functions.		
Data Fields		
uint32_t	sckdivcr_w	(@ 0x4001E020) System clock Division control register
struct cgc_divider_cfg_t	__unnamed__	
struct cgc_divider_cfg_t	sckdivcr_b	

◆ cgc_cfg_t

struct cgc_cfg_t
Configuration options.

◆ cgc_clocks_cfg_t

struct cgc_clocks_cfg_t		
Clock configuration		
Data Fields		
cgc_clock_t	system_clock	System clock source enumeration.
cgc_pll_cfg_t	pll_cfg	PLL configuration structure.
cgc_pll_cfg_t	pll2_cfg	PLL2 configuration structure.
cgc_divider_cfg_t	divider_cfg	Clock dividers structure.
cgc_clock_change_t	loco_state	State of LOCO.
cgc_clock_change_t	moco_state	State of MOCO.
cgc_clock_change_t	hoco_state	State of HOCO.
cgc_clock_change_t	mainosc_state	State of Main oscillator.
cgc_clock_change_t	pll_state	State of PLL.
cgc_clock_change_t	pll2_state	State of PLL2.

◆ cgc_api_t

struct cgc_api_t	
CGC functions implemented at the HAL layer follow this API.	
Data Fields	
fsp_err_t(*	open)(cgc_ctrl_t *const p_ctrl, cgc_cfg_t const *const p_cfg)
fsp_err_t(*	clocksCfg)(cgc_ctrl_t *const p_ctrl, cgc_clocks_cfg_t const *const p_clock_cfg)
fsp_err_t(*	clockStart)(cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source, cgc_pll_cfg_t const *const p_pll_cfg)
fsp_err_t(*	clockStop)(cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source)
fsp_err_t(*	clockCheck)(cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source)
fsp_err_t(*	systemClockSet)(cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source, cgc_divider_cfg_t const *const p_divider_cfg)

fsp_err_t(*	systemClockGet)(cgc_ctrl_t *const p_ctrl, cgc_clock_t *const p_clock_source, cgc_divider_cfg_t *const p_divider_cfg)
fsp_err_t(*	oscStopDetectEnable)(cgc_ctrl_t *const p_ctrl)
fsp_err_t(*	oscStopDetectDisable)(cgc_ctrl_t *const p_ctrl)
fsp_err_t(*	oscStopStatusClear)(cgc_ctrl_t *const p_ctrl)
fsp_err_t(*	callbackSet)(cgc_ctrl_t *const p_api_ctrl, void(*p_callback)(cgc_callback_args_t *), void const *const p_context, cgc_callback_args_t *const p_callback_memory)
fsp_err_t(*	close)(cgc_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* cgc_api_t::open) (cgc_ctrl_t *const p_ctrl, cgc_cfg_t const *const p_cfg)

Initial configuration

Implemented as

- R_CGC_Open()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	p_cfg	Pointer to configuration

◆ clocksCfg

fsp_err_t(* cgc_api_t::clocksCfg) (cgc_ctrl_t *const p_ctrl, cgc_clocks_cfg_t const *const p_clock_cfg)

Configure all system clocks.

Implemented as

- R_CGC_ClocksCfg()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	p_clock_cfg	Pointer to desired configuration of system clocks

◆ clockStart

fsp_err_t(* cgc_api_t::clockStart) (cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source, cgc_pll_cfg_t const *const p_pll_cfg)

Start a clock.

Implemented as

- R_CGC_ClockStart()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	clock_source	Clock source to start
[in]	p_pll_cfg	Pointer to PLL configuration, can be NULL if clock_source is not CGC_CLOCK_PLL or CGC_CLOCK_PLL2

◆ clockStop

fsp_err_t(* cgc_api_t::clockStop) (cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source)

Stop a clock.

Implemented as

- R_CGC_ClockStop()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	clock_source	The clock source to stop

◆ clockCheck

fsp_err_t(* cgc_api_t::clockCheck) (cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source)

Check the stability of the selected clock.

Implemented as

- R_CGC_ClockCheck()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	clock_source	Which clock source to check for stability

◆ systemClockSet

fsp_err_t(* cgc_api_t::systemClockSet) (cgc_ctrl_t *const p_ctrl, cgc_clock_t clock_source, cgc_divider_cfg_t const *const p_divider_cfg)

Set the system clock.

Implemented as

- R_CGC_SystemClockSet()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	clock_source	Clock source to set as system clock
[in]	p_divider_cfg	Pointer to the clock divider configuration

◆ systemClockGet

fsp_err_t(* cgc_api_t::systemClockGet) (cgc_ctrl_t *const p_ctrl, cgc_clock_t *const p_clock_source, cgc_divider_cfg_t *const p_divider_cfg)

Get the system clock information.

Implemented as

- R_CGC_SystemClockGet()

Parameters

[in]	p_ctrl	Pointer to instance control block
[out]	p_clock_source	Returns the current system clock
[out]	p_divider_cfg	Returns the current system clock dividers

◆ oscStopDetectEnable

fsp_err_t(* cgc_api_t::oscStopDetectEnable) (cgc_ctrl_t *const p_ctrl)

Enable and optionally register a callback for Main Oscillator stop detection.

Implemented as

- R_CGC_OscStopDetectEnable()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	p_callback	Callback function that will be called by the NMI interrupt when an oscillation stop is detected. If the second argument is "false", then this argument can be NULL.
[in]	enable	Enable/disable Oscillation Stop Detection

◆ oscStopDetectDisable

fsp_err_t(* cgc_api_t::oscStopDetectDisable) (cgc_ctrl_t *const p_ctrl)

Disable Main Oscillator stop detection.

Implemented as

- R_CGC_OscStopDetectDisable()

Parameters

[in]	p_ctrl	Pointer to instance control block

◆ oscStopStatusClear

fsp_err_t(* cgc_api_t::oscStopStatusClear) (cgc_ctrl_t *const p_ctrl)

Clear the oscillator stop detection flag.

Implemented as

- R_CGC_OscStopStatusClear()

Parameters

[in]	p_ctrl	Pointer to instance control block

◆ callbackSet

fsp_err_t(* cgc_api_t::callbackSet) (cgc_ctrl_t *const p_api_ctrl, void(*p_callback)(cgc_callback_args_t *), void const *const p_context, cgc_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_CGC_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the CGC control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ close

fsp_err_t(* cgc_api_t::close) (cgc_ctrl_t *const p_ctrl)
Close the CGC driver. **Implemented as** ◦ R_CGC_Close() **Parameters**

[in]	p_ctrl	Pointer to instance control block

◆ cgc_instance_t

struct cgc_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
cgc_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
cgc_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
cgc_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ cgc_ctrl_t

typedef void cgc_ctrl_t
CGC control block. Allocate an instance specific control block to pass into the CGC API calls. **Implemented as** ◦ cgc_instance_ctrl_t

Enumeration Type Documentation

◆ cgc_event_t

enum cgc_event_t	
Events that can trigger a callback function	
Enumerator	
CGC_EVENT_OSC_STOP_DETECT	Oscillator stop detection has caused the event.

◆ cgc_clock_t

enum cgc_clock_t	
System clock source identifiers - The source of ICLK, BCLK, FCLK, PCLKS A-D and UCLK prior to the system clock divider	
Enumerator	
CGC_CLOCK_HOCO	The high speed on chip oscillator.
CGC_CLOCK_MOCO	The middle speed on chip oscillator.
CGC_CLOCK_LOCO	The low speed on chip oscillator.
CGC_CLOCK_MAIN_OSC	The main oscillator.
CGC_CLOCK_SUBCLOCK	The subclock oscillator.
CGC_CLOCK_PLL	The PLL oscillator.
CGC_CLOCK_PLL2	The PLL2 oscillator.

◆ cgc_pll_div_t

enum cgc_pll_div_t	
PLL divider values	
Enumerator	
CGC_PLL_DIV_1	PLL divider of 1.
CGC_PLL_DIV_2	PLL divider of 2.
CGC_PLL_DIV_3	PLL divider of 3 (S7, S5 only)
CGC_PLL_DIV_4	PLL divider of 4 (S3 only)

◆ cgc_pll_mul_t

enum cgc_pll_mul_t	
PLL multiplier values	
Enumerator	
CGC_PLL_MUL_8_0	PLL multiplier of 8.0.
CGC_PLL_MUL_9_0	PLL multiplier of 9.0.
CGC_PLL_MUL_10_0	PLL multiplier of 10.0.
CGC_PLL_MUL_10_5	PLL multiplier of 10.5.
CGC_PLL_MUL_11_0	PLL multiplier of 11.0.
CGC_PLL_MUL_11_5	PLL multiplier of 11.5.
CGC_PLL_MUL_12_0	PLL multiplier of 12.0.
CGC_PLL_MUL_12_5	PLL multiplier of 12.5.
CGC_PLL_MUL_13_0	PLL multiplier of 13.0.
CGC_PLL_MUL_13_5	PLL multiplier of 13.5.
CGC_PLL_MUL_14_0	PLL multiplier of 14.0.
CGC_PLL_MUL_14_5	PLL multiplier of 14.5.
CGC_PLL_MUL_15_0	PLL multiplier of 15.0.
CGC_PLL_MUL_15_5	PLL multiplier of 15.5.
CGC_PLL_MUL_16_0	PLL multiplier of 16.0.
CGC_PLL_MUL_16_5	PLL multiplier of 16.5.
CGC_PLL_MUL_17_0	PLL multiplier of 17.0.
CGC_PLL_MUL_17_5	PLL multiplier of 17.5.
CGC_PLL_MUL_18_0	PLL multiplier of 18.0.
CGC_PLL_MUL_18_5	PLL multiplier of 18.5.
CGC_PLL_MUL_19_0	PLL multiplier of 19.0.

CGC_PLL_MUL_19_5	PLL multiplier of 19.5.
CGC_PLL_MUL_20_0	PLL multiplier of 20.0.
CGC_PLL_MUL_20_5	PLL multiplier of 20.5.
CGC_PLL_MUL_21_0	PLL multiplier of 21.0.
CGC_PLL_MUL_21_5	PLL multiplier of 21.5.
CGC_PLL_MUL_22_0	PLL multiplier of 22.0.
CGC_PLL_MUL_22_5	PLL multiplier of 22.5.
CGC_PLL_MUL_23_0	PLL multiplier of 23.0.
CGC_PLL_MUL_23_5	PLL multiplier of 23.5.
CGC_PLL_MUL_24_0	PLL multiplier of 24.0.
CGC_PLL_MUL_24_5	PLL multiplier of 24.5.
CGC_PLL_MUL_25_0	PLL multiplier of 25.0.
CGC_PLL_MUL_25_5	PLL multiplier of 25.5.
CGC_PLL_MUL_26_0	PLL multiplier of 26.0.
CGC_PLL_MUL_26_5	PLL multiplier of 26.5.
CGC_PLL_MUL_27_0	PLL multiplier of 27.0.
CGC_PLL_MUL_27_5	PLL multiplier of 27.5.
CGC_PLL_MUL_28_0	PLL multiplier of 28.0.
CGC_PLL_MUL_28_5	PLL multiplier of 28.5.
CGC_PLL_MUL_29_0	PLL multiplier of 29.0.
CGC_PLL_MUL_29_5	PLL multiplier of 29.5.
CGC_PLL_MUL_30_0	PLL multiplier of 30.0.
CGC_PLL_MUL_31_0	PLL multiplier of 31.0.

◆ cgc_sys_clock_div_t

enum cgc_sys_clock_div_t	
System clock divider vlues - The individually selectable divider of each of the system clocks, ICLK, BCLK, FCLK, PCLKS A-D.	
Enumerator	
CGC_SYS_CLOCK_DIV_1	System clock divided by 1.
CGC_SYS_CLOCK_DIV_2	System clock divided by 2.
CGC_SYS_CLOCK_DIV_4	System clock divided by 4.
CGC_SYS_CLOCK_DIV_8	System clock divided by 8.
CGC_SYS_CLOCK_DIV_16	System clock divided by 16.
CGC_SYS_CLOCK_DIV_32	System clock divided by 32.
CGC_SYS_CLOCK_DIV_64	System clock divided by 64.

◆ cgc_usb_clock_div_t

enum cgc_usb_clock_div_t	
USB clock divider values	
Enumerator	
CGC_USB_CLOCK_DIV_3	Divide USB source clock by 3.
CGC_USB_CLOCK_DIV_4	Divide USB source clock by 4.
CGC_USB_CLOCK_DIV_5	Divide USB source clock by 5.

◆ cgc_clock_change_t

enum cgc_clock_change_t	
Clock options	
Enumerator	
CGC_CLOCK_CHANGE_START	Start the clock.
CGC_CLOCK_CHANGE_STOP	Stop the clock.
CGC_CLOCK_CHANGE_NONE	No change to the clock.

4.3.7 Comparator Interface

Interfaces

Detailed Description

Interface for comparators.

Summary

The comparator interface provides standard comparator functionality, including generating an event when the comparator result changes.

Implemented by:

- High-Speed Analog Comparator (r_acmphs)
- Low-Power Analog Comparator (r_acmplp)

Data Structures

struct	comparator_info_t
struct	comparator_status_t
struct	comparator_callback_args_t
struct	comparator_cfg_t
struct	comparator_api_t
struct	comparator_instance_t

Typedefs

typedef void	comparator_ctrl_t

Enumerations

enum	comparator_mode_t
enum	comparator_trigger_t
enum	comparator_polarity_invert_t
enum	comparator_pin_output_t
enum	comparator_filter_t
enum	comparator_state_t

Data Structure Documentation

◆ comparator_info_t

struct comparator_info_t		
Comparator information.		
Data Fields		
uint32_t	min_stabilization_wait_us	Minimum stabilization wait time in microseconds.

◆ comparator_status_t

struct comparator_status_t		
Comparator status.		
Data Fields		
comparator_state_t	state	Current comparator state.

◆ comparator_callback_args_t

struct comparator_callback_args_t		
Callback function parameter data		
Data Fields		
void const *	p_context	Placeholder for user data. Set in comparator_api_t::open function in comparator_cfg_t.
uint32_t	channel	The physical hardware channel that caused the interrupt.

◆ comparator_cfg_t

struct comparator_cfg_t

User configuration structure, used in open function

Data Fields

uint8_t	channel
	Hardware channel used.
comparator_mode_t	mode
	Normal or window mode.
comparator_trigger_t	trigger
	Trigger setting.
comparator_filter_t	filter
	Digital filter clock divisor setting.
comparator_polarity_invert_t	invert
	Whether to invert output.
comparator_pin_output_t	pin_output
	Whether to include output on output pin.
uint8_t	vref_select
	Internal Vref Select.
uint8_t	ipl
	Interrupt priority.
IRQn_Type	irq
	NVIC interrupt number.

void(*	p_callback)(comparator_callback_args_t *p_args)
void const *	p_context
void const *	p_extend
	Comparator hardware dependent configuration.

Field Documentation

◆ p_callback

void(* comparator_cfg_t::p_callback) (comparator_callback_args_t *p_args)

Callback called when comparator event occurs.

◆ p_context

void const* comparator_cfg_t::p_context

Placeholder for user data. Passed to the user callback in comparator_callback_args_t.

◆ comparator_api_t

struct comparator_api_t

Comparator functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t(*	open)(comparator_ctrl_t *const p_ctrl, comparator_cfg_t const *const p_cfg)
fsp_err_t(*	outputEnable)(comparator_ctrl_t *const p_ctrl)
fsp_err_t(*	infoGet)(comparator_ctrl_t *const p_ctrl, comparator_info_t *const p_info)
fsp_err_t(*	statusGet)(comparator_ctrl_t *const p_ctrl, comparator_status_t *const p_status)
fsp_err_t(*	close)(comparator_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* comparator_api_t::open) (comparator_ctrl_t *const p_ctrl, comparator_cfg_t const *const p_cfg)

Initialize the comparator.

Implemented as

- R_ACMPHS_Open()
- R_ACMPLP_Open()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	p_cfg	Pointer to configuration

◆ outputEnable

fsp_err_t(* comparator_api_t::outputEnable) (comparator_ctrl_t *const p_ctrl)

Start the comparator.

Implemented as

- R_ACMPHS_OutputEnable()
- R_ACMPLP_OutputEnable()

Parameters

[in]	p_ctrl	Pointer to instance control block

◆ infoGet

fsp_err_t(* comparator_api_t::infoGet) (comparator_ctrl_t *const p_ctrl, comparator_info_t *const p_info)

Provide information such as the recommended minimum stabilization wait time.

Implemented as

- R_ACMPHS_InfoGet()
- R_ACMPLP_InfoGet()

Parameters

[in]	p_ctrl	Pointer to instance control block
[out]	p_info	Comparator information stored here

◆ statusGet

fsp_err_t(* comparator_api_t::statusGet) (comparator_ctrl_t *const p_ctrl, comparator_status_t *const p_status)

Provide current comparator status.

Implemented as

- R_ACMPHS_StatusGet()
- R_ACMPLP_StatusGet()

Parameters

[in]	p_ctrl	Pointer to instance control block
[out]	p_status	Status stored here

◆ close

fsp_err_t(* comparator_api_t::close) (comparator_ctrl_t *const p_ctrl)

Stop the comparator.

Implemented as

- R_ACMPHS_Close()
- R_ACMPLP_Close()

Parameters

[in]	p_ctrl	Pointer to instance control block

◆ comparator_instance_t

struct comparator_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

comparator_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
comparator_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
comparator_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ comparator_ctrl_t

typedef void comparator_ctrl_t
Includes board and MCU related header files. Comparator control block. Allocate an instance specific control block to pass into the comparator API calls. **Implemented as** ◦ acmphs_instance_ctrl_t ◦ acmplp_instance_ctrl_t

Enumeration Type Documentation

◆ comparator_mode_t

enum comparator_mode_t	
Select whether to invert the polarity of the comparator output.	
Enumerator	
COMPARATOR_MODE_NORMAL	Normal mode.
COMPARATOR_MODE_WINDOW	Window mode, not supported by all implementations.

◆ comparator_trigger_t

enum comparator_trigger_t	
Trigger type: rising edge, falling edge, both edges, low level.	
Enumerator	
COMPARATOR_TRIGGER_RISING	Rising edge trigger.
COMPARATOR_TRIGGER_FALLING	Falling edge trigger.
COMPARATOR_TRIGGER_BOTH_EDGE	Both edges trigger.

◆ comparator_polarity_invert_t

enum comparator_polarity_invert_t	
Select whether to invert the polarity of the comparator output.	
Enumerator	
COMPARATOR_POLARITY_INVERT_OFF	Do not invert polarity.
COMPARATOR_POLARITY_INVERT_ON	Invert polarity.

◆ comparator_pin_output_t

enum comparator_pin_output_t	
Select whether to include the comparator output on the output pin.	
Enumerator	
COMPARATOR_PIN_OUTPUT_OFF	Do not include comparator output on output pin.
COMPARATOR_PIN_OUTPUT_ON	Include comparator output on output pin.

◆ comparator_filter_t

enum comparator_filter_t	
Comparator digital filtering sample clock divisor settings.	
Enumerator	
COMPARATOR_FILTER_OFF	Disable debounce filter.
COMPARATOR_FILTER_1	Filter using PCLK divided by 1, not supported by all implementations.
COMPARATOR_FILTER_8	Filter using PCLK divided by 8.
COMPARATOR_FILTER_16	Filter using PCLK divided by 16, not supported by all implementations.
COMPARATOR_FILTER_32	Filter using PCLK divided by 32.

◆ comparator_state_t

enum comparator_state_t	
Current comparator state.	
Enumerator	
COMPARATOR_STATE_OUTPUT_LOW	VCMP < VREF if polarity is not inverted, VCMP > VREF if inverted.
COMPARATOR_STATE_OUTPUT_HIGH	VCMP > VREF if polarity is not inverted, VCMP < VREF if inverted.
COMPARATOR_STATE_OUTPUT_DISABLED	comparator_api_t::outputEnable() has not been called

4.3.8 CRC Interface

Interfaces

Detailed Description

Interface for cyclic redundancy checking.

Summary

The CRC (Cyclic Redundancy Check) calculator generates CRC codes using five different polynomials including 8 bit, 16 bit, and 32 bit variations. Calculation can be performed by sending data to the block using the CPU or by snooping on read or write activity on one of 10 SCI channels.

Implemented by:

- Cyclic Redundancy Check (CRC) Calculator (r_crc)

Data Structures

struct	crc_input_t
struct	crc_cfg_t
struct	crc_api_t
struct	crc_instance_t

Typedefs

typedef void	crc_ctrl_t

Enumerations

enum	crc_polynomial_t
enum	crc_bit_order_t
enum	crc_snoop_direction_t
enum	crc_snoop_address_t

Data Structure Documentation

◆ crc_input_t

struct crc_input_t
Structure for CRC inputs

◆ crc_cfg_t

struct crc_cfg_t		
User configuration structure, used in open function		
Data Fields		
crc_polynomial_t	polynomial	CRC Generating Polynomial Switching (GPS)
crc_bit_order_t	bit_order	CRC Calculation Switching (LMS)
crc_snoop_address_t	snoop_address	Register Snoop Address (CRCSA)
void const *	p_extend	CRC Hardware Dependent Configuration.

◆ crc_api_t

struct crc_api_t	
CRC driver structure. General CRC functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(crc_ctrl_t *const p_ctrl, crc_cfg_t const *const p_cfg)
fsp_err_t(*	close)(crc_ctrl_t *const p_ctrl)
fsp_err_t(*	crcResultGet)(crc_ctrl_t *const p_ctrl, uint32_t *crc_result)
fsp_err_t(*	snoopEnable)(crc_ctrl_t *const p_ctrl, uint32_t crc_seed)

fsp_err_t(*	snoopDisable)(crc_ctrl_t *const p_ctrl)
fsp_err_t(*	calculate)(crc_ctrl_t *const p_ctrl, crc_input_t *const p_crc_input, uint32_t *p_crc_result)

Field Documentation

◆ open

fsp_err_t(* crc_api_t::open) (crc_ctrl_t *const p_ctrl, crc_cfg_t const *const p_cfg)

Open the CRC driver module.

Implemented as

- R_CRC_Open()

Parameters

[in]	p_ctrl	Pointer to CRC device handle.
[in]	p_cfg	Pointer to a configuration structure.

◆ close

fsp_err_t(* crc_api_t::close) (crc_ctrl_t *const p_ctrl)

Close the CRC module driver

Implemented as

- R_CRC_Close()

Parameters

[in]	p_ctrl	Pointer to crc device handle

Return values

FSP_SUCCESS	Configuration was successful.

◆ crcResultGet

fsp_err_t(* crc_api_t::crcResultGet) (crc_ctrl_t *const p_ctrl, uint32_t *crc_result)

Return the current calculated value.

Implemented as

- R_CRC_CalculatedValueGet()

Parameters

[in]	p_ctrl	Pointer to CRC device handle.
[out]	crc_result	The calculated value from the last CRC calculation.

◆ snoopEnable

fsp_err_t(* crc_api_t::snoopEnable) (crc_ctrl_t *const p_ctrl, uint32_t crc_seed)

Configure and Enable snooping.

Implemented as

- R_CRC_SnoopEnable()

Parameters

[in]	p_ctrl	Pointer to CRC device handle.
[in]	crc_seed	CRC seed.

◆ snoopDisable

fsp_err_t(* crc_api_t::snoopDisable) (crc_ctrl_t *const p_ctrl)

Disable snooping.

Implemented as

- R_CRC_SnoopDisable()

Parameters

[in]	p_ctrl	Pointer to CRC device handle.

◆ calculate

fsp_err_t(* crc_api_t::calculate) (crc_ctrl_t *const p_ctrl, crc_input_t *const p_crc_input, uint32_t *p_crc_result)

Perform a CRC calculation on a block of data.

Implemented as

- R_CRC_Calculate()

Parameters

[in]	p_ctrl	Pointer to crc device handle.
[in]	p_crc_input	A pointer to structure for CRC inputs
[out]	crc_result	The calculated value of the CRC calculation.

◆ crc_instance_t

struct crc_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

crc_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
crc_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
crc_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ crc_ctrl_t

typedef void crc_ctrl_t

CRC control block. Allocate an instance specific control block to pass into the CRC API calls.

Implemented as

- crc_instance_ctrl_t

Enumeration Type Documentation

◆ crc_polynomial_t

enum crc_polynomial_t	
CRC Generating Polynomial Switching (GPS).	
Enumerator	
CRC_POLYNOMIAL_CRC_8	8-bit CRC-8 (X^8 + X^2 + X + 1)
CRC_POLYNOMIAL_CRC_16	16-bit CRC-16 (X^16 + X^15 + X^2 + 1)
CRC_POLYNOMIAL_CRC_CCITT	16-bit CRC-CCITT (X^16 + X^12 + X^5 + 1)
CRC_POLYNOMIAL_CRC_32	32-bit CRC-32 (X^32 + X^26 + X^23 + X^22 + X^16 + X^12 + X^11 + X^10 + X^8 + X^7 + X^5 + X^4 + X^2 + X + 1)
CRC_POLYNOMIAL_CRC_32C	32-bit CRC-32C (X^32 + X^28 + X^27 + X^26 + X^25 + X^23 + X^22 + X^20 + X^19 + X^18 + X^14 + X^13 + X^11 + X^10 + X^9 + X^8 + X^6 + 1)

◆ crc_bit_order_t

enum crc_bit_order_t	
CRC Calculation Switching (LMS)	
Enumerator	
CRC_BIT_ORDER_LMS_LSB	Generates CRC for LSB first communication.
CRC_BIT_ORDER_LMS_MSB	Generates CRC for MSB first communication.

◆ crc_snoop_direction_t

enum crc_snoop_direction_t	
Snoop-On-Write/Read Switch (CRCSWR)	
Enumerator	
CRC_SNOOP_DIRECTION_RECEIVE	Snoop-on-read.
CRC_SNOOP_DIRECTION_TRANSMIT	Snoop-on-write.

◆ crc_snoop_address_t

enum crc_snoop_address_t	
Snoop SCI register Address (lower 14 bits)	
Enumerator	
CRC_SNOOP_ADDRESS_NONE	Snoop mode disabled.
CRC_SNOOP_ADDRESS_SCI0_TDR	Snoop SCI0 transmit data register.
CRC_SNOOP_ADDRESS_SCI1_TDR	Snoop SCI1 transmit data register.
CRC_SNOOP_ADDRESS_SCI2_TDR	Snoop SCI2 transmit data register.
CRC_SNOOP_ADDRESS_SCI3_TDR	Snoop SCI3 transmit data register.
CRC_SNOOP_ADDRESS_SCI4_TDR	Snoop SCI4 transmit data register.
CRC_SNOOP_ADDRESS_SCI5_TDR	Snoop SCI5 transmit data register.
CRC_SNOOP_ADDRESS_SCI6_TDR	Snoop SCI6 transmit data register.
CRC_SNOOP_ADDRESS_SCI7_TDR	Snoop SCI7 transmit data register.
CRC_SNOOP_ADDRESS_SCI8_TDR	Snoop SCI8 transmit data register.
CRC_SNOOP_ADDRESS_SCI9_TDR	Snoop SCI9 transmit data register.
CRC_SNOOP_ADDRESS_SCI0_FTDRL	Snoop SCI0 transmit FIFO data register.
CRC_SNOOP_ADDRESS_SCI1_FTDRL	Snoop SCI1 transmit FIFO data register.
CRC_SNOOP_ADDRESS_SCI2_FTDRL	Snoop SCI2 transmit FIFO data register.
CRC_SNOOP_ADDRESS_SCI3_FTDRL	Snoop SCI3 transmit FIFO data register.
CRC_SNOOP_ADDRESS_SCI4_FTDRL	Snoop SCI4 transmit FIFO data register.
CRC_SNOOP_ADDRESS_SCI5_FTDRL	Snoop SCI5 transmit FIFO data register.
CRC_SNOOP_ADDRESS_SCI6_FTDRL	Snoop SCI6 transmit FIFO data register.
CRC_SNOOP_ADDRESS_SCI7_FTDRL	Snoop SCI7 transmit FIFO data register.
CRC_SNOOP_ADDRESS_SCI8_FTDRL	Snoop SCI8 transmit FIFO data register.
CRC_SNOOP_ADDRESS_SCI9_FTDRL	Snoop SCI9 transmit FIFO data register.

CRC_SNOOP_ADDRESS_SCI0_RDR	Snoop SCI0 receive data register.
CRC_SNOOP_ADDRESS_SCI1_RDR	Snoop SCI1 receive data register.
CRC_SNOOP_ADDRESS_SCI2_RDR	Snoop SCI2 receive data register.
CRC_SNOOP_ADDRESS_SCI3_RDR	Snoop SCI3 receive data register.
CRC_SNOOP_ADDRESS_SCI4_RDR	Snoop SCI4 receive data register.
CRC_SNOOP_ADDRESS_SCI5_RDR	Snoop SCI5 receive data register.
CRC_SNOOP_ADDRESS_SCI6_RDR	Snoop SCI6 receive data register.
CRC_SNOOP_ADDRESS_SCI7_RDR	Snoop SCI7 receive data register.
CRC_SNOOP_ADDRESS_SCI8_RDR	Snoop SCI8 receive data register.
CRC_SNOOP_ADDRESS_SCI9_RDR	Snoop SCI9 receive data register.
CRC_SNOOP_ADDRESS_SCI0_FRDRL	Snoop SCI0 receive FIFO data register.
CRC_SNOOP_ADDRESS_SCI1_FRDRL	Snoop SCI1 receive FIFO data register.
CRC_SNOOP_ADDRESS_SCI2_FRDRL	Snoop SCI2 receive FIFO data register.
CRC_SNOOP_ADDRESS_SCI3_FRDRL	Snoop SCI3 receive FIFO data register.
CRC_SNOOP_ADDRESS_SCI4_FRDRL	Snoop SCI4 receive FIFO data register.
CRC_SNOOP_ADDRESS_SCI5_FRDRL	Snoop SCI5 receive FIFO data register.
CRC_SNOOP_ADDRESS_SCI6_FRDRL	Snoop SCI6 receive FIFO data register.
CRC_SNOOP_ADDRESS_SCI7_FRDRL	Snoop SCI7 receive FIFO data register.
CRC_SNOOP_ADDRESS_SCI8_FRDRL	Snoop SCI8 receive FIFO data register.
CRC_SNOOP_ADDRESS_SCI9_FRDRL	Snoop SCI9 receive FIFO data register.

4.3.9 CTSU Interface

Interfaces

Detailed Description

Interface for Capacitive Touch Sensing Unit (CTSU) functions.

Summary

The CTSU interface provides CTSU functionality.

The CTSU interface can be implemented by:

- Capacitive Touch Sensing Unit (r_ctsu)

Data Structures

struct	ctsu_callback_args_t
struct	ctsu_element_cfg_t
struct	ctsu_cfg_t
struct	ctsu_api_t
struct	ctsu_instance_t

Typedefs

typedef void	ctsu_ctrl_t

Enumerations

enum	ctsu_event_t
enum	ctsu_cap_t
enum	ctsu_txvsel_t
enum	ctsu_txvsel2_t
enum	ctsu_atune1_t
enum	ctsu_atune12_t
enum	ctsu_md_t
enum	ctsu_posel_t
enum	ctsu_ssdiv_t
enum	ctsu_specific_data_type_t

Data Structure Documentation

◆ ctsu_callback_args_t

struct ctsu_callback_args_t		
Callback function parameter data		
Data Fields		
ctsu_event_t	event	The event can be used to identify what caused the callback.
void const *	p_context	Placeholder for user data. Set in ctsu_api_t::open function in ctsu_cfg_t.

◆ ctsu_element_cfg_t

struct ctsu_element_cfg_t		
CTSU Configuration parameters. Element Configuration		
Data Fields		
ctsu_ssdiv_t	ssdiv	CTSU Spectrum Diffusion Frequency Division Setting (CTSU Only)
uint16_t	so	CTSU Sensor Offset Adjustment.
uint8_t	snum	CTSU Measurement Count Setting.
uint8_t	sdpa	CTSU Base Clock Setting.

◆ ctsu_cfg_t

struct ctsu_cfg_t	
User configuration structure, used in open function	
Data Fields	
ctsu_cap_t	cap
	CTSU Scan Start Trigger Select.
ctsu_txvsel_t	txvsel
	CTSU Transmission Power Supply Select.
ctsu_txvsel2_t	txvsel2
	CTSU Transmission Power Supply Select 2 (CTSU2 Only)

ctsu_atune1_t	atune1
	CTSU Power Supply Capacity Adjustment (CTSU Only)
ctsu_atune12_t	atune12
	CTSU Power Supply Capacity Adjustment (CTSU2 Only)
ctsu_md_t	md
	CTSU Measurement Mode Select.
ctsu_posel_t	posel
	CTSU Non-Measured Channel Output Select (CTSU2 Only)
uint8_t	ctsuchac0
	TS00-TS07 enable mask.
uint8_t	ctsuchac1
	TS08-TS15 enable mask.
uint8_t	ctsuchac2
	TS16-TS23 enable mask.
uint8_t	ctsuchac3
	TS24-TS31 enable mask.
uint8_t	ctsuchac4
	TS32-TS39 enable mask.

uint8_t	ctsuchtrc0
	TS00-TS07 mutual-tx mask.
uint8_t	ctsuchtrc1
	TS08-TS15 mutual-tx mask.
uint8_t	ctsuchtrc2
	TS16-TS23 mutual-tx mask.
uint8_t	ctsuchtrc3
	TS24-TS31 mutual-tx mask.
uint8_t	ctsuchtrc4
	TS32-TS39 mutual-tx mask.
ctsu_element_cfg_t const *	p_elements
	Pointer to elements configuration array.
uint8_t	num_rx
	Number of receive terminals.
uint8_t	num_tx
	Number of transmit terminals.
uint16_t	num_moving_average
	Number of moving average for measurement data.
bool	tunning_enable

	Initial offset tuning flag.
void(*	p_callback)(ctsu_callback_args_t *p_args)
	Callback provided when CTSUFN ISR occurs.
transfer_instance_t const *	p_transfer_tx
	DTC instance for transmit at CTSUWR. Set to NULL if unused.
transfer_instance_t const *	p_transfer_rx
	DTC instance for receive at CTSURD. Set to NULL if unused.
adc_instance_t const *	p_adc_instance
	ADC instance for temperature correction.
IRQn_Type	write_irq
	CTSU_CTSUWR interrupt vector.
IRQn_Type	read_irq
	CTSU_CTSURD interrupt vector.
IRQn_Type	end_irq
	CTSU_CTSUFN interrupt vector.
void const *	p_context
	User defined context passed into callback function.
void const *	p_extend
	Pointer to extended configuration by instance of interface.

uint16_t	tuning_self_target_value
	Target self value for initial offset tuning.
uint16_t	tuning_mutual_target_value
	Target mutual value for initial offset tuning.

◆ ctsu_api_t

struct ctsu_api_t	
Functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(ctsu_ctrl_t *const p_ctrl, ctsu_cfg_t const *const p_cfg)
fsp_err_t(*	scanStart)(ctsu_ctrl_t *const p_ctrl)
fsp_err_t(*	dataGet)(ctsu_ctrl_t *const p_ctrl, uint16_t *p_data)
fsp_err_t(*	scanStop)(ctsu_ctrl_t *const p_ctrl)
fsp_err_t(*	diagnosis)(ctsu_ctrl_t *const p_ctrl)
fsp_err_t(*	callbackSet)(ctsu_ctrl_t *const p_api_ctrl, void(*p_callback)(ctsu_callback_args_t *), void const *const p_context, ctsu_callback_args_t *const p_callback_memory)
fsp_err_t(*	close)(ctsu_ctrl_t *const p_ctrl)
fsp_err_t(*	specificDataGet)(ctsu_ctrl_t *const p_ctrl, uint16_t *p_specific_data, ctsu_specific_data_type_t specific_data_type)
fsp_err_t(*	dataInsert)(ctsu_ctrl_t *const p_ctrl, uint16_t *p_insert_data)

Field Documentation

◆ open

fsp_err_t(* ctsu_api_t::open) (ctsu_ctrl_t *const p_ctrl, ctsu_cfg_t const *const p_cfg)

Open driver.

Implemented as

- R_CTSU_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ scanStart

fsp_err_t(* ctsu_api_t::scanStart) (ctsu_ctrl_t *const p_ctrl)

Scan start.

Implemented as

- R_CTSU_ScanStart()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ dataGet

fsp_err_t(* ctsu_api_t::dataGet) (ctsu_ctrl_t *const p_ctrl, uint16_t *p_data)

Data get.

Implemented as

- R_CTSU_DataGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_data	Pointer to get data array.

◆ scanStop

fsp_err_t(* ctsu_api_t::scanStop) (ctsu_ctrl_t *const p_ctrl)

ScanStop.

Implemented as

- R_CTSU_ScanStop()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ diagnosis

fsp_err_t(* ctsu_api_t::diagnosis) (ctsu_ctrl_t *const p_ctrl)

Diagnosis.

Implemented as

- R_CTSU_Diagnosis()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ callbackSet

fsp_err_t(* ctsu_api_t::callbackSet) (ctsu_ctrl_t *const p_api_ctrl, void(*p_callback)(ctsu_callback_args_t *), void const *const p_context, ctsu_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_CTSU_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the CTSU control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ close

fsp_err_t(* ctsu_api_t::close) (ctsu_ctrl_t *const p_ctrl)

Close driver.

Implemented as

- R_CTSU_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ specificDataGet

fsp_err_t(* ctsu_api_t::specificDataGet) (ctsu_ctrl_t *const p_ctrl, uint16_t *p_specific_data, ctsu_specific_data_type_t specific_data_type)

Specific Data get.

Implemented as

- R_CTSU_SpecificDataGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_specific_data	Pointer to get specific data array.
[in]	specific_data_type	Specific data type

◆ dataInsert

fsp_err_t(* ctsu_api_t::dataInsert) (ctsu_ctrl_t *const p_ctrl, uint16_t *p_insert_data)

Data Insert.

Implemented as

- R_CTSU_DataInsert()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_insert_data	Pointer to insert data.

◆ ctsu_instance_t

struct ctsu_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
ctsu_ctrl_t *	p_ctrl	Pointer to the control structure

		for this instance.
ctsu_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
ctsu_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ ctsu_ctrl_t

typedef void ctsu_ctrl_t
CTSU Control block. Allocate an instance specific control block to pass into the API calls. **Implemented as** ◦ ctsu_instance_ctrl_t

Enumeration Type Documentation

◆ ctsu_event_t

enum ctsu_event_t	
CTSU Events for callback function	
Enumerator	
CTSU_EVENT_SCAN_COMPLETE	Normal end.
CTSU_EVENT_OVERFLOW	Sensor counter overflow (CTSUST.CTSUSOVF set)
CTSU_EVENT_ICOMP	Abnormal TSCAP voltage (CTSUERRS.CTSUICOMP set)
CTSU_EVENT_ICOMP1	Abnormal sensor current (CTSUSR.ICOMP1 set)

◆ ctsu_cap_t

enum ctsu_cap_t	
CTSU Scan Start Trigger Select	
Enumerator	
CTSU_CAP_SOFTWARE	Scan start by software trigger.
CTSU_CAP_EXTERNAL	Scan start by external trigger.

◆ ctsu_txvsel_t

enum ctsu_txvsel_t	
CTSU Transmission Power Supply Select	
Enumerator	
CTSU_TXVSEL_VCC	VCC selected.
CTSU_TXVSEL_INTERNAL_POWER	Internal logic power supply selected.

◆ ctsu_txvsel2_t

enum ctsu_txvsel2_t	
CTSU Transmission Power Supply Select 2 (CTSU2 Only)	
Enumerator	
CTSU_TXVSEL_MODE	Follow TXVSEL setting.
CTSU_TXVSEL_VCC_PRIVATE	VCC private selected.

◆ ctsu_atune1_t

enum ctsu_atune1_t	
CTSU Power Supply Capacity Adjustment (CTSU Only)	
Enumerator	
CTSU_ATUNE1_NORMAL	Normal output (40uA)
CTSU_ATUNE1_HIGH	High-current output (80uA)

◆ ctsu_atune12_t

enum ctsu_atune12_t	
CTSU Power Supply Capacity Adjustment (CTSU2 Only)	
Enumerator	
CTSU_ATUNE12_80UA	High-current output (80uA)
CTSU_ATUNE12_40UA	Normal output (40uA)
CTSU_ATUNE12_20UA	Low-current output (20uA)
CTSU_ATUNE12_160UA	Very high-current output (160uA)

◆ ctsu_md_t

enum ctsu_md_t	
CTSU Measurement Mode Select	
Enumerator	
CTSU_MODE_SELF_MULTI_SCAN	Self-capacitance multi scan mode.
CTSU_MODE_MUTUAL_FULL_SCAN	Mutual capacitance full scan mode.
CTSU_MODE_MUTUAL_CFC_SCAN	Mutual capacitance cfc scan mode (CTSU2 Only)
CTSU_MODE_CURRENT_SCAN	Current scan mode (CTSU2 Only)
CTSU_MODE_CORRECTION_SCAN	Correction scan mode (CTSU2 Only)
CTSU_MODE_DIAGNOSIS_SCAN	Diagnosis scan mode.

◆ ctsu_posel_t

enum ctsu_posel_t	
CTSU Non-Measured Channel Output Select (CTSU2 Only)	
Enumerator	
CTSU_POSEL_LOW_GPIO	Output low through GPIO.
CTSU_POSEL_HI_Z	Hi-Z.
CTSU_POSEL_LOW	Setting prohibited.
CTSU_POSEL_SAME_PULSE	Same phase pulse output as transmission channel through the power setting by the TXVSEL[1:0] bits.

◆ ctsu_ssdiv_t

enum ctsu_ssdiv_t	
CTSU Spectrum Diffusion Frequency Division Setting (CTSU Only)	
Enumerator	
CTSU_SSDIV_4000	4.00 <= Base clock frequency (MHz)
CTSU_SSDIV_2000	2.00 <= Base clock frequency (MHz) < 4.00
CTSU_SSDIV_1330	1.33 <= Base clock frequency (MHz) < 2.00
CTSU_SSDIV_1000	1.00 <= Base clock frequency (MHz) < 1.33
CTSU_SSDIV_0800	0.80 <= Base clock frequency (MHz) < 1.00
CTSU_SSDIV_0670	0.67 <= Base clock frequency (MHz) < 0.80
CTSU_SSDIV_0570	0.57 <= Base clock frequency (MHz) < 0.67
CTSU_SSDIV_0500	0.50 <= Base clock frequency (MHz) < 0.57
CTSU_SSDIV_0440	0.44 <= Base clock frequency (MHz) < 0.50
CTSU_SSDIV_0400	0.40 <= Base clock frequency (MHz) < 0.44
CTSU_SSDIV_0360	0.36 <= Base clock frequency (MHz) < 0.40

CTSU_SSDIV_0000	0.00 <= Base clock frequency (MHz) < 0.27

◆ ctsu_specific_data_type_t

enum ctsu_specific_data_type_t
CTSU select data type for slect data get

4.3.10 DAC Interface

Interfaces

Detailed Description

Interface for D/A converters.

Summary

The DAC interface provides standard Digital/Analog Converter functionality. A DAC application writes digital sample data to the device and generates analog output on the DAC output pin.

Implemented by:

- Digital to Analog Converter (r_dac)
- Digital to Analog Converter (r_dac8)

Data Structures

struct	dac_info_t
struct	dac_cfg_t
struct	dac_api_t
struct	dac_instance_t

Typedefs

typedef void	dac_ctrl_t

Enumerations

enum	dac_data_format_t

Data Structure Documentation

◆ dac_info_t

struct dac_info_t		
DAC information structure to store various information for a DAC		
Data Fields		
uint8_t	bit_width	Resolution of the DAC.

◆ dac_cfg_t

struct dac_cfg_t
DAC Open API configuration parameter

Data Fields		
uint8_t	channel	ID associated with this DAC channel.
bool	ad_da_synchronized	AD/DA synchronization.
void const *	p_extend	

◆ dac_api_t

struct dac_api_t

DAC driver structure. General DAC functions implemented at the HAL layer follow this API.

Data Fields

fsp_err_t(*	open)(dac_ctrl_t *const p_ctrl, dac_cfg_t const *const p_cfg)
fsp_err_t(*	close)(dac_ctrl_t *const p_ctrl)
fsp_err_t(*	write)(dac_ctrl_t *const p_ctrl, uint16_t value)
fsp_err_t(*	start)(dac_ctrl_t *const p_ctrl)
fsp_err_t(*	stop)(dac_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* dac_api_t::open) (dac_ctrl_t *const p_ctrl, dac_cfg_t const *const p_cfg)

Initial configuration.

Implemented as

- R_DAC_Open()
- R_DAC8_Open()

Parameters

[in]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ close

fsp_err_t(* dac_api_t::close) (dac_ctrl_t *const p_ctrl)

Close the D/A Converter.

Implemented as

- R_DAC_Close()
- R_DAC8_Close()

Parameters

[in]	p_ctrl	Control block set in dac_api_t::open call for this timer.

◆ write

fsp_err_t(* dac_api_t::write) (dac_ctrl_t *const p_ctrl, uint16_t value)

Write sample value to the D/A Converter.

Implemented as

- R_DAC_Write()
- R_DAC8_Write()

Parameters

[in]	p_ctrl	Control block set in dac_api_t::open call for this timer.
[in]	value	Sample value to be written to the D/A Converter.

◆ start

fsp_err_t(* dac_api_t::start) (dac_ctrl_t *const p_ctrl)

Start the D/A Converter if it has not been started yet.

Implemented as

- R_DAC_Start()
- R_DAC8_Start()

Parameters

[in]	p_ctrl	Control block set in dac_api_t::open call for this timer.

◆ stop

fsp_err_t(* dac_api_t::stop) (dac_ctrl_t *const p_ctrl)

Stop the D/A Converter if the converter is running.

Implemented as

- R_DAC_Stop()
- R_DAC8_Stop()

Parameters

[in]	p_ctrl	Control block set in dac_api_t::open call for this timer.

◆ dac_instance_t

struct dac_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
dac_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
dac_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
dac_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ dac_ctrl_t

typedef void dac_ctrl_t

DAC control block. Allocate an instance specific control block to pass into the DAC API calls.

Implemented as

- dac_instance_ctrl_t
- dac8_instance_ctrl_t

Enumeration Type Documentation

◆ dac_data_format_t

enum dac_data_format_t	
DAC Open API data format settings.	
Enumerator	
DAC_DATA_FORMAT_FLUSH_RIGHT	LSB of data is flush to the right leaving the top 4 bits unused.
DAC_DATA_FORMAT_FLUSH_LEFT	MSB of data is flush to the left leaving the bottom 4 bits unused.

4.3.11 Display Interface

Interfaces

Detailed Description

Interface for LCD panel displays.

Summary

The display interface provides standard display functionality:

- Signal timing configuration for LCD panels with RGB interface.
- Dot clock source selection (internal or external) and frequency divider.
- Blending of multiple graphics layers on the background screen.
- Color correction (brightness/configuration/gamma correction).
- Interrupts and callback function.

Implemented by: Graphics LCD Controller (r_glcdc)

Data Structures

struct	display_timing_t
struct	display_color_t
struct	display_coordinate_t
struct	display_brightness_t

enum	display_endian_t
enum	display_color_order_t
enum	display_signal_polarity_t
enum	display_sync_edge_t

enum	display_fade_control_t
enum	display_fade_status_t

Data Structure Documentation

◆ display_timing_t

struct display_timing_t		
Display signal timing setting		
Data Fields		
uint16_t	total_cyc	Total cycles in one line or total lines in one frame.
uint16_t	display_cyc	Active video cycles or lines.
uint16_t	back_porch	Back porch cycles or lines.
uint16_t	sync_width	Sync signal asserting width.
display_signal_polarity_t	sync_polarity	Sync signal polarity.

◆ display_color_t

struct display_color_t
RGB Color setting

◆ display_coordinate_t

struct display_coordinate_t		
Contrast (gain) correction setting		
Data Fields		
int16_t	x	Coordinate X, this allows to set signed value.
int16_t	y	Coordinate Y, this allows to set signed value.

◆ display_brightness_t

struct display_brightness_t		
Brightness (DC) correction setting		
Data Fields		
bool	enable	Brightness Correction On/Off.
uint16_t	r	Brightness (DC) adjustment for R channel.
uint16_t	g	Brightness (DC) adjustment for G channel.

uint16_t	b	Brightness (DC) adjustment for B channel.

◆ display_contrast_t

struct display_contrast_t		
Contrast (gain) correction setting		
Data Fields		
bool	enable	Contrast Correction On/Off.
uint8_t	r	Contrast (gain) adjustment for R channel.
uint8_t	g	Contrast (gain) adjustment for G channel.
uint8_t	b	Contrast (gain) adjustment for B channel.

◆ display_correction_t

struct display_correction_t		
Color correction setting		
Data Fields		
display_brightness_t	brightness	Brightness.
display_contrast_t	contrast	Contrast.

◆ gamma_correction_t

struct gamma_correction_t		
Gamma correction setting for each color		
Data Fields		
bool	enable	Gamma Correction On/Off.
uint16_t *	gain	Gain adjustment.
uint16_t *	threshold	Start threshold.

◆ display_gamma_correction_t

struct display_gamma_correction_t		
Gamma correction setting		
Data Fields		
gamma_correction_t	r	Gamma correction for R channel.
gamma_correction_t	g	Gamma correction for G channel.
gamma_correction_t	b	Gamma correction for B

		channel.

◆ display_clut_t

struct display_clut_t		
CLUT setting		
Data Fields		
uint32_t	color_num	The number of colors in CLUT.
const uint32_t *	p_clut	Address of the area storing the CLUT data (in ARGB8888 format)

◆ display_input_cfg_t

struct display_input_cfg_t		
Graphics plane input configuration structure		
Data Fields		
uint32_t *	p_base	Base address to the frame buffer.
uint16_t	hsize	Horizontal pixel size in a line.
uint16_t	vsize	Vertical pixel size in a frame.
uint32_t	hstride	Memory stride (bytes) in a line.
display_in_format_t	format	Input format setting.
bool	line_descending_enable	Line descending enable.
bool	lines_repeat_enable	Line repeat enable.
uint16_t	lines_repeat_times	Expected number of line repeating.

◆ display_output_cfg_t

struct display_output_cfg_t		
Display output configuration structure		
Data Fields		
display_timing_t	htiming	Horizontal display cycle setting.
display_timing_t	vtiming	Vertical display cycle setting.
display_out_format_t	format	Output format setting.
display_endian_t	endian	Bit order of output data.
display_color_order_t	color_order	Color order in pixel.
display_signal_polarity_t	data_enable_polarity	Data Enable signal polarity.
display_sync_edge_t	sync_edge	Signal sync edge selection.
display_color_t	bg_color	Background color.

display_brightness_t	brightness	Brightness setting.
display_contrast_t	contrast	Contrast setting.
display_gamma_correction_t *	p_gamma_correction	Pointer to gamma correction setting.
bool	dithering_on	Dithering on/off.

◆ display_layer_t

struct display_layer_t		
Graphics layer blend setup parameter structure		
Data Fields		
display_coordinate_t	coordinate	Blending location (starting point of image)
display_color_t	bg_color	Color outside region.
display_fade_control_t	fade_control	Layer fade-in/out control on/off.
uint8_t	fade_speed	Layer fade-in/out frame rate.

◆ display_callback_args_t

struct display_callback_args_t		
Display callback parameter definition		
Data Fields		
display_event_t	event	Event code.
void const *	p_context	Context provided to user during callback.

◆ display_cfg_t

struct display_cfg_t	
Display main configuration structure	
Data Fields	
display_input_cfg_t	input [2]
	Graphics input frame setting. More...
display_output_cfg_t	output
	Graphics output frame setting.
display_layer_t	layer [2]
	Graphics layer blend setting.

uint8_t	line_detect_ipl
	Line detect interrupt priority.
uint8_t	underflow_1_ipl
	Underflow 1 interrupt priority.
uint8_t	underflow_2_ipl
	Underflow 2 interrupt priority.
IRQn_Type	line_detect_irq
	Line detect interrupt vector.
IRQn_Type	underflow_1_irq
	Underflow 1 interrupt vector.
IRQn_Type	underflow_2_irq
	Underflow 2 interrupt vector.
void(*	p_callback)(display_callback_args_t *p_args)
	Pointer to callback function. More...
void const *	p_context
	User defined context passed into callback function.
void const *	p_extend
	Display hardware dependent configuration. More...

Field Documentation

◆ input

display_input_cfg_t display_cfg_t::input[2]
Graphics input frame setting. Generic configuration for display devices

◆ p_callback

void(* display_cfg_t::p_callback) (display_callback_args_t *p_args)
Pointer to callback function. Configuration for display event processing

◆ p_extend

void const* display_cfg_t::p_extend
Display hardware dependent configuration. Pointer to display peripheral specific configuration

◆ display_runtime_cfg_t

struct display_runtime_cfg_t		
Display main configuration structure		
Data Fields		
display_input_cfg_t	input	Graphics input frame setting. Generic configuration for display devices
display_layer_t	layer	Graphics layer alpha blending setting.

◆ display_clut_cfg_t

struct display_clut_cfg_t		
Display CLUT configuration structure		
Data Fields		
uint32_t *	p_base	Pointer to CLUT source data.
uint16_t	start	Beginning of CLUT entry to be updated.
uint16_t	size	Size of CLUT entry to be updated.

◆ display_status_t

struct display_status_t

Display Status		
Data Fields		
display_state_t	state	Status of GLCDC module.
display_fade_status_t	fade_status[DISPLAY_FRAME_LAYER_2+1]	Status of fade-in/fade-out status.

◆ display_api_t

struct display_api_t	
Shared Interface definition for display peripheral	
Data Fields	
fsp_err_t(*	open)(display_ctrl_t *const p_ctrl, display_cfg_t const *const p_cfg)
fsp_err_t(*	close)(display_ctrl_t *const p_ctrl)
fsp_err_t(*	start)(display_ctrl_t *const p_ctrl)
fsp_err_t(*	stop)(display_ctrl_t *const p_ctrl)
fsp_err_t(*	layerChange)(display_ctrl_t const *const p_ctrl, display_runtime_cfg_t const *const p_cfg, display_frame_layer_t frame)
fsp_err_t(*	bufferChange)(display_ctrl_t const *const p_ctrl, uint8_t *const framebuffer, display_frame_layer_t frame)
fsp_err_t(*	correction)(display_ctrl_t const *const p_ctrl, display_correction_t const *const p_param)
fsp_err_t(*	clut)(display_ctrl_t const *const p_ctrl, display_clut_cfg_t const *const p_clut_cfg, display_frame_layer_t layer)
fsp_err_t(*	clutEdit)(display_ctrl_t const *const p_ctrl, display_frame_layer_t layer, uint8_t index, uint32_t color)
fsp_err_t(*	statusGet)(display_ctrl_t const *const p_ctrl, display_status_t *const p_status)

Field Documentation

◆ open

fsp_err_t(* display_api_t::open) (display_ctrl_t *const p_ctrl, display_cfg_t const *const p_cfg)

Open display device.

Implemented as

- R_GLCDC_Open()

Parameters

[in,out]	p_ctrl	Pointer to display interface control block. Must be declared by user. Value set here.
[in]	p_cfg	Pointer to display configuration structure. All elements of this structure must be set by user.

◆ close

fsp_err_t(* display_api_t::close) (display_ctrl_t *const p_ctrl)

Close display device.

Implemented as

- R_GLCDC_Close()

Parameters

[in]	p_ctrl	Pointer to display interface control block.

◆ start

fsp_err_t(* display_api_t::start) (display_ctrl_t *const p_ctrl)

Display start.

Implemented as

- R_GLCDC_Start()

Parameters

[in]	p_ctrl	Pointer to display interface control block.

◆ stop

fsp_err_t(* display_api_t::stop) (display_ctrl_t *const p_ctrl)

Display stop.

Implemented as

- R_GLCDC_Stop()

Parameters

[in]	p_ctrl	Pointer to display interface control block.

◆ layerChange

fsp_err_t(* display_api_t::layerChange) (display_ctrl_t const *const p_ctrl, display_runtime_cfg_t const *const p_cfg, display_frame_layer_t frame)

Change layer parameters at runtime.

Implemented as

- R_GLCDC_LayerChange()

Parameters

[in]	p_ctrl	Pointer to display interface control block.
[in]	p_cfg	Pointer to run-time layer configuration structure.
[in]	frame	Number of graphic frames.

◆ bufferChange

fsp_err_t(* display_api_t::bufferChange) (display_ctrl_t const *const p_ctrl, uint8_t *const framebuffer, display_frame_layer_t frame)

Change layer framebuffer pointer.

Implemented as

- R_GLCDC_BufferChange()

Parameters

[in]	p_ctrl	Pointer to display interface control block.
[in]	framebuffer	Pointer to desired framebuffer.
[in]	frame	Number of graphic frames.

◆ correction

fsp_err_t(* display_api_t::correction) (display_ctrl_t const *const p_ctrl, display_correction_t const *const p_param)

Color correction.

Implemented as

- R_GLCDC_ColorCorrection()

Parameters

[in]	p_ctrl	Pointer to display interface control block.
[in]	param	Pointer to color correction configuration structure.

◆ clut

fsp_err_t(* display_api_t::clut) (display_ctrl_t const *const p_ctrl, display_clut_cfg_t const *const p_clut_cfg, display_frame_layer_t layer)

Set CLUT for display device.

Implemented as

- R_GLCDC_ClutUpdate()

Parameters

[in]	p_ctrl	Pointer to display interface control block.
[in]	p_clut_cfg	Pointer to CLUT configuration structure.
[in]	layer	Layer number corresponding to the CLUT.

◆ clutEdit

fsp_err_t(* display_api_t::clutEdit) (display_ctrl_t const *const p_ctrl, display_frame_layer_t layer, uint8_t index, uint32_t color)

Set CLUT element for display device.

Implemented as

- R_GLCDC_ClutEdit()

Parameters

[in]	p_ctrl	Pointer to display interface control block.
[in]	layer	Layer number corresponding to the CLUT.
[in]	index	CLUT element index.
[in]	color	Desired CLUT index color.

◆ statusGet

fsp_err_t(* display_api_t::statusGet) (display_ctrl_t const *const p_ctrl, display_status_t *const p_status)

Get status for display device.

Implemented as

- R_GLCDC_StatusGet()

Parameters

[in]	p_ctrl	Pointer to display interface control block.
[in]	status	Pointer to display interface status structure.

◆ display_instance_t

struct display_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

display_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
display_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
display_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ display_ctrl_t

typedef void display_ctrl_t
Display control block. Allocate an instance specific control block to pass into the display API calls. **Implemented as** ◦ glcdc_instance_ctrl_tDisplay control block

Enumeration Type Documentation

◆ display_frame_layer_t

enum display_frame_layer_t	
Display frame number	
Enumerator	
DISPLAY_FRAME_LAYER_1	Frame layer 1.
DISPLAY_FRAME_LAYER_2	Frame layer 2.

◆ display_state_t

enum display_state_t	
Display interface operation state	
Enumerator	
DISPLAY_STATE_CLOSED	Display closed.
DISPLAY_STATE_OPENED	Display opened.
DISPLAY_STATE_DISPLAYING	Displaying.

◆ display_event_t

enum display_event_t	
Display event codes	
Enumerator	
DISPLAY_EVENT_GR1_UNDERFLOW	Graphics frame1 underflow occurs.
DISPLAY_EVENT_GR2_UNDERFLOW	Graphics frame2 underflow occurs.
DISPLAY_EVENT_LINE_DETECTION	Designated line is processed.

◆ display_in_format_t

enum display_in_format_t	
Input format setting	
Enumerator	
DISPLAY_IN_FORMAT_32BITS_ARGB8888	ARGB8888, 32 bits.
DISPLAY_IN_FORMAT_32BITS_RGB888	RGB888, 32 bits.
DISPLAY_IN_FORMAT_16BITS_RGB565	RGB565, 16 bits.
DISPLAY_IN_FORMAT_16BITS_ARGB1555	ARGB1555, 16 bits.
DISPLAY_IN_FORMAT_16BITS_ARGB4444	ARGB4444, 16 bits.
DISPLAY_IN_FORMAT_CLUT8	CLUT8.
DISPLAY_IN_FORMAT_CLUT4	CLUT4.
DISPLAY_IN_FORMAT_CLUT1	CLUT1.

◆ display_out_format_t

enum display_out_format_t	
Output format setting	
Enumerator	
DISPLAY_OUT_FORMAT_24BITS_RGB888	RGB888, 24 bits.
DISPLAY_OUT_FORMAT_18BITS_RGB666	RGB666, 18 bits.
DISPLAY_OUT_FORMAT_16BITS_RGB565	RGB565, 16 bits.
DISPLAY_OUT_FORMAT_8BITS_SERIAL	SERIAL, 8 bits.

◆ display_endian_t

enum display_endian_t	
Data endian select	
Enumerator	
DISPLAY_ENDIAN_LITTLE	Little-endian.
DISPLAY_ENDIAN_BIG	Big-endian.

◆ display_color_order_t

enum display_color_order_t	
RGB color order select	
Enumerator	
DISPLAY_COLOR_ORDER_RGB	Color order RGB.
DISPLAY_COLOR_ORDER_BGR	Color order BGR.

◆ display_signal_polarity_t

enum display_signal_polarity_t	
Polarity of a signal select	
Enumerator	
DISPLAY_SIGNAL_POLARITY_LOACTIVE	Low active signal.
DISPLAY_SIGNAL_POLARITY_HIACTIVE	High active signal.

◆ display_sync_edge_t

enum display_sync_edge_t	
Signal synchronization edge select	
Enumerator	
DISPLAY_SIGNAL_SYNC_EDGE_RISING	Signal is synchronized to rising edge.
DISPLAY_SIGNAL_SYNC_EDGE_FALLING	Signal is synchronized to falling edge.

◆ display_fade_control_t

enum display_fade_control_t	
Fading control	
Enumerator	
DISPLAY_FADE_CONTROL_NONE	Applying no fading control.
DISPLAY_FADE_CONTROL_FADEIN	Applying fade-in control.
DISPLAY_FADE_CONTROL_FADEOUT	Applying fade-out control.

◆ display_fade_status_t

enum display_fade_status_t	
Fading status	
Enumerator	
DISPLAY_FADE_STATUS_NOT_UNDERWAY	Fade-in/fade-out is not in progress.
DISPLAY_FADE_STATUS_FADING_UNDERWAY	Fade-in or fade-out is in progress.
DISPLAY_FADE_STATUS_PENDING	Fade-in/fade-out is configured but not yet started.

4.3.12 DOC Interface

Interfaces

Detailed Description

Interface for the Data Operation Circuit.

Defines the API and data structures for the DOC implementation of the Data Operation Circuit (DOC) interface.

Summary

This module implements the DOC_API using the Data Operation Circuit (DOC).

Implemented by: Data Operation Circuit (r_doc)

Data Structures

struct	doc_status_t
struct	doc_callback_args_t
struct	doc_cfg_t
struct	doc_api_t
struct	doc_instance_t

Typedefs

typedef void	doc_ctrl_t

Enumerations

enum	doc_event_t
enum	doc_bit_width_t

Data Structure Documentation

◆ doc_status_t

struct doc_status_t
DOC status

◆ doc_callback_args_t

struct doc_callback_args_t		
Callback function parameter data.		
Data Fields		
void const *	p_context	Set in doc_api_t::open function in doc_cfg_t. Placeholder for user data.

◆ doc_cfg_t

struct doc_cfg_t	
User configuration structure, used in the open function.	
Data Fields	
doc_event_t	event
	Select enumerated value from doc_event_t.
doc_bit_width_t	bit_width
	The bit width of operations.
uint32_t	doc_data
uint32_t	doc_data_extra
uint8_t	ipl
	DOC interrupt priority.

IRQn_Type	irq
	NVIC interrupt number assigned to this instance.
void(*	p_callback)(doc_callback_args_t *p_args)
void const *	p_context

Field Documentation

◆ doc_data

uint32_t doc_cfg_t::doc_data

Initial/Reference data for addition, subtraction, and comparison operations.

- In Addition and Subtraction mode, this value sets the initial value of the operations.
- In Comparison match, mismatch, lower, and upper modes, this value is compared with data that is written.
- In Comparison inside window and outside window modes, this value is used as the lower bound for comparisons.

◆ doc_data_extra

uint32_t doc_cfg_t::doc_data_extra

Additional reference data for use in Window Comparison operations.

- In Comparison inside window and outside window modes, this value is used as the upper bound for comparisons.

◆ p_callback

void(* doc_cfg_t::p_callback) (doc_callback_args_t *p_args)

Callback provided when a DOC ISR occurs.

◆ p_context

void const* doc_cfg_t::p_context

Placeholder for user data. Passed to the user callback in doc_callback_args_t.

◆ doc_api_t

struct doc_api_t

Data Operation Circuit (DOC) API structure. DOC functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t(*	open)(doc_ctrl_t *const p_ctrl, doc_cfg_t const *const p_cfg)
fsp_err_t(*	close)(doc_ctrl_t *const p_ctrl)
fsp_err_t(*	statusGet)(doc_ctrl_t *const p_ctrl, doc_status_t *p_status)
fsp_err_t(*	read)(doc_ctrl_t *const p_ctrl, uint32_t *p_result)
fsp_err_t(*	write)(doc_ctrl_t *const p_ctrl, uint32_t data)
fsp_err_t(*	callbackSet)(doc_ctrl_t *const p_api_ctrl, void(*p_callback)(doc_callback_args_t *), void const *const p_context, doc_callback_args_t *const p_callback_memory)

Field Documentation

◆ open

fsp_err_t(* doc_api_t::open) (doc_ctrl_t *const p_ctrl, doc_cfg_t const *const p_cfg)

Initial configuration.

Implemented as

- R_DOC_Open()

Parameters

[in]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ close

fsp_err_t(* doc_api_t::close) (doc_ctrl_t *const p_ctrl)

Allow the driver to be reconfigured. Will reduce power consumption.

Implemented as

- R_DOC_Close()

Parameters

[in]	p_ctrl	Control block set in doc_api_t::open call.

◆ statusGet

fsp_err_t(* doc_api_t::statusGet) (doc_ctrl_t *const p_ctrl, doc_status_t *p_status)

DEPRECATED - Gets the result of addition/subtraction operations and stores it in the provided pointer p_status.

Implemented as

- R_DOC_StatusGet()

Parameters

[in]	p_ctrl	Control block set in doc_api_t::open call.
[out]	p_data	Provides the 16 bit result of the addition/subtraction operation at the user defined location.

◆ read

fsp_err_t(* doc_api_t::read) (doc_ctrl_t *const p_ctrl, uint32_t *p_result)

Gets the result of addition/subtraction operations and stores it in the provided pointer p_result.

Implemented as

- R_DOC_Read()

Parameters

[in]	p_ctrl	Control block set in doc_api_t::open call.
[in]	p_result	The result of the DOC operation.

◆ write

fsp_err_t(* doc_api_t::write) (doc_ctrl_t *const p_ctrl, uint32_t data)

Write to the DODIR register.

Implemented as

- R_DOC_Write()

Parameters

[in]	p_ctrl	Control block set in doc_api_t::open call.
[in]	data	data to be written to DOC DODIR register.

◆ callbackSet

fsp_err_t(* doc_api_t::callbackSet) (doc_ctrl_t *const p_api_ctrl, void(*p_callback)(doc_callback_args_t *), void const *const p_context, doc_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_DOC_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the DOC control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ doc_instance_t

struct doc_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

doc_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
doc_cfg_t const *	p_cfg	Pointer to the configuration

		structure for this instance.
doc_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ doc_ctrl_t

typedef void doc_ctrl_t
DOC control block. Allocate an instance specific control block to pass into the DOC API calls. **Implemented as** ◦ doc_instance_ctrl_t

Enumeration Type Documentation

◆ doc_event_t

enum doc_event_t	
Event that can trigger a callback function.	
Enumerator	
DOC_EVENT_COMPARISON_MISMATCH	The data is not equal to the reference data setting.
DOC_EVENT_ADDITION	Addition resulted in a value greater than the max for the configured bit width.
DOC_EVENT_SUBTRACTION	Subtraction resulted in a value less than 0.
DOC_EVENT_COMPARISON_MATCH	The data is equal to the reference data settting.
DOC_EVENT_COMPARISON_LOWER	The data is less than the reference data setting.
DOC_EVENT_COMPARISON_UPPER	The data is greater than the reference data setting.
DOC_EVENT_COMPARISON_INSIDE_WINDOW	The data is between the two reference data settings.
DOC_EVENT_COMPARISON_OUTSIDE_WINDOW	The data is outside the two reference data setttings.

◆ doc_bit_width_t

enum doc_bit_width_t	
The bit width used during operations.	
Enumerator	
DOC_BIT_WIDTH_16	Operations are 16-bit.
DOC_BIT_WIDTH_32	Operations are 32-bit.

4.3.13 ELC Interface

Interfaces

Detailed Description

Interface for the Event Link Controller.

Data Structures

struct	elc_cfg_t
struct	elc_api_t
struct	elc_instance_t

Typedefs

typedef void	elc_ctrl_t

Enumerations

enum	elc_peripheral_t
enum	elc_software_event_t

Data Structure Documentation

◆ elc_cfg_t

struct elc_cfg_t		
Main configuration structure for the Event Link Controller		
Data Fields		
elc_event_t const	link[ELC_PERIPHERAL_NUM]	Event link register (ELSR)

		settings.

◆ elc_api_t

struct elc_api_t	
ELC driver structure. General ELC functions implemented at the HAL layer follow this API.	
Data Fields	
fsp_err_t(*	open)(elc_ctrl_t *const p_ctrl, elc_cfg_t const *const p_cfg)
fsp_err_t(*	close)(elc_ctrl_t *const p_ctrl)
fsp_err_t(*	softwareEventGenerate)(elc_ctrl_t *const p_ctrl, elc_software_event_t event_num)
fsp_err_t(*	linkSet)(elc_ctrl_t *const p_ctrl, elc_peripheral_t peripheral, elc_event_t signal)
fsp_err_t(*	linkBreak)(elc_ctrl_t *const p_ctrl, elc_peripheral_t peripheral)
fsp_err_t(*	enable)(elc_ctrl_t *const p_ctrl)
fsp_err_t(*	disable)(elc_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* elc_api_t::open) (elc_ctrl_t *const p_ctrl, elc_cfg_t const *const p_cfg)

Initialize all links in the Event Link Controller.

Implemented as

- R_ELC_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

fsp_err_t(* elc_api_t::close) (elc_ctrl_t *const p_ctrl)

Disable all links in the Event Link Controller and close the API.

Implemented as

- R_ELC_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ softwareEventGenerate

fsp_err_t(* elc_api_t::softwareEventGenerate) (elc_ctrl_t *const p_ctrl, elc_software_event_t event_num)

Generate a software event in the Event Link Controller.

Implemented as

- R_ELC_SoftwareEventGenerate()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	eventNum	Software event number to be generated.

◆ linkSet

fsp_err_t(* elc_api_t::linkSet) (elc_ctrl_t *const p_ctrl, elc_peripheral_t peripheral, elc_event_t signal)

Create a single event link.

Implemented as

- R_ELC_LinkSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	peripheral	The peripheral block that will receive the event signal.
[in]	signal	The event signal.

◆ linkBreak

fsp_err_t(* elc_api_t::linkBreak) (elc_ctrl_t *const p_ctrl, elc_peripheral_t peripheral)

Break an event link.

Implemented as

- R_ELC_LinkBreak()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	peripheral	The peripheral that should no longer be linked.

◆ enable

fsp_err_t(* elc_api_t::enable) (elc_ctrl_t *const p_ctrl)

Enable the operation of the Event Link Controller.

Implemented as

- R_ELC_Enable()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ disable

fsp_err_t(* elc_api_t::disable) (elc_ctrl_t *const p_ctrl)

Disable the operation of the Event Link Controller.

Implemented as

- R_ELC_Disable()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ elc_instance_t

struct elc_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields		
elc_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
elc_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.

elc_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ elc_ctrl_t

typedef void elc_ctrl_t
ELC control block. Allocate an instance specific control block to pass into the ELC API calls. **Implemented as** ◦ elc_instance_ctrl_t

Enumeration Type Documentation

◆ elc_peripheral_t

enum elc_peripheral_t
Possible peripherals to be linked to event signals (not all available on all MCUs)

◆ elc_software_event_t

enum elc_software_event_t	
Software event number	
Enumerator	
ELC_SOFTWARE_EVENT_0	Software event 0.
ELC_SOFTWARE_EVENT_1	Software event 1.

4.3.14 Ethernet Interface

Interfaces

Detailed Description

Interface for Ethernet functions.

Summary

The Ethernet interface provides Ethernet functionality. The Ethernet interface supports the following

features:

- Transmit/receive processing (Blocking and Non-Blocking)
- Callback function with returned event code
- Magic packet detection mode support
- Auto negotiation support
- Flow control support
- Multicast filtering support

Implemented by:

- Ethernet (r_ether)

Data Structures

struct	ether_instance_descriptor_t
struct	ether_callback_args_t
struct	ether_cfg_t
struct	ether_api_t
struct	ether_instance_t

Typedefs

typedef void	ether_ctrl_t

Enumerations

enum	ether_wake_on_lan_t
enum	ether_flow_control_t
enum	ether_multicast_t
enum	ether_promiscuous_t
enum	ether_zerocopy_t
enum	ether_event_t

Data Structure Documentation

◆ ether_instance_descriptor_t

struct ether_instance_descriptor_t
EDMAC descriptor as defined in the hardware manual. Structure must be packed at 1 byte.

◆ ether_callback_args_t

struct ether_callback_args_t		
Callback function parameter data		
Data Fields		
uint32_t	channel	Device channel number.
ether_event_t	event	Event code.
uint32_t	status_ecsr	ETHERC status register for interrupt handler.
uint32_t	status_eesr	ETHERC/EDMAC status register for interrupt handler.
void const *	p_context	Placeholder for user data. Set in ether_api_t::open function in ether_cfg_t.

◆ ether_cfg_t

struct ether_cfg_t	
Configuration parameters.	
Data Fields	
uint8_t	channel
	Channel.
ether_zerocopy_t	zerocopy
	Zero copy enable or disable in Read/Write function.
ether_multicast_t	multicast
	Multicast enable or disable.
ether_promiscuous_t	promiscuous
	Promiscuous mode enable or disable.
ether_flow_control_t	flow_control
	Flow control functionally enable or disable.
ether_padding_t	padding

	Padding length inserted into the received Ethernet frame.
uint32_t	padding_offset
	Offset of the padding inserted into the received Ethernet frame.
uint32_t	broadcast_filter
	Limit of the number of broadcast frames received continuously.
uint8_t *	p_mac_address
	Pointer of MAC address.
ether_instance_descriptor_t *	p_rx_descriptors
	Receive descriptor buffer pool.
ether_instance_descriptor_t *	p_tx_descriptors
	Transmit descriptor buffer pool.
uint8_t	num_tx_descriptors
	Number of transmission descriptor.
uint8_t	num_rx_descriptors
	Number of receive descriptor.
uint8_t **	pp_ether_buffers
	Transmit and receive buffer.
uint32_t	ether_buffer_size

	Size of transmit and receive buffer.
IRQn_Type	irq
	NVIC interrupt number.
uint32_t	interrupt_priority
	NVIC interrupt priority.
void(*	p_callback)(ether_callback_args_t *p_args)
	Callback provided when an ISR occurs.
ether_phy_instance_t const *	p_ether_phy_instance
	Pointer to ETHER_PHY instance.
void const *	p_context
	Placeholder for user data. More...
void const *	p_extend
	Placeholder for user extension.

Field Documentation

◆ p_context

void const* ether_cfg_t::p_context
Placeholder for user data. Placeholder for user data. Passed to the user callback in ether_callback_args_t.

◆ ether_api_t

struct ether_api_t
Functions implemented at the HAL layer will follow this API.

Data Fields	
fsp_err_t(*	open)(ether_ctrl_t *const p_api_ctrl, ether_cfg_t const *const p_cfg)
fsp_err_t(*	close)(ether_ctrl_t *const p_api_ctrl)
fsp_err_t(*	read)(ether_ctrl_t *const p_api_ctrl, void *const p_buffer, uint32_t *const length_bytes)
fsp_err_t(*	bufferRelease)(ether_ctrl_t *const p_api_ctrl)
fsp_err_t(*	rxBufferUpdate)(ether_ctrl_t *const p_api_ctrl, void *const p_buffer)
fsp_err_t(*	write)(ether_ctrl_t *const p_api_ctrl, void *const p_buffer, uint32_t const frame_length)
fsp_err_t(*	linkProcess)(ether_ctrl_t *const p_api_ctrl)
fsp_err_t(*	wakeOnLANEnable)(ether_ctrl_t *const p_api_ctrl)
fsp_err_t(*	txStatusGet)(ether_ctrl_t *const p_api_ctrl, void *const p_buffer_address)

Field Documentation

◆ open

fsp_err_t(* ether_api_t::open) (ether_ctrl_t *const p_api_ctrl, ether_cfg_t const *const p_cfg)

Open driver.

Implemented as

- R_ETHER_Open()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ close

fsp_err_t(* ether_api_t::close) (ether_ctrl_t *const p_api_ctrl)

Close driver.

Implemented as

- R_ETHER_Close()

Parameters

[in]	p_api_ctrl	Pointer to control structure.

◆ read

fsp_err_t(* ether_api_t::read) (ether_ctrl_t *const p_api_ctrl, void *const p_buffer, uint32_t *const length_bytes)

Read packet if data is available.

Implemented as

- R_ETHER_Read()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_buffer	Pointer to where to store read data.
[in]	length_bytes	Number of bytes in buffer

◆ bufferRelease

fsp_err_t(* ether_api_t::bufferRelease) (ether_ctrl_t *const p_api_ctrl)

Release rx buffer from buffer pool process in zero-copy read operation.

Implemented as

- R_ETHER_BufferRelease()

Parameters

[in]	p_api_ctrl	Pointer to control structure.

◆ rxBufferUpdate

fsp_err_t(* ether_api_t::rxBufferUpdate) (ether_ctrl_t *const p_api_ctrl, void *const p_buffer)

Update the buffer pointer in the current receive descriptor.

Implemented as

- R_ETHER_RxBufferUpdate()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_buffer	New address to write into the rx buffer descriptor.

◆ write

fsp_err_t(* ether_api_t::write) (ether_ctrl_t *const p_api_ctrl, void *const p_buffer, uint32_t const frame_length)

Write packet.

Implemented as

- R_ETHER_Write()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_buffer	Pointer to data to write.
[in]	frame_length	Send ethernet frame size (without 4 bytes of CRC data size).

◆ linkProcess

fsp_err_t(* ether_api_t::linkProcess) (ether_ctrl_t *const p_api_ctrl)

Process link.

Implemented as

- R_ETHER_LinkProcess()

Parameters

[in]	p_api_ctrl	Pointer to control structure.

◆ wakeOnLANEnable

fsp_err_t(* ether_api_t::wakeOnLANEnable) (ether_ctrl_t *const p_api_ctrl)

Enable magic packet detection.

Implemented as

- R_ETHER_WakeOnLANEnable()

Parameters

[in]	p_api_ctrl	Pointer to control structure.

◆ txStatusGet

fsp_err_t(* ether_api_t::txStatusGet) (ether_ctrl_t *const p_api_ctrl, void *const p_buffer_address)

Get the address of the most recently sent buffer.

Implemented as

- R_ETHER_TxStatusGet()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[out]	p_buffer_address	Pointer to the address of the most recently sent buffer.

◆ ether_instance_t

struct ether_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

ether_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
ether_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
ether_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ ether_ctrl_t

typedef void ether_ctrl_t
Control block. Allocate an instance specific control block to pass into the API calls. **Implemented as** ◦ ether_instance_ctrl_t

Enumeration Type Documentation

◆ ether_wake_on_lan_t

enum ether_wake_on_lan_t	
Wake on LAN	
Enumerator	
ETHER_WAKE_ON_LAN_DISABLE	Disable Wake on LAN.
ETHER_WAKE_ON_LAN_ENABLE	Enable Wake on LAN.

◆ ether_flow_control_t

enum ether_flow_control_t	
Flow control functionality	
Enumerator	
ETHER_FLOW_CONTROL_DISABLE	Disable flow control functionality.
ETHER_FLOW_CONTROL_ENABLE	Enable flow control functionality with pause frames.

◆ ether_multicast_t

enum ether_multicast_t	
Multicast Filter	
Enumerator	
ETHER_MULTICAST_DISABLE	Disable reception of multicast frames.
ETHER_MULTICAST_ENABLE	Enable reception of multicast frames.

◆ ether_promiscuous_t

enum ether_promiscuous_t	
Promiscuous Mode	
Enumerator	
ETHER_PROMISCUOUS_DISABLE	Only receive packets with current MAC address, multicast, and broadcast.
ETHER_PROMISCUOUS_ENABLE	Receive all packets.

◆ ether_zerocopy_t

enum ether_zerocopy_t	
Zero copy	
Enumerator	
ETHER_ZEROCOPY_DISABLE	Disable zero copy in Read/Write function.
ETHER_ZEROCOPY_ENABLE	Enable zero copy in Read/Write function.

◆ ether_event_t

enum ether_event_t	
Event code of callback function	
Enumerator	
ETHER_EVENT_WAKEON_LAN	Magic packet detection event.
ETHER_EVENT_LINK_ON	Link up detection event.
ETHER_EVENT_LINK_OFF	Link down detection event.
ETHER_EVENT_INTERRUPT	Interrupt event.

4.3.15 Ethernet PHY Interface

Interfaces

Detailed Description

Interface for Ethernet PHY functions.

Summary

The Ethernet PHY module (r_ether_phy) provides an API for standard Ethernet PHY communications applications that use the ETHERC peripheral.

The Ethernet PHY interface supports the following features:

- Auto negotiation support
- Flow control support
- Link status check support

Implemented by:

- Ethernet PHY (r_ether_phy)

Data Structures

struct	ether_phy_cfg_t
struct	ether_phy_api_t
struct	ether_phy_instance_t

Typedefs

typedef void	ether_phy_ctrl_t

Enumerations

enum	ether_phy_flow_control_t
enum	ether_phy_link_speed_t
enum	ether_phy_mii_type_t

Data Structure Documentation

◆ ether_phy_cfg_t

struct ether_phy_cfg_t		
Configuration parameters.		
Data Fields		
uint8_t	channel	Channel.
uint8_t	phy_lsi_address	Address of PHY-LSI.
uint32_t	phy_reset_wait_time	Wait time for PHY-LSI reboot.
int32_t	mii_bit_access_wait_time	Wait time for MII/RMII access.

ether_phy_flow_control_t	flow_control	Flow control functionally enable or disable.
ether_phy_mii_type_t	mii_type	Interface type is MII or RMII.
void const *	p_context	Placeholder for user data. Passed to the user callback in ether_phy_callback_args_t.
void const *	p_extend	Placeholder for user extension.

◆ ether_phy_api_t

struct ether_phy_api_t

Functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t(*	open)(ether_phy_ctrl_t *const p_api_ctrl, ether_phy_cfg_t const *const p_cfg)
fsp_err_t(*	close)(ether_phy_ctrl_t *const p_api_ctrl)
fsp_err_t(*	startAutoNegotiate)(ether_phy_ctrl_t *const p_api_ctrl)
fsp_err_t(*	linkPartnerAbilityGet)(ether_phy_ctrl_t *const p_api_ctrl, uint32_t *const p_line_speed_duplex, uint32_t *const p_local_pause, uint32_t *const p_partner_pause)
fsp_err_t(*	linkStatusGet)(ether_phy_ctrl_t *const p_api_ctrl)

Field Documentation

◆ open

fsp_err_t(* ether_phy_api_t::open) (ether_phy_ctrl_t *const p_api_ctrl, ether_phy_cfg_t const *const p_cfg)

Open driver.

Implemented as

- R_ETHER_PHY_Open()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ close

fsp_err_t(* ether_phy_api_t::close) (ether_phy_ctrl_t *const p_api_ctrl)

Close driver.

Implemented as

- R_ETHER_PHY_Close()

Parameters

[in]	p_api_ctrl	Pointer to control structure.

◆ startAutoNegotiate

fsp_err_t(* ether_phy_api_t::startAutoNegotiate) (ether_phy_ctrl_t *const p_api_ctrl)

Start auto negotiation.

Implemented as

- R_ETHER_PHY_StartAutoNegotiate()

Parameters

[in]	p_api_ctrl	Pointer to control structure.

◆ linkPartnerAbilityGet

fsp_err_t(* ether_phy_api_t::linkPartnerAbilityGet) (ether_phy_ctrl_t *const p_api_ctrl, uint32_t *const p_line_speed_duplex, uint32_t *const p_local_pause, uint32_t *const p_partner_pause)

Get the partner ability.

Implemented as

- R_ETHER_PHY_LinkPartnerAbilityGet()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[out]	p_line_speed_duplex	Pointer to the location of both the line speed and the duplex.
[out]	p_local_pause	Pointer to the location to store the local pause bits.
[out]	p_partner_pause	Pointer to the location to store the partner pause bits.

◆ linkStatusGet

fsp_err_t(* ether_phy_api_t::linkStatusGet) (ether_phy_ctrl_t *const p_api_ctrl)

Get Link status from PHY-LSI interface.

Implemented as

- R_ETHER_PHY_LinkStatusGet()

Parameters

[in]	p_api_ctrl	Pointer to control structure.

◆ ether_phy_instance_t

struct ether_phy_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
ether_phy_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
ether_phy_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
ether_phy_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ ether_phy_ctrl_t

typedef void ether_phy_ctrl_t

Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- ether_phy_instance_ctrl_t

Enumeration Type Documentation

◆ ether_phy_flow_control_t

enum ether_phy_flow_control_t	
Flow control functionality	
Enumerator	
ETHER_PHY_FLOW_CONTROL_DISABLE	Disable flow control functionality.
ETHER_PHY_FLOW_CONTROL_ENABLE	Enable flow control functionality with pause frames.

◆ ether_phy_link_speed_t

enum ether_phy_link_speed_t	
Link speed	
Enumerator	
ETHER_PHY_LINK_SPEED_NO_LINK	Link is not established.
ETHER_PHY_LINK_SPEED_10H	Link status is 10Mbit/s and half duplex.
ETHER_PHY_LINK_SPEED_10F	Link status is 10Mbit/s and full duplex.
ETHER_PHY_LINK_SPEED_100H	Link status is 100Mbit/s and half duplex.
ETHER_PHY_LINK_SPEED_100F	Link status is 100Mbit/s and full duplex.

◆ ether_phy_mii_type_t

enum ether_phy_mii_type_t	
Media-independent interface	
Enumerator	
ETHER_PHY_MII_TYPE_MII	MII.
ETHER_PHY_MII_TYPE_RMII	RMII.

4.3.16 External IRQ Interface

Interfaces

Detailed Description

Interface for detecting external interrupts.

Summary

The External IRQ Interface is for configuring interrupts to fire when a trigger condition is detected on an external IRQ pin.

The External IRQ Interface can be implemented by:

- Interrupt Controller Unit (r_icu)

Data Structures

struct	external_irq_callback_args_t
struct	external_irq_cfg_t
struct	external_irq_api_t
struct	external_irq_instance_t

Typedefs

typedef void	external_irq_ctrl_t

Enumerations

enum	external_irq_trigger_t
enum	external_irq_pclk_div_t

Data Structure Documentation

◆ external_irq_callback_args_t

struct external_irq_callback_args_t		
Callback function parameter data		
Data Fields		
void const *	p_context	Placeholder for user data. Set in external_irq_api_t::open function in external_irq_cfg_t.
uint32_t	channel	The physical hardware channel that caused the interrupt.

◆ external_irq_cfg_t

struct external_irq_cfg_t
User configuration structure, used in open function

Data Fields	
uint8_t	channel
	Hardware channel used.
uint8_t	ipl
	Interrupt priority.
IRQn_Type	irq
	NVIC interrupt number assigned to this instance.
external_irq_trigger_t	trigger
	Trigger setting.
external_irq_pclk_div_t	pclk_div
	Digital filter clock divisor setting.
bool	filter_enable
	Digital filter enable/disable setting.
void(*	p_callback)(external_irq_callback_args_t *p_args)
void const *	p_context
void const *	p_extend
	External IRQ hardware dependent configuration.

Field Documentation

◆ p_callback

void(* external_irq_cfg_t::p_callback) (external_irq_callback_args_t *p_args)

Callback provided external input trigger occurs.

◆ p_context

void const* external_irq_cfg_t::p_context

Placeholder for user data. Passed to the user callback in external_irq_callback_args_t.

◆ external_irq_api_t

struct external_irq_api_t

External interrupt driver structure. External interrupt functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t(*	open)(external_irq_ctrl_t *const p_ctrl, external_irq_cfg_t const *const p_cfg)
fsp_err_t(*	enable)(external_irq_ctrl_t *const p_ctrl)
fsp_err_t(*	disable)(external_irq_ctrl_t *const p_ctrl)
fsp_err_t(*	callbackSet)(external_irq_ctrl_t *const p_api_ctrl, void(*p_callback)(external_irq_callback_args_t *), void const *const p_context, external_irq_callback_args_t *const p_callback_memory)
fsp_err_t(*	close)(external_irq_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* external_irq_api_t::open) (external_irq_ctrl_t *const p_ctrl, external_irq_cfg_t const *const p_cfg)

Initial configuration.

Implemented as

- R_ICU_ExternalIrqOpen()

Parameters

[out]	p_ctrl	Pointer to control block. Must be declared by user. Value set here.
[in]	p_cfg	Pointer to configuration structure. All elements of the structure must be set by user.

◆ enable

fsp_err_t(* external_irq_api_t::enable) (external_irq_ctrl_t *const p_ctrl)

Enable callback when an external trigger condition occurs.

Implemented as

- R_ICU_ExternalIrqEnable()

Parameters

[in]	p_ctrl	Control block set in Open call for this external interrupt.

◆ disable

fsp_err_t(* external_irq_api_t::disable) (external_irq_ctrl_t *const p_ctrl)

Disable callback when external trigger condition occurs.

Implemented as

- R_ICU_ExternalIrqDisable()

Parameters

[in]	p_ctrl	Control block set in Open call for this external interrupt.

◆ callbackSet

fsp_err_t(* external_irq_api_t::callbackSet) (external_irq_ctrl_t *const p_api_ctrl, void(*p_callback)(external_irq_callback_args_t *), void const *const p_context, external_irq_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_ICU_ExternalIrqCallbackSet()

Parameters

[in]	p_ctrl	Pointer to the Extneral IRQ control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ close

fsp_err_t(* external_irq_api_t::close) (external_irq_ctrl_t *const p_ctrl)

Allow driver to be reconfigured. May reduce power consumption.

Implemented as

- R_ICU_ExternalIrqClose()

Parameters

[in]	p_ctrl	Control block set in Open call for this external interrupt.

◆ external_irq_instance_t

struct external_irq_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

external_irq_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
external_irq_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.

external_irq_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ external_irq_ctrl_t

typedef void external_irq_ctrl_t
External IRQ control block. Allocate an instance specific control block to pass into the external IRQ API calls. **Implemented as** ◦ icu_instance_ctrl_t

Enumeration Type Documentation

◆ external_irq_trigger_t

enum external_irq_trigger_t	
Condition that will trigger an interrupt when detected.	
Enumerator	
EXTERNAL_IRQ_TRIG_FALLING	Falling edge trigger.
EXTERNAL_IRQ_TRIG_RISING	Rising edge trigger.
EXTERNAL_IRQ_TRIG_BOTH_EDGE	Both edges trigger.
EXTERNAL_IRQ_TRIG_LEVEL_LOW	Low level trigger.

◆ external_irq_pclk_div_t

enum external_irq_pclk_div_t	
External IRQ input pin digital filtering sample clock divisor settings. The digital filter rejects trigger conditions that are shorter than 3 periods of the filter clock.	
Enumerator	
EXTERNAL_IRQ_PCLK_DIV_BY_1	Filter using PCLK divided by 1.
EXTERNAL_IRQ_PCLK_DIV_BY_8	Filter using PCLK divided by 8.
EXTERNAL_IRQ_PCLK_DIV_BY_32	Filter using PCLK divided by 32.
EXTERNAL_IRQ_PCLK_DIV_BY_64	Filter using PCLK divided by 64.

4.3.17 Flash Interface

Interfaces

Detailed Description

Interface for the Flash Memory.

Summary

The Flash interface provides the ability to read, write, erase, and blank check the code flash and data flash regions.

The Flash interface is implemented by:

- Low-Power Flash Driver (r_flash_lp)

Data Structures

struct	flash_block_info_t
struct	flash_regions_t
struct	flash_info_t
struct	flash_callback_args_t
struct	flash_cfg_t
struct	flash_api_t
struct	flash_instance_t

Typedefs

typedef void	flash_ctrl_t

Enumerations

enum	flash_result_t
enum	flash_startup_area_swap_t
enum	flash_event_t
enum	flash_id_code_mode_t
enum	flash_status_t

Data Structure Documentation

◆ flash_block_info_t

struct flash_block_info_t		
Flash block details stored in factory flash.		
Data Fields		
uint32_t	block_section_st_addr	Starting address for this block section (blocks of this size)
uint32_t	block_section_end_addr	Ending address for this block section (blocks of this size)
uint32_t	block_size	Flash erase block size.
uint32_t	block_size_write	Flash write block size.

◆ flash_regions_t

struct flash_regions_t		
Flash block details		
Data Fields		
uint32_t	num_regions	Length of block info array.
flash_block_info_t const *	p_block_array	Block info array base address.

◆ flash_info_t

struct flash_info_t		
Information about the flash blocks		
Data Fields		
flash_regions_t	code_flash	Information about the code flash regions.
flash_regions_t	data_flash	Information about the code flash regions.

◆ flash_callback_args_t

struct flash_callback_args_t		
Callback function parameter data		
Data Fields		
flash_event_t	event	Event can be used to identify what caused the callback (flash ready or error).
void const *	p_context	Placeholder for user data. Set in flash_api_t::open function in::flash_cfg_t.

◆ flash_cfg_t

struct flash_cfg_t	
FLASH Configuration	
Data Fields	
bool	data_flash_bgo
	True if BGO (Background Operation) is enabled for Data Flash.
void(*	p_callback)(flash_callback_args_t *p_args)
	Callback provided when a Flash interrupt ISR occurs.
void const *	p_extend
	FLASH hardware dependent configuration.
void const *	p_context
	Placeholder for user data. Passed to user callback in flash_callback_args_t.
uint8_t	ipl
	Flash ready interrupt priority.
IRQn_Type	irq
	Flash ready interrupt number.
uint8_t	err_ipl
	Flash error interrupt priority (unused in r_flash_lp)
IRQn_Type	err_irq
	Flash error interrupt number (unused in r_flash_lp)

◆ flash_api_t

struct flash_api_t	
Shared Interface definition for FLASH	
Data Fields	
fsp_err_t(*	open)(flash_ctrl_t *const p_ctrl, flash_cfg_t const *const p_cfg)
fsp_err_t(*	write)(flash_ctrl_t *const p_ctrl, uint32_t const src_address, uint32_t const flash_address, uint32_t const num_bytes)
fsp_err_t(*	erase)(flash_ctrl_t *const p_ctrl, uint32_t const address, uint32_t const num_blocks)
fsp_err_t(*	blankCheck)(flash_ctrl_t *const p_ctrl, uint32_t const address, uint32_t const num_bytes, flash_result_t *const p_blank_check_result)
fsp_err_t(*	infoGet)(flash_ctrl_t *const p_ctrl, flash_info_t *const p_info)
fsp_err_t(*	close)(flash_ctrl_t *const p_ctrl)
fsp_err_t(*	statusGet)(flash_ctrl_t *const p_ctrl, flash_status_t *const p_status)
fsp_err_t(*	accessWindowSet)(flash_ctrl_t *const p_ctrl, uint32_t const start_addr, uint32_t const end_addr)
fsp_err_t(*	accessWindowClear)(flash_ctrl_t *const p_ctrl)
fsp_err_t(*	idCodeSet)(flash_ctrl_t *const p_ctrl, uint8_t const *const p_id_bytes, flash_id_code_mode_t mode)
fsp_err_t(*	reset)(flash_ctrl_t *const p_ctrl)
fsp_err_t(*	updateFlashClockFreq)(flash_ctrl_t *const p_ctrl)
fsp_err_t(*	startupAreaSelect)(flash_ctrl_t *const p_ctrl, flash_startup_area_swap_t swap_type, bool is_temporary)

fsp_err_t(*	bankSwap)(flash_ctrl_t *const p_ctrl)
fsp_err_t(*	callbackSet)(flash_ctrl_t *const p_api_ctrl, void(*p_callback)(flash_callback_args_t *), void const *const p_context, flash_callback_args_t *const p_callback_memory)

Field Documentation

◆ open

fsp_err_t(* flash_api_t::open) (flash_ctrl_t *const p_ctrl, flash_cfg_t const *const p_cfg)

Open FLASH device.

Implemented as

- R_FLASH_LP_Open()
- R_FLASH_HP_Open()

Parameters

[out]	p_ctrl	Pointer to FLASH device control. Must be declared by user. Value set here.
[in]	flash_cfg_t	Pointer to FLASH configuration structure. All elements of this structure must be set by the user.

◆ write

fsp_err_t(* flash_api_t::write) (flash_ctrl_t *const p_ctrl, uint32_t const src_address, uint32_t const flash_address, uint32_t const num_bytes)

Write FLASH device.

Implemented as

- R_FLASH_LP_Write()
- R_FLASH_HP_Write()

Parameters

[in]	p_ctrl	Control for the FLASH device context.
[in]	src_address	Address of the buffer containing the data to write to Flash.
[in]	flash_address	Code Flash or Data Flash address to write. The address must be on a programming line boundary.
[in]	num_bytes	The number of bytes to write. This number must be a multiple of the programming size. For Code Flash this is FLASH_MIN_PGM_SIZE_CF. For Data Flash this is FLASH_MIN_PGM_SIZE_DF.

Warning

Specifying a number that is not a multiple of the programming size will result in SF_FLASH_ERR_BYTES being returned and no data written.

◆ erase

fsp_err_t(* flash_api_t::erase) (flash_ctrl_t *const p_ctrl, uint32_t const address, uint32_t const num_blocks)

Erase FLASH device.

Implemented as

- R_FLASH_LP_Erase()
- R_FLASH_HP_Erase()

Parameters

[in]	p_ctrl	Control for the FLASH device.
[in]	address	The block containing this address is the first block erased.
[in]	num_blocks	Specifies the number of blocks to be erased, the starting block determined by the block_erase_address.

◆ blankCheck

fsp_err_t(* flash_api_t::blankCheck) (flash_ctrl_t *const p_ctrl, uint32_t const address, uint32_t const num_bytes, flash_result_t *const p_blank_check_result)

Blank check FLASH device.

Implemented as

- R_FLASH_LP_BlankCheck()
- R_FLASH_HP_BlankCheck()

Parameters

[in]	p_ctrl	Control for the FLASH device context.
[in]	address	The starting address of the Flash area to blank check.
[in]	num_bytes	Specifies the number of bytes that need to be checked. See the specific handler for details.
[out]	p_blank_check_result	Pointer that will be populated by the API with the results of the blank check operation in non-BGO (blocking) mode. In this case the blank check operation completes here and the result is returned. In Data Flash BGO mode the blank check operation is only started here and the result obtained later when the supplied callback routine is called. In this case FLASH_RESULT_BGO_ACTIVE will be returned in p_blank_check_result.

◆ infoGet

fsp_err_t(* flash_api_t::infoGet) (flash_ctrl_t *const p_ctrl, flash_info_t *const p_info)

Close FLASH device.

Implemented as

- R_FLASH_LP_InfoGet()
- R_FLASH_HP_InfoGet()

Parameters

[in]	p_ctrl	Pointer to FLASH device control.
[out]	p_info	Pointer to FLASH info structure.

◆ close

fsp_err_t(* flash_api_t::close) (flash_ctrl_t *const p_ctrl)

Close FLASH device.

Implemented as

- R_FLASH_LP_Close()
- R_FLASH_HP_Close()

Parameters

[in]	p_ctrl	Pointer to FLASH device control.

◆ statusGet

fsp_err_t(* flash_api_t::statusGet) (flash_ctrl_t *const p_ctrl, flash_status_t *const p_status)

Get Status for FLASH device.

Implemented as

- R_FLASH_LP_StatusGet()
- R_FLASH_HP_StatusGet()

Parameters

[in]	p_ctrl	Pointer to FLASH device control.
[out]	p_ctrl	Pointer to the current flash status.

◆ accessWindowSet

fsp_err_t(* flash_api_t::accessWindowSet) (flash_ctrl_t *const p_ctrl, uint32_t const start_addr, uint32_t const end_addr)

Set Access Window for FLASH device.

Implemented as

- R_FLASH_LP_AccessWindowSet()
- R_FLASH_HP_AccessWindowSet()

Parameters

[in]	p_ctrl	Pointer to FLASH device control.
[in]	start_addr	Determines the Starting block for the Code Flash access window.
[in]	end_addr	Determines the Ending block for the Code Flash access window. This address will not be within the access window.

◆ accessWindowClear

fsp_err_t(* flash_api_t::accessWindowClear) (flash_ctrl_t *const p_ctrl)

Clear any existing Code Flash access window for FLASH device.

Implemented as

- R_FLASH_LP_AccessWindowClear()
- R_FLASH_HP_AccessWindowClear()

Parameters

[in]	p_ctrl	Pointer to FLASH device control.
[in]	start_addr	Determines the Starting block for the Code Flash access window.
[in]	end_addr	Determines the Ending block for the Code Flash access window.

◆ idCodeSet

fsp_err_t(* flash_api_t::idCodeSet) (flash_ctrl_t *const p_ctrl, uint8_t const *const p_id_bytes, flash_id_code_mode_t mode)

Set ID Code for FLASH device. Setting the ID code can restrict access to the device. The ID code will be required to connect to the device. Bits 126 and 127 are set based on the mode.

For example, uint8_t id_bytes[] = {0x00, 0x11, 0x22, 0x33, 0x44, 0x55, 0x66, 0x77, 0x88, 0x99, 0xaa, 0xbb, 0xcc, 0xdd, 0xee, 0x00}; with mode FLASH_ID_CODE_MODE_LOCKED_WITH_ALL_ERASE_SUPPORT will result in an ID code of 00112233445566778899aabbccddeec0

With mode FLASH_ID_CODE_MODE_LOCKED, it will result in an ID code of 00112233445566778899aabbccddee80

Implemented as

- R_FLASH_LP_IdCodeSet()
- R_FLASH_HP_IdCodeSet()

Parameters

[in]	p_ctrl	Pointer to FLASH device control.
[in]	p_id_bytes	Ponter to the ID Code to be written.
[in]	mode	Mode used for checking the ID code.

◆ reset

fsp_err_t(* flash_api_t::reset) (flash_ctrl_t *const p_ctrl)

Reset function for FLASH device.

Implemented as

- R_FLASH_LP_Reset()
- R_FLASH_HP_Reset()

Parameters

[in]	p_ctrl	Pointer to FLASH device control.

◆ updateFlashClockFreq

fsp_err_t(* flash_api_t::updateFlashClockFreq) (flash_ctrl_t *const p_ctrl)

Update Flash clock frequency (FCLK) and recalculate timeout values

Implemented as

- R_FLASH_LP_UpdateFlashClockFreq()
- R_FLASH_HP_UpdateFlashClockFreq()

Parameters

[in]	p_ctrl	Pointer to FLASH device control.

◆ startupAreaSelect

fsp_err_t(* flash_api_t::startupAreaSelect) (flash_ctrl_t *const p_ctrl, flash_startup_area_swap_t swap_type, bool is_temporary)

Select which block - Default (Block 0) or Alternate (Block 1) is used as the start-up area block.

Implemented as

- R_FLASH_LP_StartUpAreaSelect()
- R_FLASH_HP_StartUpAreaSelect()

Parameters

[in]	p_ctrl	Pointer to FLASH device control.
[in]	swap_type	FLASH_STARTUP_AREA_BLOCK0, FLASH_STARTUP_AREA_BLOCK1 or FLASH_STARTUP_AREA_BTFLG.
[in]	is_temporary	True or false. See table below.

swap_type	is_temporary	Operation
FLASH_STARTUP_AREA_BLOCK0	false	On next reset Startup area will be Block 0.
FLASH_STARTUP_AREA_BLOCK1	true	Startup area is immediately, but temporarily switched to Block 1.
FLASH_STARTUP_AREA_BTFLG	true	Startup area is immediately, but temporarily switched to the Block determined by the Configuration BTFLG.

◆ bankSwap

fsp_err_t(* flash_api_t::bankSwap) (flash_ctrl_t *const p_ctrl)

Swap the bank used as the startup area. Only valid in dual bank mode.

Implemented as

- R_FLASH_HP_BankSwap()

Parameters

[in]	p_ctrl	Pointer to FLASH device control.

◆ callbackSet

fsp_err_t(* flash_api_t::callbackSet) (flash_ctrl_t *const p_api_ctrl, void(*p_callback)(flash_callback_args_t *), void const *const p_context, flash_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_FLASH_HP_CallbackSet()

Parameters

[in]	p_ctrl	Control block set in flash_api_t::open call for this timer.
[in]	p_callback	Callback function to register
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ flash_instance_t

struct flash_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

flash_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
flash_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.

flash_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ flash_ctrl_t

typedef void flash_ctrl_t

Flash control block. Allocate an instance specific control block to pass into the flash API calls.

Implemented as

- flash_lp_instance_ctrl_t
- flash_hp_instance_ctrl_t

Enumeration Type Documentation

◆ flash_result_t

enum flash_result_t

Result type for certain operations

Enumerator	
FLASH_RESULT_BLANK	Return status for Blank Check Function.
FLASH_RESULT_NOT_BLANK	Return status for Blank Check Function.
FLASH_RESULT_BGO_ACTIVE	Flash is configured for BGO mode. Result is returned in callback.

◆ flash_startup_area_swap_t

enum flash_startup_area_swap_t

Parameter for specifying the startup area swap being requested by startupAreaSelect()

Enumerator	
FLASH_STARTUP_AREA_BTFLG	Startup area will be set based on the value of the BTFLG.
FLASH_STARTUP_AREA_BLOCK0	Startup area will be set to Block 0.
FLASH_STARTUP_AREA_BLOCK1	Startup area will be set to Block 1.

◆ flash_event_t

enum flash_event_t	
Event types returned by the ISR callback when used in Data Flash BGO mode	
Enumerator	
FLASH_EVENT_ERASE_COMPLETE	Erase operation successfully completed.
FLASH_EVENT_WRITE_COMPLETE	Write operation successfully completed.
FLASH_EVENT_BLANK	Blank check operation successfully completed. Specified area is blank.
FLASH_EVENT_NOT_BLANK	Blank check operation successfully completed. Specified area is NOT blank.
FLASH_EVENT_ERR_DF_ACCESS	Data Flash operation failed. Can occur when writing an unerased section.
FLASH_EVENT_ERR_CF_ACCESS	Code Flash operation failed. Can occur when writing an unerased section.
FLASH_EVENT_ERR_CMD_LOCKED	Operation failed, FCU is in Locked state (often result of an illegal command)
FLASH_EVENT_ERR_FAILURE	Erase or Program Operation failed.
FLASH_EVENT_ERR_ONE_BIT	A 1-bit error has been corrected when reading the flash memory area by the sequencer.

◆ flash_id_code_mode_t

enum flash_id_code_mode_t	
ID Code Modes for writing to ID code registers	
Enumerator	
FLASH_ID_CODE_MODE_UNLOCKED	ID code is ignored.
FLASH_ID_CODE_MODE_LOCKED_WITH_ALL_ERASE_SUPPORT	ID code is checked. All erase is available.
FLASH_ID_CODE_MODE_LOCKED	ID code is checked.

◆ flash_status_t

enum flash_status_t	
Flash status	
Enumerator	
FLASH_STATUS_IDLE	The flash is idle.
FLASH_STATUS_BUSY	The flash is currently processing a command.

4.3.18 I2C Master Interface

Interfaces

Detailed Description

Interface for I2C master communication.

Summary

The I2C master interface provides a common API for I2C HAL drivers. The I2C master interface supports:

- Interrupt driven transmit/receive processing
- Callback function support which can return an event code

Implemented by:

- I2C Master on IIC (r_iic_master)
- Serial Communications Interface (SCI) I2C (r_sci_i2c)
- I2C Master on IIC/I3C (r_iic_b_master)
- Serial Communications Interface (SCI) I2C (r_sci_b_i2c)

Data Structures

struct	i2c_master_callback_args_t
struct	i2c_master_status_t
struct	i2c_master_cfg_t
struct	i2c_master_api_t
struct	i2c_master_instance_t

Typedefs

typedef void	i2c_master_ctrl_t

Enumerations

enum	i2c_master_rate_t
enum	i2c_master_addr_mode_t
enum	i2c_master_event_t

Data Structure Documentation

◆ i2c_master_callback_args_t

struct i2c_master_callback_args_t		
I2C callback parameter definition		
Data Fields		
void const *	p_context	Pointer to user-provided context.
i2c_master_event_t	event	Event code.

◆ i2c_master_status_t

struct i2c_master_status_t		
I2C status indicators		
Data Fields		
bool	open	True if driver is open.

◆ i2c_master_cfg_t

struct i2c_master_cfg_t	
I2C configuration block	
Data Fields	
uint8_t	channel
	Identifier recognizable by implementation. More...
i2c_master_rate_t	rate
	Device's maximum clock rate from enum i2c_rate_t.
uint32_t	slave

	The address of the slave device.
i2c_master_addr_mode_t	addr_mode
	Indicates how slave fields should be interpreted.
uint8_t	ipl
	Interrupt priority level. Same for RXI, TXI, TEI and ERI.
IRQn_Type	rxi_irq
	Receive IRQ number.
IRQn_Type	txi_irq
	Transmit IRQ number.
IRQn_Type	tei_irq
	Transmit end IRQ number.
IRQn_Type	eri_irq
	Error IRQ number.
transfer_instance_t const *	p_transfer_tx
	DTC instance for I2C transmit.Set to NULL if unused. More...
transfer_instance_t const *	p_transfer_rx
	DTC instance for I2C receive. Set to NULL if unused.
void(*	p_callback)(i2c_master_callback_args_t *p_args)
	Pointer to callback function. More...

void const *	p_context
	Pointer to the user-provided context.
void const *	p_extend
	Any configuration data needed by the hardware. More...

Field Documentation

◆ channel

uint8_t i2c_master_cfg_t::channel

Identifier recognizable by implementation.

Generic configuration

◆ p_transfer_tx

transfer_instance_t const* i2c_master_cfg_t::p_transfer_tx

DTC instance for I2C transmit.Set to NULL if unused.

DTC support

◆ p_callback

void(* i2c_master_cfg_t::p_callback) (i2c_master_callback_args_t *p_args)

Pointer to callback function.

Parameters to control software behavior

◆ p_extend

void const* i2c_master_cfg_t::p_extend

Any configuration data needed by the hardware.

Implementation-specific configuration

◆ i2c_master_api_t

struct i2c_master_api_t

Interface definition for I2C access as master

Data Fields

fsp_err_t(*	open)(i2c_master_ctrl_t *const p_ctrl, i2c_master_cfg_t const *const p_cfg)

fsp_err_t(*	read)(i2c_master_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes, bool const restart)
fsp_err_t(*	write)(i2c_master_ctrl_t *const p_ctrl, uint8_t *const p_src, uint32_t const bytes, bool const restart)
fsp_err_t(*	abort)(i2c_master_ctrl_t *const p_ctrl)
fsp_err_t(*	slaveAddressSet)(i2c_master_ctrl_t *const p_ctrl, uint32_t const slave, i2c_master_addr_mode_t const addr_mode)
fsp_err_t(*	callbackSet)(i2c_master_ctrl_t *const p_api_ctrl, void(*p_callback)(i2c_master_callback_args_t *), void const *const p_context, i2c_master_callback_args_t *const p_callback_memory)
fsp_err_t(*	statusGet)(i2c_master_ctrl_t *const p_api_ctrl, i2c_master_status_t *p_status)
fsp_err_t(*	close)(i2c_master_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* i2c_master_api_t::open) (i2c_master_ctrl_t *const p_ctrl, i2c_master_cfg_t const *const p_cfg)

Opens the I2C Master driver and initializes the hardware.

Implemented as

- R_IIC_MASTER_Open()
- R_SCI_I2C_Open()
- R_IIC_B_MASTER_Open()
- R_SCI_B_I2C_Open()

Parameters

[in]	p_ctrl	Pointer to control block. Must be declared by user. Elements are set here.
[in]	p_cfg	Pointer to configuration structure.

◆ read

fsp_err_t(* i2c_master_api_t::read) (i2c_master_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes, bool const restart)

Performs a read operation on an I2C Master device.

Implemented as

- R_SCI_I2C_Read()
- R_IIC_MASTER_Read()
- R_IIC_B_MASTER_Read()
- R_SCI_B_I2C_Read()

Parameters

[in]	p_ctrl	Pointer to control block set in i2c_api_master_t::open call.
[in]	p_dest	Pointer to the location to store read data.
[in]	bytes	Number of bytes to read.
[in]	restart	Specify if the restart condition should be issued after reading.

◆ write

fsp_err_t(* i2c_master_api_t::write) (i2c_master_ctrl_t *const p_ctrl, uint8_t *const p_src, uint32_t const bytes, bool const restart)

Performs a write operation on an I2C Master device.

Implemented as

- R_IIC_MASTER_Write()
- R_SCI_I2C_Write()
- R_IIC_B_MASTER_Write()
- R_SCI_B_I2C_Write()

Parameters

[in]	p_ctrl	Pointer to control block set in i2c_api_master_t::open call.
[in]	p_src	Pointer to the location to get write data from.
[in]	bytes	Number of bytes to write.
[in]	restart	Specify if the restart condition should be issued after writing.

◆ abort

fsp_err_t(* i2c_master_api_t::abort) (i2c_master_ctrl_t *const p_ctrl)

Performs a reset of the peripheral.

Implemented as

- R_IIC_MASTER_Abort()
- R_SCI_I2C_Abort()
- R_IIC_B_MASTER_Abort()
- R_SCI_B_I2C_Abort()

Parameters

[in]	p_ctrl	Pointer to control block set in i2c_api_master_t::open call.

◆ slaveAddressSet

fsp_err_t(* i2c_master_api_t::slaveAddressSet) (i2c_master_ctrl_t *const p_ctrl, uint32_t const slave, i2c_master_addr_mode_t const addr_mode)

Sets address of the slave device without reconfiguring the bus.

Implemented as

- R_IIC_MASTER_SlaveAddressSet()
- R_SCI_I2C_SlaveAddressSet()
- R_IIC_B_MASTER_SlaveAddressSet()
- R_SCI_B_I2C_SlaveAddressSet()

Parameters

[in]	p_ctrl	Pointer to control block set in i2c_api_master_t::open call.
[in]	slave_address	Address of the slave device.
[in]	address_mode	Addressing mode.

◆ callbackSet

fsp_err_t(* i2c_master_api_t::callbackSet) (i2c_master_ctrl_t *const p_api_ctrl, void(*p_callback)(i2c_master_callback_args_t *), void const *const p_context, i2c_master_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_IIC_MASTER_CallbackSet()
- R_SCI_I2C_CallbackSet()
- R_IIC_B_MASTER_CallbackSet()
- R_SCI_B_I2C_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the IIC Master control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ statusGet

fsp_err_t(* i2c_master_api_t::statusGet) (i2c_master_ctrl_t *const p_api_ctrl, i2c_master_status_t *p_status)

Gets the status of the configured I2C device.

Implemented as

- R_IIC_MASTER_StatusGet()
- R_SCI_I2C_StatusGet()
- R_IIC_B_MASTER_StatusGet()
- R_SCI_B_I2C_StatusGet()

Parameters

[in]	p_ctrl	Pointer to the IIC Master control block.
[out]	p_status	Pointer to store current status.

◆ close

fsp_err_t(* i2c_master_api_t::close) (i2c_master_ctrl_t *const p_ctrl)

Closes the driver and releases the I2C Master device.

Implemented as

- R_IIC_MASTER_Close()
- R_SCI_I2C_Close()
- R_IIC_B_MASTER_Close()
- R_SCI_B_I2C_Close()

Parameters

[in]	p_ctrl	Pointer to control block set in i2c_api_master_t::open call.

◆ i2c_master_instance_t

struct i2c_master_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
i2c_master_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
i2c_master_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
i2c_master_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ i2c_master_ctrl_t

typedef void i2c_master_ctrl_t

I2C control block. Allocate an instance specific control block to pass into the I2C API calls.

Implemented as

- iic_master_instance_ctrl_t

Enumeration Type Documentation

◆ i2c_master_rate_t

enum i2c_master_rate_t	
Communication speed options	
Enumerator	
I2C_MASTER_RATE_STANDARD	100 kHz
I2C_MASTER_RATE_FAST	400 kHz
I2C_MASTER_RATE_FASTPLUS	1 MHz

◆ i2c_master_addr_mode_t

enum i2c_master_addr_mode_t	
Addressing mode options	
Enumerator	
I2C_MASTER_ADDR_MODE_7BIT	Use 7-bit addressing mode.
I2C_MASTER_ADDR_MODE_10BIT	Use 10-bit addressing mode.

◆ i2c_master_event_t

enum i2c_master_event_t	
Callback events	
Enumerator	
I2C_MASTER_EVENT_ABORTED	A transfer was aborted.
I2C_MASTER_EVENT_RX_COMPLETE	A receive operation was completed successfully.
I2C_MASTER_EVENT_TX_COMPLETE	A transmit operation was completed successfully.

4.3.19 I2C Slave Interface

Interfaces

Detailed Description

Interface for I2C slave communication.

Summary

The I2C slave interface provides a common API for I2C HAL drivers. The I2C slave interface supports:

- Interrupt driven transmit/receive processing
- Callback function support which returns a event codes

Implemented by:

- I2C Slave on IIC (r_iic_slave)
- I2C Slave on IIC/I3C (r_iic_b_slave)

Data Structures

struct	i2c_slave_callback_args_t
struct	i2c_slave_cfg_t
struct	i2c_slave_api_t
struct	i2c_slave_instance_t

Typedefs

typedef void	i2c_slave_ctrl_t

Enumerations

enum	i2c_slave_rate_t
enum	i2c_slave_addr_mode_t
enum	i2c_slave_event_t

Data Structure Documentation

◆ i2c_slave_callback_args_t

struct i2c_slave_callback_args_t		
I2C callback parameter definition		
Data Fields		
void const *	p_context	Pointer to user-provided context.
uint32_t	bytes	Number of received/transmitted bytes in buffer.
i2c_slave_event_t	event	Event code.

◆ i2c_slave_cfg_t

struct i2c_slave_cfg_t	
I2C configuration block	
Data Fields	
uint8_t	channel
	Identifier recognizable by implementation. More...
i2c_slave_rate_t	rate
	Device's maximum clock rate from enum i2c_rate_t.
uint16_t	slave
	The address of the slave device.
i2c_slave_addr_mode_t	addr_mode
	Indicates how slave fields should be interpreted.
bool	general_call_enable
	Allow a General call from master.
IRQn_Type	rxi_irq
	Receive IRQ number.
IRQn_Type	txi_irq
	Transmit IRQ number.
IRQn_Type	tei_irq
	Transmit end IRQ number.
IRQn_Type	eri_irq

	Error IRQ number.
uint8_t	ipl
	Interrupt priority level for RXI, TXI and TER interrupts.
uint8_t	eri_ipl
	Interrupt priority level for ERI interrupt.
bool	clock_stretching_enable
	Low Hold SCL during reception for the period between the 9th and the 1st clock cycle.
void(*	p_callback)(i2c_slave_callback_args_t *p_args)
	Pointer to callback function. More...
void const *	p_context
	Pointer to the user-provided context.
void const *	p_extend
	Any configuration data needed by the hardware. More...

Field Documentation

◆ channel

uint8_t i2c_slave_cfg_t::channel

Identifier recognizable by implementation.

Generic configuration

◆ p_callback

void(* i2c_slave_cfg_t::p_callback) (i2c_slave_callback_args_t *p_args)
Pointer to callback function. Parameters to control software behavior

◆ p_extend

void const* i2c_slave_cfg_t::p_extend
Any configuration data needed by the hardware. Implementation-specific configuration

◆ i2c_slave_api_t

struct i2c_slave_api_t	
Interface definition for I2C access as slave	
Data Fields	
fsp_err_t(*	open)(i2c_slave_ctrl_t *const p_ctrl, i2c_slave_cfg_t const *const p_cfg)
fsp_err_t(*	read)(i2c_slave_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes)
fsp_err_t(*	write)(i2c_slave_ctrl_t *const p_ctrl, uint8_t *const p_src, uint32_t const bytes)
fsp_err_t(*	callbackSet)(i2c_slave_ctrl_t *const p_api_ctrl, void(*p_callback)(i2c_slave_callback_args_t *), void const *const p_context, i2c_slave_callback_args_t *const p_callback_memory)
fsp_err_t(*	close)(i2c_slave_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* i2c_slave_api_t::open) (i2c_slave_ctrl_t *const p_ctrl, i2c_slave_cfg_t const *const p_cfg)

Opens the I2C Slave driver and initializes the hardware.

Implemented as

- R_IIC_SLAVE_Open()
- R_IIC_B_SLAVE_Open()

Parameters

[in]	p_ctrl	Pointer to control block. Must be declared by user. Elements are set here.
[in]	p_cfg	Pointer to configuration structure.

◆ read

fsp_err_t(* i2c_slave_api_t::read) (i2c_slave_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes)

Performs a read operation on an I2C Slave device.

Implemented as

- R_IIC_SLAVE_Read()
- R_IIC_B_SLAVE_Read()

Parameters

[in]	p_ctrl	Pointer to control block set in i2c_slave_api_t::open call.
[in]	p_dest	Pointer to the location to store read data.
[in]	bytes	Number of bytes to read.

◆ write

fsp_err_t(* i2c_slave_api_t::write) (i2c_slave_ctrl_t *const p_ctrl, uint8_t *const p_src, uint32_t const bytes)

Performs a write operation on an I2C Slave device.

Implemented as

- R_IIC_SLAVE_Write()
- R_IIC_B_SLAVE_Write()

Parameters

[in]	p_ctrl	Pointer to control block set in i2c_slave_api_t::open call.
[in]	p_src	Pointer to the location to get write data from.
[in]	bytes	Number of bytes to write.

◆ callbackSet

fsp_err_t(* i2c_slave_api_t::callbackSet) (i2c_slave_ctrl_t *const p_api_ctrl, void(*p_callback)(i2c_slave_callback_args_t *), void const *const p_context, i2c_slave_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_IIC_SLAVE_CallbackSet()
- R_IIC_B_SLAVE_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the IIC Slave control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ close

fsp_err_t(* i2c_slave_api_t::close) (i2c_slave_ctrl_t *const p_ctrl)

Closes the driver and releases the I2C Slave device.

Implemented as

- R_IIC_SLAVE_Close()
- R_IIC_B_SLAVE_Close()

Parameters

[in]	p_ctrl	Pointer to control block set in i2c_slave_api_t::open call.

◆ i2c_slave_instance_t

struct i2c_slave_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
i2c_slave_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
i2c_slave_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
i2c_slave_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ i2c_slave_ctrl_t

typedef void i2c_slave_ctrl_t

I2C control block. Allocate an instance specific control block to pass into the I2C API calls.

Implemented as

- iic_slave_instance_ctrl_t

Enumeration Type Documentation

◆ i2c_slave_rate_t

enum i2c_slave_rate_t	
Communication speed options	
Enumerator	
I2C_SLAVE_RATE_STANDARD	100 kHz
I2C_SLAVE_RATE_FAST	400 kHz
I2C_SLAVE_RATE_FASTPLUS	1 MHz

◆ i2c_slave_addr_mode_t

enum i2c_slave_addr_mode_t	
Addressing mode options	
Enumerator	
I2C_SLAVE_ADDR_MODE_7BIT	Use 7-bit addressing mode.
I2C_SLAVE_ADDR_MODE_10BIT	Use 10-bit addressing mode.

◆ i2c_slave_event_t

enum i2c_slave_event_t	
Callback events	
Enumerator	
I2C_SLAVE_EVENT_ABORTED	A transfer was aborted.
I2C_SLAVE_EVENT_RX_COMPLETE	A receive operation was completed successfully.
I2C_SLAVE_EVENT_TX_COMPLETE	A transmit operation was completed successfully.
I2C_SLAVE_EVENT_RX_REQUEST	A read operation expected from slave. Detected a write from master.
I2C_SLAVE_EVENT_TX_REQUEST	A write operation expected from slave. Detected a read from master.
I2C_SLAVE_EVENT_RX_MORE_REQUEST	A read operation expected from slave. Master sends out more data than configured to be read in slave.
I2C_SLAVE_EVENT_TX_MORE_REQUEST	A write operation expected from slave. Master requests more data than configured to be written by slave.
I2C_SLAVE_EVENT_GENERAL_CALL	General Call address received from Master. Detected a write from master.

4.3.20 I2S Interface

Interfaces

Detailed Description

Interface for I2S audio communication.

Summary

The I2S (Inter-IC Sound) interface provides APIs and definitions for I2S audio communication.

Known Implementations

Serial Sound Interface (r_ssi)

Data Structures

struct	i2s_callback_args_t
struct	i2s_status_t
struct	i2s_cfg_t
struct	i2s_api_t
struct	i2s_instance_t

Typedefs

typedef void	i2s_ctrl_t

Enumerations

enum	i2s_pcm_width_t
enum	i2s_word_length_t
enum	i2s_event_t
enum	i2s_mode_t
enum	i2s_mute_t
enum	i2s_ws_continue_t
enum	i2s_state_t

Data Structure Documentation

◆ i2s_callback_args_t

struct i2s_callback_args_t		
Callback function parameter data		
Data Fields		
void const *	p_context	Placeholder for user data. Set in i2s_api_t::open function in i2s_cfg_t.
i2s_event_t	event	The event can be used to identify what caused the callback (overflow or error).

◆ i2s_status_t

struct i2s_status_t		
I2S status.		
Data Fields		
i2s_state_t	state	Current I2S state.

◆ i2s_cfg_t

struct i2s_cfg_t	
User configuration structure, used in open function	
Data Fields	
uint32_t	channel
i2s_pcm_width_t	pcm_width
	Audio PCM data width.
i2s_word_length_t	word_length
	Audio word length, bits must be >= i2s_cfg_t::pcm_width bits.
i2s_ws_continue_t	ws_continue
	Whether to continue WS transmission during idle state.
i2s_mode_t	operating_mode
	Master or slave mode.
transfer_instance_t const *	p_transfer_tx
transfer_instance_t const *	p_transfer_rx
void(*	p_callback)(i2s_callback_args_t *p_args)
void const *	p_context
void const *	p_extend

	Extension parameter for hardware specific settings.
uint8_t	rxi_ipl
	Receive interrupt priority.
uint8_t	txi_ipl
	Transmit interrupt priority.
uint8_t	idle_err_ipl
	Idle/Error interrupt priority.
IRQn_Type	txi_irq
	Transmit IRQ number.
IRQn_Type	rxi_irq
	Receive IRQ number.
IRQn_Type	int_irq
	Idle/Error IRQ number.

Field Documentation

◆ channel

uint32_t i2s_cfg_t::channel

Select a channel corresponding to the channel number of the hardware.

◆ p_transfer_tx

transfer_instance_t const* i2s_cfg_t::p_transfer_tx

To use DTC during write, link a DTC instance here. Set to NULL if unused.

◆ p_transfer_rx

transfer_instance_t const* i2s_cfg_t::p_transfer_rx

To use DTC during read, link a DTC instance here. Set to NULL if unused.

◆ p_callback

void(* i2s_cfg_t::p_callback) (i2s_callback_args_t *p_args)

Callback provided when an I2S ISR occurs. Set to NULL for no CPU interrupt.

◆ p_context

void const* i2s_cfg_t::p_context

Placeholder for user data. Passed to the user callback in i2s_callback_args_t.

◆ i2s_api_t

struct i2s_api_t

I2S functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t(*	open)(i2s_ctrl_t *const p_ctrl, i2s_cfg_t const *const p_cfg)
fsp_err_t(*	stop)(i2s_ctrl_t *const p_ctrl)
fsp_err_t(*	mute)(i2s_ctrl_t *const p_ctrl, i2s_mute_t const mute_enable)
fsp_err_t(*	write)(i2s_ctrl_t *const p_ctrl, void const *const p_src, uint32_t const bytes)
fsp_err_t(*	read)(i2s_ctrl_t *const p_ctrl, void *const p_dest, uint32_t const bytes)
fsp_err_t(*	writeRead)(i2s_ctrl_t *const p_ctrl, void const *const p_src, void *const p_dest, uint32_t const bytes)
fsp_err_t(*	statusGet)(i2s_ctrl_t *const p_ctrl, i2s_status_t *const p_status)
fsp_err_t(*	close)(i2s_ctrl_t *const p_ctrl)
fsp_err_t(*	callbackSet)(i2s_ctrl_t *const p_api_ctrl, void(*p_callback)(i2s_callback_args_t *), void const *const p_context,

	i2s_callback_args_t *const p_callback_memory)

Field Documentation

◆ open

fsp_err_t(* i2s_api_t::open) (i2s_ctrl_t *const p_ctrl, i2s_cfg_t const *const p_cfg)

Initial configuration.

Implemented as

- R_SSI_Open()

Precondition

Peripheral clocks and any required output pins should be configured prior to calling this function.

Note

To reconfigure after calling this function, call i2s_api_t::close first.

Parameters

[in]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ stop

fsp_err_t(* i2s_api_t::stop) (i2s_ctrl_t *const p_ctrl)

Stop communication. Communication is stopped when callback is called with I2S_EVENT_IDLE.

Implemented as

- R_SSI_Stop()

Parameters

[in]	p_ctrl	Control block set in i2s_api_t::open call for this instance.

◆ mute

fsp_err_t(* i2s_api_t::mute) (i2s_ctrl_t *const p_ctrl, i2s_mute_t const mute_enable)

Enable or disable mute.

Implemented as

- R_SSI_Mute()

Parameters

[in]	p_ctrl	Control block set in i2s_api_t::open call for this instance.
[in]	mute_enable	Whether to enable or disable mute.

◆ write

fsp_err_t(* i2s_api_t::write) (i2s_ctrl_t *const p_ctrl, void const *const p_src, uint32_t const bytes)

Write I2S data. All transmit data is queued when callback is called with I2S_EVENT_TX_EMPTY. Transmission is complete when callback is called with I2S_EVENT_IDLE.

Implemented as

- R_SSI_Write()

Parameters

[in]	p_ctrl	Control block set in i2s_api_t::open call for this instance.
[in]	p_src	Buffer of PCM samples. Must be 4 byte aligned.
[in]	bytes	Number of bytes in the buffer. Recommended requesting a multiple of 8 bytes. If not a multiple of 8, padding 0s will be added to transmission to make it a multiple of 8.

◆ read

fsp_err_t(* i2s_api_t::read) (i2s_ctrl_t *const p_ctrl, void *const p_dest, uint32_t const bytes)

Read I2S data. Reception is complete when callback is called with I2S_EVENT_RX_EMPTY.

Implemented as

- R_SSI_Read()

Parameters

[in]	p_ctrl	Control block set in i2s_api_t::open call for this instance.
[in]	p_dest	Buffer to store PCM samples. Must be 4 byte aligned.
[in]	bytes	Number of bytes in the buffer. Recommended requesting a multiple of 8 bytes. If not a multiple of 8, receive will stop at the multiple of 8 below requested bytes.

◆ writeRead

fsp_err_t(* i2s_api_t::writeRead) (i2s_ctrl_t *const p_ctrl, void const *const p_src, void *const p_dest, uint32_t const bytes)

Simultaneously write and read I2S data. Transmission and reception are complete when callback is called with I2S_EVENT_IDLE.

Implemented as

- R_SSI_WriteRead()

Parameters

[in]	p_ctrl	Control block set in i2s_api_t::open call for this instance.
[in]	p_src	Buffer of PCM samples. Must be 4 byte aligned.
[in]	p_dest	Buffer to store PCM samples. Must be 4 byte aligned.
[in]	bytes	Number of bytes in the buffers. Recommended requesting a multiple of 8 bytes. If not a multiple of 8, padding 0s will be added to transmission to make it a multiple of 8, and receive will stop at the multiple of 8 below requested bytes.

◆ statusGet

fsp_err_t(* i2s_api_t::statusGet) (i2s_ctrl_t *const p_ctrl, i2s_status_t *const p_status)

Get current status and store it in provided pointer p_status.

Implemented as

- R_SSI_StatusGet()

Parameters

[in]	p_ctrl	Control block set in i2s_api_t::open call for this instance.
[out]	p_status	Current status of the driver.

◆ close

fsp_err_t(* i2s_api_t::close) (i2s_ctrl_t *const p_ctrl)

Allows driver to be reconfigured and may reduce power consumption.

Implemented as

- R_SSI_Close()

Parameters

[in]	p_ctrl	Control block set in i2s_api_t::open call for this instance.

◆ callbackSet

fsp_err_t(* i2s_api_t::callbackSet) (i2s_ctrl_t *const p_api_ctrl, void(*p_callback)(i2s_callback_args_t *), void const *const p_context, i2s_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_SSI_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the I2S control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ i2s_instance_t

struct i2s_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
i2s_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
i2s_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
i2s_api_t const *	p_api	Pointer to the API structure for

		this instance.

Typedef Documentation

◆ i2s_ctrl_t

typedef void i2s_ctrl_t

I2S control block. Allocate an instance specific control block to pass into the I2S API calls.

Implemented as

- ssi_instance_ctrl_t

Enumeration Type Documentation

◆ i2s_pcm_width_t

enum i2s_pcm_width_t

Audio PCM width

Enumerator	
I2S_PCM_WIDTH_8_BITS	Using 8-bit PCM.
I2S_PCM_WIDTH_16_BITS	Using 16-bit PCM.
I2S_PCM_WIDTH_18_BITS	Using 18-bit PCM.
I2S_PCM_WIDTH_20_BITS	Using 20-bit PCM.
I2S_PCM_WIDTH_22_BITS	Using 22-bit PCM.
I2S_PCM_WIDTH_24_BITS	Using 24-bit PCM.
I2S_PCM_WIDTH_32_BITS	Using 24-bit PCM.

◆ i2s_word_length_t

enum i2s_word_length_t	
Audio system word length.	
Enumerator	
I2S_WORD_LENGTH_8_BITS	Using 8-bit system word length.
I2S_WORD_LENGTH_16_BITS	Using 16-bit system word length.
I2S_WORD_LENGTH_24_BITS	Using 24-bit system word length.
I2S_WORD_LENGTH_32_BITS	Using 32-bit system word length.
I2S_WORD_LENGTH_48_BITS	Using 48-bit system word length.
I2S_WORD_LENGTH_64_BITS	Using 64-bit system word length.
I2S_WORD_LENGTH_128_BITS	Using 128-bit system word length.
I2S_WORD_LENGTH_256_BITS	Using 256-bit system word length.

◆ i2s_event_t

enum i2s_event_t	
Events that can trigger a callback function	
Enumerator	
I2S_EVENT_IDLE	Communication is idle.
I2S_EVENT_TX_EMPTY	Transmit buffer is below FIFO trigger level.
I2S_EVENT_RX_FULL	Receive buffer is above FIFO trigger level.

◆ i2s_mode_t

enum i2s_mode_t	
I2S communication mode	
Enumerator	
I2S_MODE_SLAVE	Slave mode.
I2S_MODE_MASTER	Master mode.

◆ i2s_mute_t

enum i2s_mute_t	
Mute audio samples.	
Enumerator	
I2S_MUTE_OFF	Disable mute.
I2S_MUTE_ON	Enable mute.

◆ i2s_ws_continue_t

enum i2s_ws_continue_t	
Whether to continue WS (word select line) transmission during idle state.	
Enumerator	
I2S_WS_CONTINUE_ON	Enable WS continue mode.
I2S_WS_CONTINUE_OFF	Disable WS continue mode.

◆ i2s_state_t

enum i2s_state_t	
Possible status values returned by i2s_api_t::statusGet.	
Enumerator	
I2S_STATE_IN_USE	I2S is in use.
I2S_STATE_STOPPED	I2S is stopped.

4.3.21 I3C Interface

Interfaces

Detailed Description

Interface for I3C.

Summary

The I3C interface provides APIs and definitions for I3C communication.

Known Implementations

I3C Bus Interface (r_i3c)

Data Structures

struct	i3c_device_status_t
struct	i3c_slave_info_t
struct	i3c_device_table_cfg_t
struct	i3c_device_cfg_t
struct	i3c_command_descriptor_t
struct	i3c_callback_args_t
struct	i3c_cfg_t
struct	i3c_api_t
struct	i3c_instance_t

Enumerations

enum	i3c_common_command_code_t
enum	i3c_event_t
enum	i3c_device_type_t
enum	i3c_device_protocol_t
enum	i3c_address_assignment_mode_t

enum	i3c_ibi_type_t

Data Structure Documentation

◆ i3c_device_status_t

struct i3c_device_status_t		
The current status of the slave device (See GETSTATUS in the MIPI I3C Specification v1.0).		
Data Fields		
uint8_t	pending_interrupt	Contains the interrupt number of any pending interrupt, or 0 if no interrupts are pending.
uint8_t	vendor_status	Reserved for vendor-specific meaning.

◆ i3c_slave_info_t

struct i3c_slave_info_t		
Device characteristics that define the I3C capabilities of a slave.		
Data Fields		
uint8_t	pid[6]	Provisional ID.
union i3c_slave_info_t	__unnamed__	
uint8_t	dcr	Device Characteristics Register.

◆ i3c_device_table_cfg_t

struct i3c_device_table_cfg_t		
Structure for configuring an entry in the device table when the driver is in master mode (See i3c_api_t::masterDeviceTableSet).		
Data Fields		
uint8_t	static_address	I3C Static address / I2C address for this device.
uint8_t	dynamic_address	Dynamic address for the device. This address will be assigned during Dynamic Address Assignment.
i3c_device_protocol_t	device_protocol	The protocol used to communicate with this device (I3C / I2C Legacy).
bool	ibi_accept	Accept or reject IBI requests from this device.
bool	master_request_accept	Accept mastership requests from this device.
bool	ibi_payload	IBI requests from this device

		have a data payload. Note: When the device is configured using ENTDAA, the ibi_payload will automatically be updated based on the value of BCR.

◆ i3c_device_cfg_t

struct i3c_device_cfg_t		
Structure for configuring a slave address when the driver is in slave mode (See i3c_api_t::deviceCfgSet).		
Data Fields		
uint8_t	static_address	I3C Static address / I2C address for this device.
uint8_t	dynamic_address	Dynamic address for this device. Note that the dynamic address will automatically be updated when ENTDAA is completed.
i3c_slave_info_t	slave_info	PID, BCR, and DCR registers for the device (Slave mode only).

◆ i3c_command_descriptor_t

struct i3c_command_descriptor_t		
Descriptor for completing CCC transfers.		
Data Fields		
uint8_t	command_code	Common Command Code for the transfer.
uint8_t *	p_buffer	Buffer for reading or writing data.
uint32_t	length	Length of the data portion of the command.
bool	restart	If true, issue a repeated-start after the transfer is completed.
bool	rnw	Set to true if the command type is Direct Get.

◆ i3c_callback_args_t

struct i3c_callback_args_t		
Arguments that are passed to the user callback when an event occurs.		
Data Fields		
i3c_event_t	event	The type of event that has

		occurred.
uint32_t	event_status	Status flags associated with the event.
uint32_t	transfer_size	Number of bytes transferred.
i3c_slave_info_t const *	p_slave_info	A pointer to the Characteristics Registers read during ENTDAA.
uint8_t	dynamic_address	The dynamic address that was assigned to the slave during ENTDAA.
i3c_ibi_type_t	ibi_type	The type of IBI that has been received.
uint8_t	ibi_address	The address of the device that sent the IBI.
uint8_t	command_code	The command code of the received command.
void const *	p_context	User defined context.

◆ i3c_cfg_t

struct i3c_cfg_t	
User configuration structure, used in open function	
Data Fields	
uint32_t	channel
i3c_device_type_t	device_type
void(*	p_callback)(i3c_callback_args_t const *const p_args)
void const *	p_context
	Pointer to the user-provided context.
void const *	p_extend

Field Documentation

◆ channel

uint32_t i3c_cfg_t::channel
Select a channel corresponding to the channel number of the hardware.

◆ **device_type**

i3c_device_type_t i3c_cfg_t::device_type

The type of device.

◆ **p_callback**

void(* i3c_cfg_t::p_callback) (i3c_callback_args_t const *const p_args)

Pointer to the user callback.

◆ **p_extend**

void const* i3c_cfg_t::p_extend

Pointer to extended configuration.

◆ **i3c_api_t**

struct i3c_api_t

I3C functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t(*	open)(i3c_ctrl_t *const p_ctrl, i3c_cfg_t const *const p_cfg)
fsp_err_t(*	enable)(i3c_ctrl_t *const p_ctrl)
fsp_err_t(*	deviceCfgSet)(i3c_ctrl_t *const p_ctrl, i3c_device_cfg_t const *const p_device_cfg)
fsp_err_t(*	masterDeviceTableSet)(i3c_ctrl_t *const p_ctrl, uint32_t device_index, i3c_device_table_cfg_t const *const p_device_table_cfg)
fsp_err_t(*	deviceSelect)(i3c_ctrl_t *const p_ctrl, uint32_t device_index, uint32_t bitrate_mode)
fsp_err_t(*	dynamicAddressAssignmentStart)(i3c_ctrl_t *const p_ctrl, i3c_address_assignment_mode_t address_assignment_mode, uint32_t starting_device_index, uint32_t device_count)
fsp_err_t(*	slaveStatusSet)(i3c_ctrl_t *const p_ctrl, i3c_device_status_t device_status)
fsp_err_t(*	commandSend)(i3c_ctrl_t *const p_ctrl, i3c_command_descriptor_t

	*p_command_descriptor)
fsp_err_t(*	write)(i3c_ctrl_t *const p_ctrl, uint8_t const *const p_data, uint32_t length, bool restart)
fsp_err_t(*	read)(i3c_ctrl_t *const p_ctrl, uint8_t *const p_data, uint32_t length, bool restart)
fsp_err_t(*	ibiWrite)(i3c_ctrl_t *const p_ctrl, i3c_ibi_type_t ibi_type, uint8_t const *const p_data, uint32_t length)
fsp_err_t(*	ibiRead)(i3c_ctrl_t *const p_ctrl, uint8_t *const p_data, uint32_t length)
fsp_err_t(*	close)(i3c_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* i3c_api_t::open) (i3c_ctrl_t *const p_ctrl, i3c_cfg_t const *const p_cfg)

Initial configuration.

Implemented as

- R_I3C_Open()

Parameters

[in]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ enable

fsp_err_t(* i3c_api_t::enable) (i3c_ctrl_t *const p_ctrl)

Enable the I3C device.

Implemented as

- R_I3C_Enable()

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.

◆ deviceCfgSet

fsp_err_t(* i3c_api_t::deviceCfgSet) (i3c_ctrl_t *const p_ctrl, i3c_device_cfg_t const *const p_device_cfg)

Set the configuration of this device.

Implemented as

- R_I3C_DeviceCfgSet()

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	p_device_cfg	Pointer to device configuration.

◆ masterDeviceTableSet

fsp_err_t(* i3c_api_t::masterDeviceTableSet) (i3c_ctrl_t *const p_ctrl, uint32_t device_index, i3c_device_table_cfg_t const *const p_device_table_cfg)

Set the configuration for the device at the given index in the device table. The configuration will be used by transfers when it is selected by deviceSelect.

Note: This function is not used in slave mode.

Implemented as

- R_I3C_MasterDeviceTableSet()

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	device_index	Index into the device table.
[in]	p_device_table_cfg	Pointer to the table settings for the entry in the master device table.

◆ deviceSelect

fsp_err_t(* i3c_api_t::deviceSelect) (i3c_ctrl_t *const p_ctrl, uint32_t device_index, uint32_t bitrate_mode)

In master mode, select the device for the next transfer.

Note: This function is not used in slave mode.

Implemented as

- R_I3C_DeviceSelect()

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	device_index	Index into the device table.
[in]	bitrate_setting	The bitrate settings for the selected device.

◆ dynamicAddressAssignmentStart

fsp_err_t(* i3c_api_t::dynamicAddressAssignmentStart) (i3c_ctrl_t *const p_ctrl, i3c_address_assignment_mode_t address_assignment_mode, uint32_t starting_device_index, uint32_t device_count)

Start Dynamic Address Assignment by sending either the ENTDAA or SETDASA command See i3c_address_assignment_mode_t for more information.

Note: This function is not used in slave mode.

Implemented as

- R_I3C_DynamicAddressAssignmentStart()

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	address_assignment_mode	The command to use for Dynamic Address Assignment.
[in]	starting_device_index	The device index that will be used to assign the first device during Dynamic Address Assignment.
[in]	device_count	The number of devices to assign (Only used with I3C_ADDRESS_ASSIGNMENT_MODE_ENTDAA).

◆ slaveStatusSet

fsp_err_t(* i3c_api_t::slaveStatusSet) (i3c_ctrl_t *const p_ctrl, i3c_device_status_t device_status)

Set the status returned to the master in response to a GETSTATUS command.

Note: This function is not used in master mode.

Implemented as

- R_I3C_SlaveStatusSet()

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	device_status	New status settings for responding to the GETSTATUS command code.

◆ commandSend

fsp_err_t(* i3c_api_t::commandSend) (i3c_ctrl_t *const p_ctrl, i3c_command_descriptor_t *p_command_descriptor)

Send a broadcast or directed command to slave devices on the bus.

Note: This function is not used in slave mode.

Implemented as

- R_I3C_CommandSend()

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	p_command_descriptor	A descriptor for executing the command.

◆ write

fsp_err_t(* i3c_api_t::write) (i3c_ctrl_t *const p_ctrl, uint8_t const *const p_data, uint32_t length, bool restart)

In master mode: Start a write transfer. When the transfer is completed send a stop condition or a repeated-start. In slave mode: Set the write buffer and configure the number of bytes that will be transferred before the the transfer is ended by the slave via the 'T' bit or by the master issueing a stop condition.

Implemented as

- R_I3C_Write()

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	p_data	Pointer to a buffer to write.
[in]	length	Number of bytes to transfer.
[in]	restart	If true, issue a repeated-start after the transfer is completed (Master only).

◆ read

fsp_err_t(* i3c_api_t::read) (i3c_ctrl_t *const p_ctrl, uint8_t *const p_data, uint32_t length, bool restart)

In master mode: Start a read transfer. When the transfer is completed, send a stop condition or a repeated-start. In slave mode: Set the read buffer for storing data read during the transfer. When the buffer is full, the application will receive a callback requesting a new read buffer. If no buffer is provided by the application, the driver will discard any remaining bytes read during the transfer.

Implemented as

- R_I3C_Read()

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	p_data	Pointer to a buffer to store the bytes read during the transfer.
[in]	length	Number of bytes to transfer.
[in]	restart	If true, issue a repeated-start after the transfer is completed (Master only).

◆ ibiWrite

fsp_err_t(* i3c_api_t::ibiWrite) (i3c_ctrl_t *const p_ctrl, i3c_ibi_type_t ibi_type, uint8_t const *const p_data, uint32_t length)

Initiate an IBI write operation.

Note: This function is not used in master mode.

Implemented as

- R_I3C_IbiWrite()

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	p_data	Pointer to a buffer to start the bytes read during the transfer.
[in]	length	Number of bytes to transfer.

◆ ibiRead

fsp_err_t(* i3c_api_t::ibiRead) (i3c_ctrl_t *const p_ctrl, uint8_t *const p_data, uint32_t length)

Set the read buffer for storing received IBI data (This function is not used in slave mode).

Implemented as

- R_I3C_IbiRead()

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.
[in]	p_data	Pointer to a buffer to store the bytes read during the transfer.
[in]	length	Number of bytes to transfer.

◆ close

fsp_err_t(* i3c_api_t::close) (i3c_ctrl_t *const p_ctrl)

Allows driver to be reconfigured and may reduce power consumption.

Implemented as

- R_I3C_Close()

Parameters

[in]	p_ctrl	Control block set in i3c_api_t::open call for this instance.

◆ i3c_instance_t

struct i3c_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

i3c_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
i3c_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
i3c_api_t const *	p_api	Pointer to the API structure for this instance.

Enumeration Type Documentation

◆ i3c_common_command_code_t

enum i3c_common_command_code_t	
Common Command Codes defined by MIPI I3C Specification v1.1.	
Enumerator	
I3C_CCC_BROADCAST_ENEC	Enable Slave initiated events.
I3C_CCC_BROADCAST_DISEC	Disable Slave initiated events.
I3C_CCC_BROADCAST_ENTAS0	Enter Activity State 0.
I3C_CCC_BROADCAST_ENTAS1	Enter Activity State 1.
I3C_CCC_BROADCAST_ENTAS2	Enter Activity State 2.
I3C_CCC_BROADCAST_ENTAS3	Enter Activity State 3.
I3C_CCC_BROADCAST_RSTDAA	Reset Dynamic Address Assignment.
I3C_CCC_BROADCAST_ENTDAA	Enter Dynamic Address Assignment.
I3C_CCC_BROADCAST_DEFSVLS	Define List of Slaves.
I3C_CCC_BROADCAST_SETMWL	Set Max Write Length.
I3C_CCC_BROADCAST_SETMRL	Set Max Read Length.
I3C_CCC_BROADCAST_ENTTM	Enter Test Mode.
I3C_CCC_BROADCAST_ENTHDR0	Enter HDR Mode 0.
I3C_CCC_BROADCAST_ENTHDR1	Enter HDR Mode 1.
I3C_CCC_BROADCAST_ENTHDR2	Enter HDR Mode 2.
I3C_CCC_BROADCAST_ENTHDR3	Enter HDR Mode 3.
I3C_CCC_BROADCAST_ENTHDR4	Enter HDR Mode 4 (Reserved for future definition).
I3C_CCC_BROADCAST_ENTHDR5	Enter HDR Mode 5 (Reserved for future definition).
I3C_CCC_BROADCAST_ENTHDR6	Enter HDR Mode 6 (Reserved for future definition).
I3C_CCC_BROADCAST_ENTHDR7	Enter HDR Mode 7 (Reserved for future

	definition).
I3C_CCC_BROADCAST_SETXTIME	Set Exchange Timing Info.
I3C_CCC_BROADCAST_SETAASA	Set All Addresses to Static Address.
I3C_CCC_DIRECT_ENEC	Enable Slave initiated events.
I3C_CCC_DIRECT_DISEC	Disable Slave initiated events.
I3C_CCC_DIRECT_ENTAS0	Enter Activity State 0.
I3C_CCC_DIRECT_ENTAS1	Enter Activity State 1.
I3C_CCC_DIRECT_ENTAS2	Enter Activity State 2.
I3C_CCC_DIRECT_ENTAS3	Enter Activity State 3.
I3C_CCC_DIRECT_RSTDAA	Reset Dynamic Address Assignment.
I3C_CCC_DIRECT_SETDASA	Set Dynamic Address from Static Address.
I3C_CCC_DIRECT_SETNEWDA	Set New Dynamic Address.
I3C_CCC_DIRECT_SETMWL	Set Max Write Length.
I3C_CCC_DIRECT_SETMRL	Set Max Read Length.
I3C_CCC_DIRECT_GETMWL	Get Max Write Length.
I3C_CCC_DIRECT_GETMRL	Get Max Read Length.
I3C_CCC_DIRECT_GETPID	Get Provisional ID.
I3C_CCC_DIRECT_GETBCR	Get Bus Characteristic Register.
I3C_CCC_DIRECT_GETDCR	Get Device Characteristic Register.
I3C_CCC_DIRECT_GETSTATUS	Get Device Status.
I3C_CCC_DIRECT_GETACCMST	Get Accept Mastership.
I3C_CCC_DIRECT_GETMXDS	Get Max Data Speed.
I3C_CCC_DIRECT_SETXTIME	Set Exchange Timing Information.
I3C_CCC_DIRECT_GETXTIME	Get Exchange Timing Information.

◆ i3c_event_t

enum i3c_event_t	
I3C Events that result in a callback.	
Enumerator	
I3C_EVENT_ENTDAA_ADDRESS_PHASE	Events that only occur in Master mode. A Slave device has finished writing its PID, BCR, and DCR. This information is provided in i3c_callback_args_t::p_slave_info.
I3C_EVENT_IBI_READ_COMPLETE	An IBI has successfully been read.
I3C_EVENT_IBI_READ_BUFFER_FULL	There is no more space in the IBI read buffer. The application may provide another buffer by calling i3c_api_t::ibiRead.
I3C_EVENT_READ_BUFFER_FULL	Events that only occur in Slave mode. There is no more space in the read buffer. The application may provide another buffer by calling i3c_api_t::read.
I3C_EVENT_IBI_WRITE_COMPLETE	A IBI was written successfully.
I3C_EVENT_HDR_EXIT_PATTERN_DETECTED	The HDR exit pattern was detected on the bus.
I3C_EVENT_ADDRESS_ASSIGNMENT_COMPLETE	Dynamic Address Assignment has completed. Events that are common to Master and Slave mode.
I3C_EVENT_COMMAND_COMPLETE	A command was completed.
I3C_EVENT_WRITE_COMPLETE	A write transfer has completed.
I3C_EVENT_READ_COMPLETE	A read transfer has completed.
I3C_EVENT_TIMEOUT_DETECTED	SCL is stuck at the logic high or logic low level during a transfer.
I3C_EVENT_INTERNAL_ERROR	An internal error occurred.

◆ i3c_device_type_t

enum i3c_device_type_t	
The type of device.	
Enumerator	
I3C_DEVICE_TYPE_MAIN_MASTER	The main master starts in master mode and is responsible for configuring the bus.
I3C_DEVICE_TYPE_SLAVE	A slave device listens to the bus for relevant I3C Commands (CCCs) sent by the current master, and responds accordingly. Slave devices may also initiate In-band interrupts and Hot-Join requests.

◆ i3c_device_protocol_t

enum i3c_device_protocol_t	
Identifies the protocol for transferring data with the device on the bus.	
Enumerator	
I3C_DEVICE_PROTOCOL_I2C	Transfers will use legacy I2C protocal with open-drain output at a reduced baudrate.
I3C_DEVICE_PROTOCOL_I3C	Transfers will use I3C SDR mode.

◆ i3c_address_assignment_mode_t

enum i3c_address_assignment_mode_t	
Address Assignment Mode.	
Enumerator	
I3C_ADDRESS_ASSIGNMENT_MODE_ENTDAA	Send the ENTDAA command to enter Dynamic Address Assignment mode and assign dynamic addresses in order, starting with the starting device index. The procedure is completed after the specified number of devices have been configured. The callback will be called after the PID, DCR, and BCR registers have been read for each device.

◆ i3c_ibi_type_t

enum i3c_ibi_type_t	
The type of In-Band Interrupt.	
Enumerator	
I3C_IBI_TYPE_INTERRUPT	Application specific In-Band Interrupt for notifying the master when an event occurs.
I3C_IBI_TYPE_HOT_JOIN	Request the master to perform the Dynamic Address Assignment process.
I3C_IBI_TYPE_MASTERSHIP_REQUEST	Request the master to give up control of the bus.

4.3.22 IIR Interface

Interfaces

Detailed Description

Interface for IIR filter functionality.

Summary

The IIR interface allows access to the IIRFA peripheral for hardware acceleration of direct form 2 transposed biquad IIR filters.

Implemented by:

- IIR Filter Accelerator (r_iirfa)

Data Structures

struct	iir_filter_coeffs_t
struct	iir_filter_state_t
struct	iir_filter_cfg_t
struct	iir_status_t
struct	iir_cfg_t
struct	iir_api_t

struct	iirfa_instance_t

Typedefs

typedef void	iir_ctrl_t

Data Structure Documentation

◆ iir_filter_coeffs_t

struct iir_filter_coeffs_t		
Filter stage coefficient data		
Data Fields		
float	b0	Coefficient B0.
float	b1	Coefficient B1.
float	b2	Coefficient B2.
float	a1	Coefficient A0.
float	a2	Coefficient A1.

◆ iir_filter_state_t

struct iir_filter_state_t		
Filter stage state data		
Data Fields		
float	d0	State variable D0.
float	d1	State variable D1.

◆ iir_filter_cfg_t

struct iir_filter_cfg_t		
Filter configuration		
Data Fields		
iir_filter_coeffs_t *	p_filter_coeffs	Filter coefficients.
iir_filter_state_t *	p_filter_state	Filter state data.
uint8_t	stage_base	Hardware stage to start from.
uint8_t	stage_num	Number of filter stages to use.

◆ iir_status_t

struct iir_status_t
Filter state register status

◆ iir_cfg_t

struct iir_cfg_t		
IIRFA API configuration parameter		
Data Fields		
void const *	p_extend	
uint8_t	channel	IIRFA channel to use.

◆ iir_api_t

struct iir_api_t	
IIR driver structure. IIR functions implemented at the HAL layer follow this API.	
Data Fields	
fsp_err_t(*	open)(iir_ctrl_t *const p_ctrl, iir_cfg_t const *const p_cfg)
fsp_err_t(*	close)(iir_ctrl_t *const p_ctrl)
fsp_err_t(*	configure)(iir_ctrl_t *const p_ctrl, iir_filter_cfg_t const *const p_filter_cfg)
fsp_err_t(*	filter)(iir_ctrl_t *const p_ctrl, float const *p_data_in, float *p_data_out, uint16_t const num_samples)
fsp_err_t(*	statusGet)(iir_ctrl_t *const p_ctrl, iir_status_t *const p_status)

Field Documentation

◆ open

fsp_err_t(* iir_api_t::open) (iir_ctrl_t *const p_ctrl, iir_cfg_t const *const p_cfg)

Initial configuration.

Implemented as

- R_IIRFA_Open()

Parameters

[in]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ close

fsp_err_t(* iir_api_t::close) (iir_ctrl_t *const p_ctrl)

Close the IIRFA channel.

Implemented as

- R_IIRFA_Close()

Parameters

[in]	p_ctrl	Control block set in iir_api_t::open.

◆ configure

fsp_err_t(* iir_api_t::configure) (iir_ctrl_t *const p_ctrl, iir_filter_cfg_t const *const p_filter_cfg)

Configure filter coefficients and state variables.

Implemented as

- R_IIRFA_Configure()

Parameters

[in]	p_ctrl	Control block set in iir_api_t::open.
[in]	p_filter_cfg	Pointer to filter configuration to write.

◆ filter

fsp_err_t(* iir_api_t::filter) (iir_ctrl_t *const p_ctrl, float const *p_data_in, float *p_data_out, uint16_t const num_samples)

Filter the specified data.

Implemented as

- R_IIRFA_Filter()

Parameters

[in]	p_ctrl	Control block set in iir_api_t::open.
[in]	p_data_in	Pointer to float input data.
[in]	p_data_out	Pointer to float output buffer.
[in]	num_samples	Number of samples to process.

◆ statusGet

fsp_err_t(* iir_api_t::statusGet) (iir_ctrl_t *const p_ctrl, iir_status_t *const p_status)

Retrieve current status (including state registers).

Implemented as

- R_IIRFA_StatusGet()

Parameters

[in]	p_ctrl	Control block set in iir_api_t::open.
[in]	p_status	Pointer to status struct.

◆ iirfa_instance_t

struct iirfa_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
iir_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
iir_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
iir_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ iir_ctrl_t

typedef void iir_ctrl_t

IIR control block. Allocate an instance specific control block to pass into the DAC API calls.

Implemented as

- iirfa_instance_ctrl_t

4.3.23 I/O Port Interface

Interfaces

Detailed Description

Interface for accessing I/O ports and configuring I/O functionality.

Summary

The IOPort shared interface provides the ability to access the IOPorts of a device at both bit and port level. Port and pin direction can be changed.

IOPORT Interface description: I/O Ports (r_ioport)

Data Structures

struct	ioport_pin_cfg_t
struct	ioport_cfg_t
struct	ioport_api_t
struct	ioport_instance_t

Typedefs

typedef uint16_t	ioport_size_t IO port size on this device. More...
typedef void	ioport_ctrl_t

Enumerations

enum	ioport_peripheral_t
enum	ioport_ethernet_channel_t

enum	ioport_ethernet_mode_t
enum	ioport_cfg_options_t
enum	ioport_pwpr_t

Data Structure Documentation

◆ ioport_pin_cfg_t

struct ioport_pin_cfg_t		
Pin identifier and pin PFS pin configuration value		
Data Fields		
uint32_t	pin_cfg	Pin PFS configuration - Use ioport_cfg_options_t parameters to configure.
bsp_io_port_pin_t	pin	Pin identifier.

◆ ioport_cfg_t

struct ioport_cfg_t		
Multiple pin configuration data for loading into PFS registers by R_IOPORT_Init()		
Data Fields		
uint16_t	number_of_pins	Number of pins for which there is configuration data.
ioport_pin_cfg_t const *	p_pin_cfg_data	Pin configuration data.

◆ ioport_api_t

struct ioport_api_t	
IOPort driver structure. IOPort functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(ioport_ctrl_t *const p_ctrl, const ioport_cfg_t *p_cfg)
fsp_err_t(*	close)(ioport_ctrl_t *const p_ctrl)
fsp_err_t(*	pinsCfg)(ioport_ctrl_t *const p_ctrl, const ioport_cfg_t *p_cfg)
fsp_err_t(*	pinCfg)(ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, uint32_t cfg)

fsp_err_t(*	pinEventInputRead)(ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t *p_pin_event)
fsp_err_t(*	pinEventOutputWrite)(ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t pin_value)
fsp_err_t(*	pinRead)(ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t *p_pin_value)
fsp_err_t(*	pinWrite)(ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t level)
fsp_err_t(*	portDirectionSet)(ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t direction_values, ioport_size_t mask)
fsp_err_t(*	portEventInputRead)(ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t *p_event_data)
fsp_err_t(*	portEventOutputWrite)(ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t event_data, ioport_size_t mask_value)
fsp_err_t(*	portRead)(ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t *p_port_value)
fsp_err_t(*	portWrite)(ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t value, ioport_size_t mask)

Field Documentation

◆ open

fsp_err_t(* ioport_api_t::open) (ioport_ctrl_t *const p_ctrl, const ioport_cfg_t *p_cfg)

Initialize internal driver data and initial pin configurations. Called during startup. Do not call this API during runtime. Use ioport_api_t::pinsCfg for runtime reconfiguration of multiple pins.

Implemented as

- R_IOPORT_Open()

Parameters

[in]	p_cfg	Pointer to pin configuration data array.

◆ close

fsp_err_t(* ioport_api_t::close) (ioport_ctrl_t *const p_ctrl)

Close the API.

Implemented as

- R_IOPORT_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ pinsCfg

fsp_err_t(* ioport_api_t::pinsCfg) (ioport_ctrl_t *const p_ctrl, const ioport_cfg_t *p_cfg)

Configure multiple pins.

Implemented as

- R_IOPORT_PinsCfg()

Parameters

[in]	p_cfg	Pointer to pin configuration data array.

◆ pinCfg

fsp_err_t(* ioport_api_t::pinCfg) (ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, uint32_t cfg)

Configure settings for an individual pin.

Implemented as

- R_IOPORT_PinCfg()

Parameters

[in]	pin	Pin to be read.
[in]	cfg	Configuration options for the pin.

◆ pinEventInputRead

fsp_err_t(* ioport_api_t::pinEventInputRead) (ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t *p_pin_event)

Read the event input data of the specified pin and return the level.

Implemented as

- R_IOPORT_PinEventInputRead()

Parameters

[in]	pin	Pin to be read.
[in]	p_pin_event	Pointer to return the event data.

◆ pinEventOutputWrite

fsp_err_t(* ioport_api_t::pinEventOutputWrite) (ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t pin_value)

Write pin event data.

Implemented as

- R_IOPORT_PinEventOutputWrite()

Parameters

[in]	pin	Pin event data is to be written to.
[in]	pin_value	Level to be written to pin output event.

◆ pinRead

fsp_err_t(* ioport_api_t::pinRead) (ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t *p_pin_value)

Read level of a pin.

Implemented as

- R_IOPORT_PinRead()

Parameters

[in]	pin	Pin to be read.
[in]	p_pin_value	Pointer to return the pin level.

◆ pinWrite

fsp_err_t(* ioport_api_t::pinWrite) (ioport_ctrl_t *const p_ctrl, bsp_io_port_pin_t pin, bsp_io_level_t level)

Write specified level to a pin.

Implemented as

- R_IOPORT_PinWrite()

Parameters

[in]	pin	Pin to be written to.
[in]	level	State to be written to the pin.

◆ portDirectionSet

fsp_err_t(* ioport_api_t::portDirectionSet) (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t direction_values, ioport_size_t mask)

Set the direction of one or more pins on a port.

Implemented as

- R_IOPORT_PortDirectionSet()

Parameters

[in]	port	Port being configured.
[in]	direction_values	Value controlling direction of pins on port (1 - output, 0 - input).
[in]	mask	Mask controlling which pins on the port are to be configured.

◆ portEventInputRead

fsp_err_t(* ioport_api_t::portEventInputRead) (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t *p_event_data)

Read captured event data for a port.

Implemented as

- R_IOPORT_PortEventInputRead()

Parameters

[in]	port	Port to be read.
[in]	p_event_data	Pointer to return the event data.

◆ portEventOutputWrite

fsp_err_t(* ioport_api_t::portEventOutputWrite) (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t event_data, ioport_size_t mask_value)

Write event output data for a port.

Implemented as

- R_IOPORT_PortEventOutputWrite()

Parameters

[in]	port	Port event data will be written to.
[in]	event_data	Data to be written as event data to specified port.
[in]	mask_value	Each bit set to 1 in the mask corresponds to that bit's value in event data. being written to port.

◆ portRead

fsp_err_t(* ioport_api_t::portRead) (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t *p_port_value)

Read states of pins on the specified port.

Implemented as

- R_IOPORT_PortRead()

Parameters

[in]	port	Port to be read.
[in]	p_port_value	Pointer to return the port value.

◆ portWrite

fsp_err_t(* ioport_api_t::portWrite) (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t value, ioport_size_t mask)

Write to multiple pins on a port.

Implemented as

- R_IOPORT_PortWrite()

Parameters

[in]	port	Port to be written to.
[in]	value	Value to be written to the port.
[in]	mask	Mask controlling which pins on the port are written to.

◆ ioport_instance_t

struct ioport_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

ioport_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
ioport_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
ioport_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ ioport_size_t

typedef uint16_t ioport_size_t
IO port size on this device. IO port type used with ports

◆ ioport_ctrl_t

typedef void ioport_ctrl_t
IOPORT control block. Allocate an instance specific control block to pass into the IOPORT API calls. **Implemented as** ◦ ioport_instance_ctrl_t

Enumeration Type Documentation

◆ ioport_peripheral_t

enum ioport_peripheral_t	
Superset of all peripheral functions.	
Enumerator	
IOPORT_PERIPHERAL_IO	Pin will functions as an IO pin
IOPORT_PERIPHERAL_DEBUG	Pin will function as a DEBUG pin
IOPORT_PERIPHERAL_AGT	Pin will function as an AGT peripheral pin
IOPORT_PERIPHERAL_GPT0	Pin will function as a GPT peripheral pin
IOPORT_PERIPHERAL_GPT1	Pin will function as a GPT peripheral pin
IOPORT_PERIPHERAL_SCI0_2_4_6_8	Pin will function as an SCI peripheral pin
IOPORT_PERIPHERAL_SCI1_3_5_7_9	Pin will function as an SCI peripheral pin
IOPORT_PERIPHERAL_SPI	Pin will function as a SPI peripheral pin
IOPORT_PERIPHERAL_IIC	Pin will function as a IIC peripheral pin
IOPORT_PERIPHERAL_KEY	Pin will function as a KEY peripheral pin
IOPORT_PERIPHERAL_CLKOUT_COMP_RTC	Pin will function as a clock/comparator/RTC peripheral pin
IOPORT_PERIPHERAL_CAC_AD	Pin will function as a CAC/ADC peripheral pin
IOPORT_PERIPHERAL_BUS	Pin will function as a BUS peripheral pin
IOPORT_PERIPHERAL_CTSU	Pin will function as a CTSU peripheral pin
IOPORT_PERIPHERAL_ACMPHS	Pin will function as a CMPHS peripheral pin
IOPORT_PERIPHERAL_LCDC	Pin will function as a segment LCD peripheral pin
IOPORT_PERIPHERAL_DE_SCI1_3_5_7_9	Pin will function as an SCI peripheral DEn pin
IOPORT_PERIPHERAL_DALI	Pin will function as a DALI peripheral pin
IOPORT_PERIPHERAL_DE_SCI0_2_4_6_8	Pin will function as an SCI DEn peripheral pin
IOPORT_PERIPHERAL_CAN	Pin will function as a CAN peripheral pin

IOPORT_PERIPHERAL_QSPI	Pin will function as a QSPI peripheral pin
IOPORT_PERIPHERAL_SSI	Pin will function as an SSI peripheral pin
IOPORT_PERIPHERAL_USB_FS	Pin will function as a USB full speed peripheral pin
IOPORT_PERIPHERAL_USB_HS	Pin will function as a USB high speed peripheral pin
IOPORT_PERIPHERAL_GPT2	Pin will function as a GPT peripheral pin
IOPORT_PERIPHERAL_SDHI_MMC	Pin will function as an SD/MMC peripheral pin
IOPORT_PERIPHERAL_GPT3	Pin will function as a GPT peripheral pin
IOPORT_PERIPHERAL_ETHER_MII	Pin will function as an Ethernet MMI peripheral pin
IOPORT_PERIPHERAL_GPT4	Pin will function as a GPT peripheral pin
IOPORT_PERIPHERAL_ETHER_RMII	Pin will function as an Ethernet RMMI peripheral pin
IOPORT_PERIPHERAL_PDC	Pin will function as a PDC peripheral pin
IOPORT_PERIPHERAL_LCD_GRAPHICS	Pin will function as a graphics LCD peripheral pin
IOPORT_PERIPHERAL_CAC	Pin will function as a CAC peripheral pin
IOPORT_PERIPHERAL_TRACE	Pin will function as a debug trace peripheral pin
IOPORT_PERIPHERAL_OSPI	Pin will function as a OSPI peripheral pin
IOPORT_PERIPHERAL_CEC	Pin will function as a CEC peripheral pin
IOPORT_PERIPHERAL_PGAOUT0	Pin will function as a PGAOUT peripheral pin
IOPORT_PERIPHERAL_PGAOUT1	Pin will function as a PGAOUT peripheral pin

◆ ioport_ethernet_channel_t

enum ioport_ethernet_channel_t	
Enumerator	
IOPORT_ETHERNET_CHANNEL_0	Used to select Ethernet channel 0.
IOPORT_ETHERNET_CHANNEL_1	Used to select Ethernet channel 1.
IOPORT_ETHERNET_CHANNEL_END	Marks end of enum - used by parameter checking.

◆ ioport_ethernet_mode_t

enum ioport_ethernet_mode_t	
Enumerator	
IOPORT_ETHERNET_MODE_RMII	Ethernet PHY mode set to MII.
IOPORT_ETHERNET_MODE_MII	Ethernet PHY mode set to RMII.
IOPORT_ETHERNET_MODE_END	Marks end of enum - used by parameter checking.

◆ ioport_cfg_options_t

enum ioport_cfg_options_t	
Options to configure pin functions	
Enumerator	
IOPORT_CFG_PORT_DIRECTION_INPUT	Sets the pin direction to input (default)
IOPORT_CFG_PORT_DIRECTION_OUTPUT	Sets the pin direction to output.
IOPORT_CFG_PORT_OUTPUT_LOW	Sets the pin level to low.
IOPORT_CFG_PORT_OUTPUT_HIGH	Sets the pin level to high.
IOPORT_CFG_PULLUP_ENABLE	Enables the pin's internal pull-up.
IOPORT_CFG_PIM_TTL	Enables the pin's input mode.
IOPORT_CFG_NMOS_ENABLE	Enables the pin's NMOS open-drain output.
IOPORT_CFG_PMOS_ENABLE	Enables the pin's PMOS open-drain ouput.
IOPORT_CFG_DRIVE_MID	Sets pin drive output to medium.
IOPORT_CFG_DRIVE_HS_HIGH	Sets pin drive output to high along with supporting high speed.
IOPORT_CFG_DRIVE_MID_IIC	Sets pin to drive output needed for IIC on a 20mA port.
IOPORT_CFG_DRIVE_HIGH	Sets pin drive output to high.
IOPORT_CFG_EVENT_RISING_EDGE	Sets pin event trigger to rising edge.
IOPORT_CFG_EVENT_FALLING_EDGE	Sets pin event trigger to falling edge.
IOPORT_CFG_EVENT_BOTH_EDGES	Sets pin event trigger to both edges.
IOPORT_CFG_IRQ_ENABLE	Sets pin as an IRQ pin.
IOPORT_CFG_ANALOG_ENABLE	Enables pin to operate as an analog pin.
IOPORT_CFG_PERIPHERAL_PIN	Enables pin to operate as a peripheral pin.

◆ ioport_pwpr_t

enum ioport_pwpr_t	
Enumerator	
IOPORT_PFS_WRITE_DISABLE	Disable PFS write access.
IOPORT_PFS_WRITE_ENABLE	Enable PFS write access.

4.3.24 JPEG Codec Interface

Interfaces

Detailed Description

Interface for JPEG functions.

Data Structures

struct	jpeg_encode_image_size_t
struct	jpeg_callback_args_t
struct	jpeg_cfg_t
struct	jpeg_api_t
struct	jpeg_instance_t

Typedefs

typedef void	jpeg_ctrl_t

Enumerations

enum	jpeg_color_space_t
enum	jpeg_data_order_t
enum	jpeg_status_t
enum	jpeg_decode_pixel_format_t
enum	jpeg_decode_subsample_t

Data Structure Documentation

◆ jpeg_encode_image_size_t

struct jpeg_encode_image_size_t		
Image parameter structure		
Data Fields		
uint16_t	horizontal_stride_pixels	Horizontal stride.
uint16_t	horizontal_resolution	Horizontal Resolution in pixels.
uint16_t	vertical_resolution	Vertical Resolution in pixels.

◆ jpeg_callback_args_t

struct jpeg_callback_args_t		
Callback status structure		
Data Fields		
jpeg_status_t	status	JPEG status.
uint32_t	image_size	JPEG image size.
void const *	p_context	Pointer to user-provided context.

◆ jpeg_cfg_t

struct jpeg_cfg_t	
User configuration structure, used in open function.	
Data Fields	
IRQn_Type	jedi_irq
	Data transfer interrupt IRQ number.
IRQn_Type	jdti_irq
	Decompression interrupt IRQ number.
uint8_t	jdti_ipl
	Data transfer interrupt priority.
uint8_t	jedi_ipl
	Decompression interrupt priority.

jpeg_mode_t	default_mode
	Mode to use at startup.
jpeg_data_order_t	decode_input_data_order
	Input data stream byte order.
jpeg_data_order_t	decode_output_data_order
	Output data stream byte order.
jpeg_decode_pixel_format_t	pixel_format
	Pixel format.
uint8_t	alpha_value
	Alpha value to be applied to decoded pixel data. Only valid for ARGB8888 format.
void(*	p_decode_callback)(jpeg_callback_args_t *p_args)
	User-supplied callback functions.
void const *	p_decode_context
	Placeholder for user data. Passed to user callback in jpeg_callback_args_t.
jpeg_data_order_t	encode_input_data_order
	Input data stream byte order.
jpeg_data_order_t	encode_output_data_order
	Output data stream byte order.

uint16_t	dri_marker
	DRI Marker setting (0 = No DRI or RST marker)
uint16_t	horizontal_resolution
	Horizontal resolution of input image.
uint16_t	vertical_resolution
	Vertical resolution of input image.
uint16_t	horizontal_stride_pixels
	Horizontal stride of input image.
uint8_t const *	p_quant_luma_table
	Luma quantization table.
uint8_t const *	p_quant_chroma_table
	Chroma quantization table.
uint8_t const *	p_huffman_luma_ac_table
	Huffman AC table for luma.
uint8_t const *	p_huffman_luma_dc_table
	Huffman DC table for luma.
uint8_t const *	p_huffman_chroma_ac_table
	Huffman AC table for chroma.

uint8_t const *	p_huffman_chroma_dc_table
	Huffman DC table for chroma.
void(*	p_encode_callback)(jpeg_callback_args_t *p_args)
	User-supplied callback functions.
void const *	p_encode_context
	Placeholder for user data. Passed to user callback in jpeg_callback_args_t.

◆ jpeg_api_t

struct jpeg_api_t	
JPEG functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(jpeg_ctrl_t *const p_ctrl, jpeg_cfg_t const *const p_cfg)
fsp_err_t(*	inputBufferSet)(jpeg_ctrl_t *const p_ctrl, void *p_buffer, uint32_t buffer_size)
fsp_err_t(*	outputBufferSet)(jpeg_ctrl_t *const p_ctrl, void *p_buffer, uint32_t buffer_size)
fsp_err_t(*	statusGet)(jpeg_ctrl_t *const p_ctrl, jpeg_status_t *const p_status)
fsp_err_t(*	close)(jpeg_ctrl_t *const p_ctrl)
fsp_err_t(*	horizontalStrideSet)(jpeg_ctrl_t *const p_ctrl, uint32_t horizontal_stride)
fsp_err_t(*	pixelFormatGet)(jpeg_ctrl_t *const p_ctrl, jpeg_color_space_t *const p_color_space)
fsp_err_t(*	imageSubsampleSet)(jpeg_ctrl_t *const p_ctrl, jpeg_decode_subsample_t horizontal_subsample,

	jpeg_decode_subsample_t vertical_subsample)
fsp_err_t(*	linesDecodedGet)(jpeg_ctrl_t *const p_ctrl, uint32_t *const p_lines)
fsp_err_t(*	imageSizeGet)(jpeg_ctrl_t *const p_ctrl, uint16_t *p_horizontal_size, uint16_t *p_vertical_size)
fsp_err_t(*	imageSizeSet)(jpeg_ctrl_t *const p_ctrl, jpeg_encode_image_size_t *p_image_size)
fsp_err_t(*	modeSet)(jpeg_ctrl_t *const p_ctrl, jpeg_mode_t mode)

Field Documentation

◆ open

fsp_err_t(* jpeg_api_t::open) (jpeg_ctrl_t *const p_ctrl, jpeg_cfg_t const *const p_cfg)

Initial configuration

Implemented as

- R_JPEG_Open()

Precondition

none

Parameters

[in,out]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ inputBufferSet

fsp_err_t(* jpeg_api_t::inputBufferSet) (jpeg_ctrl_t *const p_ctrl, void *p_buffer, uint32_t buffer_size)

Assign input data buffer to JPEG codec.

Implemented as

- R_JPEG_InputBufferSet()

Precondition

the JPEG codec module must have been opened properly.

Note

The buffer starting address must be 8-byte aligned.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.
[in]	p_buffer	Pointer to the input buffer space
[in]	buffer_size	Size of the input buffer

◆ outputBufferSet

fsp_err_t(* jpeg_api_t::outputBufferSet) (jpeg_ctrl_t *const p_ctrl, void *p_buffer, uint32_t buffer_size)

Assign output buffer to JPEG codec for storing output data.

Implemented as

- R_JPEG_OutputBufferSet()

Precondition

The JPEG codec module must have been opened properly.

Note

The buffer starting address must be 8-byte aligned. For the decoding process, the HLD driver automatically computes the number of lines of the image to decoded so the output data fits into the given space. If the supplied output buffer is not able to hold the entire frame, the application should call the Output Full Callback function so it can be notified when additional buffer space is needed.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.
[in]	p_buffer	Pointer to the output buffer space
[in]	buffer_size	Size of the output buffer

◆ statusGet

fsp_err_t(* jpeg_api_t::statusGet) (jpeg_ctrl_t *const p_ctrl, jpeg_status_t *const p_status)

Retrieve current status of the JPEG codec module.

Implemented as

- R_JPEG_StatusGet()

Precondition

the JPEG codec module must have been opened properly.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.
[out]	p_status	JPEG module status

◆ close

fsp_err_t(* jpeg_api_t::close) (jpeg_ctrl_t *const p_ctrl)

Cancel an outstanding operation.

Implemented as

- R_JPEG_Close()

Precondition

the JPEG codec module must have been opened properly.

Note

If the encoding or the decoding operation is finished without errors, the HLD driver automatically closes the device. In this case, application does not need to explicitly close the JPEG device.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.

◆ horizontalStrideSet

fsp_err_t(* jpeg_api_t::horizontalStrideSet) (jpeg_ctrl_t *const p_ctrl, uint32_t horizontal_stride)

Configure the horizontal stride value.

Implemented as

- R_JPEG_DecodeHorizontalStrideSet()

Precondition

The JPEG codec module must have been opened properly.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.
[in]	horizontal_stride	Horizontal stride value to be used for the decoded image data.
[in]	buffer_size	Size of the output buffer

◆ pixelFormatGet

fsp_err_t(* jpeg_api_t::pixelFormatGet) (jpeg_ctrl_t *const p_ctrl, jpeg_color_space_t *const p_color_space)

Get the input pixel format.

Implemented as

- R_JPEG_DecodePixelFormatGet()

Precondition

the JPEG codec module must have been opened properly.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.
[out]	p_color_space	JPEG input format.

◆ imageSubsampleSet

fsp_err_t(* jpeg_api_t::imageSubsampleSet) (jpeg_ctrl_t *const p_ctrl, jpeg_decode_subsample_t horizontal_subsample, jpeg_decode_subsample_t vertical_subsample)

Configure the horizontal and vertical subsample settings.

Implemented as

- R_JPEG_DecodeImageSubsampleSet()

Precondition

The JPEG codec module must have been opened properly.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.
[in]	horizontal_subsample	Horizontal subsample value
[in]	vertical_subsample	Vertical subsample value

◆ linesDecodedGet

fsp_err_t(* jpeg_api_t::linesDecodedGet) (jpeg_ctrl_t *const p_ctrl, uint32_t *const p_lines)

Return the number of lines decoded into the output buffer.

Implemented as

- R_JPEG_DecodeLinesDecodedGet()

Precondition

the JPEG codec module must have been opened properly.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.
[out]	p_lines	Number of lines decoded

◆ imageSizeGet

fsp_err_t(* jpeg_api_t::imageSizeGet) (jpeg_ctrl_t *const p_ctrl, uint16_t *p_horizontal_size, uint16_t *p_vertical_size)

Retrieve image size during decoding operation.

Implemented as

- R_JPEG_DecodeImageSizeGet()

Precondition

the JPEG codec module must have been opened properly.

Note

If the encoding or the decoding operation is finished without errors, the HLD driver automatically closes the device. In this case, application does not need to explicitly close the JPEG device.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.
[out]	p_horizontal_size	Image horizontal size, in number of pixels.
[out]	p_vertical_size	Image vertical size, in number of pixels.

◆ imageSizeSet

fsp_err_t(* jpeg_api_t::imageSizeSet) (jpeg_ctrl_t *const p_ctrl, jpeg_encode_image_size_t *p_image_size)

Set image parameters to JPEG Codec

Implemented as

- R_JPEG_EncodeImageSizeSet()

Precondition

The JPEG codec module must have been opened properly.

Parameters

[in,out]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_image_size	Pointer to the RAW image parameters

◆ modeSet

fsp_err_t(* jpeg_api_t::modeSet) (jpeg_ctrl_t *const p_ctrl, jpeg_mode_t mode)

Switch between encode and decode mode or vice-versa.

Implemented as

- R_JPEG_ModeSet()

Precondition

The JPEG codec module must have been opened properly. The JPEG Codec can only perform one operation at a time and requires different configuration for encode and decode. This function facilitates easy switching between the two modes in case both are needed in an application.

Parameters

[in]	p_ctrl	Control block set in jpeg_api_t::open call.
[in]	mode	Mode to switch to

◆ jpeg_instance_t

struct jpeg_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
jpeg_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
jpeg_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
jpeg_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ jpeg_ctrl_t

typedef void jpeg_ctrl_t

JPEG decode control block. Allocate an instance specific control block to pass into the JPEG decode API calls.

Implemented as

- jpeg_instance_ctrl_t

Enumeration Type Documentation

◆ jpeg_color_space_t

enum jpeg_color_space_t	
Configuration for this module Image color space definitions	
Enumerator	
JPEG_COLOR_SPACE_YCBCR444	Color Space YCbCr 444.
JPEG_COLOR_SPACE_YCBCR422	Color Space YCbCr 422.
JPEG_COLOR_SPACE_YCBCR420	Color Space YCbCr 420.
JPEG_COLOR_SPACE_YCBCR411	Color Space YCbCr 411.

◆ jpeg_data_order_t

enum jpeg_data_order_t	
Multi-byte Data Format	
Enumerator	
JPEG_DATA_ORDER_NORMAL	(1)(2)(3)(4)(5)(6)(7)(8) Normal byte order
JPEG_DATA_ORDER_BYTE_SWAP	(2)(1)(4)(3)(6)(5)(8)(7) Byte Swap
JPEG_DATA_ORDER_WORD_SWAP	(3)(4)(1)(2)(7)(8)(5)(6) Word Swap
JPEG_DATA_ORDER_WORD_BYTE_SWAP	(4)(3)(2)(1)(8)(7)(6)(5) Word-Byte Swap
JPEG_DATA_ORDER_LONGWORD_SWAP	(5)(6)(7)(8)(1)(2)(3)(4) Longword Swap
JPEG_DATA_ORDER_LONGWORD_BYTE_SWAP	(6)(5)(8)(7)(2)(1)(4)(3) Longword Byte Swap
JPEG_DATA_ORDER_LONGWORD_WORD_SWAP	(7)(8)(5)(6)(3)(4)(1)(2) Longword Word Swap
JPEG_DATA_ORDER_LONGWORD_WORD_BYTE_SWAP	(8)(7)(6)(5)(4)(3)(2)(1) Longword Word Byte Swap

◆ jpeg_status_t

enum jpeg_status_t	
JPEG HLD driver internal status information. The driver can simultaneously be in more than any one status at the same time. Parse the status bit-fields using the definitions in this enum to determine driver status	
Enumerator	
JPEG_STATUS_NONE	JPEG codec module is not initialized.
JPEG_STATUS_IDLE	JPEG Codec module is open but not running.
JPEG_STATUS_RUNNING	JPEG Codec is running.
JPEG_STATUS_HEADER_PROCESSING	JPEG Codec module is reading the JPEG header information.
JPEG_STATUS_INPUT_PAUSE	JPEG Codec paused waiting for more input data.
JPEG_STATUS_OUTPUT_PAUSE	JPEG Codec paused after it decoded the number of lines specified by user.
JPEG_STATUS_IMAGE_SIZE_READY	JPEG decoding operation obtained image size, and paused.
JPEG_STATUS_ERROR	JPEG Codec module encountered an error.
JPEG_STATUS_OPERATION_COMPLETE	JPEG Codec has completed the operation.

◆ jpeg_decode_pixel_format_t

enum jpeg_decode_pixel_format_t	
Pixel Data Format	
Enumerator	
JPEG_DECODE_PIXEL_FORMAT_ARGB8888	Pixel Data ARGB8888 format.
JPEG_DECODE_PIXEL_FORMAT_RGB565	Pixel Data RGB565 format.

◆ jpeg_decode_subsample_t

enum jpeg_decode_subsample_t	
Data type for horizontal and vertical subsample settings. This setting applies only to the decoding operation.	
Enumerator	
JPEG_DECODE_OUTPUT_NO_SUBSAMPLE	No subsample. The image is decoded with no reduction in size.
JPEG_DECODE_OUTPUT_SUBSAMPLE_HALF	The output image size is reduced by half.
JPEG_DECODE_OUTPUT_SUBSAMPLE_ONE_QUARTER	The output image size is reduced to one-quarter.
JPEG_DECODE_OUTPUT_SUBSAMPLE_ONE_EIGHTH	The output image size is reduced to one-eighth.

4.3.25 Key Matrix Interface

Interfaces

Detailed Description

Interface for key matrix functions.

Summary

The KEYMATRIX interface provides standard Key Matrix functionality including event generation on a rising or falling edge for one or more channels at the same time. The generated event indicates all channels that are active in that instant via a bit mask. This allows the interface to be used with a matrix configuration or a one-to-one hardware implementation that is triggered on either a rising or a falling edge.

Implemented by:

- Key Interrupt (r_kint)

Data Structures

struct	keymatrix_callback_args_t
struct	keymatrix_cfg_t
struct	keymatrix_api_t

struct	keymatrix_instance_t

Typedefs

typedef void	keymatrix_ctrl_t

Enumerations

enum	keymatrix_trigger_t

Data Structure Documentation

◆ keymatrix_callback_args_t

struct keymatrix_callback_args_t		
Callback function parameter data		
Data Fields		
void const *	p_context	Holder for user data. Set in keymatrix_api_t::open function in keymatrix_cfg_t.
uint32_t	channel_mask	Bit vector representing the physical hardware channel(s) that caused the interrupt.

◆ keymatrix_cfg_t

struct keymatrix_cfg_t	
User configuration structure, used in open function	
Data Fields	
uint32_t	channel_mask
	Key Input channel(s). Bit mask of channels to open.
keymatrix_trigger_t	trigger
	Key Input trigger setting.
uint8_t	ipl
	Interrupt priority level.
IRQn_Type	irq
	NVIC IRQ number.

void(*	p_callback)(keymatrix_callback_args_t *p_args)
	Callback for key interrupt ISR.
void const *	p_context
	Holder for user data. Passed to callback in keymatrix_user_cb_data_t.
void const *	p_extend
	Extension parameter for hardware specific settings.

◆ keymatrix_api_t

struct keymatrix_api_t	
Key Matrix driver structure. Key Matrix functions implemented at the HAL layer will use this API.	
Data Fields	
fsp_err_t(*	open)(keymatrix_ctrl_t *const p_ctrl, keymatrix_cfg_t const *const p_cfg)
fsp_err_t(*	enable)(keymatrix_ctrl_t *const p_ctrl)
fsp_err_t(*	disable)(keymatrix_ctrl_t *const p_ctrl)
fsp_err_t(*	close)(keymatrix_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* keymatrix_api_t::open) (keymatrix_ctrl_t *const p_ctrl, keymatrix_cfg_t const *const p_cfg)

Initial configuration.

Implemented as

- R_KINT_Open()

Parameters

[out]	p_ctrl	Pointer to control block. Must be declared by user. Value set in this function.
[in]	p_cfg	Pointer to configuration structure. All elements of the structure must be set by user.

◆ enable

fsp_err_t(* keymatrix_api_t::enable) (keymatrix_ctrl_t *const p_ctrl)

Enable Key interrupt

Implemented as

- R_KINT_Enable()

Parameters

[in]	p_ctrl	Control block pointer set in Open call for this Key interrupt.

◆ disable

fsp_err_t(* keymatrix_api_t::disable) (keymatrix_ctrl_t *const p_ctrl)

Disable Key interrupt.

Implemented as

- R_KINT_Disable()

Parameters

[in]	p_ctrl	Control block pointer set in Open call for this Key interrupt.

◆ close

fsp_err_t(* keymatrix_api_t::close) (keymatrix_ctrl_t *const p_ctrl)

Allow driver to be reconfigured. May reduce power consumption.

Implemented as

- R_KINT_Close()

Parameters

[in]	p_ctrl	Control block pointer set in Open call for this Key interrupt.

◆ keymatrix_instance_t

struct keymatrix_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
keymatrix_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
keymatrix_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
keymatrix_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ keymatrix_ctrl_t

typedef void keymatrix_ctrl_t

Key matrix control block. Allocate an instance specific control block to pass into the key matrix API calls.

Implemented as

- kint_instance_ctrl_t

Enumeration Type Documentation

◆ keymatrix_trigger_t

enum keymatrix_trigger_t	
Trigger type: rising edge, falling edge	
Enumerator	
KEYMATRIX_TRIG_FALLING	Falling edge trigger.
KEYMATRIX_TRIG_RISING	Rising edge trigger.

4.3.26 Low Power Modes Interface

Interfaces

Detailed Description

Interface for accessing low power modes.

Summary

This section defines the API for the LPM (Low Power Mode) Driver. The LPM Driver provides functions for controlling power consumption by configuring and transitioning to a low power mode. The LPM driver supports configuration of MCU low power modes using the LPM hardware peripheral. The LPM driver supports low power modes deep standby, standby, sleep, and snooze.

Note

Not all low power modes are available on all MCUs.

The LPM interface is implemented by:

- Low Power Modes (r_lpm)

Data Structures

struct	lpm_cfg_t
struct	lpm_api_t
struct	lpm_instance_t

Typedefs

typedef void	lpm_ctrl_t

Enumerations

enum	lpm_mode_t

enum	lpm_snooze_request_t
enum	lpm_snooze_end_t
enum	lpm_snooze_cancel_t
enum	lpm_snooze_dtc_t
enum	lpm_standby_wake_source_t
enum	lpm_io_port_t
enum	lpm_power_supply_t
enum	lpm_deep_standby_cancel_edge_t
enum	lpm_deep_standby_cancel_source_t
enum	lpm_output_port_enable_t

Data Structure Documentation

◆ lpm_cfg_t

struct lpm_cfg_t		
User configuration structure, used in open function		
Data Fields		
lpm_mode_t	low_power_mode	Low Power Mode
lpm_standby_wake_source_bits_t	standby_wake_sources	Bitwise list of sources to wake from standby
lpm_snooze_request_t	snooze_request_source	Snooze request source
lpm_snooze_end_bits_t	snooze_end_sources	Bitwise list of snooze end sources
lpm_snooze_cancel_t	snooze_cancel_sources	List of snooze cancel sources
lpm_snooze_dtc_t	dtc_state_in_snooze	State of DTC in snooze mode, enabled or disabled
void const *	p_extend	Placeholder for extension.

◆ lpm_api_t

struct lpm_api_t	
LPM driver structure. General LPM functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(lpm_ctrl_t *const p_api_ctrl, lpm_cfg_t const *const p_cfg)

fsp_err_t(*	close)(lpm_ctrl_t *const p_api_ctrl)
fsp_err_t(*	lowPowerReconfigure)(lpm_ctrl_t *const p_api_ctrl, lpm_cfg_t const *const p_cfg)
fsp_err_t(*	lowPowerModeEnter)(lpm_ctrl_t *const p_api_ctrl)
fsp_err_t(*	ioKeepClear)(lpm_ctrl_t *const p_api_ctrl)

Field Documentation

◆ open

fsp_err_t(* lpm_api_t::open) (lpm_ctrl_t *const p_api_ctrl, lpm_cfg_t const *const p_cfg)

Initialization function

Implemented as

- R_LPM_Open()

◆ close

fsp_err_t(* lpm_api_t::close) (lpm_ctrl_t *const p_api_ctrl)

Initialization function

Implemented as

- R_LPM_Close()

◆ lowPowerReconfigure

fsp_err_t(* lpm_api_t::lowPowerReconfigure) (lpm_ctrl_t *const p_api_ctrl, lpm_cfg_t const *const p_cfg)

Configure a low power mode.

Implemented as

- R_LPM_LowPowerReconfigure()

Parameters

[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ lowPowerModeEnter

fsp_err_t(* lpm_api_t::lowPowerModeEnter) (lpm_ctrl_t *const p_api_ctrl)

Enter low power mode (sleep/standby/deep standby) using WFI macro. Function will return after waking from low power mode.

Implemented as

- R_LPM_LowPowerModeEnter()

◆ ioKeepClear

fsp_err_t(* lpm_api_t::ioKeepClear) (lpm_ctrl_t *const p_api_ctrl)

Clear the IOKEEP bit after deep software standby.

- **Implemented as**

- R_LPM_IoKeepClear()

◆ lpm_instance_t

struct lpm_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

lpm_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
lpm_cfg_t const *const	p_cfg	Pointer to the configuration structure for this instance.
lpm_api_t const *const	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ lpm_ctrl_t

typedef void lpm_ctrl_t

LPM control block. Allocate an instance specific control block to pass into the LPM API calls.

Implemented as

- lpm_instance_ctrl_t

Enumeration Type Documentation

◆ lpm_mode_t

enum lpm_mode_t	
Low power modes	
Enumerator	
LPM_MODE_SLEEP	Sleep mode.
LPM_MODE_STANDBY	Software Standby mode.
LPM_MODE_STANDBY_SNOOZE	Software Standby mode with Snooze mode enabled.
LPM_MODE_DEEP	Deep Software Standby mode.

◆ lpm_snooze_request_t

enum lpm_snooze_request_t	
Snooze request sources	
Enumerator	
LPM_SNOOZE_REQUEST_RXD0_FALLING	Enable RXD0 falling edge snooze request.
LPM_SNOOZE_REQUEST_IRQ0	Enable IRQ0 pin snooze request.
LPM_SNOOZE_REQUEST_IRQ1	Enable IRQ1 pin snooze request.
LPM_SNOOZE_REQUEST_IRQ2	Enable IRQ2 pin snooze request.
LPM_SNOOZE_REQUEST_IRQ3	Enable IRQ3 pin snooze request.
LPM_SNOOZE_REQUEST_IRQ4	Enable IRQ4 pin snooze request.
LPM_SNOOZE_REQUEST_IRQ5	Enable IRQ5 pin snooze request.
LPM_SNOOZE_REQUEST_IRQ6	Enable IRQ6 pin snooze request.
LPM_SNOOZE_REQUEST_IRQ7	Enable IRQ7 pin snooze request.
LPM_SNOOZE_REQUEST_IRQ8	Enable IRQ8 pin snooze request.
LPM_SNOOZE_REQUEST_IRQ9	Enable IRQ9 pin snooze request.
LPM_SNOOZE_REQUEST_IRQ10	Enable IRQ10 pin snooze request.
LPM_SNOOZE_REQUEST_IRQ11	Enable IRQ11 pin snooze request.

LPM_SNOOZE_REQUEST_IRQ12	Enable IRQ12 pin snooze request.
LPM_SNOOZE_REQUEST_IRQ13	Enable IRQ13 pin snooze request.
LPM_SNOOZE_REQUEST_IRQ14	Enable IRQ14 pin snooze request.
LPM_SNOOZE_REQUEST_IRQ15	Enable IRQ15 pin snooze request.
LPM_SNOOZE_REQUEST_KEY	Enable KR snooze request.
LPM_SNOOZE_REQUEST_ACMPHS0	Enable High-speed analog comparator 0 snooze request.
LPM_SNOOZE_REQUEST_RTC_ALARM	Enable RTC alarm snooze request.
LPM_SNOOZE_REQUEST_RTC_PERIOD	Enable RTC period snooze request.
LPM_SNOOZE_REQUEST_AGT1_UNDERFLOW	Enable AGT1 underflow snooze request.
LPM_SNOOZE_REQUEST_AGT1_COMPARE_A	Enable AGT1 compare match A snooze request.
LPM_SNOOZE_REQUEST_AGT1_COMPARE_B	Enable AGT1 compare match B snooze request.
LPM_SNOOZE_REQUEST_AGT3_UNDERFLOW	Enable AGT3 underflow snooze request.
LPM_SNOOZE_REQUEST_AGT3_COMPARE_A	Enable AGT3 compare match A snooze request.
LPM_SNOOZE_REQUEST_AGT3_COMPARE_B	Enable AGT3 compare match B snooze request.

◆ lpm_snooze_end_t

enum lpm_snooze_end_t	
Snooze end control	
Enumerator	
LPM_SNOOZE_END_STANDBY_WAKE_SOURCES	Transition from Snooze to Normal mode directly.
LPM_SNOOZE_END_AGT1_UNDERFLOW	AGT1 underflow.
LPM_SNOOZE_END_DTC_TRANS_COMPLETE	Last DTC transmission completion.
LPM_SNOOZE_END_DTC_TRANS_COMPLETE_NEGATED	Not Last DTC transmission completion.
LPM_SNOOZE_END_ADC0_COMPARE_MATCH	ADC Channel 0 compare match.
LPM_SNOOZE_END_ADC0_COMPARE_MISMATCH	ADC Channel 0 compare mismatch.
LPM_SNOOZE_END_ADC1_COMPARE_MATCH	ADC 1 compare match.
LPM_SNOOZE_END_ADC1_COMPARE_MISMATCH	ADC 1 compare mismatch.
LPM_SNOOZE_END_SCI0_ADDRESS_MATCH	SCI0 address mismatch.
LPM_SNOOZE_END_AGT3_UNDERFLOW	AGT3 underflow.

◆ lpm_snooze_cancel_t

enum lpm_snooze_cancel_t	
Snooze cancel control	
Enumerator	
LPM_SNOOZE_CANCEL_SOURCE_NONE	No snooze cancel source.
LPM_SNOOZE_CANCEL_SOURCE_ADC0_WCMPM	ADC Channel 0 window compare match.
LPM_SNOOZE_CANCEL_SOURCE_ADC0_WCMPUM	ADC Channel 0 window compare mismatch.
LPM_SNOOZE_CANCEL_SOURCE_DTC_COMPLETE	DTC transfer completion.
LPM_SNOOZE_CANCEL_SOURCE_DOC_DOPCI	Data operation circuit interrupt.

◆ lpm_snooze_dtc_t

enum lpm_snooze_dtc_t	
DTC Enable in Snooze Mode	
Enumerator	
LPM_SNOOZE_DTC_DISABLE	Disable DTC operation.
LPM_SNOOZE_DTC_ENABLE	Enable DTC operation.

◆ lpm_standby_wake_source_t

enum lpm_standby_wake_source_t	
Wake from standby mode sources, does not apply to sleep or deep standby modes	
Enumerator	
LPM_STANDBY_WAKE_SOURCE_IRQ0	IRQ0.
LPM_STANDBY_WAKE_SOURCE_IRQ1	IRQ1.
LPM_STANDBY_WAKE_SOURCE_IRQ2	IRQ2.
LPM_STANDBY_WAKE_SOURCE_IRQ3	IRQ3.
LPM_STANDBY_WAKE_SOURCE_IRQ4	IRQ4.
LPM_STANDBY_WAKE_SOURCE_IRQ5	IRQ5.
LPM_STANDBY_WAKE_SOURCE_IRQ6	IRQ6.
LPM_STANDBY_WAKE_SOURCE_IRQ7	IRQ7.
LPM_STANDBY_WAKE_SOURCE_IRQ8	IRQ8.
LPM_STANDBY_WAKE_SOURCE_IRQ9	IRQ9.
LPM_STANDBY_WAKE_SOURCE_IRQ10	IRQ10.
LPM_STANDBY_WAKE_SOURCE_IRQ11	IRQ11.
LPM_STANDBY_WAKE_SOURCE_IRQ12	IRQ12.
LPM_STANDBY_WAKE_SOURCE_IRQ13	IRQ13.
LPM_STANDBY_WAKE_SOURCE_IRQ14	IRQ14.

LPM_STANDBY_WAKE_SOURCE_IRQ15	IRQ15.
LPM_STANDBY_WAKE_SOURCE_IWDT	Independent watchdog interrupt.
LPM_STANDBY_WAKE_SOURCE_KEY	Key interrupt.
LPM_STANDBY_WAKE_SOURCE_LVD1	Low Voltage Detection 1 interrupt.
LPM_STANDBY_WAKE_SOURCE_LVD2	Low Voltage Detection 2 interrupt.
LPM_STANDBY_WAKE_SOURCE_VBATT	VBATT Monitor interrupt.
LPM_STANDBY_WAKE_SOURCE_ACMPHS0	Analog Comparator High-speed 0 interrupt.
LPM_STANDBY_WAKE_SOURCE_ACMPLP0	Analog Comparator Low-speed 0 interrupt.
LPM_STANDBY_WAKE_SOURCE_RTCALM	RTC Alarm interrupt.
LPM_STANDBY_WAKE_SOURCE_RTCPRD	RTC Period interrupt.
LPM_STANDBY_WAKE_SOURCE_USBHS	USB High-speed interrupt.
LPM_STANDBY_WAKE_SOURCE_USBFS	USB Full-speed interrupt.
LPM_STANDBY_WAKE_SOURCE_AGT1UD	AGT1 underflow interrupt.
LPM_STANDBY_WAKE_SOURCE_AGT1CA	AGT1 compare match A interrupt.
LPM_STANDBY_WAKE_SOURCE_AGT1CB	AGT1 compare match B interrupt.
LPM_STANDBY_WAKE_SOURCE_IIC0	I2C 0 interrupt.
LPM_STANDBY_WAKE_SOURCE_AGT3UD	AGT3 underflow interrupt.
LPM_STANDBY_WAKE_SOURCE_AGT3CA	AGT3 compare match A interrupt.
LPM_STANDBY_WAKE_SOURCE_AGT3CB	AGT3 compare match B interrupt.

◆ lpm_io_port_t

enum lpm_io_port_t	
I/O port state after Deep Software Standby mode	
Enumerator	
LPM_IO_PORT_RESET	When the Deep Software Standby mode is canceled, the I/O ports are in the reset state
LPM_IO_PORT_NO_CHANGE	When the Deep Software Standby mode is canceled, the I/O ports are in the same state as in the Deep Software Standby mode

◆ lpm_power_supply_t

enum lpm_power_supply_t	
Power supply control	
Enumerator	
LPM_POWER_SUPPLY_DEEPCUT0	Power to the standby RAM, Low-speed on-chip oscillator, AGTn, and USBFS/HS resume detecting unit is supplied in deep software standby mode
LPM_POWER_SUPPLY_DEEPCUT1	Power to the standby RAM, Low-speed on-chip oscillator, AGTn, and USBFS/HS resume detecting unit is not supplied in deep software standby mode
LPM_POWER_SUPPLY_DEEPCUT3	Power to the standby RAM, Low-speed on-chip oscillator, AGTn, and USBFS/HS resume detecting unit is not supplied in deep software standby mode. In addition, LVD is disabled and the low power function in a poweron reset circuit is enabled

◆ lpm_deep_standby_cancel_edge_t

enum lpm_deep_standby_cancel_edge_t	
Deep Standby Interrupt Edge	
Enumerator	
LPM_DEEP_STANDBY_CANCEL_SOURCE_EDGE_NONE	No options for a deep standby cancel source.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ0_RIS	

ING	IRQ0-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ0_FALLING	IRQ0-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ1_RISING	IRQ1-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ1_FALLING	IRQ1-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ2_RISING	IRQ2-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ2_FALLING	IRQ2-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ3_RISING	IRQ3-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ3_FALLING	IRQ3-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ4_RISING	IRQ4-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ4_FALLING	IRQ4-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ5_RISING	IRQ5-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ5_FALLING	IRQ5-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ6_RISING	IRQ6-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ6_FALLING	IRQ6-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ7_RISING	IRQ7-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ7_FALLING	IRQ7-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ8_RISING	IRQ8-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ8_FALLING	IRQ8-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ9_RISING	IRQ9-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ9_FALLING	IRQ9-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ10_RISING	IRQ10-DS Pin Rising Edge.

LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ10_FALLING	IRQ10-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ11_RISING	IRQ11-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ11_FALLING	IRQ11-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ12_RISING	IRQ12-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ12_FALLING	IRQ12-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ13_RISING	IRQ13-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ13_FALLING	IRQ13-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ14_RISING	IRQ14-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ14_FALLING	IRQ14-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ15_RISING	IRQ14-DS Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ15_FALLING	IRQ14-DS Pin Falling Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_LVD1_RISING	LVD1 Rising Slope.
LPM_DEEP_STANDBY_CANCEL_SOURCE_LVD1_FALLING	LVD1 Falling Slope.
LPM_DEEP_STANDBY_CANCEL_SOURCE_LVD2_RISING	LVD2 Rising Slope.
LPM_DEEP_STANDBY_CANCEL_SOURCE_LVD2_FALLING	LVD2 Falling Slope.
LPM_DEEP_STANDBY_CANCEL_SOURCE_NMI_RISING	NMI Pin Rising Edge.
LPM_DEEP_STANDBY_CANCEL_SOURCE_NMI_FALLING	NMI Pin Falling Edge.

◆ lpm_deep_standby_cancel_source_t

enum lpm_deep_standby_cancel_source_t	
Deep Standby cancel sources	
Enumerator	
LPM_DEEP_STANDBY_CANCEL_SOURCE_RESET_ONLY	Cancel deep standby only by reset.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ0	IRQ0.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ1	IRQ1.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ2	IRQ2.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ3	IRQ3.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ4	IRQ4.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ5	IRQ5.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ6	IRQ6.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ7	IRQ7.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ8	IRQ8.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ9	IRQ9.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ10	IRQ10.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ11	IRQ11.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ12	IRQ12.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ13	IRQ13.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ14	IRQ14.
LPM_DEEP_STANDBY_CANCEL_SOURCE_IRQ15	IRQ15.
LPM_DEEP_STANDBY_CANCEL_SOURCE_LVD1	LVD1.
LPM_DEEP_STANDBY_CANCEL_SOURCE_LVD2	LVD2.
LPM_DEEP_STANDBY_CANCEL_SOURCE_RTC_INTERVAL	RTC Interval Interrupt.

LPM_DEEP_STANDBY_CANCEL_SOURCE_RTC_ALARM	RTC Alarm Interrupt.
LPM_DEEP_STANDBY_CANCEL_SOURCE_NMI	NMI.
LPM_DEEP_STANDBY_CANCEL_SOURCE_USBFS	USBFS Suspend/Resume.
LPM_DEEP_STANDBY_CANCEL_SOURCE_USBHS	USBHS Suspend/Resume.
LPM_DEEP_STANDBY_CANCEL_SOURCE_AGT1	AGT1 Underflow.

◆ **lpm_output_port_enable_t**

enum lpm_output_port_enable_t	
Output port enable	
Enumerator	
LPM_OUTPUT_PORT_ENABLE_HIGH_IMPEDANCE	0: In Software Standby Mode or Deep Software Standby Mode, the address output pins, data output pins, and other bus control signal output pins are set to the high-impedance state. In Snooze, the status of the address bus and bus control signals are same as before entering Software Standby Mode.
LPM_OUTPUT_PORT_ENABLE_RETAIN	1: In Software Standby Mode, the address output pins, data output pins, and other bus control signal output pins retain the output state.

4.3.27 Low Voltage Detection Interface

Interfaces

Detailed Description

Interface for Low Voltage Detection.

Summary

The LVD driver provides functions for configuring the LVD voltage monitors and detectors.

Implemented by:

- Low Voltage Detection (r_lvd)

Data Structures

struct	lvd_status_t
struct	lvd_callback_args_t
struct	lvd_cfg_t
struct	lvd_api_t
struct	lvd_instance_t

Typedefs

typedef void	lvd_ctrl_t

Enumerations

enum	lvd_threshold_t
enum	lvd_response_t
enum	lvd_voltage_slope_t
enum	lvd_sample_clock_t
enum	lvd_negation_delay_t
enum	lvd_threshold_crossing_t
enum	lvd_current_state_t

Data Structure Documentation

◆ lvd_status_t

struct lvd_status_t		
Current state of a voltage monitor.		
Data Fields		
lvd_threshold_crossing_t	crossing_detected	Threshold crossing detection (latched)
lvd_current_state_t	current_state	Instantaneous status of monitored voltage (above or below threshold)

◆ lvd_callback_args_t

struct lvd_callback_args_t
LVD callback parameter definition

Data Fields		
uint32_t	monitor_number	Monitor number.
lvd_current_state_t	current_state	Current state of the voltage monitor.
void const *	p_context	Placeholder for user data.

◆ lvd_cfg_t

struct lvd_cfg_t	
LVD configuration structure	
Data Fields	
uint32_t	monitor_number
lvd_threshold_t	voltage_threshold
lvd_response_t	detection_response
lvd_voltage_slope_t	voltage_slope
lvd_negation_delay_t	negation_delay
lvd_sample_clock_t	sample_clock_divisor
IRQn_Type	irq
uint8_t	monitor_ipl
void(*	p_callback)(lvd_callback_args_t *p_args)
void const *	p_context
void const *	p_extend

Field Documentation

◆ **monitor_number**

uint32_t lvd_cfg_t::monitor_number

Monitor number, 1, 2, ...

◆ **voltage_threshold**

lvd_threshold_t lvd_cfg_t::voltage_threshold

Threshold for out of range voltage detection

◆ **detection_response**

lvd_response_t lvd_cfg_t::detection_response

Response on detecting a threshold crossing

◆ **voltage_slope**

lvd_voltage_slope_t lvd_cfg_t::voltage_slope

Direction of voltage crossing that will trigger a detection (Rising Edge, Falling Edge, Both).

◆ **negation_delay**

lvd_negation_delay_t lvd_cfg_t::negation_delay

Negation of LVD signal follows reset or voltage in range

◆ **sample_clock_divisor**

lvd_sample_clock_t lvd_cfg_t::sample_clock_divisor

Sample clock divider, use LVD_SAMPLE_CLOCK_DISABLED to disable digital filtering

◆ **irq**

IRQn_Type lvd_cfg_t::irq

Interrupt number.

◆ **monitor_ipl**

uint8_t lvd_cfg_t::monitor_ipl

Interrupt priority level.

◆ **p_callback**

void(* lvd_cfg_t::p_callback) (lvd_callback_args_t *p_args)

User function to be called from interrupt

◆ **p_context**

void const* lvd_cfg_t::p_context

Placeholder for user data. Passed to the user callback in

◆ p_extend

void const* lvd_cfg_t::p_extend
Extension parameter for hardware specific settings

◆ lvd_api_t

struct lvd_api_t	
LVD driver API structure. LVD driver functions implemented at the HAL layer will adhere to this API.	
Data Fields	
fsp_err_t(*	open)(lvd_ctrl_t *const p_ctrl, lvd_cfg_t const *const p_cfg)
fsp_err_t(*	statusGet)(lvd_ctrl_t *const p_ctrl, lvd_status_t *p_lvd_status)
fsp_err_t(*	statusClear)(lvd_ctrl_t *const p_ctrl)
fsp_err_t(*	callbackSet)(lvd_ctrl_t *const p_api_ctrl, void(*p_callback)(lvd_callback_args_t *), void const *const p_context, lvd_callback_args_t *const p_callback_memory)
fsp_err_t(*	close)(lvd_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* lvd_api_t::open) (lvd_ctrl_t *const p_ctrl, lvd_cfg_t const *const p_cfg)

Initializes a low voltage detection driver according to the passed-in configuration structure.

Implemented as

- R_LVD_Open()

Parameters

[in]	p_ctrl	Pointer to control structure for the driver instance
[in]	p_cfg	Pointer to the configuration structure for the driver instance

◆ statusGet

fsp_err_t(* lvd_api_t::statusGet) (lvd_ctrl_t *const p_ctrl, lvd_status_t *p_lvd_status)

Get the current state of the monitor, (threshold crossing detected, voltage currently above or below threshold). Must be used if the peripheral was initialized with lvd_response_t set to LVD_RESPONSE_NONE.

Implemented as

- R_LVD_StatusGet()

Parameters

[in]	p_ctrl	Pointer to the control structure for the driver instance
[in,out]	p_lvd_status	Pointer to a lvd_status_t structure

◆ statusClear

fsp_err_t(* lvd_api_t::statusClear) (lvd_ctrl_t *const p_ctrl)

Clears the latched status of the monitor. Must be used if the peripheral was initialized with lvd_response_t set to LVD_RESPONSE_NONE.

Implemented as

- R_LVD_StatusClear()

Parameters

[in]	p_ctrl	Pointer to the control structure for the driver instance

◆ callbackSet

fsp_err_t(* lvd_api_t::callbackSet) (lvd_ctrl_t *const p_api_ctrl, void(*p_callback)(lvd_callback_args_t *), void const *const p_context, lvd_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_LVD_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the LVD control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ close

fsp_err_t(* lvd_api_t::close) (lvd_ctrl_t *const p_ctrl)

Disables the LVD peripheral. Closes the driver instance.

Implemented as

- R_LVD_Close()

Parameters

[in]	p_ctrl	Pointer to the control structure for the driver instance

◆ lvd_instance_t

struct lvd_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields		
lvd_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
lvd_cfg_t const *	p_cfg	Pointer to the configuration structure for this interface instance.

lvd_api_t const *	p_api	Pointer to the API structure for this interface instance.

Typedef Documentation

◆ lvd_ctrl_t

typedef void lvd_ctrl_t

LVD control block. Allocate an instance specific control block to pass into the LVD API calls.

Implemented as

- lvd_instance_ctrl_t

Enumeration Type Documentation

◆ lvd_threshold_t

enum lvd_threshold_t

Register definitions, common services, and error codes. Voltage detection level The thresholds supported by each MCU are in the MCU User's Manual as well as in the r_lvd module description on the stack tab of the RA project.

Enumerator	
LVD_THRESHOLD_MONITOR_1_LEVEL_4_29V	4.29V
LVD_THRESHOLD_MONITOR_1_LEVEL_4_14V	4.14V
LVD_THRESHOLD_MONITOR_1_LEVEL_4_02V	4.02V
LVD_THRESHOLD_MONITOR_1_LEVEL_3_84V	3.84V
LVD_THRESHOLD_MONITOR_1_LEVEL_3_10V	3.10V
LVD_THRESHOLD_MONITOR_1_LEVEL_3_00V	3.00V
LVD_THRESHOLD_MONITOR_1_LEVEL_2_90V	2.90V
LVD_THRESHOLD_MONITOR_1_LEVEL_2_79V	2.79V
LVD_THRESHOLD_MONITOR_1_LEVEL_2_68V	2.68V
LVD_THRESHOLD_MONITOR_1_LEVEL_2_58V	2.58V
LVD_THRESHOLD_MONITOR_1_LEVEL_2_48V	2.48V
LVD_THRESHOLD_MONITOR_1_LEVEL_2_20V	2.20V

LVD_THRESHOLD_MONITOR_1_LEVEL_1_96V	1.96V
LVD_THRESHOLD_MONITOR_1_LEVEL_1_86V	1.86V
LVD_THRESHOLD_MONITOR_1_LEVEL_1_75V	1.75V
LVD_THRESHOLD_MONITOR_1_LEVEL_1_65V	1.65V
LVD_THRESHOLD_MONITOR_1_LEVEL_2_99V	2.99V
LVD_THRESHOLD_MONITOR_1_LEVEL_2_92V	2.92V
LVD_THRESHOLD_MONITOR_1_LEVEL_2_85V	2.85V
LVD_THRESHOLD_MONITOR_2_LEVEL_4_29V	4.29V
LVD_THRESHOLD_MONITOR_2_LEVEL_4_14V	4.14V
LVD_THRESHOLD_MONITOR_2_LEVEL_4_02V	4.02V
LVD_THRESHOLD_MONITOR_2_LEVEL_3_84V	3.84V
LVD_THRESHOLD_MONITOR_2_LEVEL_2_99V	2.99V
LVD_THRESHOLD_MONITOR_2_LEVEL_2_92V	2.92V
LVD_THRESHOLD_MONITOR_2_LEVEL_2_85V	2.85V

◆ lvd_response_t

enum lvd_response_t	
Response types for handling threshold crossing event.	
Enumerator	
LVD_RESPONSE_NMI	Non-maskable interrupt.
LVD_RESPONSE_INTERRUPT	Maskable interrupt.
LVD_RESPONSE_RESET	Reset.
LVD_RESPONSE_NONE	No response, status must be requested via statusGet function.

◆ lvd_voltage_slope_t

enum lvd_voltage_slope_t	
The direction from which Vcc must cross the threshold to trigger a detection (rising, falling, or both).	
Enumerator	
LVD_VOLTAGE_SLOPE_RISING	When VCC >= Vdet2 (rise) is detected.
LVD_VOLTAGE_SLOPE_FALLING	When VCC < Vdet2 (drop) is detected.
LVD_VOLTAGE_SLOPE_BOTH	When drop and rise are detected.

◆ lvd_sample_clock_t

enum lvd_sample_clock_t	
Sample clock divider, use LVD_SAMPLE_CLOCK_DISABLED to disable digital filtering	
Enumerator	
LVD_SAMPLE_CLOCK_LOCO_DIV_2	Digital filter sample clock is LOCO divided by 2.
LVD_SAMPLE_CLOCK_LOCO_DIV_4	Digital filter sample clock is LOCO divided by 4.
LVD_SAMPLE_CLOCK_LOCO_DIV_8	Digital filter sample clock is LOCO divided by 8.
LVD_SAMPLE_CLOCK_LOCO_DIV_16	Digital filter sample clock is LOCO divided by 16.
LVD_SAMPLE_CLOCK_DISABLED	Digital filter is disabled.

◆ lvd_negation_delay_t

enum lvd_negation_delay_t	
Negation delay of LVD reset signal follows reset or voltage in range	
Enumerator	
LVD_NEGATION_DELAY_FROM_VOLTAGE	Negation follows a stabilization time (tLVDn) after VCC > Vdet1 is detected. If a transition to software standby or deep software standby is to be made, the only possible value for the RN bit is LVD_NEGATION_DELAY_FROM_VOLTAGE
LVD_NEGATION_DELAY_FROM_RESET	Negation follows a stabilization time (tLVDn) after assertion of the LVDn reset. If a transition to software standby or deep software standby is to be made, the only possible value for the RN bit is LVD_NEGATION_DELAY_FROM_VOLTAGE

◆ lvd_threshold_crossing_t

enum lvd_threshold_crossing_t	
Threshold crossing detection (latched)	
Enumerator	
LVD_THRESHOLD_CROSSING_NOT_DETECTED	Threshold crossing has not been detected.
LVD_THRESHOLD_CROSSING_DETECTED	Threshold crossing has been detected.

◆ lvd_current_state_t

enum lvd_current_state_t	
Instantaneous status of VCC (above or below threshold)	
Enumerator	
LVD_CURRENT_STATE_BELOW_THRESHOLD	VCC < threshold.
LVD_CURRENT_STATE_ABOVE_THRESHOLD	VCC >= threshold or monitor is disabled.

4.3.28 OPAMP Interface

Interfaces

Detailed Description

Interface for Operational Amplifiers.

Summary

The OPAMP interface provides standard operational amplifier functionality, including starting and stopping the amplifier.

Implemented by: Operational Amplifier (r_opamp)

Data Structures

struct	opamp_trim_args_t
struct	opamp_info_t
struct	opamp_status_t
struct	opamp_cfg_t
struct	opamp_api_t
struct	opamp_instance_t

Typedefs

typedef void	opamp_ctrl_t

Enumerations

enum	opamp_trim_cmd_t
enum	opamp_trim_input_t

Data Structure Documentation

◆ opamp_trim_args_t

struct opamp_trim_args_t		
OPAMP trim arguments.		
Data Fields		
uint8_t	channel	Channel.
opamp_trim_input_t	input	Which input of the channel above.

◆ opamp_info_t

struct opamp_info_t		
OPAMP information.		
Data Fields		
uint32_t	min_stabilization_wait_us	Minimum stabilization wait time in microseconds.

◆ opamp_status_t

struct opamp_status_t		
OPAMP status.		
Data Fields		
uint32_t	operating_channel_mask	Bitmask of channels currently operating.

◆ opamp_cfg_t

struct opamp_cfg_t		
OPAMP general configuration.		
Data Fields		
void const *	p_extend	Extension parameter for hardware specific settings.

◆ opamp_api_t

struct opamp_api_t	
OPAMP functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(opamp_ctrl_t *const p_ctrl, opamp_cfg_t const *const p_cfg)
fsp_err_t(*	start)(opamp_ctrl_t *const p_ctrl, uint32_t const channel_mask)
fsp_err_t(*	stop)(opamp_ctrl_t *const p_ctrl, uint32_t const channel_mask)
fsp_err_t(*	trim)(opamp_ctrl_t *const p_ctrl, opamp_trim_cmd_t const cmd, opamp_trim_args_t const *const p_args)
fsp_err_t(*	infoGet)(opamp_ctrl_t *const p_ctrl, opamp_info_t *const p_info)
fsp_err_t(*	statusGet)(opamp_ctrl_t *const p_ctrl, opamp_status_t *const p_status)

fsp_err_t(*	close)(opamp_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* opamp_api_t::open) (opamp_ctrl_t *const p_ctrl, opamp_cfg_t const *const p_cfg)

Initialize the operational amplifier.

Implemented as

- R_OPAMP_Open()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	p_cfg	Pointer to configuration

◆ start

fsp_err_t(* opamp_api_t::start) (opamp_ctrl_t *const p_ctrl, uint32_t const channel_mask)

Start the op-amp(s).

Implemented as

- R_OPAMP_Start()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	channel_mask	Bitmask of channels to start

◆ stop

fsp_err_t(* opamp_api_t::stop) (opamp_ctrl_t *const p_ctrl, uint32_t const channel_mask)

Stop the op-amp(s).

Implemented as

- R_OPAMP_Stop()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	channel_mask	Bitmask of channels to stop

◆ trim

fsp_err_t(* opamp_api_t::trim) (opamp_ctrl_t *const p_ctrl, opamp_trim_cmd_t const cmd, opamp_trim_args_t const *const p_args)

Trim the op-amp(s). Not supported on all MCUs. See implementation for procedure details.

Implemented as

- R_OPAMP_Trim()

Parameters

[in]	p_ctrl	Pointer to instance control block
[in]	cmd	Trim command
[in]	p_args	Pointer to arguments for the command

◆ infoGet

fsp_err_t(* opamp_api_t::infoGet) (opamp_ctrl_t *const p_ctrl, opamp_info_t *const p_info)

Provide information such as the recommended minimum stabilization wait time.

Implemented as

- R_OPAMP_InfoGet()

Parameters

[in]	p_ctrl	Pointer to instance control block
[out]	p_info	OPAMP information stored here

◆ statusGet

fsp_err_t(* opamp_api_t::statusGet) (opamp_ctrl_t *const p_ctrl, opamp_status_t *const p_status)

Provide status of each op-amp channel.

Implemented as

- R_OPAMP_StatusGet()

Parameters

[in]	p_ctrl	Pointer to instance control block
[out]	p_status	Status stored here

◆ close

fsp_err_t(* opamp_api_t::close) (opamp_ctrl_t *const p_ctrl)

Close the specified OPAMP unit by ending any scan in progress, disabling interrupts, and removing power to the specified A/D unit.

Implemented as

- R_OPAMP_Close()

Parameters

[in]	p_ctrl	Pointer to instance control block

◆ opamp_instance_t

struct opamp_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
opamp_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
opamp_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
opamp_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ opamp_ctrl_t

typedef void opamp_ctrl_t

OPAMP control block. Allocate using driver instance control structure from driver instance header file.

Enumeration Type Documentation

◆ **opamp_trim_cmd_t**

enum opamp_trim_cmd_t	
Includes board and MCU related header files. Trim command.	
Enumerator	
OPAMP_TRIM_CMD_START	Initialize trim state machine.
OPAMP_TRIM_CMD_NEXT_STEP	Move to next step in state machine.
OPAMP_TRIM_CMD_CLEAR_BIT	Clear trim bit.

◆ **opamp_trim_input_t**

enum opamp_trim_input_t	
Trim input.	
Enumerator	
OPAMP_TRIM_INPUT_PCH	Trim non-inverting (+) input.
OPAMP_TRIM_INPUT_NCH	Trim inverting (-) input.

4.3.29 PDC Interface

Interfaces

Detailed Description

Interface for PDC functions.

Summary

The PDC interface provides the functionality for capturing an image from an image sensor/camera. When a capture is complete a transfer complete interrupt is triggered.

Implemented by:

- Parallel Data Capture (r_pdc)

Data Structures

struct	pdc_callback_args_t
struct	pdc_cfg_t

struct	pdc_api_t
struct	pdc_instance_t

Typedefs

typedef void	pdc_ctrl_t

Enumerations

enum	pdc_clock_division_t
enum	pdc_endian_t
enum	pdc_hsync_polarity_t
enum	pdc_vsync_polarity_t
enum	pdc_event_t

Data Structure Documentation

◆ pdc_callback_args_t

struct pdc_callback_args_t		
Callback function parameter data		
Data Fields		
pdc_event_t	event	Event causing the callback.
uint8_t *	p_buffer	Pointer to buffer containing the captured data.
void const *	p_context	Placeholder for user data. Set in pdc_api_t::open function in pdc_cfg_t.

◆ pdc_cfg_t

struct pdc_cfg_t	
PDC configuration parameters.	
Data Fields	
uint16_t	x_capture_start_pixel
	Horizontal position to start capture.
uint16_t	x_capture_pixels
	Number of horizontal pixels to capture.

uint16_t	y_capture_start_pixel
	Vertical position to start capture.
uint16_t	y_capture_pixels
	Number of vertical lines/pixels to capture.
pdc_clock_division_t	clock_division
	Clock divider.
pdc_endian_t	endian
	Endian of capture data.
pdc_hsync_polarity_t	hsync_polarity
	Polarity of HSYNC input.
pdc_vsync_polarity_t	vsync_polarity
	Polarity of VSYNC input.
uint8_t *	p_buffer
	Pointer to buffer to write image into.
uint8_t	bytes_per_pixel
	Number of bytes per pixel.
uint8_t	pdc_ipl
	PDC interrupt priority.

uint8_t	transfer_req_ipl
	Transfer interrupt priority.
IRQn_Type	pdc_irq
	PDC IRQ number.
IRQn_Type	transfer_req_irq
	Transfer request IRQ number.
transfer_instance_t const *	p_lower_lvl_transfer
	Pointer to the transfer instance the PDC should use.
void(*	p_callback)(pdc_callback_args_t *p_args)
	Callback provided when a PDC transfer ISR occurs.
void const *	p_context
	User defined context passed to callback function.
void const *	p_extend
	Placeholder for user data.

◆ pdc_api_t

struct pdc_api_t	
PDC functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(pdc_ctrl_t *const p_ctrl, pdc_cfg_t const *const p_cfg)
fsp_err_t(*	close)(pdc_ctrl_t *const p_ctrl)

fsp_err_t(*	captureStart)(pdc_ctrl_t *const p_ctrl, uint8_t *const p_buffer)

Field Documentation

◆ open

fsp_err_t(* pdc_api_t::open) (pdc_ctrl_t *const p_ctrl, pdc_cfg_t const *const p_cfg)

Initial configuration.

Implemented as

- R_PDC_Open()

Note

To reconfigure after calling this function, call pdc_api_t::close first.

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ close

fsp_err_t(* pdc_api_t::close) (pdc_ctrl_t *const p_ctrl)

Closes the driver and allows reconfiguration. May reduce power consumption.

Implemented as

- R_PDC_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ captureStart

fsp_err_t(* pdc_api_t::captureStart) (pdc_ctrl_t *const p_ctrl, uint8_t *const p_buffer)

Start a capture.

Implemented as

- R_PDC_CaptureStart()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_buffer	Pointer to store captured image data.

◆ pdc_instance_t

struct pdc_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
pdc_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
pdc_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
pdc_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ pdc_ctrl_t

typedef void pdc_ctrl_t

PDC control block. Allocate an instance specific control block to pass into the PDC API calls.

Implemented as

- pdc_instance_ctrl_t

Enumeration Type Documentation

◆ pdc_clock_division_t

enum pdc_clock_division_t	
Clock divider applied to PDC clock to provide PCKO output frequency	
Enumerator	
PDC_CLOCK_DIVISION_2	CLK / 2.
PDC_CLOCK_DIVISION_4	CLK / 4.
PDC_CLOCK_DIVISION_6	CLK / 6.
PDC_CLOCK_DIVISION_8	CLK / 8.
PDC_CLOCK_DIVISION_10	CLK / 10.
PDC_CLOCK_DIVISION_12	CLK / 12.
PDC_CLOCK_DIVISION_14	CLK / 14.
PDC_CLOCK_DIVISION_16	CLK / 16.

◆ pdc_endian_t

enum pdc_endian_t	
Endian of captured data	
Enumerator	
PDC_ENDIAN_LITTLE	Data is in little endian format.
PDC_ENDIAN_BIG	Data is in big endian format.

◆ pdc_hsync_polarity_t

enum pdc_hsync_polarity_t	
Polarity of input HSYNC signal	
Enumerator	
PDC_HSYNC_POLARITY_HIGH	HSYNC signal is active high.
PDC_HSYNC_POLARITY_LOW	HSYNC signal is active low.

◆ pdc_vsync_polarity_t

enum pdc_vsync_polarity_t	
Polarity of input VSYNC signal	
Enumerator	
PDC_VSYNC_POLARITY_HIGH	VSYNC signal is active high.
PDC_VSYNC_POLARITY_LOW	VSYNC signal is active low.

◆ pdc_event_t

enum pdc_event_t	
PDC events	
Enumerator	
PDC_EVENT_TRANSFER_COMPLETE	Complete frame transferred by DMAC/DTC.
PDC_EVENT_RX_DATA_READY	Receive data ready interrupt.
PDC_EVENT_FRAME_END	Frame end interrupt.
PDC_EVENT_ERR_OVERRUN	Overrun interrupt.
PDC_EVENT_ERR_UNDERRUN	Underrun interrupt.
PDC_EVENT_ERR_V_SET	Vertical line setting error interrupt.
PDC_EVENT_ERR_H_SET	Horizontal byte number setting error interrupt.

4.3.30 POEG Interface

Interfaces

Detailed Description

Interface for the Port Output Enable for GPT.

Defines the API and data structures for the Port Output Enable for GPT (POEG) interface.

Summary

The POEG disables GPT output pins based on configurable events.

Implemented by: Port Output Enable for GPT (r_poeg)

Data Structures

struct	poeg_status_t
struct	poeg_callback_args_t
struct	poeg_cfg_t

struct	poeg_api_t
struct	poeg_instance_t

Typedefs

typedef void	poeg_ctrl_t

Enumerations

enum	poeg_state_t
enum	poeg_trigger_t
enum	poeg_gtetrg_polarity_t
enum	poeg_gtetrg_noise_filter_t

Data Structure Documentation

◆ poeg_status_t

struct poeg_status_t		
POEG status		
Data Fields		
poeg_state_t	state	Current state of POEG.

◆ poeg_callback_args_t

struct poeg_callback_args_t		
Callback function parameter data.		
Data Fields		
void const *	p_context	Placeholder for user data, set in poeg_cfg_t.

◆ poeg_cfg_t

struct poeg_cfg_t	
User configuration structure, used in the open function.	
Data Fields	
poeg_trigger_t	trigger
	Select one or more triggers for the POEG.
poeg_gtetrg_polarity_t	polarity
	Select the polarity for the GTETRG pin.

poeg_gtetrg_noise_filter_t	noise_filter
	Configure the GTETRG noise filter.
void(*	p_callback)(poeg_callback_args_t *p_args)
void const *	p_context
uint32_t	channel
	Channel 0 corresponds to GTETRGA, 1 to GTETRGB, etc.
IRQn_Type	irq
	NVIC interrupt number assigned to this instance.
uint8_t	ipl
	POEG interrupt priority.

Field Documentation

◆ p_callback

void(* poeg_cfg_t::p_callback) (poeg_callback_args_t *p_args)

Callback called when a POEG interrupt occurs.

◆ p_context

void const* poeg_cfg_t::p_context

Placeholder for user data. Passed to the user callback in poeg_callback_args_t.

◆ poeg_api_t

struct poeg_api_t

Port Output Enable for GPT (POEG) API structure. POEG functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t(*	open)(poeg_ctrl_t *const p_ctrl, poeg_cfg_t const *const p_cfg)

fsp_err_t(*	statusGet)(poeg_ctrl_t *const p_ctrl, poeg_status_t *p_status)
fsp_err_t(*	callbackSet)(poeg_ctrl_t *const p_api_ctrl, void(*p_callback)(poeg_callback_args_t *), void const *const p_context, poeg_callback_args_t *const p_callback_memory)
fsp_err_t(*	outputDisable)(poeg_ctrl_t *const p_ctrl)
fsp_err_t(*	reset)(poeg_ctrl_t *const p_ctrl)
fsp_err_t(*	close)(poeg_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* poeg_api_t::open) (poeg_ctrl_t *const p_ctrl, poeg_cfg_t const *const p_cfg)

Initial configuration.

Implemented as

- R_POEG_Open()

Parameters

[in]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ statusGet

fsp_err_t(* poeg_api_t::statusGet) (poeg_ctrl_t *const p_ctrl, poeg_status_t *p_status)

Gets the current driver state.

Implemented as

- R_POEG_StatusGet()

Parameters

[in]	p_ctrl	Control block set in poeg_api_t::open call.
[out]	p_status	Provides the current state of the POEG.

◆ callbackSet

fsp_err_t(* poeg_api_t::callbackSet) (poeg_ctrl_t *const p_api_ctrl, void(*p_callback)(poeg_callback_args_t *), void const *const p_context, poeg_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_POEG_CallbackSet()

Parameters

[in]	p_ctrl	Control block set in poeg_api_t::open call for this timer.
[in]	p_callback	Callback function to register
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ outputDisable

fsp_err_t(* poeg_api_t::outputDisable) (poeg_ctrl_t *const p_ctrl)

Disables GPT output pins by software request.

Implemented as

- R_POEG_OutputDisable()

Parameters

[in]	p_ctrl	Control block set in poeg_api_t::open call.

◆ reset

fsp_err_t(* poeg_api_t::reset) (poeg_ctrl_t *const p_ctrl)

Attempts to clear status flags to reenable GPT output pins. Confirm all status flags are cleared after calling this function by calling poeg_api_t::statusGet().

Implemented as

- R_POEG_Reset()

Parameters

[in]	p_ctrl	Control block set in poeg_api_t::open call.

◆ close

fsp_err_t(* poeg_api_t::close) (poeg_ctrl_t *const p_ctrl)

Disables POEG interrupt.

Implemented as

- R_POEG_Close()

Parameters

[in]	p_ctrl	Control block set in poeg_api_t::open call.

◆ poeg_instance_t

struct poeg_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

poeg_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
poeg_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.

poeg_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ poeg_ctrl_t

typedef void poeg_ctrl_t
DOC control block. Allocate an instance specific control block to pass into the DOC API calls. **Implemented as** ◦ poeg_instance_ctrl_t

Enumeration Type Documentation

◆ poeg_state_t

enum poeg_state_t	
POEG states.	
Enumerator	
POEG_STATE_NO_DISABLE_REQUEST	GPT output is not disabled by POEG.
POEG_STATE_PIN_DISABLE_REQUEST	GPT output disabled due to GTETRG pin level.
POEG_STATE_GPT_OR_COMPARATOR_DISABLE_REQUEST	GPT output disabled due to high speed analog comparator or GPT.
POEG_STATE_OSCILLATION_STOP_DISABLE_REQUEST	GPT output disabled due to main oscillator stop.
POEG_STATE_SOFTWARE_STOP_DISABLE_REQUEST	GPT output disabled due to poeg_api_t::outputDisable()
POEG_STATE_PIN_DISABLE_REQUEST_ACTIVE	GPT output disable request active from the GTETRG pin. If a filter is used, this flag represents the state of the filtered input.

◆ poeg_trigger_t

enum poeg_trigger_t	
Triggers that will disable GPT output pins.	
Enumerator	
POEG_TRIGGER_SOFTWARE	Software disable is always supported with POEG. Select this option if no other triggers are used.
POEG_TRIGGER_PIN	Disable GPT output based on GTETRG input level.
POEG_TRIGGER_GPT_OUTPUT_LEVEL	Disable GPT output based on GPT output pin levels.
POEG_TRIGGER_OSCILLATION_STOP	Disable GPT output based on main oscillator stop.
POEG_TRIGGER_ACMPHS0	Disable GPT output based on ACMPHS0 comparator result.
POEG_TRIGGER_ACMPHS1	Disable GPT output based on ACMPHS1 comparator result.
POEG_TRIGGER_ACMPHS2	Disable GPT output based on ACMPHS2 comparator result.
POEG_TRIGGER_ACMPHS3	Disable GPT output based on ACMPHS3 comparator result.
POEG_TRIGGER_ACMPHS4	Disable GPT output based on ACMPHS4 comparator result.
POEG_TRIGGER_ACMPHS5	Disable GPT output based on ACMPHS5 comparator result.

◆ poeg_gtetrg_polarity_t

enum poeg_gtetrg_polarity_t	
GTETRG polarity.	
Enumerator	
POEG_GTETRG_POLARITY_ACTIVE_HIGH	Disable GPT output based when GTETRG input level is high.
POEG_GTETRG_POLARITY_ACTIVE_LOW	Disable GPT output based when GTETRG input level is low.

◆ poeg_gtetrg_noise_filter_t

enum poeg_gtetrg_noise_filter_t	
GTETRG noise filter. For the input signal to pass through the noise filter, the active level set in poeg_gtetrg_polarity_t must be read 3 consecutive times at the sampling clock selected.	
Enumerator	
POEG_GTETRG_NOISE_FILTER_DISABLED	No noise filter applied to GTETRG input.
POEG_GTETRG_NOISE_FILTER_PCLKB_DIV_1	Apply noise filter with sample clock PCLKB.
POEG_GTETRG_NOISE_FILTER_PCLKB_DIV_8	Apply noise filter with sample clock PCLKB/8.
POEG_GTETRG_NOISE_FILTER_PCLKB_DIV_32	Apply noise filter with sample clock PCLKB/32.
POEG_GTETRG_NOISE_FILTER_PCLKB_DIV_128	Apply noise filter with sample clock PCLKB/128.

4.3.31 PTP Interface

Interfaces

Detailed Description

Interface for PTP functions.

Summary

The PTP interface provides the functionality for using PTP.

Implemented by:

- Precision Time Protocol (r_ptp)

Data Structures

struct	ptp_clock_properties_t
struct	ptp_time_t
struct	ptp_message_flags_t
struct	ptp_message_header_t
struct	ptp_message_sync_t
struct	ptp_message_pdelay_req_t
struct	ptp_message_pdelay_resp_t
struct	ptp_message_announce_t
struct	ptp_message_signaling_t
struct	ptp_message_management_t
struct	ptp_message_t
struct	ptp_callback_args_t
struct	ptp_pulse_timer_common_cfg_t
struct	ptp_pulse_timer_cfg_t

Data Structure Documentation

◆ ptp_clock_properties_t

struct ptp_clock_properties_t

Clock properties used in the best master clock algorithm (BMCA) in order to determine the grandmaster clock.

In master mode, these properties will be advertised in announce messages.

Note: The final property used in BMCA is the clock ID. This is usually configured at runtime because it is often based on the hardware address.

Data Fields		
uint8_t	priority1	Priority1 value used in best master calculation.
uint8_t	cclass	Class value.
uint8_t	accuracy	Accuracy of the clock.
uint16_t	variance	Variance of the clock.
uint8_t	priority2	Priority2 value used as secondary priority in best master calculation.

◆ ptp_time_t

struct ptp_time_t		
Structure for storing time with nanosecond precision .		
Data Fields		
uint16_t	seconds_upper	Upper 16 bits of the seconds.
uint32_t	seconds_lower	Lower 32 bits of the seconds.
uint32_t	nanoseconds	Nanoseconds.

◆ ptp_message_flags_t

struct ptp_message_flags_t
Flags field in PTP message header.

◆ ptp_message_header_t

struct ptp_message_header_t		
Commom PTP Message Header.		
Data Fields		
uint8_t	message_type: 4	The message type.
uint8_t	sdoid_major: 4	Standard Organization ID Major.
uint8_t	version: 4	PTP Version.
uint8_t	minor_version: 4	PTP Minor Version.
uint16_t	message_length	The total message length (Including the header).
uint8_t	domain	The clock domain.

uint8_t	sdoid_minor: 8	Standard Organization ID minor.
ptp_message_flags_t	flags	Flags set in the message.
uint64_t	correction_field	Correction Field that is updated when a message passes through a transparent clock.
uint32_t	reserved	
uint8_t	clock_id[8]	Clock ID that the message was sent from.
uint16_t	source_port_id	Port ID that the message was sent from.
uint16_t	sequence_id	Sequence ID of the message.
ptp_ctrl_field_t	control_field	Control field (Message specifc).
uint8_t	log_message_interval	Logbase2 of the message period.

◆ ptp_message_sync_t

struct ptp_message_sync_t		
Sync Message Type (0x00).		
Data Fields		
ptp_time_t	origin_timestamp	Timestamp when the message was transmitted.

◆ ptp_message_pdelay_req_t

struct ptp_message_pdelay_req_t		
PDelay_req Message Type (0x02).		
Data Fields		
ptp_time_t	origin_timestamp	Timestamp when the message was transmitted.
uint8_t	reserved[10]	

◆ ptp_message_pdelay_resp_t

struct ptp_message_pdelay_resp_t		
PDelay_resp Message Type (0x03).		
Data Fields		
ptp_time_t	origin_timestamp	Timestamp when the message was transmitted.
uint8_t	source_port_identity[10]	Clock ID + sourcePortId.

◆ ptp_message_announce_t

struct ptp_message_announce_t		
Announce Message Type (0x0B).		
Data Fields		
ptp_time_t	origin_timestamp	Timestamp when the message was transmitted.
uint16_t	current_utc_offset	Offset from UTC in seconds.
uint8_t	reserved	
ptp_clock_properties_t	clock_properties	Clock properties used in Best Master Clock Algorithm.
uint8_t	clock_id[8]	Clock ID that the message was sent from.
uint16_t	steps_removed	The number of boundary clocks between the clock and the grand master clock.
uint8_t	time_source	The source of time (Eg. INTERNAL_OSC).

◆ ptp_message_signaling_t

struct ptp_message_signaling_t		
Signaling Message Type (0x0C).		
Data Fields		
uint8_t	target_clock_id[8]	ID of the target PTP instance.
uint16_t	target_port_id	Port of the target PTP instance.

◆ ptp_message_management_t

struct ptp_message_management_t		
Management Message Type (0x0D).		
Data Fields		
uint8_t	target_clock_id[8]	ID of the target PTP instance.
uint16_t	target_port_id	Port of the target PTP instance.
uint8_t	starting_boundary_hops	The starting number of times the message is retransmitted by boundary clocks.
uint8_t	boundary_hops	The remaining number of retransmissions.
uint8_t	action	The action that will be taken on reception of the message.
uint8_t	reserved	

◆ ptp_message_t

struct ptp_message_t		
Complete PTP Message.		
Data Fields		
ptp_message_header_t	header	Header of the message.
union ptp_message_t	__unnamed__	

◆ ptp_callback_args_t

struct ptp_callback_args_t		
Arguments passed to p_ptp_callback.		
Data Fields		
ptp_event_t	event	Event that caused the callback.
ptp_message_t const *	p_message	The message received (PTP message fields will be little endian).
uint8_t const *	p_tlv_data	Start of TLV data (TLV data will be big endian).
uint16_t	tlv_data_size	Total bytes of TLV data.
uint32_t	pulse_timer_channel	Channel of the pulse timer that caused ptp_event_t::PTP_EVENT_PULSE_TIMER_MINT_RISING_EDGE.
void const *	p_context	Context value set in the configuration.

◆ ptp_pulse_timer_common_cfg_t

struct ptp_pulse_timer_common_cfg_t		
Structure for configuring the IPLS IRQ settings that are common to all pulse timer channels.		
Data Fields		
ptp_enable_t	ipls_rising_irq	Enable the IPLS IRQ when a rising edge is detected.
ptp_enable_t	ipls_falling_irq	Enable the IPLS IRQ when a falling edge is detected.
ptp_enable_t	ipls_rising_irq_auto_clear	Auto disable the rising edge IRQ after the first rising edge is detected.
ptp_enable_t	ipls_falling_irq_auto_clear	Auto disable the falling edge IRQ after the first falling edge is detected.

◆ ptp_pulse_timer_cfg_t

struct ptp_pulse_timer_cfg_t

Structure for configuring a pulse timer channel.		
Data Fields		
ptp_time_t	start_time	The exact time when the timer will start.
uint32_t	period	The period of the timer in nanoseconds.
uint32_t	pulse	The pulse width of the timer in nanoseconds.
ptp_enable_t	mint_rising_irq	Enable MINT rising edge IRQ.
ptp_enable_t	ipls_rising_event	Enable IPLS rising edge ELC event.
ptp_enable_t	ipls_falling_event	Enable IPLS falling edge ELC event.
ptp_enable_t	ipls_rising_event_auto_clear	Enable IPLS rising edge ELC event.
ptp_enable_t	ipls_falling_event_auto_clear	Enable IPLS falling edge ELC event.
ptp_enable_t	ipls_irq_source	Enable using this channel as a source for the IPLS IRQ.

◆ ptp_sync_state_cfg_t

struct ptp_sync_state_cfg_t		
Configuration settings for determining when the PTP clock is synchronized.		
Data Fields		
uint64_t	threshold	The maximum clock offset required to transition between synchronization states.
uint8_t	count	The number of times the clock must be above the threshold in order to transition between synchronization states.

◆ ptp_synfp_cfg_t

struct ptp_synfp_cfg_t		
Configuration settings for the SYNFP.		
Data Fields		
ptp_ethernet_phy_interface_t	ethernet_phy_interface	The type of interface used to communicate with the PHY.
ptp_frame_format_t	frame_format	Frame format used to transport PTP messages.
ptp_frame_filter_mode_t	frame_filter	Frame filter mode.

uint8_t	clock_domain	Clock domain that the clock operates in.
ptp_enable_t	clock_domain_filter	Filter out messages from other clock domains.
ptp_message_interval_t	announce_interval	Interval for transmitting announce messages.
ptp_message_interval_t	sync_interval	Interval for transmitting sync messages.
ptp_message_interval_t	delay_req_interval	Interval for transmitting delay_req messages.
uint32_t	message_timeout	Timeout in milliseconds for receiving PTP messages.
ptp_clock_properties_t	clock_properties	Clock properties used in annonce messages.
uint8_t	timesource	TimeSource field used in announce messages.
uint8_t *	p_multicast_addr_filter	Filter for multicast packets.
struct ptp_synfp_cfg_t	ether	Valid if frame_format is set to Ethernet II or IEEE 802.3.
struct ptp_synfp_cfg_t	ipv4	Valid if frame_format is set to IPV4_UDP.

◆ ptp_synfp_cfg_t.ether

struct ptp_synfp_cfg_t.ether		
Valid if frame_format is set to Ethernet II or IEEE 802.3.		
Data Fields		
uint8_t *	p_primary_mac_addr	The MAC address to send primary messages.
uint8_t *	p_pdelay_mac_addr	The MAC address to send p2p messages.

◆ ptp_synfp_cfg_t.ipv4

struct ptp_synfp_cfg_t.ipv4		
Valid if frame_format is set to IPV4_UDP.		
Data Fields		
uint32_t	primary_ip_addr	The IP address to send primary messages.
uint32_t	pdelay_ip_addr	The IP address to send pdelay messages.
uint8_t	event_tos	Type of service for event messages.

uint8_t	general_tos	Type of service for general messages.
uint8_t	primary_ttl	Time to live for primary messages.
uint8_t	pdelay_ttl	Time to live for pdelay messages.
uint16_t	event_udp_port	The port to send event messages.
uint16_t	general_udp_port	The port to send general messages.

◆ ptp_stca_cfg_t

struct ptp_stca_cfg_t		
Configuration settings for the STCA.		
Data Fields		
ptp_stca_clock_freq_t	clock_freq	Select the clock frequency of the STCA.
ptp_stca_clock_sel_t	clock_sel	Select the input clock to the STCA.
ptp_clock_correction_mode_t	clock_correction_mode	Select the clock correction mode.
uint8_t	gradient_worst10_interval	Select the interval for the gradient worst10 acquisition.
ptp_sync_state_cfg_t	sync_threshold	Configure the synchronization threshold.
ptp_sync_state_cfg_t	sync_loss_threshold	Configure the SYnchronization lost threshold.

◆ ptp_cfg_t

struct ptp_cfg_t	
User configuration structure, used in open function	
Data Fields	
ptp_synfp_cfg_t	synfp
	Configuration settings for the SYNFP.
ptp_stca_cfg_t	stca
	Configuration settings for the STCA.

edmac_instance_t *	p_edmac_instance
	Pointer to PTP edmac instance.
uint16_t	buffer_size
	The maximum Ethernet packet size that can be transmitted or received.
uint8_t **	p_rx_buffers
	Pointer to list of buffers used to receive PTP packets.
uint8_t **	p_tx_buffers
	Pointer to list of buffers used to transmit PTP packets.
IRQn_Type	mint_irq
	Interrupt number for PTP event IRQ.
IRQn_Type	ipls_irq
	Interrupt number for PTP timer IRQ.
uint8_t	mint_ipl
	Interrupt priority of the PTP event IRQ.
uint8_t	ipls_ipl
	Interrupt priority of the PTP timer IRQ.
void(*	p_callback)(ptp_callback_args_t *p_args)

Field Documentation

◆ p_callback

void(* ptp_cfg_t::p_callback) (ptp_callback_args_t *p_args)
Callback for handling received PTP events.

◆ ptp_api_t

struct ptp_api_t	
Timer API structure. General timer functions implemented at the HAL layer follow this API.	
Data Fields	
fsp_err_t(*	open)(ptp_ctrl_t *const p_ctrl, ptp_cfg_t const *const p_cfg)
fsp_err_t(*	macAddrSet)(ptp_ctrl_t *const p_ctrl, uint8_t const *const p_mac_addr)
fsp_err_t(*	ipAddrSet)(ptp_ctrl_t *const p_ctrl, uint32_t ip_addr)
fsp_err_t(*	localClockIdSet)(ptp_ctrl_t *const p_ctrl, uint8_t const *const p_clock_id)
fsp_err_t(*	masterClockIdSet)(ptp_ctrl_t *const p_ctrl, uint8_t const *const p_clock_id, uint16_t port_id)
fsp_err_t(*	messageFlagsSet)(ptp_ctrl_t *const p_ctrl, ptp_message_type_t message_type, ptp_message_flags_t flags)
fsp_err_t(*	currentUtcOffsetSet)(ptp_ctrl_t *const p_ctrl, uint16_t offset)
fsp_err_t(*	portStateSet)(ptp_ctrl_t *const p_ctrl, uint32_t state)
fsp_err_t(*	messageSend)(ptp_ctrl_t *const p_ctrl, ptp_message_t const *const p_message, uint8_t const *const p_tlv_data, uint16_t tlv_data_size)
fsp_err_t(*	localClockValueSet)(ptp_ctrl_t *const p_ctrl, ptp_time_t const *const p_time)
fsp_err_t(*	localClockValueGet)(ptp_ctrl_t *const p_ctrl, ptp_time_t *const p_time)

fsp_err_t(*	pulseTimerCommonConfig)(ptp_ctrl_t *const p_ctrl, ptp_pulse_timer_common_cfg_t *p_timer_cfg)
fsp_err_t(*	pulseTimerEnable)(ptp_ctrl_t *const p_ctrl, uint32_t channel, ptp_pulse_timer_cfg_t *const p_timer_cfg)
fsp_err_t(*	pulseTimerDisable)(ptp_ctrl_t *const p_ctrl, uint32_t channel)
fsp_err_t(*	close)(ptp_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* ptp_api_t::open) (ptp_ctrl_t *const p_ctrl, ptp_cfg_t const *const p_cfg)

Initial configuration.

Implemented as

- R_PTP_Open()

Note

To reconfigure after calling this function, call ptp_api_t::close first.

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ macAddrSet

fsp_err_t(* ptp_api_t::macAddrSet) (ptp_ctrl_t *const p_ctrl, uint8_t const *const p_mac_addr)

Set the MAC address for the PTP.

Implemented as

- R_PTP_MacAddrSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_hw_addr	Pointer to the 6 byte MAC address.

◆ ipAddrSet

fsp_err_t(* ptp_api_t::ipAddrSet) (ptp_ctrl_t *const p_ctrl, uint32_t ip_addr)

Set the IP address for the PTP.

Implemented as

- R_PTP_IpAddrSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	ip_addr	32 bit IPv4 address of the PTP.

◆ localClockIdSet

fsp_err_t(* ptp_api_t::localClockIdSet) (ptp_ctrl_t *const p_ctrl, uint8_t const *const p_clock_id)

Set the local clock ID (Usually based off of the PTP MAC address).

Implemented as

- R_PTP_LocalClockIdSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_clock_id	Pointer to 8 byte clock ID.

◆ masterClockIdSet

fsp_err_t(* ptp_api_t::masterClockIdSet) (ptp_ctrl_t *const p_ctrl, uint8_t const *const p_clock_id, uint16_t port_id)

Set the master clock ID (Usually obtained from previously received announce message).

Implemented as

- R_PTP_MasterClockIdSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_clock_id	Pointer to 8 byte clock ID.
[in]	port_id	The port on the master clock.

◆ messageFlagsSet

fsp_err_t(* ptp_api_t::messageFlagsSet) (ptp_ctrl_t *const p_ctrl, ptp_message_type_t message_type, ptp_message_flags_t flags)

Set the flags field for the given message type.

Implemented as

- R_PTP_MessageFlagsSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	message_type	The message type.
[in]	flags	Flags to set.

◆ currentUtcOffsetSet

fsp_err_t(* ptp_api_t::currentUtcOffsetSet) (ptp_ctrl_t *const p_ctrl, uint16_t offset)

Sets the offsetFromMaster field in announce messages.

Implemented as

- R_PTP_CurrentUtcOffsetSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	offset	New currentUtcOffset value.

◆ portStateSet

fsp_err_t(* ptp_api_t::portStateSet) (ptp_ctrl_t *const p_ctrl, uint32_t state)

Transition to a new clock state.

Implemented as

- R_PTP_PortStateSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	state	The state to transition into.

◆ messageSend

fsp_err_t(* ptp_api_t::messageSend) (ptp_ctrl_t *const p_ctrl, ptp_message_t const *const p_message, uint8_t const *const p_tlv_data, uint16_t tlv_data_size)

Send a PTP message. Appropriate fields in the PTP message will be endian swapped. The application must ensure that the TLV data is in big endian format.

Implemented as

- R_PTP_MessageSend()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_message	Pointer to a PTP message.
[in]	p_tlv_data	Pointer to TLV data that is appended to the end of the PTP message.
[in]	tlv_data_size	Size of the TLV data in bytes.

◆ localClockValueSet

fsp_err_t(* ptp_api_t::localClockValueSet) (ptp_ctrl_t *const p_ctrl, ptp_time_t const *const p_time)

Set the local clock value.

Implemented as

- R_PTP_LocalClockValueSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_time	Pointer to the new time setting.

◆ localClockValueGet

fsp_err_t(* ptp_api_t::localClockValueGet) (ptp_ctrl_t *const p_ctrl, ptp_time_t *const p_time)

Get the local clock value.

Implemented as

- R_PTP_LocalClockValueGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_time	Pointer to store the current time setting.

◆ pulseTimerCommonConfig

fsp_err_t(* ptp_api_t::pulseTimerCommonConfig) (ptp_ctrl_t *const p_ctrl, ptp_pulse_timer_common_cfg_t *p_timer_cfg)

Configuration that is common to all of the pulse timers.

Implemented as

- R_PTP_PulseTimerCommonConfig()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_timer_cfg	Pointer to the pulse timer common configuration.

◆ pulseTimerEnable

fsp_err_t(* ptp_api_t::pulseTimerEnable) (ptp_ctrl_t *const p_ctrl, uint32_t channel, ptp_pulse_timer_cfg_t *const p_timer_cfg)

Setup a pulse timer.

Implemented as

- R_PTP_PulseTimerEnable()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	channel	The pulse timer channel to setup.
[in]	p_timer_cfg	Pointer to the pulse timer configuration.

◆ pulseTimerDisable

fsp_err_t(* ptp_api_t::pulseTimerDisable) (ptp_ctrl_t *const p_ctrl, uint32_t channel)

Stop a pulse timer.

Implemented as

- R_PTP_PulseTimerDisable()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	channel	The pulse timer channel to stop.

◆ close

fsp_err_t(* ptp_api_t::close) (ptp_ctrl_t *const p_ctrl)
Stop PTP operation. **Implemented as** ◦ R_PTP_Close() **Parameters** [in] p_ctrl — Pointer to control structure.

◆ ptp_instance_t

struct ptp_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
ptp_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
ptp_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
ptp_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ ptp_ctrl_field_t

typedef enum PTP_PACKED e_ptp_ctrl_field ptp_ctrl_field_t
The control field for PTP message header.

◆ ptp_message_delay_req_t

typedef ptp_message_sync_t ptp_message_delay_req_t
Delay_req Message Type (0x01).

◆ ptp_message_follow_up_t

typedef ptp_message_sync_t ptp_message_follow_up_t
Follow_up Message Type (0x08).

◆ ptp_message_delay_resp_t

typedef ptp_message_pdelay_resp_t ptp_message_delay_resp_t
Delay_resp Message Type (0x09).

◆ ptp_message_pdelay_resp_follow_up_t

typedef ptp_message_delay_resp_t ptp_message_pdelay_resp_follow_up_t
PDelay_resp_follow_up Message Type (0x0A).

Enumeration Type Documentation

◆ ptp_message_type_t

enum ptp_message_type_t	
Standard PTP message types.	
Enumerator	
PTP_MESSAGE_TYPE_SYNC	Sync Message Type.
PTP_MESSAGE_TYPE_DELAY_REQ	Delay_req Message Type.
PTP_MESSAGE_TYPE_PDELAY_REQ	PDelay_req Message Type.
PTP_MESSAGE_TYPE_PDELAY_RESP	PDelay_resp Message Type.
PTP_MESSAGE_TYPE_FOLLOW_UP	Follow_up Message Type.
PTP_MESSAGE_TYPE_DELAY_RESP	Delay_resp Message Type.
PTP_MESSAGE_TYPE_PDELAY_RESP_FOLLOW_UP	PDelay_resp_follow_up Message Type.
PTP_MESSAGE_TYPE_ANNOUNCE	Announce Message Type.
PTP_MESSAGE_TYPE_SIGNALING	Signaling Message Type.
PTP_MESSAGE_TYPE_MANAGEMENT	Management Message Type.

◆ ptp_port_state_t

enum ptp_port_state_t	
Possible states that the PTP instance can be in.	
Enumerator	
PTP_PORT_STATE_GENERATE_ANNOUNCE	Generate Announce Messages.
PTP_PORT_STATE_GENERATE_SYNC	Generate Sync Messages.
PTP_PORT_STATE_GENERATE_DELAY_REQ	Generate Delay_req Messages.
PTP_PORT_STATE_GENERATE_PDELAY_REQ	Generate PDelay_req Messages.
PTP_PORT_STATE_RECEIVE_ANNOUNCE	Receive Announce Messages from ptp_cfg_t::p_callback.
PTP_PORT_STATE_RECEIVE_SYNC	Receive Sync Messages from ptp_cfg_t::p_callback.
PTP_PORT_STATE_RECEIVE_FOLLOW_UP	Receive Follow_up Messages from ptp_cfg_t::p_callback.
PTP_PORT_STATE_RECEIVE_DELAY_REQ	Receive Delay_req Messages from ptp_cfg_t::p_callback.
PTP_PORT_STATE_RECEIVE_DELAY_RESP	Receive Delay_resp Messages from ptp_cfg_t::p_callback.
PTP_PORT_STATE_RECEIVE_PDELAY_REQ	Receive PDelay_req Messages from ptp_cfg_t::p_callback.
PTP_PORT_STATE_RECEIVE_PDELAY_RESP	Receive PDelay_resp Messages from ptp_cfg_t::p_callback.
PTP_PORT_STATE_RECEIVE_PDELAY_RESP_FOLLOW_UP	Receive PDelay_resp_follow_up Messages from ptp_cfg_t::p_callback.
PTP_PORT_STATE_RECEIVE_MANAGEMENT	Receive Management Messages from ptp_cfg_t::p_callback.
PTP_PORT_STATE_RECEIVE_SIGNALING	Receive Signaling Messages from ptp_cfg_t::p_callback.
PTP_PORT_STATE_PROCESS_SYNC	Enable Sync Message processing.
PTP_PORT_STATE_PROCESS_FOLLOW_UP	Enable Follow_up Message processing.

PTP_PORT_STATE_PROCESS_DELAY_REQ	Enable Delay_req Message processing.
PTP_PORT_STATE_PROCESS_DELAY_RESP	Enable Delay_resp Message processing.
PTP_PORT_STATE_PROCESS_PDELAY_REQ	Enable PDelay_req Message processing.
PTP_PORT_STATE_PROCESS_PDELAY_RESP	Enable PDelay_resp Message processing.
PTP_PORT_STATE_PROCESS_PDELAY_RESP_FOLLOW_UP	Enable PDelay_resp_follow_up Message processing.
PTP_PORT_STATE_PASSIVE	Configure the PTP instance to only receive Announce, Management, and Signaling Messages.
PTP_PORT_STATE_E2E_MASTER	Configure the PTP instance to operate as a E2E Master.
PTP_PORT_STATE_E2E_SLAVE	Configure the PTP instance to operate as a E2E Slave.
PTP_PORT_STATE_P2P_MASTER	Configure the PTP instance to operate as a P2P Master.
PTP_PORT_STATE_P2P_SLAVE	Configure the PTP instance to operate as a P2P Slave.
PTP_PORT_STATE_RECEIVE_ALL	Configure the PTP instance to receive all messages.
PTP_PORT_STATE_DISABLE	Disable all PTP message generation, processing, and reception.

◆ ptp_clock_delay_mechanism_t

enum ptp_clock_delay_mechanism_t	
The mechanism used for delay messages.	
Enumerator	
PTP_CLOCK_DELAY_MECHANISM_E2E	End to end delay mechanism.
PTP_CLOCK_DELAY_MECHANISM_P2P	Peer to peer delay mechanism.

◆ ptp_frame_format_t

enum ptp_frame_format_t	
Frame formats that PTP messages can be encapsulated in.	
Enumerator	
PTP_FRAME_FORMAT_ETHERII	Send PTP messages using Ethernet II frames.
PTP_FRAME_FORMAT_IEEE802_3	Send PTP messages using IEEE802_3 frames.
PTP_FRAME_FORMAT_ETHERII_IPV4_UDP	Send PTP messages using Ethernet II frames with an IP and UDP header.
PTP_FRAME_FORMAT_IEEE802_3_IPV4_UDP	Send PTP messages using IEEE802.3 frames with an IP and UDP header.

◆ ptp_frame_filter_mode_t

enum ptp_frame_filter_mode_t	
Filter PTP messages based on destination MAC address. Messages that pass the filter will be transferred to the ETHERC EDMAC.	
Enumerator	
PTP_FRAME_FILTER_MODE_EXT_PROMISCUOUS_MODE	Receive all packets.
PTP_FRAME_FILTER_MODE_UNICAST_MULTICAST	Receive all unicast packets destined for the PTP and all multicast packets.
PTP_FRAME_FILTER_MODE_UNICAST_MULTICAST_FILTERED	Receive Unicast packets destined for the PTP and filter configured multicast packets.
PTP_FRAME_FILTER_MODE_UNICAST	Receive unicast packets destined for the PTP.

◆ ptp_stca_clock_freq_t

enum ptp_stca_clock_freq_t	
STCA input clock frequency.	
Enumerator	
PTP_STCA_CLOCK_FREQ_20MHZ	20 Mhz Input Clock
PTP_STCA_CLOCK_FREQ_25MHZ	25 Mhz Input Clock
PTP_STCA_CLOCK_FREQ_50MHZ	50 Mhz Input Clock
PTP_STCA_CLOCK_FREQ_100MHZ	100 Mhz Input Clock

◆ ptp_stca_clock_sel_t

enum ptp_stca_clock_sel_t	
STCA input clock selection.	
Enumerator	
PTP_STCA_CLOCK_SEL_PCLKA_DIV_1	PCLKA.
PTP_STCA_CLOCK_SEL_PCLKA_DIV_2	PCLKA Divided by 2.
PTP_STCA_CLOCK_SEL_PCLKA_DIV_3	PCLKA Divided by 3.
PTP_STCA_CLOCK_SEL_PCLKA_DIV_4	PCLKA Divided by 4.
PTP_STCA_CLOCK_SEL_PCLKA_DIV_5	PCLKA Divided by 5.
PTP_STCA_CLOCK_SEL_PCLKA_DIV_6	PCLKA Divided by 6.
PTP_STCA_CLOCK_SEL_REF50CK0	50-MHz Reference Signal for timing in RMII mode (STCA clock frequency is 25 Mhz when REF50CK0 is used).

◆ ptp_message_interval_t

enum ptp_message_interval_t	
Message interval for transmitting PTP messages.	
Enumerator	
PTP_MESSAGE_INTERVAL_1_128	1 / 128 seconds
PTP_MESSAGE_INTERVAL_1_64	1 / 64 seconds
PTP_MESSAGE_INTERVAL_1_32	1 / 32 seconds
PTP_MESSAGE_INTERVAL_1_16	1 / 16 seconds
PTP_MESSAGE_INTERVAL_1_8	1 / 8 seconds
PTP_MESSAGE_INTERVAL_1_4	1 / 4 seconds
PTP_MESSAGE_INTERVAL_1_2	1 / 2 seconds
PTP_MESSAGE_INTERVAL_1	1 seconds
PTP_MESSAGE_INTERVAL_2	2 seconds
PTP_MESSAGE_INTERVAL_4	4 seconds
PTP_MESSAGE_INTERVAL_8	8 seconds
PTP_MESSAGE_INTERVAL_16	16 seconds
PTP_MESSAGE_INTERVAL_32	32 seconds
PTP_MESSAGE_INTERVAL_64	64 seconds

◆ ptp_clock_correction_mode_t

enum ptp_clock_correction_mode_t	
Clock correction mode.	
Enumerator	
PTP_CLOCK_CORRECTION_MODE1	Correct the local clock using the current offsetFromMaster value.
PTP_CLOCK_CORRECTION_MODE2	Correct the local clock using the calculated clock gradient.

◆ ptp_event_t

enum ptp_event_t	
PTP events provided by ptp_cfg_t::p_callback.	
Enumerator	
PTP_EVENT_SYNC_ACQUIRED	The local clock is synchronized to the master clock.
PTP_EVENT_SYNC_LOST	The local clock is not synchronized to the master clcok.
PTP_EVENT_SYNC_MESSAGE_TIMEOUT	A sync message has not been received for the configured time.
PTP_EVENT_WORST10_ACQUIRED	Gradient worst10 values has been calcualted.
PTP_EVENT_OFFSET_FROM_MASTER_UPDATED	The offset from the master clock has been updated.
PTP_EVENT_LOG_MESSAGE_INT_CHANGED	The message interval was changed.
PTP_EVENT_MEAN_PATH_DELAY_UPDATED	The mean path delay has been updated.
PTP_EVENT_DELAY_RESP_TIMEOUT	A delay_resp has not been received for the configured time.
PTP_EVENT_LOG_MESSAGE_INT_OUT_OF_RANGE	The updated message interval is out of range.
PTP_EVENT_DELAY_REQ_FIFO_OVERFLOW	The FIFO buffer for storing information from received Delay_Req messages holds 32 or more entries.
PTP_EVENT_LOOP_RECEPTION_DETECTED	A packet with the same sourcePortIdendity as the local clock was received.
PTP_EVENT_CTRL_INFO_ABNORMALITY	A malformed frame was received (EDMAC, ETHERC, and EPTPC must be reset).
PTP_EVENT_DELAY_RESP_PROCESSING_HALTED	Processing of delay_resp messages has been halted.
PTP_EVENT_MESSAGE_GENERATION_HALTED	Generation of messages has been halted.
PTP_EVENT_MESSAGE_RECEIVED	A PTP message was received from the EDMAC.
PTP_EVENT_MESSAGE_TRANSMIT_COMPLETE	A PTP message has been transmitted.

PTP_EVENT_PULSE_TIMER_MINT_RISING_EDGE	A rising edge occurred on a pulse timer channel.
PTP_EVENT_PULSE_TIMER_IPLS_COMMON	A rising or falling edge occurred on any pulse timer channel.

◆ **ptp_ethernet_phy_interface_t**

enum ptp_ethernet_phy_interface_t	
The Ethernet PHY interface type.	
Enumerator	
PTP_ETHERNET_PHY_INTERFACE_MII	Media-independant interface.
PTP_ETHERNET_PHY_INTERFACE_RMII	Reduced media-independant interface.

Variable Documentation

◆ **e_ptp_ctrl_field**

enum PTP_PACKED e_ptp_ctrl_field
The control field for PTP message header.

4.3.32 RTC Interface

Interfaces

Detailed Description

Interface for accessing the Realtime Clock.

Summary

The RTC Interface is for configuring Real Time Clock (RTC) functionality including alarm, periodic notiification and error adjustment.

The Real Time Clock Interface can be implemented by:

- Realtime Clock (r_rtc)

Data Structures

struct	rtc_callback_args_t

struct	rtc_error_adjustment_cfg_t
struct	rtc_alarm_time_t
struct	rtc_info_t
struct	rtc_cfg_t
struct	rtc_api_t
struct	rtc_instance_t

Typedefs

typedef struct tm	rtc_time_t
typedef void	rtc_ctrl_t

Enumerations

enum	rtc_event_t
enum	rtc_clock_source_t
enum	rtc_status_t
enum	rtc_error_adjustment_t
enum	rtc_error_adjustment_mode_t
enum	rtc_error_adjustment_period_t
enum	rtc_periodic_irq_select_t

Data Structure Documentation

◆ rtc_callback_args_t

struct rtc_callback_args_t		
Callback function parameter data		
Data Fields		
rtc_event_t	event	The event can be used to identify what caused the callback (compare match or error).
void const *	p_context	Placeholder for user data.

◆ rtc_error_adjustment_cfg_t

struct rtc_error_adjustment_cfg_t		
Time error adjustment value configuration		
Data Fields		
rtc_error_adjustment_mode_t	adjustment_mode	Automatic Adjustment Enable/Disable.
rtc_error_adjustment_period_t	adjustment_period	Error Adjustment period.
rtc_error_adjustment_t	adjustment_type	Time error adjustment setting.
uint32_t	adjustment_value	Value of the prescaler for error adjustment.

◆ rtc_alarm_time_t

struct rtc_alarm_time_t		
Alarm time setting structure		
Data Fields		
rtc_time_t	time	Time structure.
bool	sec_match	Enable the alarm based on a match of the seconds field.
bool	min_match	Enable the alarm based on a match of the minutes field.
bool	hour_match	Enable the alarm based on a match of the hours field.
bool	mday_match	Enable the alarm based on a match of the days field.
bool	mon_match	Enable the alarm based on a match of the months field.
bool	year_match	Enable the alarm based on a match of the years field.
bool	dayofweek_match	Enable the alarm based on a match of the dayofweek field.

◆ rtc_info_t

struct rtc_info_t		
RTC Information Structure for information returned by infoGet()		
Data Fields		
rtc_clock_source_t	clock_source	Clock source for the RTC block.
rtc_status_t	status	RTC run status.

◆ rtc_cfg_t

struct rtc_cfg_t
User configuration structure, used in open function

Data Fields	
rtc_clock_source_t	clock_source
	Clock source for the RTC block.
uint32_t	freq_compare_value_loco
	The frequency comparison value for LOCO.
rtc_error_adjustment_cfg_t const *const	p_err_cfg
	Pointer to Error Adjustment configuration.
uint8_t	alarm_ipl
	Alarm interrupt priority.
IRQn_Type	alarm_irq
	Alarm interrupt vector.
uint8_t	periodic_ipl
	Periodic interrupt priority.
IRQn_Type	periodic_irq
	Periodic interrupt vector.
uint8_t	carry_ipl
	Carry interrupt priority.
IRQn_Type	carry_irq
	Carry interrupt vector.

void(*	p_callback)(rtc_callback_args_t *p_args)
	Called from the ISR.
void const *	p_context
	User defined context passed into callback function.
void const *	p_extend
	RTC hardware dependant configuration.

◆ rtc_api_t

struct rtc_api_t	
RTC driver structure. General RTC functions implemented at the HAL layer follow this API.	
Data Fields	
fsp_err_t(*	open)(rtc_ctrl_t *const p_ctrl, rtc_cfg_t const *const p_cfg)
fsp_err_t(*	close)(rtc_ctrl_t *const p_ctrl)
fsp_err_t(*	calendarTimeSet)(rtc_ctrl_t *const p_ctrl, rtc_time_t *const p_time)
fsp_err_t(*	calendarTimeGet)(rtc_ctrl_t *const p_ctrl, rtc_time_t *const p_time)
fsp_err_t(*	calendarAlarmSet)(rtc_ctrl_t *const p_ctrl, rtc_alarm_time_t *const p_alarm)
fsp_err_t(*	calendarAlarmGet)(rtc_ctrl_t *const p_ctrl, rtc_alarm_time_t *const p_alarm)
fsp_err_t(*	periodicIrqRateSet)(rtc_ctrl_t *const p_ctrl, rtc_periodic_irq_select_t const rate)
fsp_err_t(*	errorAdjustmentSet)(rtc_ctrl_t *const p_ctrl, rtc_error_adjustment_cfg_t const *const err_adj_cfg)

fsp_err_t(*	callbackSet)(rtc_ctrl_t *const p_ctrl, void(*p_callback)(rtc_callback_args_t *), void const *const p_context, rtc_callback_args_t *const p_callback_memory)
fsp_err_t(*	infoGet)(rtc_ctrl_t *const p_ctrl, rtc_info_t *const p_rtc_info)

Field Documentation

◆ open

fsp_err_t(* rtc_api_t::open) (rtc_ctrl_t *const p_ctrl, rtc_cfg_t const *const p_cfg)

Open the RTC driver.

Implemented as

- R_RTC_Open()

Parameters

[in]	p_ctrl	Pointer to RTC device handle
[in]	p_cfg	Pointer to the configuration structure

◆ close

fsp_err_t(* rtc_api_t::close) (rtc_ctrl_t *const p_ctrl)

Close the RTC driver.

Implemented as

- R_RTC_Close()

Parameters

[in]	p_ctrl	Pointer to RTC device handle.

◆ calendarTimeSet

fsp_err_t(* rtc_api_t::calendarTimeSet) (rtc_ctrl_t *const p_ctrl, rtc_time_t *const p_time)

Set the calendar time and start the calender counter

Implemented as

- R_RTC_CalendarTimeSet()

Parameters

[in]	p_ctrl	Pointer to RTC device handle
[in]	p_time	Pointer to a time structure that contains the time to set
[in]	clock_start	Flag that starts the clock right after it is set

◆ calendarTimeGet

fsp_err_t(* rtc_api_t::calendarTimeGet) (rtc_ctrl_t *const p_ctrl, rtc_time_t *const p_time)

Get the calendar time.

Implemented as

- R_RTC_CalendarTimeGet()

Parameters

[in]	p_ctrl	Pointer to RTC device handle
[out]	p_time	Pointer to a time structure that contains the time to get

◆ calendarAlarmSet

fsp_err_t(* rtc_api_t::calendarAlarmSet) (rtc_ctrl_t *const p_ctrl, rtc_alarm_time_t *const p_alarm)

Set the calendar alarm time and enable the alarm interrupt.

Implemented as

- R_RTC_CalendarAlarmSet()

Parameters

[in]	p_ctrl	Pointer to RTC device handle
[in]	p_alarm	Pointer to an alarm structure that contains the alarm time to set
[in]	irq_enable_flag	Enable the ALARM irq if set

◆ calendarAlarmGet

fsp_err_t(* rtc_api_t::calendarAlarmGet) (rtc_ctrl_t *const p_ctrl, rtc_alarm_time_t *const p_alarm)

Get the calendar alarm time.

Implemented as

- R_RTC_CalendarAlarmGet()

Parameters

[in]	p_ctrl	Pointer to RTC device handle
[out]	p_alarm	Pointer to an alarm structure to fill up with the alarm time

◆ periodicIrqRateSet

fsp_err_t(* rtc_api_t::periodicIrqRateSet) (rtc_ctrl_t *const p_ctrl, rtc_periodic_irq_select_t const rate)

Set the periodic irq rate

Implemented as

- R_RTC_PeriodicIrqRateSet()

Parameters

[in]	p_ctrl	Pointer to RTC device handle
[in]	rate	Rate of periodic interrupts

◆ errorAdjustmentSet

fsp_err_t(* rtc_api_t::errorAdjustmentSet) (rtc_ctrl_t *const p_ctrl, rtc_error_adjustment_cfg_t const *const err_adj_cfg)

Set time error adjustment.

Implemented as

- R_RTC_ErrorAdjustmentSet()

Parameters

[in]	p_ctrl	Pointer to control handle structure
[in]	err_adj_cfg	Pointer to the Error Adjustment Config

◆ callbackSet

fsp_err_t(* rtc_api_t::callbackSet) (rtc_ctrl_t *const p_ctrl, void(*p_callback)(rtc_callback_args_t *), void const *const p_context, rtc_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_RTC_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the RTC control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated

◆ infoGet

fsp_err_t(* rtc_api_t::infoGet) (rtc_ctrl_t *const p_ctrl, rtc_info_t *const p_rtc_info)

Return the currently configure clock source for the RTC

Implemented as

- R_RTC_InfoGet()

Parameters

[in]	p_ctrl	Pointer to control handle structure
[out]	p_rtc_info	Pointer to RTC information structure

◆ rtc_instance_t

struct rtc_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

rtc_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rtc_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
rtc_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ rtc_time_t

typedef struct tm rtc_time_t
Date and time structure defined in C standard library <time.h>

◆ rtc_ctrl_t

typedef void rtc_ctrl_t
RTC control block. Allocate an instance specific control block to pass into the RTC API calls. **Implemented as** ◦ rtc_instance_ctrl_t

Enumeration Type Documentation

◆ rtc_event_t

enum rtc_event_t	
Events that can trigger a callback function	
Enumerator	
RTC_EVENT_ALARM_IRQ	Real Time Clock ALARM IRQ.
RTC_EVENT_PERIODIC_IRQ	Real Time Clock PERIODIC IRQ.

◆ rtc_clock_source_t

enum rtc_clock_source_t	
Clock source for the RTC block	
Enumerator	
RTC_CLOCK_SOURCE_SUBCLK	Sub-clock oscillator.
RTC_CLOCK_SOURCE_LOCO	Low power On Chip Oscillator.

◆ rtc_status_t

enum rtc_status_t	
RTC run state	
Enumerator	
RTC_STATUS_STOPPED	RTC counter is stopped.
RTC_STATUS_RUNNING	RTC counter is running.

◆ rtc_error_adjustment_t

enum rtc_error_adjustment_t	
Time error adjustment settings	
Enumerator	
RTC_ERROR_ADJUSTMENT_NONE	Adjustment is not performed.
RTC_ERROR_ADJUSTMENT_ADD_PRESCALER	Adjustment is performed by the addition to the prescaler.
RTC_ERROR_ADJUSTMENT_SUBTRACT_PRESCALER	Adjustment is performed by the subtraction from the prescaler.

◆ rtc_error_adjustment_mode_t

enum rtc_error_adjustment_mode_t	
Time error adjustment mode settings	
Enumerator	
RTC_ERROR_ADJUSTMENT_MODE_MANUAL	Adjustment mode is set to manual.
RTC_ERROR_ADJUSTMENT_MODE_AUTOMATIC	Adjustment mode is set to automatic.

◆ rtc_error_adjustment_period_t

enum rtc_error_adjustment_period_t	
Time error adjustment period settings	
Enumerator	
RTC_ERROR_ADJUSTMENT_PERIOD_1_MINUTE	Adjustment period is set to every one minute.
RTC_ERROR_ADJUSTMENT_PERIOD_10_SECOND	Adjustment period is set to every ten second.
RTC_ERROR_ADJUSTMENT_PERIOD_NONE	Adjustment period not supported in manual mode.

◆ rtc_periodic_irq_select_t

enum rtc_periodic_irq_select_t	
Periodic Interrupt select	
Enumerator	
RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_256_SECOND	A periodic irq is generated every 1/256 second.
RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_128_SECOND	A periodic irq is generated every 1/128 second.
RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_64_SECOND	A periodic irq is generated every 1/64 second.
RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_32_SECOND	A periodic irq is generated every 1/32 second.
RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_16_SECOND	A periodic irq is generated every 1/16 second.
RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_8_SECOND	A periodic irq is generated every 1/8 second.
RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_4_SECOND	A periodic irq is generated every 1/4 second.
RTC_PERIODIC_IRQ_SELECT_1_DIV_BY_2_SECOND	A periodic irq is generated every 1/2 second.
RTC_PERIODIC_IRQ_SELECT_1_SECOND	A periodic irq is generated every 1 second.
RTC_PERIODIC_IRQ_SELECT_2_SECOND	A periodic irq is generated every 2 seconds.

4.3.33 SD/MMC Interface

Interfaces

Detailed Description

Interface for accessing SD, eMMC, and SDIO devices.

Summary

The r_sdhi interface provides standard SD and eMMC media functionality. This interface also supports SDIO.

The SD/MMC interface is implemented by:

- SD/MMC Host Interface (r_sdhi)

Data Structures

struct	sdmmc_response_t.status_b
struct	sdmmc_status_t
struct	sdmmc_device_t
struct	sdmmc_callback_args_t
struct	sdmmc_write_io_args_t
struct	sdmmc_read_io_ext_args_t
struct	sdmmc_write_io_ext_args_t
struct	sdmmc_cfg_t
struct	sdmmc_api_t
struct	sdmmc_instance_t

Typedefs

typedef void	sdmmc_ctrl_t

Enumerations

enum	sdmmc_card_type_t
enum	sdmmc_bus_width_t
enum	sdmmc_io_transfer_mode_t

enum	sdmmc_io_address_mode_t
enum	sdmmc_io_write_mode_t
enum	sdmmc_event_t
enum	sdmmc_card_detect_t
enum	sdmmc_write_protect_t
enum	sdmmc_r1_state_t

Data Structure Documentation

◆ sdmmc_response_t.status_b

struct sdmmc_response_t.status_b
SDIO Card Status Register.

◆ sdmmc_status_t

struct sdmmc_status_t		
Current status.		
Data Fields		
bool	initialized	False if card was removed (only applies if MCU supports card detection and SDnCD pin is connected), true otherwise. If ready is false, call sdmmc_api_t::mediaInit to reinitialize it
bool	transfer_in_progress	true = Card is busy
bool	card_inserted	Card detect status, true if card detect is not used.

◆ sdmmc_device_t

struct sdmmc_device_t		
Information obtained from the media device.		
Data Fields		
sdmmc_card_type_t	card_type	SD, eMMC, or SDIO.
bool	write_protected	true = Card is write protected
uint32_t	clock_rate	Current clock rate.

uint32_t	sector_count	Sector count.
uint32_t	sector_size_bytes	Sector size.
uint32_t	erase_sector_count	Minimum erasable unit (in 512 byte sectors)

◆ sdmmc_callback_args_t

struct sdmmc_callback_args_t		
Callback function parameter data		
Data Fields		
sdmmc_event_t	event	The event can be used to identify what caused the callback.
sdmmc_response_t	response	Response from card, only valid if SDMMC_EVENT_RESPONSE is set in event.
void const *	p_context	Placeholder for user data.

◆ sdmmc_write_io_args_t

struct sdmmc_write_io_args_t
Non-secure arguments for writeIo guard function

◆ sdmmc_read_io_ext_args_t

struct sdmmc_read_io_ext_args_t
Non-secure arguments for readIoExt guard function

◆ sdmmc_write_io_ext_args_t

struct sdmmc_write_io_ext_args_t
Non-secure arguments for writeIoExt guard function

◆ sdmmc_cfg_t

struct sdmmc_cfg_t	
SD/MMC Configuration	
Data Fields	
uint8_t	channel
	Channel of SD/MMC host interface.
sdmmc_bus_width_t	bus_width

	Device bus width is 1, 4 or 8 bits wide.
transfer_instance_t const *	p_lower_lvl_transfer
	Transfer instance used to move data with DMA or DTC.
void(*	p_callback)(sdmmc_callback_args_t *p_args)
	Pointer to callback function.
void const *	p_context
	User defined context passed into callback function.
void const *	p_extend
	SD/MMC hardware dependent configuration.
uint32_t	block_size
sdmmc_card_detect_t	card_detect
sdmmc_write_protect_t	write_protect
IRQn_Type	access_irq
	Access IRQ number.
IRQn_Type	sdio_irq
	SDIO IRQ number.
IRQn_Type	card_irq
	Card IRQ number.

IRQn_Type	dma_req_irq
	DMA request IRQ number.
uint8_t	access_ipl
	Access interrupt priority.
uint8_t	sdio_ipl
	SDIO interrupt priority.
uint8_t	card_ipl
	Card interrupt priority.
uint8_t	dma_req_ipl
	DMA request interrupt priority.

Field Documentation

◆ block_size

uint32_t sdmmc_cfg_t::block_size

Block size in bytes. Block size must be 512 bytes for SD cards and eMMC devices. Block size can be 1-512 bytes for SDIO.

◆ card_detect

sdmmc_card_detect_t sdmmc_cfg_t::card_detect

Whether or not card detection is used.

◆ write_protect

sdmmc_write_protect_t sdmmc_cfg_t::write_protect

Select whether or not to use the write protect pin. Select Not Used if the MCU or device does not have a write protect pin.

◆ sdmmc_api_t

struct sdmmc_api_t

SD/MMC functions implemented at the HAL layer API.

Data Fields	
fsp_err_t(*	open)(sdmmc_ctrl_t *const p_ctrl, sdmmc_cfg_t const *const p_cfg)
fsp_err_t(*	mediaInit)(sdmmc_ctrl_t *const p_ctrl, sdmmc_device_t *const p_device)
fsp_err_t(*	read)(sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const start_sector, uint32_t const sector_count)
fsp_err_t(*	write)(sdmmc_ctrl_t *const p_ctrl, uint8_t const *const p_source, uint32_t const start_sector, uint32_t const sector_count)
fsp_err_t(*	readIo)(sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_data, uint32_t const function, uint32_t const address)
fsp_err_t(*	writeIo)(sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_data, uint32_t const function, uint32_t const address, sdmmc_io_write_mode_t const read_after_write)
fsp_err_t(*	readIoExt)(sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const function, uint32_t const address, uint32_t *const count, sdmmc_io_transfer_mode_t transfer_mode, sdmmc_io_address_mode_t address_mode)
fsp_err_t(*	writeIoExt)(sdmmc_ctrl_t *const p_ctrl, uint8_t const *const p_source, uint32_t const function, uint32_t const address, uint32_t const count, sdmmc_io_transfer_mode_t transfer_mode, sdmmc_io_address_mode_t address_mode)
fsp_err_t(*	ioIntEnable)(sdmmc_ctrl_t *const p_ctrl, bool enable)
fsp_err_t(*	statusGet)(sdmmc_ctrl_t *const p_ctrl, sdmmc_status_t *const p_status)
fsp_err_t(*	erase)(sdmmc_ctrl_t *const p_ctrl, uint32_t const start_sector, uint32_t const sector_count)
fsp_err_t(*	callbackSet)(sdmmc_ctrl_t *const p_api_ctrl, void(*p_callback)(sdmmc_callback_args_t *), void const *const p_context, sdmmc_callback_args_t *const p_callback_memory)

fsp_err_t(*	close)(sdmmc_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* sdmmc_api_t::open) (sdmmc_ctrl_t *const p_ctrl, sdmmc_cfg_t const *const p_cfg)

Open the SD/MMC driver.

Implemented as

- R_SDHI_Open()

Parameters

[in]	p_ctrl	Pointer to SD/MMC instance control block.
[in]	p_cfg	Pointer to SD/MMC instance configuration structure.

◆ mediaInit

fsp_err_t(* sdmmc_api_t::mediaInit) (sdmmc_ctrl_t *const p_ctrl, sdmmc_device_t *const p_device)

Initializes an SD/MMC device. If the device is a card, the card must be plugged in prior to calling this API. This API blocks until the device initialization procedure is complete.

Implemented as

- R_SDHI_MediaInit()

Parameters

[in]	p_ctrl	Pointer to SD/MMC instance control block.
[out]	p_device	Pointer to store device information.

◆ read

fsp_err_t(* sdmmc_api_t::read) (sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const start_sector, uint32_t const sector_count)

Read data from an SD/MMC channel. This API is not supported for SDIO devices.

Implemented as

- R_SDHI_Read()

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.
[out]	p_dest	Pointer to data buffer to read data to.
[in]	start_sector	First sector address to read.
[in]	sector_count	Number of sectors to read. All sectors must be in the range of sdmmc_device_t::sector_count.

◆ write

fsp_err_t(* sdmmc_api_t::write) (sdmmc_ctrl_t *const p_ctrl, uint8_t const *const p_source, uint32_t const start_sector, uint32_t const sector_count)

Write data to SD/MMC channel. This API is not supported for SDIO devices.

Implemented as

- R_SDHI_Write()

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.
[in]	p_source	Pointer to data buffer to write data from.
[in]	start_sector	First sector address to write to.
[in]	sector_count	Number of sectors to write. All sectors must be in the range of sdmmc_device_t::sector_count.

◆ readIo

fsp_err_t(* sdmmc_api_t::readIo) (sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_data, uint32_t const function, uint32_t const address)

Read one byte of I/O data from an SDIO device. This API is not supported for SD or eMMC memory devices.

Implemented as

- R_SDHI_ReadIo()

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.
[out]	p_data	Pointer to location to store data byte.
[in]	function	SDIO Function Number.
[in]	address	SDIO register address.

◆ writeIo

fsp_err_t(* sdmmc_api_t::writeIo) (sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_data, uint32_t const function, uint32_t const address, sdmmc_io_write_mode_t const read_after_write)

Write one byte of I/O data to an SDIO device. This API is not supported for SD or eMMC memory devices.

Implemented as

- R_SDHI_WriteIo()

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.
[in,out]	p_data	Pointer to data byte to write. Read data is also provided here if read_after_write is true.
[in]	function	SDIO Function Number.
[in]	address	SDIO register address.
[in]	read_after_write	Whether or not to read back the same register after writing

◆ readIoExt

fsp_err_t(* sdmmc_api_t::readIoExt) (sdmmc_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const function, uint32_t const address, uint32_t *const count, sdmmc_io_transfer_mode_t transfer_mode, sdmmc_io_address_mode_t address_mode)

Read multiple bytes or blocks of I/O data from an SDIO device. This API is not supported for SD or eMMC memory devices.

Implemented as

- R_SDHI_ReadIoExt()

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.
[out]	p_dest	Pointer to data buffer to read data to.
[in]	function	SDIO Function Number.
[in]	address	SDIO register address.
[in]	count	Number of bytes or blocks to read, maximum 512 bytes or 511 blocks.
[in]	transfer_mode	Byte or block mode
[in]	address_mode	Fixed or incrementing address mode

◆ writeIoExt

fsp_err_t(* sdmmc_api_t::writeIoExt) (sdmmc_ctrl_t *const p_ctrl, uint8_t const *const p_source, uint32_t const function, uint32_t const address, uint32_t const count, sdmmc_io_transfer_mode_t transfer_mode, sdmmc_io_address_mode_t address_mode)

Write multiple bytes or blocks of I/O data to an SDIO device. This API is not supported for SD or eMMC memory devices.

Implemented as

- R_SDHI_WriteIoExt()

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.
[in]	p_source	Pointer to data buffer to write data from.
[in]	function_number	SDIO Function Number.
[in]	address	SDIO register address.
[in]	count	Number of bytes or blocks to write, maximum 512 bytes or 511 blocks.
[in]	transfer_mode	Byte or block mode
[in]	address_mode	Fixed or incrementing address mode

◆ ioIntEnable

fsp_err_t(* sdmmc_api_t::ioIntEnable) (sdmmc_ctrl_t *const p_ctrl, bool enable)

Enables SDIO interrupt for SD/MMC instance. This API is not supported for SD or eMMC memory devices.

Implemented as

- R_SDHI_IoIntEnable

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.
[in]	enable	Interrupt enable = true, interrupt disable = false.

◆ statusGet

fsp_err_t(* sdmmc_api_t::statusGet) (sdmmc_ctrl_t *const p_ctrl, sdmmc_status_t *const p_status)

Get SD/MMC device status.

Implemented as

- R_SDHI_StatusGet()

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.
[out]	p_status	Pointer to current driver status.

◆ erase

fsp_err_t(* sdmmc_api_t::erase) (sdmmc_ctrl_t *const p_ctrl, uint32_t const start_sector, uint32_t const sector_count)

Erase SD/MMC sectors. The sector size for erase is fixed at 512 bytes. This API is not supported for SDIO devices.

Implemented as

- R_SDHI_Erase

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.
[in]	start_sector	First sector to erase. Must be a multiple of sdmmc_device_t::erase_sector_count.
[in]	sector_count	Number of sectors to erase. Must be a multiple of sdmmc_device_t::erase_sector_count. All sectors must be in the range of sdmmc_device_t::sector_count.

◆ callbackSet

fsp_err_t(* sdmmc_api_t::callbackSet) (sdmmc_ctrl_t *const p_api_ctrl, void(*p_callback)(sdmmc_callback_args_t *), void const *const p_context, sdmmc_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_SDHI_CallbackSet()

Parameters

[in]	p_ctrl	Control block set in sdmmc_api_t::open call.
[in]	p_callback	Callback function to register
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ close

fsp_err_t(* sdmmc_api_t::close) (sdmmc_ctrl_t *const p_ctrl)

Close open SD/MMC device.

Implemented as

- R_SDHI_Close()

Parameters

[in]	p_ctrl	Pointer to an open SD/MMC instance control block.

◆ sdmmc_instance_t

struct sdmmc_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields		
sdmmc_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
sdmmc_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
sdmmc_api_t const *	p_api	Pointer to the API structure for

		this instance.

Typedef Documentation

◆ sdmmc_ctrl_t

typedef void sdmmc_ctrl_t
SD/MMC control block. Allocate an instance specific control block to pass into the SD/MMC API calls. **Implemented as** ◦ sdmmc_instance_ctrl_t

Enumeration Type Documentation

◆ sdmmc_card_type_t

enum sdmmc_card_type_t	
SD/MMC media uses SD protocol or MMC protocol.	
Enumerator	
SDMMC_CARD_TYPE_MMC	The media is an eMMC device.
SDMMC_CARD_TYPE_SD	The media is an SD card.
SDMMC_CARD_TYPE_SDIO	The media is an SDIO card.

◆ sdmmc_bus_width_t

enum sdmmc_bus_width_t	
SD/MMC data bus is 1, 4 or 8 bits wide.	
Enumerator	
SDMMC_BUS_WIDTH_1_BIT	Data bus is 1 bit wide.
SDMMC_BUS_WIDTH_4_BITS	Data bus is 4 bits wide.
SDMMC_BUS_WIDTH_8_BITS	Data bus is 8 bits wide.

◆ sdmmc_io_transfer_mode_t

enum sdmmc_io_transfer_mode_t	
SDIO transfer mode, configurable in SDIO read/write extended commands.	
Enumerator	
SDMMC_IO_MODE_TRANSFER_BYTE	SDIO byte transfer mode.
SDMMC_IO_MODE_TRANSFER_BLOCK	SDIO block transfer mode.

◆ sdmmc_io_address_mode_t

enum sdmmc_io_address_mode_t	
SDIO address mode, configurable in SDIO read/write extended commands.	
Enumerator	
SDMMC_IO_ADDRESS_MODE_FIXED	Write all data to the same address.
SDMMC_IO_ADDRESS_MODE_INCREMENT	Increment destination address after each write.

◆ sdmmc_io_write_mode_t

enum sdmmc_io_write_mode_t	
Controls the RAW (read after write) flag of CMD52. Used to read back the status after writing a control register.	
Enumerator	
SDMMC_IO_WRITE_MODE_NO_READ	Write only (do not read back)
SDMMC_IO_WRITE_READ_AFTER_WRITE	Read back the register after write.

◆ sdmmc_event_t

enum sdmmc_event_t	
Events that can trigger a callback function	
Enumerator	
SDMMC_EVENT_CARD_REMOVED	Card removed event.
SDMMC_EVENT_CARD_INSERTED	Card inserted event.
SDMMC_EVENT_RESPONSE	Response event.
SDMMC_EVENT_SDIO	IO event.
SDMMC_EVENT_TRANSFER_COMPLETE	Read or write complete.
SDMMC_EVENT_TRANSFER_ERROR	Read or write failed.
SDMMC_EVENT_ERASE_COMPLETE	Erase completed.
SDMMC_EVENT_ERASE_BUSY	Erase timeout, poll sdmmc_api_t::statusGet.

◆ sdmmc_card_detect_t

enum sdmmc_card_detect_t	
Card detection configuration options.	
Enumerator	
SDMMC_CARD_DETECT_NONE	Card detection unused.
SDMMC_CARD_DETECT_CD	Card detection using the CD pin.

◆ sdmmc_write_protect_t

enum sdmmc_write_protect_t	
Write protection configuration options.	
Enumerator	
SDMMC_WRITE_PROTECT_NONE	Write protection unused.
SDMMC_WRITE_PROTECT_WP	Write protection using WP pin.

◆ sdmmc_r1_state_t

enum sdmmc_r1_state_t	
Card state when receiving the prior command.	
Enumerator	
SDMMC_R1_STATE_IDLE	Idle State.
SDMMC_R1_STATE_READY	Ready State.
SDMMC_R1_STATE_IDENT	Identification State.
SDMMC_R1_STATE_STBY	Stand-by State.
SDMMC_R1_STATE_TRAN	Transfer State.
SDMMC_R1_STATE_DATA	Sending-data State.
SDMMC_R1_STATE_RCV	Receive-data State.
SDMMC_R1_STATE_PRG	Programming State.
SDMMC_R1_STATE_DIS	Disconnect State (between programming and stand-by)
SDMMC_R1_STATE_IO	This is an I/O card and memory states do not apply.

4.3.34 SLCDC Interface

Interfaces

Detailed Description

Interface for Segment LCD controllers.

Data Structures

struct	slcdc_cfg_t
struct	slcdc_api_t
struct	slcdc_instance_t

Typedefs

typedef void	slcdc_ctrl_t

Enumerations

enum	slcdc_bias_method_t
enum	slcdc_time_slice_t
enum	slcdc_waveform_t
enum	slcdc_drive_volt_gen_t
enum	slcdc_display_area_control_blink_t
enum	slcdc_display_area_t
enum	slcdc_contrast_t
enum	slcdc_display_on_off_t
enum	slcdc_display_enable_disable_t
enum	slcdc_display_clock_t
enum	slcdc_clk_div_t

Data Structure Documentation

◆ slcdc_cfg_t

struct slcdc_cfg_t		
SLCDC configuration block		
Data Fields		
slcdc_display_clock_t	slcdc_clock	LCD clock source (LCDSCKSEL)
slcdc_clk_div_t	slcdc_clock_setting	LCD clock setting (LCDC0)
slcdc_bias_method_t	bias_method	LCD display bias method select (LBAS bit)
slcdc_time_slice_t	time_slice	Time slice of LCD display select (LDTY bit)
slcdc_waveform_t	waveform	LCD display waveform select (LWAVE bit)
slcdc_drive_volt_gen_t	drive_volt_gen	LCD Drive Voltage Generator Select (MDSET bit)
slcdc_contrast_t	contrast	LCD Boost Level (contrast setting)

◆ slcdc_api_t

struct slcdc_api_t	
SLCDC functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(slcdc_ctrl_t *const p_ctrl, slcdc_cfg_t const *const p_cfg)
fsp_err_t(*	write)(slcdc_ctrl_t *const p_ctrl, uint8_t const start_segment, uint8_t const *p_data, uint8_t const segment_count)
fsp_err_t(*	modify)(slcdc_ctrl_t *const p_ctrl, uint8_t const segment, uint8_t const data_mask, uint8_t const data)
fsp_err_t(*	start)(slcdc_ctrl_t *const p_ctrl)
fsp_err_t(*	stop)(slcdc_ctrl_t *const p_ctrl)
fsp_err_t(*	setContrast)(slcdc_ctrl_t *const p_ctrl, slcdc_contrast_t const contrast)
fsp_err_t(*	setDisplayArea)(slcdc_ctrl_t *const p_ctrl, slcdc_display_area_t const display_area)
fsp_err_t(*	close)(slcdc_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* slcdc_api_t::open) (slcdc_ctrl_t *const p_ctrl, slcdc_cfg_t const *const p_cfg)

Open SLCDC.

Implemented as

- R_SLCDC_Open()

Parameters

[in,out]	p_ctrl	Pointer to display interface control block. Must be declared by user.
[in]	p_cfg	Pointer to display configuration structure. All elements of this structure must be set by the user.

◆ write

fsp_err_t(* slcdc_api_t::write) (slcdc_ctrl_t *const p_ctrl, uint8_t const start_segment, uint8_t const *p_data, uint8_t const segment_count)

Write data to the SLCDC segment data array. Specifies the initial display data. Except when using 8-time slice mode, store values in the lower 4 bits when writing to the A-pattern area and in the upper 4 bits when writing to the B-pattern area.

Implemented as

- R_SLCDC_Write()

Parameters

[in]	p_ctrl	Pointer to display interface control block.
[in]	start_segment	Specify the start segment number to be written.
[in]	p_data	Pointer to the display data to be written to the specified segments.
[in]	segment_count	Number of segments to be written.

◆ modify

fsp_err_t(* slcdc_api_t::modify) (slcdc_ctrl_t *const p_ctrl, uint8_t const segment, uint8_t const data_mask, uint8_t const data)

Rewrite data in the SLCDC segment data array. Rewrites the LCD display data in 1-bit units. If a bit is not specified for rewriting, the value stored in the bit is held as it is.

Implemented as

- R_SLCDC_Modify()

Parameters

[in]	p_ctrl	Pointer to display interface control block.
[in]	segment	The segment to be written.
[in]	data_mask	Mask the data being displayed. Set 0 to the bit to be rewritten and set 1 to the other bits. Multiple bits can be rewritten.
[in]	data	Specify display data to rewrite to the specified segment.

◆ start

fsp_err_t(* slcdc_api_t::start) (slcdc_ctrl_t *const p_ctrl)

Enable display signal output. Displays the segment data on the LCD.

Implemented as

- R_SLCDC_Start()

Parameters

[in]	p_ctrl	Pointer to display interface control block.

◆ stop

fsp_err_t(* slcdc_api_t::stop) (slcdc_ctrl_t *const p_ctrl)

Disable display signal output. Stops displaying data on the LCD.

Implemented as

- R_SLCDC_Stop()

Parameters

[in]	p_ctrl	Pointer to display interface control block.

◆ setContrast

fsp_err_t(* slcdc_api_t::setContrast) (slcdc_ctrl_t *const p_ctrl, slcdc_contrast_t const contrast)

Set the display contrast. This function can be used only when the internal voltage boosting method is used for drive voltage generation.

Implemented as

- R_SLCDC_SetContrast()

Parameters

[in]	p_ctrl	Pointer to display interface control block.

◆ setDisplayArea

fsp_err_t(* slcdc_api_t::setDisplayArea) (slcdc_ctrl_t *const p_ctrl, slcdc_display_area_t const display_area)

Set LCD display area. This function sets a specified display area, A-pattern or B-pattern. This function can be used to 'blink' the display between A-pattern and B-pattern area data.

When using blinking, the RTC is required to operate before this function is executed. To configure the RTC, follow the steps below. 1) Open RTC 2) Set Periodic IRQ 3) Start RTC counter 4) Enable IRQ, RTC_EVENT_PERIODIC_IRQ Refer to the User's Manual for the detailed procedure.

Implemented as

- R_SLCDC_SetDisplayArea()

Parameters

[in]	p_ctrl	Pointer to display interface control block.
[in]	display_area	Display area to be used, A-pattern or B-pattern area.

◆ close

fsp_err_t(* slcdc_api_t::close) (slcdc_ctrl_t *const p_ctrl)

Close SLCDC.

Implemented as

- R_SLCDC_Close()

Parameters

[in]	p_ctrl	Pointer to display interface control block.

◆ slcdc_instance_t

struct slcdc_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields		
slcdc_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
slcdc_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
slcdc_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ slcdc_ctrl_t

typedef void slcdc_ctrl_t

SLCDC control block. Allocate an instance specific control block to pass into the SLCDC API calls.

Implemented as

- slcdc_instance_ctrl_tSLCDC control block

Enumeration Type Documentation

◆ slcdc_bias_method_t

enum slcdc_bias_method_t

LCD display bias method.

Enumerator	
SLCDC_BIAS_2	1/2 bias method
SLCDC_BIAS_3	1/3 bias method
SLCDC_BIAS_4	1/4 bias method

◆ slcdc_time_slice_t

enum slcdc_time_slice_t	
Time slice of LCD display.	
Enumerator	
SLCDC_STATIC	Static.
SLCDC_SLICE_2	2-time slice
SLCDC_SLICE_3	3-time slice
SLCDC_SLICE_4	4-time slice
SLCDC_SLICE_8	8-time slice

◆ slcdc_waveform_t

enum slcdc_waveform_t	
LCD display waveform select.	
Enumerator	
SLCDC_WAVE_A	Waveform A.
SLCDC_WAVE_B	Waveform B.

◆ slcdc_drive_volt_gen_t

enum slcdc_drive_volt_gen_t	
LCD Drive Voltage Generator Select.	
Enumerator	
SLCDC_VOLT_EXTERNAL	External resistance division method.
SLCDC_VOLT_INTERNAL	Internal voltage boosting method.
SLCDC_VOLT_CAPACITOR	Capacitor split method.

◆ slcdc_display_area_control_blink_t

enum slcdc_display_area_control_blink_t	
Display Data Area Control	
Enumerator	
SLCDC_NOT_BLINKING	Display either A-pattern or B-pattern data.
SLCDC_BLINKING	Alternately display A-pattern and B-pattern data.

◆ slcdc_display_area_t

enum slcdc_display_area_t	
Display Area data	
Enumerator	
SLCDC_DISP_A	Display A-pattern data.
SLCDC_DISP_B	Display B-pattern data.
SLCDC_DISP_BLINK	Blink between A- and B-pattern.

◆ slcdc_contrast_t

enum slcdc_contrast_t	
LCD Boost Level (contrast) settings	
Enumerator	
SLCDC_CONTRAST_0	Contrast level 0.
SLCDC_CONTRAST_1	Contrast level 1.
SLCDC_CONTRAST_2	Contrast level 2.
SLCDC_CONTRAST_3	Contrast level 3.
SLCDC_CONTRAST_4	Contrast level 4.
SLCDC_CONTRAST_5	Contrast level 5.
SLCDC_CONTRAST_6	Contrast level 6.
SLCDC_CONTRAST_7	Contrast level 7.
SLCDC_CONTRAST_8	Contrast level 8.
SLCDC_CONTRAST_9	Contrast level 9.
SLCDC_CONTRAST_10	Contrast level 10.
SLCDC_CONTRAST_11	Contrast level 11.
SLCDC_CONTRAST_12	Contrast level 12.
SLCDC_CONTRAST_13	Contrast level 13.
SLCDC_CONTRAST_14	Contrast level 14.
SLCDC_CONTRAST_15	Contrast level 15.

◆ slcdc_display_on_off_t

enum slcdc_display_on_off_t	
LCD Display Enable/Disable	
Enumerator	
SLCDC_DISP_OFF	Display off.
SLCDC_DISP_ON	Display on.

◆ slcdc_display_enable_disable_t

enum slcdc_display_enable_disable_t	
LCD Display output enable	
Enumerator	
SLCDC_DISP_DISABLE	Output ground level to segment/common pins.
SLCDC_DISP_ENABLE	Output enable.

◆ slcdc_display_clock_t

enum slcdc_display_clock_t	
LCD Display clock selection	
Enumerator	
SLCDC_CLOCK_LOCO	Display clock source LOCO.
SLCDC_CLOCK_SOSC	Display clock source SOSC.
SLCDC_CLOCK_MOSC	Display clock source MOSC.
SLCDC_CLOCK_HOCO	Display clock source HOCO.

◆ slcdc_clk_div_t

enum slcdc_clk_div_t	
LCD clock settings	
Enumerator	
SLCDC_CLK_DIVISOR_LOCO_4	LOCO Clock/4.

SLCDC_CLK_DIVISOR_LOCO_8	LOCO Clock/8.
SLCDC_CLK_DIVISOR_LOCO_16	LOCO Clock/16.
SLCDC_CLK_DIVISOR_LOCO_32	LOCO Clock/32.
SLCDC_CLK_DIVISOR_LOCO_64	LOCO Clock/64.
SLCDC_CLK_DIVISOR_LOCO_128	LOCO Clock/128.
SLCDC_CLK_DIVISOR_LOCO_256	LOCO Clock/256.
SLCDC_CLK_DIVISOR_LOCO_512	LOCO Clock/512.
SLCDC_CLK_DIVISOR_LOCO_1024	LOCO Clock/1024.
SLCDC_CLK_DIVISOR_HOCO_256	HOCO Clock/256.
SLCDC_CLK_DIVISOR_HOCO_512	HOCO Clock/512.
SLCDC_CLK_DIVISOR_HOCO_1024	HOCO Clock/1024.
SLCDC_CLK_DIVISOR_HOCO_2048	HOCO Clock/2048.
SLCDC_CLK_DIVISOR_HOCO_4096	HOCO Clock/4096.
SLCDC_CLK_DIVISOR_HOCO_8192	HOCO Clock/8192.
SLCDC_CLK_DIVISOR_HOCO_16384	HOCO Clock/16384.
SLCDC_CLK_DIVISOR_HOCO_32768	HOCO Clock/32768.
SLCDC_CLK_DIVISOR_HOCO_65536	HOCO Clock/65536.
SLCDC_CLK_DIVISOR_HOCO_131072	HOCO Clock/131072.
SLCDC_CLK_DIVISOR_HOCO_262144	HOCO Clock/262144.
SLCDC_CLK_DIVISOR_HOCO_524288	HOCO Clock/524288.

4.3.35 SPI Interface

Interfaces

Detailed Description

Interface for SPI communications.

Summary

Provides a common interface for communication using the SPI Protocol.

Implemented by:

- Serial Peripheral Interface (r_spi)
- Serial Communications Interface (SCI) SPI (r_sci_spi)

Data Structures

struct	spi_callback_args_t
struct	spi_write_read_guard_args_t
struct	spi_cfg_t
struct	spi_api_t
struct	spi_instance_t

Typedefs

typedef void	spi_ctrl_t

Enumerations

enum	spi_bit_width_t
enum	spi_mode_t
enum	spi_clk_phase_t
enum	spi_clk_polarity_t
enum	spi_mode_fault_t
enum	spi_bit_order_t
enum	spi_event_t

Data Structure Documentation

◆ spi_callback_args_t

struct spi_callback_args_t
Common callback parameter definition

Data Fields		
uint32_t	channel	Device channel number.
spi_event_t	event	Event code.
void const *	p_context	Context provided to user during callback.

◆ spi_write_read_guard_args_t

struct spi_write_read_guard_args_t
Non-secure arguments for write-read guard function

◆ spi_cfg_t

struct spi_cfg_t	
SPI interface configuration	
Data Fields	
uint8_t	channel
	Channel number to be used.
IRQn_Type	rxi_irq
	Receive Buffer Full IRQ number.
IRQn_Type	txi_irq
	Transmit Buffer Empty IRQ number.
IRQn_Type	tei_irq
	Transfer Complete IRQ number.
IRQn_Type	eri_irq
	Error IRQ number.
uint8_t	rxi_ipl
	Receive Interrupt priority.

uint8_t	txi_ipl
	Transmit Interrupt priority.
uint8_t	tei_ipl
	Transfer Complete Interrupt priority.
uint8_t	eri_ipl
	Error Interrupt priority.
spi_mode_t	operating_mode
	Select master or slave operating mode.
spi_clk_phase_t	clk_phase
	Data sampling on odd or even clock edge.
spi_clk_polarity_t	clk_polarity
	Clock level when idle.
spi_mode_fault_t	mode_fault
	Mode fault error (master/slave conflict) flag.
spi_bit_order_t	bit_order
	Select to transmit MSB/LSB first.
transfer_instance_t const *	p_transfer_tx
	To use SPI DTC/DMA write transfer, link a DTC/DMA instance here. Set to NULL if unused.

transfer_instance_t const *	p_transfer_rx
	To use SPI DTC/DMA read transfer, link a DTC/DMA instance here. Set to NULL if unused.
void(*	p_callback)(spi_callback_args_t *p_args)
	Pointer to user callback function.
void const *	p_context
	User defined context passed to callback function.
void const *	p_extend
	Extended SPI hardware dependent configuration.

◆ **spi_api_t**

struct spi_api_t	
Shared Interface definition for SPI	
Data Fields	
fsp_err_t(*	open)(spi_ctrl_t *p_ctrl, spi_cfg_t const *const p_cfg)
fsp_err_t(*	read)(spi_ctrl_t *const p_ctrl, void *p_dest, uint32_t const length, spi_bit_width_t const bit_width)
fsp_err_t(*	write)(spi_ctrl_t *const p_ctrl, void const *p_src, uint32_t const length, spi_bit_width_t const bit_width)
fsp_err_t(*	writeRead)(spi_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint32_t const length, spi_bit_width_t const bit_width)
fsp_err_t(*	callbackSet)(spi_ctrl_t *const p_api_ctrl, void(*p_callback)(spi_callback_args_t *), void const *const p_context, spi_callback_args_t *const p_callback_memory)

fsp_err_t(*	close)(spi_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* spi_api_t::open) (spi_ctrl_t *p_ctrl, spi_cfg_t const *const p_cfg)

Initialize a channel for SPI communication mode.

Implemented as

- R_SPI_Open()
- R_SPI_B_Open()
- R_SCI_SPI_Open()

Parameters

[in,out]	p_ctrl	Pointer to user-provided storage for the control block.
[in]	p_cfg	Pointer to SPI configuration structure.

◆ read

fsp_err_t(* spi_api_t::read) (spi_ctrl_t *const p_ctrl, void *p_dest, uint32_t const length, spi_bit_width_t const bit_width)

Receive data from a SPI device.

Implemented as

- R_SPI_Read()
- R_SPI_B_Read()
- R_SCI_SPI_Read()

Parameters

[in]	p_ctrl	Pointer to the control block for the channel.
[in]	length	Number of units of data to be transferred (unit size specified by the bit_width).
[in]	bit_width	Data bit width to be transferred.
[out]	p_dest	Pointer to destination buffer into which data will be copied that is received from a SPI device. It is the responsibility of the caller to ensure that adequate space is available to hold the requested data count.

◆ write

fsp_err_t(* spi_api_t::write) (spi_ctrl_t *const p_ctrl, void const *p_src, uint32_t const length, spi_bit_width_t const bit_width)

Transmit data to a SPI device.

Implemented as

- R_SPI_Write()
- R_SPI_B_Write()
- R_SCI_SPI_Write()

Parameters

[in]	p_ctrl	Pointer to the control block for the channel.
[in]	p_src	Pointer to a source data buffer from which data will be transmitted to a SPI device. The argument must not be NULL.
[in]	length	Number of units of data to be transferred (unit size specified by the bit_width).
[in]	bit_width	Data bit width to be transferred.

◆ writeRead

fsp_err_t(* spi_api_t::writeRead) (spi_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint32_t const length, spi_bit_width_t const bit_width)

Simultaneously transmit data to a SPI device while receiving data from a SPI device (full duplex).

Implemented as

- R_SPI_WriteRead()
- R_SPI_B_WriteRead()
- R_SCI_SPI_WriteRead()

Parameters

[in]	p_ctrl	Pointer to the control block for the channel.
[in]	p_src	Pointer to a source data buffer from which data will be transmitted to a SPI device. The argument must not be NULL.
[out]	p_dest	Pointer to destination buffer into which data will be copied that is received from a SPI device. It is the responsibility of the caller to ensure that adequate space is available to hold the requested data count. The argument must not be NULL.
[in]	length	Number of units of data to be transferred (unit size specified by the bit_width).
[in]	bit_width	Data bit width to be transferred.

◆ callbackSet

fsp_err_t(* spi_api_t::callbackSet) (spi_ctrl_t *const p_api_ctrl, void(*p_callback)(spi_callback_args_t *), void const *const p_context, spi_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_SPI_CallbackSet()
- R_SPI_B_CallbackSet()
- R_SCI_SPI_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the SPI control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ close

fsp_err_t(* spi_api_t::close) (spi_ctrl_t *const p_ctrl)

Remove power to the SPI channel designated by the handle and disable the associated interrupts.

Implemented as

- R_SPI_Close()
- R_SPI_B_Close()
- R_SCI_SPI_Close()

Parameters

[in]	p_ctrl	Pointer to the control block for the channel.

◆ spi_instance_t

struct spi_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

spi_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
spi_cfg_t const *	p_cfg	Pointer to the configuration

		structure for this instance.
spi_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ spi_ctrl_t

typedef void spi_ctrl_t

SPI control block. Allocate an instance specific control block to pass into the SPI API calls.

Implemented as

- spi_instance_ctrl_t
- spi_b_instance_ctrl_t
- sci_spi_instance_ctrl_t

Enumeration Type Documentation

◆ spi_bit_width_t

enum spi_bit_width_t

Data bit width

Enumerator	
SPI_BIT_WIDTH_4_BITS	Data bit width is 4 bits (byte)
SPI_BIT_WIDTH_5_BITS	Data bit width is 5 bits (byte)
SPI_BIT_WIDTH_6_BITS	Data bit width is 6 bits (byte)
SPI_BIT_WIDTH_7_BITS	Data bit width is 7 bits (byte)
SPI_BIT_WIDTH_8_BITS	Data bit width is 8 bits (byte)
SPI_BIT_WIDTH_9_BITS	Data bit width is 9 bits (word)
SPI_BIT_WIDTH_10_BITS	Data bit width is 10 bits (word)
SPI_BIT_WIDTH_11_BITS	Data bit width is 11 bits (word)
SPI_BIT_WIDTH_12_BITS	Data bit width is 12 bits (word)
SPI_BIT_WIDTH_13_BITS	Data bit width is 13 bits (word)
SPI_BIT_WIDTH_14_BITS	Data bit width is 14 bits (word)

SPI_BIT_WIDTH_15_BITS	Data bit width is 15 bits (word)
SPI_BIT_WIDTH_16_BITS	Data bit width is 16 bits (word)
SPI_BIT_WIDTH_17_BITS	Data bit width is 17 bits (word)
SPI_BIT_WIDTH_18_BITS	Data bit width is 18 bits (word)
SPI_BIT_WIDTH_19_BITS	Data bit width is 19 bits (word)
SPI_BIT_WIDTH_20_BITS	Data bit width is 20 bits (longword)
SPI_BIT_WIDTH_21_BITS	Data bit width is 21 bits (word)
SPI_BIT_WIDTH_22_BITS	Data bit width is 22 bits (word)
SPI_BIT_WIDTH_23_BITS	Data bit width is 23 bits (longword)
SPI_BIT_WIDTH_24_BITS	Data bit width is 24 bits (longword)
SPI_BIT_WIDTH_25_BITS	Data bit width is 25 bits (longword)
SPI_BIT_WIDTH_26_BITS	Data bit width is 26 bits (word)
SPI_BIT_WIDTH_27_BITS	Data bit width is 27 bits (word)
SPI_BIT_WIDTH_28_BITS	Data bit width is 28 bits (word)
SPI_BIT_WIDTH_29_BITS	Data bit width is 29 bits (word)
SPI_BIT_WIDTH_30_BITS	Data bit width is 30 bits (longword)
SPI_BIT_WIDTH_31_BITS	Data bit width is 31 bits (longword)
SPI_BIT_WIDTH_32_BITS	Data bit width is 32 bits (longword)

◆ spi_mode_t

enum spi_mode_t	
Master or slave operating mode	
Enumerator	
SPI_MODE_MASTER	Channel operates as SPI master.
SPI_MODE_SLAVE	Channel operates as SPI slave.

◆ spi_clk_phase_t

enum spi_clk_phase_t	
Clock phase	
Enumerator	
SPI_CLK_PHASE_EDGE_ODD	0: Data sampling on odd edge, data variation on even edge
SPI_CLK_PHASE_EDGE_EVEN	1: Data variation on odd edge, data sampling on even edge

◆ spi_clk_polarity_t

enum spi_clk_polarity_t	
Clock polarity	
Enumerator	
SPI_CLK_POLARITY_LOW	0: Clock polarity is low when idle
SPI_CLK_POLARITY_HIGH	1: Clock polarity is high when idle

◆ spi_mode_fault_t

enum spi_mode_fault_t	
Mode fault error flag. This error occurs when the device is setup as a master, but the SSLA line does not seem to be controlled by the master. This usually happens when the connecting device is also acting as master. A similar situation can also happen when configured as a slave.	
Enumerator	
SPI_MODE_FAULT_ERROR_ENABLE	Mode fault error flag on.
SPI_MODE_FAULT_ERROR_DISABLE	Mode fault error flag off.

◆ spi_bit_order_t

enum spi_bit_order_t	
Bit order	
Enumerator	
SPI_BIT_ORDER_MSB_FIRST	Send MSB first in transmission.
SPI_BIT_ORDER_LSB_FIRST	Send LSB first in transmission.

◆ spi_event_t

enum spi_event_t	
SPI events	
Enumerator	
SPI_EVENT_TRANSFER_COMPLETE	The data transfer was completed.
SPI_EVENT_TRANSFER_ABORTED	The data transfer was aborted.
SPI_EVENT_ERR_MODE_FAULT	Mode fault error.
SPI_EVENT_ERR_READ_OVERFLOW	Read overflow error.
SPI_EVENT_ERR_PARITY	Parity error.
SPI_EVENT_ERR_OVERRUN	Overrun error.
SPI_EVENT_ERR_FRAMING	Framing error.
SPI_EVENT_ERR_MODE_UNDERRUN	Underrun error.

4.3.36 SPI Flash Interface

Interfaces

Detailed Description

Interface for accessing external SPI flash devices.

Summary

The SPI flash API provides an interface that configures, writes, and erases sectors in SPI flash devices.

Implemented by:

- Octa Serial Peripheral Interface for Flash and RAM devices (r_ospi)
- Quad Serial Peripheral Interface Flash (r_qspi)

Data Structures

struct	spi_flash_erase_command_t
struct	spi_flash_direct_transfer_t
struct	spi_flash_cfg_t
struct	spi_flash_status_t
struct	spi_flash_api_t
struct	spi_flash_instance_t

Typedefs

typedef void	spi_flash_ctrl_t

Enumerations

enum	spi_flash_read_mode_t
enum	spi_flash_protocol_t
enum	spi_flash_address_bytes_t
enum	spi_flash_data_lines_t
enum	spi_flash_dummy_clocks_t
enum	spi_flash_direct_transfer_dir_t

Data Structure Documentation

◆ spi_flash_erase_command_t

struct spi_flash_erase_command_t		
Structure to define an erase command and associated erase size.		
Data Fields		
uint16_t	command	Erase command.
uint32_t	size	Size of erase for associated

		command, set to SPI_FLASH_ERASE_SIZE_CHIP_ERASE for chip erase.

◆ spi_flash_direct_transfer_t

struct spi_flash_direct_transfer_t		
Structure to define a direct transfer.		
Data Fields		
uint32_t	address	Starting address.
uint32_t	data	Data.
uint16_t	command	Transfer command.
uint8_t	dummy_cycles	Number of dummy cycles.
uint8_t	command_length	Command length.
uint8_t	address_length	Address lengrh.
uint8_t	data_length	Data length.

◆ spi_flash_cfg_t

struct spi_flash_cfg_t		
User configuration structure used by the open function		
Data Fields		
spi_flash_protocol_t	spi_protocol	Initial SPI protocol. SPI protocol can be changed in spi_flash_api_t::spiProtocolSet.
spi_flash_read_mode_t	read_mode	Read mode.
spi_flash_address_bytes_t	address_bytes	Number of bytes used to represent the address.
spi_flash_dummy_clocks_t	dummy_clocks	Number of dummy clocks to use for fast read operations.
spi_flash_data_lines_t	page_program_address_lines	Number of lines used to send address for page program command. This should either be 1 or match the number of lines used in the selected read mode.
uint8_t	write_status_bit	Which bit determines write status.
uint8_t	write_enable_bit	Which bit determines write status.
uint32_t	page_size_bytes	Page size in bytes (maximum number of bytes for page program). Used to specify single continuous write size

		(bytes) in case of OSPI RAM.
uint8_t	page_program_command	Page program command.
uint8_t	write_enable_command	Command to enable write or erase, typically 0x06.
uint8_t	status_command	Command to read the write status.
uint8_t	read_command	Read command - OSPI SPI mode only.
uint8_t	xip_enter_command	Command to enter XIP mode.
uint8_t	xip_exit_command	Command to exit XIP mode.
uint8_t	erase_command_list_length	Length of erase command list.
spi_flash_erase_command_t const *	p_erase_command_list	List of all erase commands and associated sizes.
void const *	p_extend	Pointer to implementation specific extended configurations.

◆ spi_flash_status_t

struct spi_flash_status_t		
Status.		
Data Fields		
bool	write_in_progress	Whether or not a write is in progress. This is determined by reading the spi_flash_cfg_t::write_status_bit from the spi_flash_cfg_t::status_command.

◆ spi_flash_api_t

struct spi_flash_api_t	
SPI flash implementations follow this API.	
Data Fields	
fsp_err_t(*	open)(spi_flash_ctrl_t *p_ctrl, spi_flash_cfg_t const *const p_cfg)
fsp_err_t(*	directWrite)(spi_flash_ctrl_t *p_ctrl, uint8_t const *const p_src, uint32_t const bytes, bool const read_after_write)
fsp_err_t(*	directRead)(spi_flash_ctrl_t *p_ctrl, uint8_t *const p_dest, uint32_t const bytes)

fsp_err_t(*	directTransfer)(spi_flash_ctrl_t *p_ctrl, spi_flash_direct_transfer_t *const p_transfer, spi_flash_direct_transfer_dir_t direction)
fsp_err_t(*	spiProtocolSet)(spi_flash_ctrl_t *p_ctrl, spi_flash_protocol_t spi_protocol)
fsp_err_t(*	write)(spi_flash_ctrl_t *p_ctrl, uint8_t const *const p_src, uint8_t *const p_dest, uint32_t byte_count)
fsp_err_t(*	erase)(spi_flash_ctrl_t *p_ctrl, uint8_t *const p_device_address, uint32_t byte_count)
fsp_err_t(*	statusGet)(spi_flash_ctrl_t *p_ctrl, spi_flash_status_t *const p_status)
fsp_err_t(*	xipEnter)(spi_flash_ctrl_t *p_ctrl)
fsp_err_t(*	xipExit)(spi_flash_ctrl_t *p_ctrl)
fsp_err_t(*	bankSet)(spi_flash_ctrl_t *p_ctrl, uint32_t bank)
fsp_err_t(*	autoCalibrate)(spi_flash_ctrl_t *p_ctrl)
fsp_err_t(*	close)(spi_flash_ctrl_t *p_ctrl)

Field Documentation

◆ open

fsp_err_t(* spi_flash_api_t::open) (spi_flash_ctrl_t *p_ctrl, spi_flash_cfg_t const *const p_cfg)

Open the SPI flash driver module.

Implemented as

- R_OSPI_Open()
- R_QSPI_Open()

Parameters

[in]	p_ctrl	Pointer to a driver handle
[in]	p_cfg	Pointer to a configuration structure

◆ directWrite

fsp_err_t(* spi_flash_api_t::directWrite) (spi_flash_ctrl_t *p_ctrl, uint8_t const *const p_src, uint32_t const bytes, bool const read_after_write)

Write raw data to the SPI flash.

Implemented as

- R_OSPI_DirectWrite()
- R_QSPI_DirectWrite()

Parameters

[in]	p_ctrl	Pointer to a driver handle
[in]	p_src	Pointer to raw data to write, must include any required command/address
[in]	bytes	Number of bytes to write
[in]	read_after_write	If true, the slave select remains asserted and the peripheral does not return to direct communications mode. If false, the slave select is deasserted and memory mapped access is possible after this function returns if the device is not busy.

◆ directRead

fsp_err_t(* spi_flash_api_t::directRead) (spi_flash_ctrl_t *p_ctrl, uint8_t *const p_dest, uint32_t const bytes)

Read raw data from the SPI flash. Must follow a call to spi_flash_api_t::directWrite.

Implemented as

- R_OSPI_DirectRead()
- R_QSPI_DirectRead()

Parameters

[in]	p_ctrl	Pointer to a driver handle
[out]	p_dest	Pointer to read raw data into
[in]	bytes	Number of bytes to read

◆ directTransfer

fsp_err_t(* spi_flash_api_t::directTransfer) (spi_flash_ctrl_t *p_ctrl, spi_flash_direct_transfer_t *const p_transfer, spi_flash_direct_transfer_dir_t direction)

Direct Read/Write raw data to the SPI flash.

Implemented as

- R_OSPI_DirectTransfer()
- R_QSPI_DirectTransfer()

Parameters

[in]	p_ctrl	Pointer to a driver handle
[in]	p_data	Pointer to command, address and data values and lengths
[in]	direction	Direct Read/Write

◆ spiProtocolSet

fsp_err_t(* spi_flash_api_t::spiProtocolSet) (spi_flash_ctrl_t *p_ctrl, spi_flash_protocol_t spi_protocol)

Change the SPI protocol in the driver. The application must change the SPI protocol on the device.

Implemented as

- R_OSPI_SpiProtocolSet()
- R_QSPI_SpiProtocolSet()

Parameters

[in]	p_ctrl	Pointer to a driver handle
[in]	spi_protocol	Desired SPI protocol

◆ write

fsp_err_t(* spi_flash_api_t::write) (spi_flash_ctrl_t *p_ctrl, uint8_t const *const p_src, uint8_t *const p_dest, uint32_t byte_count)

Program a page of data to the flash.

Implemented as

- R_OSPI_Write()
- R_QSPI_Write()

Parameters

[in]	p_ctrl	Pointer to a driver handle
[in]	p_src	The memory address of the data to write to the flash device
[in]	p_dest	The location in the flash device address space to write the data to
[in]	byte_count	The number of bytes to write

◆ erase

fsp_err_t(* spi_flash_api_t::erase) (spi_flash_ctrl_t *p_ctrl, uint8_t *const p_device_address, uint32_t byte_count)

Erase a certain number of bytes of the flash.

Implemented as

- R_OSPI_Erase()
- R_QSPI_Erase()

Parameters

[in]	p_ctrl	Pointer to a driver handle
[in]	p_device_address	The location in the flash device address space to start the erase from
[in]	byte_count	The number of bytes to erase. Set to SPI_FLASH_ERASE_SIZE_CHIP_ERASE to erase entire chip.

◆ statusGet

fsp_err_t(* spi_flash_api_t::statusGet) (spi_flash_ctrl_t *p_ctrl, spi_flash_status_t *const p_status)

Get the write or erase status of the flash.

Implemented as

- R_OSPI_StatusGet()
- R_QSPI_StatusGet()

Parameters

[in]	p_ctrl	Pointer to a driver handle
[out]	p_status	Current status of the SPI flash device stored here.

◆ xipEnter

fsp_err_t(* spi_flash_api_t::xipEnter) (spi_flash_ctrl_t *p_ctrl)

Enter XIP mode.

Implemented as

- R_OSPI_XipEnter()
- R_QSPI_XipEnter()

Parameters

[in]	p_ctrl	Pointer to a driver handle

◆ xipExit

fsp_err_t(* spi_flash_api_t::xipExit) (spi_flash_ctrl_t *p_ctrl)

Exit XIP mode.

Implemented as

- R_OSPI_XipExit()
- R_QSPI_XipExit()

Parameters

[in]	p_ctrl	Pointer to a driver handle

◆ bankSet

fsp_err_t(* spi_flash_api_t::bankSet) (spi_flash_ctrl_t *p_ctrl, uint32_t bank)

Select the bank to access. See implementation for details.

Implemented as

- R_OSPI_BankSet()
- R_QSPI_BankSet()

Parameters

[in]	p_ctrl	Pointer to a driver handle
[in]	bank	The bank number

◆ autoCalibrate

fsp_err_t(* spi_flash_api_t::autoCalibrate) (spi_flash_ctrl_t *p_ctrl)

AutoCalibrate the SPI flash driver module. Expected to be used when auto-calibrating OSPI RAM device.

Implemented as

- R_OSPI_AutoCalibrate()
- R_QSPI_AutoCalibrate()

Parameters

[in]	p_ctrl	Pointer to a driver handle

◆ close

fsp_err_t(* spi_flash_api_t::close) (spi_flash_ctrl_t *p_ctrl)

Close the SPI flash driver module.

Implemented as

- R_OSPI_Close()
- R_QSPI_Close()

Parameters

[in]	p_ctrl	Pointer to a driver handle

◆ spi_flash_instance_t

struct spi_flash_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

spi_flash_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.

spi_flash_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
spi_flash_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ spi_flash_ctrl_t

typedef void spi_flash_ctrl_t

SPI flash control block. Allocate an instance specific control block to pass into the SPI flash API calls.

Implemented as

- qspi_instance_ctrl_t
- ospi_instance_ctrl_t

Enumeration Type Documentation

◆ spi_flash_read_mode_t

enum spi_flash_read_mode_t

Read mode.

Enumerator	
SPI_FLASH_READ_MODE_STANDARD	Standard Read Mode (no dummy cycles)
SPI_FLASH_READ_MODE_FAST_READ	Fast Read Mode (dummy cycles between address and data)
SPI_FLASH_READ_MODE_FAST_READ_DUAL_OUTPUT	Fast Read Dual Output Mode (data on 2 lines)
SPI_FLASH_READ_MODE_FAST_READ_DUAL_IO	Fast Read Dual I/O Mode (address and data on 2 lines)
SPI_FLASH_READ_MODE_FAST_READ_QUAD_OUTPUT	Fast Read Quad Output Mode (data on 4 lines)
SPI_FLASH_READ_MODE_FAST_READ_QUAD_IO	Fast Read Quad I/O Mode (address and data on 4 lines)

◆ spi_flash_protocol_t

enum spi_flash_protocol_t	
SPI protocol.	
Enumerator	
SPI_FLASH_PROTOCOL_EXTENDED_SPI	Extended SPI mode (commands on 1 line)
SPI_FLASH_PROTOCOL_QPI	QPI mode (commands on 4 lines). Note that the application must ensure the device is in QPI mode.
SPI_FLASH_PROTOCOL_SOPI	SOPI mode (command and data on 8 lines). Note that the application must ensure the device is in SOPI mode.
SPI_FLASH_PROTOCOL_DOPI	DOPI mode (command and data on 8 lines, dual data rate). Note that the application must ensure the device is in DOPI mode.

◆ spi_flash_address_bytes_t

enum spi_flash_address_bytes_t	
Number of bytes in the address.	
Enumerator	
SPI_FLASH_ADDRESS_BYTES_3	3 address bytes
SPI_FLASH_ADDRESS_BYTES_4	4 address bytes with standard commands. If this option is selected, the application must issue the EN4B command using spi_flash_api_t::directWrite() if required by the device.
SPI_FLASH_ADDRESS_BYTES_4_4BYTE_READ_CODE	4 address bytes using standard 4-byte command set.

◆ spi_flash_data_lines_t

enum spi_flash_data_lines_t	
Number of data lines used.	
Enumerator	
SPI_FLASH_DATA_LINES_1	1 data line
SPI_FLASH_DATA_LINES_2	2 data lines
SPI_FLASH_DATA_LINES_4	4 data lines

◆ spi_flash_dummy_clocks_t

enum spi_flash_dummy_clocks_t	
Number of dummy cycles for fast read operations.	
Enumerator	
SPI_FLASH_DUMMY_CLOCKS_DEFAULT	Default is 6 clocks for Fast Read Quad I/O, 4 clocks for Fast Read Dual I/O, and 8 clocks for other fast read instructions including Fast Read Quad Output, Fast Read Dual Output, and Fast Read.
SPI_FLASH_DUMMY_CLOCKS_3	3 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_4	4 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_5	5 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_6	6 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_7	7 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_8	8 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_9	9 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_10	10 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_11	11 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_12	12 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_13	13 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_14	14 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_15	15 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_16	16 dummy clocks
SPI_FLASH_DUMMY_CLOCKS_17	17 dummy clocks

◆ spi_flash_direct_transfer_dir_t

enum spi_flash_direct_transfer_dir_t
Direct Read and Write direction

4.3.37 Three-Phase Interface

Interfaces

Detailed Description

Interface for three-phase timer functions.

Summary

The Three-Phase interface provides functionality for synchronous start/stop/reset control of three timer channels for use in 3-phase motor control applications.

Implemented by:

- General PWM Timer Three-Phase Motor Control Driver (r_gpt_three_phase)

Data Structures

struct	three_phase_duty_cycle_t
struct	three_phase_cfg_t
struct	three_phase_api_t
struct	three_phase_instance_t

Typedefs

typedef void	three_phase_ctrl_t

Enumerations

enum	three_phase_channel_t
enum	three_phase_buffer_mode_t

Data Structure Documentation

◆ three_phase_duty_cycle_t

struct three_phase_duty_cycle_t

Struct for passing duty cycle values to three_phase_api_t::dutyCycleSet		
Data Fields		
uint32_t	duty[3]	Duty cycle. Note: When the GPT instances are configured in TIMER_MODE_TRIANGLE_WAVE_ASYMMETRIC_PWM_MODE3, this value sets the duty cycle count that is transfered to GTCCRA/B at the trough.
uint32_t	duty_buffer[3]	Double-buffer for duty cycle values. Note: When the GPT instances are configured in TIMER_MODE_TRIANGLE_WAVE_ASYMMETRIC_PWM_MODE3, this value sets the duty cycle count that is transfered to GTCCRA/B at the crest.

◆ three_phase_cfg_t

struct three_phase_cfg_t		
User configuration structure, used in open function		
Data Fields		
three_phase_buffer_mode_t	buffer_mode	Single or double-buffer mode.
timer_instance_t const *	p_timer_instance[3]	Pointer to the timer instance structs.
three_phase_channel_t	callback_ch	Channel to enable callback when using three_phase_api_t::callbackSet.
uint32_t	channel_mask	Bitmask of timer channels used by this module.
void const *	p_context	Placeholder for user data. Passed to the user callback in timer_callback_args_t.
void const *	p_extend	Extension parameter for hardware specific settings.

◆ three_phase_api_t

struct three_phase_api_t	
Three-Phase API structure.	
Data Fields	
fsp_err_t(*	open)(three_phase_ctrl_t *const p_ctrl, three_phase_cfg_t const *const p_cfg)

fsp_err_t(*	start)(three_phase_ctrl_t *const p_ctrl)
fsp_err_t(*	stop)(three_phase_ctrl_t *const p_ctrl)
fsp_err_t(*	reset)(three_phase_ctrl_t *const p_ctrl)
fsp_err_t(*	dutyCycleSet)(three_phase_ctrl_t *const p_ctrl, three_phase_duty_cycle_t *const p_duty_cycle)
fsp_err_t(*	callbackSet)(three_phase_ctrl_t *const p_api_ctrl, void(*p_callback)(timer_callback_args_t *), void const *const p_context, timer_callback_args_t *const p_callback_memory)
fsp_err_t(*	close)(three_phase_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* three_phase_api_t::open) (three_phase_ctrl_t *const p_ctrl, three_phase_cfg_t const *const p_cfg)

Initial configuration.

Implemented as

- R_GPT_THREE_PHASE_Open()

Parameters

[in]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ start

fsp_err_t(* three_phase_api_t::start) (three_phase_ctrl_t *const p_ctrl)

Start all three timers synchronously.

Implemented as

- R_GPT_THREE_PHASE_Start()

Parameters

[in]	p_ctrl	Control block set in three_phase_api_t::open call for this timer.

◆ stop

fsp_err_t(* three_phase_api_t::stop) (three_phase_ctrl_t *const p_ctrl)

Stop all three timers synchronously.

Implemented as

- R_GPT_THREE_PHASE_Stop()

Parameters

[in]	p_ctrl	Control block set in three_phase_api_t::open call for this timer.

◆ reset

fsp_err_t(* three_phase_api_t::reset) (three_phase_ctrl_t *const p_ctrl)

Reset all three timers synchronously.

Implemented as

- R_GPT_THREE_PHASE_Reset()

Parameters

[in]	p_ctrl	Control block set in three_phase_api_t::open call for this timer.

◆ dutyCycleSet

fsp_err_t(* three_phase_api_t::dutyCycleSet) (three_phase_ctrl_t *const p_ctrl, three_phase_duty_cycle_t *const p_duty_cycle)

Sets the duty cycle match values. If the timer is counting, the updated duty cycle is reflected after the next timer expiration.

Implemented as

- R_GPT_THREE_PHASE_DutyCycleSet()

Parameters

[in]	p_ctrl	Control block set in three_phase_api_t::open call for this timer.
[in]	p_duty_cycle	Duty cycle values for all three timer channels.

◆ callbackSet

fsp_err_t(* three_phase_api_t::callbackSet) (three_phase_ctrl_t *const p_api_ctrl, void(*p_callback)(timer_callback_args_t *), void const *const p_context, timer_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_GPT_THREE_PHASE_CallbackSet()

Parameters

[in]	p_ctrl	Control block set in three_phase_api_t::open call.
[in]	p_callback	Callback function to register with GPT U-channel
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ close

fsp_err_t(* three_phase_api_t::close) (three_phase_ctrl_t *const p_ctrl)

Allows driver to be reconfigured and may reduce power consumption.

Implemented as

- R_GPT_THREE_PHASE_Close()

Parameters

[in]	p_ctrl	Control block set in three_phase_api_t::open call for this timer.

◆ three_phase_instance_t

struct three_phase_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
three_phase_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
three_phase_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
three_phase_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ three_phase_ctrl_t

typedef void three_phase_ctrl_t

Three-Phase control block. Allocate an instance specific control block to pass into the timer API calls.

Implemented as

- gpt_three_phase_instance_ctrl_t

Enumeration Type Documentation

◆ three_phase_channel_t

enum three_phase_channel_t	
Timer channel indices	
Enumerator	
THREE_PHASE_CHANNEL_U	U-channel index.
THREE_PHASE_CHANNEL_V	V-channel index.
THREE_PHASE_CHANNEL_W	W-channel index.

◆ three_phase_buffer_mode_t

enum three_phase_buffer_mode_t	
Buffering mode	
Enumerator	
THREE_PHASE_BUFFER_MODE_SINGLE	Single-buffer mode.
THREE_PHASE_BUFFER_MODE_DOUBLE	Double-buffer mode.

4.3.38 Timer Interface

Interfaces

Detailed Description

Interface for timer functions.

Summary

The general timer interface provides standard timer functionality including periodic mode, one-shot mode, PWM output, and free-running timer mode. After each timer cycle (overflow or underflow), an interrupt can be triggered.

If an instance supports output compare mode, it is provided in the extension configuration timer_on_<instance>_cfg_t defined in r_<instance>.h.

Implemented by:

- General PWM Timer (r_gpt)
- Asynchronous General Purpose Timer (r_agt)

Data Structures

struct	timer_callback_args_t
struct	timer_info_t
struct	timer_status_t
struct	timer_cfg_t
struct	timer_api_t
struct	timer_instance_t

Typedefs

typedef void	timer_ctrl_t

Enumerations

enum	timer_event_t
enum	timer_variant_t
enum	timer_state_t
enum	timer_mode_t
enum	timer_direction_t
enum	timer_source_div_t

Data Structure Documentation

◆ timer_callback_args_t

struct timer_callback_args_t		
Callback function parameter data		
Data Fields		
void const *	p_context	Placeholder for user data. Set in timer_api_t::open function in timer_cfg_t.
timer_event_t	event	The event can be used to identify what caused the callback.
uint32_t	capture	Most recent capture, only valid if event is TIMER_EVENT_CAPTURE_A or TIMER_EVENT_CAPTURE_B.

◆ timer_info_t

struct timer_info_t		
Timer information structure to store various information for a timer resource		
Data Fields		
timer_direction_t	count_direction	Clock counting direction of the timer.
uint32_t	clock_frequency	Clock frequency of the timer counter.
uint32_t	period_counts	Period in raw timer counts. *Note* *For triangle wave PWM modes, the full period is double this value.*

◆ timer_status_t

struct timer_status_t		
Current timer status.		
Data Fields		
uint32_t	counter	Current counter value.
timer_state_t	state	Current timer state (running or stopped)

◆ timer_cfg_t

struct timer_cfg_t	
User configuration structure, used in open function	
Data Fields	
timer_mode_t	mode
	Select enumerated value from timer_mode_t.
uint32_t	period_counts
	Period in raw timer counts.
timer_source_div_t	source_div
	Source clock divider.
uint32_t	duty_cycle_counts

	Duty cycle in counts.
uint8_t	channel
uint8_t	cycle_end_ipl
	Cycle end interrupt priority.
IRQn_Type	cycle_end_irq
	Cycle end interrupt.
void(*	p_callback)(timer_callback_args_t *p_args)
void const *	p_context
void const *	p_extend
	Extension parameter for hardware specific settings.

Field Documentation

◆ channel

uint8_t timer_cfg_t::channel

Select a channel corresponding to the channel number of the hardware.

◆ p_callback

void(* timer_cfg_t::p_callback) (timer_callback_args_t *p_args)

Callback provided when a timer ISR occurs. Set to NULL for no CPU interrupt.

◆ p_context

void const* timer_cfg_t::p_context

Placeholder for user data. Passed to the user callback in timer_callback_args_t.

◆ timer_api_t

struct timer_api_t

Timer API structure. General timer functions implemented at the HAL layer follow this API.

Data Fields

fsp_err_t(*	open)(timer_ctrl_t *const p_ctrl, timer_cfg_t const *const p_cfg)
fsp_err_t(*	start)(timer_ctrl_t *const p_ctrl)
fsp_err_t(*	stop)(timer_ctrl_t *const p_ctrl)
fsp_err_t(*	reset)(timer_ctrl_t *const p_ctrl)
fsp_err_t(*	enable)(timer_ctrl_t *const p_ctrl)
fsp_err_t(*	disable)(timer_ctrl_t *const p_ctrl)
fsp_err_t(*	periodSet)(timer_ctrl_t *const p_ctrl, uint32_t const period)
fsp_err_t(*	dutyCycleSet)(timer_ctrl_t *const p_ctrl, uint32_t const duty_cycle_counts, uint32_t const pin)
fsp_err_t(*	infoGet)(timer_ctrl_t *const p_ctrl, timer_info_t *const p_info)
fsp_err_t(*	statusGet)(timer_ctrl_t *const p_ctrl, timer_status_t *const p_status)
fsp_err_t(*	callbackSet)(timer_ctrl_t *const p_api_ctrl, void(*p_callback)(timer_callback_args_t *), void const *const p_context, timer_callback_args_t *const p_callback_memory)
fsp_err_t(*	close)(timer_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* timer_api_t::open) (timer_ctrl_t *const p_ctrl, timer_cfg_t const *const p_cfg)

Initial configuration.

Implemented as

- R_GPT_Open()
- R_AGT_Open()

Parameters

[in]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ start

fsp_err_t(* timer_api_t::start) (timer_ctrl_t *const p_ctrl)

Start the counter.

Implemented as

- R_GPT_Start()
- R_AGT_Start()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.

◆ stop

fsp_err_t(* timer_api_t::stop) (timer_ctrl_t *const p_ctrl)

Stop the counter.

Implemented as

- R_GPT_Stop()
- R_AGT_Stop()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.

◆ reset

fsp_err_t(* timer_api_t::reset) (timer_ctrl_t *const p_ctrl)

Reset the counter to the initial value.

Implemented as

- R_GPT_Reset()
- R_AGT_Reset()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.

◆ enable

fsp_err_t(* timer_api_t::enable) (timer_ctrl_t *const p_ctrl)

Enables input capture.

Implemented as

- R_GPT_Enable()
- R_AGT_Enable()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.

◆ disable

fsp_err_t(* timer_api_t::disable) (timer_ctrl_t *const p_ctrl)

Disables input capture.

Implemented as

- R_GPT_Disable()
- R_AGT_Disable()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.

◆ periodSet

fsp_err_t(* timer_api_t::periodSet) (timer_ctrl_t *const p_ctrl, uint32_t const period)

Set the time until the timer expires. See implementation for details of period update timing.

Implemented as

- R_GPT_PeriodSet()
- R_AGT_PeriodSet()

Note

Timer expiration may or may not generate a CPU interrupt based on how the timer is configured in timer_api_t::open.

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.
[in]	p_period	Time until timer should expire.

◆ dutyCycleSet

fsp_err_t(* timer_api_t::dutyCycleSet) (timer_ctrl_t *const p_ctrl, uint32_t const duty_cycle_counts, uint32_t const pin)

Sets the number of counts for the pin level to be high. If the timer is counting, the updated duty cycle is reflected after the next timer expiration.

Implemented as

- R_GPT_DutyCycleSet()
- R_AGT_DutyCycleSet()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.
[in]	duty_cycle_counts	Time until duty cycle should expire.
[in]	pin	Which output pin to update. See implementation for details.

◆ infoGet

fsp_err_t(* timer_api_t::infoGet) (timer_ctrl_t *const p_ctrl, timer_info_t *const p_info)

Stores timer information in p_info.

Implemented as

- R_GPT_InfoGet()
- R_AGT_InfoGet()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.
[out]	p_info	Collection of information for this timer.

◆ statusGet

fsp_err_t(* timer_api_t::statusGet) (timer_ctrl_t *const p_ctrl, timer_status_t *const p_status)

Get the current counter value and timer state and store it in p_status.

Implemented as

- R_GPT_StatusGet()
- R_AGT_StatusGet()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.
[out]	p_status	Current status of this timer.

◆ callbackSet

fsp_err_t(* timer_api_t::callbackSet) (timer_ctrl_t *const p_api_ctrl, void(*p_callback)(timer_callback_args_t *), void const *const p_context, timer_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_GPT_CallbackSet()
- R_AGT_CallbackSet()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.
[in]	p_callback	Callback function to register
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ close

fsp_err_t(* timer_api_t::close) (timer_ctrl_t *const p_ctrl)

Allows driver to be reconfigured and may reduce power consumption.

Implemented as

- R_GPT_Close()
- R_AGT_Close()

Parameters

[in]	p_ctrl	Control block set in timer_api_t::open call for this timer.

◆ timer_instance_t

struct timer_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

timer_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.

timer_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
timer_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ timer_ctrl_t

typedef void timer_ctrl_t

Timer control block. Allocate an instance specific control block to pass into the timer API calls.

Implemented as

- gpt_instance_ctrl_t
- agt_instance_ctrl_t

Enumeration Type Documentation

◆ timer_event_t

enum timer_event_t

Events that can trigger a callback function

Enumerator	
TIMER_EVENT_CYCLE_END	Requested timer delay has expired or timer has wrapped around.
TIMER_EVENT_CREST	Timer crest event (counter is at a maximum, triangle-wave PWM only)
TIMER_EVENT_CAPTURE_A	A capture has occurred on signal A.
TIMER_EVENT_CAPTURE_B	A capture has occurred on signal B.
TIMER_EVENT_TROUGH	Timer trough event (counter is 0, triangle-wave PWM only.

◆ timer_variant_t

enum timer_variant_t	
Timer variant types.	
Enumerator	
TIMER_VARIANT_32_BIT	32-bit timer
TIMER_VARIANT_16_BIT	16-bit timer

◆ timer_state_t

enum timer_state_t	
Possible status values returned by timer_api_t::statusGet.	
Enumerator	
TIMER_STATE_STOPPED	Timer is stopped.
TIMER_STATE_COUNTING	Timer is running.

◆ timer_mode_t

enum timer_mode_t	
Timer operational modes	
Enumerator	
TIMER_MODE_PERIODIC	Timer restarts after period elapses.
TIMER_MODE_ONE_SHOT	Timer stops after period elapses.
TIMER_MODE_PWM	Timer generates saw-wave PWM output.
TIMER_MODE_TRIANGLE_WAVE_SYMMETRIC_PWM	Timer generates symmetric triangle-wave PWM output.
TIMER_MODE_TRIANGLE_WAVE_ASYMMETRIC_PWM	Timer generates asymmetric triangle-wave PWM output.
TIMER_MODE_TRIANGLE_WAVE_ASYMMETRIC_PWM_MODE3	Timer generates Asymmetric Triangle-wave PWM output. In PWM mode 3, the duty cycle does not need to be updated at each tough/crest interrupt. Instead, the trough and crest duty cycle values can be set once and only need to be updated when the application needs to change the duty cycle.

◆ timer_direction_t

enum timer_direction_t	
Direction of timer count	
Enumerator	
TIMER_DIRECTION_DOWN	Timer count goes up.
TIMER_DIRECTION_UP	Timer count goes down.

◆ timer_source_div_t

enum timer_source_div_t	
PCLK divisors	
Enumerator	
TIMER_SOURCE_DIV_1	Timer clock source divided by 1.
TIMER_SOURCE_DIV_2	Timer clock source divided by 2.
TIMER_SOURCE_DIV_4	Timer clock source divided by 4.
TIMER_SOURCE_DIV_8	Timer clock source divided by 8.
TIMER_SOURCE_DIV_16	Timer clock source divided by 16.
TIMER_SOURCE_DIV_32	Timer clock source divided by 32.
TIMER_SOURCE_DIV_64	Timer clock source divided by 64.
TIMER_SOURCE_DIV_128	Timer clock source divided by 128.
TIMER_SOURCE_DIV_256	Timer clock source divided by 256.
TIMER_SOURCE_DIV_512	Timer clock source divided by 512.
TIMER_SOURCE_DIV_1024	Timer clock source divided by 1024.

4.3.39 Transfer Interface

Interfaces

Detailed Description

Interface for data transfer functions.

Summary

The transfer interface supports background data transfer (no CPU intervention).

Implemented by:

- Data Transfer Controller (r_dtc)
- Direct Memory Access Controller (r_dmac)

Data Structures

struct	transfer_properties_t
struct	transfer_info_t
struct	transfer_cfg_t
struct	transfer_api_t
struct	transfer_instance_t

Typedefs

typedef void	transfer_ctrl_t

Enumerations

enum	transfer_mode_t
enum	transfer_size_t
enum	transfer_addr_mode_t
enum	transfer_repeat_area_t
enum	transfer_chain_mode_t
enum	transfer_irq_t
enum	transfer_start_mode_t

Data Structure Documentation

◆ transfer_properties_t

struct transfer_properties_t		
Driver specific information.		
Data Fields		
uint32_t	block_count_max	Maximum number of blocks.
uint32_t	block_count_remaining	Number of blocks remaining.
uint32_t	transfer_length_max	Maximum number of transfers.
uint32_t	transfer_length_remaining	Number of transfers remaining.

◆ transfer_info_t

struct transfer_info_t
This structure specifies the properties of the transfer.

Warning

When using DTC, this structure corresponds to the descriptor block registers required by the DTC. The following components may be modified by the driver: p_src, p_dest, num_blocks, and length.
When using DTC, do NOT reuse this structure to configure multiple transfers. Each transfer must have a unique transfer_info_t.
When using DTC, this structure must not be allocated in a temporary location. Any instance of this structure must remain in scope until the transfer it is used for is closed.

Note

When using DTC, consider placing instances of this structure in a protected section of memory.

Data Fields		
union transfer_info_t	__unnamed__	
void const *volatile	p_src	Source pointer.
void *volatile	p_dest	Destination pointer.
volatile uint16_t	num_blocks	Number of blocks to transfer when using TRANSFER_MODE_BLOCK (both DTC an DMAC) or TRANSFER_MODE_REPEAT (DMAC only) or TRANSFER_MODE_REPEAT_BLOCK (DMAC only), unused in other modes.
volatile uint16_t	length	Length of each transfer. Range limited for TRANSFER_MODE_BLOCK, TRANSFER_MODE_REPEAT, and TRANSFER_MODE_REPEAT_BLOCK see HAL driver for details.

◆ transfer_cfg_t

struct transfer_cfg_t

Driver configuration set in transfer_api_t::open. All elements except p_extend are required and must be initialized.

Data Fields		
transfer_info_t *	p_info	Pointer to transfer configuration options. If using chain transfer (DTC only), this can be a pointer to an array of chained transfers that will be completed in order.
void const *	p_extend	Extension parameter for hardware specific settings.

◆ transfer_api_t

struct transfer_api_t

Transfer functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t(*	open)(transfer_ctrl_t *const p_ctrl, transfer_cfg_t const *const p_cfg)
fsp_err_t(*	reconfigure)(transfer_ctrl_t *const p_ctrl, transfer_info_t *p_info)
fsp_err_t(*	reset)(transfer_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint16_t const num_transfers)
fsp_err_t(*	enable)(transfer_ctrl_t *const p_ctrl)
fsp_err_t(*	disable)(transfer_ctrl_t *const p_ctrl)
fsp_err_t(*	softwareStart)(transfer_ctrl_t *const p_ctrl, transfer_start_mode_t mode)
fsp_err_t(*	softwareStop)(transfer_ctrl_t *const p_ctrl)
fsp_err_t(*	infoGet)(transfer_ctrl_t *const p_ctrl, transfer_properties_t *const p_properties)
fsp_err_t(*	close)(transfer_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* transfer_api_t::open) (transfer_ctrl_t *const p_ctrl, transfer_cfg_t const *const p_cfg)

Initial configuration.

Implemented as

- R_DTC_Open()
- R_DMAC_Open()

Parameters

[in,out]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ reconfigure

fsp_err_t(* transfer_api_t::reconfigure) (transfer_ctrl_t *const p_ctrl, transfer_info_t *p_info)

Reconfigure the transfer. Enable the transfer if p_info is valid.

Implemented as

- R_DTC_Reconfigure()
- R_DMAC_Reconfigure()

Parameters

[in,out]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_info	Pointer to a new transfer info structure.

◆ reset

fsp_err_t(* transfer_api_t::reset) (transfer_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint16_t const num_transfers)

Reset source address pointer, destination address pointer, and/or length, keeping all other settings the same. Enable the transfer if p_src, p_dest, and length are valid.

Implemented as

- R_DTC_Reset()
- R_DMAC_Reset()

Parameters

[in]	p_ctrl	Control block set in transfer_api_t::open call for this transfer.
[in]	p_src	Pointer to source. Set to NULL if source pointer should not change.
[in]	p_dest	Pointer to destination. Set to NULL if destination pointer should not change.
[in]	num_transfers	Transfer length in normal mode or number of blocks in block mode. In DMAC only, resets number of repeats (initially stored in transfer_info_t::num_blocks) in repeat mode. Not used in repeat mode for DTC.

◆ enable

fsp_err_t(* transfer_api_t::enable) (transfer_ctrl_t *const p_ctrl)

Enable transfer. Transfers occur after the activation source event (or when transfer_api_t::softwareStart is called if ELC_EVENT_ELC_NONE is chosen as activation source).

Implemented as

- R_DTC_Enable()
- R_DMAC_Enable()

Parameters

[in]	p_ctrl	Control block set in transfer_api_t::open call for this transfer.

◆ disable

fsp_err_t(* transfer_api_t::disable) (transfer_ctrl_t *const p_ctrl)

Disable transfer. Transfers do not occur after the activation source event (or when transfer_api_t::softwareStart is called if ELC_EVENT_ELC_NONE is chosen as the DMAC activation source).

Note

If a transfer is in progress, it will be completed. Subsequent transfer requests do not cause a transfer.

Implemented as

- R_DTC_Disable()
- R_DMAC_Disable()

Parameters

[in]	p_ctrl	Control block set in transfer_api_t::open call for this transfer.

◆ softwareStart

fsp_err_t(* transfer_api_t::softwareStart) (transfer_ctrl_t *const p_ctrl, transfer_start_mode_t mode)

Start transfer in software.

Warning

Only works if ELC_EVENT_ELC_NONE is chosen as the DMAC activation source.

Note

Not supported for DTC.

Implemented as

- R_DMAC_SoftwareStart()

Parameters

[in]	p_ctrl	Control block set in transfer_api_t::open call for this transfer.
[in]	mode	Select mode from transfer_start_mode_t.

◆ softwareStop

fsp_err_t(* transfer_api_t::softwareStop) (transfer_ctrl_t *const p_ctrl)

Stop transfer in software. The transfer will stop after completion of the current transfer.

Note

Not supported for DTC.
Only applies for transfers started with TRANSFER_START_MODE_REPEAT.

Warning

Only works if ELC_EVENT_ELC_NONE is chosen as the DMAC activation source.

Implemented as

- R_DMAC_SoftwareStop()

Parameters

[in]	p_ctrl	Control block set in transfer_api_t::open call for this transfer.

◆ infoGet

fsp_err_t(* transfer_api_t::infoGet) (transfer_ctrl_t *const p_ctrl, transfer_properties_t *const p_properties)

Provides information about this transfer.

Implemented as

- R_DTC_InfoGet()
- R_DMAC_InfoGet()

Parameters

[in]	p_ctrl	Control block set in transfer_api_t::open call for this transfer.
[out]	p_properties	Driver specific information.

◆ close

fsp_err_t(* transfer_api_t::close) (transfer_ctrl_t *const p_ctrl)

Releases hardware lock. This allows a transfer to be reconfigured using transfer_api_t::open.

Implemented as

- R_DTC_Close()
- R_DMAC_Close()

Parameters

[in]	p_ctrl	Control block set in transfer_api_t::open call for this transfer.

◆ transfer_instance_t

struct transfer_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
transfer_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
transfer_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
transfer_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ transfer_ctrl_t

typedef void transfer_ctrl_t

Transfer control block. Allocate an instance specific control block to pass into the transfer API calls.

Implemented as

- dtc_instance_ctrl_t
- dmac_instance_ctrl_t

Enumeration Type Documentation

◆ transfer_mode_t

enum transfer_mode_t	
Transfer mode describes what will happen when a transfer request occurs.	
Enumerator	
TRANSFER_MODE_NORMAL	In normal mode, each transfer request causes a transfer of transfer_size_t from the source pointer to the destination pointer. The transfer length is decremented and the source and address pointers are updated according to transfer_addr_mode_t. After the transfer length reaches 0, transfer requests will not cause any further transfers.
TRANSFER_MODE_REPEAT	Repeat mode is like normal mode, except that when the transfer length reaches 0, the pointer to the repeat area and the transfer length will be reset to their initial values. If DMAC is used, the transfer repeats only transfer_info_t::num_blocks times. After the transfer repeats transfer_info_t::num_blocks times, transfer requests will not cause any further transfers. If DTC is used, the transfer repeats continuously (no limit to the number of repeat transfers).
TRANSFER_MODE_BLOCK	In block mode, each transfer request causes transfer_info_t::length transfers of transfer_size_t. After each individual transfer, the source and destination pointers are updated according to transfer_addr_mode_t. After the block transfer is complete, transfer_info_t::num_blocks is decremented. After the transfer_info_t::num_blocks reaches 0, transfer requests will not cause any further transfers.
TRANSFER_MODE_REPEAT_BLOCK	In addition to block mode features, repeat-block mode supports a ring buffer of blocks and offsets within a block (to split blocks into arrays of their first data, second data, etc.)

◆ transfer_size_t

enum transfer_size_t	
Transfer size specifies the size of each individual transfer. Total transfer length = transfer_size_t * transfer_length_t	
Enumerator	
TRANSFER_SIZE_1_BYTE	Each transfer transfers a 8-bit value.
TRANSFER_SIZE_2_BYTE	Each transfer transfers a 16-bit value.
TRANSFER_SIZE_4_BYTE	Each transfer transfers a 32-bit value.

◆ transfer_addr_mode_t

enum transfer_addr_mode_t	
Address mode specifies whether to modify (increment or decrement) pointer after each transfer.	
Enumerator	
TRANSFER_ADDR_MODE_FIXED	Address pointer remains fixed after each transfer.
TRANSFER_ADDR_MODE_OFFSET	Offset is added to the address pointer after each transfer.
TRANSFER_ADDR_MODE_INCREMENTED	Address pointer is incremented by associated transfer_size_t after each transfer.
TRANSFER_ADDR_MODE_DECREMENTED	Address pointer is decremented by associated transfer_size_t after each transfer.

◆ transfer_repeat_area_t

enum transfer_repeat_area_t	
Repeat area options (source or destination). In TRANSFER_MODE_REPEAT, the selected pointer returns to its original value after transfer_info_t::length transfers. In TRANSFER_MODE_BLOCK and TRANSFER_MODE_REPEAT_BLOCK, the selected pointer returns to its original value after each transfer.	
Enumerator	
TRANSFER_REPEAT_AREA_DESTINATION	Destination area repeated in TRANSFER_MODE_REPEAT or TRANSFER_MODE_BLOCK or TRANSFER_MODE_REPEAT_BLOCK.
TRANSFER_REPEAT_AREA_SOURCE	Source area repeated in TRANSFER_MODE_REPEAT or TRANSFER_MODE_BLOCK or TRANSFER_MODE_REPEAT_BLOCK.

◆ transfer_chain_mode_t

enum transfer_chain_mode_t	
Chain transfer mode options. ***Note*** *Only applies for DTC.*	
Enumerator	
TRANSFER_CHAIN_MODE_DISABLED	Chain mode not used.
TRANSFER_CHAIN_MODE_EACH	Switch to next transfer after a single transfer from this transfer_info_t.
TRANSFER_CHAIN_MODE_END	Complete the entire transfer defined in this transfer_info_t before chaining to next transfer.

◆ transfer_irq_t

enum transfer_irq_t	
Interrupt options.	
Enumerator	
TRANSFER_IRQ_END	Interrupt occurs only after last transfer. If this transfer is chained to a subsequent transfer, the interrupt will occur only after subsequent chained transfer(s) are complete. Warning DTC triggers the interrupt of the activation source. Choosing TRANSFER_IRQ_END with DTC will prevent activation source interrupts until the transfer is complete.
TRANSFER_IRQ_EACH	Interrupt occurs after each transfer. *Note* *Not available in all HAL drivers. See HAL driver for details.*

◆ transfer_start_mode_t

enum transfer_start_mode_t	
Select whether to start single or repeated transfer with software start.	
Enumerator	
TRANSFER_START_MODE_SINGLE	Software start triggers single transfer.
TRANSFER_START_MODE_REPEAT	Software start transfer continues until transfer is complete.

4.3.40 UART Interface

Interfaces

Detailed Description

Interface for UART communications.

Summary

The UART interface provides common APIs for UART HAL drivers. The UART interface supports the following features:

- Full-duplex UART communication
- Interrupt driven transmit/receive processing
- Callback function with returned event code
- Runtime baud-rate change
- Hardware resource locking during a transaction
- CTS/RTS hardware flow control support (with an associated IOPORT pin)

Implemented by:

- Serial Communications Interface (SCI) UART (r_sci_uart)
- Serial Communications Interface (SCI) UART (r_sci_b_uart)

Data Structures

struct	uart_info_t
struct	uart_callback_args_t
struct	uart_cfg_t
struct	uart_api_t
struct	uart_instance_t

Typedefs

typedef void	uart_ctrl_t

Enumerations

enum	uart_event_t
enum	uart_data_bits_t
enum	uart_parity_t
enum	uart_stop_bits_t
enum	uart_dir_t

Data Structure Documentation

◆ uart_info_t

struct uart_info_t
UART driver specific information

Data Fields		
uint32_t	write_bytes_max	Maximum bytes that can be written at this time. Only applies if uart_cfg_t::p_transfer_tx is not NULL.
uint32_t	read_bytes_max	Maximum bytes that are available to read at one time. Only applies if uart_cfg_t::p_transfer_rx is not NULL.

◆ uart_callback_args_t

struct uart_callback_args_t		
UART Callback parameter definition		
Data Fields		
uint32_t	channel	Device channel number.
uart_event_t	event	Event code.
uint32_t	data	Contains the next character received for the events UART_EVENT_RX_CHAR, UART_EVENT_ERR_PARITY, UART_EVENT_ERR_FRAMING, or UART_EVENT_ERR_OVERFLOW. Otherwise unused.
void const *	p_context	Context provided to user during callback.

◆ uart_cfg_t

struct uart_cfg_t	
UART Configuration	
Data Fields	
uint8_t	channel
	Select a channel corresponding to the channel number of the hardware.
uart_data_bits_t	data_bits
	Data bit length (8 or 7 or 9)
uart_parity_t	parity

	Parity type (none or odd or even)
uart_stop_bits_t	stop_bits
	Stop bit length (1 or 2)
uint8_t	rxi_ipl
	Receive interrupt priority.
IRQn_Type	rxi_irq
	Receive interrupt IRQ number.
uint8_t	txi_ipl
	Transmit interrupt priority.
IRQn_Type	txi_irq
	Transmit interrupt IRQ number.
uint8_t	tei_ipl
	Transmit end interrupt priority.
IRQn_Type	tei_irq
	Transmit end interrupt IRQ number.
uint8_t	eri_ipl
	Error interrupt priority.
IRQn_Type	eri_irq
	Error interrupt IRQ number.

transfer_instance_t const *	p_transfer_rx
transfer_instance_t const *	p_transfer_tx
void(*	p_callback)(uart_callback_args_t *p_args)
	Pointer to callback function.
void const *	p_context
	User defined context passed into callback function.
void const *	p_extend
	UART hardware dependent configuration.

Field Documentation

◆ p_transfer_rx

transfer_instance_t const* uart_cfg_t::p_transfer_rx
Optional transfer instance used to receive multiple bytes without interrupts. Set to NULL if unused. If NULL, the number of bytes allowed in the read API is limited to one byte at a time.

◆ p_transfer_tx

transfer_instance_t const* uart_cfg_t::p_transfer_tx
Optional transfer instance used to send multiple bytes without interrupts. Set to NULL if unused. If NULL, the number of bytes allowed in the write APIs is limited to one byte at a time.

◆ uart_api_t

struct uart_api_t
Shared Interface definition for UART
Data Fields

fsp_err_t(*	open)(uart_ctrl_t *const p_ctrl, uart_cfg_t const *const p_cfg)
fsp_err_t(*	read)(uart_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes)

fsp_err_t(*	write)(uart_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint32_t const bytes)
fsp_err_t(*	baudSet)(uart_ctrl_t *const p_ctrl, void const *const p_baudrate_info)
fsp_err_t(*	infoGet)(uart_ctrl_t *const p_ctrl, uart_info_t *const p_info)
fsp_err_t(*	communicationAbort)(uart_ctrl_t *const p_ctrl, uart_dir_t communication_to_abort)
fsp_err_t(*	callbackSet)(uart_ctrl_t *const p_api_ctrl, void(*p_callback)(uart_callback_args_t *), void const *const p_context, uart_callback_args_t *const p_callback_memory)
fsp_err_t(*	close)(uart_ctrl_t *const p_ctrl)
fsp_err_t(*	readStop)(uart_ctrl_t *const p_ctrl, uint32_t *remaining_bytes)

Field Documentation

◆ open

fsp_err_t(* uart_api_t::open) (uart_ctrl_t *const p_ctrl, uart_cfg_t const *const p_cfg)

Open UART device.

Implemented as

- R_SCI_UART_Open()
- R_SCI_B_UART_Open()

Parameters

[in,out]	p_ctrl	Pointer to the UART control block. Must be declared by user. Value set here.
[in]	uart_cfg_t	Pointer to UART configuration structure. All elements of this structure must be set by user.

◆ read

fsp_err_t(* uart_api_t::read) (uart_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes)

Read from UART device. The read buffer is used until the read is complete. When a transfer is complete, the callback is called with event UART_EVENT_RX_COMPLETE. Bytes received outside an active transfer are received in the callback function with event UART_EVENT_RX_CHAR. The maximum transfer size is reported by infoGet().

Implemented as

- R_SCI_UART_Read()
- R_SCI_B_UART_Read()

Parameters

[in]	p_ctrl	Pointer to the UART control block for the channel.
[in]	p_dest	Destination address to read data from.
[in]	bytes	Read data length.

◆ write

fsp_err_t(* uart_api_t::write) (uart_ctrl_t *const p_ctrl, uint8_t const *const p_src, uint32_t const bytes)

Write to UART device. The write buffer is used until write is complete. Do not overwrite write buffer contents until the write is finished. When the write is complete (all bytes are fully transmitted on the wire), the callback called with event UART_EVENT_TX_COMPLETE. The maximum transfer size is reported by infoGet().

Implemented as

- R_SCI_UART_Write()
- R_SCI_B_UART_Write()

Parameters

[in]	p_ctrl	Pointer to the UART control block.
[in]	p_src	Source address to write data to.
[in]	bytes	Write data length.

◆ baudSet

fsp_err_t(* uart_api_t::baudSet) (uart_ctrl_t *const p_ctrl, void const *const p_baudrate_info)

Change baud rate.

Warning

Calling this API aborts any in-progress transmission and disables reception until the new baud settings have been applied.

Implemented as

- R_SCI_UART_BaudSet()
- R_SCI_B_UART_BaudSet()

Parameters

[in]	p_ctrl	Pointer to the UART control block.
[in]	p_baudrate_info	Pointer to module specific information for configuring baud rate.

◆ infoGet

fsp_err_t(* uart_api_t::infoGet) (uart_ctrl_t *const p_ctrl, uart_info_t *const p_info)

Get the driver specific information.

Implemented as

- R_SCI_UART_InfoGet()
- R_SCI_B_UART_InfoGet()

Parameters

[in]	p_ctrl	Pointer to the UART control block.
[in]	baudrate	Baud rate in bps.

◆ communicationAbort

fsp_err_t(* uart_api_t::communicationAbort) (uart_ctrl_t *const p_ctrl, uart_dir_t communication_to_abort)

Abort ongoing transfer.

Implemented as

- R_SCI_UART_Abort()
- R_SCI_B_UART_Abort()

Parameters

[in]	p_ctrl	Pointer to the UART control block.
[in]	communication_to_abort	Type of abort request.

◆ callbackSet

fsp_err_t(* uart_api_t::callbackSet) (uart_ctrl_t *const p_api_ctrl, void(*p_callback)(uart_callback_args_t *), void const *const p_context, uart_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_SCI_Uart_CallbackSet()
- R_SCI_B_Uart_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the UART control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ close

fsp_err_t(* uart_api_t::close) (uart_ctrl_t *const p_ctrl)

Close UART device.

Implemented as

- R_SCI_UART_Close()
- R_SCI_B_UART_Close()

Parameters

[in]	p_ctrl	Pointer to the UART control block.

◆ readStop

fsp_err_t(* uart_api_t::readStop) (uart_ctrl_t *const p_ctrl, uint32_t *remaining_bytes)

Stop ongoing read and return the number of bytes remaining in the read.

Implemented as

- R_SCI_UART_ReadStop()
- R_SCI_B_UART_ReadStop()

Parameters

[in]	p_ctrl	Pointer to the UART control block.
[in,out]	remaining_bytes	Pointer to location to store remaining bytes for read.

◆ uart_instance_t

struct uart_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
uart_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
uart_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
uart_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ uart_ctrl_t

typedef void uart_ctrl_t
UART control block. Allocate an instance specific control block to pass into the UART API calls. **Implemented as** ◦ sci_uart_instance_ctrl_t

Enumeration Type Documentation

◆ uart_event_t

enum uart_event_t	
UART Event codes	
Enumerator	
UART_EVENT_RX_COMPLETE	Receive complete event.
UART_EVENT_TX_COMPLETE	Transmit complete event.
UART_EVENT_RX_CHAR	Character received.
UART_EVENT_ERR_PARITY	Parity error event.
UART_EVENT_ERR_FRAMING	Mode fault error event.
UART_EVENT_ERR_OVERFLOW	FIFO Overflow error event.
UART_EVENT_BREAK_DETECT	Break detect error event.
UART_EVENT_TX_DATA_EMPTY	Last byte is transmitting, ready for more data.

◆ uart_data_bits_t

enum uart_data_bits_t	
UART Data bit length definition	
Enumerator	
UART_DATA_BITS_9	Data bits 9-bit.
UART_DATA_BITS_8	Data bits 8-bit.
UART_DATA_BITS_7	Data bits 7-bit.

◆ uart_parity_t

enum uart_parity_t	
UART Parity definition	
Enumerator	
UART_PARITY_OFF	No parity.
UART_PARITY_EVEN	Even parity.
UART_PARITY_ODD	Odd parity.

◆ uart_stop_bits_t

enum uart_stop_bits_t	
UART Stop bits definition	
Enumerator	
UART_STOP_BITS_1	Stop bit 1-bit.
UART_STOP_BITS_2	Stop bits 2-bit.

◆ uart_dir_t

enum uart_dir_t	
UART transaction definition	
Enumerator	
UART_DIR_RX_TX	Both RX and TX.
UART_DIR_RX	Only RX.
UART_DIR_TX	Only TX.

4.3.41 USB Interface

Interfaces

Detailed Description

Interface for USB functions.

Summary

The USB interface provides USB functionality.

The USB interface can be implemented by:

- USB (r_usb_basic)

Data Structures

struct	usb_cfg_t
struct	usb_api_t
struct	usb_instance_t

Macros

#define	USB_BREQUEST b15-8
#define	USB_GET_STATUS USB Standard request Get Status.
#define	USB_CLEAR_FEATURE USB Standard request Clear Feature.
#define	USB_REQRESERVED USB Standard request Reqreserved.
#define	USB_SET_FEATURE USB Standard request Set Feature.
#define	USB_REQRESERVED1 USB Standard request Reqreserved1.
#define	USB_SET_ADDRESS USB Standard request Set Address.

#define	USB_GET_DESCRIPTOR USB Standard request Get Descriptor.
#define	USB_SET_DESCRIPTOR USB Standard request Set Descriptor.
#define	USB_GET_CONFIGURATION USB Standard request Get Configuration.
#define	USB_SET_CONFIGURATION USB Standard request Set Configuration.

Data Structure Documentation

◆ usb_cfg_t

struct usb_cfg_t		
USB configuration.		
Data Fields		
usb_mode_t	usb_mode	USB_MODE_HOST/USB_MODE_PERI.
usb_speed_t	usb_speed	USB speed (USB_HS/USB_FS/USB_LS)
uint8_t	module_number	USB module number (USB_IP0/USB_IP1)
usb_class_t	type	USB device class etc.
usb_descriptor_t *	p_usb_reg	Pointer to the usb_decriptor_t structure area.
usb_compliance_cb_t *	usb_complience_cb	
IRQn_Type	irq	USBI dedicated interrupt number storage variable.
IRQn_Type	irq_r	USBR dedicated interrupt number storage variable.
IRQn_Type	irq_d0	FS D0FIFO dedicated interrupt

		number storage variable.
IRQn_Type	irq_d1	FS D1FIFO dedicated interrupt number storage variable.
IRQn_Type	hsirq	USBIR dedicated interrupt number storage variable.
IRQn_Type	hsirq_d0	HS D0FIFO dedicated interrupt number storage variable.
IRQn_Type	hsirq_d1	HS D1FIFO dedicated interrupt number storage variable.
uint8_t	ipl	Variable to store the interrupt priority of USBI.
uint8_t	ipl_r	Variable to store the interrupt priority of USBR.
uint8_t	ipl_d0	Variable to store the interrupt priority of FS D0FIFO.
uint8_t	ipl_d1	Variable to store the interrupt priority of FS D1FIFO.
uint8_t	hsipl	Variable to store the interrupt priority of USBIR.
uint8_t	hsipl_d0	Variable to store the interrupt priority of HS D0FIFO.
uint8_t	hsipl_d1	Variable to store the interrupt priority of HS D1FIFO.
usb_callback_t *	p_usb_apl_callback	Application Callback.
void const *	p_context	Other Context.
const transfer_instance_t *	p_transfer_tx	Send context.
const transfer_instance_t *	p_transfer_rx	Receive context.

◆ usb_api_t

struct usb_api_t	
Functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(usb_ctrl_t *const p_api_ctrl, usb_cfg_t const *const p_cfg)
fsp_err_t(*	close)(usb_ctrl_t *const p_api_ctrl)
fsp_err_t(*	read)(usb_ctrl_t *const p_api_ctrl, uint8_t *p_buf, uint32_t size, uint8_t destination)

fsp_err_t(*	write)(usb_ctrl_t *const p_api_ctrl, uint8_t const *const p_buf, uint32_t size, uint8_t destination)
fsp_err_t(*	stop)(usb_ctrl_t *const p_api_ctrl, usb_transfer_t direction, uint8_t destination)
fsp_err_t(*	suspend)(usb_ctrl_t *const p_api_ctrl)
fsp_err_t(*	resume)(usb_ctrl_t *const p_api_ctrl)
fsp_err_t(*	vbusSet)(usb_ctrl_t *const p_api_ctrl, uint16_t state)
fsp_err_t(*	infoGet)(usb_ctrl_t *const p_api_ctrl, usb_info_t *p_info, uint8_t destination)
fsp_err_t(*	pipeRead)(usb_ctrl_t *const p_api_ctrl, uint8_t *p_buf, uint32_t size, uint8_t pipe_number)
fsp_err_t(*	pipeWrite)(usb_ctrl_t *const p_api_ctrl, uint8_t *p_buf, uint32_t size, uint8_t pipe_number)
fsp_err_t(*	pipeStop)(usb_ctrl_t *const p_api_ctrl, uint8_t pipe_number)
fsp_err_t(*	usedPipesGet)(usb_ctrl_t *const p_api_ctrl, uint16_t *p_pipe, uint8_t destination)
fsp_err_t(*	pipeInfoGet)(usb_ctrl_t *const p_api_ctrl, usb_pipe_t *p_info, uint8_t pipe_number)
fsp_err_t(*	eventGet)(usb_ctrl_t *const p_api_ctrl, usb_status_t *event)
fsp_err_t(*	callback)(usb_callback_t *p_callback)
fsp_err_t(*	pullUp)(usb_ctrl_t *const p_api_ctrl, uint8_t state)
fsp_err_t(*	hostControlTransfer)(usb_ctrl_t *const p_api_ctrl, usb_setup_t *p_setup, uint8_t *p_buf, uint8_t device_address)

fsp_err_t(*	periControlDataGet)(usb_ctrl_t *const p_api_ctrl, uint8_t *p_buf, uint32_t size)
fsp_err_t(*	periControlDataSet)(usb_ctrl_t *const p_api_ctrl, uint8_t *p_buf, uint32_t size)
fsp_err_t(*	periControlStatusSet)(usb_ctrl_t *const p_api_ctrl, usb_setup_status_t status)
fsp_err_t(*	remoteWakeup)(usb_ctrl_t *const p_api_ctrl)
fsp_err_t(*	moduleNumberGet)(usb_ctrl_t *const p_api_ctrl, uint8_t *module_number)
fsp_err_t(*	classTypeGet)(usb_ctrl_t *const p_api_ctrl, usb_class_t *class_type)
fsp_err_t(*	deviceAddressGet)(usb_ctrl_t *const p_api_ctrl, uint8_t *device_address)
fsp_err_t(*	pipeNumberGet)(usb_ctrl_t *const p_api_ctrl, uint8_t *pipe_number)
fsp_err_t(*	deviceStateGet)(usb_ctrl_t *const p_api_ctrl, uint16_t *state)
fsp_err_t(*	dataSizeGet)(usb_ctrl_t *const p_api_ctrl, uint32_t *data_size)
fsp_err_t(*	setupGet)(usb_ctrl_t *const p_api_ctrl, usb_setup_t *setup)
fsp_err_t(*	otgCallbackSet)(usb_ctrl_t *const p_api_ctrl, usb_otg_callback_t *p_callback)
fsp_err_t(*	otgSRP)(usb_ctrl_t *const p_api_ctrl)

Field Documentation

◆ open

fsp_err_t(* usb_api_t::open) (usb_ctrl_t *const p_api_ctrl, usb_cfg_t const *const p_cfg)

Start the USB module

Implemented as

- R_USB_Open()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

fsp_err_t(* usb_api_t::close) (usb_ctrl_t *const p_api_ctrl)

Stop the USB module

Implemented as

- R_USB_Close()

Parameters

[in]	p_api_ctrl	Pointer to control structure.

◆ read

fsp_err_t(* usb_api_t::read) (usb_ctrl_t *const p_api_ctrl, uint8_t *p_buf, uint32_t size, uint8_t destination)

Request USB data read

Implemented as

- R_USB_Read()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_buf	Pointer to area that stores read data.
[in]	size	Read request size.
[in]	destination	In Host mode, it represents the device address, and in Peripheral mode, it represents the device class.

◆ write

fsp_err_t(* usb_api_t::write) (usb_ctrl_t *const p_api_ctrl, uint8_t const *const p_buf, uint32_t size, uint8_t destination)

Request USB data write

Implemented as

- R_USB_Write()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_buf	Pointer to area that stores write data.
[in]	size	Read request size.
[in]	destination	In Host mode, it represents the device address, and in Peripheral mode, it represents the device class.

◆ stop

fsp_err_t(* usb_api_t::stop) (usb_ctrl_t *const p_api_ctrl, usb_transfer_t direction, uint8_t destination)

Stop USB data read/write processing

Implemented as

- R_USB_Stop()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	direction	Receive (USB_TRANSFER_READ) or send (USB_TRANSFER_WRITE).
[in]	destination	In Host mode, it represents the device address, and in Peripheral mode, it represents the device class.

◆ suspend

fsp_err_t(* usb_api_t::suspend) (usb_ctrl_t *const p_api_ctrl)

Request suspend

Implemented as

- R_USB_Suspend()

Parameters

[in]	p_api_ctrl	Pointer to control structure.

◆ resume

fsp_err_t(* usb_api_t::resume) (usb_ctrl_t *const p_api_ctrl)

Request resume

Implemented as

- R_USB_Resume()

Parameters

[in]	p_api_ctrl	Pointer to control structure.

◆ vbusSet

fsp_err_t(* usb_api_t::vbusSet) (usb_ctrl_t *const p_api_ctrl, uint16_t state)

Sets VBUS supply start/stop.

Implemented as

- R_USB_VbusSet()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	state	VBUS supply start/stop specification

◆ infoGet

fsp_err_t(* usb_api_t::infoGet) (usb_ctrl_t *const p_api_ctrl, usb_info_t *p_info, uint8_t destination)

Get information on USB device.

Implemented as

- R_USB_InfoGet()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_info	Pointer to usb_info_t structure area.
[in]	destination	Device address for Host.

◆ pipeRead

fsp_err_t(* usb_api_t::pipeRead) (usb_ctrl_t *const p_api_ctrl, uint8_t *p_buf, uint32_t size, uint8_t pipe_number)

Request data read from specified pipe

Implemented as

- R_USB_PipeRead()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_buf	Pointer to area that stores read data.
[in]	size	Read request size.
[in]	pipe_number	Pipe Number.

◆ pipeWrite

fsp_err_t(* usb_api_t::pipeWrite) (usb_ctrl_t *const p_api_ctrl, uint8_t *p_buf, uint32_t size, uint8_t pipe_number)

Request data write to specified pipe

Implemented as

- R_USB_PipeWrite()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_buf	Pointer to area that stores write data.
[in]	size	Read request size.
[in]	pipe_number	Pipe Number.

◆ pipeStop

fsp_err_t(* usb_api_t::pipeStop) (usb_ctrl_t *const p_api_ctrl, uint8_t pipe_number)

Stop USB data read/write processing to specified pipe

Implemented as

- R_USB_PipeStop()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	pipe_number	Pipe Number.

◆ usedPipesGet

fsp_err_t(* usb_api_t::usedPipesGet) (usb_ctrl_t *const p_api_ctrl, uint16_t *p_pipe, uint8_t destination)

Get pipe number

Implemented as

- R_USB_UsedPipesGet()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_pipe	Pointer to area that stores the selected pipe number (bit map information).
[in]	destination	Device address for Host.

◆ pipeInfoGet

fsp_err_t(* usb_api_t::pipeInfoGet) (usb_ctrl_t *const p_api_ctrl, usb_pipe_t *p_info, uint8_t pipe_number)

Get pipe information

Implemented as

- R_USB_PipeInfoGet()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_info	Pointer to usb_pipe_t structure area.
[in]	pipe_number	Pipe Number.

◆ eventGet

fsp_err_t(* usb_api_t::eventGet) (usb_ctrl_t *const p_api_ctrl, usb_status_t *event)

Return USB-related completed events (OS less only)

Implemented as

- R_USB_EventGet()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[out]	event	Pointer to event.

◆ callback

fsp_err_t(* usb_api_t::callback) (usb_callback_t *p_callback)

Register a callback function to be called upon completion of a USB related event. (RTOS only)

Implemented as

- R_USB_Callback()

Parameters

[in]	p_callback	Pointer to Callback function.

◆ pullUp

fsp_err_t(* usb_api_t::pullUp) (usb_ctrl_t *const p_api_ctrl, uint8_t state)

Pull-up enable/disable setting of D+/D- line.

Implemented as

- R_USB_PullUp()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	state	Pull-up enable/disable setting.

◆ hostControlTransfer

fsp_err_t(* usb_api_t::hostControlTransfer) (usb_ctrl_t *const p_api_ctrl, usb_setup_t *p_setup, uint8_t *p_buf, uint8_t device_address)

Performs settings and transmission processing when transmitting a setup packet.

Implemented as

- R_USB_HostControlTransfer()

Parameters

[in]	p_api_ctrl	USB control structure.
[in]	p_setup	Setup packet information.
[in]	p_buf	Transfer area information.
[in]	device_address	Device address information.

◆ periControlDataGet

fsp_err_t(* usb_api_t::periControlDataGet) (usb_ctrl_t *const p_api_ctrl, uint8_t *p_buf, uint32_t size)

Receives data sent by control transfer.

Implemented as

- R_USB_PeriControlDataGet()

Parameters

[in]	p_api_ctrl	USB control structure.
[in]	p_buf	Data reception area information.
[in]	size	Data reception size information.

◆ periControlDataSet

fsp_err_t(* usb_api_t::periControlDataSet) (usb_ctrl_t *const p_api_ctrl, uint8_t *p_buf, uint32_t size)

Performs transfer processing for control transfer.

Implemented as

- R_USB_PeriControlDataSet()

Parameters

[in]	p_api_ctrl	USB control structure.
[in]	p_buf	Area information for data transfer.
[in]	size	Transfer size information.

◆ periControlStatusSet

fsp_err_t(* usb_api_t::periControlStatusSet) (usb_ctrl_t *const p_api_ctrl, usb_setup_status_t status)

Set the response to the setup packet.

Implemented as

- R_USB_PeriControlStatusSet()

Parameters

[in]	p_api_ctrl	USB control structure.
[in]	status	USB port startup information.

◆ remoteWakeup

fsp_err_t(* usb_api_t::remoteWakeup) (usb_ctrl_t *const p_api_ctrl)

Sends a remote wake-up signal to the connected Host.

Implemented as

- R_USB_RemoteWakeup()

Parameters

[in]	p_api_ctrl	USB control structure.

◆ moduleNumberGet

fsp_err_t(* usb_api_t::moduleNumberGet) (usb_ctrl_t *const p_api_ctrl, uint8_t *module_number)

This API gets the module number.

Implemented as

- R_USB_ModuleNumberGet()

Parameters

[in]	p_api_ctrl	USB control structure.
[out]	module_number	Module number to get.

◆ classTypeGet

fsp_err_t(* usb_api_t::classTypeGet) (usb_ctrl_t *const p_api_ctrl, usb_class_t *class_type)

This API gets the module number.

Implemented as

- R_USB_ClassTypeGet()

Parameters

[in]	p_api_ctrl	USB control structure.
[out]	class_type	Class type to get.

◆ deviceAddressGet

fsp_err_t(* usb_api_t::deviceAddressGet) (usb_ctrl_t *const p_api_ctrl, uint8_t *device_address)

This API gets the device address.

Implemented as

- R_USB_DeviceAddressGet()

Parameters

[in]	p_api_ctrl	USB control structure.
[out]	device_address	Device address to get.

◆ pipeNumberGet

fsp_err_t(* usb_api_t::pipeNumberGet) (usb_ctrl_t *const p_api_ctrl, uint8_t *pipe_number)

This API gets the pipe number.

Implemented as

- R_USB_PipeNumberGet()

Parameters

[in]	p_api_ctrl	USB control structure.
[out]	pipe_number	Pipe number to get.

◆ deviceStateGet

fsp_err_t(* usb_api_t::deviceStateGet) (usb_ctrl_t *const p_api_ctrl, uint16_t *state)

This API gets the state of the device.

Implemented as

- R_USB_DeviceStateGet()

Parameters

[in]	p_api_ctrl	USB control structure.
[out]	state	Device state to get.

◆ dataSizeGet

fsp_err_t(* usb_api_t::dataSizeGet) (usb_ctrl_t *const p_api_ctrl, uint32_t *data_size)

This API gets the data size.

Implemented as

- R_USB_DataSizeGet()

Parameters

[in]	p_api_ctrl	USB control structure.
[out]	data_size	Data size to get.

◆ setupGet

fsp_err_t(* usb_api_t::setupGet) (usb_ctrl_t *const p_api_ctrl, usb_setup_t *setup)

This API gets the setup type.

Implemented as

- R_USB_SetupGet()

Parameters

[in]	p_api_ctrl	USB control structure.
[out]	setup	Setup type to get.

◆ otgCallbackSet

fsp_err_t(* usb_api_t::otgCallbackSet) (usb_ctrl_t *const p_api_ctrl, usb_otg_callback_t *p_callback)

This API sets the callback function for OTG.

Implemented as

- R_USB_OtgCallbackSet()

Parameters

[in]	p_api_ctrl	USB control structure.
[in]	p_callback	Pointer to the callback function for OTG.

◆ otgSRP

fsp_err_t(* usb_api_t::otgSRP) (usb_ctrl_t *const p_api_ctrl)

This API starts SRP processing for OTG.

Implemented as

- R_USB_OtgSRP()

Parameters

[in]	p_api_ctrl	USB control structure.

◆ usb_instance_t

struct usb_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

usb_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
usb_cfg_t const *	p_cfg	Pointer to the configuration

		structure for this instance.
usb_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ usb_ctrl_t

typedef void usb_ctrl_t
USB control block. Allocate an instance specific control block to pass into the USB API calls. **Implemented as** ◦ usb_instance_ctrl_t

Enumeration Type Documentation

◆ usb_speed_t

enum usb_speed_t	
USB speed type	
Enumerator	
USB_SPEED_LS	Low speed operation.
USB_SPEED_FS	Full speed operation.
USB_SPEED_HS	Hi speed operation.

◆ usb_setup_status_t

enum usb_setup_status_t	
USB request result	
Enumerator	
USB_SETUP_STATUS_ACK	ACK response.
USB_SETUP_STATUS_STALL	STALL response.

◆ usb_status_t

enum usb_status_t	
USB driver status	
Enumerator	
USB_STATUS_POWERED	Powered State.
USB_STATUS_DEFAULT	Default State.
USB_STATUS_ADDRESS	Address State.
USB_STATUS_CONFIGURED	Configured State.
USB_STATUS_SUSPEND	Suspend State.
USB_STATUS_RESUME	Resume State.
USB_STATUS_DETACH	Detach State.
USB_STATUS_REQUEST	Request State.
USB_STATUS_REQUEST_COMPLETE	Request Complete State.
USB_STATUS_READ_COMPLETE	Read Complete State.
USB_STATUS_WRITE_COMPLETE	Write Complete State.
USB_STATUS_BC	battery Charge State
USB_STATUS_OVERCURRENT	Over Current state.
USB_STATUS_NOT_SUPPORT	Device Not Support.
USB_STATUS_NONE	None Status.
USB_STATUS_MSC_CMD_COMPLETE	MSC_CMD Complete.

◆ usb_class_t

enum usb_class_t	
USB class type	
Enumerator	
USB_CLASS_PCDC	PCDC Class.
USB_CLASS_PCDCC	PCDCC Class.
USB_CLASS_PCDC2	PCDC2 Class.
USB_CLASS_PCDCC2	PCDCC2 Class.
USB_CLASS_PHID	PHID Class.
USB_CLASS_PAUD	PAUD Class.
USB_CLASS_PVND	PVND Class.
USB_CLASS_HCDC	HCDC Class.
USB_CLASS_HCDCC	HCDCC Class.
USB_CLASS_HHID	HHID Class.
USB_CLASS_HVND	HVND Class.
USB_CLASS_HMSC	HMSC Class.
USB_CLASS_PMSC	PMSC Class.
USB_CLASS_REQUEST	USB Class Request.
USB_CLASS_END	USB Class End Code.

◆ usb_bcport_t

enum usb_bcport_t	
USB battery charging type	
Enumerator	
USB_BCPORT_SDP	SDP port settings.
USB_BCPORT_CDP	CDP port settings.
USB_BCPORT_DCP	DCP port settings.

◆ usb_onoff_t

enum usb_onoff_t	
USB status	
Enumerator	
USB_OFF	USB Off State.
USB_ON	USB On State.

◆ usb_transfer_t

enum usb_transfer_t	
USB read/write type	
Enumerator	
USB_TRANSFER_READ	Data Receive communication.
USB_TRANSFER_WRITE	Data transmission communication.

◆ usb_transfer_type_t

enum usb_transfer_type_t	
USB transfer type	
Enumerator	
USB_TRANSFER_TYPE_BULK	Bulk communication.
USB_TRANSFER_TYPE_INT	Interrupt communication.
USB_TRANSFER_TYPE_ISO	Isochronous communication.

◆ usb_mode_t

enum usb_mode_t	
Enumerator	
USB_MODE_HOST	Host mode.
USB_MODE_PERI	Peripheral mode.

◆ usb_compliancetest_status_t

enum usb_compliancetest_status_t	
Enumerator	
USB_COMPLIANCETEST_ATTACH	Device Attach Detection.
USB_COMPLIANCETEST_DETACH	Device Detach Detection.
USB_COMPLIANCETEST_TPL	TPL device connect.
USB_COMPLIANCETEST_NOTTPL	Not TPL device connect.
USB_COMPLIANCETEST_HUB	USB Hub connect.
USB_COMPLIANCETEST_OVRC	Over current.
USB_COMPLIANCETEST_NORES	Response Time out for Control Read Transfer.
USB_COMPLIANCETEST_SETUP_ERR	Setup Transaction Error.

4.3.42 USB HCDC Interface

Interfaces

Detailed Description

Interface for USB HCDC functions.

Summary

The USB HCDC interface provides USB HCDC functionality.

The USB HCDC interface can be implemented by:

- USB Host Communications Device Class Driver (r_usb_hcdc)

Data Structures

struct	usb_hcdc_encapsulated_t
struct	usb_hcdc_abstractstate_t
struct	usb_hcdc_countrysetting_t
union	usb_hcdc_commfeature_t
struct	usb_hcdc_linecoding_t
struct	usb_hcdc_controllinestate_t
struct	usb_hcdc_serialstate_t
struct	usb_hcdc_breakduration_t

Enumerations

enum	usb_hcdc_data_bit_t
enum	usb_hcdc_stop_bit_t
enum	usb_hcdc_parity_bit_t
enum	usb_hcdc_line_speed_t
enum	usb_hcdc_feature_selector_t

Data Structure Documentation

◆ usb_hcdc_encapsulated_t

struct usb_hcdc_encapsulated_t		
Encapsulated data		
Data Fields		
uint8_t *	p_data	Protocol dependent data.
uint16_t	wlength	Data length in bytes.

◆ usb_hcdc_abstractstate_t

struct usb_hcdc_abstractstate_t		
Abstract Control Model (ACM) settings bitmap		
Data Fields		
uint16_t	bis: 1	Idle enable.
uint16_t	bdms: 1	Data multiplexing enable.
uint16_t	rsv: 14	Reserved.

◆ usb_hcdc_countrysetting_t

struct usb_hcdc_countrysetting_t		
Country code data		
Data Fields		
uint16_t	country_code	Country code.

◆ usb_hcdc_commfeature_t

union usb_hcdc_commfeature_t		
Feature setting data		
Data Fields		
usb_hcdc_abstractstate_t	abstract_state	ACM settings bitmap.
usb_hcdc_countrysetting_t	country_setting	Country code.

◆ usb_hcdc_linecoding_t

struct usb_hcdc_linecoding_t		
Virtual UART configuration (line coding)		
Data Fields		
usb_hcdc_line_speed_t	dwdte_rate	Data terminal rate in bits per second.
usb_hcdc_stop_bit_t	bchar_format	Stop bits.
usb_hcdc_parity_bit_t	bparity_type	Parity.
usb_hcdc_data_bit_t	bdata_bits	Data bits.

uint8_t	rsv	Reserved.

◆ usb_hcdc_controllinestate_t

struct usb_hcdc_controllinestate_t		
Virtual UART control signal bitmap		
Data Fields		
uint16_t	bdtr: 1	DTR.
uint16_t	brts: 1	RTS.
uint16_t	rsv: 14	Reserved.

◆ usb_hcdc_serialstate_t

struct usb_hcdc_serialstate_t		
Virtual UART state bitmap		
Data Fields		
uint16_t	brx_carrier: 1	DCD signal.
uint16_t	btx_carrier: 1	DSR signal.
uint16_t	bbreak: 1	Break detection status.
uint16_t	bring_signal: 1	Ring signal.
uint16_t	bframing: 1	Framing error.
uint16_t	bparity: 1	Parity error.
uint16_t	bover_run: 1	Over Run error.
uint16_t	rsv: 9	Reserved.

◆ usb_hcdc_breakduration_t

struct usb_hcdc_breakduration_t		
Break duration data		
Data Fields		
uint16_t	wtime_ms	Duration of Break.

Enumeration Type Documentation

◆ usb_hcdc_data_bit_t

enum usb_hcdc_data_bit_t	
Virtual UART data length	
Enumerator	
USB_HCDC_DATA_BIT_7	7 bits
USB_HCDC_DATA_BIT_8	8 bits

◆ usb_hcdc_stop_bit_t

enum usb_hcdc_stop_bit_t	
Virtual UART stop bit length	
Enumerator	
USB_HCDC_STOP_BIT_1	1 bit
USB_HCDC_STOP_BIT_15	1.5 bits
USB_HCDC_STOP_BIT_2	2 bits

◆ usb_hcdc_parity_bit_t

enum usb_hcdc_parity_bit_t	
Virtual UART parity bit setting	
Enumerator	
USB_HCDC_PARITY_BIT_NONE	No parity bit.
USB_HCDC_PARITY_BIT_ODD	Odd parity.
USB_HCDC_PARITY_BIT_EVEN	Even parity.

◆ usb_hcdc_line_speed_t

enum usb_hcdc_line_speed_t
Virtual UART bitrate

◆ usb_hcdc_feature_selector_t

enum usb_hcdc_feature_selector_t
Feature Selector

4.3.43 USB HHID Interface

Interfaces

Detailed Description

Interface for USB HHID functions.

Summary

The USB HHID interface provides USB HHID functionality.

The USB HHID interface can be implemented by:

- USB Host Human Interface Device Class Driver (r_usb_hhid)

Data Structures

struct	usb_hhid_api_t
struct	usb_hhid_instance_t

Macros

#define	USB_HID_OTHER Other.
#define	USB_HID_KEYBOARD Keyboard.
#define	USB_HID_MOUSE Mouse.
#define	USB_HID_IN In Transfer.

#define	USB_HID_OUT Out Transfer.

Data Structure Documentation

◆ usb_hhid_api_t

struct usb_hhid_api_t	
USB HHID functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	typeGet)(usb_ctrl_t *const p_api_ctrl, uint8_t *p_type, uint8_t device_address)
fsp_err_t(*	maxPacketSizeGet)(usb_ctrl_t *const p_api_ctrl, uint16_t *p_size, uint8_t direction, uint8_t device_address)

Field Documentation

◆ typeGet

fsp_err_t(* usb_hhid_api_t::typeGet) (usb_ctrl_t *const p_api_ctrl, uint8_t *p_type, uint8_t device_address)

Get HID protocol.(USB Mouse/USB Keyboard/Other Type.)

Implemented as

- R_USB_HHID_TypeGet()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_type	Pointer to store HID protocol value.
[in]	device_address	Device Address.

◆ **maxPacketSizeGet**

fsp_err_t(* usb_hhid_api_t::maxPacketSizeGet) (usb_ctrl_t *const p_api_ctrl, uint16_t *p_size, uint8_t direction, uint8_t device_address)

Obtains max packet size for the connected HID device. The max packet size is set to the area. Set the direction (USB_HID_IN/USB_HID_OUT).

Implemented as

- R_USB_HHID_MaxPacketSizeGet()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_size	Pointer to the area to store the max package size.
[in]	direction	Transfer direction.
[in]	device_address	Device Address.

◆ **usb_hhid_instance_t**

struct usb_hhid_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
usb_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
usb_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
usb_hhid_api_t const *	p_api	Pointer to the API structure for this instance.

4.3.44 USB HMSC Interface

Interfaces

Detailed Description

Interface for USB HMSC functions.

Summary

The USB HMSC interface provides USB HMSC functionality.

The USB HMSC interface can be implemented by:

- USB Host Mass Storage Class Driver (r_usb_hmsc)

Data Structures

struct	usb_hmsc_api_t

Enumerations

enum	usb_atapi_t
enum	usb_csw_result_t

Data Structure Documentation

◆ usb_hmsc_api_t

struct usb_hmsc_api_t	
USB HMSC functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	storageCommand)(usb_ctrl_t *const p_api_ctrl, uint8_t *buf, uint8_t command, uint8_t destination)
fsp_err_t(*	driveNumberGet)(usb_ctrl_t *const p_api_ctrl, uint8_t *p_drive, uint8_t destination)
fsp_err_t(*	storageReadSector)(uint16_t drive_number, uint8_t *const buff, uint32_t sector_number, uint16_t sector_count)
fsp_err_t(*	storageWriteSector)(uint16_t drive_number, uint8_t const *const buff, uint32_t sector_number, uint16_t sector_count)
fsp_err_t(*	semaphoreGet)(void)
fsp_err_t(*	semaphoreRelease)(void)

Field Documentation

◆ storageCommand

fsp_err_t(* usb_hmsc_api_t::storageCommand) (usb_ctrl_t *const p_api_ctrl, uint8_t *buf, uint8_t command, uint8_t destination)

Processing for MassStorage(ATAPI) command.

Implemented as

- R_USB_HMSC_StorageCommand()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	*buf	Pointer to the buffer area to store the transfer data.
[in]	command	ATAPI command.
[in]	destination	Represents a device address.

◆ driveNumberGet

fsp_err_t(* usb_hmsc_api_t::driveNumberGet) (usb_ctrl_t *const p_api_ctrl, uint8_t *p_drive, uint8_t destination)

Get number of Storage drive.

Implemented as

- R_USB_HMSC_DriveNumberGet()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[out]	p_drive	Store address for Drive No.
[in]	destination	Represents a device address.

◆ storageReadSector

fsp_err_t(* usb_hmsc_api_t::storageReadSector) (uint16_t drive_number, uint8_t *const buff, uint32_t sector_number, uint16_t sector_count)

Read sector information.

Implemented as

- R_USB_HMSC_StorageReadSector()

Parameters

[in]	drive_number	Drive number.
[out]	*buff	Pointer to the buffer area to store the transfer data.
[in]	sector_number	The sector number to start with.
[in]	sector_count	Transmit with the sector size of the number of times.

◆ storageWriteSector

fsp_err_t(* usb_hmsc_api_t::storageWriteSector) (uint16_t drive_number, uint8_t const *const buff, uint32_t sector_number, uint16_t sector_count)

Write sector information.

Implemented as

- R_USB_HMSC_StorageWriteSector()

Parameters

[in]	drive_number	Drive number.
[in]	*buff	Pointer to the buffer area to store the transfer data.
[in]	sector_number	The sector number to start with.
[in]	sector_count	Transmit with the sector size of the number of times.

◆ semaphoreGet

fsp_err_t(* usb_hmsc_api_t::semaphoreGet) (void)

Get Semaphore.

Implemented as

- R_USB_HMSC_SemaphoreGet()

◆ semaphoreRelease

fsp_err_t(* usb_hmsc_api_t::semaphoreRelease) (void)
Release Semaphore. **Implemented as** ◦ R_USB_HMSC_SemaphoreRelease()

Enumeration Type Documentation

◆ usb_atapi_t

enum usb_atapi_t	
ATAPI commands	
Enumerator	
USB_ATAPI_TEST_UNIT_READY	Test Unit Ready.
USB_ATAPI_REQUEST_SENSE	Request Sense.
USB_ATAPI_FORMAT_UNIT	Format Unit.
USB_ATAPI_INQUIRY	Inquiry.
USB_ATAPI_MODE_SELECT6	Mode Select6.
USB_ATAPI_MODE_SENSE6	Mode Sense6.
USB_ATAPI_START_STOP_UNIT	Start Stop Unit.
USB_ATAPI_PREVENT_ALLOW	Prevent Allow.
USB_ATAPI_READ_FORMAT_CAPACITY	Read Format Capacity.
USB_ATAPI_READ_CAPACITY	Read Capacity.
USB_ATAPI_READ10	Read10.
USB_ATAPI_WRITE10	Write10.
USB_ATAPI_SEEK	Seek.
USB_ATAPI_WRITE_AND_VERIFY	Write and Verify.
USB_ATAPI_VERIFY10	Verify10.
USB_ATAPI_MODE_SELECT10	Mode Select10.
USB_ATAPI_MODE_SENSE10	Mode Sense10.

◆ usb_csw_result_t

enum usb_csw_result_t	
Command Status Wrapper (CSW)	
Enumerator	
USB_CSW_RESULT_SUCCESS	CSW was successful.
USB_CSW_RESULT_FAIL	CSW failed.
USB_CSW_RESULT_PHASE	CSW has phase error.

4.3.45 USB PCDC Interface

Interfaces

Detailed Description

Interface for USB PCDC functions.

Summary

The USB PCDC interface provides USB PCDC functionality.

The USB PCDC interface can be implemented by:

- USB Peripheral Communications Device Class (r_usb_pcdc)

Data Structures

struct	usb_serial_state_bitmap_t
union	usb_sci_serialstate_t
struct	usb_pcdc_linecoding_t
struct	usb_pcdc_ctrllinestate_t

Macros

#define	USB_PCDC_SET_LINE_CODING Set Line Coding.
#define	USB_PCDC_GET_LINE_CODING

	Get Line Coding.
#define	USB_PCDC_SET_CONTROL_LINE_STATE Control Line State.
#define	USB_PCDC_SERIAL_STATE Serial State Code.
#define	USB_PCDC_SETUP_TBL_BSIZE Setup packet table size (uint16_t * 5)

Data Structure Documentation

◆ usb_serial_state_bitmap_t

struct usb_serial_state_bitmap_t		
Virtual UART signal state		
Data Fields		
uint16_t	b_rx_carrier: 1	DCD signal.
uint16_t	b_tx_carrier: 1	DSR signal.
uint16_t	b_break: 1	Break signal.
uint16_t	b_ring_signal: 1	Ring signal.
uint16_t	b_framing: 1	Framing error.
uint16_t	b_parity: 1	Parity error.
uint16_t	b_over_run: 1	Overrun error.
uint16_t	rsv: 9	Reserved.

◆ usb_sci_serialstate_t

union usb_sci_serialstate_t		
Class Notification Serial State		
Data Fields		
uint32_t	word	Word Access.
usb_serial_state_bitmap_t	bit	Bit Access.

◆ usb_pcdc_linecoding_t

struct usb_pcdc_linecoding_t

Virtual UART communication settings		
Data Fields		
uint32_t	dw_dte_rate	Bitrate.
uint8_t	b_char_format	Stop bits.
uint8_t	b_parity_type	Parity.
uint8_t	b_data_bits	Data bits.
uint8_t	rsv	Reserved.

◆ **usb_pcdc_ctrllinestate_t**

struct usb_pcdc_ctrllinestate_t		
Virtual UART control line state		
Data Fields		
uint16_t	bdtr: 1	DTR.
uint16_t	brts: 1	RTS.
uint16_t	rsv: 14	Reserved.

4.3.46 USB PHID Interface

Interfaces

Detailed Description

Interface for USB PHID functions.

Summary

The USB interface provides USB functionality.

The USB PHID interface can be implemented by:

- USB Peripheral Human Interface Device Class (r_usb_phid)

4.3.47 USB PMSC Interface

Interfaces

Detailed Description

Interface for USB PMSC functions.

Summary

The USB PMSC interface provides USB PMSC functionality.

The USB PMSC interface can be implemented by:

- USB Peripheral Mass Storage Class (r_usb_pmsc)

Macros

#define	USB_MASS_STORAGE_RESET Mass storage reset request code.
#define	USB_GET_MAX_LUN Get max logical unit number request code.

4.3.48 WDT Interface

Interfaces

Detailed Description

Interface for watch dog timer functions.

Summary

The WDT interface for the Watchdog Timer (WDT) peripheral provides watchdog functionality including resetting the device or generating an interrupt.

The watchdog timer interface can be implemented by:

- Watchdog Timer (r_wdt)
- Independent Watchdog Timer (r_iwdt)

Data Structures

struct	wdt_callback_args_t
struct	wdt_timeout_values_t
struct	wdt_cfg_t
struct	wdt_api_t

struct	wdt_instance_t

Typedefs

typedef void	wdt_ctrl_t

Enumerations

enum	wdt_timeout_t
enum	wdt_clock_division_t
enum	wdt_window_start_t
enum	wdt_window_end_t
enum	wdt_reset_control_t
enum	wdt_stop_control_t
enum	wdt_status_t

Data Structure Documentation

◆ wdt_callback_args_t

struct wdt_callback_args_t		
Callback function parameter data		
Data Fields		
void const *	p_context	Placeholder for user data. Set in wdt_api_t::open function in wdt_cfg_t.

◆ wdt_timeout_values_t

struct wdt_timeout_values_t		
WDT timeout data. Used to return frequency of WDT clock and timeout period		
Data Fields		
uint32_t	clock_frequency_hz	Frequency of watchdog clock after divider.
uint32_t	timeout_clocks	Timeout period in units of watchdog clock ticks.

◆ wdt_cfg_t

struct wdt_cfg_t
WDT configuration parameters.

Data Fields	
wdt_timeout_t	timeout
	Timeout period.
wdt_clock_division_t	clock_division
	Clock divider.
wdt_window_start_t	window_start
	Refresh permitted window start position.
wdt_window_end_t	window_end
	Refresh permitted window end position.
wdt_reset_control_t	reset_control
	Select NMI or reset generated on underflow.
wdt_stop_control_t	stop_control
	Select whether counter operates in sleep mode.
void(*	p_callback)(wdt_callback_args_t *p_args)
	Callback provided when a WDT NMI ISR occurs.
void const *	p_context
void const *	p_extend
	Placeholder for user extension.

Field Documentation

◆ p_context

void const* wdt_cfg_t::p_context
Placeholder for user data. Passed to the user callback in wdt_callback_args_t.

◆ wdt_api_t

struct wdt_api_t	
WDT functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(wdt_ctrl_t *const p_ctrl, wdt_cfg_t const *const p_cfg)
fsp_err_t(*	refresh)(wdt_ctrl_t *const p_ctrl)
fsp_err_t(*	statusGet)(wdt_ctrl_t *const p_ctrl, wdt_status_t *const p_status)
fsp_err_t(*	statusClear)(wdt_ctrl_t *const p_ctrl, const wdt_status_t status)
fsp_err_t(*	counterGet)(wdt_ctrl_t *const p_ctrl, uint32_t *const p_count)
fsp_err_t(*	timeoutGet)(wdt_ctrl_t *const p_ctrl, wdt_timeout_values_t *const p_timeout)
fsp_err_t(*	callbackSet)(wdt_ctrl_t *const p_api_ctrl, void(*p_callback)(wdt_callback_args_t *), void const *const p_context, wdt_callback_args_t *const p_callback_memory)

Field Documentation

◆ open

fsp_err_t(* wdt_api_t::open) (wdt_ctrl_t *const p_ctrl, wdt_cfg_t const *const p_cfg)

Initialize the WDT in register start mode. In auto-start mode with NMI output it registers the NMI callback.

Implemented as

- R_WDT_Open()
- R_IWDT_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ refresh

fsp_err_t(* wdt_api_t::refresh) (wdt_ctrl_t *const p_ctrl)

Refresh the watchdog timer.

Implemented as

- R_WDT_Refresh()
- R_IWDT_Refresh()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ statusGet

fsp_err_t(* wdt_api_t::statusGet) (wdt_ctrl_t *const p_ctrl, wdt_status_t *const p_status)

Read the status of the WDT.

Implemented as

- R_WDT_StatusGet()
- R_IWDT_StatusGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_status	Pointer to variable to return status information through.

◆ statusClear

fsp_err_t(* wdt_api_t::statusClear) (wdt_ctrl_t *const p_ctrl, const wdt_status_t status)

Clear the status flags of the WDT.

Implemented as

- R_WDT_StatusClear()
- R_IWDT_StatusClear()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	status	Status condition(s) to clear.

◆ counterGet

fsp_err_t(* wdt_api_t::counterGet) (wdt_ctrl_t *const p_ctrl, uint32_t *const p_count)

Read the current WDT counter value.

Implemented as

- R_WDT_CounterGet()
- R_IWDT_CounterGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_count	Pointer to variable to return current WDT counter value.

◆ timeoutGet

fsp_err_t(* wdt_api_t::timeoutGet) (wdt_ctrl_t *const p_ctrl, wdt_timeout_values_t *const p_timeout)

Read the watchdog timeout values.

Implemented as

- R_WDT_TimeoutGet()
- R_IWDT_TimeoutGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_timeout	Pointer to structure to return timeout values.

◆ callbackSet

fsp_err_t(* wdt_api_t::callbackSet) (wdt_ctrl_t *const p_api_ctrl, void(*p_callback)(wdt_callback_args_t *), void const *const p_context, wdt_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- R_WDT_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the WDT control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ wdt_instance_t

struct wdt_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields		
wdt_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
wdt_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
wdt_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ wdt_ctrl_t

typedef void wdt_ctrl_t

WDT control block. Allocate an instance specific control block to pass into the WDT API calls.

Implemented as

- wdt_instance_ctrl_t
- iwdt_instance_ctrl_t

Enumeration Type Documentation

◆ wdt_timeout_t

enum wdt_timeout_t	
WDT time-out periods.	
Enumerator	
WDT_TIMEOUT_128	128 clock cycles
WDT_TIMEOUT_512	512 clock cycles
WDT_TIMEOUT_1024	1024 clock cycles
WDT_TIMEOUT_2048	2048 clock cycles
WDT_TIMEOUT_4096	4096 clock cycles
WDT_TIMEOUT_8192	8192 clock cycles
WDT_TIMEOUT_16384	16384 clock cycles

◆ wdt_clock_division_t

enum wdt_clock_division_t	
WDT clock division ratio.	
Enumerator	
WDT_CLOCK_DIVISION_1	CLK/1.
WDT_CLOCK_DIVISION_4	CLK/4.
WDT_CLOCK_DIVISION_16	CLK/16.
WDT_CLOCK_DIVISION_32	CLK/32.
WDT_CLOCK_DIVISION_64	CLK/64.
WDT_CLOCK_DIVISION_128	CLK/128.
WDT_CLOCK_DIVISION_256	CLK/256.
WDT_CLOCK_DIVISION_512	CLK/512.
WDT_CLOCK_DIVISION_2048	CLK/2048.
WDT_CLOCK_DIVISION_8192	CLK/8192.

◆ wdt_window_start_t

enum wdt_window_start_t	
WDT refresh permitted period window start position.	
Enumerator	
WDT_WINDOW_START_25	Start position = 25%.
WDT_WINDOW_START_50	Start position = 50%.
WDT_WINDOW_START_75	Start position = 75%.
WDT_WINDOW_START_100	Start position = 100%.

◆ wdt_window_end_t

enum wdt_window_end_t	
WDT refresh permitted period window end position.	
Enumerator	
WDT_WINDOW_END_75	End position = 75%.
WDT_WINDOW_END_50	End position = 50%.
WDT_WINDOW_END_25	End position = 25%.
WDT_WINDOW_END_0	End position = 0%.

◆ wdt_reset_control_t

enum wdt_reset_control_t	
WDT Counter underflow and refresh error control.	
Enumerator	
WDT_RESET_CONTROL_NMI	NMI request when counter underflows.
WDT_RESET_CONTROL_RESET	Reset request when counter underflows.

◆ wdt_stop_control_t

enum wdt_stop_control_t	
WDT Counter operation in sleep mode.	
Enumerator	
WDT_STOP_CONTROL_DISABLE	Count will not stop when device enters sleep mode.
WDT_STOP_CONTROL_ENABLE	Count will automatically stop when device enters sleep mode.

◆ **wdt_status_t**

enum wdt_status_t	
WDT status	
Enumerator	
WDT_STATUS_NO_ERROR	No status flags set.
WDT_STATUS_UNDERFLOW_ERROR	Underflow flag set.
WDT_STATUS_REFRESH_ERROR	Refresh error flag set. Refresh outside of permitted window.
WDT_STATUS_UNDERFLOW_AND_REFRESH_ERROR	Underflow and refresh error flags set.

4.3.49 ADPCM Decoder Interface

Interfaces

Detailed Description

Interface for ADPCM decoder.

Summary

The ADPCM decoder interface provides functionality to decode the 4bit ADPCM data to 16bit PCM output.

Implemented by: ADPCM Decoder (rm_adpcm_decoder)

Data Structures

struct	adpcm_decoder_cfg_t
struct	adpcm_decoder_api_t
struct	adpcm_decoder_instance_t

Typedefs

typedef void	adpcm_decoder_ctrl_t

Data Structure Documentation

◆ **adpcm_decoder_cfg_t**

struct adpcm_decoder_cfg_t
Audio Decoder general configuration

◆ adpcm_decoder_api_t

struct adpcm_decoder_api_t	
Audio Decoder interface API.	
Data Fields	
fsp_err_t(*	open)(adpcm_decoder_ctrl_t *const p_ctrl, adpcm_decoder_cfg_t const *const p_cfg)
fsp_err_t(*	decode)(adpcm_decoder_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint32_t src_len_bytes)
fsp_err_t(*	reset)(adpcm_decoder_ctrl_t *const p_ctrl)
fsp_err_t(*	close)(adpcm_decoder_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* adpcm_decoder_api_t::open) (adpcm_decoder_ctrl_t *const p_ctrl, adpcm_decoder_cfg_t const *const p_cfg)

Initialize Audio Decoder device.

Implemented as

- RM_ADPCM_DECODER_Open()

Note

To reconfigure after calling this function, call adpcm_decoder_api_t::close first.

Parameters

[in]	p_ctrl	Pointer to control handle structure
[in]	p_cfg	Pointer to configuration structure

◆ decode

fsp_err_t(* adpcm_decoder_api_t::decode) (adpcm_decoder_ctrl_t *const p_ctrl, void const *p_src, void *p_dest, uint32_t src_len_bytes)

Decodes the compressed data and stores it in output buffer.

Implemented as

- RM_ADPCM_DECODER_Decode()

Parameters

[in]	p_ctrl	Pointer to control handle structure
[in]	p_src	Pointer to a source data buffer from which data will be picked up for decode operation. The argument must not be NULL.
[out]	p_dest	Pointer to the location to store the decoded data.
[in]	p_dest	Number of bytes to be decoded.

◆ reset

fsp_err_t(* adpcm_decoder_api_t::reset) (adpcm_decoder_ctrl_t *const p_ctrl)

Resets the ADPCM driver.

Implemented as

- RM_ADPCM_DECODER_Reset()

Parameters

[in]	p_ctrl	Pointer to control handle structure

◆ close

fsp_err_t(* adpcm_decoder_api_t::close) (adpcm_decoder_ctrl_t *const p_ctrl)

Close the specified Audio decoder modules.

Implemented as

- RM_ADPCM_DECODER_Close()

Parameters

[in]	p_ctrl	Pointer to control handle structure

◆ adpcm_decoder_instance_t

struct adpcm_decoder_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
adpcm_decoder_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
adpcm_decoder_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
adpcm_decoder_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ adpcm_decoder_ctrl_t

typedef void adpcm_decoder_ctrl_t
Audio Decoder control block. Allocate an instance specific control block to pass into the Audio Decoder API calls. **Implemented as** ◦ adpcm_decoder_instance_ctrl_t

4.3.50 AUDIO PLAYBACK Interface

Interfaces

Detailed Description

Interface for the Audio Playback.

Defines the API and data structures for the Audio Playback implementation.

Summary

This module provides common interface for Audio Playback.

Implemented by: Audio Playback with PWM (rm_audio_playback_pwm)

Data Structures

struct	audio_playback_callback_args_t
struct	audio_playback_cfg_t

struct	audio_playback_api_t
struct	audio_playback_instance_t

Typedefs

typedef void	audio_playback_ctrl_t

Enumerations

enum	audio_playback_event_t

Data Structure Documentation

◆ audio_playback_callback_args_t

struct audio_playback_callback_args_t		
Callback function parameter data		
Data Fields		
void *	p_context	Placeholder for user data.
audio_playback_event_t	event	Event that triggered the callback.

◆ audio_playback_cfg_t

struct audio_playback_cfg_t	
Audio Playback configuration parameters.	
Data Fields	
void const *	p_extend
	Hardware dependent configuration.
void(*	p_callback)(audio_playback_callback_args_t *p_args)
void *	p_context

Field Documentation

◆ p_callback

void(* audio_playback_cfg_t::p_callback) (audio_playback_callback_args_t *p_args)
Callback called when play is complete.

◆ p_context

void* audio_playback_cfg_t::p_context
Placeholder for user data. Passed to the user callback in audio_playback_callback_args_t.

◆ audio_playback_api_t

struct audio_playback_api_t	
Audio Playback functions implemented by the Audio Playback drivers will follow this API.	
Data Fields	
fsp_err_t(*	open)(audio_playback_ctrl_t *const p_ctrl, audio_playback_cfg_t const *const p_cfg)
fsp_err_t(*	start)(audio_playback_ctrl_t *const p_ctrl)
fsp_err_t(*	stop)(audio_playback_ctrl_t *const p_ctrl)
fsp_err_t(*	play)(audio_playback_ctrl_t *const p_ctrl, void const *const p_buffer, uint32_t length)
fsp_err_t(*	close)(audio_playback_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* audio_playback_api_t::open) (audio_playback_ctrl_t *const p_ctrl, audio_playback_cfg_t const *const p_cfg)

Open a audio playback module.

Implemented as

- RM_AUDIO_PLAYBACK_PWM_Open()

Parameters

[in]	p_ctrl	Pointer to memory allocated for control block.
[in]	p_cfg	Pointer to the hardware configurations.

◆ start

fsp_err_t(* audio_playback_api_t::start) (audio_playback_ctrl_t *const p_ctrl)

Start audio playback hardware.

Implemented as

- RM_AUDIO_PLAYBACK_PWM_Start()

Parameters

[in]	p_ctrl	Pointer to control block.

◆ stop

fsp_err_t(* audio_playback_api_t::stop) (audio_playback_ctrl_t *const p_ctrl)

Stop audio playback hardware.

Implemented as

- RM_AUDIO_PLAYBACK_PWM_Stop()

Parameters

[in]	p_ctrl	Pointer to control block.

◆ play

fsp_err_t(* audio_playback_api_t::play) (audio_playback_ctrl_t *const p_ctrl, void const *const p_buffer, uint32_t length)

Play audio buffer.

Implemented as

- RM_AUDIO_PLAYBACK_PWM_Play()

Parameters

[in]	p_ctrl	Pointer to control block.
[in]	p_buffer	Pointer to buffer with PCM samples to play. Data must be scaled for audio playback hardware.
[in]	length	Length of data in p_buffer.

◆ close

fsp_err_t(* audio_playback_api_t::close) (audio_playback_ctrl_t *const p_ctrl)

Close the audio driver.

Implemented as

- RM_AUDIO_PLAYBACK_PWM_Close()

Parameters

[in]	p_ctrl	Pointer to control block initialized in audio_playback_api_t::open.

◆ audio_playback_instance_t

struct audio_playback_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
audio_playback_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
audio_playback_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
audio_playback_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ audio_playback_ctrl_t

typedef void audio_playback_ctrl_t

Audio Playback control block. Allocate an instance specific control block to pass into the AUDIO_PLAYBACK API calls.

Implemented as

- audio_playback_pwm_instance_ctrl_t

Enumeration Type Documentation

◆ audio_playback_event_t

enum audio_playback_event_t	
Callback event types.	
Enumerator	
AUDIO_PLAYBACK_EVENT_PLAYBACK_COMPLETE	Audio playback complete event.

4.3.51 BLE ABS Interface

Interfaces

Detailed Description

Interface for Bluetooth Low Energy Abstraction functions.

Summary

The BLE ABS interface for the Bluetooth Low Energy Abstraction (BLE ABS) peripheral provides Bluetooth Low Energy Abstraction functionality.

The Bluetooth Low Energy Abstraction interface can be implemented by:

- Bluetooth Low Energy Abstraction (rm_ble_abs)

Data Structures

struct	ble_device_address_t
struct	ble_gap_connection_parameter_t
struct	ble_gap_connection_phy_parameter_t
struct	ble_gap_scan_phy_parameter_t
struct	ble_gap_scan_on_t
struct	ble_abs_callback_args_t
struct	ble_abs_pairing_parameter_t
struct	ble_abs_gatt_server_callback_set_t
struct	ble_abs_gatt_client_callback_set_t

struct	ble_abs_legacy_advertising_parameter_t
struct	ble_abs_extend_advertising_parameter_t
struct	ble_abs_non_connectable_advertising_parameter_t
struct	ble_abs_periodic_advertising_parameter_t
struct	ble_abs_scan_phy_parameter_t
struct	ble_abs_scan_parameter_t
struct	ble_abs_connection_phy_parameter_t
struct	ble_abs_connection_parameter_t
struct	ble_abs_cfg_t
struct	ble_abs_api_t
struct	ble_abs_instance_t

Macros

#define	BLE_ABS_ADVERTISING_PHY_LEGACY Non-Connectable Legacy Advertising phy setting.

Typedefs

typedef void(*	ble_gap_application_callback_t) (uint16_t event_type, ble_status_t event_result, st_ble_evt_data_t *p_event_data)
typedef void(*	ble_vendor_specific_application_callback_t) (uint16_t event_type, ble_status_t event_result, st_ble_vs_evt_data_t *p_event_data)
typedef void(*	ble_gatt_server_application_callback_t) (uint16_t event_type, ble_status_t event_result, st_ble_gatts_evt_data_t *p_event_data)
typedef void(*	ble_gatt_client_application_callback_t) (uint16_t event_type, ble_status_t event_result, st_ble_gattc_evt_data_t *p_event_data)
typedef void(*	ble_abs_delete_bond_application_callback_t) (st_ble_dev_addr_t *p_addr)
typedef void	ble_abs_ctrl_t

Enumerations

enum	ble_abs_advertising_filter_t

enum	ble_abs_local_bond_information_t
enum	ble_abs_remote_bond_information_t
enum	ble_abs_delete_non_volatile_area_t

Data Structure Documentation

◆ ble_device_address_t

struct ble_device_address_t		
st_ble_device_address is the type of bluetooth device address(BD_ADDR).		
Data Fields		
uint8_t	addr[BLE_BD_ADDR_LEN]	bluetooth device address.
uint8_t	type	the type of bluetooth device address.

◆ ble_gap_connection_parameter_t

struct ble_gap_connection_parameter_t		
ble_gap_connection_parameter_t is Connection parameters included in connection interval, slave latency, supervision timeout, ce length.		
Data Fields		
uint16_t	conn_intv_min	Minimum connection interval.
uint16_t	conn_intv_max	Maximum connection interval.
uint16_t	conn_latency	Slave latency.
uint16_t	sup_to	Supervision timeout.
uint16_t	min_ce_length	Minimum CE Length.
uint16_t	max_ce_length	Maximum CE Length.

◆ ble_gap_connection_phy_parameter_t

struct ble_gap_connection_phy_parameter_t		
ble_gap_connection_phy_parameter_t is Connection parameters per PHY.		
Data Fields		
uint16_t	scan_intv	Scan interval.
uint16_t	scan_window	Scan window.
ble_gap_connection_parameter_t *	p_conn_param	Connection interval, slave latency, supervision timeout, and CE length.

◆ ble_gap_scan_phy_parameter_t

struct ble_gap_scan_phy_parameter_t

Scan parameters per scan PHY.		
Data Fields		
uint8_t	scan_type	Scan type.
uint16_t	scan_intv	Scan interval.
uint16_t	scan_window	Scan window.

◆ ble_gap_scan_on_t

struct ble_gap_scan_on_t		
Parameters configured when scanning starts.		
Data Fields		
uint8_t	proc_type	Procedure type.
uint8_t	filter_dups	Filter duplicates.
uint16_t	duration	Scan duration.
uint16_t	period	Scan period.

◆ ble_abs_callback_args_t

struct ble_abs_callback_args_t		
Callback function parameter data		
Data Fields		
uint32_t	channel	Select a channel corresponding to the channel number of the hardware.
ble_event_cb_t	ble_abs_event	The event can be used to identify what caused the callback.
void const *	p_context	Placeholder for user data. Set in ble_abs_api_t::open function in ble_abs_cfg_t.

◆ ble_abs_pairing_parameter_t

struct ble_abs_pairing_parameter_t		
st_ble_abs_pairing_parameter_t includes the pairing parameters.		
Data Fields		
uint8_t	io_capabilitie_local_device	IO capabilities of local device.
uint8_t	mitm_protection_policy	MITM protection policy.
uint8_t	secure_connection_only	Determine whether to accept only Secure Connections or not.
uint8_t	local_key_distribute	Type of keys to be distributed from local device.

uint8_t	remote_key_distribute	Type of keys which local device requests a remote device to distribute.
uint8_t	maximum_key_size	Maximum LTK size.
uint8_t	padding[2]	padding

◆ ble_abs_gatt_server_callback_set_t

struct ble_abs_gatt_server_callback_set_t		
GATT Server callback function and the priority.		
Data Fields		
ble_gatt_server_application_callback_t	gatt_server_callback_function	GATT Server callback function.
uint8_t	gatt_server_callback_priority	The priority number of GATT Server callback function.

◆ ble_abs_gatt_client_callback_set_t

struct ble_abs_gatt_client_callback_set_t		
GATT Client callback function and the priority.		
Data Fields		
ble_gatt_client_application_callback_t	gatt_client_callback_function	GATT Client callback function.
uint8_t	gatt_client_callback_priority	The priority number of GATT Client callback function.

◆ ble_abs_legacy_advertising_parameter_t

struct ble_abs_legacy_advertising_parameter_t		
st_ble_abs_legacy_advertising_parameter_t is the parameters for legacy advertising.		
Data Fields		
ble_device_address_t *	p_peer_address	The remote device address. If the p_peer_address parameter is not NULL, Direct Connectable Advertising is performed to the remote address. If the p_peer_address parameter is NULL, Undirect Connectable Advertising is performed according to the advertising filter policy specified by the filter parameter.
uint8_t *	p_advertising_data	Advertising Data. If the p_advertising_data is specified as NULL, Advertising

		Data is not included in the advertising PDU.
uint8_t *	p_scan_response_data	Scan Response Data. If the p_scan_response_data is specified as NULL, Scan Response Data is not included in the advertising PDU.
uint32_t	fast_advertising_interval	Advertising with the fast_advertising_interval parameter continues for the period specified by the fast_period parameter. Time(ms) = fast_advertising_interval * 0.625. If the fast_period parameter is 0, this parameter is ignored. Valid range is 0x00000020 - 0x00FFFFFF.
uint32_t	slow_advertising_interval	After the elapse of the fast_period, advertising with the slow_advertising_interval parameter continues for the period specified by the slow_advertising_interval parameter. Time(ms) = slow_advertising_interval * 0.625. If the slow_advertising_interval parameter is 0, this parameter is ignored. Valid range is 0x00000020 - 0x00FFFFFF.
uint16_t	fast_advertising_period	The period which advertising with the fast_advertising_interval parameter continues for. Time = duration * 10ms. After the elapse of the fast_advertising_period, BLE_GAP_EVENT_ADV_OFF event notifies that the advertising has stopped. Valid range is 0x0000 - 0xFFFF. If the fast_advertising_period parameter is 0x0000, advertising with the fast_advertising_interval parameter is not performed.
uint16_t	slow_advertising_period	The period which advertising with the

		slow_advertising_interval parameter continues for. Time = duration * 10ms. After the elapse of the slow_advertising_period, BLE_GAP_EVENT_ADV_OFF event notifies that the advertising has stopped. Valid range is 0x0000 - 0xFFFF. If the slow_advertising_period parameter is 0x0000, the advertising continues.
uint16_t	advertising_data_length	Advertising data length(byte). Valid range is 0-31. If the advertising_data_length is 0, Advertising Data is not included in the advertising PDU.
uint16_t	scan_response_data_length	Scan response data length (in bytes). Scan Response Data(byte). Valid range is 0-31. If the scan_response_data_length is 0, Scan Response Data is not included in the advertising PDU.
uint8_t	advertising_channel_map	The channel map used for the advertising packet transmission. It is a bitwise OR of the following values. macro: description BLE_GAP_ADV_CH_37(0x01): Use 37 CH. BLE_GAP_ADV_CH_38(0x02): Use 38 CH. BLE_GAP_ADV_CH_39(0x04): Use 38 CH. BLE_GAP_ADV_CH_ALL(0x07): Use 37 - 39 CH.
uint8_t	advertising_filter_policy	Advertising filter policy. If the p_peer_address parameter is NULL, the advertising is performed according to the advertising filter policy. If the p_peer_address parameter is not NULL, this parameter is ignored.

		macro / description BLE_ABS_ADVERTISING_FILTER_ALLOW_ANY(0x00) — Process scan and connection requests from all devices. BLE_ABS_ADVERTISING_FILTER_ALLOW_WHITE_LIST(0x01) — Process scan and connection requests from only devices in the White List.
uint8_t	own_bluetooth_address_type	Own Bluetooth address type. Select one of the following. macro / description BLE_GAP_ADDR_PUBLIC(0x00) — Public Address BLE_GAP_ADDR_RPA_ID_PUBLIC(0x02) — Resolvable Private Address. If the IRK of local device has not been registered in Resolving List, public address is used.
uint8_t	own_bluetooth_address[6]	Own Bluetooth address.
uint8_t	padding[3]	padding

◆ ble_abs_extend_advertising_parameter_t

struct ble_abs_extend_advertising_parameter_t		
st_ble_abs_extend_advertising_parameter_t is the parameters for extended advertising.		
Data Fields		
ble_device_address_t *	p_peer_address	The remote device address. If the p_addr parameter is not NULL, Direct Connectable Advertising is performed to the remote address. If the p_addr parameter is NULL, Undirect Connectable Advertising is performed according to the advertising filter policy specified by the filter parameter.

uint8_t *	p_advertising_data	Advertising data. If p_adv_data is specified as NULL, advertising data is not set.
uint32_t	fast_advertising_interval	Advertising with the fast_advertising_interval parameter continues for the period specified by the fast_advertising_period parameter. Time(ms) = fast_advertising_interval * 0.625. If the fast_advertising_period parameter is 0, this parameter is ignored. Valid range is 0x00000020 - 0x00FFFFFF.
uint32_t	slow_advertising_interval	After the elapse of the fast_advertising_period, advertising with the slow_advertising_interval parameter continues for the period specified by the slow_advertising_period parameter. Time(ms) = fast_advertising_interval * 0.625. If the fast_advertising_period parameter is 0, this parameter is ignored. Valid range is 0x00000020 - 0x00FFFFFF.
uint16_t	fast_advertising_period	The period which advertising with the fast_advertising_interval parameter continues for. Time = duration * 10ms. After the elapse of the fast_advertising_period, BLE_GAP_EVENT_ADV_OFF event notifies that the advertising has stopped. Valid range is 0x0000 - 0xFFFF. If the fast_advertising_period parameter is 0x0000, the fast_advertising_interval parameter is ignored.
uint16_t	slow_advertising_period	The period which advertising with the slow_advertising_interval

<table>
<tr><td></td><td></td><td>parameter continues for.

</table>

		ERTISING_FILTER_ALLOW_WHITE_LIST(0x01) and connection requests from only devices in the White List.
uint8_t	own_bluetooth_address_type	Own Bluetooth address type. Select one of the following. macro: BLE_GAP_ADDR_PUBLIC(0x00) — Public Address macro: BLE_GAP_ADDR_RPA_ID_PUBLIC(0x02) — Resolvable Private Address. If the IRK of local device has not been registered in Resolving List, public address is used.
uint8_t	own_bluetooth_address[6]	Own Bluetooth address.
uint8_t	primary_advertising_phy	Primary advertising PHY. In this parameter, only 1M PHY and Coded PHY can be specified, and 2M PHY cannot be specified. macro: BLE_GAP_ADV_PHY_1M(0x01) — Use 1M PHY as Primary Advertising PHY. When the adv_prop_type field is Legacy Advertising PDU type, this field shall be set to BLE_GAP_ADV_PHY_1M. macro: BLE_GAP_ADV_PHY_CD(0x03) — Use Coded PHY as Primary Advertising PHY. Coding

		scheme is configured by R_BLE_VS_SetCodingScheme().
uint8_t	secondary_advertising_phy	Secondary advertising Phy. Select one of the following. macro: description BLE_GAP_ADV_PHY_1M(0x01): Use 1M PHY as Secondary Advertising PHY. BLE_GAP_ADV_PHY_2M(0x02): Use 2M PHY as Secondary Advertising PHY. BLE_GAP_ADV_PHY_CD(0x03): Use Coded PHY(S=8) as Secondary Advertising PHY. Coding scheme is configured by R_BLE_VS_SetCodingScheme().
uint8_t	padding[3]	padding

◆ **ble_abs_non_connectable_advertising_parameter_t**

struct ble_abs_non_connectable_advertising_parameter_t		
st_ble_abs_non_connectable_advertising_parameter_t is the parameters for non-connectable advertising.		
Data Fields		
ble_device_address_t *	p_peer_address	The remote device address. If the p_peer_address parameter is not NULL, Direct Connectable Advertising is performed to the remote address. If the p_peer_address parameter is NULL, Undirect Connectable Advertising is performed according to the advertising filter policy specified by the filter parameter.
uint8_t *	p_advertising_data	Advertising data. If p_adv_data

<table>
<tr><td></td><td></td><td>is specified as NULL, advertising data is not set.</td></tr>
<tr><td>uint32_t</td><td>advertising_interval</td><td>Advertising with the advertising_interval parameter continues for the period specified by the duration parameter.
Time(ms) = advertising_interval * 0.625.
If the duration parameter is 0x0000, the advertising with the advertising_interval parameter continue.
Valid range is 0x00000020 - 0x00FFFFFF.</td></tr>
<tr><td>uint16_t</td><td>advertising_duration</td><td>The period which advertising with the advertising_interval parameter continues for.
Time = advertising_duration * 10ms.
After the elapse of the advertising_duration, BLE_GAP_EVENT_ADV_OFF event notifies that the advertising has stopped.
Valid range is 0x0000 - 0xFFFF.
If the advertising_duration parameter is 0x0000, the advertising continues.</td></tr>
<tr><td>uint16_t</td><td>advertising_data_length</td><td>Advertising data length (in bytes).
If the primary_advertising_phy parameter is BLE_ABS_ADVERTISING_PHY_LEGACY(0x00), the valid range is 0-31.
If the primary_advertising_phy parameter is the other values, the valid range is 0-1650.
If the advertising_data_length parameter is 0, Advertising Data is not included in the advertising PDU.</td></tr>
<tr><td>uint8_t</td><td>advertising_channel_map</td><td>The channel map used for the advertising packet transmission.
It is a bitwise OR of the following values.<table><tr><td>macro</td><td>description</td></tr><tr><td>BLE_GAP_ADV_CH_37(0x01)</td><td>Use 37 CH.</td></tr></table></td></tr>
</table>

		BLE_GAP_ADV_CH_38(0x02) Use 38 CH. BLE_GAP_ADV_CH_39(0x04) Use 38 CH. BLE_GAP_ADV_CH_ALL(0x07) Use 37 - 39 CH.
uint8_t	own_bluetooth_address_type	Own Bluetooth address type. Select one of the following. macro / description BLE_GAP_ADDR_PUBLIC(0x00) Public Address BLE_GAP_ADDR_RPA_ID_PUBLIC(0x02) Resolvable Private Address. If the IRK of local device has not been registered in Resolving List, public address is used.
uint8_t	own_bluetooth_address[6]	Own Bluetooth address.
uint8_t	primary_advertising_phy	Primary advertising PHY. In this parameter, only 1M PHY and Coded PHY can be specified, and 2M PHY cannot be specified. macro / description BLE_ABS_ADVERTISING_PHY_LEGACY(0x00) Use 1M PHY as Primary Advertising PHY for Non-Connectable Legacy Advertising. If Periodic Advertising is performed, this value shall not set to the adv_phy parameter. BLE_GAP_ADV_PHY_1M(0x01) Use 1M PHY as Primary Advertising

		PHY. When the adv_prop_type field is Legacy Advertising PDU type, this field shall be set to BLE_GAP_ADV_PHY_1M. BLE_GAP_ADV_PHY_CD(0x03) Use Coded PHY as Primary Advertising PHY. Coding scheme is configured by R_BLE_VS_SetCodingScheme().
uint8_t	secondary_advertising_phy	Secondary advertising Phy. Select one of the following. macro: description BLE_GAP_ADV_PHY_1M(0x01): Use 1M PHY as Secondary Advertising PHY. BLE_GAP_ADV_PHY_2M(0x02): Use 2M PHY as Secondary Advertising PHY. BLE_GAP_ADV_PHY_CD(0x03): Use Coded PHY(S=8) as Secondary Advertising PHY. Coding scheme is configured by R_BLE_VS_SetCodingScheme().
uint8_t	padding[2]	padding

◆ ble_abs_periodic_advertising_parameter_t

struct ble_abs_periodic_advertising_parameter_t
st_ble_abs_periodic_advertising_parameter_t is the parameters for periodic advertising.

Data Fields		
ble_abs_non_connectable_advertising_parameter_t	advertising_parameter	Advertising parameters.
uint8_t *	p_periodic_advertising_data	Periodic advertising data. If p_perd_adv_data is specified as NULL, periodic advertising data is not set.
uint16_t	periodic_advertising_interval	Periodic advertising interval. Time(ms) = periodic_advertising_interval * 1.25. Valid range is 0x0006 - 0xFFFF.
uint16_t	periodic_advertising_data_length	Periodic advertising data length (in bytes). Valid range is 0 - 1650. If the periodic_advertising_data_length is 0, Periodic Advertising Data is not included in the advertising PDU.

◆ ble_abs_scan_phy_parameter_t

struct ble_abs_scan_phy_parameter_t		
st_ble_abs_scan_phy_parameter_t is the phy parameters for scan.		
Data Fields		
uint16_t	fast_scan_interval	Fast scan interval. Interval(ms) = fast_scan_interval * 0.625. Valid range is 0x0004 - 0xFFFF.
uint16_t	slow_scan_interval	Slow Scan interval. Slow Scan interval(ms) = slow_scan_interval * 0.625. Valid range is 0x0004 - 0xFFFF.
uint16_t	fast_scan_window	Fast Scan window. Fast Scan window(ms) = fast_scan_window * 0.625. Valid range is 0x0004 - 0xFFFF.
uint16_t	slow_scan_window	Slow Scan window. Slow Scan window(ms) = slow_scan_window * 0.625. Valid range is 0x0004 - 0xFFFF.
uint8_t	scan_type	Scan type. macro: BLE_GAP_SCAN_PASSIVE(0x00) — description: Passive Scan.

		BLE_GAP_SCAN_ACTIVE(0x01) Active Scan.
uint8_t	padding[3]	padding.

◆ ble_abs_scan_parameter_t

struct ble_abs_scan_parameter_t		
st_ble_abs_scan_parameter_t is the parameters for scan.		
Data Fields		
ble_abs_scan_phy_parameter_t *	p_phy_parameter_1M	Scan parameters for receiving the advertising packets in 1M PHY. In case of not receiving the advertising packets in 1M PHY, this field is specified as NULL. p_phy_parameter_1M or p_phy_parameter_coded field shall be set to scan parameters.
ble_abs_scan_phy_parameter_t *	p_phy_parameter_coded	Scan parameters for receiving the advertising packets in Coded PHY. In case of not receiving the advertising packets in Coded PHY, this field is specified as NULL. p_phy_parameter_1M or p_phy_parameter_coded field shall be set to scan parameters.
uint8_t *	p_filter_data	Data for Advertising Data filtering. The p_filter_data parameter is used for the advertising data in single advertising report. The advertising data composed of multiple advertising reports is not filtered by this parameter. If the p_filter_data parameter is specified as NULL, the filtering is not done.
uint16_t	fast_scan_period	The period which scan with the fast scan interval/fast scan window continues for. Time(ms) = fast_scan_period * 10. Valid range is 0x0000 - 0xFFFF. If the fast_scan_period parameter is 0x0000, scan with the fast scan interval/fast scan

<table>
<tr><td></td><td></td><td>window is not performed.
After the elapse of the fast_scan_period, BLE_GAP_EVENT_SCAN_TO event notifies that the scan has stopped.</td></tr>
<tr><td>uint16_t</td><td>slow_scan_period</td><td>The period which scan with the slow scan interval/slow scan window continues for.
Time = slow_scan_period * 10ms.
Valid range is 0x0000 - 0xFFFF.
If the slow_scan_period parameter is 0x0000, the scan continues.
After the elapse of the slow_scan_period, BLE_GAP_EVENT_SCAN_TO event notifies that the scan has stopped.</td></tr>
<tr><td>uint16_t</td><td>filter_data_length</td><td>The length of the data specified by the p_filter_data parameter.
Valid range is 0x0000-0x0010.
If the filter_data_length parameter is 0, the filtering is not done.</td></tr>
<tr><td>uint8_t</td><td>device_scan_filter_policy</td><td>Scan Filter Policy. Select one of the following.
.
• Address type setting (Field [7:4])
<table><tr><th>macro</th><th>description</th></tr><tr><td>BLE_GAP_ADDR_PUBLIC(0x00)</td><td>Use Public Address.</td></tr><tr><td>BLE_GAP_ADDR_RAND(0x01)</td><td>Use Random Address.</td></tr><tr><td>BLE_GAP_ADDR_RPA_ID_PUBLIC(0x02)</td><td>If the IRK of local device has been registered in Resolving list, use RPA. If not, use</td></tr></table></td></tr>
</table>

			Public Address. BLE_GAP_ADDR_RPA_ID_RANDOM(0x03) If the IRK of local device has been registered in Resolving list, use RPA. If not, use Random Address. • White list setting (Field [3:0]) macro / description BLE_GAP_SCAN_ALLOW_ADV_ALL(0x00) Accept all advertising and scan response PDUs except directed advertising PDUs not addressed to local device. BLE_GAP_SCAN_ALLOW_ADV_WLST(0x01) Accept only advertising and scan response PDUs from remote devices whose address is registered in the White List. Directed advertising PDUs which are not

				addressed to local device is ignored.
			BLE_GAP_SCAN_ALLOW_ADV_EXCEPT_DIRECTED(0x02)	Accept all advertising and scan response PDUs except directed advertising PDUs whose the target address is identity address but doesn't address local device. However directed advertising PDUs whose the target address is the local resolvable private address are accepted.
			BLE_GAP_SCAN_ALLOW_ADV_EXCEPT_DIRECTED_WLST(0x03)	Accept all advertising and scan response PDUs. The following are excluded. • Advertising an

			d scan response PDUs where the advertiser's identity address is not in the White List. • Directed advertising PDUs whose the target add

			ress is identity address but doesn't address local device. However directed advertising PDUs whose the target address is the local resolvabl

		e private address are accepted.
uint8_t	filter_duplicate	Filter duplicates. Maximum number of filtered devices is 8. The 9th and subsequent devices are not filtered by this parameter. macro: description BLE_GAP_SCAN_FILT_DUPLIC_DISABLE(0x00): Duplicate filter disabled. BLE_GAP_SCAN_FILT_DUPLIC_ENABLE(0x01): Duplicate filter enabled. BLE_GAP_SCAN_FILT_DUPLIC_ENABLE_FOR_PERIOD(0x02)): Duplicate filtering enabled, reset for each scan period.
uint8_t	filter_ad_type	The AD type of the data specified by the p_filter_data parameter. The AD type identifier values are defined in Bluetooth SIG Assigned Number (https://www.bluetooth.com/specifications/assigned-numbers).
uint8_t	padding[3]	Padding.

◆ ble_abs_connection_phy_parameter_t

struct ble_abs_connection_phy_parameter_t
st_ble_abs_connection_phy_parameter_t is the phy parameters for create connection.

Data Fields		
uint16_t	connection_interval	Connection interval. Time(ms) = connection_interval * 1.25. Valid range is 0x0006 - 0x0C80.
uint16_t	connection_slave_latency	Slave latency. Valid range is 0x0000 - 0x01F3.
uint16_t	supervision_timeout	Supervision timeout. Time(ms) = supervision_timeout * 10. Valid range is 0x000A - 0x0C80.
uint8_t	padding[2]	Padding.

◆ ble_abs_connection_parameter_t

struct ble_abs_connection_parameter_t		
st_ble_abs_connection_parameter_t is the parameters for create connection.		
Data Fields		
ble_abs_connection_phy_parameter_t *	p_connection_phy_parameter_1M	Connection interval, slave latency, supervision timeout for 1M PHY. The p_connection_phy_parameter_1M is specified as NULL, a connection request is not sent with 1M PHY.
ble_abs_connection_phy_parameter_t *	p_connection_phy_parameter_2M	Connection interval, slave latency, supervision timeout for 2M PHY. The p_connection_phy_parameter_2M is specified as NULL, a connection request is not sent with 2M PHY.
ble_abs_connection_phy_parameter_t *	p_connection_phy_parameter_coded	Connection interval, slave latency, supervision timeout for Coded PHY. The p_connection_phy_parameter_coded is specified as NULL, a connection request is not sent with Coded PHY.
ble_device_address_t *	p_device_address	Address of the device to be connected. If the filter field is BLE_GAP_INIT_FILT_USE_WLST(0x01), this parameter is ignored and please fill p_device_address.addr with 0x00.
uint8_t	filter_parameter	The filter field specifies whether

			the White List is used or not, when connecting with a remote device. . • Address type setting (Field [7:4]) macro / description BLE_GAP_ADDR_PUBLIC(0x00) — Use Public Address. BLE_GAP_ADDR_RAND(0x01) — Use Random Address. BLE_GAP_ADDR_RPA_ID_PUBLIC(0x02) — If the IRK of local device has been registered in Resolving list, use RPA. If not, use Public Address. BLE_GAP_ADDR_RPA_ID_RANDOM(0x03) — If the IRK of local device has been registered in Resolving list, use RPA. If not, use Random Address. • White list setting (Field [3:0]) macro / description BLE_GAP_INIT_FILT_USE_ADDR(0x00) — White List is not used. The remote device to

		be connected is specified by the p_addr field is used. BLE_GAP_INIT_FILT_USE_WLST (0x01) White List is used. The remote device registered in White List is connected with local device. The p_addr field is ignored.
uint8_t	connection_timeout	The time(sec) to cancel the create connection request. Valid range is 0 <= connection_timeout <= 10. If the connection_timeout field is 0, the create connection request is not canceled. .
uint8_t	padding[2]	Padding.

◆ ble_abs_cfg_t

struct ble_abs_cfg_t	
BLE ABS configuration parameters.	
Data Fields	
uint32_t	channel
	Select a channel corresponding to the channel number of the hardware. More...
ble_gap_application_callback_t	gap_callback
	GAP callback function.

ble_vendor_specific_application_callback_t	vendor_specific_callback
	Vendor Specific callback function.
ble_abs_gatt_server_callback_set_t *	p_gatt_server_callback_list
	GATT Server callback set.
uint8_t	gatt_server_callback_list_number
	The number of GATT Server callback functions.
ble_abs_gatt_client_callback_set_t *	p_gatt_client_callback_list
	GATT Client callback set.
uint8_t	gatt_client_callback_list_number
	The number of GATT Client callback functions.
ble_abs_pairing_parameter_t *	p_pairing_parameter
	Pairing parameters.
flash_instance_t const *	p_flash_instance
	Pointer to flash instance.
timer_instance_t const *	p_timer_instance
	Pointer to timer instance.
void(*	p_callback)(ble_abs_callback_args_t *p_args)

	Callback provided when a BLE ISR occurs.
void const *	p_context
	Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t.
void const *	p_extend
	Placeholder for user extension.

Field Documentation

◆ channel

uint32_t ble_abs_cfg_t::channel
Select a channel corresponding to the channel number of the hardware. the parameters for initialization.

◆ ble_abs_api_t

struct ble_abs_api_t	
BLE ABS functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(ble_abs_ctrl_t *const p_ctrl, ble_abs_cfg_t const *const p_cfg)
fsp_err_t(*	close)(ble_abs_ctrl_t *const p_ctrl)

fsp_err_t(*	exportKeyInformation)(ble_abs_ctrl_t *const p_ctrl, ble_device_address_t *p_local_identity_address, uint8_t *p_local_irk, uint8_t *p_local_csrk)

Field Documentation

◆ open

fsp_err_t(* ble_abs_api_t::open) (ble_abs_ctrl_t *const p_ctrl, ble_abs_cfg_t const *const p_cfg)

Initialize the BLE ABS in register start mode.

Implemented as

- RM_BLE_ABS_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ close

fsp_err_t(* ble_abs_api_t::close) (ble_abs_ctrl_t *const p_ctrl)

Close the BLE ABS.

Implemented as

- RM_BLE_ABS_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ reset

fsp_err_t(* ble_abs_api_t::reset) (ble_abs_ctrl_t *const p_ctrl, ble_event_cb_t init_callback)

Close the BLE ABS.

Implemented as

- RM_BLE_ABS_Reset()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	init_callback	callback function to initialize Host Stack.

◆ startLegacyAdvertising

fsp_err_t(* ble_abs_api_t::startLegacyAdvertising) (ble_abs_ctrl_t *const p_ctrl, ble_abs_legacy_advertising_parameter_t const *const p_advertising_parameter)

Start Legacy Connectable Advertising.

Implemented as

- RM_BLE_ABS_StartLegacyAdvertising()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_advertising_parameter	Pointer to Advertising parameters for Legacy Advertising.

◆ startExtendedAdvertising

fsp_err_t(* ble_abs_api_t::startExtendedAdvertising) (ble_abs_ctrl_t *const p_ctrl, ble_abs_extend_advertising_parameter_t const *const p_advertising_parameter)

Start Extended Connectable Advertising.

Implemented as

- RM_BLE_ABS_StartExtendedAdvertising()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_advertising_parameter	Pointer to Advertising parameters for extend Advertising.

◆ startNonConnectableAdvertising

fsp_err_t(* ble_abs_api_t::startNonConnectableAdvertising) (ble_abs_ctrl_t *const p_ctrl, ble_abs_non_connectable_advertising_parameter_t const *const p_advertising_parameter)

Start Non-Connectable Advertising.

Implemented as

- RM_BLE_ABS_StartNonConnectableAdvertising()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_advertising_parameter	Pointer to Advertising parameters for non-connectable Advertising.

◆ startPeriodicAdvertising

fsp_err_t(* ble_abs_api_t::startPeriodicAdvertising) (ble_abs_ctrl_t *const p_ctrl, ble_abs_periodic_advertising_parameter_t const *const p_advertising_parameter)

Start Periodic Advertising.

Implemented as

- RM_BLE_ABS_StartPeriodicAdvertising()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_advertising_parameter	Pointer to Advertising parameters for periodic Advertising.

◆ startScanning

fsp_err_t(* ble_abs_api_t::startScanning) (ble_abs_ctrl_t *const p_ctrl, ble_abs_scan_parameter_t const *const p_scan_parameter)

Start scanning.

Implemented as

- RM_BLE_ABS_StartScanning()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_scan_parameter	Pointer to scan parameter.

◆ createConnection

fsp_err_t(* ble_abs_api_t::createConnection) (ble_abs_ctrl_t *const p_ctrl, ble_abs_connection_parameter_t const *const p_connection_parameter)

Request create connection.

Implemented as

- RM_BLE_ABS_CreateConnection()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_connection_parameter	Pointer to connection parameter.

◆ setLocalPrivacy

fsp_err_t(* ble_abs_api_t::setLocalPrivacy) (ble_abs_ctrl_t *const p_ctrl, uint8_t const *const p_lc_irk, uint8_t privacy_mode)

Configure local device privacy.

Implemented as

- RM_BLE_ABS_SetLocalPrivacy()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_lc_irk	Pointer to IRK to be registered in the resolving list.
[in]	privacy_mode	privacy_mode privacy mode.

◆ startAuthentication

fsp_err_t(* ble_abs_api_t::startAuthentication) (ble_abs_ctrl_t *const p_ctrl, uint16_t connection_handle)

Start pairing or encryption.

Implemented as

- RM_BLE_ABS_StartAuthentication()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	connection_handle	Connection handle identifying the remote device.

◆ deleteBondInformation

fsp_err_t(* ble_abs_api_t::deleteBondInformation) (ble_abs_ctrl_t *const p_ctrl, ble_abs_bond_information_parameter_t const *const p_bond_information_parameter)

Delete bond information.

Implemented as

- RM_BLE_ABS_DeleteBondInformation()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_bond_information_parameter	Pointer to bond information parameter.

◆ importKeyInformation

fsp_err_t(* ble_abs_api_t::importKeyInformation) (ble_abs_ctrl_t *const p_ctrl, ble_device_address_t *p_local_identity_address, uint8_t *p_local_irk, uint8_t *p_local_csrk)

Import local identity address, keys information to local storage.

Implemented as

- RM_BLE_ABS_ImportKeyInformation()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_local_identity_address	Pointer to local identiry address.
[in]	uint8_t	p_local_irk Pointer to local IRK
[in]	uint8_t	p_local_csrk Pointer to local CSRK

◆ exportKeyInformation

fsp_err_t(* ble_abs_api_t::exportKeyInformation) (ble_abs_ctrl_t *const p_ctrl, ble_device_address_t *p_local_identity_address, uint8_t *p_local_irk, uint8_t *p_local_csrk)

Export local identity address, keys information from local storage.

Implemented as

- RM_BLE_ABS_ExportKeyInformation()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_local_identity_address	Pointer to local identiry address.
[out]	uint8_t	p_local_irk Pointer to local IRK
[out]	uint8_t	p_local_csrk Pointer to local CSRK

◆ ble_abs_instance_t

struct ble_abs_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

ble_abs_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
ble_abs_cfg_t const *	p_cfg	Pointer to the configuration

		structure for this instance.
ble_abs_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ ble_gap_application_callback_t

typedef void(* ble_gap_application_callback_t) (uint16_t event_type, ble_status_t event_result, st_ble_evt_data_t *p_event_data)
ble_gap_application_callback_t is the GAP Event callback function type.

◆ ble_vendor_specific_application_callback_t

typedef void(* ble_vendor_specific_application_callback_t) (uint16_t event_type, ble_status_t event_result, st_ble_vs_evt_data_t *p_event_data)
ble_vendor_specific_application_callback_t is the Vendor Specific Event callback function type.

◆ ble_gatt_server_application_callback_t

typedef void(* ble_gatt_server_application_callback_t) (uint16_t event_type, ble_status_t event_result, st_ble_gatts_evt_data_t *p_event_data)
ble_gatt_server_application_callback_t is the GATT Server Event callback function type.

◆ ble_gatt_client_application_callback_t

typedef void(* ble_gatt_client_application_callback_t) (uint16_t event_type, ble_status_t event_result, st_ble_gattc_evt_data_t *p_event_data)
ble_gatt_client_application_callback_t is the GATT Server Event callback function type.

◆ ble_abs_delete_bond_application_callback_t

typedef void(* ble_abs_delete_bond_application_callback_t) (st_ble_dev_addr_t *p_addr)
ble_abs_delete_bond_application_callback_t is the delete bond information Event callback function type.

◆ ble_abs_ctrl_t

typedef void ble_abs_ctrl_t
BLE ABS control block. Allocate an instance specific control block to pass into the BLE ABS API calls. **Implemented as** ◦ ble_abs_instance_ctrl_t

Enumeration Type Documentation

◆ ble_abs_advertising_filter_t

enum ble_abs_advertising_filter_t	
Advertising Filter Policy	
Enumerator	
BLE_ABS_ADVERTISING_FILTER_ALLOW_ANY	Receive a connect request from all devices.
BLE_ABS_ADVERTISING_FILTER_ALLOW_WHITE_LIST	Receive a connect request from only the devices registered in White List.

◆ ble_abs_local_bond_information_t

enum ble_abs_local_bond_information_t	
Local keys delete policy	
Enumerator	
BLE_ABS_LOCAL_BOND_INFORMATION_NONE	Delete no local keys.
BLE_ABS_LOCAL_BOND_INFORMATION_ALL	Delete all local keys.

◆ ble_abs_remote_bond_information_t

enum ble_abs_remote_bond_information_t	
Remote keys delete policy	
Enumerator	
BLE_ABS_REMOTE_BOND_INFORMATION_NONE	Delete no remote device keys.
BLE_ABS_REMOTE_BOND_INFORMATION_SPECIFIED	Delete the keys specified by the device address.
BLE_ABS_REMOTE_BOND_INFORMATION_ALL	Delete all remote device keys.

◆ ble_abs_delete_non_volatile_area_t

enum ble_abs_delete_non_volatile_area_t	
Deletion policy for non-volatile memory	
Enumerator	
BLE_ABS_DELETE_NON_VOLATILE_AREA_DISABLE	Delete no keys stored in storage.
BLE_ABS_DELETE_NON_VOLATILE_AREA_ENABLE	Delete the keys stored in storage.

4.3.52 BLE Mesh Access Interface

Interfaces

Detailed Description

Interface for Bluetooth Low Energy Mesh Access functions.

Summary

The BLE Mesh Access interface for the Bluetooth Low Energy Mesh Netwrok Access (BLE MESH ACCESS) peripheral provides Bluetooth Low Energy Mesh Network Access functionality.

The Bluetooth Low Energy Mesh Network Access interface can be implemented by:

- Bluetooth Low Energy Mesh Network Access (rm_ble_mesh_access)

Modules

	Application Callback

Data Structures

struct	rm_ble_mesh_access_model_id_t
union	rm_ble_mesh_access_model_id_t.__unnamed__

enum	rm_ble_mesh_access_iv_update_test_mode_t
enum	rm_ble_mesh_access_message_opcode_t
enum	rm_ble_mesh_access_model_type_info_t
enum	rm_ble_mesh_access_model_id_info_t

Data Structure Documentation

◆ rm_ble_mesh_access_model_id_t

struct rm_ble_mesh_access_model_id_t		
Model ID datatype		
Data Fields		
union rm_ble_mesh_access_model_id_t	__unnamed__	Vendor/SIG ID
rm_ble_mesh_access_model_type_info_t	type	Model type - SIG or Vendor

◆ rm_ble_mesh_access_model_id_t.__unnamed__

union rm_ble_mesh_access_model_id_t.__unnamed__
Vendor/SIG ID

◆ rm_ble_mesh_access_element_descriptor_t

struct rm_ble_mesh_access_element_descriptor_t		
Element description format.		
Data Fields		
uint16_t	loc	Location descriptor

◆ rm_ble_mesh_access_address_t

struct rm_ble_mesh_access_address_t		
Unicast/Virtual/Group Address.		
Data Fields		
uint8_t	use_label	Flag - which field to be used
rm_ble_mesh_network_address_t	addr	Address
uint8_t	label[RM_BLE_MESH_ACCESS_LABEL_UUID_LENGTH]	Label UUID

◆ rm_ble_mesh_access_publish_info_t

struct rm_ble_mesh_access_publish_info_t		
Access Publication related information		
Data Fields		
rm_ble_mesh_access_address_t	addr	PublishAddress (Unicast/Virtual/Group)
uint16_t	appkey_index	• AppKey Index (when set from remote). • AppKey Handle (when set from locally for Configuration Client).
uint8_t	crden_flag	CredentialFlag
uint8_t	ttl	PublishTTL
uint8_t	period	PublishPeriod
uint8_t	rtx_count	PublishRetransmitCount
uint8_t	rtx_interval_steps	PublishRetransmitIntervalSteps
uint8_t	remote	Flag - if called from local or remote

◆ rm_ble_mesh_access_model_req_msg_context_t

struct rm_ble_mesh_access_model_req_msg_context_t		
Context of message received for a specific model instance. This is required to send response appropriately.		
Data Fields		
rm_ble_mesh_access_model_handle_t	handle	Model Handle - for which request is received
rm_ble_mesh_network_address_t	saddr	Source Address - originator of request
rm_ble_mesh_network_address_t	daddr	Destination Address - of the request
rm_ble_mesh_network_subnet_handle_t	subnet_handle	Associated Subnet Identifier
rm_ble_mesh_network_appkey_handle_t	appkey_handle	Associated AppKey Identifier

◆ **rm_ble_mesh_access_req_msg_raw_t**

struct rm_ble_mesh_access_req_msg_raw_t		
Uninterpreted/raw received message for a specific model instance.		
Data Fields		
uint32_t	opcode	Request Opcode
uint8_t *	data_param	Raw received message
uint16_t	data_len	Raw received message length

◆ **rm_ble_mesh_access_model_req_msg_t**

struct rm_ble_mesh_access_model_req_msg_t		
Requested message type for a specific model instance.		
Data Fields		
rm_ble_mesh_access_model_req_msg_type_t	type	Flag: GET, SET or Others
uint8_t	to_be_acked	Flag: True or False

◆ **rm_ble_mesh_access_publish_setting_t**

struct rm_ble_mesh_access_publish_setting_t		
Publish setting		
Data Fields		
uint8_t	ttl	Time to Live
uint8_t	to_publish	Flag to indicate if the message also to be published

◆ **rm_ble_mesh_access_pdu_t**

struct rm_ble_mesh_access_pdu_t		
PDU setting		
Data Fields		
rm_ble_mesh_network_address_t	src_addr	16 bit Source Address
rm_ble_mesh_network_address_t	dst_addr	16 bit Destination Address
rm_ble_mesh_network_subnet_handle_t	subnet_handle	Subnet Handle
rm_ble_mesh_network_appkey_handle_t	appkey_handle	AppKey Handle
uint8_t	ttl	Time to Live
uint32_t	opcode	Request Opcode
uint8_t *	data_param	Raw received message
uint16_t	data_len	Raw received message length

◆ rm_ble_mesh_access_model_state_parameter_t

struct rm_ble_mesh_access_model_state_parameter_t		
Model specific state parameters in a request or response message		
Data Fields		
uint8_t	state_type	State Type
void *	state	State pointer

◆ rm_ble_mesh_access_extended_parameter_t

struct rm_ble_mesh_access_extended_parameter_t		
Additional paramters in a Model specific request or response message		
Data Fields		
uint8_t	ext_type	State/Extended Type
void *	ext	State/Extended data structure pointer

◆ rm_ble_mesh_access_device_entry_t

struct rm_ble_mesh_access_device_entry_t		
Provisioned Device List Data Structure, containing Primary Element Address and number of elements.		
Data Fields		
rm_ble_mesh_network_address_t	uaddr	Unicast Address of the first element
uint8_t	num_elements	Number of Elements

◆ rm_ble_mesh_access_model_t

struct rm_ble_mesh_access_model_t		
Data structure for model. Models could be bluetooth SIG defined or vendor defined.		
Data Fields		
rm_ble_mesh_access_model_id_t	model_id	Model ID
rm_ble_mesh_access_model_callback_t	model_callback	Callback function pointer to receive packets from the underlying protocol layers
rm_ble_mesh_access_timeout_callback_t	timeout_callback	Callback function called when Publication Timer expires. Set to NULL if model does not support periodic publication.
uint16_t	num_opcodes	Number of Opcodes
const uint32_t *	opcodes	List of Opcodes

◆ rm_ble_mesh_access_server_state_t

struct rm_ble_mesh_access_server_state_t		
API to send reply or to update state change		
Data Fields		
rm_ble_mesh_access_model_req_msg_context_t *	p_context	Context of the message.
rm_ble_mesh_access_model_state_parameter_t *	p_current_state_parameter	Model specific current state parameters.
rm_ble_mesh_access_model_state_parameter_t *	p_target_state_parameter	Model specific target state parameters (NULL: to be ignored).
uint16_t	remaining_time	Time from current state to target state (0: to be ignored).
rm_ble_mesh_access_extended_parameter_t *	p_extended_parameter	Additional parameters (NULL: to be ignored).
uint8_t	reply	If unicast response to be sent.
uint8_t	publish	If state to be published.

◆ rm_ble_mesh_access_provisioned_device_entry_t

struct rm_ble_mesh_access_provisioned_device_entry_t
Provisioned Device List Data Structure, containing Primary Element Address and number of elements.
Data Fields

rm_ble_mesh_network_address_t	uaddr	Unicast Address of the first element
uint8_t	num_elements	Number of Elements

◆ rm_ble_mesh_access_associated_keys_t

struct rm_ble_mesh_access_associated_keys_t		
Associated key		
Data Fields		
uint8_t	privacy_key[RM_BLE_MESH_ACCESS_KEY_SIZE]	Privacy key
uint8_t	encrypt_key[RM_BLE_MESH_ACCESS_KEY_SIZE]	Encription key
uint8_t	beacon_key[RM_BLE_MESH_ACCESS_KEY_SIZE]	Beacon key
uint8_t	is_new_key	Whether new key or not

◆ rm_ble_mesh_access_friend_security_credential_info_t

struct rm_ble_mesh_access_friend_security_credential_info_t		
To add Security Credential of a LPN or the Friend.		
Data Fields		
rm_ble_mesh_network_address_t	lpn_addr	Address of the LPN.
rm_ble_mesh_network_address_t	friend_addr	Address of the Friend.
uint16_t	lpn_counter	Number of Friend Request messages the LPN has sent.
uint16_t	friend_counter	Number of Friend Offer messages the Friend has sent.

◆ rm_ble_mesh_access_cfg_t

struct rm_ble_mesh_access_cfg_t		
BLE MESH ACCESS configuration parameters.		
Data Fields		
uint32_t	channel	Select a channel corresponding to the channel number of the hardware. the parameters for initialization.

rm_ble_mesh_access_element_descriptor_t *	p_element_descriptor	Element description format.
rm_ble_mesh_upper_trans_instance_t const *	p_mesh_upper_trans_instance	Instance structure of upper trans.
void const *	p_context	Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t.
void const *	p_extend	Placeholder for user extension.

◆ rm_ble_mesh_access_api_t

struct rm_ble_mesh_access_api_t	
BLE MESH ACCESS functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_cfg_t const *const p_cfg)
fsp_err_t(*	close)(rm_ble_mesh_access_ctrl_t *const p_ctrl)
fsp_err_t(*	registerModel)(rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_t const *const p_model, rm_ble_mesh_access_model_handle_t *const p_model_handle)
fsp_err_t(*	getElementHandle)(rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t elem_addr, rm_ble_mesh_access_element_handle_t *const p_handle)
fsp_err_t(*	getElementHandleForModelHandle)(rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, rm_ble_mesh_access_element_handle_t *const p_elem_handle)
fsp_err_t(*	getModelHandle)(rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_element_handle_t elem_handle, rm_ble_mesh_access_model_id_t model_id, rm_ble_mesh_access_model_handle_t *const p_handle)
fsp_err_t(*	publish)(rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t const *const p_handle, rm_ble_mesh_access_req_msg_raw_t const *const p_publish_message, uint8_t reliable)

fsp_err_t(*	reliablePublish)(rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t const *const p_handle, rm_ble_mesh_access_req_msg_raw_t const *const p_publish_message, uint32_t rsp_opcode)
fsp_err_t(*	reply)(rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_req_msg_context_t const *const p_req_msg_context, uint8_t ttl, rm_ble_mesh_access_req_msg_raw_t const *const p_req_msg_raw)
fsp_err_t(*	replyAndPublish)(rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_req_msg_context_t const *const p_req_msg_context, rm_ble_mesh_access_req_msg_raw_t const *const p_req_msg_raw, rm_ble_mesh_access_publish_setting_t const *const p_publish_setting)
fsp_err_t(*	sendPdu)(rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_pdu_t const *const p_pdu, uint8_t reliable)
fsp_err_t(*	getCompositionData)(rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_buffer_t *const p_buffer)
fsp_err_t(*	reset)(rm_ble_mesh_access_ctrl_t *const p_ctrl)
fsp_err_t(*	getElementCount)(rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t *const p_count)

Field Documentation

◆ open

fsp_err_t(* rm_ble_mesh_access_api_t::open) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_cfg_t const *const p_cfg)

Open access middleware.

Implemented as

- RM_BLE_MESH_ACCESS_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

fsp_err_t(* rm_ble_mesh_access_api_t::close) (rm_ble_mesh_access_ctrl_t *const p_ctrl)

Close access middleware.

Implemented as

- RM_BLE_MESH_ACCESS_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ registerModel

fsp_err_t(* rm_ble_mesh_access_api_t::registerModel) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_t const *const p_model, rm_ble_mesh_access_model_handle_t *const p_model_handle)

Register a model with the access layer.

Implemented as

- RM_BLE_MESH_ACCESS_RegisterModel()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_model	Pointer to model structure.
[out]	p_model_handle	Pointer to model handle.

◆ getElementHandle

fsp_err_t(* rm_ble_mesh_access_api_t::getElementHandle) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t elem_addr, rm_ble_mesh_access_element_handle_t *const p_handle)

Get element handle.

Implemented as

- RM_BLE_MESH_ACCESS_GetElementHandle()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	elem_addr	Address of the corresponding element.
[out]	p_handle	Pointer to model handle.

◆ getElementHandleForModelHandle

fsp_err_t(* rm_ble_mesh_access_api_t::getElementHandleForModelHandle) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, rm_ble_mesh_access_element_handle_t *const p_elem_handle)

Get element handle for a given model handle

Implemented as

- RM_BLE_MESH_ACCESS_GetElementHandleForModelHandle()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	model_handle	Model handle.
[out]	p_elem_handle	Pointer to element handle.

◆ getModelHandle

fsp_err_t(* rm_ble_mesh_access_api_t::getModelHandle) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_element_handle_t elem_handle, rm_ble_mesh_access_model_id_t model_id, rm_ble_mesh_access_model_handle_t *const p_handle)

Get model handle.

Implemented as

- RM_BLE_MESH_ACCESS_GetModelHandle()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	elem_handle	Element Identifier associated with the Model.
[in]	model_id	Model Identifier for which the model handle to be searched.
[out]	p_handle	Pointer to model handle.

◆ publish

fsp_err_t(* rm_ble_mesh_access_api_t::publish) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t const *const p_handle, rm_ble_mesh_access_req_msg_raw_t const *const p_publish_message, uint8_t reliable)

API to publish access layer message.

Implemented as

- RM_BLE_MESH_ACCESS_Publish()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_handl	Pointer to model handle.
[in]	p_publish_message	Pointer to received message structure.
[in]	reliable	MS_TRUE for reliable message. MS_FALSE otherwise.

◆ reliablePublish

fsp_err_t(* rm_ble_mesh_access_api_t::reliablePublish) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t const *const p_handle, rm_ble_mesh_access_req_msg_raw_t const *const p_publish_message, uint32_t rsp_opcode)

API to reliably publish access layer message.

Implemented as

- RM_BLE_MESH_ACCESS_ReliablePublish()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_handl	Pointer to model handle.
[in]	p_publish_message	Pointer to raw received message structure.
[in]	rsp_opcode	Response opcode.

◆ reply

fsp_err_t(* rm_ble_mesh_access_api_t::reply) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_req_msg_context_t const *const p_req_msg_context, uint8_t ttl, rm_ble_mesh_access_req_msg_raw_t const *const p_req_msg_raw)

API to reply to access layer message.

Implemented as

- RM_BLE_MESH_ACCESS_Reply()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_req_msg_context	Pointer to context of received message structure.
[in]	ttl	Time to live.
[in]	p_req_msg_raw	Pointer to received message structure.

◆ replyAndPublish

fsp_err_t(* rm_ble_mesh_access_api_t::replyAndPublish) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_req_msg_context_t const *const p_req_msg_context, rm_ble_mesh_access_req_msg_raw_t const *const p_req_msg_raw, rm_ble_mesh_access_publish_setting_t const *const p_publish_setting)

API to reply to access layer message and optionally also to publish.

Implemented as

- RM_BLE_MESH_ACCESS_ReplyAndPublish()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_req_msg_context	Pointer to context of received message structure.
[in]	p_req_msg_raw	Pointer to received message structure.
[in]	p_publish_setting	Pointer to publish setting structure.

◆ sendPdu

fsp_err_t(* rm_ble_mesh_access_api_t::sendPdu) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_pdu_t const *const p_pdu, uint8_t reliable)

API to send access PDUs.

Implemented as

- RM_BLE_MESH_ACCESS_SendPdu()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_pdu	Pointer to pdu structure.
[in]	reliable	If requires lower transport Ack, set reliable as TRUE.

◆ getCompositionData

fsp_err_t(* rm_ble_mesh_access_api_t::getCompositionData) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_buffer_t *const p_buffer)

Get composition data.

Implemented as

- RM_BLE_MESH_ACCESS_GetCompositionData()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_buffer	Pointer to buffer structure.

◆ reset

fsp_err_t(* rm_ble_mesh_access_api_t::reset) (rm_ble_mesh_access_ctrl_t *const p_ctrl)

To reset a node.

Implemented as

- RM_BLE_MESH_ACCESS_Reset()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ getElementCount

fsp_err_t(* rm_ble_mesh_access_api_t::getElementCount) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t *const p_count)

To get the number of elements in local node.

Implemented as

- RM_BLE_MESH_ACCESS_GetElementCount()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_count	Pointer to number of elements.

◆ setPrimaryUnicastAddress

fsp_err_t(* rm_ble_mesh_access_api_t::setPrimaryUnicastAddress) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t addr)

To set primary unicast address.

Implemented as

- RM_BLE_MESH_ACCESS_SetPrimaryUnicastAddress()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	addr	Primary Unicast Address to be set.

◆ getPrimaryUnicastAddress

fsp_err_t(* rm_ble_mesh_access_api_t::getPrimaryUnicastAddress) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t *const p_addr)

To get primary unicast address.

Implemented as

- RM_BLE_MESH_ACCESS_GetPrimaryUnicastAddress()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_addr	Pointer to address.

◆ setDefaultTtl

fsp_err_t(* rm_ble_mesh_access_api_t::setDefaultTtl) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t ttl)

To set default TTL.

Implemented as

- RM_BLE_MESH_ACCESS_SetDefaultTtl()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	ttl	Default TTL to be set.

◆ getDefaultTtl

fsp_err_t(* rm_ble_mesh_access_api_t::getDefaultTtl) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t const *const p_ttl)

To get default TTL.

Implemented as

- RM_BLE_MESH_ACCESS_GetDefaultTtl()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	ttl	Pointer to ttl.

◆ setIvIndex

fsp_err_t(* rm_ble_mesh_access_api_t::setIvIndex) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint32_t iv_index, uint8_t iv_update_flag)

To set IV Index.

Implemented as

- RM_BLE_MESH_ACCESS_SetIvIndex()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	iv_index	IV Index to be set.
[in]	iv_update_flag	IV Update Flag.

◆ getIvIndex

fsp_err_t(* rm_ble_mesh_access_api_t::getIvIndex) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint32_t *const p_iv_index, uint8_t *const p_iv_update_flag)

To get IV Index.

Implemented as

- RM_BLE_MESH_ACCESS_GetIvIndex()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_iv_index	Pointer to index.
[out]	p_iv_update_flag	Pointer to update flag.

◆ getIvIndexByIvi

fsp_err_t(* rm_ble_mesh_access_api_t::getIvIndexByIvi) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t ivi, uint32_t *const p_iv_index)

To get IV Index by IVI.

Implemented as

- RM_BLE_MESH_ACCESS_GetIvIndexByIvi()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	ivi	Least Significant bit of the IV Index used in the nonce to authenticate and encrypt the Network PDU.
[out]	p_iv_index	Pointer to index.

◆ setFeaturesField

fsp_err_t(* rm_ble_mesh_access_api_t::setFeaturesField) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t enable, uint8_t feature)

To enable/disable a feature.

Implemented as

- RM_BLE_MESH_ACCESS_SetFeaturesField()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	enable	Enable or Disable.
[in]	feature	Relay, proxy, friend or Low Power.

◆ getFeaturesField

fsp_err_t(* rm_ble_mesh_access_api_t::getFeaturesField) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t *const p_enable, uint8_t feature)

To get state of a feature.

Implemented as

- RM_BLE_MESH_ACCESS_GetFeaturesField()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	enable	Pointer to enable.
[in]	feature	Relay, proxy, friend or Low Power.

◆ getFeatures

fsp_err_t(* rm_ble_mesh_access_api_t::getFeatures) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t *const p_features)

To get state of all features.

Implemented as

- RM_BLE_MESH_ACCESS_GetFeatures()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_features	Pointer to features.

◆ getFriendshipRole

fsp_err_t(* rm_ble_mesh_access_api_t::getFriendshipRole) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t *const p_friend_role)

To get friendship role of the node.

Implemented as

- RM_BLE_MESH_ACCESS_GetFriendshipRole()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_friend_role	Pointer to friend role.

◆ setFriendshipRole

fsp_err_t(* rm_ble_mesh_access_api_t::setFriendshipRole) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t friend_role)

To set friendship role of the node.

Implemented as

- RM_BLE_MESH_ACCESS_SetFriendshipRole()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	friend_role	Friend role.

◆ addDeviceKey

fsp_err_t(* rm_ble_mesh_access_api_t::addDeviceKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t const *const p_dev_key, rm_ble_mesh_network_address_t uaddr, uint8_t num_elements)

To add Device Key.

Implemented as

- RM_BLE_MESH_ACCESS_AddDeviceKey()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_dev_key	Pointer to device Key.
[in]	uaddr	Unicast Address of the first element.
[in]	num_elements	Number of elements.

◆ getDeviceKey

fsp_err_t(* rm_ble_mesh_access_api_t::getDeviceKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t dev_key_index, uint8_t **const p_dev_key)

To get Device Key.

Implemented as

- RM_BLE_MESH_ACCESS_GetDeviceKey()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	dev_key_index	Device Key Index.
[out]	p_dev_key	Pointer to Device Key to be returned.

◆ removeAllDeviceKeys

fsp_err_t(* rm_ble_mesh_access_api_t::removeAllDeviceKeys) (rm_ble_mesh_access_ctrl_t *const p_ctrl)

To remove all Device Keys.

Implemented as

- RM_BLE_MESH_ACCESS_RemoveAllDeviceKeys()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ getProvisionedDeviceList

fsp_err_t(* rm_ble_mesh_access_api_t::getProvisionedDeviceList) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_provisioned_device_entry_t const *const p_prov_dev_list, uint16_t *const p_num_entries)

To get list of Provisioned Device List.

Implemented as

- RM_BLE_MESH_ACCESS_GetProvisionedDeviceList()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_prov_dev_list	Pointer to provisioned device lList structure.
[in]	p_num_entries	Pointer to number of entries.

◆ getDeviceKeyHandle

fsp_err_t(* rm_ble_mesh_access_api_t::getDeviceKeyHandle) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t prim_elem_uaddr, rm_ble_mesh_access_device_key_handle_t *const p_handle)

To get Device Key Handle.

Implemented as

- RM_BLE_MESH_ACCESS_GetDeviceKeyHandle()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	prim_elem_uaddr	Primary element address to be searched.
[in]	p_handle	Pointer to handle.

◆ getAppKey

fsp_err_t(* rm_ble_mesh_access_api_t::getAppKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_appkey_handle_t appkey_handle, uint8_t **const p_app_key, uint8_t *const p_aid)

To get AppKey.

Implemented as

- RM_BLE_MESH_ACCESS_GetAppKey()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	appkey_handle	AppKey Handle.
[out]	p_app_key	Pointer to AppKey to be returned.
[out]	p_aid	Pointer to AID to be returned.

◆ addUpdateNetkey

fsp_err_t(* rm_ble_mesh_access_api_t::addUpdateNetkey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint16_t netkey_index, uint32_t opcode, uint8_t const *const net_key)

To add/update NetKey.

Implemented as

- RM_BLE_MESH_ACCESS_AddUpdateNetkey()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	netkey_index	Identifies global Index of NetKey. A 12-bit value.
[out]	opcode	To identify Add or Update NetKey.
[out]	net_key	Pointer to Netkey.

◆ addFriendSecurityCredential

fsp_err_t(* rm_ble_mesh_access_api_t::addFriendSecurityCredential) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t friend_index, rm_ble_mesh_access_friend_security_credential_info_t info)

To add Security Credential of a LPN or the Friend.

Implemented as

- RM_BLE_MESH_ACCESS_AddFriendSecurityCredential()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	subnet_handle	Identifies associated subnet.
[in]	friend_index	Friend Index.
[in]	info	Security credential of a LPN or the friend.

◆ deleteFriendSecurityCredential

fsp_err_t(* rm_ble_mesh_access_api_t::deleteFriendSecurityCredential) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t friend_index)

To delete the Security Credential of a LPN or the Friend.

Implemented as

- RM_BLE_MESH_ACCESS_DeleteFriendSecurityCredential()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	subnet_handle	Identifies associated subnet.
[in]	friend_index	Friend Index.

◆ findSubnet

fsp_err_t(* rm_ble_mesh_access_api_t::findSubnet) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint16_t netkey_index, rm_ble_mesh_network_subnet_handle_t *const p_subnet_handle)

To find a Subnet associated with the NetKey.

Implemented as

- RM_BLE_MESH_ACCESS_FindSubnet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	netkey_index	Identifies global Index of NetKey, corresponding Subnet to be returned.
[out]	p_subnet_handle	Pointer to subnet handle.

◆ findMasterSubnet

fsp_err_t(* rm_ble_mesh_access_api_t::findMasterSubnet) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t friend_subnet_handle, rm_ble_mesh_network_subnet_handle_t *const p_master_subnet_handle)

To find the Master Subnet associated with the friend security credential, identified by Friend Subnet Handle.

Implemented as

- RM_BLE_MESH_ACCESS_FindMasterSubnet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	friend_subnet_handle	Idetifies the friend subnet handle, corresponding to friend subnet handle.
[out]	p_master_subnet_handle	Pointer to master subnet handle.

◆ deleteNetKey

fsp_err_t(* rm_ble_mesh_access_api_t::deleteNetKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle)

To delete NetKey.

Implemented as

- RM_BLE_MESH_ACCESS_DeleteNetKey()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	subnet_handle	Handle of the Subnet for which NetKey to be deleted.

◆ getNetKey

fsp_err_t(* rm_ble_mesh_access_api_t::getNetKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint8_t *const p_net_key)

To get NetKey.

Implemented as

- RM_BLE_MESH_ACCESS_GetNetKey()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	subnet_handle	Handle of the Subnet for which NetKey to be deleted.
[in]	p_net_key	Pointer to Netkey.

◆ getNetKeyIndexList

fsp_err_t(* rm_ble_mesh_access_api_t::getNetKeyIndexList) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint16_t *const p_netkey_count, uint16_t *const p_netkey_index_list)

To get list of all known NetKeys.

Implemented as

- RM_BLE_MESH_ACCESS_GetNetKeyIndexList()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_netkey_count	Pointer to Netkey count.
[in]	p_netkey_index_list	Pointer to Netkey index list.

◆ lookUpNid

fsp_err_t(* rm_ble_mesh_access_api_t::lookUpNid) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t nid, rm_ble_mesh_network_subnet_handle_t *const p_subnet_handle, rm_ble_mesh_access_associated_keys_t *const p_key_set)

To search for NID.

Implemented as

- RM_BLE_MESH_ACCESS_LookUpNid()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	nid	NID to be searched in all known subnets for match.
[out]	p_subnet_handle	Pointer to subnet handle.
[out]	p_key_set	Pointer to key set.

◆ lookUpNetworkId

fsp_err_t(* rm_ble_mesh_access_api_t::lookUpNetworkId) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t const *const p_network_id, rm_ble_mesh_network_subnet_handle_t *const p_subnet_handle, rm_ble_mesh_access_associated_keys_t *const p_key_set)

To search for Network ID.

Implemented as

- RM_BLE_MESH_ACCESS_LookUpNetworkId()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_network_id	Network ID to be searched in all known subnets for match.
[out]	p_subnet_handle	Pointer to subnet handle.

◆ lookUpAid

fsp_err_t(* rm_ble_mesh_access_api_t::lookUpAid) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t aid, rm_ble_mesh_network_appkey_handle_t *const p_appkey_handle, uint8_t *const p_app_key)

To search for AID.

Implemented as

- RM_BLE_MESH_ACCESS_LookUpNetworkId()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	aid	AID to be searched in all known AppKeys for match.
[out]	p_appkey_handle	Pointer to AppKey handle.
[out]	p_app_key	Pointer to AppKey.

◆ setProvisioningData

fsp_err_t(* rm_ble_mesh_access_api_t::setProvisioningData) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_provision_data_t const *const p_prov_data)

Set Provisioning Data.

Implemented as

- RM_BLE_MESH_ACCESS_SetProvisioningData()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_prov_data	Pointer to provisioning data structure.

◆ getSubnetNid

fsp_err_t(* rm_ble_mesh_access_api_t::getSubnetNid) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t handle, uint8_t *const p_nid)

To get NID associated with a subnet.

Implemented as

- RM_BLE_MESH_ACCESS_GetSubnetNid()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	handle	Handle identifing the subnet.
[out]	p_nid	Pointer to NID.

◆ getSubnetPrivacyKey

fsp_err_t(* rm_ble_mesh_access_api_t::getSubnetPrivacyKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t handle, uint8_t *const p_privacy_key)

To get Privacy Key associated with a subnet.

Implemented as

- RM_BLE_MESH_ACCESS_GetSubnetPrivacyKey()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	handle	Handle identifing the subnet.
[out]	p_privacy_key	Pointer to Privacy Key.

◆ getSubnetNetworkId

fsp_err_t(* rm_ble_mesh_access_api_t::getSubnetNetworkId) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t handle, uint8_t *const p_network_id)

To get Network ID associated with a subnet.

Implemented as

- RM_BLE_MESH_ACCESS_GetSubnetNetworkId()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	handle	Handle identifing the subnet.
[out]	p_network_id	Pointer to Network ID.

◆ getSubnetBeaconKey

fsp_err_t(* rm_ble_mesh_access_api_t::getSubnetBeaconKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t handle, uint8_t *const p_beacon_key)

To get Beacon Key associated with a subnet.

Implemented as

- RM_BLE_MESH_ACCESS_GetSubnetBeaconKey()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	handle	Handle identifing the subnet.
[out]	p_beacon_key	Pointer to Beacon Key.

◆ getSubnetIdentityKey

fsp_err_t(* rm_ble_mesh_access_api_t::getSubnetIdentityKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t handle, uint8_t *const p_identity_key)

To get Identity Key associated with a subnet.

Implemented as

- RM_BLE_MESH_ACCESS_GetSubnetIdentityKey()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	handle	Handle identifing the subnet.
[out]	p_identity_key	Pointer to Identity Key.

◆ getSubnetEncryptionKey

fsp_err_t(* rm_ble_mesh_access_api_t::getSubnetEncryptionKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t handle, uint8_t *const p_encrypt_key)

To get Encryption Key associated with a subnet.

Implemented as

- RM_BLE_MESH_ACCESS_GetSubnetEncryptionKey()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	handle	Handle identifing the subnet.
[out]	p_encrypt_key	Pointer to Encyption Key.

◆ getNodeIdentity

fsp_err_t(* rm_ble_mesh_access_api_t::getNodeIdentity) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint8_t *const p_id_state)

To get Node Identity.

Implemented as

- RM_BLE_MESH_ACCESS_GetNodeIdentity()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	subnet_handle	Handle identifing the subnet.
[out]	p_id_state	Pointer to node Identity state.

◆ setNodeIdentity

fsp_err_t(* rm_ble_mesh_access_api_t::setNodeIdentity) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint8_t *const p_id_state)

To set Node Identity.

Implemented as

- RM_BLE_MESH_ACCESS_SetNodeIdentity()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	subnet_handle	Handle identifing the subnet.
[out]	p_id_state	Pointer to node Identity state.

◆ getKeyRefreshPhase

fsp_err_t(* rm_ble_mesh_access_api_t::getKeyRefreshPhase) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint8_t *const p_key_refresh_state)

To get Key Refresh Phase.

Implemented as

- RM_BLE_MESH_ACCESS_GetKeyRefreshPhase()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	subnet_handle	Handle identifing the subnet.
[out]	p_key_refresh_state	Pointer to key refresh phase state.

◆ setKeyRefreshPhase

fsp_err_t(* rm_ble_mesh_access_api_t::setKeyRefreshPhase) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint8_t const *const p_key_refresh_state)

To set Key Refresh Phase.

Implemented as

- RM_BLE_MESH_ACCESS_SetKeyRefreshPhase()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	subnet_handle	Handle identifing the subnet.
[in]	p_key_refresh_state	Pointer to key refresh phase state.

◆ setTransmitState

fsp_err_t(* rm_ble_mesh_access_api_t::setTransmitState) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t tx_state_type, uint8_t tx_state)

To set Network/Relay Transmit state.

Implemented as

- RM_BLE_MESH_ACCESS_SetTransmitState()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	tx_state_type	Transmit State Type (Network or Relay).
[in]	tx_state	Composite state (3-bits of Tx Count and 5-bits of Tx Interval Steps).

◆ getTransmitState

fsp_err_t(* rm_ble_mesh_access_api_t::getTransmitState) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t tx_state_type, uint8_t *const p_tx_state)

To get Network/Relay Transmit state.

Implemented as

- RM_BLE_MESH_ACCESS_GetTransmitState()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	tx_state_type	Transmit State Type (Network or Relay).
[out]	p_tx_state	Pointer to tx state.

◆ addAppKey

fsp_err_t(* rm_ble_mesh_access_api_t::addAppKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t appkey_index, uint8_t const *const p_app_key)

To add AppKey.

Implemented as

- RM_BLE_MESH_ACCESS_AddAppKey()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	subnet_handle	Handle of the Subnet for which AppKey to be added.
[in]	appkey_index	Identifies global Index of AppKey. A 12-bit value.
[in]	p_app_key	Pointer to AppKey.

◆ updateAppKey

fsp_err_t(* rm_ble_mesh_access_api_t::updateAppKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t appkey_index, uint8_t const *const p_app_key)

To update/delete AppKey.

Implemented as

- RM_BLE_MESH_ACCESS_UpdateAppKey()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	subnet_handle	Handle of the Subnet for which AppKey to be updated/deleted.
[in]	appkey_index	Identifies global Index of AppKey. A 12-bit value.
[in]	p_app_key	Pointer to AppKey.

◆ deleteAppKey

fsp_err_t(* rm_ble_mesh_access_api_t::deleteAppKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t appkey_index, uint8_t const *const p_app_key)

To update/delete AppKey.

Implemented as

- RM_BLE_MESH_ACCESS_DeleteAppKey()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	subnet_handle	Handle of the Subnet for which AppKey to be updated/deleted.
[in]	appkey_index	Identifies global Index of AppKey. A 12-bit value.
[in]	p_app_key	Pointer to AppKey.

◆ getAppKeyHandle

fsp_err_t(* rm_ble_mesh_access_api_t::getAppKeyHandle) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t appkey_index, uint8_t const *const p_app_key, rm_ble_mesh_network_appkey_handle_t *const p_appkey_handle)

To get AppKey Handle for a given AppKey Index.

Implemented as

- RM_BLE_MESH_ACCESS_GetAppKeyHandle()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	subnet_handle	Handle of the Subnet for which AppKey to be updated.
[in]	appkey_index	Identifies global Index of AppKey. A 12-bit value.
[in]	p_app_key	Pointer to AppKey.
[out]	p_app_key_handle	Pointer to AppKey handle.

◆ getAppKeyIndexList

fsp_err_t(* rm_ble_mesh_access_api_t::getAppKeyIndexList) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t *const p_appkey_count, uint16_t *const p_appkey_index_list)

To get list of all known AppKeys.

Implemented as

- RM_BLE_MESH_ACCESS_GetAppKeyIndexList()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	subnet_handle	Handle of the Subnet for which AppKey to be returned.
[out]	p_appkey_count	Pointer to AppKey count.
[out]	p_appkey_index_list	Pointer to AppKey index list.

◆ bindModelWithAppKey

fsp_err_t(* rm_ble_mesh_access_api_t::bindModelWithAppKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, uint16_t appkey_index)

To bind a model with an AppKey.

Implemented as

- RM_BLE_MESH_ACCESS_BindModelWithAppKey()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	model_handle	Model handle identifing the model.
[in]	appkey_index	Pointer to AppKey index.

◆ unbindModelWithAppKey

fsp_err_t(* rm_ble_mesh_access_api_t::unbindModelWithAppKey) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, uint16_t appkey_index)

To unbind a model with an AppKey.

Implemented as

- RM_BLE_MESH_ACCESS_UnbindModelWithAppKey()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	model_handle	Model handle identifing the model.
[in]	appkey_index	Identifies global Index of AppKey. A 12-bit value.

◆ getModelAppKeyList

fsp_err_t(* rm_ble_mesh_access_api_t::getModelAppKeyList) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, uint16_t *const p_appkey_count, uint16_t *const p_appkey_index_list)

To get list of all AppKeys associated with a model.

Implemented as

- RM_BLE_MESH_ACCESS_GetModelAppKeyList()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	model_handle	Handle of the Model for which AppKey to be returned.
[out]	p_appkey_count	pointer to AppKey count.
[out]	p_appkey_index_list	Pointer to AppKey index list.

◆ setModelPublication

fsp_err_t(* rm_ble_mesh_access_api_t::setModelPublication) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, rm_ble_mesh_access_publish_info_t *const p_publish_info)

To set Publication information associated with a model.

Implemented as

- RM_BLE_MESH_ACCESS_SetModelPublication()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	model_handle	Handle of the Model for which Publication info to be set.
[out]	p_publish_info	Pointer to publication information structure.

◆ setModelPublicationPeriodDivisor

fsp_err_t(* rm_ble_mesh_access_api_t::setModelPublicationPeriodDivisor) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, uint8_t period_divisor)

To set Publication Fast Period Divisor information associated with a model.

Implemented as

- RM_BLE_MESH_ACCESS_SetModelPublicationPeriodDivisor()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	model_handle	Handle of the Model for which Publication info to be set.
[in]	period_divisor	The value range for the Health Fast Period Divisor state is 0 through 15, all other values are prohibited.

◆ getModelPublication

fsp_err_t(* rm_ble_mesh_access_api_t::getModelPublication) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, rm_ble_mesh_access_publish_info_t *const p_publish_info)

To get Publication information associated with a model.

Implemented as

- RM_BLE_MESH_ACCESS_GetModelPublication()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	model_handle	Handle of the Model for which Publication info to be returned.
[out]	p_publish_info	Pointer to publication information structure..

◆ addModelSubscription

fsp_err_t(* rm_ble_mesh_access_api_t::addModelSubscription) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, rm_ble_mesh_access_address_t const *const p_sub_addr)

To add an address to a model subscription list.

Implemented as

- RM_BLE_MESH_ACCESS_AddModelSubscription()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	model_handle	Handle of the Model for which address to be added in the subscription list.
[in]	p_sub_addr	Pointer to address structure.

◆ deleteModelSubscription

fsp_err_t(* rm_ble_mesh_access_api_t::deleteModelSubscription) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, rm_ble_mesh_access_address_t const *const p_sub_addr)

To delete an address to a model subscription list.

Implemented as

- RM_BLE_MESH_ACCESS_DeleteModelSubscription()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	model_handle	Handle of the Model for which address to be deleteed in the subscription list.
[in]	p_sub_addr	Pointer to address structure.

◆ deleteAllModelSubscription

fsp_err_t(* rm_ble_mesh_access_api_t::deleteAllModelSubscription) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle)

To discard a model subscription list.

Implemented as

- RM_BLE_MESH_ACCESS_DeleteAllModelSubscription()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	model_handle	Handle of the Model for which the subscription list to be discarded.

◆ getModelSubscriptionList

fsp_err_t(* rm_ble_mesh_access_api_t::getModelSubscriptionList) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, uint16_t *const p_sub_addr_count, uint16_t *const p_sub_addr_list)

To get list of subscription addresses of a model.

Implemented as

- RM_BLE_MESH_ACCESS_GetModelSubscriptionList()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	model_handle	Handle of the Model for which the subscription addresses to be returned.
[in]	p_sub_addr_count	Pointer to maximum number of subscription address.
[in]	p_sub_addr_list	Pointer to subscription addresses.

◆ getAllModelSubscriptionList

fsp_err_t(* rm_ble_mesh_access_api_t::getAllModelSubscriptionList) (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint16_t *const p_sub_addr_count, uint16_t *const p_sub_addr_list)

To get list of subscription addresses of all the models.

Implemented as

- RM_BLE_MESH_ACCESS_GetAllModelSubscriptionList()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_sub_addr_count	Pointer to maximum number of subscription address.
[in]	p_sub_addr_list	Pointer to maximum number of subscription address.

◆ isValidElementAddress

fsp_err_t(* rm_ble_mesh_access_api_t::isValidElementAddress) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t addr)

To check if valid element address to receive a packet.

Implemented as

- RM_BLE_MESH_ACCESS_IsValidElementAddress()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	addr	Unicast address to search.

◆ isFixedGroupAddressToBeProcessed

fsp_err_t(* rm_ble_mesh_access_api_t::isFixedGroupAddressToBeProcessed) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t addr)

To check if Fixed Group Address in receive packet to be processed.

Implemented as

- RM_BLE_MESH_ACCESS_IsFixedGroupAddressToBeProcessed()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	addr	A valid fixed group address, to be checked.

◆ isValidSubscriptionAddress

fsp_err_t(* rm_ble_mesh_access_api_t::isValidSubscriptionAddress) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t addr)

To check if valid subscription address to receive a packet.

Implemented as

- RM_BLE_MESH_ACCESS_IsValidSubscriptionAddress()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	addr	Address to search.

◆ enableIvUpdateTestMode

fsp_err_t(* rm_ble_mesh_access_api_t::enableIvUpdateTestMode) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_iv_update_test_mode_t mode)

To set the IV Update Test Mode feature.

Implemented as

- RM_BLE_MESH_ACCESS_EnableIvUpdateTestMode()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	mode	This flag is used to either enable or disable the IV update test mode feature.

◆ rm_ble_mesh_access_instance_t

struct rm_ble_mesh_access_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

rm_ble_mesh_access_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_ble_mesh_access_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
rm_ble_mesh_access_api_t const *	p_api	Pointer to the API structure for this instance.

Macro Definition Documentation

◆ RM_BLE_MESH_ACCESS_VADDR_LABEL_UUID_SIZE

#define RM_BLE_MESH_ACCESS_VADDR_LABEL_UUID_SIZE
Array sizes for use in the Access layer Size of Virtual Address (Label UUID)

◆ RM_BLE_MESH_ACCESS_NETKEY_SIZE

#define RM_BLE_MESH_ACCESS_NETKEY_SIZE
Size of NetKey

◆ RM_BLE_MESH_ACCESS_APPKEY_SIZE

#define RM_BLE_MESH_ACCESS_APPKEY_SIZE
Size of AppKey

◆ RM_BLE_MESH_ACCESS_KEY_SIZE

#define RM_BLE_MESH_ACCESS_KEY_SIZE
Size of Key

Typedef Documentation

◆ rm_ble_mesh_access_node_id_t

typedef uint8_t rm_ble_mesh_access_node_id_t
Access Node ID

◆ rm_ble_mesh_access_element_handle_t

typedef uint8_t rm_ble_mesh_access_element_handle_t
Access Element Handle

◆ rm_ble_mesh_access_model_handle_t

typedef uint16_t rm_ble_mesh_access_model_handle_t
Access Model Handle

◆ rm_ble_mesh_access_model_id_sig_t

typedef uint16_t rm_ble_mesh_access_model_id_sig_t
SIG Model ID

◆ rm_ble_mesh_access_model_id_vendor_t

typedef uint32_t rm_ble_mesh_access_model_id_vendor_t
Vendor Model ID

◆ rm_ble_mesh_access_address_handle_t

typedef uint32_t rm_ble_mesh_access_address_handle_t
Access Address Handle

◆ rm_ble_mesh_access_device_key_handle_t

typedef uint32_t rm_ble_mesh_access_device_key_handle_t
Device Key Handle

◆ rm_ble_mesh_access_ctrl_t

typedef void rm_ble_mesh_access_ctrl_t
BLE MESH ACCESS control block. Allocate an instance specific control block to pass into the BLE MESH ACCESS API calls. **Implemented as** ◦ rm_ble_mesh_access_instance_ctrl_t

Enumeration Type Documentation

4.3.52.1 Application Callback

Interfaces » BLE Mesh Access Interface

Detailed Description

This Section Describes the module Notification Callback interface offered to the application

Data Structures

struct	rm_ble_mesh_access_model_callback_args_t
struct	rm_ble_mesh_access_timeout_callback_args_t

Typedefs

typedef void(*	rm_ble_mesh_access_model_callback_t) (rm_ble_mesh_access_model_callback_args_t *p_args)
typedef void(*	rm_ble_mesh_access_timeout_callback_t) (rm_ble_mesh_access_timeout_callback_args_t *p_args)

Data Structure Documentation

◆ rm_ble_mesh_access_model_callback_args_t

struct rm_ble_mesh_access_model_callback_args_t

Access Layer Application Asynchronous Notification Callback Arguments.

Data Fields

void const *	p_context	Placeholder for user data.
rm_ble_mesh_access_model_req_msg_context_t *	p_msg_context	Context of message received for a specific model instance.
rm_ble_mesh_access_req_msg_raw_t *	p_msg_raw	Uninterpreted/raw received message for a specific model instance.

◆ rm_ble_mesh_access_timeout_callback_args_t

struct rm_ble_mesh_access_timeout_callback_args_t

Access Layer Model Publication Timeout Callback Arguments.

Access Layer calls the registered callback to indicate Publication Timeout for the associated model.

Parameters

handle	Model Handle.
blob	Blob if any or NULL.

Data Fields

void const *	p_context	Placeholder for user data.
rm_ble_mesh_access_model_handle_t	handle	Model handle.

void *	p_blob	Blob if any or NULL.

Typedef Documentation

◆ rm_ble_mesh_access_model_callback_t

typedef void(* rm_ble_mesh_access_model_callback_t)
(rm_ble_mesh_access_model_callback_args_t *p_args)

Access Layer Application Asynchronous Notification Callback.

Access Layer calls the registered callback to indicate events occurred to the application.

Parameters

handle	Model Handle.
saddr	16 bit Source Address.
daddr	16 bit Destination Address.
subnet_handle	Subnet Handle.
appkey_handle	AppKey Handle.
opcode	Opcode.
data_param	Data associated with the event if any or NULL.
data_len	Size of the event data. 0 if event data is NULL.

◆ rm_ble_mesh_access_timeout_callback_t

typedef void(* rm_ble_mesh_access_timeout_callback_t)
(rm_ble_mesh_access_timeout_callback_args_t *p_args)

Access Layer Model Publication Timeout Callback.

Access Layer calls the registered callback to indicate Publication Timeout for the associated model.

Parameters

handle	Model Handle.
blob	Blob if any or NULL.

4.3.53 BLE Mesh Interface

Interfaces

Detailed Description

Interface for Bluetooth Low Energy Abstraction functions.

Summary

The BLE Mesh interface for the Bluetooth Low Energy Mesh (BLE MESH) peripheral provides Bluetooth Low Energy Mesh functionality.

The Bluetooth Low Energy Mesh interface can be implemented by:

- Bluetooth Low Energy Mesh Network (rm_ble_mesh)

Data Structures

struct	rm_ble_mesh_buffer_t
struct	rm_ble_mesh_access_state_transition_t
struct	rm_ble_mesh_cfg_t
struct	rm_ble_mesh_api_t
struct	rm_ble_mesh_instance_t

Macros

#define	RM_BLE_MESH_DEVICE_UUID_SIZE

◆ **rm_ble_mesh_cfg_t**

struct rm_ble_mesh_cfg_t		
BLE MESH configuration parameters.		
Data Fields		
uint32_t	channel	Select a channel corresponding to the channel number of the hardware. the parameters for initialization.
uint32_t	network_interfaces_num	Number of Network Interfaces
uint32_t	provisioning_interfaces_num	Number of Provisioning Interfaces
uint32_t	network_cache_size	Network Cache Size
uint32_t	network_sequence_num_cache_size	Network Sequence Number Cache Size
uint32_t	maximum_subnets	Maximum number of subnets the device can store information about.
uint32_t	maximum_device_keys	Maximum number of device keys the device can store information about.
uint32_t	proxy_filter_list_size	Maximum number of addresses present in each proxy filter list.
uint32_t	maximum_lpn	Maximum number of LPNs.
uint32_t	reassembled_cache_size	The size of Reassembled Cache.
uint32_t	maximum_ltrn_sar_context	Number of Segmentation and Reassembly contexts.

uint32_t	maximum_friend_message_queue	Maximum number of messages that the friend is capabale to queue for a single Low Power Node.
uint32_t	maximum_friend_subscription_list	Maximum number of subscription addresses that the friend is capabale to store for a single Low Power Node.
uint32_t	maximum_access_element_num	Maximum number of elements.
uint32_t	maximum_access_model_num	Maximum number of models.
uint32_t	maximum_application	Maximum number of Applications (keys) the device can store information about.
uint32_t	maximum_virtual_address	Maximum number of Virtual Addresses the device can store information about.
uint32_t	maximum_non_virtual_address	Maximum number of Non-Virtual Addresses the device can store information about.
uint32_t	net_sequence_number_block_size	The distance between the network sequence numbers, for every persistent storage write. If the device is powered cycled, it will resume transmission using the sequence number from start of next block.
uint32_t	net_tx_count	Network Transmit Count for network packets
uint32_t	net_tx_interval_steps	Network Interval Steps for network packets
uint32_t	net_relay_tx_count	Network Transmit Count for relayed packets
uint32_t	net_relay_tx_interval_steps	Network Interval Steps for relayed packets
uint32_t	config_server_snb_timeout	Secure Network Beacon Interval
uint32_t	proxy_subnet_netid_adv_timeout	Poxy ADV Network ID timeout for each Subnet in milliseconds.
uint32_t	proxy_subnet_nodeid_adv_timeout	Poxy ADV Node Identity timeout for each Subnet in milliseconds.
uint32_t	proxy_nodeid_adv_timeout	Poxy ADV Node Identity overall time period in milliseconds.

uint32_t	frnd_poll_retry_count	Friend Poll Retry Count - default value
uint32_t	ltrn_rtx_timeout	Lower Transport Segment Transmission Timeout in milliseconds
uint32_t	ltrn_rtx_count	Lower Transport Segment Transmission Count - default value
uint32_t	ltrn_ack_timeout	Lower Transport Acknowledgement Timeout in milliseconds
uint32_t	ltrn_incomplete_timeout	Lower Transport Incomplete Timeout in milliseconds
uint32_t	frnd_receive_window	Friendship Receive Window - default value
uint32_t	lpn_clear_retry_timeout_initial	Friend Clear Confirmation Timeout in milliseconds
uint32_t	lpn_clear_retry_count	LPN Friend Clear Retry Count
uint32_t	trn_frndreq_retry_timeout	Friendship Retry Timeout in milliseconds
uint32_t	unprov_device_beacon_timeout	Unprovisioned Device Beacon Interleaved Beacon Timeout
uint32_t	net_tx_queue_size	Maximum number of messages that can be queued in Network layer for Transmission.
uint32_t	max_num_transition_timers	Maximum number of Transition Timers
uint32_t	max_num_periodic_step_timers	Maximum number of Periodic Step Timers
uint32_t	maximum_health_server_num	Maximum number of Health Server Instances.
uint32_t	replay_cache_size	The size of the Replay Protection cache.
uint32_t	default_company_id	Company ID
uint32_t	default_product_id	Product ID
uint32_t	default_vendor_id	Vendor ID
void const *	p_context	Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t.
void const *	p_extend	Placeholder for user extension.

◆ rm_ble_mesh_api_t

struct rm_ble_mesh_api_t

BLE MESH functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t(*	open)(rm_ble_mesh_ctrl_t *const p_ctrl, rm_ble_mesh_cfg_t const *const p_cfg)
fsp_err_t(*	close)(rm_ble_mesh_ctrl_t *const p_ctrl)
fsp_err_t(*	startTransitionTimer)(rm_ble_mesh_ctrl_t *const p_ctrl, rm_ble_mesh_access_state_transition_t const *const p_transition, uint16_t *const p_transition_time_handle)
fsp_err_t(*	stopTransitionTimer)(rm_ble_mesh_ctrl_t *const p_ctrl, uint16_t transition_time_handle)
fsp_err_t(*	getRemainingTransitionTime)(rm_ble_mesh_ctrl_t *const p_ctrl, uint16_t transition_time_handle, uint8_t *const p_remaining_transition_time)
fsp_err_t(*	getRemainingTransitionTimeWithOffset)(rm_ble_mesh_ctrl_t *const p_ctrl, uint16_t transition_time_handle, uint32_t offset_in_ms, uint8_t *const p_remaining_transition_time)
fsp_err_t(*	convertTransitionTimeFromMs)(rm_ble_mesh_ctrl_t *const p_ctrl, uint32_t transition_time_in_ms, uint8_t *const p_transition_time)
fsp_err_t(*	convertTransitionTimeToMs)(rm_ble_mesh_ctrl_t *const p_ctrl, uint8_t transition_time, uint32_t *const p_transition_time_in_ms)

Field Documentation

◆ open

fsp_err_t(* rm_ble_mesh_api_t::open) (rm_ble_mesh_ctrl_t *const p_ctrl, rm_ble_mesh_cfg_t const *const p_cfg)

Open ble mesh middleware.

Implemented as

- RM_BLE_MESH_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ close

fsp_err_t(* rm_ble_mesh_api_t::close) (rm_ble_mesh_ctrl_t *const p_ctrl)

Close ble mesh middleware.

Implemented as

- RM_BLE_MESH_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ startTransitionTimer

fsp_err_t(* rm_ble_mesh_api_t::startTransitionTimer) (rm_ble_mesh_ctrl_t *const p_ctrl, rm_ble_mesh_access_state_transition_t const *const p_transition, uint16_t *const p_transition_time_handle)

To start transition timer.

Implemented as

- RM_BLE_MESH_StartTransitionTimer()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	transition	State Transition data structure, which includes the timeout, transition start and complete callback etc.
[out]	transition_time_handle	Transition Time Handle, which can be used to stop the transition timer if required.

Returns

API_SUCCESS or an error code indicating reason for failure

◆ stopTransitionTimer

fsp_err_t(* rm_ble_mesh_api_t::stopTransitionTimer) (rm_ble_mesh_ctrl_t *const p_ctrl, uint16_t transition_time_handle)

To stop transition timer.

Implemented as

- RM_BLE_MESH_StopTransitionTimer()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	transition_time_handle	Transition Time Handle, returned by the Start Transition Timer interface.

Returns

API_SUCCESS or an error code indicating reason for failure

◆ getRemainingTransitionTime

fsp_err_t(* rm_ble_mesh_api_t::getRemainingTransitionTime) (rm_ble_mesh_ctrl_t *const p_ctrl, uint16_t transition_time_handle, uint8_t *const p_remaining_transition_time)

To get remaining Transition Time.

Implemented as

- RM_BLE_MESH_GetRemainingTransitionTime()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	transition_time_handle	Transition Time Handle, returned by the Start Transition Timer interface.
[out]	remaining_transition_time	Remaining Transition Time.

Returns

API_SUCCESS or an error code indicating reason for failure

◆ getRemainingTransitionTimeWithOffset

fsp_err_t(* rm_ble_mesh_api_t::getRemainingTransitionTimeWithOffset) (rm_ble_mesh_ctrl_t *const p_ctrl, uint16_t transition_time_handle, uint32_t offset_in_ms, uint8_t *const p_remaining_transition_time)

To get remaining Transition Time, with offset.

Implemented as

- RM_BLE_MESH_GetRemainingTransitionTimeWithOffset()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	transition_time_handle	Transition Time Handle, returned by the Start Transition Timer interface.
[in]	offset_in_ms	Offset in ms.
[out]	remaining_transition_time	Remaining Transition Time.

Returns

API_SUCCESS or an error code indicating reason for failure

◆ convertTransitionTimeFromMs

fsp_err_t(* rm_ble_mesh_api_t::convertTransitionTimeFromMs) (rm_ble_mesh_ctrl_t *const p_ctrl, uint32_t transition_time_in_ms, uint8_t *const p_transition_time)

To convert transition time from milisecond.

Implemented as

- RM_BLE_MESH_ConvertTransitionTimeFromMs()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	transition_time_in_ms	Transition Time in milisecond.
[out]	transition_time	Converted value in Generic Default Transition Time state format.

Returns

API_SUCCESS or an error code indicating reason for failure

◆ convertTransitionTimeToMs

fsp_err_t(* rm_ble_mesh_api_t::convertTransitionTimeToMs) (rm_ble_mesh_ctrl_t *const p_ctrl, uint8_t transition_time, uint32_t *const p_transition_time_in_ms)

To convert transition time to milisecond.

Implemented as

- RM_BLE_MESH_ConvertTransitionTimeToMs()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	transition_time	Transition time in Generic Default Transition Time state format.
[out]	transition_time_in_ms	Converted value of Transition Time in milisecond.

Returns

API_SUCCESS or an error code indicating reason for failure

◆ rm_ble_mesh_instance_t

struct rm_ble_mesh_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

rm_ble_mesh_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.

rm_ble_mesh_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
rm_ble_mesh_api_t const *	p_api	Pointer to the API structure for this instance.

Macro Definition Documentation

◆ RM_BLE_MESH_DEVICE_UUID_SIZE

#define RM_BLE_MESH_DEVICE_UUID_SIZE
Device UUID Size

Typedef Documentation

◆ rm_ble_mesh_timer_handle_t

typedef void* rm_ble_mesh_timer_handle_t
Timer handle

◆ rm_ble_mesh_ctrl_t

typedef void rm_ble_mesh_ctrl_t
BLE MESH control block. Allocate an instance specific control block to pass into the BLE MESH API calls. **Implemented as** ◦ rm_ble_mesh_instance_ctrl_t

Enumeration Type Documentation

◆ rm_ble_mesh_error_code_t

enum rm_ble_mesh_error_code_t	
BLE MESH error code.	
Enumerator	
RM_BLE_MESH_INVALID_ADDRESS	Invalid Address
RM_BLE_MESH_INVALID_MODEL	Invalid Model
RM_BLE_MESH_INVALID_APPKEY_INDEX	Invalid AppKey Index
RM_BLE_MESH_INVALID_NETKEY_INDEX	Invalid NetKey Index
RM_BLE_MESH_INSUFFICIENT_RESOURCES	Insufficient Resources
RM_BLE_MESH_KEY_INDEX_ALREADY_STORED	Key Index Already Stored
RM_BLE_MESH_INVALID_PUBLISH_PARAMETER	Invalid Publish Parameters
RM_BLE_MESH_NOT_A_SUBSCRIBE_MODEL	Not a Subscribe Model
RM_BLE_MESH_STORAGE_FAILURE	Storage Failure
RM_BLE_MESH_FEATURE_NOT_SUPPORTED	Feature Not Supported
RM_BLE_MESH_CANNOT_UPDATE	Cannot Update
RM_BLE_MESH_CANNOT_REMOVE	Cannot Remove
RM_BLE_MESH_CANNOT_BIND	Cannot Bind
RM_BLE_MESH_TEMP_UNABLE_TO_CHANGE_STATE	Temporarily Unable to Change State
RM_BLE_MESH_CANNOT_SET	Cannot Set
RM_BLE_MESH_UNSPECIFIED_ERROR	Unspecified Error
RM_BLE_MESH_INVALID_BINDING	Invalid Binding

◆ rm_ble_mesh_feature_select_t

enum rm_ble_mesh_feature_select_t	
Node Feature	
Enumerator	
RM_BLE_MESH_FEATURE_SELECT_RELAY	Relay Feature
RM_BLE_MESH_FEATURE_SELECT_PROXY	Proxy Feature
RM_BLE_MESH_FEATURE_SELECT_FRIEND	Friend Feature
RM_BLE_MESH_FEATURE_SELECT_LPN	Low Power Feature

4.3.54 BLE Mesh Bearer Interface

Interfaces

Detailed Description

Interface for Bluetooth Low Energy Mesh Bearer functions.

Summary

The BLE Mesh Bearer interface for the Bluetooth Low Energy Mesh Bearer (BLE MESH BEARER) peripheral provides Bluetooth Low Energy Mesh Bearer functionality.

The Bluetooth Low Energy Mesh Bearer interface can be implemented by:

- Bluetooth Low Energy Mesh Network Bearer (rm_ble_mesh_bearer)

Data Structures

struct	rm_ble_mesh_bearer_info_t
struct	rm_ble_mesh_bearer_beacon_info_t
struct	rm_ble_mesh_bearer_ch_info_t

enum	rm_ble_mesh_bearer_operation_mode_t
enum	rm_ble_mesh_bearer_ntf_callback_result_t
enum	rm_ble_mesh_bearer_type_t
enum	rm_ble_mesh_bearer_beacon_type_t

Data Structure Documentation

◆ rm_ble_mesh_bearer_info_t

struct rm_ble_mesh_bearer_info_t	
Bearer information to register	
Data Fields	
rm_ble_mesh_buffer_t *	binfo
fsp_err_t(*	bearer_send)(rm_ble_mesh_bearer_handle_t *, uint8_t, void *, uint16_t)

void(*	bearer_recv)(rm_ble_mesh_bearer_handle_t *, uint8_t *, uint16_t, rm_ble_mesh_buffer_t *info)
void(*	bearer_sleep)(rm_ble_mesh_bearer_handle_t *)
void(*	bearer_wakeup)(rm_ble_mesh_bearer_handle_t *, uint8_t mode)

Field Documentation

◆ binfo

rm_ble_mesh_buffer_t* rm_ble_mesh_bearer_info_t::binfo

Bearer Information

◆ bearer_send

fsp_err_t(* rm_ble_mesh_bearer_info_t::bearer_send) (rm_ble_mesh_bearer_handle_t *, uint8_t, void *, uint16_t)

Data Send routine

◆ bearer_recv

void(* rm_ble_mesh_bearer_info_t::bearer_recv) (rm_ble_mesh_bearer_handle_t *, uint8_t *, uint16_t, rm_ble_mesh_buffer_t *info)

Data Receive routine

◆ bearer_sleep

void(* rm_ble_mesh_bearer_info_t::bearer_sleep) (rm_ble_mesh_bearer_handle_t *)

Bearer Sleep Interface

◆ bearer_wakeup

void(* rm_ble_mesh_bearer_info_t::bearer_wakeup) (rm_ble_mesh_bearer_handle_t *, uint8_t mode)

Bearer Wakeup Interface

◆ rm_ble_mesh_bearer_beacon_info_t

struct rm_ble_mesh_bearer_beacon_info_t

Bearer Beacon type data structure

Data Fields

uint8_t	action	Beacon Action • Lower Nibble:

		BRR_OBSERVE B RR_BROADCAST • Higher Nibble: BRR_ENABLE BRR_DISABLE
uint8_t	type	Beacon type • Lower Nibble: BRR_BCON_PASS IVE - Non Connectable beacon BRR_BC ON_ACTIVE - Connectable beacon • Higher Nibble (Valid only when Passive) BRR_BCON_TYPE _UNPROV_DEVIC E BRR_BCON_TY PE_SECURE_NET
uint8_t *	bcon_data	Beacon Broadcast Data
uint16_t	bcon_datalen	Beacon Broadcast Data length
rm_ble_mesh_buffer_t *	uri	URI information in case of Unprovisioned Beacons

◆ rm_ble_mesh_bearer_ch_info_t

struct rm_ble_mesh_bearer_ch_info_t		
Bearer GATT Channel informartion related data structure		
Data Fields		
uint16_t	mtu	Identifies the MTU for the Bearer Channel
uint8_t	role	Identifies the role for the Bearer channel

◆ rm_ble_mesh_bearer_ntf_callback_args_t

struct rm_ble_mesh_bearer_ntf_callback_args_t		
BEARER Application Asynchronous Notification Callback. BEARER calls the registered callback to indicate events occurred to the application.		
Data Fields		
rm_ble_mesh_bearer_handle_t *	p_handle	
rm_ble_mesh_bearer_interface_event_t	event	
uint8_t *	p_data	Data associated with the event if any or NULL.
uint16_t	data_length	Size of the event data. 0 if event data is NULL.

◆ **rm_ble_mesh_bearer_beacon_callback_args_t**

struct rm_ble_mesh_bearer_beacon_callback_args_t		
BEARER Application Asynchronous Notification Callback for Beacons. Application registers callback for beacon notification with bearer.		
Data Fields		
uint8_t *	p_data	Data associated with the event if any or NULL.
uint16_t	data_length	Size of the event data. 0 if event data is NULL.

◆ **rm_ble_mesh_bearer_cfg_t**

struct rm_ble_mesh_bearer_cfg_t		
BLE MESH BEARER configuration parameters.		
Data Fields		
uint32_t	channel	Select a channel corresponding to the channel number of the hardware. the parameters for initialization.
rm_ble_mesh_instance_t const *	p_mesh_instance	Instance structure of BLE Mesh.
void const *	p_context	Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t.
void const *	p_extend	Placeholder for user extension.

◆ **rm_ble_mesh_bearer_api_t**

struct rm_ble_mesh_bearer_api_t
BLE MESH BEARER functions implemented at the HAL layer will follow this API.

Data Fields	
fsp_err_t(*	open)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl, rm_ble_mesh_bearer_cfg_t const *const p_cfg)
fsp_err_t(*	close)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl)
fsp_err_t(*	registerInterface)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl, rm_ble_mesh_bearer_type_t brr_type, rm_ble_mesh_bearer_ntf_callback_result_t (*p_callback)(rm_ble_mesh_bearer_ntf_callback_args_t *p_args))
fsp_err_t(*	registerBeaconHandler)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl, rm_ble_mesh_bearer_beacon_type_t bcon_type, void(*p_handler)(rm_ble_mesh_bearer_beacon_callback_args_t *p_args))
fsp_err_t(*	addBearer)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl, rm_ble_mesh_bearer_type_t brr_type, rm_ble_mesh_bearer_info_t const *const p_brr_info, rm_ble_mesh_bearer_handle_t *const p_brr_handle)
fsp_err_t(*	removeBearer)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl, rm_ble_mesh_bearer_type_t brr_type, rm_ble_mesh_bearer_handle_t const *const p_brr_handle)
fsp_err_t(*	observeBeacon)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl, uint8_t bcon_type, uint8_t enable)
fsp_err_t(*	bcastUnprovisionedBeacon)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl, uint8_t type, uint8_t const *const p_dev_uuid, uint16_t oob_info, rm_ble_mesh_buffer_t const *const p_uri)
fsp_err_t(*	broadcastBeacon)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl, uint8_t type, uint8_t const *const p_packet, uint16_t length)
fsp_err_t(*	startProxyAdv)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl, uint8_t type, uint8_t const *const p_data, uint16_t datalen)
fsp_err_t(*	sendPdu)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl, rm_ble_mesh_bearer_handle_t const *const p_brr_handle, rm_ble_mesh_bearer_type_t brr_type, rm_ble_mesh_buffer_t const

	*const p_buffer)
fsp_err_t(*	getPacketRssi)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl, uint8_t *rssi_value)
fsp_err_t(*	sleep)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl)
fsp_err_t(*	wakeup)(rm_ble_mesh_bearer_ctrl_t *const p_ctrl, uint8_t mode)

Field Documentation

◆ open

fsp_err_t(* rm_ble_mesh_bearer_api_t::open) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl, rm_ble_mesh_bearer_cfg_t const *const p_cfg)

Open bearer middleware.

Implemented as

- RM_BLE_MESH_BEARER_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ close

fsp_err_t(* rm_ble_mesh_bearer_api_t::close) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl)

Close bearer middleware.

Implemented as

- RM_BLE_MESH_BEARER_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ registerInterface

fsp_err_t(* rm_ble_mesh_bearer_api_t::registerInterface) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl, rm_ble_mesh_bearer_type_t brr_type, rm_ble_mesh_bearer_ntf_callback_result_t(*p_callback)(rm_ble_mesh_bearer_ntf_callback_args_t *p_args))

Register Interface with Bearer Layer

Implemented as

- RM_BLE_MESH_BEARER_RegisterInterface()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	brr_type	Bearer Type
[in]	p_callback	Details describing Application Notification Callback

Returns

API_SUCCESS or an error code indicating reason for failure

◆ registerBeaconHandler

fsp_err_t(* rm_ble_mesh_bearer_api_t::registerBeaconHandler) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl, rm_ble_mesh_bearer_beacon_type_t bcon_type, void(*p_handler)(rm_ble_mesh_bearer_beacon_callback_args_t *p_args))

Register Beacon Interface with Bearer Layer

Implemented as

- RM_BLE_MESH_BEARER_RegisterBeaconHandler()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	bcon_type	Beacon type - Unprovisioned Device or Secure Network.
[in]	p_handler	Callback handler to be registered for the given beacon type.

Returns

API_SUCCESS or an error code indicating reason for failure

◆ addBearer

fsp_err_t(* rm_ble_mesh_bearer_api_t::addBearer) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl, rm_ble_mesh_bearer_type_t brr_type, rm_ble_mesh_bearer_info_t const *const p_brr_info, rm_ble_mesh_bearer_handle_t *const p_brr_handle)

Add a bearer to Bearer Layer

Implemented as

- RM_BLE_MESH_BEARER_AddBearer()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	brr_type	Bearer Type
[in]	brr_info	Details describing the Bearer being added
[out]	brr_handle	Handle to the bearer that is added. Used in data APIs.

Returns

API_SUCCESS or an error code indicating reason for failure

◆ removeBearer

fsp_err_t(* rm_ble_mesh_bearer_api_t::removeBearer) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl, rm_ble_mesh_bearer_type_t brr_type, rm_ble_mesh_bearer_handle_t const *const p_brr_handle)

Remove a bearer from Bearer Layer

Implemented as

- RM_BLE_MESH_BEARER_RemoveBearer()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	brr_type	Bearer Type
[in]	brr_handle	Handle to the bearer that is added. Used in data APIs.

Returns

API_SUCCESS or an error code indicating reason for failure

◆ observeBeacon

fsp_err_t(* rm_ble_mesh_bearer_api_t::observeBeacon) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl, uint8_t bcon_type, uint8_t enable)

Observe ON/OFF for the beacon type

Implemented as

- RM_BLE_MESH_BEARER_ObserveBeacon()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	bcon_type	Type of beacon to observe - Active/Passive.
[in]	enable	Enable or Disable the observation procedure.

Returns

API_SUCCESS or an error code indicating reason for failure

◆ bcastUnprovisionedBeacon

fsp_err_t(* rm_ble_mesh_bearer_api_t::bcastUnprovisionedBeacon) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl, uint8_t type, uint8_t const *const p_dev_uuid, uint16_t oob_info, rm_ble_mesh_buffer_t const *const p_uri)

API to send Unprovisioned Device Beacon

Implemented as

- RM_BLE_MESH_BEARER_BcastUnprovisionedBeacon()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	type	Active or Passive Broadcast type.
[in]	dev_uuid	Device UUID uniquely identifying this device.
[in]	oob_info	OOB Information
[in]	uri	Optional Parameter. NULL if not present. Points to the length and payload pointer of the URI string to be advertised interleaving with the unprovisioned beacon.

Returns

API_SUCCESS or an error code indicating reason for failure

◆ broadcastBeacon

fsp_err_t(* rm_ble_mesh_bearer_api_t::broadcastBeacon) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl, uint8_t type, uint8_t const *const p_packet, uint16_t length)

API to broadcast a beacon

Implemented as

- RM_BLE_MESH_BEARER_BroadcastBeacon()

Parameters

[in]	p_ctrl	Pointer to control structure
[in]	type	The type of beacon
[in]	packet	Beacon data
[in]	length	Beacon data length

Returns

API_SUCCESS or an error code indicating reason for failure

◆ startProxyAdv

fsp_err_t(* rm_ble_mesh_bearer_api_t::startProxyAdv) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl, uint8_t type, uint8_t const *const p_data, uint16_t datalen)

API to send Proxy Device ADV

Implemented as

- RM_BLE_MESH_BEARER_StartProxyAdv()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	type	Proxy ADV Type: 0x00 - Network ID 0x01 - Node Identity
[in]	data	Data to be advertised by Proxy. If the "type" is: 0x00 - Network ID - 8 Bytes of Network ID 0x01 - Node Identity - 8 Bytes Hash, 8 Bytes Random num
[in]	datalen	Length of the data to be advertised by Proxy. If the "type" is: 0x00 - Network ID - 8 Bytes of Network ID 0x01 - Node Identity - 8 Bytes Hash, 8 Bytes Random num

Returns

API_SUCCESS or an error code indicating reason for failure

◆ sendPdu

fsp_err_t(* rm_ble_mesh_bearer_api_t::sendPdu) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl, rm_ble_mesh_bearer_handle_t const *const p_brr_handle, rm_ble_mesh_bearer_type_t brr_type, rm_ble_mesh_buffer_t const *const p_buffer)

Send a bearer PDU

Implemented as

- RM_BLE_MESH_BEARER_SendPdu()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	brr_handle	Bearer handle on which PDU is to be sent.
[in]	brr_type	Bearer Type.
[in]	buffer	PDU data to be sent.

Returns

API_SUCCESS or an error code indicating reason for failure

◆ getPacketRssi

fsp_err_t(* rm_ble_mesh_bearer_api_t::getPacketRssi) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl, uint8_t *rssi_value)

Get the RSSI of current received packet being processed.

Implemented as

- RM_BLE_MESH_BEARER_GetPacketRssi()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	rssi_value	RSSI value.

Returns

RSSI value of the current packet in context.

Note

This applies only when the packet is received over ADV bearer

◆ sleep

fsp_err_t(* rm_ble_mesh_bearer_api_t::sleep) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl)

Put the bearer to sleep.

Implemented as

- RM_BLE_MESH_BEARER_Sleep()

Parameters

[in]	p_ctrl	Pointer to control structure.

Returns

API_SUCCESS

◆ wakeup

fsp_err_t(* rm_ble_mesh_bearer_api_t::wakeup) (rm_ble_mesh_bearer_ctrl_t *const p_ctrl, uint8_t mode)

Wakeup the bearer.

Implemented as

- RM_BLE_MESH_BEARER_Wakeup()

Parameters

[in]	p_ctrl	Pointer to control structure.
	mode	Identifies the mode (BRR_TX/BRR_RX) for which bearer is requested for wakeup.

Returns

API_SUCCESS

◆ rm_ble_mesh_bearer_instance_t

struct rm_ble_mesh_bearer_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

rm_ble_mesh_bearer_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_ble_mesh_bearer_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
rm_ble_mesh_bearer_api_t const *	p_api	Pointer to the API structure for this instance.

Macro Definition Documentation

◆ RM_BLE_MESH_BEARER_HANDLE_INVALID

#define RM_BLE_MESH_BEARER_HANDLE_INVALID
Invalid Bearer handle identifier

◆ RM_BLE_MESH_BEARER_MAX_PDU_SIZE

#define RM_BLE_MESH_BEARER_MAX_PDU_SIZE
Maximum PDU size for data received over bearer

◆ RM_BLE_MESH_BEARER_SUBTYPE_GATT_T_MASK_BIT_OFFSET

#define RM_BLE_MESH_BEARER_SUBTYPE_GATT_T_MASK_BIT_OFFSET
GATT Bearer Message Type Masks

Typedef Documentation

◆ rm_ble_mesh_bearer_handle_t

typedef uint8_t rm_ble_mesh_bearer_handle_t
Bearer handle identifier

◆ rm_ble_mesh_bearer_ctrl_t

typedef void rm_ble_mesh_bearer_ctrl_t
BLE MESH BEARER control block. Allocate an instance specific control block to pass into the BLE MESH API calls. **Implemented as** ◦ rm_ble_mesh_bearer_instance_ctrl_t

Enumeration Type Documentation

◆ rm_ble_mesh_bearer_interface_event_t

enum rm_ble_mesh_bearer_interface_event_t	
Bearer Interface Event	
Enumerator	
RM_BLE_MESH_BEARER_INTERFACE_EVENT_DOWN	Bearer Interface Event - Down
RM_BLE_MESH_BEARER_INTERFACE_EVENT_UP	Bearer Interface Event - Up
RM_BLE_MESH_BEARER_INTERFACE_EVENT_DATA	Bearer Interface Event - Data
RM_BLE_MESH_BEARER_INTERFACE_EVENT_PROXY_DATA	Bearer Interface Event - Proxy Data

◆ rm_ble_mesh_bearer_beacon_operation_t

enum rm_ble_mesh_bearer_beacon_operation_t	
Bearer Beacon Operations	
Enumerator	
RM_BLE_MESH_BEARER_BEACON_OPERATION_BROADCAST	Bearer Beacon Operations - Broadcast
RM_BLE_MESH_BEARER_BEACON_OPERATION_OBSERVE	Bearer Beacon Operations - Observe

◆ rm_ble_mesh_bearer_beacon_action_t

enum rm_ble_mesh_bearer_beacon_action_t	
Bearer Beacon Actions	
Enumerator	
RM_BLE_MESH_BEARER_BEACON_ACTION_DISABLE	Bearer Beacon Actions - Disable
RM_BLE_MESH_BEARER_BEACON_ACTION_ENABLE	Bearer Beacon Actions - Enable

◆ rm_ble_mesh_bearer_role_t

enum rm_ble_mesh_bearer_role_t	
Bearer Server Client Roles	
Enumerator	
RM_BLE_MESH_BEARER_ROLE_CLIENT	Bearer Client Role
RM_BLE_MESH_BEARER_ROLE_SERVER	Bearer Server Role
RM_BLE_MESH_BEARER_ROLE_INVALID	Bearer Role - Invalid

◆ rm_ble_mesh_bearer_operation_mode_t

enum rm_ble_mesh_bearer_operation_mode_t	
Bearer Transmit and Receive operation modes	
Enumerator	
RM_BLE_MESH_BEARER_OPERATION_MODE_TX	Bearer transmit operation mode
RM_BLE_MESH_BEARER_OPERATION_MODE_RX	Bearer receive operation mode

◆ rm_ble_mesh_bearer_ntf_callback_result_t

enum rm_ble_mesh_bearer_ntf_callback_result_t	
Bearer Transmit and Receive operation modes	
Enumerator	
RM_BLE_MESH_BEARER_NTF_CALLBACK_RESULT_SUCCESS	Callback success
RM_BLE_MESH_BEARER_NTF_CALLBACK_RESULT_FAILURE	Callback failure

◆ rm_ble_mesh_bearer_type_t

enum rm_ble_mesh_bearer_type_t	
Bearer Type definitions	
Enumerator	
RM_BLE_MESH_BEARER_TYPE_BCON	Beacon Bearer
RM_BLE_MESH_BEARER_TYPE_ADV	Advertising Bearer
RM_BLE_MESH_BEARER_TYPE_PB_ADV	Provisioning Advertising Bearer
RM_BLE_MESH_BEARER_TYPE_GATT	GATT Bearer
RM_BLE_MESH_BEARER_TYPE_PB_GATT	Provisioning GATT Bearer
RM_BLE_MESH_BEARER_COUNT	Number of bearers supported

◆ rm_ble_mesh_bearer_beacon_type_t

enum rm_ble_mesh_bearer_beacon_type_t	
Bearer Beacon type definitions	
Enumerator	
RM_BLE_MESH_BEARER_BEACON_TYPE_UNPROV_DEVICE	Unprovisioned Device Beacon
RM_BLE_MESH_BEARER_BEACON_TYPE_SECURE_NET	Secure Network Beacon
RM_BLE_MESH_BEARER_BEACON_TYPE_GATT_UNPROV_DEVICE	Unprovisioned Device Beacon over GATT bearer
RM_BLE_MESH_BEARER_BEACON_TYPE_PROXY_NETID	Proxy beacon with Network ID
RM_BLE_MESH_BEARER_BEACON_TYPE_PROXY_NODEID	Proxy beacon with Node Identity
RM_BLE_MESH_BEARER_BEACON_COUNT	Number of Beacon types

4.3.55 BLE Mesh Model Configuration Client Interface

Interfaces

Detailed Description

Interface for Bluetooth Low Energy Mesh Model Configuration Client functions.

Summary

The BLE Mesh interface for the Bluetooth Low Energy Mesh Model Configuration Client (BLE MESH MODEL CONFIG CLIENT) middleware provides Bluetooth Low Energy Mesh Model Configuration Client functionality.

The Bluetooth Low Energy Mesh Model Configuration Client interface can be implemented by:

- Bluetooth Low Energy Mesh Network Config Client (rm_mesh_config_clt)

Data Structures

struct	rm_ble_mesh_config_client_callback_args_t
struct	rm_ble_mesh_config_client_cfg_t
struct	rm_ble_mesh_config_client_api_t
struct	rm_ble_mesh_config_client_instance_t

Typedefs

typedef void	rm_ble_mesh_config_client_ctrl_t

Data Structure Documentation

◆ rm_ble_mesh_config_client_callback_args_t

struct rm_ble_mesh_config_client_callback_args_t		
Mesh model client callback parameter definition		
Data Fields		
void const *	p_context	
rm_ble_mesh_access_model_req_msg_context_t *	p_msg_context	Context of message received for a specific model instance.
rm_ble_mesh_access_req_msg_raw_t *	p_msg_raw	Uninterpreted/raw received message for a specific model instance.

◆ rm_ble_mesh_config_client_cfg_t

struct rm_ble_mesh_config_client_cfg_t	
BLE mesh model health client configuration parameters.	
Data Fields	
rm_ble_mesh_access_instance_t const *	p_access_instance

void(*	p_callback)(rm_ble_mesh_config_client_callback_args_t *p_args)
	Callback function.
void const *	p_context
	Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t.
void const *	p_extend
	Placeholder for user extension.

Field Documentation

◆ p_access_instance

rm_ble_mesh_access_instance_t const* rm_ble_mesh_config_client_cfg_t::p_access_instance
the parameters for initialization.

◆ rm_ble_mesh_config_client_api_t

struct rm_ble_mesh_config_client_api_t	
Shared Interface definition for BLE MESH	
Data Fields	
fsp_err_t(*	open)(rm_ble_mesh_config_client_ctrl_t *const p_ctrl, rm_ble_mesh_config_client_cfg_t const *const p_cfg)
fsp_err_t(*	close)(rm_ble_mesh_config_client_ctrl_t *const p_ctrl)
fsp_err_t(*	setServer)(rm_ble_mesh_config_client_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t server_addr, uint8_t *p_dev_key)
fsp_err_t(*	sendReliablePdu)(rm_ble_mesh_config_client_ctrl_t *const p_ctrl, uint32_t req_opcode, void const *const p_parameter, uint32_t rsp_opcode)

Field Documentation

◆ open

fsp_err_t(* rm_ble_mesh_config_client_api_t::open) (rm_ble_mesh_config_client_ctrl_t *const p_ctrl, rm_ble_mesh_config_client_cfg_t const *const p_cfg)

API to open configuration client model.

Implemented as

- RM_MESH_CONFIG_CLT_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

fsp_err_t(* rm_ble_mesh_config_client_api_t::close) (rm_ble_mesh_config_client_ctrl_t *const p_ctrl)

API to close configuration client model.

Implemented as

- RM_MESH_CONFIG_CLT_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ setServer

fsp_err_t(* rm_ble_mesh_config_client_api_t::setServer) (rm_ble_mesh_config_client_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t server_addr, uint8_t *p_dev_key)

API to set configuration server.

Implemented as

- RM_MESH_CONFIG_CLT_SetServer()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	server_addr	Address of Configuration Server.
[in]	p_dev_key	Pointer to device Key of Configuration Server.

◆ sendReliablePdu

fsp_err_t(* rm_ble_mesh_config_client_api_t::sendReliablePdu) (rm_ble_mesh_config_client_ctrl_t *const p_ctrl, uint32_t req_opcode, void const *const p_parameter, uint32_t rsp_opcode)

API to send acknowledged commands.

Implemented as

- RM_MESH_CONFIG_CLT_SendReliablePdu()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	req_opcode	Request Opcode.
[in]	p_parameter	Pointer to parameter associated with Request Opcode.
[in]	rsp_opcode	Response Opcode.

◆ rm_ble_mesh_config_client_instance_t

struct rm_ble_mesh_config_client_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

rm_ble_mesh_config_client_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_ble_mesh_config_client_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
rm_ble_mesh_config_client_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ rm_ble_mesh_config_client_ctrl_t

typedef void rm_ble_mesh_config_client_ctrl_t

BLE MESH CONFIG CLIENT control block. Allocate an instance specific control block to pass into the BLE mesh model health client API calls.

Implemented as

- rm_ble_mesh_health_client_instance_ctrl_t

4.3.56 BLE Mesh Health Server Interface

Interfaces

Detailed Description

Interface for Bluetooth Low Energy Mesh Model Health Server functions.

Summary

The BLE Mesh interface for the Bluetooth Low Energy Mesh Model Health Server (BLE MESH HEALTH SERVER) middleware provides Bluetooth Low Energy Mesh Model Health Server functionality.

The Bluetooth Low Energy Mesh Model Health Server interface can be implemented by:

- Bluetooth Low Energy Mesh Network Health Server (rm_mesh_health_srv)

Data Structures

struct	rm_ble_mesh_model_health_callback_args_t
struct	rm_ble_mesh_health_server_self_test_t
struct	rm_ble_mesh_health_server_cfg_t
struct	rm_ble_mesh_health_server_api_t
struct	rm_ble_mesh_health_server_instance_t

Typedefs

typedef void(*	rm_ble_mesh_health_server_self_test_function) (uint8_t test_id, uint16_t company_id)
typedef void	rm_ble_mesh_health_server_ctrl_t

Enumerations

enum	rm_ble_mesh_health_server_events_t

Data Structure Documentation

◆ rm_ble_mesh_model_health_callback_args_t

struct rm_ble_mesh_model_health_callback_args_t
Mesh model health server callback parameter definition

◆ rm_ble_mesh_health_server_self_test_t

struct rm_ble_mesh_health_server_self_test_t

Health Server Self Test Funtion Structure.		
Data Fields		
uint8_t	test_id	Test ID
rm_ble_mesh_health_server_self_test_function	self_test_fn	Self Test Function

◆ rm_ble_mesh_health_server_cfg_t

struct rm_ble_mesh_health_server_cfg_t	
BLE mesh model health server configuration parameters.	
Data Fields	
rm_ble_mesh_access_instance_t const *	p_access_instance
void const *	p_context
	Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t.
void const *	p_extend
	Placeholder for user extension.

Field Documentation

◆ p_access_instance

rm_ble_mesh_access_instance_t const* rm_ble_mesh_health_server_cfg_t::p_access_instance
the parameters for initialization.

◆ rm_ble_mesh_health_server_api_t

struct rm_ble_mesh_health_server_api_t	
Shared Interface definition for BLE MESH	
Data Fields	
fsp_err_t(*	open)(rm_ble_mesh_health_server_ctrl_t *const p_ctrl, rm_ble_mesh_health_server_cfg_t const *const p_cfg)
fsp_err_t(*	close)(rm_ble_mesh_health_server_ctrl_t *const p_ctrl)
fsp_err_t(*	reportFault)(rm_ble_mesh_health_server_ctrl_t *const p_ctrl, const

	rm_ble_mesh_access_model_handle_t *const p_model_handle, uint8_t test_id, uint16_t company_id, uint8_t fault_code)
fsp_err_t(*	publishCurrentStatus)(rm_ble_mesh_health_server_ctrl_t *const p_ctrl, uint8_t *p_status, uint16_t length)

Field Documentation

◆ open

fsp_err_t(* rm_ble_mesh_health_server_api_t::open) (rm_ble_mesh_health_server_ctrl_t *const p_ctrl, rm_ble_mesh_health_server_cfg_t const *const p_cfg)

API to open health server model.

Implemented as

- RM_MESH_HEALTH_SERVER_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

fsp_err_t(* rm_ble_mesh_health_server_api_t::close) (rm_ble_mesh_health_server_ctrl_t *const p_ctrl)

API to close health server model.

Implemented as

- RM_MESH_HEALTH_SERVER_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ reportFault

fsp_err_t(* rm_ble_mesh_health_server_api_t::reportFault) (rm_ble_mesh_health_server_ctrl_t *const p_ctrl, const rm_ble_mesh_access_model_handle_t *const p_model_handle, uint8_t test_id, uint16_t company_id, uint8_t fault_code)

API to report self-test fault.

Implemented as

- RM_MESH_HEALTH_SERVER_ReportFault()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_model_handle	Pointer to model handle identifying the health server model instance.
[in]	test_id	Identifier of the self-test.
[in]	company_id	Company identifier.
[in]	fault_code	Fault value indicating the error.

◆ publishCurrentStatus

fsp_err_t(* rm_ble_mesh_health_server_api_t::publishCurrentStatus) (rm_ble_mesh_health_server_ctrl_t *const p_ctrl, uint8_t *p_status, uint16_t length)

API to publish current status.

Implemented as

- RM_MESH_HEALTH_SERVER_PublishCurrentStatus()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_status	Pointer to current status.
[in]	length	Status data length.

◆ rm_ble_mesh_health_server_instance_t

struct rm_ble_mesh_health_server_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

rm_ble_mesh_health_server_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_ble_mesh_health_server_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.

rm_ble_mesh_health_server_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ rm_ble_mesh_health_server_self_test_function

typedef void(* rm_ble_mesh_health_server_self_test_function) (uint8_t test_id, uint16_t company_id)
Health Server Self Test Function.

◆ rm_ble_mesh_health_server_ctrl_t

typedef void rm_ble_mesh_health_server_ctrl_t
BLE MESH HEALTH SERVER control block. Allocate an instance specific control block to pass into the BLE mesh model health server API calls. **Implemented as** ◦ rm_ble_mesh_health_server_instance_ctrl_t

Enumeration Type Documentation

◆ rm_ble_mesh_health_server_events_t

enum rm_ble_mesh_health_server_events_t	
This section lists the Application Events defined for Health Server Model	
Enumerator	
RM_BLE_MESH_HEALTH_SERVER_SERVER_ATTENTION_START	Attention Start
RM_BLE_MESH_HEALTH_SERVER_SERVER_ATTENTION_RESTART	Attention Restart
RM_BLE_MESH_HEALTH_SERVER_SERVER_ATTENTION_STOP	Attention Stop

4.3.57 BLE Mesh Lower Trans Interface

Interfaces

Detailed Description

Interface for Bluetooth Low Energy Mesh Lower Trans functions.

Summary

The BLE Mesh interface for the Bluetooth Low Energy Mesh Lower Trans peripheral provides Bluetooth Low Energy Abstraction functionality.

The Bluetooth Low Energy Mesh interface can be implemented by:

- Bluetooth Low Energy Mesh Network Lower Trans (rm_ble_mesh_lower_trans)

Data Structures

struct	rm_ble_mesh_lower_trans_transmit_setting_t
struct	rm_ble_mesh_lower_trans_callback_args_t
struct	rm_ble_mesh_lower_trans_cfg_t
struct	rm_ble_mesh_lower_trans_api_t
struct	rm_ble_mesh_lower_trans_instance_t

Typedefs

typedef uint8_t	rm_ble_mesh_lower_trans_lpn_handle_t
typedef void	rm_ble_mesh_lower_trans_ctrl_t

Enumerations

enum	rm_ble_mesh_lower_trans_message_type_t
enum	rm_ble_mesh_lower_trans_reliable_t
enum	rm_ble_mesh_lower_trans_event_t
enum	rm_ble_mesh_lower_trans_notification_t

Data Structure Documentation

◆ rm_ble_mesh_lower_trans_transmit_setting_t

struct rm_ble_mesh_lower_trans_transmit_setting_t		
transport PDUs setting to peer device.		
Data Fields		
rm_ble_mesh_network_address_t	src_addr	Source address.
rm_ble_mesh_network_address_	dst_addr	Destination address.

t		
rm_ble_mesh_network_subnet_handle_t	subnet_handle	Handle identifying the subnet.
rm_ble_mesh_lower_trans_message_type_t	msg_type	Transport message type.
uint8_t	ttl	Time to Live.
uint8_t	akf	Application key flag.
uint8_t	aid	Application key identifier.
uint8_t	seq_num	Sequence number.

◆ rm_ble_mesh_lower_trans_callback_args_t

struct rm_ble_mesh_lower_trans_callback_args_t		
BLE Mesh lowe trans callback parameter definition		
Data Fields		
rm_ble_mesh_lower_trans_event_t_t	event	Event code.
rm_ble_mesh_network_header_t *	p_header	Network header.
rm_ble_mesh_network_subnet_handle_t	subnet_handle	Subnet handle.
uint8_t	trans_mic_size	TransMIC size.
rm_ble_mesh_lower_trans_lpn_handle_t	lpn_handle	LPM Size.
uint8_t	packet_type	packet type TODO should be change enum?
rm_ble_mesh_buffer_t	event_data	Event data.
void const *	p_context	Context provided to user during callback.

◆ rm_ble_mesh_lower_trans_cfg_t

struct rm_ble_mesh_lower_trans_cfg_t	
BLE MESH configuration parameters.	
Data Fields	
uint32_t	channel
	Select a channel corresponding to the channel number of the hardware. More...
rm_ble_mesh_network_instance_t const *	p_mesh_network_instance

	Instance structure of BLE Mesh Network.
void(*	p_callback)(rm_ble_mesh_lower_trans_callback_args_t *p_args)
	Callback function.
void const *	p_context
	Placeholder for user data.
void const *	p_extend
	Placeholder for extension data.

Field Documentation

◆ channel

uint32_t rm_ble_mesh_lower_trans_cfg_t::channel
Select a channel corresponding to the channel number of the hardware. the parameters for initialization.

◆ rm_ble_mesh_lower_trans_api_t

struct rm_ble_mesh_lower_trans_api_t	
BLE MESH functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl, rm_ble_mesh_lower_trans_cfg_t const *const p_cfg)
fsp_err_t(*	close)(rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl)
fsp_err_t(*	sendPdu)(rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl, rm_ble_mesh_lower_trans_transmit_setting_t const *const p_transmit_setting, rm_ble_mesh_buffer_t const *const p_buffer, rm_ble_mesh_lower_trans_reliable_t reliable)
fsp_err_t(*	clearSarContexts)(rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl)

fsp_err_t(*	clearSubnetSarContexts)(rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle)
fsp_err_t(*	reinitReplayCache)(rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl)
fsp_err_t(*	triggerPendingTransmits)(rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* rm_ble_mesh_lower_trans_api_t::open) (rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl, rm_ble_mesh_lower_trans_cfg_t const *const p_cfg)

Register Inerface with Lower Transport Layer.

Implemented as

- RM_BLE_MESH_LOWER_TRANS_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ close

fsp_err_t(* rm_ble_mesh_lower_trans_api_t::close) (rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl)

Unregister Inerface with Lower Transport Layer.

Implemented as

- RM_BLE_MESH_LOWER_TRANS_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ sendPdu

fsp_err_t(* rm_ble_mesh_lower_trans_api_t::sendPdu) (rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl, rm_ble_mesh_lower_trans_transmit_setting_t const *const p_transmit_setting, rm_ble_mesh_buffer_t const *const p_buffer, rm_ble_mesh_lower_trans_reliable_t reliable)

API to send transport PDUs.

Implemented as

- RM_BLE_MESH_LOWER_TRANS_SendPdu()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_transmit_setting	Pointer to transmit setting structure.
[in]	p_buffer	Pointer to payload and payload length structure.
[in]	reliable	If requires lower transport Ack, set reliable as RM_BLE_MESH_LOWER_TRANS_RELIABLE_ENABLE.

◆ clearSarContexts

fsp_err_t(* rm_ble_mesh_lower_trans_api_t::clearSarContexts) (rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl)

To clear all segmentation and reassembly contexts.

Implemented as

- RM_BLE_MESH_LOWER_TRANS_ClearSarContexts()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ clearSubnetSarContexts

fsp_err_t(* rm_ble_mesh_lower_trans_api_t::clearSubnetSarContexts) (rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle)

To clear all segmentation and reassembly contexts for a given subnet.

Implemented as

- RM_BLE_MESH_LOWER_TRANS_ClearSubnetSarContexts()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	subnet_handle	Subnet Handle whose respective SAR Contexts are to be cleared.

◆ reinitReplayCache

fsp_err_t(* rm_ble_mesh_lower_trans_api_t::reinitReplayCache) (rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl)

To reinitialize all Lower Transport replay cache entries.

Implemented as

- RM_BLE_MESH_LOWER_TRANS_ReinitReplayCache()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ triggerPendingTransmits

fsp_err_t(* rm_ble_mesh_lower_trans_api_t::triggerPendingTransmits) (rm_ble_mesh_lower_trans_ctrl_t *const p_ctrl)

To trigger any Lower Transport pending transmissions.

Implemented as

- RM_BLE_MESH_LOWER_TRANS_TriggerPendingTransmits()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ rm_ble_mesh_lower_trans_instance_t

struct rm_ble_mesh_lower_trans_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

rm_ble_mesh_lower_trans_ctrl_t	p_ctrl	Pointer to the control structure

*		for this instance.
rm_ble_mesh_lower_trans_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
rm_ble_mesh_lower_trans_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ rm_ble_mesh_lower_trans_lpn_handle_t

typedef uint8_t rm_ble_mesh_lower_trans_lpn_handle_t
LPN handle

◆ rm_ble_mesh_lower_trans_ctrl_t

typedef void rm_ble_mesh_lower_trans_ctrl_t
BLE MESH control block. Allocate an instance specific control block to pass into the BLE MESH API calls. **Implemented as** ◦ rm_ble_mesh_lower_trans_instance_ctrl_t

Enumeration Type Documentation

◆ rm_ble_mesh_lower_trans_message_type_t

enum rm_ble_mesh_lower_trans_message_type_t	
Transport Message Type	
Enumerator	
RM_BLE_MESH_LOWER_TRANS_MESSAGE_TYPE_ACCESS	Access Layer Packet
RM_BLE_MESH_LOWER_TRANS_MESSAGE_TYPE_CTRL	Transport Layer Control Packet

◆ rm_ble_mesh_lower_trans_reliable_t

enum rm_ble_mesh_lower_trans_reliable_t	
If requires lower transport Ack	
Enumerator	
RM_BLE_MESH_LOWER_TRANS_RELIABLE_DISABLE	Ack enable.
RM_BLE_MESH_LOWER_TRANS_RELIABLE_ENABLE	Ack disable.

◆ rm_ble_mesh_lower_trans_event_t

enum rm_ble_mesh_lower_trans_event_t
Callback event

◆ rm_ble_mesh_lower_trans_notification_t

enum rm_ble_mesh_lower_trans_notification_t	
Whether to enable the event or not.	
Enumerator	
RM_BLE_MESH_LOWER_TRANS_NOTIFICATION_DISABLE	Callback disable.
RM_BLE_MESH_LOWER_TRANS_NOTIFICATION_ENABLE	Callback enable.

4.3.58 BLE Mesh Model Client Interface

Interfaces

Detailed Description

Interface for Bluetooth Low Energy Mesh Model Model Client functions.

Summary

The BLE Mesh interface for the Bluetooth Low Energy Mesh Model Client (BLE MESH MODEL CLIENT) middleware provides Bluetooth Low Energy Mesh Model Client functionality.

The Bluetooth Low Energy Mesh Model Client interface can be implemented by:

- Bluetooth Low Energy Mesh Network Generic Battery Client (rm_mesh_generic_battery_clt)
- Bluetooth Low Energy Mesh Network Generic Default Transition Time Client (rm_mesh_generic_dtt_clt)
- Bluetooth Low Energy Mesh Network Generic Level Client (rm_mesh_generic_level_clt)
- Bluetooth Low Energy Mesh Network Generic Location Client (rm_mesh_generic_loc_clt)
- Bluetooth Low Energy Mesh Network Generic On Off Client (rm_mesh_generic_on_off_clt)
- Bluetooth Low Energy Mesh Network Generic Power Level Client (rm_mesh_generic_pl_clt)
- Bluetooth Low Energy Mesh Network Generic Power On Off Client (rm_mesh_generic_poo_clt)
- Bluetooth Low Energy Mesh Network Generic Property Client (rm_mesh_generic_prop_clt)
- Bluetooth Low Energy Mesh Network Health Client (rm_mesh_health_clt)
- Bluetooth Low Energy Mesh Network Light Control Client (rm_mesh_light_ctl_clt)
- Bluetooth Low Energy Mesh Network Light Hsl Client (rm_mesh_light_hsl_clt)
- Bluetooth Low Energy Mesh Network Light Location Client (rm_mesh_light_lc_clt)
- Bluetooth Low Energy Mesh Network Light Lightness Client (rm_mesh_light_lightness_clt)
- Bluetooth Low Energy Mesh Network Light Xyl Client (rm_mesh_light_xyl_clt)
- Bluetooth Low Energy Mesh Network Scene Client (rm_mesh_scene_clt)
- Bluetooth Low Energy Mesh Network Scheduler Client (rm_mesh_scheduler_clt)
- Bluetooth Low Energy Mesh Network Time Client (rm_mesh_time_clt)
- Bluetooth Low Energy Mesh Network Sensor Client (rm_mesh_sensor_clt)

Data Structures

struct	rm_ble_mesh_model_client_callback_args_t
struct	rm_ble_mesh_model_client_cfg_t
struct	rm_ble_mesh_model_client_api_t
struct	rm_ble_mesh_model_client_instance_t

Typedefs

typedef void	rm_ble_mesh_model_client_ctrl_t

Data Structure Documentation

◆ rm_ble_mesh_model_client_callback_args_t

struct rm_ble_mesh_model_client_callback_args_t
Mesh model client callback parameter definition

◆ rm_ble_mesh_model_client_cfg_t

struct rm_ble_mesh_model_client_cfg_t	
BLE mesh model health client configuration parameters.	
Data Fields	
rm_ble_mesh_access_instance_t const *	p_access_instance

void const *	p_context
	Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t.
void const *	p_extend
	Placeholder for user extension.

Field Documentation

◆ p_access_instance

rm_ble_mesh_access_instance_t const* rm_ble_mesh_model_client_cfg_t::p_access_instance

the parameters for initialization.

◆ rm_ble_mesh_model_client_api_t

struct rm_ble_mesh_model_client_api_t

Shared Interface definition for BLE MESH

Data Fields

fsp_err_t(*	open)(rm_ble_mesh_model_client_ctrl_t *const p_ctrl, rm_ble_mesh_model_client_cfg_t const *const p_cfg)
fsp_err_t(*	close)(rm_ble_mesh_model_client_ctrl_t *const p_ctrl)
fsp_err_t(*	setModelHandle)(rm_ble_mesh_model_client_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle)
fsp_err_t(*	getModelHandle)(rm_ble_mesh_model_client_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t *const p_model_handle)
fsp_err_t(*	sendReliablePdu)(rm_ble_mesh_model_client_ctrl_t *const p_ctrl, uint32_t req_opcode, void const *const p_parameter, uint32_t rsp_opcode)

Field Documentation

◆ open

fsp_err_t(* rm_ble_mesh_model_client_api_t::open) (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, rm_ble_mesh_model_client_cfg_t const *const p_cfg)

API to open client model.

Implemented as

- RM_MESH_GENERIC_BATTERY_CLT_Open()
- RM_MESH_GENERIC_DTT_CLT_Open()
- RM_MESH_GENERIC_LEVEL_CLT_Open()
- RM_MESH_GENERIC_LOC_CLT_Open()
- RM_MESH_GENERIC_ON_OFF_CLT_Open()
- RM_MESH_GENERIC_PL_CLT_Open()
- RM_MESH_GENERIC_POO_CLT_Open()
- RM_MESH_GENERIC_PROP_CLT_Open()
- RM_MESH_LIGHT_CTL_CLT_Open()
- RM_MESH_LIGHT_HSL_CLT_Open()
- RM_MESH_LIGHT_LC_CLT_Open()
- RM_MESH_LIGHT_LIGHTNESS_CLT_Open()
- RM_MESH_LIGHT_XYL_CLT_Open()
- RM_MESH_SCENE_CLT_Open()
- RM_MESH_SCHEDULER_CLT_Open()
- RM_MESH_TIME_CLT_Open()
- RM_MESH_SENSOR_CLT_Open()
- RM_MESH_HEALTH_CLIENT_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

fsp_err_t(* rm_ble_mesh_model_client_api_t::close) (rm_ble_mesh_model_client_ctrl_t *const p_ctrl)

API to close client model.

Implemented as

- RM_MESH_GENERIC_BATTERY_CLT_Close()
- RM_MESH_GENERIC_DTT_CLT_Close()
- RM_MESH_GENERIC_LEVEL_CLT_Close()
- RM_MESH_GENERIC_LOC_CLT_Close()
- RM_MESH_GENERIC_ON_OFF_CLT_Close()
- RM_MESH_GENERIC_PL_CLT_Close()
- RM_MESH_GENERIC_POO_CLT_Close()
- RM_MESH_GENERIC_PROP_CLT_Close()
- RM_MESH_LIGHT_CTL_CLT_Close()
- RM_MESH_LIGHT_HSL_CLT_Close()
- RM_MESH_LIGHT_LC_CLT_Close()
- RM_MESH_LIGHT_LIGHTNESS_CLT_Close()
- RM_MESH_LIGHT_XYL_CLT_Close()
- RM_MESH_SCENE_CLT_Close()
- RM_MESH_SCHEDULER_CLT_Close()
- RM_MESH_TIME_CLT_Close()
- RM_MESH_SENSOR_CLT_Close()
- RM_MESH_HEALTH_CLIENT_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ setModelHandle

fsp_err_t(* rm_ble_mesh_model_client_api_t::setModelHandle) (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle)

API to set Model client model handle.

Implemented as

- RM_MESH_GENERIC_BATTERY_CLT_SetModelHandle()
- RM_MESH_GENERIC_DTT_CLT_SetModelHandle()
- RM_MESH_GENERIC_LEVEL_CLT_SetModelHandle()
- RM_MESH_GENERIC_LOC_CLT_SetModelHandle()
- RM_MESH_GENERIC_ON_OFF_CLT_SetModelHandle()
- RM_MESH_GENERIC_PL_CLT_SetModelHandle()
- RM_MESH_GENERIC_POO_CLT_SetModelHandle()
- RM_MESH_GENERIC_PROP_CLT_SetModelHandle()
- RM_MESH_LIGHT_CTL_CLT_SetModelHandle()
- RM_MESH_LIGHT_HSL_CLT_SetModelHandle()
- RM_MESH_LIGHT_LC_CLT_SetModelHandle()
- RM_MESH_LIGHT_LIGHTNESS_CLT_SetModelHandle()
- RM_MESH_LIGHT_XYL_CLT_SetModelHandle()
- RM_MESH_SCENE_CLT_SetModelHandle()
- RM_MESH_SCHEDULER_CLT_SetModelHandle()
- RM_MESH_TIME_CLT_SetModelHandle()
- RM_MESH_SENSOR_CLT_SetModelHandle()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	model_handle	Model handle to be assigned.

◆ getModelHandle

fsp_err_t(* rm_ble_mesh_model_client_api_t::getModelHandle) (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t *const p_model_handle)

API to get Model client model handle.

Implemented as

- RM_MESH_GENERIC_BATTERY_CLT_GetModelHandle()
- RM_MESH_GENERIC_DTT_CLT_GetModelHandle()
- RM_MESH_GENERIC_LEVEL_CLT_GetModelHandle()
- RM_MESH_GENERIC_LOC_CLT_GetModelHandle()
- RM_MESH_GENERIC_ON_OFF_CLT_GetModelHandle()
- RM_MESH_GENERIC_PL_CLT_GetModelHandle()
- RM_MESH_GENERIC_POO_CLT_GetModelHandle()
- RM_MESH_GENERIC_PROP_CLT_GetModelHandle()
- RM_MESH_LIGHT_CTL_CLT_GetModelHandle()
- RM_MESH_LIGHT_HSL_CLT_GetModelHandle()
- RM_MESH_LIGHT_LC_CLT_GetModelHandle()
- RM_MESH_LIGHT_LIGHTNESS_CLT_GetModelHandle()
- RM_MESH_LIGHT_XYL_CLT_GetModelHandle()
- RM_MESH_SCENE_CLT_GetModelHandle()
- RM_MESH_SCHEDULER_CLT_GetModelHandle()
- RM_MESH_TIME_CLT_GetModelHandle()
- RM_MESH_SENSOR_CLT_GetModelHandle()
- RM_MESH_HEALTH_CLIENT_GetModelHandle()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_model_handle	Pointer to model handle to be filled/returned.

◆ sendReliablePdu

fsp_err_t(* rm_ble_mesh_model_client_api_t::sendReliablePdu) (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, uint32_t req_opcode, void const *const p_parameter, uint32_t rsp_opcode)

API to send acknowledged commands.

Implemented as

- RM_MESH_GENERIC_BATTERY_CLT_GetModelHandle()
- RM_MESH_GENERIC_DTT_CLT_GetModelHandle()
- RM_MESH_GENERIC_LEVEL_CLT_GetModelHandle()
- RM_MESH_GENERIC_LOC_CLT_GetModelHandle()
- RM_MESH_GENERIC_ON_OFF_CLT_GetModelHandle()
- RM_MESH_GENERIC_PL_CLT_GetModelHandle()
- RM_MESH_GENERIC_POO_CLT_GetModelHandle()
- RM_MESH_GENERIC_PROP_CLT_GetModelHandle()
- RM_MESH_LIGHT_CTL_CLT_GetModelHandle()
- RM_MESH_LIGHT_HSL_CLT_GetModelHandle()
- RM_MESH_LIGHT_LC_CLT_GetModelHandle()
- RM_MESH_LIGHT_LIGHTNESS_CLT_GetModelHandle()
- RM_MESH_LIGHT_XYL_CLT_GetModelHandle()
- RM_MESH_SCENE_CLT_GetModelHandle()
- RM_MESH_SCHEDULER_CLT_GetModelHandle()
- RM_MESH_TIME_CLT_GetModelHandle()
- RM_MESH_SENSOR_CLT_GetModelHandle()
- RM_MESH_HEALTH_CLIENT_GetModelHandle()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	req_opcode	Request Opcode.
[in]	p_parameter	Pointer to Parameter associated with Request Opcode.
[in]	rsp_opcode	Response Opcode.

◆ rm_ble_mesh_model_client_instance_t

struct rm_ble_mesh_model_client_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

rm_ble_mesh_model_client_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_ble_mesh_model_client_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
rm_ble_mesh_model_client_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ rm_ble_mesh_model_client_ctrl_t

typedef void rm_ble_mesh_model_client_ctrl_t
BLE MESH MODEL CLIENT control block. Allocate an instance specific control block to pass into the BLE mesh model health client API calls. **Implemented as** ◦ rm_ble_mesh_health_client_instance_ctrl_t

4.3.59 BLE Mesh Model Server Interface

Interfaces

Detailed Description

Interface for Bluetooth Low Energy Mesh Model Model Server functions.

Summary

The BLE Mesh interface for the Bluetooth Low Energy Mesh Model Server (BLE MESH MODEL SERVER) middleware provides Bluetooth Low Energy Mesh Model Model Server functionality.

The Bluetooth Low Energy Mesh Model Model Server interface can be implemented by:

- Bluetooth Low Energy Mesh Network Config Server (rm_mesh_config_srv)
- Bluetooth Low Energy Mesh Network Generic Battery Server (rm_mesh_generic_battery_srv)
- Bluetooth Low Energy Mesh Network Generic Default Transition Time Server (rm_mesh_generic_dtt_srv)
- Bluetooth Low Energy Mesh Network Generic Level Server (rm_mesh_generic_level_srv)
- Bluetooth Low Energy Mesh Network Generic Location Server (rm_mesh_generic_loc_srv)
- Bluetooth Low Energy Mesh Network Generic On Off Server (rm_mesh_generic_on_off_srv)
- Bluetooth Low Energy Mesh Network Generic Power Level Server (rm_mesh_generic_pl_srv)
- Bluetooth Low Energy Mesh Network Generic Power On Off Server (rm_mesh_generic_poo_srv)
- Bluetooth Low Energy Mesh Network Generic Admin Property Server (rm_mesh_generic_admin_prop_srv)
- Bluetooth Low Energy Mesh Network Generic Manufacturer Property Server (rm_mesh_generic_mfr_prop_srv)
- Bluetooth Low Energy Mesh Network Generic User Property Server (rm_mesh_generic_user_prop_srv)
- Bluetooth Low Energy Mesh Network Generic Client Property Server (rm_mesh_generic_client_prop_srv)
- Bluetooth Low Energy Mesh Network Light Control Server (rm_mesh_light_ctl_srv)
- Bluetooth Low Energy Mesh Network Light Hsl Server (rm_mesh_light_hsl_srv)
- Bluetooth Low Energy Mesh Network Light Location Server (rm_mesh_light_lc_srv)
- Bluetooth Low Energy Mesh Network Light Lightness Server (rm_mesh_light_lightness_srv)

- Bluetooth Low Energy Mesh Network Light Xyl Server (rm_mesh_light_xyl_srv)
- Bluetooth Low Energy Mesh Network Scheduler Server (rm_mesh_scheduler_srv)
- Bluetooth Low Energy Mesh Network Time Server (rm_mesh_time_srv)
- Bluetooth Low Energy Mesh Network Sensor Server (rm_mesh_sensor_srv)

Data Structures

struct	rm_ble_mesh_model_server_generic_prop_srv_state_info_t
struct	rm_ble_mesh_model_server_generic_prop_srv_id_info_t
struct	rm_ble_mesh_model_server_generic_prop_srv_ids_info_t
struct	rm_ble_mesh_model_server_callback_args_t
struct	rm_ble_mesh_model_server_timeout_callback_args_t
struct	rm_ble_mesh_model_server_cfg_t
struct	rm_ble_mesh_model_server_api_t
struct	rm_ble_mesh_model_server_instance_t

Typedefs

typedef void	rm_ble_mesh_model_server_ctrl_t

Enumerations

enum	rm_ble_mesh_model_server_generic_server_property_t
enum	rm_ble_mesh_model_server_user_access_t
enum	rm_ble_mesh_model_server_device_property_t

Data Structure Documentation

◆ rm_ble_mesh_model_server_generic_prop_srv_state_info_t

struct rm_ble_mesh_model_server_generic_prop_srv_state_info_t

Generic Property is a state representing a device property of an element. The properties can be one of the following

- Manufacturer Properties
- Admin Properties
- User Properties

Data Fields

uint16_t	property_id	User Property ID field is a 2-octet Assigned Number value referencing a property

uint8_t	property_type	Property Type - Manufacturer/Admin/User
uint8_t	access	User Access field is an enumeration indicating whether the device property can be read or written as a Generic Admin/User Property
uint8_t *	property_value	User Property Value field is a conditional field
uint16_t	property_value_len	

◆ rm_ble_mesh_model_server_generic_prop_srv_id_info_t

struct rm_ble_mesh_model_server_generic_prop_srv_id_info_t		
Generic Property ID a read-only state representing a device property that an element supports		
Data Fields		
uint16_t	property_id	Property ID field is a 2-octet Assigned Number value that references a device property

◆ rm_ble_mesh_model_server_generic_prop_srv_ids_info_t

struct rm_ble_mesh_model_server_generic_prop_srv_ids_info_t		
Generic Property IDs a state representing a set of device properties that an element supports		
Data Fields		
uint16_t *	property_ids	Property IDs field is a set of 2-octet Assigned Number value that references a set of device properties
uint16_t	property_ids_count	

◆ rm_ble_mesh_model_server_callback_args_t

struct rm_ble_mesh_model_server_callback_args_t
Mesh model server callback parameter definition

◆ rm_ble_mesh_model_server_timeout_callback_args_t

struct rm_ble_mesh_model_server_timeout_callback_args_t
Access Layer Model Publication Timeout Callback. Access Layer calls the registered callback to indicate Publication Timeout for the associated model. **Parameters** handle — Model Handle. blob — Blob if any or NULL.

◆ rm_ble_mesh_model_server_cfg_t

struct rm_ble_mesh_model_server_cfg_t	
BLE mesh model health server configuration parameters.	
Data Fields	
rm_ble_mesh_access_instance_t const *	p_access_instance
void const *	p_context
	Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t.
void const *	p_extend
	Placeholder for user extension.

Field Documentation

◆ p_access_instance

rm_ble_mesh_access_instance_t const* rm_ble_mesh_model_server_cfg_t::p_access_instance
the parameters for initialization.

◆ rm_ble_mesh_model_server_api_t

struct rm_ble_mesh_model_server_api_t	
Shared Interface definition for BLE MESH	
Data Fields	
fsp_err_t(*	open)(rm_ble_mesh_model_server_ctrl_t *const p_ctrl, rm_ble_mesh_model_server_cfg_t const *const p_cfg)
fsp_err_t(*	close)(rm_ble_mesh_model_server_ctrl_t *const p_ctrl)
fsp_err_t(*	stateUpdate)(rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_server_state_t const *const p_state)

Field Documentation

◆ open

fsp_err_t(* rm_ble_mesh_model_server_api_t::open) (rm_ble_mesh_model_server_ctrl_t *const p_ctrl, rm_ble_mesh_model_server_cfg_t const *const p_cfg)

API to open server model.

Implemented as

- RM_MESH_GENERIC_BATTERY_SRV_Open()
- RM_MESH_GENERIC_DTT_SRV_Open()
- RM_MESH_GENERIC_LEVEL_SRV_Open()
- RM_MESH_GENERIC_LOC_SRV_Open()
- RM_MESH_GENERIC_ON_OFF_SRV_Open()
- RM_MESH_GENERIC_PL_SRV_Open()
- RM_MESH_GENERIC_POO_SRV_Open()
- RM_MESH_GENERIC_ADMIN_PROP_SRV_Open()
- RM_MESH_GENERIC_CLIENT_PROP_SRV_Open()
- RM_MESH_GENERIC_MFR_PROP_SRV_Open()
- RM_MESH_GENERIC_USER_PROP_SRV_Open()
- RM_MESH_LIGHT_CTL_SRV_Open()
- RM_MESH_LIGHT_HSL_SRV_Open()
- RM_MESH_LIGHT_LC_SRV_Open()
- RM_MESH_LIGHT_LIGHTNESS_SRV_Open()
- RM_MESH_LIGHT_XYL_SRV_Open()
- RM_MESH_SCHEDULER_SRV_Open()
- RM_MESH_TIME_SRV_Open()
- RM_MESH_SENSOR_SRV_Open()
- RM_MESH_CONFIG_SRV_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

fsp_err_t(* rm_ble_mesh_model_server_api_t::close) (rm_ble_mesh_model_server_ctrl_t *const p_ctrl)

API to close server model.

Implemented as

- RM_MESH_GENERIC_BATTERY_SRV_Close()
- RM_MESH_GENERIC_DTT_SRV_Close()
- RM_MESH_GENERIC_LEVEL_SRV_Close()
- RM_MESH_GENERIC_LOC_SRV_Close()
- RM_MESH_GENERIC_ON_OFF_SRV_Close()
- RM_MESH_GENERIC_PL_SRV_Close()
- RM_MESH_GENERIC_POO_SRV_Close()
- RM_MESH_GENERIC_ADMIN_PROP_SRV_Close()
- RM_MESH_GENERIC_CLIENT_PROP_SRV_Close()
- RM_MESH_GENERIC_MFR_PROP_SRV_Close()
- RM_MESH_GENERIC_USER_PROP_SRV_Close()
- RM_MESH_LIGHT_CTL_SRV_Close()
- RM_MESH_LIGHT_HSL_SRV_Close()
- RM_MESH_LIGHT_LC_SRV_Close()
- RM_MESH_LIGHT_LIGHTNESS_SRV_Close()
- RM_MESH_LIGHT_XYL_SRV_Close()
- RM_MESH_SCHEDULER_SRV_Close()
- RM_MESH_TIME_SRV_Close()
- RM_MESH_SENSOR_SRV_Close()
- RM_MESH_CONFIG_SRV_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ stateUpdate

fsp_err_t(* rm_ble_mesh_model_server_api_t::stateUpdate) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_server_state_t const *const p_state)

API to send reply or to update state change.

Implemented as

- RM_MESH_GENERIC_BATTERY_SRV_StateUpdate()
- RM_MESH_GENERIC_LEVEL_SRV_StateUpdate()
- RM_MESH_GENERIC_LOC_SRV_StateUpdate()
- RM_MESH_GENERIC_ON_OFF_SRV_StateUpdate()
- RM_MESH_GENERIC_PL_SRV_StateUpdate()
- RM_MESH_GENERIC_POO_SRV_StateUpdate()
- RM_MESH_GENERIC_ADMIN_PROP_SRV_StateUpdate()
- RM_MESH_GENERIC_CLIENT_PROP_SRV_StateUpdate()
- RM_MESH_GENERIC_MFR_PROP_SRV_StateUpdate()
- RM_MESH_GENERIC_USER_PROP_SRV_StateUpdate()
- RM_MESH_LIGHT_CTL_SRV_StateUpdate()
- RM_MESH_LIGHT_HSL_SRV_StateUpdate()
- RM_MESH_LIGHT_LC_SRV_StateUpdate()
- RM_MESH_LIGHT_LIGHTNESS_SRV_StateUpdate()
- RM_MESH_LIGHT_XYL_SRV_StateUpdate()
- RM_MESH_SCHEDULER_SRV_StateUpdate()
- RM_MESH_TIME_SRV_StateUpdate()
- RM_MESH_SENSOR_SRV_StateUpdate()
- RM_MESH_CONFIG_SRV_StateUpdate()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_state	Pointer to model specific current/target state parameters.

◆ rm_ble_mesh_model_server_instance_t

struct rm_ble_mesh_model_server_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

rm_ble_mesh_model_server_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_ble_mesh_model_server_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
rm_ble_mesh_model_server_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ rm_ble_mesh_model_server_ctrl_t

typedef void rm_ble_mesh_model_server_ctrl_t
BLE MESH MODEL SERVER control block. Allocate an instance specific control block to pass into the BLE mesh model server API calls. **Implemented as** ◦ rm_ble_mesh_model_server_instance_ctrl_t

Enumeration Type Documentation

◆ rm_ble_mesh_model_server_generic_server_property_t

enum rm_ble_mesh_model_server_generic_server_property_t	
Enumerator	
RM_BLE_MESH_MODEL_SERVER_GENERIC_SERVER_PROPERTY_MANUFACTURER	Generic Manufacturer Properties
RM_BLE_MESH_MODEL_SERVER_GENERIC_SERVER_PROPERTY_ADMIN	Generic Admin Properties
RM_BLE_MESH_MODEL_SERVER_GENERIC_SERVER_PROPERTY_USER	Generic User Properties

◆ rm_ble_mesh_model_server_user_access_t

enum rm_ble_mesh_model_server_user_access_t	
User Access field values	
Enumerator	
RM_BLE_MESH_MODEL_SERVER_USER_ACCESS_PROHIBITED	User Access - Prohibited
RM_BLE_MESH_MODEL_SERVER_USER_ACCESS_READ	User Access - the device property can be read
RM_BLE_MESH_MODEL_SERVER_USER_ACCESS_WRITE	User Access - the device property can be written
RM_BLE_MESH_MODEL_SERVER_USER_ACCESS_READ_WRITE	User Access - the device property can be read and written

◆ rm_ble_mesh_model_server_device_property_t

enum rm_ble_mesh_model_server_device_property_t	
Enumerator	
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_TIME_OCCUPANCY_DELAY	Device Property - Light Control Time Occupancy Delay
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_TIME_FADE_ON	Device Property - Light Control Time Fade On
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_TIME_RUN_ON	Device Property - Light Control Time Run On
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_TIME_FADE	Device Property - Light Control Time Fade
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_TIME_PROLONG	Device Property - Light Control Time Prolong
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_TIME_FADE_STANDBY_AUTO	Device Property - Light Control Time Fade Standby Auto
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_TIME_FADE_STANDBY_MANUAL	Device Property - Light Control Time Fade Standby Manual
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_LIGHTNESS_ON	Device Property - Light Control Lightness On
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_LIGHTNESS_PROLONG	Device Property - Light Control Lightness Prolong
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_LIGHTNESS_STANDBY	Device Property - Light Control Lightness Standby
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_AMBIENT_LUXLEVEL_ON	Device Property - Light Control Ambient LuxLevel On
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_AMBIENT_LUXLEVEL_PROLONG	Device Property - Light Control Ambient LuxLevel Prolong
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_AMBIENT_LUXLEVEL_STANDBY	Device Property - Light Control Ambient LuxLevel Standby
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_REGULATOR_KIU	Device Property - Light Control Regulator Kiu
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_REGULATOR_KID	Device Property - Light Control Regulator Kid
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_REGULATOR_KPU	Device Property - Light Control Regulator Kpu

RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_REGULATOR_KPD	Device Property - Light Control Regulator Kpd
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_LIGHT_CONTROL_REGULATOR_ACCURACY	Device Property - Light Control Regulator Accuracy
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_MOTION_SENSED	Device Property - Motion Sensed
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_TIME_SINCE_MOTION_SENSED	Device Property - Time Since Motion Sensed
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_PEOPLE_COUNT	Device Property - People Count
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_PRESENCE_DETECTED	Device Property - Presence Detected
RM_BLE_MESH_MODEL_SERVER_DEVICE_PROPERTY_PRESENT_AMBIENT_LIGHT_LEVEL	Device Property - Present Ambient Light Level

4.3.60 BLE Mesh Network Interface

Interfaces

Detailed Description

Interface for Bluetooth Low Energy Mesh Network functions.

Summary

The BLE Mesh Network interface for the Bluetooth Low Energy Mesh Network (BLE MESH NETWORK) peripheral provides Bluetooth Low Energy Mesh Network functionality.

The Bluetooth Low Energy Mesh interface can be implemented by:

- Bluetooth Low Energy Mesh Network Network (rm_ble_mesh_network)

Data Structures

struct	rm_ble_mesh_network_header_t
struct	rm_ble_mesh_network_seq_number_state_t
struct	rm_ble_mesh_network_route_info_t
struct	rm_ble_mesh_network_proxy_address_list_t
struct	rm_ble_mesh_network_callback_args_t

struct	rm_ble_mesh_network_cfg_t
struct	rm_ble_mesh_network_api_t
struct	rm_ble_mesh_network_instance_t

Macros

#define	RM_BLE_MESH_NETWORK_UNASSIGNED_ADDRESS
#define	RM_BLE_MESH_NETWORK_PRIMARY_SUBNET
#define	RM_BLE_MESH_NETWORK_INVALID_SUBNET_HANDLE
#define	RM_BLE_MESH_NETWORK_INVALID_APPKEY_HANDLE
#define	RM_BLE_MESH_NETWORK_INVALID_NID

Typedefs

typedef uint16_t	rm_ble_mesh_network_address_t
typedef uint16_t	rm_ble_mesh_network_subnet_handle_t
typedef uint16_t	rm_ble_mesh_network_appkey_handle_t
typedef uint16_t	rm_ble_mesh_network_proxy_address_t
typedef uint8_t	rm_ble_mesh_network_interface_handle_t
typedef void	rm_ble_mesh_network_ctrl_t

Enumerations

enum	rm_ble_mesh_network_old_packet_treatment_t
enum	rm_ble_mesh_network_rx_state_event_t
enum	rm_ble_mesh_network_tx_state_event_t
enum	rm_ble_mesh_network_address_type_t
enum	rm_ble_mesh_proxy_filter_type_t
enum	rm_ble_mesh_proxy_config_opcode_t
enum	rm_ble_mesh_network_gatt_proxy_state_t
enum	rm_ble_mesh_network_gatt_proxy_adv_mode_t

enum	rm_ble_mesh_network_event_t

Data Structure Documentation

◆ rm_ble_mesh_network_header_t

struct rm_ble_mesh_network_header_t		
Network Header Type		
Data Fields		
uint8_t	ivi	Least significant bit of IV Index - 1 bit
uint8_t	nid	Value derived from the NetKey used to identify the Encrytion Key and Privacy Key used to secure this PDU - 7 bits
uint8_t	new_key	Indicates use of a new Netkey to which the network is being updated to
uint8_t	ctl	Network Control - 1 bit
uint8_t	ttl	Time To Live - 7 bits
rm_ble_mesh_network_address_t	src_addr	16 Bit Source Address
rm_ble_mesh_network_address_t	dst_addr	16 Bit Destination Address
uint32_t	seq_num	24 bit sequence number - currently filled only in recption path

◆ rm_ble_mesh_network_seq_number_state_t

struct rm_ble_mesh_network_seq_number_state_t		
Current Sequence Number and Block State		
Data Fields		
uint32_t	seq_num	Current Sequence Number
uint32_t	block_seq_num_max	Block Sequence number - maximum available

◆ rm_ble_mesh_network_route_info_t

struct rm_ble_mesh_network_route_info_t		
Network configuration information		
Data Fields		
rm_ble_mesh_network_interface_handle_t *	interface_handle	Pointer to list of address to be added/deleted

rm_ble_mesh_network_subnet_handle_t	subnet_handle	Count of addresses present in the provided list

◆ rm_ble_mesh_network_proxy_address_list_t

struct rm_ble_mesh_network_proxy_address_list_t		
Proxy Server's filter List		
Data Fields		
rm_ble_mesh_network_proxy_address_t *	address	Pointer to list of address to be added/deleted
uint16_t	count	Count of addresses present in the provided list

◆ rm_ble_mesh_network_callback_args_t

struct rm_ble_mesh_network_callback_args_t		
BLE Mesh Network callback parameter definition		
Data Fields		
rm_ble_mesh_network_event_t	event	Event code.
rm_ble_mesh_network_header_t *	p_header	Network header type.
rm_ble_mesh_network_subnet_handle_t	subnet_handle	Subnet handle.
rm_ble_mesh_network_interface_handle_t *	p_network_interface	Network interface handle.
rm_ble_mesh_buffer_t	event_data	
void const *	p_context	< Event data Context provided to user during callback.

◆ rm_ble_mesh_network_cfg_t

struct rm_ble_mesh_network_cfg_t	
BLE MESH NETWORK configuration parameters.	
Data Fields	
uint32_t	channel
	Select a channel corresponding to the channel number of the hardware. More...
rm_ble_mesh_bearer_instance_t const *	p_mesh_bearer_instance

	Instance structure of BLE Mesh Bearer.
rm_ble_mesh_provision_instance_t const *	p_mesh_provision_instance
	Instance structure of BLE Mesh Provision.
void(*	p_callback)(rm_ble_mesh_network_callback_args_t *p_args)
	Callback function.
void const *	p_context
	Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t.
void const *	p_extend
	Placeholder for user extension.

Field Documentation

◆ channel

uint32_t rm_ble_mesh_network_cfg_t::channel
Select a channel corresponding to the channel number of the hardware. the parameters for initialization.

◆ rm_ble_mesh_network_api_t

struct rm_ble_mesh_network_api_t	
BLE MESH NETWORK functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_cfg_t const *const p_cfg)
fsp_err_t(*	close)(rm_ble_mesh_network_ctrl_t *const p_ctrl)
fsp_err_t(*	broadcastSecureBeacon)(rm_ble_mesh_network_ctrl_t *const p_ctrl,

	rm_ble_mesh_network_subnet_handle_t subnet_handle)
fsp_err_t(*	sendPduOnInterface)(rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_route_info_t const *const p_route_info, rm_ble_mesh_network_header_t const *const p_header, rm_ble_mesh_buffer_t const *const p_buffer)
fsp_err_t(*	getAddressType)(rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t addr, rm_ble_mesh_network_address_type_t *const p_type)
fsp_err_t(*	fetchProxyState)(rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_gatt_proxy_state_t *const p_proxy_state)
fsp_err_t(*	setProxyFilter)(rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_route_info_t const *const p_route_info, rm_ble_mesh_proxy_filter_type_t type)
fsp_err_t(*	configProxyFilter)(rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_route_info_t const *const p_route_info, rm_ble_mesh_proxy_config_opcode_t opcode, rm_ble_mesh_network_proxy_address_list_t *const p_addr_list)
fsp_err_t(*	startProxyServerAdv)(rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, rm_ble_mesh_network_gatt_proxy_adv_mode_t proxy_adv_mode)
fsp_err_t(*	stopProxyServerAdv)(rm_ble_mesh_network_ctrl_t *const p_ctrl)
fsp_err_t(*	allocateSeqNumber)(rm_ble_mesh_network_ctrl_t *const p_ctrl, uint32_t *const p_seq_num)
fsp_err_t(*	getSeqNumberState)(rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_seq_number_state_t *const p_seq_num_state)
fsp_err_t(*	setSeqNumberState)(rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_seq_number_state_t const *const p_seq_num_state)
fsp_err_t(*	resetNetCache)(rm_ble_mesh_network_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* rm_ble_mesh_network_api_t::open) (rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_cfg_t const *const p_cfg)

Register Inerface with Network Layer.

Implemented as

- RM_BLE_MESH_NETWORK_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ close

fsp_err_t(* rm_ble_mesh_network_api_t::close) (rm_ble_mesh_network_ctrl_t *const p_ctrl)

Unregister Inerface with Network Layer.

Implemented as

- RM_BLE_MESH_NETWORK_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ broadcastSecureBeacon

fsp_err_t(* rm_ble_mesh_network_api_t::broadcastSecureBeacon) (rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle)

API to send Secure Network Beacon.

Implemented as

- RM_BLE_MESH_NETWORK_BroadcastSecureBeacon()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	subnet_handle	Subnet handle of the network to be broadcasted.

◆ sendPduOnInterface

fsp_err_t(* rm_ble_mesh_network_api_t::sendPduOnInterface) (rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_route_info_t const *const p_route_info, rm_ble_mesh_network_header_t const *const p_header, rm_ble_mesh_buffer_t const *const p_buffer)

Extension API to send Network PDUs on selected network interfaces.

Implemented as

- RM_BLE_MESH_NETWORK_SendPduOnInterface()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_route_info	Pointer to network configuration information.
[in]	p_header	Pointer to network Header.
[in]	p_buffer	Pointer to Lower Transport Payload.

◆ getAddressType

fsp_err_t(* rm_ble_mesh_network_api_t::getAddressType) (rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t addr, rm_ble_mesh_network_address_type_t *const p_type)

To get address type.

Implemented as

- RM_BLE_MESH_NETWORK_GetAddressType()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	addr	Input network address.
[in]	p_type	One of the following address type RM_BLE_MESH_NETWORK_ADDRESS_TYPE_INVALID RM_BLE_MESH_NETWORK_ADDRESS_TYPE_UNICAST RM_BLE_MESH_NETWORK_ADDRESS_TYPE_GROUP

◆ fetchProxyState

fsp_err_t(* rm_ble_mesh_network_api_t::fetchProxyState) (rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_gatt_proxy_state_t *const p_proxy_state)

Check if the proxy module is ready to handle proxy messages/events.

Implemented as

- RM_BLE_MESH_NETWORK_FetchProxyState()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_proxy_state	Returns the current state of the proxy.

◆ setProxyFilter

fsp_err_t(* rm_ble_mesh_network_api_t::setProxyFilter) (rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_route_info_t const *const p_route_info, rm_ble_mesh_proxy_filter_type_t type)

Set proxy server's filter type.

Implemented as

- RM_BLE_MESH_NETWORK_SetProxyFilter()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_route_info	Pointer to network configuration information.
[in]	type	Type of the proxy filter to be set. Either RM_BLE_MESH_NETWORK_PROXY_FILTER_TYPE_WHITELIST or RM_BLE_MESH_NETWORK_PROXY_FILTER_TYPE_BLACKLIST

◆ configProxyFilter

fsp_err_t(* rm_ble_mesh_network_api_t::configProxyFilter) (rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_route_info_t const *const p_route_info, rm_ble_mesh_proxy_config_opcode_t opcode, rm_ble_mesh_network_proxy_address_list_t *const p_addr_list)

Add or Delete/Remove addresses to/from proxy filter list.

Implemented as

- RM_BLE_MESH_NETWORK_ConfigProxyFilter()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_route_info	Pointer to network configuration information.
[in]	opcode	Operation to be performed. Either RM_BLE_MESH_NETWORK_PROXY_CONFIG_OPECODE_ADD_TO_FILTER or RM_BLE_MESH_NETWORK_PROXY_CONFIG_OPECODE_REM_FROM_FILTER
[in]	p_addr_list	Pointer to list of address to be added/deleted. And count of addresses present in the provided List.

◆ startProxyServerAdv

fsp_err_t(* rm_ble_mesh_network_api_t::startProxyServerAdv) (rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, rm_ble_mesh_network_gatt_proxy_adv_mode_t proxy_adv_mode)

Start connectable advertisements for a proxy server.

Implemented as

- RM_BLE_MESH_NETWORK_StartProxyServerAdv()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	subnet_handle	Subnet handle which the proxy server is part of network.
[in]	proxy_adv_mode	Mode of proxy advertisements. This could be of two types RM_BLE_MESH_NETWORK_GATT_PROXY_ADV_MODE_NET_ID or RM_BLE_MESH_NETWORK_GATT_PROXY_ADV_MODE_NODE_ID

◆ stopProxyServerAdv

fsp_err_t(* rm_ble_mesh_network_api_t::stopProxyServerAdv) (rm_ble_mesh_network_ctrl_t *const p_ctrl)

Stop connectable advertisements for a proxy server.

Implemented as

- RM_BLE_MESH_NETWORK_StopProxyServerAdv()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ allocateSeqNumber

fsp_err_t(* rm_ble_mesh_network_api_t::allocateSeqNumber) (rm_ble_mesh_network_ctrl_t *const p_ctrl, uint32_t *const p_seq_num)

To allocate sequence number.

Implemented as

- RM_BLE_MESH_NETWORK_AllocateSeqNumber()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_seq_num	Location where sequence number to be filled.

◆ getSeqNumberState

fsp_err_t(* rm_ble_mesh_network_api_t::getSeqNumberState) (rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_seq_number_state_t *const p_seq_num_state)

To get current sequence number state.

Implemented as

- RM_BLE_MESH_NETWORK_GetSeqNumberState()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_seq_num_state	Location where sequence number state to be filled.

◆ setSeqNumberState

fsp_err_t(* rm_ble_mesh_network_api_t::setSeqNumberState) (rm_ble_mesh_network_ctrl_t *const p_ctrl, rm_ble_mesh_network_seq_number_state_t const *const p_seq_num_state)

To set current sequence number state.

Implemented as

- RM_BLE_MESH_NETWORK_SetSeqNumberState()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_seq_num_state	Location from where sequence number state to be taken.

◆ resetNetCache

fsp_err_t(* rm_ble_mesh_network_api_t::resetNetCache) (rm_ble_mesh_network_ctrl_t *const p_ctrl)

To reinitialize all Network Layer cache entries.

Implemented as

- RM_BLE_MESH_NETWORK_ResetNetCache()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ rm_ble_mesh_network_instance_t

struct rm_ble_mesh_network_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
rm_ble_mesh_network_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_ble_mesh_network_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
rm_ble_mesh_network_api_t const *	p_api	Pointer to the API structure for this instance.

Macro Definition Documentation

◆ RM_BLE_MESH_NETWORK_UNASSIGNED_ADDRESS

#define RM_BLE_MESH_NETWORK_UNASSIGNED_ADDRESS
Unassigned Address.

◆ RM_BLE_MESH_NETWORK_PRIMARY_SUBNET

#define RM_BLE_MESH_NETWORK_PRIMARY_SUBNET
Primary Subnet - NetKey Index is 0x000

◆ RM_BLE_MESH_NETWORK_INVALID_SUBNET_HANDLE

#define RM_BLE_MESH_NETWORK_INVALID_SUBNET_HANDLE
Invalid Subnet Handle

◆ RM_BLE_MESH_NETWORK_INVALID_APPKEY_HANDLE

#define RM_BLE_MESH_NETWORK_INVALID_APPKEY_HANDLE
Invalid AppKey Handle

◆ RM_BLE_MESH_NETWORK_INVALID_NID

#define RM_BLE_MESH_NETWORK_INVALID_NID
Invalid NID Identifier. The NID is a 7-bit value that identifies the security material that is used to secure Network PDUs. Treating 0xFF as Invalid NID value.

Typedef Documentation

◆ rm_ble_mesh_network_address_t

typedef uint16_t rm_ble_mesh_network_address_t
Network Address Type

◆ rm_ble_mesh_network_subnet_handle_t

typedef uint16_t rm_ble_mesh_network_subnet_handle_t
Subnet Handle

◆ rm_ble_mesh_network_appkey_handle_t

typedef uint16_t rm_ble_mesh_network_appkey_handle_t
AppKey Handle

◆ rm_ble_mesh_network_proxy_address_t

typedef uint16_t rm_ble_mesh_network_proxy_address_t
Proxy Address

◆ rm_ble_mesh_network_interface_handle_t

typedef uint8_t rm_ble_mesh_network_interface_handle_t
Network Interface Handle

◆ rm_ble_mesh_network_ctrl_t

typedef void rm_ble_mesh_network_ctrl_t
BLE MESH NETWORK control block. Allocate an instance specific control block to pass into the BLE MESH API calls. **Implemented as** ◦ rm_ble_mesh_network_instance_ctrl_t

Enumeration Type Documentation

◆ rm_ble_mesh_network_old_packet_treatment_t

enum rm_ble_mesh_network_old_packet_treatment_t	
Ignore netcache wrapping.	
Enumerator	
RM_BLE_MESH_NETWORK_OLD_PACKET_TREATMENT_DROPPED	Old packets will be dropped.
RM_BLE_MESH_NETWORK_OLD_PACKET_TREATMENT_PROCESSED	Ignores cache wrapping. Old packets will be processed.

◆ rm_ble_mesh_network_rx_state_event_t

enum rm_ble_mesh_network_rx_state_event_t	
Whether to enable the RX callback event or not.	
Enumerator	
RM_BLE_MESH_NETWORK_RX_STATE_EVENT_DISABLE	Rx state callback disable.
RM_BLE_MESH_NETWORK_RX_STATE_EVENT_ENABLE	Rx state callback enable.

◆ rm_ble_mesh_network_tx_state_event_t

enum rm_ble_mesh_network_tx_state_event_t	
Whether to enable the TX callback event or not.	
Enumerator	
RM_BLE_MESH_NETWORK_TX_STATE_EVENT_DISABLE	Tx state callback disable.
RM_BLE_MESH_NETWORK_TX_STATE_EVENT_ENABLE	Tx state callback enable.

◆ rm_ble_mesh_network_address_type_t

enum rm_ble_mesh_network_address_type_t	
Address Type	
Enumerator	
RM_BLE_MESH_NETWORK_ADDRESS_TYPE_INVALID	Invalid address type
RM_BLE_MESH_NETWORK_ADDRESS_TYPE_UNICAST	Unicast address type
RM_BLE_MESH_NETWORK_ADDRESS_TYPE_VIRTUAL	Virtual address type
RM_BLE_MESH_NETWORK_ADDRESS_TYPE_GROUP	Group address type

◆ rm_ble_mesh_proxy_filter_type_t

enum rm_ble_mesh_proxy_filter_type_t	
Data structures for filter type and address list	
Enumerator	
RM_BLE_MESH_NETWORK_PROXY_FILTER_TYPE_WHITELIST	GATT Proxy Filter Types - Whitelist
RM_BLE_MESH_NETWORK_PROXY_FILTER_TYPE_BLACKLIST	GATT Proxy Filter Type - Blacklist

◆ rm_ble_mesh_proxy_config_opcode_t

enum rm_ble_mesh_proxy_config_opcode_t	
GATT Proxy Configuration Opcodes	
Enumerator	
RM_BLE_MESH_NETWORK_PROXY_CONFIG_OPECODE_SET_FILTER	GATT Proxy Configuration - Set Filter Opcode
RM_BLE_MESH_NETWORK_PROXY_CONFIG_OPECODE_ADD_TO_FILTER	GATT Proxy Configuration - Add to Filter Opcode
RM_BLE_MESH_NETWORK_PROXY_CONFIG_OPECODE_REM_FROM_FILTER	GATT Proxy Configuration - Remove From Filter Opcode
RM_BLE_MESH_NETWORK_PROXY_CONFIG_OPECODE_FILTER_STATUS	GATT Proxy Configuration - Filter Status Opcode

◆ rm_ble_mesh_network_gatt_proxy_state_t

enum rm_ble_mesh_network_gatt_proxy_state_t		
GATT Proxy States.		
Proxy Callback	Proxy Iface	Error Code
NULL	Down	MS_PROXY_NULL
NULL	Up	MS_PROXY_NULL
!NULL	Down	MS_PROXY_READY
!NULL	UP	MS_PROXY_CONNECTED
Enumerator		
RM_BLE_MESH_NETWORK_GATT_PROXY_STATE_NULL	GATT Proxy State - Invalid/Not Initialized	
RM_BLE_MESH_NEgTWORK_GATT_PROXY_STATE_READY	GATT Proxy State - Ready/Initialized	
RM_BLE_MESH_NETWORK_GATT_PROXY_STATE_CONNECTED	GATT Proxy State - Connected	

◆ rm_ble_mesh_network_gatt_proxy_adv_mode_t

enum rm_ble_mesh_network_gatt_proxy_adv_mode_t	
GATT Proxy ADV Modes	
Enumerator	
RM_BLE_MESH_NETWORK_GATT_PROXY_ADV_MODE_NET_ID	Network ID Type
RM_BLE_MESH_NETWORK_GATT_PROXY_ADV_MODE_NODE_ID	Node Idetity Type

◆ rm_ble_mesh_network_event_t

enum rm_ble_mesh_network_event_t	
GATT Proxy Events	
Enumerator	
RM_BLE_MESH_NETWORK_EVENT_PROXY_UP	GATT Proxy Event - Interface Up
RM_BLE_MESH_NETWORK_EVENT_PROXY_DOWN	GATT Proxy Event - Interface Down
RM_BLE_MESH_NETWORK_EVENT_PROXY_STATUS	GATT Proxy Event - Status
RM_BLE_MESH_NETWORK_EVENT_RECIEVE	GATT Proxy Event - Receive
RM_BLE_MESH_NETWORK_EVENT_TX_QUEUE_EMPTY	GATT Proxy Event - Tx queue empty

4.3.61 BLE Mesh Provision Interface

Interfaces

Detailed Description

Interface for Bluetooth Low Energy Mesh Provision functions.

Summary

The BLE Mesh Provision interface for the Bluetooth Low Energy Mesh Provision (BLE MESH PROVISION) peripheral provides Bluetooth Low Energy Mesh Provision functionality.

The Bluetooth Low Energy Mesh interface can be implemented by:

- Bluetooth Low Energy Mesh Network Provision (rm_ble_mesh_provision)

Data Structures

struct	rm_ble_mesh_provision_device_t
struct	rm_ble_mesh_provision_oob_info_t
struct	rm_ble_mesh_provision_capabilities_t
struct	rm_ble_mesh_provision_method_t
struct	rm_ble_mesh_provision_data_t
struct	rm_ble_mesh_provision_device_info_t
struct	rm_ble_mesh_provision_callback_args_t
struct	rm_ble_mesh_provision_cfg_t
struct	rm_ble_mesh_provision_api_t
struct	rm_ble_mesh_provision_instance_t

Macros

#define	RM_BLE_MESH_PROVISION_KEY_NETKEY_SIZE
#define	RM_BLE_MESH_PROVISION_OOB_VALUE_SIZE
#define	RM_BLE_MESH_PROVISION_URI_HASH_SIZE
#define	RM_BLE_MESH_PROVISION_HANDLE_INVALID

Typedefs

typedef uint8_t	rm_ble_mesh_provision_handle_t
typedef void	rm_ble_mesh_provision_ctrl_t

Enumerations

enum	rm_ble_mesh_provision_role_t
enum	rm_ble_mesh_provision_bearer_type_t
enum	rm_ble_mesh_provision_pdu_type_t
enum	rm_ble_mesh_provision_pub_key_value_t
enum	rm_ble_mesh_provision_auth_method_t

enum	rm_ble_mesh_provision_output_oob_action_t
enum	rm_ble_mesh_provision_input_oob_action_t
enum	rm_ble_mesh_provision_adv_transport_opcode_t
enum	rm_ble_mesh_provision_gatt_transport_opcode_t
enum	rm_ble_mesh_provision_error_code_t
enum	rm_ble_mesh_provision_link_close_reason_t
enum	rm_ble_mesh_provision_oob_type_t
enum	rm_ble_mesh_provision_event_type_t

Data Structure Documentation

◆ rm_ble_mesh_provision_device_t

struct rm_ble_mesh_provision_device_t		
Device Information used for Provisioning		
Data Fields		
uint8_t	uuid[RM_BLE_MESH_DEVICE_UUID_SIZE]	Device UUID - Used in unprovisioned device beacon and Provisioning Invite
uint16_t	oob	OOB Information
rm_ble_mesh_buffer_t *	uri	URI if any, to be given in encoded form

◆ rm_ble_mesh_provision_oob_info_t

struct rm_ble_mesh_provision_oob_info_t		
OOB type for provisioning		
Data Fields		
uint16_t	action	OOB Action information
uint8_t	size	OOB Size information

◆ rm_ble_mesh_provision_capabilities_t

struct rm_ble_mesh_provision_capabilities_t		
Device capabilities used for Provisioning		
Data Fields		
uint8_t	num_elements	Number of Elements

uint16_t	supported_algorithms	Supported algorithms
uint8_t	supported_pubkey	Public key type
uint8_t	supported_soob	Static OOB type
rm_ble_mesh_provision_oob_info_t	output_oob	Output OOB information
rm_ble_mesh_provision_oob_info_t	input_oob	Input OOB information

◆ rm_ble_mesh_provision_method_t

struct rm_ble_mesh_provision_method_t		
Provisioning method information		
Data Fields		
uint8_t	algorithm	Algorithm selected
uint8_t	pubkey	Public key usage
uint8_t	auth	Authentication type
rm_ble_mesh_provision_oob_info_t	oob	OOB type

◆ rm_ble_mesh_provision_data_t

struct rm_ble_mesh_provision_data_t		
Data exchanged during Provisiong procedure		
Data Fields		
uint8_t	netkey[RM_BLE_MESH_PROVISION_KEY_NETKEY_SIZE]	NetKey
uint16_t	keyid	Index of the NetKey
uint8_t	flags	Flags bitmask bit 0: Key Refresh Flag. 0: Not-In-Phase2 1: In-Phase2 bit 1: IV Update Flag 0: Normal operation 1: IV Update active bits 2-7: RFU
uint32_t	iv_index	Current value of the IV index
uint16_t	unicast_addr	Unicast address of the primary element

◆ rm_ble_mesh_provision_device_info_t

struct rm_ble_mesh_provision_device_info_t
Provisioning device information

Data Fields		
rm_ble_mesh_provision_bearer_type_t	type	Provisioning Bearer Types.
rm_ble_mesh_provision_device_t *	p_device	Device Information used for Provisioning.

◆ rm_ble_mesh_provision_callback_args_t

struct rm_ble_mesh_provision_callback_args_t		
Mesh model client callback parameter definition		
Data Fields		
rm_ble_mesh_provision_handle_t *	p_handle	Handle to reference the active provisioning context.
rm_ble_mesh_provision_event_type_t	event_type	Provisioning event type.
rm_ble_mesh_error_code_t	event_result	BLE MESH error code.
rm_ble_mesh_buffer_t	event_data	Payload type.
void const *	p_context	

◆ rm_ble_mesh_provision_cfg_t

struct rm_ble_mesh_provision_cfg_t	
BLE MESH PROVISION configuration parameters.	
Data Fields	
uint32_t	channel
	Select a channel corresponding to the channel number of the hardware. More...
rm_ble_mesh_provision_capabilities_t *	p_capabilities
	Device capabilities used for Provisioning.
rm_ble_mesh_instance_t const *	p_mesh_instance
	Instance structure of BLE Mesh.
void(*	p_callback)(rm_ble_mesh_provision_callback_args_t *p_args)
	Callback.

void const *	p_context
	Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t.
void const *	p_extend
	Placeholder for user extension.

Field Documentation

◆ channel

uint32_t rm_ble_mesh_provision_cfg_t::channel

Select a channel corresponding to the channel number of the hardware.

the parameters for initialization.

◆ rm_ble_mesh_provision_api_t

struct rm_ble_mesh_provision_api_t

BLE MESH PROVISION functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t(*	open)(rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_cfg_t const *const p_cfg)
fsp_err_t(*	close)(rm_ble_mesh_provision_ctrl_t *const p_ctrl)
fsp_err_t(*	setup)(rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_role_t role, rm_ble_mesh_provision_device_info_t info, uint16_t timeout)
fsp_err_t(*	bind)(rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_device_info_t info, uint8_t attention, rm_ble_mesh_provision_handle_t *const p_handle)
fsp_err_t(*	sendPdu)(rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_handle_t const *const p_handle, rm_ble_mesh_provision_pdu_type_t type, rm_ble_mesh_buffer_t pdu_data)

fsp_err_t(*	setAuthVal)(rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_handle_t const *const p_handle, rm_ble_mesh_buffer_t auth_value)
fsp_err_t(*	abort)(rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_handle_t const *const p_handle, rm_ble_mesh_provision_link_close_reason_t reason)
fsp_err_t(*	getLocalPublicKey)(rm_ble_mesh_provision_ctrl_t *const p_ctrl, uint8_t *const public_key)
fsp_err_t(*	setLocalPublicKey)(rm_ble_mesh_provision_ctrl_t *const p_ctrl, uint8_t const *const public_key)

Field Documentation

◆ open

fsp_err_t(* rm_ble_mesh_provision_api_t::open) (rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_cfg_t const *const p_cfg)

Open access middleware.

Implemented as

- RM_BLE_MESH_PROVISION_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ close

fsp_err_t(* rm_ble_mesh_provision_api_t::close) (rm_ble_mesh_provision_ctrl_t *const p_ctrl)

Close access middleware.

Implemented as

- RM_BLE_MESH_PROVISION_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ setup

fsp_err_t(* rm_ble_mesh_provision_api_t::setup) (rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_role_t role, rm_ble_mesh_provision_device_info_t info, uint16_t timeout)

Setup the device for provisioning.

Implemented as

- RM_BLE_MESH_PROVISION_Setup()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	role	Provisioniong role to be setup - Device or Provisioner.
[in]	info	Device information.
[in]	timeout	The time period for which the setup shall be active.

Returns

API_SUCCESS or Error Code on failure

◆ bind

fsp_err_t(* rm_ble_mesh_provision_api_t::bind) (rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_device_info_t info, uint8_t attention, rm_ble_mesh_provision_handle_t *const p_handle)

Bind to the peer device for provisioning

Implemented as

- RM_BLE_MESH_PROVISION_Bind()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	info	Device information.
[out]	p_handle	Pointer to handle.

Note

This API is for use by the Provisioner application only upon reception of an Unprovisioned Device Beacon.

Returns

API_SUCCESS or Error Code on failure

◆ sendPdu

fsp_err_t(* rm_ble_mesh_provision_api_t::sendPdu) (rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_handle_t const *const p_handle, rm_ble_mesh_provision_pdu_type_t type, rm_ble_mesh_buffer_t pdu_data)

Send provisioning PDUs to the peer.

Implemented as

- RM_BLE_MESH_PROVISION_SendPdu()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_handle	Pointer to provisioning context to be used.
[in]	type	Following PDU types are handled - PROV_PDU_TYPE_START PROV_PDU_TYPE_INPUT_CMPLT PROV_PDU_TYPE_DATA
[in]	pdu_data	Pointer to the data corresponding to the above PDUs

Returns

API_SUCCESS or Error Code on failure

◆ setAuthVal

fsp_err_t(* rm_ble_mesh_provision_api_t::setAuthVal) (rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_handle_t const *const p_handle, rm_ble_mesh_buffer_t auth_value)

Set the display authval.

Implemented as

- RM_BLE_MESH_PROVISION_SetAuthVal()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_handle	Pointer to provisioning context to be used.
[in]	auth_value	Pointer to the Authval (UINT32 *) or (uint8_t *)

Returns

API_SUCCESS or Error Code on failure

◆ abort

fsp_err_t(* rm_ble_mesh_provision_api_t::abort) (rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_handle_t const *const p_handle, rm_ble_mesh_provision_link_close_reason_t reason)

Abort the provisioning procedure

Implemented as

- RM_BLE_MESH_PROVISION_Abort()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_handle	Pointer to provisioning context to be used.
[in]	reason	Reason for termination.

Returns

API_SUCCESS or Error Code on failure

◆ getLocalPublicKey

fsp_err_t(* rm_ble_mesh_provision_api_t::getLocalPublicKey) (rm_ble_mesh_provision_ctrl_t *const p_ctrl, uint8_t *const public_key)

Utility API to get current ECDH Public Key to be used for Provisioning

Implemented as

- RM_BLE_MESH_PROVISION_GetLocalPublicKey()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	public_key	To a pointer of uint8_t array of length RM_BLE_MESH_PROVISION_KEY_NETKEY_SIZE

Returns

API_SUCCESS or Error Code on failure

◆ setLocalPublicKey

fsp_err_t(* rm_ble_mesh_provision_api_t::setLocalPublicKey) (rm_ble_mesh_provision_ctrl_t *const p_ctrl, uint8_t const *const public_key)

Utility API to set current ECDH Public Key to be used for Provisioning

Implemented as

- RM_BLE_MESH_PROVISION_SetLocalPublicKey()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	public_key	To a pointer of uint8_t array of length RM_BLE_MESH_PROVISION_KEY_NETKEY_SIZE

Returns

API_SUCCESS or Error Code on failure

◆ rm_ble_mesh_provision_instance_t

struct rm_ble_mesh_provision_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

rm_ble_mesh_provision_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_ble_mesh_provision_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
rm_ble_mesh_provision_api_t const *	p_api	Pointer to the API structure for this instance.

Macro Definition Documentation

◆ RM_BLE_MESH_PROVISION_KEY_NETKEY_SIZE

#define RM_BLE_MESH_PROVISION_KEY_NETKEY_SIZE

Provisioning array size requirements Provisioning key netkey size

◆ RM_BLE_MESH_PROVISION_OOB_VALUE_SIZE

#define RM_BLE_MESH_PROVISION_OOB_VALUE_SIZE

Provisioning OOB value size

◆ RM_BLE_MESH_PROVISION_URI_HASH_SIZE

#define RM_BLE_MESH_PROVISION_URI_HASH_SIZE
Provisioning URI hash size

◆ RM_BLE_MESH_PROVISION_HANDLE_INVALID

#define RM_BLE_MESH_PROVISION_HANDLE_INVALID
Invalid Provisioning Handle

Typedef Documentation

◆ rm_ble_mesh_provision_handle_t

typedef uint8_t rm_ble_mesh_provision_handle_t
Handle to reference the active provisioning context

◆ rm_ble_mesh_provision_ctrl_t

typedef void rm_ble_mesh_provision_ctrl_t
BLE MESH PROVISION control block. Allocate an instance specific control block to pass into the BLE MESH API calls. **Implemented as** ◦ rm_ble_mesh_provision_instance_ctrl_t

Enumeration Type Documentation

◆ rm_ble_mesh_provision_role_t

enum rm_ble_mesh_provision_role_t	
Provisiong Roles	
Enumerator	
RM_BLE_MESH_PROVISION_ROLE_DEVICE	Device role.
RM_BLE_MESH_PROVISION_ROLE_PROVISIONER	Provisioner role.

◆ rm_ble_mesh_provision_bearer_type_t

enum rm_ble_mesh_provision_bearer_type_t	
Provisioning Bearer Types	
Enumerator	
RM_BLE_MESH_PROVISION_BEARER_TYPE_ADV	Advertising bearer type.
RM_BLE_MESH_PROVISION_BEARER_TYPE_GATT	GATT bearer type.

◆ rm_ble_mesh_provision_pdu_type_t

enum rm_ble_mesh_provision_pdu_type_t	
Provisioning PDU Types	
Enumerator	
RM_BLE_MESH_PROVISION_PDU_TYPE_INVITE	Invite PDU type.
RM_BLE_MESH_PROVISION_PDU_TYPE_CAPAB	Capable PDu type.
RM_BLE_MESH_PROVISION_PDU_TYPE_START	Start PDU type.
RM_BLE_MESH_PROVISION_PDU_TYPE_PUBKEY	Public key PDU type.
RM_BLE_MESH_PROVISION_PDU_TYPE_INPUT_COMPLETE	Input complete PDU type.
RM_BLE_MESH_PROVISION_PDU_TYPE_CONF	Configuration PDU type.
RM_BLE_MESH_PROVISION_PDU_TYPE_RAND	Random PDU type.
RM_BLE_MESH_PROVISION_PDU_TYPE_DATA	Data PDU type.
RM_BLE_MESH_PROVISION_PDU_TYPE_COMPLETE	Complete PDU type.
RM_BLE_MESH_PROVISION_PDU_TYPE_FAILED	Failed PDU type.

◆ rm_ble_mesh_provision_pub_key_value_t

enum rm_ble_mesh_provision_pub_key_value_t	
Provisioning public key values	
Enumerator	
RM_BLE_MESH_PROVISION_PUBKEY_NO_OOB	Public key no OOB.
RM_BLE_MESH_PROVISION_PUBKEY_OOB	Public key OOB.

◆ rm_ble_mesh_provision_auth_method_t

enum rm_ble_mesh_provision_auth_method_t	
Provisioning authentication method values	
Enumerator	
RM_BLE_MESH_PROVISION_AUTH_METHOD_OOB_NONE	Authentication method none.
RM_BLE_MESH_PROVISION_AUTH_METHOD_OOB_STATIC	Authentication method static.
RM_BLE_MESH_PROVISION_AUTH_METHOD_OOB_OUTPUT	Authentication method output.
RM_BLE_MESH_PROVISION_AUTH_METHOD_OOB_INPUT	Authentication method input.

◆ rm_ble_mesh_provision_output_oob_action_t

enum rm_ble_mesh_provision_output_oob_action_t	
Provisioning Output OOB action values	
Enumerator	
RM_BLE_MESH_PROVISION_OUTPUT_OOB_ACTION_BLINK	Output OOB action blink.
RM_BLE_MESH_PROVISION_OUTPUT_OOB_ACTION_BEEP	Output OOB action beep.
RM_BLE_MESH_PROVISION_OUTPUT_OOB_ACTION_VIBRATE	Output OOB action vibrate.
RM_BLE_MESH_PROVISION_OUTPUT_OOB_ACTION_NUMERIC	Output OOB action numeric.
RM_BLE_MESH_PROVISION_OUTPUT_OOB_ACTION_ALPHANUMERIC	Output OOB action alphanumeric.

◆ rm_ble_mesh_provision_input_oob_action_t

enum rm_ble_mesh_provision_input_oob_action_t	
Provisioning Input OOB action values	
Enumerator	
RM_BLE_MESH_PROVISION_INPUT_OOB_ACTION_PUSH	Iuput OOB action push.
RM_BLE_MESH_PROVISION_INPUT_OOB_ACTION_TWIST	Input OOB action twist.
RM_BLE_MESH_PROVISION_INPUT_OOB_ACTION_NUMERIC	Iuput OOB action numeric.
RM_BLE_MESH_PROVISION_INPUT_OOB_ACTION_ALPHANUMERIC	Iuput OOB action alphanumeric.

◆ rm_ble_mesh_provision_adv_transport_opcode_t

enum rm_ble_mesh_provision_adv_transport_opcode_t	
Specification defined transport Opcodes for PB-ADV bearer	
Enumerator	
RM_BLE_MESH_PROVISION_ADV_TRANSPORT_OPECODE_OPEN_REQ	Link Open Request
RM_BLE_MESH_PROVISION_ADV_TRANSPORT_OPECODE_OPEN_CNF	Link Open Confirm
RM_BLE_MESH_PROVISION_ADV_TRANSPORT_OPECODE_CLOSE_IND	Link Close Indication

◆ rm_ble_mesh_provision_gatt_transport_opcode_t

enum rm_ble_mesh_provision_gatt_transport_opcode_t	
Implementation specific transport Opcodes for PB-GATT bearer	
Enumerator	
RM_BLE_MESH_PROVISION_GATT_TRANSPORT_OPECODE_OPEN_IND	Link Open Indication
RM_BLE_MESH_PROVISION_GATT_TRANSPORT_OPECODE_CLOSE_IND	Link Close Indication

◆ rm_ble_mesh_provision_error_code_t

enum rm_ble_mesh_provision_error_code_t	
Provisioning Failure Error Codes	
Enumerator	
RM_BLE_MESH_PROVISION_ERROR_CODE_PROHIBITED	Failure error code prohibited.
RM_BLE_MESH_PROVISION_ERROR_CODE_INVALID_PDU	Failure error code invalid PDU.
RM_BLE_MESH_PROVISION_ERROR_CODE_INVALID_FORMAT	Failure error code invalid format.
RM_BLE_MESH_PROVISION_ERROR_CODE_UNEXPECTED_PDU	Failure error code unexpected PDU.
RM_BLE_MESH_PROVISION_ERROR_CODE_CONFIRMATION_FAILED	Failure error code confirmation failed.
RM_BLE_MESH_PROVISION_ERROR_CODE_OUT_OF_RESOURCES	Failure error code out of resources.
RM_BLE_MESH_PROVISION_ERROR_CODE_DECRYPTION_FAILED	Failure error code decryption failed.
RM_BLE_MESH_PROVISION_ERROR_CODE_UNEXPECTED_ERROR	Failure error code unexpected error.
RM_BLE_MESH_PROVISION_ERROR_CODE_CANNOT_ASSIGN_ADDRESS	Failure error code cannot assign address.

◆ rm_ble_mesh_provision_link_close_reason_t

enum rm_ble_mesh_provision_link_close_reason_t	
Provisioning LinkClose Error codes	
Enumerator	
RM_BLE_MESH_PROVISION_LINK_CLOSE_REASON_SUCCESS	Linkclose error code reason success.
RM_BLE_MESH_PROVISION_LINK_CLOSE_REASON_TIMEOUT	Linkclose error code reason timeout.
RM_BLE_MESH_PROVISION_LINK_CLOSE_REASON_FAIL	Linkclose error code reason fail.

◆ rm_ble_mesh_provision_oob_type_t

enum rm_ble_mesh_provision_oob_type_t	
Provisioning OOB type masks for ADV data	
Enumerator	
RM_BLE_MESH_PROVISION_OOB_TYPE_OTHER	Other OOB type mask.
RM_BLE_MESH_PROVISION_OOB_TYPE_URI	Uri OOB type mask.
RM_BLE_MESH_PROVISION_OOB_TYPE_2DMRC	2DMRC OOB type mask
RM_BLE_MESH_PROVISION_OOB_TYPE_BARCODE	Bar code OOB type mask.
RM_BLE_MESH_PROVISION_OOB_TYPE_NFC	NFC OOB type mask.
RM_BLE_MESH_PROVISION_OOB_TYPE_NUMBER	Number OOB type mask.
RM_BLE_MESH_PROVISION_OOB_TYPE_STRING	String OOB type mask.
RM_BLE_MESH_PROVISION_OOB_TYPE_ONBOX	On box OOB type mask.
RM_BLE_MESH_PROVISION_OOB_TYPE_INSIDEBOX	Inside box OOB type mask.
RM_BLE_MESH_PROVISION_OOB_TYPE_ONPIECEOFPAPER	On piece of paper OOB type mask.
RM_BLE_MESH_PROVISION_OOB_TYPE_INSIDEMANUAL	Inside manual OOB type mask.
RM_BLE_MESH_PROVISION_OOB_TYPE_ONDEVICE	On device OOB type mask.

◆ rm_ble_mesh_provision_event_type_t

enum rm_ble_mesh_provision_event_type_t

Provision Events The Asynchronous Events notified to Application by the Module.

Enumerator	
RM_BLE_MESH_PROVISION_EVENT_TYPE_UNPROVISIONED_BEACON	This event indicates the availability of an unprovisioned device beacon, with the following values as parameters in the rm_ble_mesh_provision_callback_args_t callback. Parameters [in] phandle — Pointer to the Provisioning context handle [in] event_type — RM_BLE_MESH_PROVISION_EVENT_TYPE_UNPROVISIONED_BEACON. [in] event_result [in] event_data — Pointer to the array with the UUID of the device. [in] event_datalen — RM_BLE_MESH_DEVICE_UUID_SIZE *Note* *This event is received by the Provisioner application. On reception of this event, the application shall make use of the RM_BLE_MESH_PROVISION_Bind() to initiate the provisioning procedure.* Returns FSP_SUCCESS (always)
RM_BLE_MESH_PROVISION_EVENT_TYPE_PROVISIONING_SETUP	This event indicates that the provisioning procedure capability exchange is complete, with the following values as parameters in the

rm_ble_mesh_provision_callback_args_t callback.

Parameters

[in]	phandle	Pointer to the Provisioning context handle
[in]	event_type	RM_BLE_MESH_PROVISION_EVENT_TYPE_PROVISIONING_SETUP.
[in]	event_result	FSP_SUCCESS on successful procedure completion, else an Error Code.
[in]	event_data	When local provisioner, this contains peer device capabilities and when local device, this contains the attention timeout value.
[in]	event_datalen	When local provisioner, sizeof(rm_ble_mesh_provision_capabilities_t) and when local device, size of(uint32_t).

Note

When local provisioner, the appliation shall select the required capability from the received

	capabilities and choose to start the procedure by calling RM_BLE_MESH_PROVISION_SendPdu() put RM_BLE_MESH_PROVISION_EVENT_TYPE _PROVISIONING_SETUP as the third argument.. Returns FSP_SUCCESS (always)
RM_BLE_MESH_PROVISION_EVENT_TYPE_OOB_DISPLAY	This event indicates to the application the OOB random data that is to be displayed on the UI via the rm_ble_mesh_provision_callback_args_t callback. Parameters [in] phandle — Pointer to the Provisioning context handle [in] event_type — RM_BLE_MESH_PROVISION_EVENT_TYPE_OOB_DISPLAY. [in] event_result — FSP_SUCCESS on successful procedure completion, else an Error Code. [in] event_data — Pointer to OOB information as in rm_ble_mesh_provision_oob_info_t. [in] event_datalen — sizeof (rm_ble_mesh_provision_oob_info_t). Returns FSP_SUCCESS (always)
RM_BLE_MESH_PROVISION_EVENT_TYPE_OOB_ENTRY	This event indicates to the application requesting for OOB random data that is to be used in the procedure via the

	rm_ble_mesh_provision_callback_args_t callback. Parameters [in] phandle — Pointer to the Provisioning context handle [in] event_type — RM_BLE_MESH_PROVISION_EVENT_TYPE_OOB_ENTRY. [in] event_result — FSP_SUCCESS on successful procedure completion, else an Error Code. [in] event_data — Pointer to OOB information as in rm_ble_mesh_provision_oob_info_t. [in] event_datalen — sizeof (rm_ble_mesh_provision_oob_info_t). Returns FSP_SUCCESS (always)
RM_BLE_MESH_PROVISION_EVENT_TYPE_DEVINPUT_COMPLETE	This event indicates to the application that the peer device has completed the Input of OOB when this capability is negotiated via the rm_ble_mesh_provision_callback_args_t callback. Parameters [in] phandle — Pointer to the Provisioning context handle

	[in] event_type RM_BLE_MESH_PROVISION_EVENT_TYPE_DEVINPUT_COMPLETE. [in] event_result FSP_SUCCESS on successful procedure completion, else an Error Code. [in] event_data NULL. [in] event_datalen 0. *Note* *This event is generated only for the provisioner application.* Returns FSP_SUCCESS (always)
RM_BLE_MESH_PROVISION_EVENT_TYPE_PROVDATA_INFO_REQ	This event indicates to the application requesting for Provisional data to be sent to the peer device via the rm_ble_mesh_provision_callback_args_t callback. Parameters [in] phandle Pointer to the Provisioning context handle [in] event_type RM_BLE_MESH_PROVISION_EVENT_TYPE_PROVDATA_INFO_REQ. [in] event_result FSP_SUCCESS on successful procedure completion, else an Error Code.

	[in] event_data NULL. [in] event_datalen 0. *Note* *This event is generated only for the provisioner application.* Returns FSP_SUCCESS (always)
RM_BLE_MESH_PROVISION_EVENT_TYPE_PROVDATA_INFO	This event indicates to the application the Provisional data received from the Provisioner via the rm_ble_mesh_provision_callback_args_t callback. Parameters [in] phandle Pointer to the Provisioning context handle [in] event_type RM_BLE_MESH_PROVISION_EVENT_TYPE_PROVDATA_INFO. [in] event_result FSP_SUCCESS on successful procedure completion, else an Error Code. [in] event_data Pointer to the provisioning data rm_ble_mesh_provision_data_t. [in] event_datalen sizeof(rm_ble_mesh_provision_data_t). *Note* *This event is generated only for the device*

	application. Returns FSP_SUCCESS (always)
RM_BLE_MESH_PROVISION_EVENT_TYPE_PROVISIONING_COMPLETE	This event indicates to the application that the provisioning procedure is complete via the rm_ble_mesh_provision_callback_args_t callback. Parameters [in] phandle — Pointer to the Provisioning context handle [in] event_type — RM_BLE_MESH_PROVISION_EVENT_TYPE_PROVISIONING_COMPLETE. [in] event_result — FSP_SUCCESS on successful procedure completion, else an Error Code. [in] event_data — NULL. [in] event_datalen — 0. Returns FSP_SUCCESS (always)

4.3.62 BLE Mesh Scene Server Interface

Interfaces

Detailed Description

Interface for Bluetooth Low Energy Mesh Model Scene Server functions.

Summary

The BLE Mesh interface for the Bluetooth Low Energy Mesh Model Scene Server (BLE MESH HEALTH SERVER) middleware provides Bluetooth Low Energy Mesh Model Scene Server functionality.

The Bluetooth Low Energy Mesh Model Scene Server interface can be implemented by:

- Bluetooth Low Energy Mesh Network Scene Server (rm_mesh_scene_srv)

Data Structures

struct	rm_ble_mesh_scene_server_callback_args_t
struct	rm_ble_mesh_scene_server_timeout_callback_args_t
struct	rm_ble_mesh_scene_server_cfg_t
struct	rm_ble_mesh_scene_server_api_t
struct	rm_ble_mesh_scene_server_instance_t

Typedefs

typedef void	rm_ble_mesh_scene_server_ctrl_t

Enumerations

enum	rm_ble_mesh_scene_srv_event_t

Data Structure Documentation

◆ rm_ble_mesh_scene_server_callback_args_t

struct rm_ble_mesh_scene_server_callback_args_t
Mesh model scene server callback parameter definition

◆ rm_ble_mesh_scene_server_timeout_callback_args_t

struct rm_ble_mesh_scene_server_timeout_callback_args_t
Access Layer Model Publication Timeout Callback. Access Layer calls the registered callback to indicate Publication Timeout for the associated model. **Parameters** handle — Model Handle. blob — Blob if any or NULL.

◆ rm_ble_mesh_scene_server_cfg_t

struct rm_ble_mesh_scene_server_cfg_t

BLE mesh model scene server configuration parameters.

Data Fields	
rm_ble_mesh_access_instance_t const *	p_access_instance
void const *	p_context
	Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t.
void const *	p_extend
	Placeholder for user extension.

Field Documentation

◆ p_access_instance

rm_ble_mesh_access_instance_t const* rm_ble_mesh_scene_server_cfg_t::p_access_instance

the parameters for initialization.

◆ rm_ble_mesh_scene_server_api_t

struct rm_ble_mesh_scene_server_api_t

Shared Interface definition for BLE MESH

Data Fields	
fsp_err_t(*	open)(rm_ble_mesh_scene_server_ctrl_t *const p_ctrl, rm_ble_mesh_scene_server_cfg_t const *const p_cfg)
fsp_err_t(*	close)(rm_ble_mesh_scene_server_ctrl_t *const p_ctrl)
fsp_err_t(*	stateUpdate)(rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_server_state_t const *const p_state)

Field Documentation

◆ open

fsp_err_t(* rm_ble_mesh_scene_server_api_t::open) (rm_ble_mesh_scene_server_ctrl_t *const p_ctrl, rm_ble_mesh_scene_server_cfg_t const *const p_cfg)

API to open scene server model.

Implemented as

- RM_MESH_SCENE_SRV_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

fsp_err_t(* rm_ble_mesh_scene_server_api_t::close) (rm_ble_mesh_scene_server_ctrl_t *const p_ctrl)

API to close scene server model.

Implemented as

- RM_MESH_SCENE_SRV_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ stateUpdate

fsp_err_t(* rm_ble_mesh_scene_server_api_t::stateUpdate) (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_server_state_t const *const p_state)

API to send reply or to update state change.

Implemented as

- RM_MESH_SCENE_SRV_StateUpdate()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_state	Pointer to model specific current/target state parameters.

◆ rm_ble_mesh_scene_server_instance_t

struct rm_ble_mesh_scene_server_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

rm_ble_mesh_scene_server_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_ble_mesh_scene_server_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
rm_ble_mesh_scene_server_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ rm_ble_mesh_scene_server_ctrl_t

typedef void rm_ble_mesh_scene_server_ctrl_t

BLE MESH SCENE SERVER control block. Allocate an instance specific control block to pass into the BLE mesh model scene server API calls.

Implemented as

- rm_ble_mesh_scene_server_instance_ctrl_t

Enumeration Type Documentation

◆ rm_ble_mesh_scene_srv_event_t

enum rm_ble_mesh_scene_srv_event_t

Scene Event Types

Enumerator	
RM_BLE_MESH_SCENE_SRV_EVENT_STORE	Scene Event - Store
RM_BLE_MESH_SCENE_SRV_EVENT_DELETE	Scene Event - Delete
RM_BLE_MESH_SCENE_SRV_EVENT_RECALL_START	Scene Event - Recall Start
RM_BLE_MESH_SCENE_SRV_EVENT_RECALL_COMPLETE	Scene Event - Recall Complete
RM_BLE_MESH_SCENE_SRV_EVENT_RECALL_IMMEDIATE	Scene Event - Recall Immediate

4.3.63 BLE Mesh Upper Trans Interface

Interfaces

Detailed Description

Interface for Bluetooth Low Energy Mesh Upper Trans functions.

Summary

The BLE Mesh interface for the Bluetooth Low Energy Mesh Upper Trans peripheral provides Bluetooth Low Energy Mesh Upper Trans functionality.

The Bluetooth Low Energy Mesh interface can be implemented by:

- Bluetooth Low Energy Mesh Network Upper Trans (rm_ble_mesh_upper_trans)

Data Structures

struct	rm_ble_mesh_upper_trans_access_layer_pdu_t
struct	rm_ble_mesh_upper_trans_control_pdu_t
struct	rm_ble_mesh_upper_trans_friendship_setting_t
struct	rm_ble_mesh_upper_trans_friendship_info_t
struct	rm_ble_mesh_upper_trans_heartbeat_publication_info_t
struct	rm_ble_mesh_upper_trans_heartbeat_subscription_info_t
struct	rm_ble_mesh_upper_trans_callback_args_t
struct	rm_ble_mesh_upper_trans_cfg_t
struct	rm_ble_mesh_upper_trans_api_t
struct	rm_ble_mesh_upper_trans_instance_t

Typedefs

typedef void	rm_ble_mesh_upper_trans_ctrl_t

Enumerations

enum	rm_ble_mesh_upper_trans_access_message_evnet_t
enum	rm_ble_mesh_upper_trans_control_message_evnet_t
enum	rm_ble_mesh_upper_trans_control_opcode_t
enum	rm_ble_mesh_upper_trans_friend_role_t
enum	rm_ble_mesh_upper_trans_event_t

Data Structure Documentation

◆ rm_ble_mesh_upper_trans_access_layer_pdu_t

struct rm_ble_mesh_upper_trans_access_layer_pdu_t		
Access PDU		
Data Fields		
rm_ble_mesh_network_address_t	src_addr	Source address.
rm_ble_mesh_network_address_t	dst_addr	Destination address.
uint8_t *	p_label	Lable UUID, represending Virtual Address of Destination.
rm_ble_mesh_network_subnet_handle_t	subnet_handle	Handle identifying the subnet.
rm_ble_mesh_network_appkey_handle_t	appkey_handle	Handle identifying the AppKey to be used for Transport Layer encryption.
uint8_t	ttl	Time to Live.
void *	p_parameter	Transport parameter, based on the type and header.

◆ rm_ble_mesh_upper_trans_control_pdu_t

struct rm_ble_mesh_upper_trans_control_pdu_t		
Control PDU		
Data Fields		
rm_ble_mesh_network_address_t	src_addr	Source address.
rm_ble_mesh_network_address_t	dst_addr	Destination address.
rm_ble_mesh_network_subnet_handle_t	subnet_handle	Handle identifying the subnet.
uint8_t	ttl	Time to Live.
rm_ble_mesh_upper_trans_control_opcode_t	opcode	Control Packet Opcode.
void *	p_parameter	Transport parameter, based on the type and header.

◆ rm_ble_mesh_upper_trans_friendship_setting_t

struct rm_ble_mesh_upper_trans_friendship_setting_t
Low Power Node setting

Data Fields		
rm_ble_mesh_network_subnet_handle_t	subnet_handle	The subnet to initiate the friendship procedure
uint8_t	criteria	Friend criteria that is required. RSSI, Receive Window, MessageQueue size requirements can be established.
uint8_t	rx_delay	Receive delay in milliseconds that the LPN will wait before listening to response for any request.
uint32_t	poll_timeout	Timeout in milliseconds after which the LPN will send Poll PDU to check for data from the friend.
uint32_t	setup_timeout	Timeout in milliseconds for which the Friend Establishment procedure is to be tried.

◆ rm_ble_mesh_upper_trans_friendship_info_t

struct rm_ble_mesh_upper_trans_friendship_info_t		
Low Power Node element information		
Data Fields		
rm_ble_mesh_network_subnet_handle_t	subnet_handle	Main subnet handle of the element
rm_ble_mesh_network_address_t	addr	Peer LPN/Friend Address
uint16_t	lpn_counter	Low Power Node Counter
uint16_t	friend_counter	Friend Counter - TODO: Should be a global index?

◆ rm_ble_mesh_upper_trans_heartbeat_publication_info_t

struct rm_ble_mesh_upper_trans_heartbeat_publication_info_t		
Hearbeat Publication state		
Data Fields		
rm_ble_mesh_network_address_t	daddr	Destination address for Heartbeat messages
uint8_t	count_log	Count to control the number of periodic heartbeat transport messages to be sent
uint8_t	period_log	Period to control the cadence of periodic heartbeat transport

		messages
uint8_t	ttl	TTL value to be used when sending Heartbeat messages
uint16_t	features	Features that trigger sending Heartbeat messages when changed
uint16_t	netkey_index	Global NetKey index of the NetKey to be used to send Heartbeat messges

◆ rm_ble_mesh_upper_trans_heartbeat_subscription_info_t

struct rm_ble_mesh_upper_trans_heartbeat_subscription_info_t		
Hearbeat Subscription state		
Data Fields		
rm_ble_mesh_network_address_t	saddr	Source address for Heartbeat messages that a node shall process
rm_ble_mesh_network_address_t	daddr	Destination address for Heartbeat messages
uint8_t	count_log	Counter that tracks the number of periodic heartbeat transport message received since receiving the most recent Config Heartbeat Subscription Set message
uint8_t	period_log	Period that controls the period for processing periodical Heartbeat transport control messages
uint16_t	min_hops	Minimum hops value registered when receiving heartbeat messages since receiving the most recent Config Heartbeat Subscription Set message
uint16_t	max_hops	Maximum hops value registered when receiving heartbeat messages since receiving the most recent Config Heartbeat Subscription Set message

◆ rm_ble_mesh_upper_trans_callback_args_t

struct rm_ble_mesh_upper_trans_callback_args_t		
BLE Mesh Network callback parameter definition		
Data Fields		
rm_ble_mesh_upper_trans_even	event	Event code.

t_t		
rm_ble_mesh_network_header_t *	p_header	Event code.
rm_ble_mesh_network_subnet_handle_t	subnet_handle	Associated Subnet Handle.
rm_ble_mesh_network_appkey_handle_t	appkey_handle	Associated AppKey Handle.
rm_ble_mesh_error_code_t	result	Event result.
rm_ble_mesh_buffer_t	event_data	
void const *	p_context	Context provided to user during callback.

◆ rm_ble_mesh_upper_trans_cfg_t

struct rm_ble_mesh_upper_trans_cfg_t	
BLE MESH configuration parameters.	
Data Fields	
uint32_t	channel
	Select a channel corresponding to the channel number of the hardware. More...
rm_ble_mesh_lower_trans_instance_t const *	p_mesh_lower_trans_instance
	Instance structure of BLE Mesh Bearer.
void(*	p_callback)(rm_ble_mesh_upper_trans_callback_args_t *p_args)
	Callback.
void const *	p_context
	Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t.
void const *	p_extend
	Placeholder for user extension.

Field Documentation

◆ channel

uint32_t rm_ble_mesh_upper_trans_cfg_t::channel

Select a channel corresponding to the channel number of the hardware.

the parameters for initialization.

◆ rm_ble_mesh_upper_trans_api_t

struct rm_ble_mesh_upper_trans_api_t

BLE MESH functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t(*	open)(rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, rm_ble_mesh_upper_trans_cfg_t const *const p_cfg)

fsp_err_t(*	setHeartbeatSubscription)(rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, rm_ble_mesh_upper_trans_heartbeat_subscription_info_t *const p_info)
fsp_err_t(*	getHeartbeatSubscription)(rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, rm_ble_mesh_upper_trans_heartbeat_subscription_info_t *const p_info)
fsp_err_t(*	triggerHeartbeat)(rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, uint8_t change_in_feature_bit)

Field Documentation

◆ open

fsp_err_t(* rm_ble_mesh_upper_trans_api_t::open) (rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, rm_ble_mesh_upper_trans_cfg_t const *const p_cfg)

Register Inerface with Transport Layer.

Implemented as

- RM_BLE_MESH_UPPER_TRANS_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ close

fsp_err_t(* rm_ble_mesh_upper_trans_api_t::close) (rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl)

Unregister Inerface with Transport Layer.

Implemented as

- RM_BLE_MESH_UPPER_TRANS_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ sendAccessPdu

fsp_err_t(* rm_ble_mesh_upper_trans_api_t::sendAccessPdu) (rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, rm_ble_mesh_upper_trans_access_layer_pdu_t const *const p_access_layer_pdu, rm_ble_mesh_lower_trans_reliable_t reliable)

API to send Access Layer PDUs.

Implemented as

- RM_BLE_MESH_UPPER_TRANS_SendAccessPdu()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_access_layer_pdu	Pointer to Access Layer PDUs.
[in]	reliable	If requires lower transport Ack, set reliable as RM_BLE_MESH_LOWER_TRANS_RELIABLE_ENABLE.

◆ sendControlPdu

fsp_err_t(* rm_ble_mesh_upper_trans_api_t::sendControlPdu) (rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, rm_ble_mesh_upper_trans_control_pdu_t const *const p_control_pdu)

API to send transport Control PDUs.

Implemented as

- RM_BLE_MESH_UPPER_TRANS_SendControlPdu()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_control_pdu	Pointer to control PDUs.

◆ lpnSetupFriendship

fsp_err_t(* rm_ble_mesh_upper_trans_api_t::lpnSetupFriendship) (rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, rm_ble_mesh_upper_trans_friendship_setting_t const *const p_setting)

API to setup Friendship.

Implemented as

- RM_BLE_MESH_UPPER_TRANS_LpnSetupFriendship()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_setting	Pointer to friendship settings.

◆ lpnClearFriendship

fsp_err_t(* rm_ble_mesh_upper_trans_api_t::lpnClearFriendship) (rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl)

API to terminate friendship.

Implemented as

- RM_BLE_MESH_UPPER_TRANS_LpnClearFriendship()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ lpnManageSubscription

fsp_err_t(* rm_ble_mesh_upper_trans_api_t::lpnManageSubscription) (rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, rm_ble_mesh_upper_trans_control_opcode_t action, uint16_t const *const p_addr_list, uint16_t count)

API to manage friend subscription list.

Implemented as

- RM_BLE_MESH_UPPER_TRANS_LpnManageSubscription()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	action	Will be one of RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_SUBSCRN_LIST_ADD or RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_SUBSCRN_LIST_REMOVE.
[in]	p_addr_list	Pointer to the packed list of addresses to be managed.
[in]	count	Number of addresses given.

◆ lpnPoll

fsp_err_t(* rm_ble_mesh_upper_trans_api_t::lpnPoll) (rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl)

To trigger Friend Poll from application.

Implemented as

- RM_BLE_MESH_UPPER_TRANS_LpnPoll()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ isValidLpnElementAddress

fsp_err_t(* rm_ble_mesh_upper_trans_api_t::isValidLpnElementAddress)
(rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t addr,
rm_ble_mesh_lower_trans_lpn_handle_t *const p_lpn_handle)

To check if address matches with any of the LPN.

Implemented as

- RM_BLE_MESH_UPPER_TRANS_IsValidLpnElementAddress()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	addr	Unicast address to search.
[out]	p_lpn_handle	Pointer to an LPN Handle, which will be filled if match found.

◆ isValidLpnSubscriptionAddress

fsp_err_t(* rm_ble_mesh_upper_trans_api_t::isValidLpnSubscriptionAddress)
(rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t addr,
rm_ble_mesh_lower_trans_lpn_handle_t *const p_lpn_handle)

To check if valid subscription address of an LPN to receive a packet.

Implemented as

- RM_BLE_MESH_UPPER_TRANS_IsValidLpnSubscriptionAddress()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	addr	Address to search.
[out]	p_lpn_handle	Pointer to an LPN Handle, which will be filled if match found.

◆ getLpnPolltimeout

fsp_err_t(* rm_ble_mesh_upper_trans_api_t::getLpnPolltimeout) (rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t lpn_addr, uint32_t *const p_poll_timeout)

To get Poll Timeout of an LPN.

Implemented as

- RM_BLE_MESH_UPPER_TRANS_GetLpnPolltimeout()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	lpn_addr	LPN address to search.
[out]	p_poll_timeout	Pointer to a memory where poll timeout of the LPN to be filled (if match found).

◆ getFriendshipInfo

fsp_err_t(* rm_ble_mesh_upper_trans_api_t::getFriendshipInfo) (rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, rm_ble_mesh_upper_trans_friend_role_t role, uint16_t lpn_index, rm_ble_mesh_upper_trans_friendship_info_t *const p_node)

To get the LPN node information.

Implemented as

- RM_BLE_MESH_UPPER_TRANS_GetFriendshipInfo()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	role	Local friendship role.
[in]	lpn_index	Index of the LPN element.
[out]	p_node	Pointer to copy the information.

◆ lpnRegisterSecurityUpdate

fsp_err_t(* rm_ble_mesh_upper_trans_api_t::lpnRegisterSecurityUpdate) (rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint8_t flag, uint32_t ivindex)

To add the security update information.

Implemented as

- RM_BLE_MESH_UPPER_TRANS_LpnRegisterSecurityUpdate()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	subnet_handle	Handle to identitfy the network.
[in]	flag	Flag indicating the Key Refresh and IV Update state.
[in]	ivindex	Current IV Index of teh network.

◆ clearAllLpn

fsp_err_t(* rm_ble_mesh_upper_trans_api_t::clearAllLpn) (rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl)

To clear information related to all LPNs.

Implemented as

- RM_BLE_MESH_UPPER_TRANS_ClearAllLpn()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ setHeartbeatPublication

fsp_err_t(* rm_ble_mesh_upper_trans_api_t::setHeartbeatPublication)
(rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl,
rm_ble_mesh_upper_trans_heartbeat_publication_info_t *const p_info)

To set the Heartbeat publication data.

Implemented as

- RM_BLE_MESH_UPPER_TRANS_SetHeartbeatPublication()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_info	Heartbeat Publication information data as in rm_ble_mesh_upper_trans_heartbeat_publication_info_t.

◆ getHeartbeatPublication

fsp_err_t(* rm_ble_mesh_upper_trans_api_t::getHeartbeatPublication)
(rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl,
rm_ble_mesh_upper_trans_heartbeat_publication_info_t *const p_info)

To get the Heartbeat publication data.

Implemented as

- RM_BLE_MESH_UPPER_TRANS_GetHeartbeatPublication()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_info	Heartbeat Publication information data as in rm_ble_mesh_upper_trans_heartbeat_publication_info_t.

◆ setHeartbeatSubscription

fsp_err_t(* rm_ble_mesh_upper_trans_api_t::setHeartbeatSubscription)
(rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl,
rm_ble_mesh_upper_trans_heartbeat_subscription_info_t *const p_info)

To set the Heartbeat subscription data.

Implemented as

- RM_BLE_MESH_UPPER_TRANS_SetHeartbeatSubscription()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_info	Heartbeat Publication information data as in rm_ble_mesh_upper_trans_heartbeat_subscription_info_t.

◆ getHeartbeatSubscription

fsp_err_t(* rm_ble_mesh_upper_trans_api_t::getHeartbeatSubscription)
(rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl,
rm_ble_mesh_upper_trans_heartbeat_subscription_info_t *const p_info)

To get the Heartbeat subscription data.

Implemented as

- RM_BLE_MESH_UPPER_TRANS_GetHeartbeatSubscription()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_info	Heartbeat Publication information data as in rm_ble_mesh_upper_trans_heartbeat_subscription_info_t.

◆ triggerHeartbeat

fsp_err_t(* rm_ble_mesh_upper_trans_api_t::triggerHeartbeat) (rm_ble_mesh_upper_trans_ctrl_t *const p_ctrl, uint8_t change_in_feature_bit)

To trigger Heartbeat send on change in feature.

Implemented as

- RM_BLE_MESH_UPPER_TRANS_GetHeartbeatSubscription()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	change_in_feature_bit	Bit mask of the changed feature field.

◆ rm_ble_mesh_upper_trans_instance_t

struct rm_ble_mesh_upper_trans_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

rm_ble_mesh_upper_trans_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_ble_mesh_upper_trans_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
rm_ble_mesh_upper_trans_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ rm_ble_mesh_upper_trans_ctrl_t

typedef void rm_ble_mesh_upper_trans_ctrl_t

BLE MESH control block. Allocate an instance specific control block to pass into the BLE MESH API calls.

Implemented as

- rm_ble_mesh_upper_trans_instance_ctrl_t

Enumeration Type Documentation

◆ rm_ble_mesh_upper_trans_access_message_evnet_t

enum rm_ble_mesh_upper_trans_access_message_evnet_t	
Whether to enable the access message event or not.	
Enumerator	
RM_BLE_MESH_UPPER_TRANS_ACCESS_MESSAGE_EVENT_DISABLE	Access state callback disable.
RM_BLE_MESH_UPPER_TRANS_ACCESS_MESSAGE_EVENT_ENABLE	Access state callback enable.

◆ rm_ble_mesh_upper_trans_control_message_evnet_t

enum rm_ble_mesh_upper_trans_control_message_evnet_t	
Whether to enable the control message event or not.	
Enumerator	
RM_BLE_MESH_UPPER_TRANS_CONTROL_MESSAGE_EVENT_DISABLE	Control state callback disable.
RM_BLE_MESH_UPPER_TRANS_CONTROL_MESSAGE_EVENT_ENABLE	Control state callback enable.

◆ rm_ble_mesh_upper_trans_control_opcode_t

enum rm_ble_mesh_upper_trans_control_opcode_t	
Tranport Layer Control Packet Opcodes RFU: 0x02 - 0x0F	
Enumerator	
RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_POLL	Sent by a Low Power node to its Friend node to request any messages that it has cached for the Low Power node
RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_UPDATE	Sent by a Friend node to a Low Power node to inform it about cache and/or security updates
RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_REQ	Broadcast by a Low Power node to start to find a friend
RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_OFFER	Sent by a Friend node to a Low Power node to offer to become its friend
RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_CLEAR	Sent to a Friend node to inform a previous friend of a Low Power node about the removal of a friendship
RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_CLEAR_CNF	Sent from a previous friend to Friend node to confirm that a prior friend relationship has been removed
RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_SUBSCRN_LIST_ADD	Sent to a Friend node to add one or more addresses to the Friend Subscription List
RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_SUBSCRN_LIST_REMOVE	Sent to a Friend node to remove one or more addresses from the Friend Subscription List
RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_SUBSCRN_LIST_CNF	Sent by a Friend node to confirm Friend Subscription List updates
RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_HEARTBEAT	Sent by a node to let other nodes determine topology of a Subnet

◆ rm_ble_mesh_upper_trans_friend_role_t

enum rm_ble_mesh_upper_trans_friend_role_t	
Friend role	
Enumerator	
RM_BLE_MESH_UPPER_TRANS_FRIEND_ROLE_FRIEND	Friend role.
RM_BLE_MESH_UPPER_TRANS_FRIEND_ROLE_LPN	LPN role.

◆ rm_ble_mesh_upper_trans_event_t

enum rm_ble_mesh_upper_trans_event_t
Callback Event

4.3.64 Block Media Interface

Interfaces

Detailed Description

Interface for block media memory access.

Summary

The block media interface supports reading, writing, and erasing media devices. All functions are non-blocking if possible. The callback is used to determine when an operation completes.

Implemented by:

- SD/MMC Block Media Implementation (rm_block_media_sdmmc)
- SPI Block Media Implementation (rm_block_media_spi)
- USB HMSC Block Media Implementation (rm_block_media_usb)

Data Structures

struct	rm_block_media_info_t
struct	rm_block_media_callback_args_t
struct	rm_block_media_cfg_t
struct	rm_block_media_status_t

struct	rm_block_media_api_t
struct	rm_block_media_instance_t

Typedefs

typedef void	rm_block_media_ctrl_t

Enumerations

enum	rm_block_media_event_t

Data Structure Documentation

◆ rm_block_media_info_t

struct rm_block_media_info_t		
Block media device information supported by the instance		
Data Fields		
uint32_t	sector_size_bytes	Sector size in bytes.
uint32_t	num_sectors	Total number of sectors.
bool	reentrant	True if connected block media driver is reentrant.
bool	write_protected	True if connected block media device is write protected.

◆ rm_block_media_callback_args_t

struct rm_block_media_callback_args_t		
Callback function parameter data		
Data Fields		
rm_block_media_event_t	event	The event can be used to identify what caused the callback.
void const *	p_context	Placeholder for user data.

◆ rm_block_media_cfg_t

struct rm_block_media_cfg_t	
User configuration structure, used in open function	
Data Fields	
void(*	p_callback)(rm_block_media_callback_args_t *p_args)
	DEPRECATED - Block size, must be a power of 2 multiple of sector_size_bytes. More...

void const *	p_context
	User defined context passed into callback function.
void const *	p_extend
	Extension parameter for hardware specific settings.

Field Documentation

◆ p_callback

void(* rm_block_media_cfg_t::p_callback) (rm_block_media_callback_args_t *p_args)

DEPRECATED - Block size, must be a power of 2 multiple of sector_size_bytes.

Pointer to callback function

◆ rm_block_media_status_t

struct rm_block_media_status_t

Current status

Data Fields

bool	initialized	False if rm_block_media_api_t::mediaInit has not been called since media was inserted, true otherwise.
bool	busy	True if media is busy with a previous write/erase operation.
bool	media_inserted	Media insertion status, true if media is not removable.

◆ rm_block_media_api_t

struct rm_block_media_api_t

Block media interface API.

Data Fields

fsp_err_t(*	open)(rm_block_media_ctrl_t *const p_ctrl, rm_block_media_cfg_t const *const p_cfg)
fsp_err_t(*	mediaInit)(rm_block_media_ctrl_t *const p_ctrl)

fsp_err_t(*	read)(rm_block_media_ctrl_t *const p_ctrl, uint8_t *const p_dest_address, uint32_t const block_address, uint32_t const num_blocks)
fsp_err_t(*	write)(rm_block_media_ctrl_t *const p_ctrl, uint8_t const *const p_src_address, uint32_t const block_address, uint32_t const num_blocks)
fsp_err_t(*	erase)(rm_block_media_ctrl_t *const p_ctrl, uint32_t const block_address, uint32_t const num_blocks)
fsp_err_t(*	callbackSet)(rm_block_media_ctrl_t *const p_ctrl, void(*p_callback)(rm_block_media_callback_args_t *), void const *const p_context, rm_block_media_callback_args_t *const p_callback_memory)
fsp_err_t(*	statusGet)(rm_block_media_ctrl_t *const p_ctrl, rm_block_media_status_t *const p_status)
fsp_err_t(*	infoGet)(rm_block_media_ctrl_t *const p_ctrl, rm_block_media_info_t *const p_info)
fsp_err_t(*	close)(rm_block_media_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* rm_block_media_api_t::open) (rm_block_media_ctrl_t *const p_ctrl, rm_block_media_cfg_t const *const p_cfg)

Initialize block media device. rm_block_media_api_t::mediaInit must be called to complete the initialization procedure.

Implemented as

- RM_BLOCK_MEDIA_SDMMC_Open
- RM_BLOCK_MEDIA_SPI_Open
- RM_BLOCK_MEDIA_USB_Open

Parameters

[in]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ mediaInit

fsp_err_t(* rm_block_media_api_t::mediaInit) (rm_block_media_ctrl_t *const p_ctrl)

Initializes a media device. If the device is removable, it must be plugged in prior to calling this API. This function blocks until media initialization is complete.

Implemented as

- RM_BLOCK_MEDIA_SDMMC_MediaInit
- RM_BLOCK_MEDIA_SPI_MediaInit
- RM_BLOCK_MEDIA_USB_MediaInit

Parameters

[in]	p_ctrl	Control block set in rm_block_media_api_t::open call.

◆ read

fsp_err_t(* rm_block_media_api_t::read) (rm_block_media_ctrl_t *const p_ctrl, uint8_t *const p_dest_address, uint32_t const block_address, uint32_t const num_blocks)

Reads blocks of data from the specified memory device address to the location specified by the caller.

Implemented as

- RM_BLOCK_MEDIA_SDMMC_Read
- RM_BLOCK_MEDIA_SPI_Read
- RM_BLOCK_MEDIA_USB_Read

Parameters

[in]	p_ctrl	Control block set in rm_block_media_api_t::open call.
[out]	p_dest_address	Destination to read the data into.
[in]	block_address	Block address to read the data from.
[in]	num_blocks	Number of blocks of data to read.

◆ write

fsp_err_t(* rm_block_media_api_t::write) (rm_block_media_ctrl_t *const p_ctrl, uint8_t const *const p_src_address, uint32_t const block_address, uint32_t const num_blocks)

Writes blocks of data to the specified device memory address.

Implemented as

- RM_BLOCK_MEDIA_SDMMC_Write
- RM_BLOCK_MEDIA_SPI_Write
- RM_BLOCK_MEDIA_USB_Write

Parameters

[in]	p_ctrl	Control block set in rm_block_media_api_t::open call.
[in]	p_src_address	Address to read the data to be written.
[in]	block_address	Block address to write the data to.
[in]	num_blocks	Number of blocks of data to write.

◆ erase

fsp_err_t(* rm_block_media_api_t::erase) (rm_block_media_ctrl_t *const p_ctrl, uint32_t const block_address, uint32_t const num_blocks)

Erases blocks of data from the memory device.

Implemented as

- RM_BLOCK_MEDIA_SDMMC_Erase
- RM_BLOCK_MEDIA_SPI_Erase
- RM_BLOCK_MEDIA_USB_Erase

Parameters

[in]	p_ctrl	Control block set in rm_block_media_api_t::open call.
[in]	block_address	Block address to start the erase process at.
[in]	num_blocks	Number of blocks of data to erase.

◆ callbackSet

fsp_err_t(* rm_block_media_api_t::callbackSet) (rm_block_media_ctrl_t *const p_ctrl, void(*p_callback)(rm_block_media_callback_args_t *), void const *const p_context, rm_block_media_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- RM_BLOCK_MEDIA_SDMMC_CallbackSet()

Parameters

[in]	p_ctrl	Control block set in rm_block_media_api_t::open call.
[in]	p_callback	Callback function to register
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ statusGet

fsp_err_t(* rm_block_media_api_t::statusGet) (rm_block_media_ctrl_t *const p_ctrl, rm_block_media_status_t *const p_status)

Get status of connected device.

Implemented as

- RM_BLOCK_MEDIA_SDMMC_StatusGet
- RM_BLOCK_MEDIA_SPI_StatusGet
- RM_BLOCK_MEDIA_USB_StatusGet

Parameters

[in]	p_ctrl	Control block set in rm_block_media_api_t::open call.
[out]	p_status	Pointer to store current status.

◆ infoGet

fsp_err_t(* rm_block_media_api_t::infoGet) (rm_block_media_ctrl_t *const p_ctrl, rm_block_media_info_t *const p_info)

Returns information about the block media device.

Implemented as

- RM_BLOCK_MEDIA_SDMMC_InfoGet
- RM_BLOCK_MEDIA_SPI_InfoGet
- RM_BLOCK_MEDIA_USB_InfoGet

Parameters

[in]	p_ctrl	Control block set in rm_block_media_api_t::open call.
[out]	p_info	Pointer to information structure. All elements of this structure will be set by the function.

◆ close

fsp_err_t(* rm_block_media_api_t::close) (rm_block_media_ctrl_t *const p_ctrl)

Closes the module.

Implemented as

- RM_BLOCK_MEDIA_SDMMC_Close
- RM_BLOCK_MEDIA_SPI_Close
- RM_BLOCK_MEDIA_USB_Close

Parameters

[in]	p_ctrl	Control block set in rm_block_media_api_t::open call.

◆ rm_block_media_instance_t

struct rm_block_media_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields		
rm_block_media_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_block_media_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
rm_block_media_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ rm_block_media_ctrl_t

typedef void rm_block_media_ctrl_t

Block media API control block. Allocate an instance specific control block to pass into the block media API calls.

Implemented as

- rm_block_media_sdmmc_instance_ctrl_t
- rm_block_media_spi_instance_ctrl_t
- rm_block_media_usb_instance_ctrl_t

Enumeration Type Documentation

◆ **rm_block_media_event_t**

enum rm_block_media_event_t	
Events that can trigger a callback function	
Enumerator	
RM_BLOCK_MEDIA_EVENT_MEDIA_REMOVED	Media removed event.
RM_BLOCK_MEDIA_EVENT_MEDIA_INSERTED	Media inserted event.
RM_BLOCK_MEDIA_EVENT_OPERATION_COMPLETE	Read, write, or erase completed.
RM_BLOCK_MEDIA_EVENT_ERROR	Error on media operation.
RM_BLOCK_MEDIA_EVENT_POLL_STATUS	Poll rm_block_media_api_t::statusGet for write/erase completion.
RM_BLOCK_MEDIA_EVENT_MEDIA_SUSPEND	Media suspended event.
RM_BLOCK_MEDIA_EVENT_MEDIA_RESUME	Media resumed event.
RM_BLOCK_MEDIA_EVENT_WAIT	Indication to user that they should wait for an interrupt on a pending operation.
RM_BLOCK_MEDIA_EVENT_WAIT_END	Indication to user that interrupt has been received and waiting can end.

4.3.65 Communicatons Middleware Interface

Interfaces

Detailed Description

Interface for Communications Middleware functions.

Summary

The Communications interface provides multiple communications functionality.

The Communications interface can be implemented by:

- I2C Communicatons Middleware (rm_comms_i2c)

Data Structures

struct	rm_comms_write_read_params_t
struct	rm_comms_callback_args_t
struct	rm_comms_cfg_t
struct	rm_comms_api_t
struct	rm_comms_instance_t

Typedefs

typedef void	rm_comms_ctrl_t

Enumerations

enum	rm_comms_event_t

Data Structure Documentation

◆ rm_comms_write_read_params_t

struct rm_comms_write_read_params_t
Struct to pack params for writeRead

◆ rm_comms_callback_args_t

struct rm_comms_callback_args_t
Communications middleware callback parameter definition

◆ rm_comms_cfg_t

struct rm_comms_cfg_t	
Communications middleware configuration block	
Data Fields	
uint32_t	semaphore_timeout
	timeout for callback.
void(*	p_callback)(rm_comms_callback_args_t *p_args)
	Pointer to callback function, mostly used if using non-blocking functionality.
void const *	p_lower_level_cfg

	Pointer to lower level driver configuration structure.
void const *	p_extend
	Pointer to extended configuration by instance of interface.
void const *	p_context
	Pointer to the user-provided context.

◆ rm_comms_api_t

struct rm_comms_api_t	
COMM APIs	
Data Fields	
fsp_err_t(*	open)(rm_comms_ctrl_t *const p_ctrl, rm_comms_cfg_t const *const p_cfg)
fsp_err_t(*	close)(rm_comms_ctrl_t *const p_ctrl)
fsp_err_t(*	read)(rm_comms_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes)
fsp_err_t(*	write)(rm_comms_ctrl_t *const p_ctrl, uint8_t *const p_src, uint32_t const bytes)
fsp_err_t(*	writeRead)(rm_comms_ctrl_t *const p_ctrl, rm_comms_write_read_params_t write_read_params)

Field Documentation

◆ open

fsp_err_t(* rm_comms_api_t::open) (rm_comms_ctrl_t *const p_ctrl, rm_comms_cfg_t const *const p_cfg)

Open driver.

Implemented as

- RM_COMMS_I2C_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

fsp_err_t(* rm_comms_api_t::close) (rm_comms_ctrl_t *const p_ctrl)

Close driver.

Implemented as

- RM_COMMS_I2C_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ read

fsp_err_t(* rm_comms_api_t::read) (rm_comms_ctrl_t *const p_ctrl, uint8_t *const p_dest, uint32_t const bytes)

Read data.

Implemented as

- RM_COMMS_I2C_Read()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_dest	Pointer to the location to store read data.
[in]	bytes	Number of bytes to read.

◆ write

fsp_err_t(* rm_comms_api_t::write) (rm_comms_ctrl_t *const p_ctrl, uint8_t *const p_src, uint32_t const bytes)

Write data.

Implemented as

- RM_COMMS_I2C_Write()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_src	Pointer to the location to get write data from.
[in]	bytes	Number of bytes to write.

◆ writeRead

fsp_err_t(* rm_comms_api_t::writeRead) (rm_comms_ctrl_t *const p_ctrl, rm_comms_write_read_params_t write_read_params)

Write bytes over comms followed by a read, will have a struct for params.

Implemented as

- RM_COMMS_I2C_WriteRead()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	write_read_params	Parameters structure.

◆ rm_comms_instance_t

struct rm_comms_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Typedef Documentation

◆ rm_comms_ctrl_t

typedef void rm_comms_ctrl_t

Communications control block. Allocate an instance specific control block to pass into the Communications API calls.

Implemented as

- rm_comms_i2c_instance_ctrl_t

Enumeration Type Documentation

◆ rm_comms_event_t

enum rm_comms_event_t
Event in the callback function

4.3.66 FileX Block Media Port Interface

Interfaces

Detailed Description

Interface for FileX Block Media port.

Summary

The FileX block media port provides notifications for insertion and removal of removable media and provides initialization functions required by FileX.

The FileX Block media interface can be implemented by: Azure RTOS FileX Block Media I/O Driver (rm_filex_block_media)

Data Structures

struct	rm_filex_block_media_callback_args_t
struct	rm_filex_block_media_cfg_t
struct	rm_filex_block_media_api_t
struct	rm_filex_block_media_instance_t

Typedefs

typedef void	rm_filex_block_media_ctrl_t

Enumerations

enum	rm_filex_block_media_partition_t

Data Structure Documentation

◆ rm_filex_block_media_callback_args_t

struct rm_filex_block_media_callback_args_t

Callback function parameter data

Data Fields		
rm_block_media_event_t	event	The event can be used to identify what caused the callback.
void const *	p_context	Placeholder for user data.

◆ rm_filex_block_media_cfg_t

struct rm_filex_block_media_cfg_t

Block media configuration structure

Data Fields

rm_block_media_instance_t *	p_lower_lvl_block_media
	Lower level block media pointer.
rm_filex_block_media_partition_t	partition
	Partition to use for partitioned media.
void(*	p_callback)(rm_filex_block_media_callback_args_t *p_args)
	Pointer to callback function.

◆ rm_filex_block_media_api_t

struct rm_filex_block_media_api_t

FileX block media functions implemented at the HAL layer will follow this API.

Data Fields

fsp_err_t(*	open)(rm_filex_block_media_ctrl_t *const p_ctrl, rm_filex_block_media_cfg_t const *const p_cfg)
fsp_err_t(*	close)(rm_filex_block_media_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* rm_filex_block_media_api_t::open) (rm_filex_block_media_ctrl_t *const p_ctrl, rm_filex_block_media_cfg_t const *const p_cfg)

Open media device.

Implemented as

- RM_FILEX_BLOCK_MEDIA_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

fsp_err_t(* rm_filex_block_media_api_t::close) (rm_filex_block_media_ctrl_t *const p_ctrl)

Close media device.

Implemented as

- RM_FILEX_BLOCK_MEDIA_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ rm_filex_block_media_instance_t

struct rm_filex_block_media_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
rm_filex_block_media_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_filex_block_media_cfg_t const *const	p_cfg	Pointer to the configuration structure for this instance.
rm_filex_block_media_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ rm_filex_block_media_ctrl_t

typedef void rm_filex_block_media_ctrl_t
Block media control structure

Enumeration Type Documentation

◆ **rm_filex_block_media_partition_t**

enum rm_filex_block_media_partition_t	
Partitions that can be selected to use FileX with	
Enumerator	
RM_FILEX_BLOCK_MEDIA_PARTITION0	Partition 0 (0x01BE) in Master Boot Record Partition Table.
RM_FILEX_BLOCK_MEDIA_PARTITION1	Partition 1 (0x01CE) in Master Boot Record Partition Table.
RM_FILEX_BLOCK_MEDIA_PARTITION2	Partition 2 (0x01DE) in Master Boot Record Partition Table.
RM_FILEX_BLOCK_MEDIA_PARTITION3	Partition 3 (0x01EE) in Master Boot Record Partition Table.

4.3.67 FreeRTOS+FAT Port Interface

Interfaces

Detailed Description

Interface for FreeRTOS+FAT port.

Summary

The FreeRTOS+FAT port provides notifications for insertion and removal of removable media and provides initialization functions required by FreeRTOS+FAT.

The FreeRTOS+FAT interface can be implemented by: FreeRTOS+FAT Port (rm_freertos_plus_fat)

Data Structures

struct	rm_freertos_plus_fat_callback_args_t
struct	rm_freertos_plus_fat_device_t
struct	rm_freertos_plus_fat_api_t
struct	rm_freertos_plus_fat_instance_t

Enumerations

enum	rm_freertos_plus_fat_event_t
enum	rm_freertos_plus_fat_type_t

Data Structure Documentation

◆ rm_freertos_plus_fat_callback_args_t

struct rm_freertos_plus_fat_callback_args_t		
Callback function parameter data		
Data Fields		
rm_freertos_plus_fat_event_t	event	The event can be used to identify what caused the callback.
void const *	p_context	Placeholder for user data.

◆ rm_freertos_plus_fat_device_t

struct rm_freertos_plus_fat_device_t		
Information obtained from the media device.		
Data Fields		
uint32_t	sector_count	Sector count.
uint32_t	sector_size_bytes	Sector size in bytes.

◆ rm_freertos_plus_fat_api_t

struct rm_freertos_plus_fat_api_t	
FreeRTOS plus Fat functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(rm_freertos_plus_fat_ctrl_t *const p_ctrl, rm_freertos_plus_fat_cfg_t const *const p_cfg)
fsp_err_t(*	mediaInit)(rm_freertos_plus_fat_ctrl_t *const p_ctrl, rm_freertos_plus_fat_device_t *const p_device)
fsp_err_t(*	diskInit)(rm_freertos_plus_fat_ctrl_t *const p_ctrl, rm_freertos_plus_fat_disk_cfg_t const *const p_disk_cfg, FF_Disk_t *const p_disk)
fsp_err_t(*	diskDeinit)(rm_freertos_plus_fat_ctrl_t *const p_ctrl, FF_Disk_t *const p_disk)
fsp_err_t(*	infoGet)(rm_freertos_plus_fat_ctrl_t *const p_ctrl, FF_Disk_t *const

	p_disk, rm_freertos_plus_fat_info_t *const p_info)
fsp_err_t(*	close)(rm_freertos_plus_fat_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* rm_freertos_plus_fat_api_t::open) (rm_freertos_plus_fat_ctrl_t *const p_ctrl, rm_freertos_plus_fat_cfg_t const *const p_cfg)

Open media device.

Implemented as

- RM_FREERTOS_PLUS_FAT_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ mediaInit

fsp_err_t(* rm_freertos_plus_fat_api_t::mediaInit) (rm_freertos_plus_fat_ctrl_t *const p_ctrl, rm_freertos_plus_fat_device_t *const p_device)

Initializes a media device. If the device is removable, it must be plugged in prior to calling this API. This function blocks until media initialization is complete.

Implemented as

- RM_FREERTOS_PLUS_FAT_MediaInit

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_device	Pointer to store device information.

◆ diskInit

fsp_err_t(* rm_freertos_plus_fat_api_t::diskInit) (rm_freertos_plus_fat_ctrl_t *const p_ctrl, rm_freertos_plus_fat_disk_cfg_t const *const p_disk_cfg, FF_Disk_t *const p_disk)

Initializes a FreeRTOS+FAT FF_Disk_t structure.

Implemented as

- RM_FREERTOS_PLUS_FAT_DiskInit

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_disk_cfg	Pointer to disk configurations
[out]	p_disk	Pointer to store FreeRTOS+FAT disk structure.

◆ diskDeinit

fsp_err_t(* rm_freertos_plus_fat_api_t::diskDeinit) (rm_freertos_plus_fat_ctrl_t *const p_ctrl, FF_Disk_t *const p_disk)

Deinitializes a FreeRTOS+FAT FF_Disk_t structure.

Implemented as

- RM_FREERTOS_PLUS_FAT_DiskDeinit

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_disk_cfg	Pointer to disk configurations
[out]	p_disk	Pointer to store FreeRTOS+FAT disk structure.

◆ infoGet

fsp_err_t(* rm_freertos_plus_fat_api_t::infoGet) (rm_freertos_plus_fat_ctrl_t *const p_ctrl, FF_Disk_t *const p_disk, rm_freertos_plus_fat_info_t *const p_info)

Returns information about the media device.

Implemented as

- RM_FREERTOS_PLUS_FAT_InfoGet

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_info	Pointer to information structure. All elements of this structure will be set by the function.

◆ close

fsp_err_t(* rm_freertos_plus_fat_api_t::close) (rm_freertos_plus_fat_ctrl_t *const p_ctrl)

Close media device.

Implemented as

- RM_FREERTOS_PLUS_FAT_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ rm_freertos_plus_fat_instance_t

struct rm_freertos_plus_fat_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

rm_freertos_plus_fat_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_freertos_plus_fat_cfg_t const *const	p_cfg	Pointer to the configuration structure for this instance.
rm_freertos_plus_fat_api_t const *	p_api	Pointer to the API structure for this instance.

Enumeration Type Documentation

◆ **rm_freertos_plus_fat_event_t**

enum rm_freertos_plus_fat_event_t	
Events that can trigger a callback function	
Enumerator	
RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_REMOVED	Media removed event.
RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_INSERTED	Media inserted event.
RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_SUSPEND	Media suspended event.
RM_FREERTOS_PLUS_FAT_EVENT_MEDIA_RESUME	Media resumed event.

◆ **rm_freertos_plus_fat_type_t**

enum rm_freertos_plus_fat_type_t	
Enumerator	
RM_FREERTOS_PLUS_FAT_TYPE_FAT32	FAT32 disk.
RM_FREERTOS_PLUS_FAT_TYPE_FAT16	FAT16 disk.
RM_FREERTOS_PLUS_FAT_TYPE_FAT12	FAT12 disk.

4.3.68 FSXXXX Middleware Interface

Interfaces

Detailed Description

Interface for FSXXXX Middleware functions.

Summary

The FSXXXX interface provides FSXXXX functionality.

The FSXXXX interface can be implemented by:

- FS2012 Sensor Middleware (rm_fs2012)

Data Structures

struct	rm_fsxxxx_callback_args_t
struct	rm_fsxxxx_raw_data_t
struct	rm_fsxxxx_sensor_data_t
struct	rm_fsxxxx_data_t
struct	rm_fsxxxx_cfg_t
struct	rm_fsxxxx_api_t
struct	rm_fsxxxx_instance_t

Typedefs

typedef void	rm_fsxxxx_ctrl_t

Enumerations

enum	rm_fsxxxx_event_t

Data Structure Documentation

◆ rm_fsxxxx_callback_args_t

struct rm_fsxxxx_callback_args_t
FSXXXX callback parameter definition

◆ rm_fsxxxx_raw_data_t

struct rm_fsxxxx_raw_data_t
FSXXXX raw data

◆ rm_fsxxxx_sensor_data_t

struct rm_fsxxxx_sensor_data_t		
FSXXXX sensor data block		
Data Fields		
int16_t	integer_part	
int16_t	decimal_part	To two decimal places.

◆ rm_fsxxxx_data_t

struct rm_fsxxxx_data_t
FSXXXX data block

◆ rm_fsxxxx_cfg_t

struct rm_fsxxxx_cfg_t	
FSXXXX Configuration	
Data Fields	
rm_comms_instance_t const *	p_instance
	Pointer to Communications Middleware instance.
void const *	p_context
	Pointer to the user-provided context.
void const *	p_extend
	Pointer to extended configuration by instance of interface.
void(*	p_callback)(rm_fsxxxx_callback_args_t *p_args)
	Pointer to callback function.

◆ rm_fsxxxx_api_t

struct rm_fsxxxx_api_t	
FSXXXX APIs	
Data Fields	
fsp_err_t(*	open)(rm_fsxxxx_ctrl_t *const p_ctrl, rm_fsxxxx_cfg_t const *const p_cfg)
fsp_err_t(*	read)(rm_fsxxxx_ctrl_t *const p_ctrl, rm_fsxxxx_raw_data_t *const p_raw_data)
fsp_err_t(*	dataCalculate)(rm_fsxxxx_ctrl_t *const p_ctrl, rm_fsxxxx_raw_data_t *const p_raw_data, rm_fsxxxx_data_t *const p_fsxxxx_data)
fsp_err_t(*	close)(rm_fsxxxx_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* rm_fsxxxx_api_t::open) (rm_fsxxxx_ctrl_t *const p_ctrl, rm_fsxxxx_cfg_t const *const p_cfg)

Open sensor.

Implemented as

- RM_FS2012_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ read

fsp_err_t(* rm_fsxxxx_api_t::read) (rm_fsxxxx_ctrl_t *const p_ctrl, rm_fsxxxx_raw_data_t *const p_raw_data)

Read ADC data from FSXXXX.

Implemented as

- RM_FS2012_Read()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data structure.

◆ dataCalculate

fsp_err_t(* rm_fsxxxx_api_t::dataCalculate) (rm_fsxxxx_ctrl_t *const p_ctrl, rm_fsxxxx_raw_data_t *const p_raw_data, rm_fsxxxx_data_t *const p_fsxxxx_data)

Calculate flow values from ADC data.

Implemented as

- RM_FS2012_DataCalculate()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data.
[in]	p_fsxxxx_data	Pointer to FSXXXX data structure.

◆ **close**

fsp_err_t(* rm_fsxxxx_api_t::close) (rm_fsxxxx_ctrl_t *const p_ctrl)
Close FSXXXX. **Implemented as** ◦ RM_FS2012_Close() **Parameters**

[in]	p_ctrl	Pointer to control structure.

◆ **rm_fsxxxx_instance_t**

struct rm_fsxxxx_instance_t		
FSXXXX instance		
Data Fields		
rm_fsxxxx_ctrl_t *	p_ctrl	Pointer to the control structure for this instance
rm_fsxxxx_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance
rm_fsxxxx_api_t const *	p_api	Pointer to the API structure for this instance

Typedef Documentation

◆ **rm_fsxxxx_ctrl_t**

typedef void rm_fsxxxx_ctrl_t
FSXXXX control block. Allocate an instance specific control block to pass into the FSXXXX API calls. **Implemented as** ◦ rm_fsxxxx_instance_ctrl_t

Enumeration Type Documentation

◆ **rm_fsxxxx_event_t**

enum rm_fsxxxx_event_t
Event in the callback function

4.3.69 HS300X Middleware Interface

Interfaces

Detailed Description

Interface for HS300X Middleware functions.

Summary

The HS300X interface provides HS300X functionality.

The HS300X interface can be implemented by:

- HS300X Sensor Middleware (rm_hs300x)

Data Structures

struct	rm_hs300x_callback_args_t
struct	rm_hs300x_raw_data_t
struct	rm_hs300x_sensor_data_t
struct	rm_hs300x_data_t
struct	rm_hs300x_cfg_t
struct	rm_hs300x_api_t
struct	rm_hs300x_instance_t

Typedefs

typedef void	rm_hs300x_ctrl_t

Enumerations

enum	rm_hs300x_event_t
enum	rm_hs300x_data_type_t
enum	rm_hs300x_resolution_t

Data Structure Documentation

◆ rm_hs300x_callback_args_t

struct rm_hs300x_callback_args_t
HS300X callback parameter definition

◆ rm_hs300x_raw_data_t

struct rm_hs300x_raw_data_t		
HS300X raw data		
Data Fields		
uint8_t	humidity[2]	Upper 2 bits of 0th element are data status.
uint8_t	temperature[2]	Lower 2 bits of 1st element are mask.

◆ rm_hs300x_sensor_data_t

struct rm_hs300x_sensor_data_t		
HS300X sensor data block		
Data Fields		
int16_t	integer_part	
int16_t	decimal_part	To two decimal places.

◆ rm_hs300x_data_t

struct rm_hs300x_data_t
HS300X data block

◆ rm_hs300x_cfg_t

struct rm_hs300x_cfg_t	
HS300X Configuration	
Data Fields	
rm_comms_instance_t const *	p_instance
	Pointer to Communications Middleware instance.
void const *	p_context
	Pointer to the user-provided context.
void const *	p_extend
	Pointer to extended configuration by instance of interface.

void(*	p_callback)(rm_hs300x_callback_args_t *p_args)
	Pointer to callback function.

◆ rm_hs300x_api_t

struct rm_hs300x_api_t	
HS300X APIs	
Data Fields	
fsp_err_t(*	open)(rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_cfg_t const *const p_cfg)
fsp_err_t(*	measurementStart)(rm_hs300x_ctrl_t *const p_ctrl)
fsp_err_t(*	read)(rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_raw_data_t *const p_raw_data)
fsp_err_t(*	dataCalculate)(rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_raw_data_t *const p_raw_data, rm_hs300x_data_t *const p_hs300x_data)
fsp_err_t(*	programmingModeEnter)(rm_hs300x_ctrl_t *const p_ctrl)
fsp_err_t(*	resolutionChange)(rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_data_type_t const data_type, rm_hs300x_resolution_t const resolution)
fsp_err_t(*	sensorIdGet)(rm_hs300x_ctrl_t *const p_ctrl, uint32_t *const p_sensor_id)
fsp_err_t(*	programmingModeExit)(rm_hs300x_ctrl_t *const p_ctrl)
fsp_err_t(*	close)(rm_hs300x_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* rm_hs300x_api_t::open) (rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_cfg_t const *const p_cfg)

Open sensor.

Implemented as

- RM_HS300X_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ measurementStart

fsp_err_t(* rm_hs300x_api_t::measurementStart) (rm_hs300x_ctrl_t *const p_ctrl)

Start a measurement.

Implemented as

- RM_HS300X_MeasurementStart()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ read

fsp_err_t(* rm_hs300x_api_t::read) (rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_raw_data_t *const p_raw_data)

Read ADC data from HS300X.

Implemented as

- RM_HS300X_Read()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data structure.

◆ dataCalculate

fsp_err_t(* rm_hs300x_api_t::dataCalculate) (rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_raw_data_t *const p_raw_data, rm_hs300x_data_t *const p_hs300x_data)

Calculate humidity and temperature values from ADC data.

Implemented as

- RM_HS300X_DataCalculate()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data.
[in]	p_hs300x_data	Pointer to HS300X data structure.

◆ programmingModeEnter

fsp_err_t(* rm_hs300x_api_t::programmingModeEnter) (rm_hs300x_ctrl_t *const p_ctrl)

Enter the programming mode.

Implemented as

- RM_HS300X_ProgrammingModeEnter()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ resolutionChange

fsp_err_t(* rm_hs300x_api_t::resolutionChange) (rm_hs300x_ctrl_t *const p_ctrl, rm_hs300x_data_type_t const data_type, rm_hs300x_resolution_t const resolution)

Change the sensor resolution.

Implemented as

- RM_HS300X_ResolutionChange()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	data_type	Data type of HS300X.
[in]	resolution	Resolution type of HS300X.

◆ sensorIdGet

fsp_err_t(* rm_hs300x_api_t::sensorIdGet) (rm_hs300x_ctrl_t *const p_ctrl, uint32_t *const p_sensor_id)

Get the sensor ID.

Implemented as

- RM_HS300X_SensorIdGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_sensor_id	Pointer to sensor ID of HS300X.

◆ programmingModeExit

fsp_err_t(* rm_hs300x_api_t::programmingModeExit) (rm_hs300x_ctrl_t *const p_ctrl)

Exit the programming mode.

Implemented as

- RM_HS300X_ProgrammingModeExit()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ close

fsp_err_t(* rm_hs300x_api_t::close) (rm_hs300x_ctrl_t *const p_ctrl)

Close HS300X.

Implemented as

- RM_HS300X_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ rm_hs300x_instance_t

struct rm_hs300x_instance_t

HS300X instance

Data Fields

rm_hs300x_ctrl_t *	p_ctrl	Pointer to the control structure for this instance
rm_hs300x_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance

rm_hs300x_api_t const *	p_api	Pointer to the API structure for this instance

Typedef Documentation

◆ rm_hs300x_ctrl_t

typedef void rm_hs300x_ctrl_t
HS300X control block. Allocate an instance specific control block to pass into the HS300X API calls. **Implemented as** ◦ rm_hs300x_instance_ctrl_t

Enumeration Type Documentation

◆ rm_hs300x_event_t

enum rm_hs300x_event_t
Event in the callback function

◆ rm_hs300x_data_type_t

enum rm_hs300x_data_type_t
Data type of HS300X

◆ rm_hs300x_resolution_t

enum rm_hs300x_resolution_t
Resolution type of HS300X

4.3.70 LittleFS Interface

Interfaces

Detailed Description

Interface for LittleFS access.

Summary

The LittleFS Port configures a fail-safe filesystem designed for microcontrollers on top of a lower level storage device.

Implemented by: LittleFS Flash Port (rm_littlefs_flash)

Data Structures

struct	rm_littlefs_cfg_t
struct	rm_littlefs_api_t
struct	rm_littlefs_instance_t

Typedefs

typedef void	rm_littlefs_ctrl_t

Data Structure Documentation

◆ rm_littlefs_cfg_t

struct rm_littlefs_cfg_t		
User configuration structure, used in open function		
Data Fields		
struct lfs_config const *	p_lfs_cfg	Pointer LittleFS configuration structure.
void const *	p_extend	Pointer to hardware dependent configuration.

◆ rm_littlefs_api_t

struct rm_littlefs_api_t	
LittleFS Port interface API.	
Data Fields	
fsp_err_t(*	open)(rm_littlefs_ctrl_t *const p_ctrl, rm_littlefs_cfg_t const *const p_cfg)
fsp_err_t(*	close)(rm_littlefs_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* rm_littlefs_api_t::open) (rm_littlefs_ctrl_t *const p_ctrl, rm_littlefs_cfg_t const *const p_cfg)

Initialize The lower level storage device.

Implemented as

- RM_LITTLEFS_FLASH_Open

Parameters

[in]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ close

fsp_err_t(* rm_littlefs_api_t::close) (rm_littlefs_ctrl_t *const p_ctrl)

Closes the module and lower level storage device.

Implemented as

- RM_LITTLEFS_FLASH_Close

Parameters

[in]	p_ctrl	Control block set in rm_littlefs_api_t::open call.

◆ rm_littlefs_instance_t

struct rm_littlefs_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
rm_littlefs_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_littlefs_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
rm_littlefs_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ rm_littlefs_ctrl_t

typedef void rm_littlefs_ctrl_t

LittleFS Port API control block. Allocate an instance specific control block to pass into the LittleFS Port API calls.

Implemented as

- rm_littlefs_flash_instance_ctrl_t

4.3.71 BLE Mesh Bearer Platform Interface

Interfaces

Detailed Description

Interface for Bluetooth Low Energy Mesh Bearer Platform functions.

Summary

The BLE Mesh interface for the Bluetooth Low Energy Mesh Bearer Platform (BLE MESH BEARER PLATFORM) peripheral provides Bluetooth Low Energy Mesh Bearer Platform functionality.

The Bluetooth Low Energy Mesh Bearer Platform interface can be implemented by:

- Bluetooth Low Energy Mesh Network Bearer Platform (rm_mesh_bearer_platform)

Data Structures

struct	rm_mesh_bearer_platform_cfg_t
struct	rm_mesh_bearer_platform_api_t
struct	rm_mesh_bearer_platform_instance_t

Typedefs

typedef void	rm_mesh_bearer_platform_ctrl_t

Enumerations

enum	rm_mesh_bearer_platform_device_address_type_t
enum	rm_mesh_bearer_platform_state_t
enum	rm_mesh_bearer_platform_gatt_mode_t

Data Structure Documentation

◆ rm_mesh_bearer_platform_cfg_t

struct rm_mesh_bearer_platform_cfg_t		
MESH BEARER PLATFORM configuration parameters.		
Data Fields		
uint32_t	channel	Select a channel corresponding to the channel number of the hardware. the parameters for initialization.
rm_mesh_bearer_platform_device_address_type_t	device_address_type	Device address type.
rm_ble_mesh_bearer_instance_t const *	p_bearer_instance	Instance structure of BLE Mesh Bearer.
void const *	p_context	Placeholder for user data. Passed to the user callback in ble_abs_callback_args_t.
void const *	p_extend	Placeholder for user extension.

◆ rm_mesh_bearer_platform_api_t

struct rm_mesh_bearer_platform_api_t	
MESH BEARER PLATFORM functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(rm_mesh_bearer_platform_ctrl_t *const p_ctrl, rm_mesh_bearer_platform_cfg_t const *const p_cfg)
fsp_err_t(*	close)(rm_mesh_bearer_platform_ctrl_t *const p_ctrl)
fsp_err_t(*	setScanResponseData)(rm_mesh_bearer_platform_ctrl_t *const p_ctrl, uint8_t *p_data, uint8_t len)
fsp_err_t(*	connect)(rm_mesh_bearer_platform_ctrl_t *const p_ctrl, uint8_t *p_remote_address, uint8_t address_type, rm_mesh_bearer_platform_gatt_mode_t mode)
fsp_err_t(*	discoverService)(rm_mesh_bearer_platform_ctrl_t *const p_ctrl, uint16_t handle, rm_mesh_bearer_platform_gatt_mode_t mode)

fsp_err_t(*	configureNotification)(rm_mesh_bearer_platform_ctrl_t *const p_ctrl, uint16_t handle, rm_mesh_bearer_platform_state_t state, rm_mesh_bearer_platform_gatt_mode_t mode)
fsp_err_t(*	disconnect)(rm_mesh_bearer_platform_ctrl_t *const p_ctrl, uint16_t handle)

Field Documentation

◆ open

fsp_err_t(* rm_mesh_bearer_platform_api_t::open) (rm_mesh_bearer_platform_ctrl_t *const p_ctrl, rm_mesh_bearer_platform_cfg_t const *const p_cfg)

Open Bearer Platform middleware.

Implemented as

- RM_MESH_BEARER_PLATFORM_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

fsp_err_t(* rm_mesh_bearer_platform_api_t::close) (rm_mesh_bearer_platform_ctrl_t *const p_ctrl)

Close Bearer Platform middleware.

Implemented as

- RM_MESH_BEARER_PLATFORM_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ setScanResponseData

fsp_err_t(* rm_mesh_bearer_platform_api_t::setScanResponseData) (rm_mesh_bearer_platform_ctrl_t *const p_ctrl, uint8_t *p_data, uint8_t len)

Set scan response data in connectable and scannable undirected advertising event.

Implemented as

- RM_MESH_BEARER_PLATFORM_SetScanResponseData()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_data	Pointer to scan response data.
[in]	len	Data length.

◆ connect

fsp_err_t(* rm_mesh_bearer_platform_api_t::connect) (rm_mesh_bearer_platform_ctrl_t *const p_ctrl, uint8_t *p_remote_address, uint8_t address_type, rm_mesh_bearer_platform_gatt_mode_t mode)

Request to create connection.

Implemented as

- RM_MESH_BEARER_PLATFORM_Connect()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_remote_address	Pointer to remote device address.
[in]	address_type	Address type.
[in]	mode	GATT interface mode, either RM_MESH_BEARER_PLATFORM_GATT_MODE_PROVISION or RM_MESH_BEARER_PLATFORM_GATT_MODE_PROXY.

◆ discoverService

fsp_err_t(* rm_mesh_bearer_platform_api_t::discoverService) (rm_mesh_bearer_platform_ctrl_t *const p_ctrl, uint16_t handle, rm_mesh_bearer_platform_gatt_mode_t mode)

Start service discovery for Mesh GATT service.

Implemented as

- RM_MESH_BEARER_PLATFORM_DiscoverService()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	handle	Connection handle to identify device.
[in]	mode	GATT interface mode, either RM_MESH_BEARER_PLATFORM_GATT_MODE_PROVISION or RM_MESH_BEARER_PLATFORM_GATT_MODE_PROXY.

◆ configureNotification

fsp_err_t(* rm_mesh_bearer_platform_api_t::configureNotification) (rm_mesh_bearer_platform_ctrl_t *const p_ctrl, uint16_t handle, rm_mesh_bearer_platform_state_t state, rm_mesh_bearer_platform_gatt_mode_t mode)

Configure GATT notification of Mesh GATT service.

Implemented as

- RM_MESH_BEARER_PLATFORM_ConfigureNotification()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	handle	Connection handle to identify device.
[in]	state	Notification configuration flag; enable if RM_MESH_BEARER_PLATFORM_STATE_ENABLE, or disable if RM_MESH_BEARER_PLATFORM_STATE_DISABLE.
[in]	mode	GATT interface mode, either RM_MESH_BEARER_PLATFORM_GATT_MODE_PROVISION or RM_MESH_BEARER_PLATFORM_GATT_MODE_PROXY.

◆ disconnect

fsp_err_t(* rm_mesh_bearer_platform_api_t::disconnect) (rm_mesh_bearer_platform_ctrl_t *const p_ctrl, uint16_t handle)

Terminate Connection.

Implemented as

- RM_MESH_BEARER_PLATFORM_Disconnect()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	handle	Connection handle to identify device.

◆ rm_mesh_bearer_platform_instance_t

struct rm_mesh_bearer_platform_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

rm_mesh_bearer_platform_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_mesh_bearer_platform_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
rm_mesh_bearer_platform_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ rm_mesh_bearer_platform_ctrl_t

typedef void rm_mesh_bearer_platform_ctrl_t

MESH BEARER PLATFORM control block. Allocate an instance specific control block to pass into the BLE MESH API calls.

Implemented as

- rm_mesh_bearer_platform_instance_ctrl_t

Enumeration Type Documentation

◆ **rm_mesh_bearer_platform_device_address_type_t**

enum rm_mesh_bearer_platform_device_address_type_t	
Device address type	
Enumerator	
RM_MESH_BEARER_PLATFORM_DEVICE_ADDRESS_TYPE_PUBLIC	Public device address type
RM_MESH_BEARER_PLATFORM_DEVICE_ADDRESS_TYPE_RANDOM	Random device address type

◆ **rm_mesh_bearer_platform_state_t**

enum rm_mesh_bearer_platform_state_t	
State	
Enumerator	
RM_MESH_BEARER_PLATFORM_STATE_ENABLE	State enable
RM_MESH_BEARER_PLATFORM_STATE_DISABLE	state Disable

◆ **rm_mesh_bearer_platform_gatt_mode_t**

enum rm_mesh_bearer_platform_gatt_mode_t	
GATT mode	
Enumerator	
RM_MESH_BEARER_PLATFORM_GATT_MODE_PROVISION	Provision GATT mode
RM_MESH_BEARER_PLATFORM_GATT_MODE_PROXY	Proxy GATT mode

4.3.72 Interface

Interfaces

Detailed Description

Interface for motor 120 control functions.

Summary

The motor 120 control interface for speed calculation and setting, fixed cycle processing

The motor 120 control interface can be implemented by:

- Motor 120 Control Sensorless (motor_120_control_sensorless)
- Motor 120 Control Hall (motor_120_control_hall)

Data Structures

struct	motor_120_control_callback_args_t
struct	motor_120_control_motor_parameter_t
struct	motor_120_control_cfg_t
struct	motor_120_control_api_t
struct	motor_120_control_instance_t

Typedefs

typedef void	motor_120_control_ctrl_t

Enumerations

enum	motor_120_control_event_t
enum	motor_120_conduction_type_t
enum	motor_120_control_status_t
enum	motor_120_control_run_mode_t
enum	motor_120_control_rotation_direction_t
enum	motor_120_control_wait_stop_flag_t
enum	motor_120_control_timeout_error_flag_t
enum	motor_120_control_pattern_error_flag_t
enum	motor_120_control_speed_ref_t
enum	motor_120_control_voltage_ref_t

Data Structure Documentation

◆ motor_120_control_callback_args_t

struct motor_120_control_callback_args_t
Callback function parameter data

Data Fields		
motor_120_control_event_t	event	Event trigger.
void const *	p_context	Placeholder for user data.

◆ motor_120_control_motor_parameter_t

struct motor_120_control_motor_parameter_t		
Motor parameter for motor 120 control		
Data Fields		
uint32_t	u4_motor_pp	Pole pairs.
float	f4_motor_r	Resistance (ohm)
float	f4_motor_ld	Inductance for d-axis (H)
float	f4_motor_lq	Inductance for q-axis (H)
float	f4_motor_m	Magnet flux (Wb)
float	f4_motor_j	Rotor inertia (kgm^2)

◆ motor_120_control_cfg_t

struct motor_120_control_cfg_t	
Configuration parameters.	
Data Fields	
motor_120_conduction_type_t	conduction_type
	0:First 60 degree PWM, 1:Complementary first 60 degree PWM
uint32_t	u4_timeout_cnt
	Undetected time.
float	f4_max_drive_v
	Max output voltage (V)
float	f4_min_drive_v
	Min output voltage (V)
uint32_t	u4_speed_pi_decimation

	Speed PI control decimation counter.
uint32_t	u4_free_run_timer_freq
	Speed calc free run timer frequency (MHz)
float	f4_speed_lpf_k
	Speed LPF parameter.
float	f4_limit_speed_change
	Speed ref change limit.
float	f4_pi_ctrl_kp
	PI control error.
float	f4_pi_ctrl_ki
	PI control buffer of integral term.
float	f4_pi_ctrl_ilimit
	PI control limit of integral term.
motor_120_control_motor_parameter_t	motor_param
	Motor parameter.
void(*	p_callback)(motor_120_control_callback_args_t *p_args)
	Callback function.
void const *	p_context

	Placeholder for user data.
void const *	p_extend
	Extended configurations.

◆ motor_120_control_api_t

struct motor_120_control_api_t	
Functions implemented at the HAL layer will follow these APIs.	
Data Fields	
fsp_err_t(*	open)(motor_120_control_ctrl_t *const p_ctrl, motor_120_control_cfg_t const *const p_cfg)
fsp_err_t(*	close)(motor_120_control_ctrl_t *const p_ctrl)
fsp_err_t(*	run)(motor_120_control_ctrl_t *const p_ctrl)
fsp_err_t(*	stop)(motor_120_control_ctrl_t *const p_ctrl)
fsp_err_t(*	reset)(motor_120_control_ctrl_t *const p_ctrl)
fsp_err_t(*	speedSet)(motor_120_control_ctrl_t *const p_ctrl, float const speed_rpm)
fsp_err_t(*	speedGet)(motor_120_control_ctrl_t *const p_ctrl, float *const p_speed_rpm)
fsp_err_t(*	currentGet)(motor_120_control_ctrl_t *const p_ctrl, motor_120_driver_current_status_t *const p_current_status)
fsp_err_t(*	waitStopFlagGet)(motor_120_control_ctrl_t *const p_ctrl, motor_120_control_wait_stop_flag_t *const p_flag)
fsp_err_t(*	timeoutErrorFlagGet)(motor_120_control_ctrl_t *const p_ctrl, motor_120_control_timeout_error_flag_t *const p_timeout_error_flag)

fsp_err_t(*	patternErrorFlagGet)(motor_120_control_ctrl_t *const p_ctrl, motor_120_control_pattern_error_flag_t *const p_pattern_error_flag)
fsp_err_t(*	voltageRefGet)(motor_120_control_ctrl_t *const p_ctrl, motor_120_control_voltage_ref_t *const p_voltage_ref)
fsp_err_t(*	parameterUpdate)(motor_120_control_ctrl_t *const p_ctrl, motor_120_control_cfg_t const *const p_cfg)

Field Documentation

◆ open

fsp_err_t(* motor_120_control_api_t::open) (motor_120_control_ctrl_t *const p_ctrl, motor_120_control_cfg_t const *const p_cfg)

Initialize the motor 120 control module.

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_Open()
- RM_MOTOR_120_CONTROL_HALL_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

fsp_err_t(* motor_120_control_api_t::close) (motor_120_control_ctrl_t *const p_ctrl)

Close the motor 120 control module

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_Close()
- RM_MOTOR_120_CONTROL_HALL_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ run

fsp_err_t(* motor_120_control_api_t::run) (motor_120_control_ctrl_t *const p_ctrl)

Run the motor 120 control module

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_Run()
- RM_MOTOR_120_CONTROL_HALL_Run()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ stop

fsp_err_t(* motor_120_control_api_t::stop) (motor_120_control_ctrl_t *const p_ctrl)

Stop the motor 120 control module

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_Stop()
- RM_MOTOR_120_CONTROL_HALL_Stop()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ reset

fsp_err_t(* motor_120_control_api_t::reset) (motor_120_control_ctrl_t *const p_ctrl)

Reset variables of the motor 120 control module

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_Reset()
- RM_MOTOR_120_CONTROL_HALL_Reset()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ speedSet

fsp_err_t(* motor_120_control_api_t::speedSet) (motor_120_control_ctrl_t *const p_ctrl, float const speed_rpm)

Set speed[rpm]

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_SpeedSet()
- RM_MOTOR_120_CONTROL_HALL_SpeedSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	speed_rpm	Pointer to get speed data[rpm]

◆ speedGet

fsp_err_t(* motor_120_control_api_t::speedGet) (motor_120_control_ctrl_t *const p_ctrl, float *const p_speed_rpm)

Get speed.

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_SpeedGet()
- RM_MOTOR_120_CONTROL_HALL_SpeedGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_speed_rpm	Pointer to get speed data[rpm]

◆ currentGet

fsp_err_t(* motor_120_control_api_t::currentGet) (motor_120_control_ctrl_t *const p_ctrl, motor_120_driver_current_status_t *const p_current_status)

Get phase current, Vdc and Va_max data.

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_CurrentGet()
- RM_MOTOR_120_CONTROL_HALL_CurrentGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_current_status	Pointer to get data structure.

◆ waitStopFlagGet

fsp_err_t(* motor_120_control_api_t::waitStopFlagGet) (motor_120_control_ctrl_t *const p_ctrl, motor_120_control_wait_stop_flag_t *const p_flag)

Get wait stop flag.

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_WaitStopFlagGet()
- RM_MOTOR_120_CONTROL_HALL_WaitStopFlagGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_flag	Pointer to wait stop flag

◆ timeoutErrorFlagGet

fsp_err_t(* motor_120_control_api_t::timeoutErrorFlagGet) (motor_120_control_ctrl_t *const p_ctrl, motor_120_control_timeout_error_flag_t *const p_timeout_error_flag)

Get timerout error flag.

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_TimeoutErrorFlagGet()
- RM_MOTOR_120_CONTROL_HALL_TimeoutErrorFlagGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_timeout_error_flag	Pointer to timeout error flag

◆ patternErrorFlagGet

fsp_err_t(* motor_120_control_api_t::patternErrorFlagGet) (motor_120_control_ctrl_t *const p_ctrl, motor_120_control_pattern_error_flag_t *const p_pattern_error_flag)

Get pattern error flag.

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_PatternErrorFlagGet()
- RM_MOTOR_120_CONTROL_HALL_PatternErrorFlagGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_pattern_error_flag	Pointer to pattern error flag

◆ voltageRefGet

fsp_err_t(* motor_120_control_api_t::voltageRefGet) (motor_120_control_ctrl_t *const p_ctrl, motor_120_control_voltage_ref_t *const p_voltage_ref)

Get voltage ref.

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_VoltageRefGet()
- RM_MOTOR_120_CONTROL_HALL_VoltageRefGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_voltage_ref	Pointer to flag voltage ref

◆ parameterUpdate

fsp_err_t(* motor_120_control_api_t::parameterUpdate) (motor_120_control_ctrl_t *const p_ctrl, motor_120_control_cfg_t const *const p_cfg)

Update configuration parameters for the calculation in the motor 120 control module

Implemented as

- RM_MOTOR_120_CONTROL_SENSORLESS_ParameterUpdate()
- RM_MOTOR_120_CONTROL_HALL_ParameterUpdate()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure include update parameters.

◆ motor_120_control_instance_t

struct motor_120_control_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

motor_120_control_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
motor_120_control_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
motor_120_control_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ motor_120_control_ctrl_t

typedef void motor_120_control_ctrl_t
Control block. Allocate an instance specific control block to pass into the API calls. **Implemented as** ◦ motor_120_control_sensorless_instance_ctrl_t ◦ motor_120_control_hall_instance_ctrl_t

Enumeration Type Documentation

◆ motor_120_control_event_t

enum motor_120_control_event_t	
Events that can trigger a callback function	
Enumerator	
MOTOR_120_CONTROL_EVENT_ADC_FORWARD	Event before motor 120 driver process.
MOTOR_120_CONTROL_EVENT_ADC_BACKWARD	Event after motor 120 driver process.
MOTOR_120_CONTROL_EVENT_CYCLE_FORWARD	Before cyclic process of speed control.
MOTOR_120_CONTROL_EVENT_CYCLE_BACKWARD	After cyclic process of speed control.

◆ motor_120_conduction_type_t

enum motor_120_conduction_type_t	
Enumerator	
MOTOR_120_CONDUCTION_TYPE_FIRST60	First 60 degree PWM.
MOTOR_120_CONDUCTION_TYPE_COMPLEMENTARY	Complementary first 60 degree PWM.

◆ motor_120_control_status_t

enum motor_120_control_status_t	
120 control status	
Enumerator	
MOTOR_120_CONTROL_STATUS_INACTIVE	120 control status inactive
MOTOR_120_CONTROL_STATUS_ACTIVE	120 control status active

◆ motor_120_control_run_mode_t

enum motor_120_control_run_mode_t	
Run mode	
Enumerator	
MOTOR_120_CONTROL_RUN_MODE_INIT	Run mode init.
MOTOR_120_CONTROL_RUN_MODE_BOOT	Run mode boot.
MOTOR_120_CONTROL_RUN_MODE_DRIVE	Run mode drive.

◆ motor_120_control_rotation_direction_t

enum motor_120_control_rotation_direction_t	
Rotation direction	
Enumerator	
MOTOR_120_CONTROL_ROTATION_DIRECTION_CW	Clockwise.
MOTOR_120_CONTROL_ROTATION_DIRECTION_CCW	Counter clockwise.
MOTOR_120_CONTROL_ROTATION_DIRECTION_MAX	Max value.

◆ motor_120_control_wait_stop_flag_t

enum motor_120_control_wait_stop_flag_t	
Flag for waiting for motor stop	
Enumerator	
MOTOR_120_CONTROL_WAIT_STOP_FLAG_CLEAR	Wait stop flag clear.
MOTOR_120_CONTROL_WAIT_STOP_FLAG_SET	Wait stop flag set.

◆ motor_120_control_timeout_error_flag_t

enum motor_120_control_timeout_error_flag_t	
Flag for timeout error status	
Enumerator	
MOTOR_120_CONTROL_TIMEOUT_ERROR_FLAG_CLEAR	Timeout error flag clear.
MOTOR_120_CONTROL_TIMEOUT_ERROR_FLAG_SET	Timeout error flag set.

◆ motor_120_control_pattern_error_flag_t

enum motor_120_control_pattern_error_flag_t	
Flag for pattern error status	
Enumerator	
MOTOR_120_CONTROL_PATTERN_ERROR_FLAG_CLEAR	Pattern error flag clear.
MOTOR_120_CONTROL_PATTERN_ERROR_FLAG_SET	Pattern error flag set.

◆ motor_120_control_speed_ref_t

enum motor_120_control_speed_ref_t	
Speed reference status	
Enumerator	
MOTOR_120_CONTROL_SPEED_REF_ZERO_CONST	Speed reference zero const.
MOTOR_120_CONTROL_SPEED_REF_OPENLOOP_1	Speed reference openloop 1.
MOTOR_120_CONTROL_SPEED_REF_OPENLOOP_2	Speed reference openloop 2.
MOTOR_120_CONTROL_SPEED_REF_OPENLOOP_3	Speed reference openloop 3.
MOTOR_120_CONTROL_SPEED_REF_CHANGE	Speed reference change.

◆ motor_120_control_voltage_ref_t

enum motor_120_control_voltage_ref_t	
Voltage reference status	
Enumerator	
MOTOR_120_CONTROL_VOLTAGE_REF_ZERO_CONST	Voltage reference zero const.
MOTOR_120_CONTROL_VOLTAGE_REF_UP	Voltage reference up.
MOTOR_120_CONTROL_VOLTAGE_REF_CONST	Voltage reference const.
MOTOR_120_CONTROL_VOLTAGE_REF_OPENLOOP	Voltage reference opneloop.
MOTOR_120_CONTROL_VOLTAGE_REF_PI_OUTPUT	Voltage reference pi output.

4.3.73 Interface

Interfaces

Detailed Description

Interface for motor driver functions.

Summary

The MOTOR_120_DRIVER interface for setting the PWM modulation duty

The motor current control interface can be implemented by:

- Motor 120 degree driver (rm_motor_120_driver)

Data Structures

struct	motor_120_driver_callback_args_t
struct	motor_120_driver_current_status_t
struct	motor_120_driver_cfg_t
struct	motor_120_driver_api_t
struct	motor_120_driver_instance_t

Typedefs

typedef void	motor_120_driver_ctrl_t

Enumerations

enum	motor_120_driver_event_t
enum	motor_120_driver_flag_offset_calc_t
enum	motor_120_driver_phase_pattern_t

Data Structure Documentation

◆ motor_120_driver_callback_args_t

struct motor_120_driver_callback_args_t		
Callback function parameter data		
Data Fields		
motor_120_driver_event_t	event	Event trigger.
void const *	p_context	Placeholder for user data.

◆ motor_120_driver_current_status_t

struct motor_120_driver_current_status_t		
Current data get structure		
Data Fields		
float	iu	U phase current (A)

float	iv	V phase current (A)
float	iw	W phase current (A)
float	vdc	Main line voltage (V)
float	vu	U phase voltage (V)
float	vv	V phase voltage (V)
float	vw	W phase voltage (V)

◆ motor_120_driver_cfg_t

struct motor_120_driver_cfg_t	
Configuration parameters.	
Data Fields	
void(*	p_callback)(motor_120_driver_callback_args_t *p_args)
	Callback function.
void const *	p_context
	Placeholder for user data.
void const *	p_extend
	Placeholder for user extension.

◆ motor_120_driver_api_t

struct motor_120_driver_api_t	
Functions implemented at the HAL layer will follow these APIs.	
Data Fields	
fsp_err_t(*	open)(motor_120_driver_ctrl_t *const p_ctrl, motor_120_driver_cfg_t const *const p_cfg)
fsp_err_t(*	close)(motor_120_driver_ctrl_t *const p_ctrl)
fsp_err_t(*	run)(motor_120_driver_ctrl_t *const p_ctrl)
fsp_err_t(*	stop)(motor_120_driver_ctrl_t *const p_ctrl)

fsp_err_t(*	reset)(motor_120_driver_ctrl_t *const p_ctrl)
fsp_err_t(*	phaseVoltageSet)(motor_120_driver_ctrl_t *const p_ctrl, float const u_voltage, float const v_voltage, float const w_voltage)
fsp_err_t(*	phasePatternSet)(motor_120_driver_ctrl_t *const p_ctrl, motor_120_driver_phase_pattern_t const pattern)
fsp_err_t(*	currentGet)(motor_120_driver_ctrl_t *const p_ctrl, motor_120_driver_current_status_t *const p_current_status)
fsp_err_t(*	currentOffsetCalc)(motor_120_driver_ctrl_t *const p_ctrl)
fsp_err_t(*	flagCurrentOffsetGet)(motor_120_driver_ctrl_t *const p_ctrl, motor_120_driver_flag_offset_calc_t *const p_flag_offset)
fsp_err_t(*	parameterUpdate)(motor_120_driver_ctrl_t *const p_ctrl, motor_120_driver_cfg_t const *const p_cfg)

Field Documentation

◆ open

fsp_err_t(* motor_120_driver_api_t::open) (motor_120_driver_ctrl_t *const p_ctrl, motor_120_driver_cfg_t const *const p_cfg)

Initialize the motor 120 driver module.

Implemented as

- RM_MOTOR_120_DRIVER_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

fsp_err_t(* motor_120_driver_api_t::close) (motor_120_driver_ctrl_t *const p_ctrl)

Close the motor 120 driver module

Implemented as

- RM_MOTOR_120_DRIVER_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ run

fsp_err_t(* motor_120_driver_api_t::run) (motor_120_driver_ctrl_t *const p_ctrl)

Run the motor 120 driver module

Implemented as

- RM_MOTOR_120_DRIVER_Run()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ stop

fsp_err_t(* motor_120_driver_api_t::stop) (motor_120_driver_ctrl_t *const p_ctrl)

Stop the motor 120 driver module

Implemented as

- RM_MOTOR_120_DRIVER_Stop()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ reset

fsp_err_t(* motor_120_driver_api_t::reset) (motor_120_driver_ctrl_t *const p_ctrl)

Reset variables of the motor 120 driver module

Implemented as

- RM_MOTOR_120_DRIVER_Reset()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ phaseVoltageSet

fsp_err_t(* motor_120_driver_api_t::phaseVoltageSet) (motor_120_driver_ctrl_t *const p_ctrl, float const u_voltage, float const v_voltage, float const w_voltage)

Set (Input) phase voltage data into the motor 120 driver module

Implemented as

- RM_MOTOR_120_DRIVER_PhaseVoltageSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	u_voltage	U phase voltage [V]
[in]	v_voltage	V phase voltage [V]
[in]	w_voltage	W phase voltage [V]

◆ phasePatternSet

fsp_err_t(* motor_120_driver_api_t::phasePatternSet) (motor_120_driver_ctrl_t *const p_ctrl, motor_120_driver_phase_pattern_t const pattern)

Set phase voltage pattern the motor 120 driver module

Implemented as

- RM_MOTOR_120_DRIVER_PhasePatternSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	pattern	Voltage pattern

◆ currentGet

fsp_err_t(* motor_120_driver_api_t::currentGet) (motor_120_driver_ctrl_t *const p_ctrl, motor_120_driver_current_status_t *const p_current_status)

Get phase current, Vdc and Va_max data from the motor 120 driver module

Implemented as

- RM_MOTOR_120_DRIVER_CurrentGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_current_status	Pointer to get data structure.

◆ currentOffsetCalc

fsp_err_t(* motor_120_driver_api_t::currentOffsetCalc) (motor_120_driver_ctrl_t *const p_ctrl)

current offset detection from the motor 120 driver module

Implemented as

- RM_MOTOR_120_DRIVER_CurrentOffsetCalc()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ flagCurrentOffsetGet

fsp_err_t(* motor_120_driver_api_t::flagCurrentOffsetGet) (motor_120_driver_ctrl_t *const p_ctrl, motor_120_driver_flag_offset_calc_t *const p_flag_offset)

Get the flag of finish current offset detection from the motor 120 driver module

Implemented as

- RM_MOTOR_120_DRIVER_FlagCurrentOffsetGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_flag_offset	Flag of finish current offset detection

◆ parameterUpdate

fsp_err_t(* motor_120_driver_api_t::parameterUpdate) (motor_120_driver_ctrl_t *const p_ctrl, motor_120_driver_cfg_t const *const p_cfg)

Update configuration parameters for the calculation in the motor 120 driver module

Implemented as

- RM_MOTOR_120_DRIVER_ParameterUpdate()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure include update parameters.

◆ motor_120_driver_instance_t

struct motor_120_driver_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

motor_120_driver_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
motor_120_driver_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
motor_120_driver_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ motor_120_driver_ctrl_t

typedef void motor_120_driver_ctrl_t

Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- motor_120_driver_instance_ctrl_t

Enumeration Type Documentation

◆ motor_120_driver_event_t

enum motor_120_driver_event_t

Events that can trigger a callback function

Enumerator	
MOTOR_120_DRIVER_EVENT_FORWARD	Event before motor 120 driver process (before current control timing)
MOTOR_120_DRIVER_EVENT_120_CONTROL	Event 120 detection.
MOTOR_120_DRIVER_EVENT_BACKWARD	Event after motor 120 driver process (after PWM duty setting)

◆ motor_120_driver_flag_offset_calc_t

enum motor_120_driver_flag_offset_calc_t	
The flag represents that the offset measurement is finished	
Enumerator	
MOTOR_120_DRIVER_FLAG_OFFSET_CALC_CLEAR	Offset calculation not finished.
MOTOR_120_DRIVER_FLAG_OFFSET_CALC_OFF_FINISH	Off voltage offset calculation finished.
MOTOR_120_DRIVER_FLAG_OFFSET_CALC_ALL_FINISH	All offset calculation finished.

◆ motor_120_driver_phase_pattern_t

enum motor_120_driver_phase_pattern_t	
Phase voltage pattern	
Enumerator	
MOTOR_120_DRIVER_PHASE_PATTERN_ERROR	Phase voltage pattern error.
MOTOR_120_DRIVER_PHASE_PATTERN_UP_PWM_VN_ON	Up(PWM) to Vn(on)
MOTOR_120_DRIVER_PHASE_PATTERN_UP_PWM_WN_ON	Up(PWM) to Wn(on)
MOTOR_120_DRIVER_PHASE_PATTERN_VP_PWM_UN_ON	Vp(PWM) to Un(on)
MOTOR_120_DRIVER_PHASE_PATTERN_VP_PWM_WN_ON	Vp(PWM) to Wn(on)
MOTOR_120_DRIVER_PHASE_PATTERN_WP_PWM_UN_ON	Wp(PWM) to Un(on)
MOTOR_120_DRIVER_PHASE_PATTERN_WP_PWM_VN_ON	Wp(PWM) to Vn(on)
MOTOR_120_DRIVER_PHASE_PATTERN_UP_ON_VN_PWM	Up(on) to Vn(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_UP_ON_WN_PWM	Up(on) to Wn(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_VP_ON_UN_PWM	Vp(on) to Un(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_VP_ON_WN_PWM	Vp(on) to Wn(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_WP_ON_U	Wp(on) to Un(PWM)

N_PWM	
MOTOR_120_DRIVER_PHASE_PATTERN_WP_ON_VN_PWM	Wp(on) to Vn(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_U_PWM_VN_ON	U(PWM) to Vn(on)
MOTOR_120_DRIVER_PHASE_PATTERN_U_PWM_WN_ON	U(PWM) to Wn(on)
MOTOR_120_DRIVER_PHASE_PATTERN_V_PWM_UN_ON	V(PWM) to Un(on)
MOTOR_120_DRIVER_PHASE_PATTERN_V_PWM_WN_ON	V(PWM) to Wn(on)
MOTOR_120_DRIVER_PHASE_PATTERN_W_PWM_UN_ON	W(PWM) to Un(on)
MOTOR_120_DRIVER_PHASE_PATTERN_W_PWM_VN_ON	W(PWM) to Vn(on)
MOTOR_120_DRIVER_PHASE_PATTERN_UP_ON_V_PWM	Up(on) to V(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_UP_ON_W_PWM	Up(on) to W(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_VP_ON_U_PWM	Vp(on) to U(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_VP_ON_W_PWM	Vp(on) to W(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_WP_ON_U_PWM	Wp(on) to U(PWM)
MOTOR_120_DRIVER_PHASE_PATTERN_WP_ON_V_PWM	Wp(on) to V(PWM)

4.3.74 Motor angle Interface

Interfaces

Detailed Description

Interface for motor angle and speed calculation functions.

Summary

The Motor angle interface calculates the rotor angle and rotational speed from other data.

The motor angle interface can be implemented by:

- Motor Angle and Speed Estimation (rm_motor_estimate)
- Motor Angle and Speed Calculation with an Encoder (rm_motor_sense_encoder)

Data Structures

struct	motor_angle_cfg_t
struct	motor_angle_current_t
struct	motor_angle_voltage_reference_t
struct	motor_angle_encoder_info_t
struct	motor_angle_api_t
struct	motor_angle_instance_t

Typedefs

typedef void	motor_angle_ctrl_t

Enumerations

enum	motor_sense_encoder_angle_adjust_t

Data Structure Documentation

◆ motor_angle_cfg_t

struct motor_angle_cfg_t
Configuration parameters.

◆ motor_angle_current_t

struct motor_angle_current_t		
Interface structure		
Data Fields		
float	id	d-axis current
float	iq	q-axis current

◆ motor_angle_voltage_reference_t

struct motor_angle_voltage_reference_t		
Motor angle voltage reference		
Data Fields		
float	vd	d-axis voltage reference
float	vq	q-axis voltage reference

◆ motor_angle_encoder_info_t

struct motor_angle_encoder_info_t		
Motor angle encoder adjustment info		
Data Fields		
motor_sense_encoder_angle_adjust_t	e_adjust_status	Encoder Adjustment Status.
uint8_t	u1_adjust_count_full	Adjustment count became full.

◆ motor_angle_api_t

struct motor_angle_api_t	
Functions implemented as application interface will follow these APIs.	
Data Fields	
fsp_err_t(*	open)(motor_angle_ctrl_t *const p_ctrl, motor_angle_cfg_t const *const p_cfg)
fsp_err_t(*	close)(motor_angle_ctrl_t *const p_ctrl)
fsp_err_t(*	reset)(motor_angle_ctrl_t *const p_ctrl)
fsp_err_t(*	currentSet)(motor_angle_ctrl_t *const p_ctrl, motor_angle_current_t *const p_st_current, motor_angle_voltage_reference_t *const p_st_voltage)
fsp_err_t(*	speedSet)(motor_angle_ctrl_t *const p_ctrl, float const speed_ctrl, float const damp_speed)
fsp_err_t(*	flagPiCtrlSet)(motor_angle_ctrl_t *const p_ctrl, uint32_t const flag_pi)
fsp_err_t(*	internalCalculate)(motor_angle_ctrl_t *const p_ctrl)
fsp_err_t(*	angleSpeedGet)(motor_angle_ctrl_t *const p_ctrl, float *const p_angle, float *const p_speed, float *const p_phase_err)
fsp_err_t(*	angleAdjust)(motor_angle_ctrl_t *const p_ctrl)
fsp_err_t(*	encoderCyclic)(motor_angle_ctrl_t *const p_ctrl)

fsp_err_t(*	estimatedComponentGet)(motor_angle_ctrl_t *const p_ctrl, float *const p_ed, float *const p_eq)
fsp_err_t(*	infoGet)(motor_angle_ctrl_t *const p_ctrl, motor_angle_encoder_info_t *const p_info)
fsp_err_t(*	parameterUpdate)(motor_angle_ctrl_t *const p_ctrl, motor_angle_cfg_t const *p_cfg)

Field Documentation

◆ open

fsp_err_t(* motor_angle_api_t::open) (motor_angle_ctrl_t *const p_ctrl, motor_angle_cfg_t const *const p_cfg)

Initialize the Motor_Angle.

Implemented as

- RM_MOTOR_ESTIMATE_Open()
- RM_MOTOR_SENSE_ENCODER_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

fsp_err_t(* motor_angle_api_t::close) (motor_angle_ctrl_t *const p_ctrl)

Close (Finish) the Motor_Angle.

Implemented as

- RM_MOTOR_ESTIMATE_Close()
- RM_MOTOR_SENSE_ENCODER_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ reset

fsp_err_t(* motor_angle_api_t::reset) (motor_angle_ctrl_t *const p_ctrl)

Reset the Motor_Angle.

Implemented as

- RM_MOTOR_ESTIMATE_Reset()
- RM_MOTOR_SENSE_ENCODER_Reset()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ currentSet

fsp_err_t(* motor_angle_api_t::currentSet) (motor_angle_ctrl_t *const p_ctrl, motor_angle_current_t *const p_st_current, motor_angle_voltage_reference_t *const p_st_voltage)

Set (Input) Current & Voltage Reference data into the Motor_Angle.

Implemented as

- RM_MOTOR_ESTIMATE_CurrentSet()
- RM_MOTOR_SENSE_ENCODER_CurrentSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_st_current	Pointer to current structure
[in]	p_st_voltage	Pointer to voltage Reference structure

◆ speedSet

fsp_err_t(* motor_angle_api_t::speedSet) (motor_angle_ctrl_t *const p_ctrl, float const speed_ctrl, float const damp_speed)

Set (Input) Speed Information into the Motor_Angle.

Implemented as

- RM_MOTOR_ESTIMATE_SpeedSet()
- RM_MOTOR_SENSE_ENCODER_SpeedSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	speed_ctrl	Control reference of rotational speed [rad/s]
[in]	damp_speed	Damping rotational speed [rad/s]

◆ flagPiCtrlSet

fsp_err_t(* motor_angle_api_t::flagPiCtrlSet) (motor_angle_ctrl_t *const p_ctrl, uint32_t const flag_pi)

Set the flag of PI Control runs.

Implemented as

- RM_MOTOR_ESTIMATE_FlagPiCtrlSet()
- RM_MOTOR_SENSE_ENCODER_FlagPiCtrlSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	flag_pi	The flag of PI control runs

◆ internalCalculate

fsp_err_t(* motor_angle_api_t::internalCalculate) (motor_angle_ctrl_t *const p_ctrl)

Calculate internal parameters of encoder process.

Implemented as

- RM_MOTOR_ESTIMATE_InternalCalculate()
- RM_MOTOR_SENSE_ENCODER_InternalCalculate()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ angleSpeedGet

fsp_err_t(* motor_angle_api_t::angleSpeedGet) (motor_angle_ctrl_t *const p_ctrl, float *const p_angle, float *const p_speed, float *const p_phase_err)

Get rotor angle and rotational speed from the Motor_Angle.

Implemented as

- RM_MOTOR_ESTIMATE_AngleSpeedGet()
- RM_MOTOR_SENSE_ENCODER_AngleSpeedGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_angl	Memory address to get rotor angle data
[out]	p_speed	Memory address to get rotational speed data
[out]	p_phase_err	Memory address to get phase(angle) error data

◆ angleAdjust

fsp_err_t(* motor_angle_api_t::angleAdjust) (motor_angle_ctrl_t *const p_ctrl)

Angle Adjustment Process.

Implemented as

- RM_MOTOR_ESTIMATE_AngleAdjust()
- RM_MOTOR_SENSE_ENCODER_AngleAdjust()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ encoderCyclic

fsp_err_t(* motor_angle_api_t::encoderCyclic) (motor_angle_ctrl_t *const p_ctrl)

Encoder Cyclic Process.

Implemented as

- RM_MOTOR_ESTIMATE_EncoderCyclic()
- RM_MOTOR_SENSE_ENCODER_EncoderCyclic()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ estimatedComponentGet

fsp_err_t(* motor_angle_api_t::estimatedComponentGet) (motor_angle_ctrl_t *const p_ctrl, float *const p_ed, float *const p_eq)

Get estimated d/q-axis component from the Motor_Angle.

Implemented as

- RM_MOTOR_ESTIMATE_EstimatedComponentGet()
- RM_MOTOR_SENSE_ENCODER_EstimatedComponentGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_ed	Memory address to get estimated d-axis component
[out]	p_eq	Memory address to get estimated q-axis component

◆ infoGet

fsp_err_t(* motor_angle_api_t::infoGet) (motor_angle_ctrl_t *const p_ctrl, motor_angle_encoder_info_t *const p_info)

Get Encoder Calculate Information.

Implemented as

- RM_MOTOR_ESTIMATE_InfoGet()
- RM_MOTOR_SENSE_ENCODER_InfoGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_info	Memory address to get encoder calculate information

◆ parameterUpdate

fsp_err_t(* motor_angle_api_t::parameterUpdate) (motor_angle_ctrl_t *const p_ctrl, motor_angle_cfg_t const *p_cfg)

Update Parameters for the calculation in the Motor_Angle.

Implemented as

- RM_MOTOR_ESTIMATE_ParameterUpdate()
- RM_MOTOR_SENSE_ENCODER_ParameterUpdate()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure include update parameters.

◆ motor_angle_instance_t

struct motor_angle_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
motor_angle_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
motor_angle_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
motor_angle_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ motor_angle_ctrl_t

typedef void motor_angle_ctrl_t
Motor Angle Control block. Allocate an instance specific control block to pass into the API calls. **Implemented as** ◦ motor_angle_ctrl_t

Enumeration Type Documentation

◆ motor_sense_encoder_angle_adjust_t

enum motor_sense_encoder_angle_adjust_t	
Enumerator	
MOTOR_SENSE_ENCODER_ANGLE_ADJUST_90_DEGREE	Roter Angle Adjustment to pull in 90degree.
MOTOR_SENSE_ENCODER_ANGLE_ADJUST_0_DEGREE	Roter Angle Adjustment to pull in 0degree.
MOTOR_SENSE_ENCODER_ANGLE_ADJUST_FINISH	Roter Angle Adjustment Finish.

4.3.75 Motor Interface

Interfaces

Detailed Description

Interface for Motor functions.

Summary

The Motor interface provides Motor functionality.

Implemented by:

- Motor Sensorless Vector Control (rm_motor_sensorless)
- Motor encoder vector control (rm_motor_encoder)
- Motor 120 Degree (rm_motor_120_degree)

Data Structures

struct	motor_callback_args_t

struct	motor_cfg_t
struct	motor_api_t
struct	motor_instance_t

Typedefs

typedef void	motor_ctrl_t

Enumerations

enum	motor_error_t
enum	motor_callback_event_t
enum	motor_wait_stop_flag_t

Data Structure Documentation

◆ motor_callback_args_t

struct motor_callback_args_t		
callback function parameter data		
Data Fields		
void const *	p_context	Placeholder for user data.
motor_callback_event_t	event	

◆ motor_cfg_t

struct motor_cfg_t	
Configuration parameters.	
Data Fields	
motor_speed_instance_t const *	p_motor_speed_instance
	Speed Instance.
motor_current_instance_t const *	p_motor_current_instance
	Current Instance.
void(*	p_callback)(motor_callback_args_t *p_args)

void const *	p_extend
	Placeholder for user extension.

Field Documentation

◆ p_callback

void(* motor_cfg_t::p_callback) (motor_callback_args_t *p_args)
Placeholder for user data. Passed to the user callback in motor_callback_args_t.

◆ motor_api_t

struct motor_api_t	
Functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(motor_ctrl_t *const p_ctrl, motor_cfg_t const *const p_cfg)
fsp_err_t(*	close)(motor_ctrl_t *const p_ctrl)
fsp_err_t(*	run)(motor_ctrl_t *const p_ctrl)
fsp_err_t(*	stop)(motor_ctrl_t *const p_ctrl)
fsp_err_t(*	reset)(motor_ctrl_t *const p_ctrl)
fsp_err_t(*	errorSet)(motor_ctrl_t *const p_ctrl, motor_error_t const error)
fsp_err_t(*	speedSet)(motor_ctrl_t *const p_ctrl, float const speed_rpm)
fsp_err_t(*	positionSet)(motor_ctrl_t *const p_ctrl, motor_speed_position_data_t const *const p_position)
fsp_err_t(*	statusGet)(motor_ctrl_t *const p_ctrl, uint8_t *const p_status)
fsp_err_t(*	angleGet)(motor_ctrl_t *const p_ctrl, float *const p_angle_rad)

fsp_err_t(*	speedGet)(motor_ctrl_t *const p_ctrl, float *const p_speed_rpm)
fsp_err_t(*	waitStopFlagGet)(motor_ctrl_t *const p_ctrl, motor_wait_stop_flag_t *const p_flag)
fsp_err_t(*	errorCheck)(motor_ctrl_t *const p_ctrl, uint16_t *const p_error)

Field Documentation

◆ open

fsp_err_t(* motor_api_t::open) (motor_ctrl_t *const p_ctrl, motor_cfg_t const *const p_cfg)

Open driver.

Implemented as

- RM_MOTOR_SENSORLESS_Open()
- RM_MOTOR_ENCODER_Open()
- RM_MOTOR_120_DEGREE_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

fsp_err_t(* motor_api_t::close) (motor_ctrl_t *const p_ctrl)

Close driver.

Implemented as

- RM_MOTOR_SENSORLESS_Close()
- RM_MOTOR_ENCODER_Close()
- RM_MOTOR_120_DEGREE_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ run

fsp_err_t(* motor_api_t::run) (motor_ctrl_t *const p_ctrl)

Run the motor. (Start the motor rotation.)

Implemented as

- RM_MOTOR_SENSORLESS_Run()
- RM_MOTOR_ENCODER_Run()
- RM_MOTOR_120_DEGREE_Run()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ stop

fsp_err_t(* motor_api_t::stop) (motor_ctrl_t *const p_ctrl)

Stop the motor. (Stop the motor rotation.)

Implemented as

- RM_MOTOR_SENSORLESS_Stop()
- RM_MOTOR_ENCODER_Stop()
- RM_MOTOR_120_DEGREE_Stop()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ reset

fsp_err_t(* motor_api_t::reset) (motor_ctrl_t *const p_ctrl)

Reset the motor control. (Recover from the error status.)

Implemented as

- RM_MOTOR_SENSORLESS_Reset()
- RM_MOTOR_ENCODER_Reset()
- RM_MOTOR_120_DEGREE_Reset()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ errorSet

fsp_err_t(* motor_api_t::errorSet) (motor_ctrl_t *const p_ctrl, motor_error_t const error)

Set Error Information.

Implemented as

- RM_MOTOR_SENSORLESS_ErrorSet()
- RM_MOTOR_ENCODER_ErrorSet()
- RM_MOTOR_120_DEGREE_ErrorSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	error	Happend error code

◆ speedSet

fsp_err_t(* motor_api_t::speedSet) (motor_ctrl_t *const p_ctrl, float const speed_rpm)

Set rotation speed.

Implemented as

- RM_MOTOR_SENSORLESS_SpeedSet()
- RM_MOTOR_ENCODER_SpeedSet()
- RM_MOTOR_120_DEGREE_SpeedSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	speed_rpm	Required rotation speed [rpm]

◆ positionSet

fsp_err_t(* motor_api_t::positionSet) (motor_ctrl_t *const p_ctrl, motor_speed_position_data_t const *const p_position)

Set reference position.

Implemented as

- RM_MOTOR_SENSORLESS_PositionSet()
- RM_MOTOR_ENCODER_PositionSet()
- RM_MOTOR_120_DEGREE_PositionSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_position	Pointer to set required data

◆ statusGet

fsp_err_t(* motor_api_t::statusGet) (motor_ctrl_t *const p_ctrl, uint8_t *const p_status)

Get the motor control status.

Implemented as

- RM_MOTOR_SENSORLESS_StatusGet()
- RM_MOTOR_ENCODER_StatusGet()
- RM_MOTOR_120_DEGREE_StatusGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_status	Pointer to get the motor control status

◆ angleGet

fsp_err_t(* motor_api_t::angleGet) (motor_ctrl_t *const p_ctrl, float *const p_angle_rad)

Get the rotor angle.

Implemented as

- RM_MOTOR_SENSORLESS_AngleGet()
- RM_MOTOR_ENCODER_AngleGet()
- RM_MOTOR_120_DEGREE_AngleGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_angle_rad	Pointer to get the rotor angle [rad]

◆ speedGet

fsp_err_t(* motor_api_t::speedGet) (motor_ctrl_t *const p_ctrl, float *const p_speed_rpm)

Get the rotation speed.

Implemented as

- RM_MOTOR_SENSORLESS_SpeedGet()
- RM_MOTOR_ENCODER_SpeedGet()
- RM_MOTOR_120_DEGREE_SpeedGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_speed_rpm	Pointer to get the rotation speed [rpm]

◆ waitStopFlagGet

fsp_err_t(* motor_api_t::waitStopFlagGet) (motor_ctrl_t *const p_ctrl, motor_wait_stop_flag_t *const p_flag)

Get wait stop flag.

Implemented as

- RM_MOTOR_SENSORLESS_WaitStopFlagGet()
- RM_MOTOR_ENCODER_WaitStopFlagGet()
- RM_MOTOR_120_DEGREE_WaitStopFlagGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_flag	Pointer to wait stop flag

◆ errorCheck

fsp_err_t(* motor_api_t::errorCheck) (motor_ctrl_t *const p_ctrl, uint16_t *const p_error)

Check the error occurrence

Implemented as

- RM_MOTOR_SENSORLESS_ErrorCheck()
- RM_MOTOR_ENCODER_ErrorCheck()
- RM_MOTOR_120_DEGREE_ErrorCheck()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_error	Pointer to get occured error

◆ motor_instance_t

struct motor_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
motor_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
motor_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
motor_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ motor_ctrl_t

typedef void motor_ctrl_t
Motor Control block. Allocate an instance specific control block to pass into the API calls. **Implemented as** ◦ motor_instance_ctrl_t

Enumeration Type Documentation

◆ motor_error_t

enum motor_error_t
Error information

◆ motor_callback_event_t

enum motor_callback_event_t	
Events that can trigger a callback function	
Enumerator	
MOTOR_CALLBACK_EVENT_SPEED_FORWARD	Event forward speed control.
MOTOR_CALLBACK_EVENT_SPEED_BACKWARD	Event backward speed control.
MOTOR_CALLBACK_EVENT_CURRENT_FORWARD	Event forward current control.
MOTOR_CALLBACK_EVENT_CURRENT_BACKWARD	Event backward current control.
MOTOR_CALLBACK_EVENT_ADC_FORWARD	Event before motor 120 driver process.
MOTOR_CALLBACK_EVENT_ADC_BACKWARD	Event after motor 120 driver process.
MOTOR_CALLBACK_EVENT_CYCLE_FORWARD	Before cyclic process of speed control.
MOTOR_CALLBACK_EVENT_CYCLE_BACKWARD	After cyclic process of speed control.

◆ motor_wait_stop_flag_t

enum motor_wait_stop_flag_t	
Flag for waiting for motor stop	
Enumerator	
MOTOR_WAIT_STOP_FLAG_CLEAR	Wait stop flag clear.
MOTOR_WAIT_STOP_FLAG_SET	Wait stop flag set.

4.3.76 Motor current Interface

Interfaces

Detailed Description

Interface for motor current functions.

Summary

The Motor current interface for getting the PWM modulation duty from electric current and speed

The motor current control interface can be implemented by:

- Motor Current (rm_motor_current)

Data Structures

struct	motor_current_output_t
struct	motor_current_input_current_t
struct	motor_current_input_voltage_t
struct	motor_current_get_voltage_t
struct	motor_current_cfg_t
struct	motor_current_api_t
struct	motor_current_instance_t

Typedefs

typedef void	motor_current_ctrl_t

Enumerations

enum motor_current_event_t

Data Structure Documentation

◆ motor_current_output_t

struct motor_current_output_t

Structure of interface to speed control Output parameters

Data Fields

float	f_id	D-axis current [A].
float	f_iq	Q-axis current [A].
float	f_vamax	
float	f_speed_rad	Speed value [rad/s].
float	f_speed_rpm	Speed value [rpm].
float	f_rotor_angle	Motor rotor angle [rad].
float	f_position_rad	Motor rotor position [rad].
float	f_ed	Estimated d-axis component[V] of flux due to the permanent magnet.
float	f_eq	Estimated q-axis component[V] of flux due to the permanent magnet.
float	f_phase_err_rad	Phase error [rad].
uint8_t	u1_flag_get_iref	Flag to set d/q-axis current reference.
uint8_t	u1_adjust_status	Angle adjustment satatus.
uint8_t	u1_adjust_count_full	Angle adjustment count full.

◆ motor_current_input_current_t

struct motor_current_input_current_t

Three-phase input current

Data Fields

float	iu	U phase current[A].
float	iv	V phase current[A].
float	iw	W phase current[A].

◆ motor_current_input_voltage_t

struct motor_current_input_voltage_t

Input voltage		
Data Fields		
float	vdc	Main line voltage[V].
float	va_max	Maximum magnitude of voltage vector[V].

◆ motor_current_get_voltage_t

struct motor_current_get_voltage_t		
Struct to get motor current		
Data Fields		
float	u_voltage	U phase voltage[V].
float	v_voltage	V phase voltage[V].
float	w_voltage	W phase voltage[V].
float	vd_reference	d-axis voltage reference
float	vq_reference	q-axis voltage reference

◆ motor_current_cfg_t

struct motor_current_cfg_t
Configuration parameters.

◆ motor_current_api_t

struct motor_current_api_t	
Functions implemented at the Motor Current Module will follow these APIs.	
Data Fields	
fsp_err_t(*	open)(motor_current_ctrl_t *const p_ctrl, motor_current_cfg_t const *const p_cfg)
fsp_err_t(*	close)(motor_current_ctrl_t *const p_ctrl)
fsp_err_t(*	reset)(motor_current_ctrl_t *const p_ctrl)
fsp_err_t(*	run)(motor_current_ctrl_t *const p_ctrl)
fsp_err_t(*	parameterSet)(motor_current_ctrl_t *const p_ctrl, motor_current_input_t const *const p_st_input)

fsp_err_t(*	currentReferenceSet)(motor_current_ctrl_t *const p_ctrl, float const id_reference, float const iq_reference)
fsp_err_t(*	speedPhaseSet)(motor_current_ctrl_t *const p_ctrl, float const speed_rad, float const phase_rad)
fsp_err_t(*	currentSet)(motor_current_ctrl_t *const p_ctrl, motor_current_input_current_t const *const p_st_current, motor_current_input_voltage_t const *const p_st_voltage)
fsp_err_t(*	parameterGet)(motor_current_ctrl_t *const p_ctrl, motor_current_output_t *const p_st_output)
fsp_err_t(*	currentGet)(motor_current_ctrl_t *const p_ctrl, float *const p_id, float *const p_iq)
fsp_err_t(*	phaseVoltageGet)(motor_current_ctrl_t *const p_ctrl, motor_current_get_voltage_t *const p_voltage)
fsp_err_t(*	parameterUpdate)(motor_current_ctrl_t *const p_ctrl, motor_current_cfg_t const *const p_cfg)

Field Documentation

◆ open

fsp_err_t(* motor_current_api_t::open) (motor_current_ctrl_t *const p_ctrl, motor_current_cfg_t const *const p_cfg)

Initialize the motor current module.

Implemented as

- RM_MOTOR_CURRENT_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

fsp_err_t(* motor_current_api_t::close) (motor_current_ctrl_t *const p_ctrl)

Close (Finish) the motor current module.

Implemented as

- RM_MOTOR_CURRENT_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ reset

fsp_err_t(* motor_current_api_t::reset) (motor_current_ctrl_t *const p_ctrl)

Reset variables for the motor current module.

Implemented as

- RM_MOTOR_CURRENT_Reset()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ run

fsp_err_t(* motor_current_api_t::run) (motor_current_ctrl_t *const p_ctrl)

Activate the motor current control.

Implemented as

- RM_MOTOR_CURRENT_Run()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ parameterSet

fsp_err_t(* motor_current_api_t::parameterSet) (motor_current_ctrl_t *const p_ctrl, motor_current_input_t const *const p_st_input)

Set (Input) parameters into the motor current module.

Implemented as

- RM_MOTOR_CURRENT_ParameterSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_st_input	Pointer to input data structure(speed control output data)

◆ currentReferenceSet

fsp_err_t(* motor_current_api_t::currentReferenceSet) (motor_current_ctrl_t *const p_ctrl, float const id_reference, float const iq_reference)

Set (Input) Current reference into the motor current module.

Implemented as

- RM_MOTOR_CURRENT_CurrentReferenceSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	id_reference	D-axis current reference [A]
[in]	iq_reference	Q-axis current reference [A]

◆ speedPhaseSet

fsp_err_t(* motor_current_api_t::speedPhaseSet) (motor_current_ctrl_t *const p_ctrl, float const speed_rad, float const phase_rad)

Set (Input) Speed & Phase data into the motor current module.

Implemented as

- RM_MOTOR_CURRENT_SpeedPhaseSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	speed_rad	Rotational speed [rad/s]
[in]	phase_rad	Rotor phase [rad]

◆ currentSet

fsp_err_t(* motor_current_api_t::currentSet) (motor_current_ctrl_t *const p_ctrl, motor_current_input_current_t const *const p_st_current, motor_current_input_voltage_t const *const p_st_voltage)

Set (Input) Current data into the motor current module.

Implemented as

- RM_MOTOR_CURRENT_CurrentSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_st_current	Pointer to input current structure
[in]	p_st_voltage	Pointer to input voltage structure

◆ parameterGet

fsp_err_t(* motor_current_api_t::parameterGet) (motor_current_ctrl_t *const p_ctrl, motor_current_output_t *const p_st_output)

Get (output) parameters from the motor current module

Implemented as

- RM_MOTOR_CURRENT_ParameterGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_st_output	Pointer to output data structure(speed control input data)

◆ currentGet

fsp_err_t(* motor_current_api_t::currentGet) (motor_current_ctrl_t *const p_ctrl, float *const p_id, float *const p_iq)

Get d/q-axis current

Implemented as

- RM_MOTOR_CURRENT_CurrentGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_id	Pointer to get d-axis current [A]
[out]	p_iq	Pointer to get q-axis current [A]

◆ phaseVoltageGet

fsp_err_t(* motor_current_api_t::phaseVoltageGet) (motor_current_ctrl_t *const p_ctrl, motor_current_get_voltage_t *const p_voltage)

Get phase output voltage

Implemented as

- RM_MOTOR_CURRENT_PhaseVoltageGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_voltage	Pointer to get voltages

◆ parameterUpdate

fsp_err_t(* motor_current_api_t::parameterUpdate) (motor_current_ctrl_t *const p_ctrl, motor_current_cfg_t const *const p_cfg)

Update parameters for the calculation in the motor current control.

Implemented as

- RM_MOTOR_CURRENT_ParameterUpdate()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure include update parameters.

◆ motor_current_instance_t

struct motor_current_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
motor_current_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
motor_current_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
motor_current_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ motor_current_ctrl_t

typedef void motor_current_ctrl_t
Control block. Allocate an instance specific control block to pass into the API calls. **Implemented as** ◦ motor_current_ctrl_t

Enumeration Type Documentation

◆ motor_current_event_t

enum motor_current_event_t	
Events that can trigger a callback function	
Enumerator	
MOTOR_CURRENT_EVENT_FORWARD	Event forward current control.
MOTOR_CURRENT_EVENT_DATA_SET	Event set speed control output data.
MOTOR_CURRENT_EVENT_BACKWARD	Event backward current control.

4.3.77 Motor driver Interface

Interfaces

Detailed Description

Interface for motor driver functions.

Summary

The Motor driver interface for setting the PWM modulation duty

The motor current control interface can be implemented by:

- Motor Driver (rm_motor_driver)

Data Structures

struct	motor_driver_callback_args_t
struct	motor_driver_current_get_t
struct	motor_driver_cfg_t
struct	motor_driver_api_t
struct	motor_driver_instance_t

Typedefs

typedef void	motor_driver_ctrl_t

Enumerations

enum	motor_driver_event_t
enum	motor_driver_shunt_type_t

Data Structure Documentation

◆ motor_driver_callback_args_t

struct motor_driver_callback_args_t		
Callback function parameter data		
Data Fields		
motor_driver_event_t	event	Event trigger.
void const *	p_context	Placeholder for user data.

◆ motor_driver_current_get_t

struct motor_driver_current_get_t		
Current Data Get Structure		
Data Fields		
float	iu	U phase current [A].
float	iv	V phase current [A].

float	iw	W phase current [A].
float	vdc	Main Line Voltage [V].
float	va_max	maximum magnitude of voltage vector

◆ motor_driver_cfg_t

struct motor_driver_cfg_t	
Configuration parameters.	
Data Fields	
adc_channel_t	iu_ad_ch
	A/D Channel for U Phase Current.
adc_channel_t	iv_ad_ch
	A/D Channel for V Phase Current.
adc_channel_t	iw_ad_ch
	A/D Channel for W Phase Current.
adc_channel_t	vdc_ad_ch
	A/D Channel for Main Line Voltage.
motor_driver_shunt_type_t	shunt
	Selection of shunt type.
void const *	p_context
	Placeholder for user data.

◆ motor_driver_api_t

struct motor_driver_api_t
Functions implemented at the HAL layer will follow these APIs.
Data Fields

fsp_err_t(*	open)(motor_driver_ctrl_t *const p_ctrl, motor_driver_cfg_t const *const p_cfg)
fsp_err_t(*	close)(motor_driver_ctrl_t *const p_ctrl)
fsp_err_t(*	reset)(motor_driver_ctrl_t *const p_ctrl)
fsp_err_t(*	phaseVoltageSet)(motor_driver_ctrl_t *const p_ctrl, float const u_voltage, float const v_voltage, float const w_voltage)
fsp_err_t(*	currentGet)(motor_driver_ctrl_t *const p_ctrl, motor_driver_current_get_t *const p_current_get)
fsp_err_t(*	flagCurrentOffsetGet)(motor_driver_ctrl_t *const p_ctrl, uint8_t *const p_flag_offset)
fsp_err_t(*	currentOffsetRestart)(motor_driver_ctrl_t *const p_ctrl)
fsp_err_t(*	parameterUpdate)(motor_driver_ctrl_t *const p_ctrl, motor_driver_cfg_t const *const p_cfg)

Field Documentation

◆ open

fsp_err_t(* motor_driver_api_t::open) (motor_driver_ctrl_t *const p_ctrl, motor_driver_cfg_t const *const p_cfg)

Initialize the Motor Driver Module.

Implemented as

- RM_MOTOR_DRIVER_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

fsp_err_t(* motor_driver_api_t::close) (motor_driver_ctrl_t *const p_ctrl)

Close the Motor Driver Module

Implemented as

- RM_MOTOR_DRIVER_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ reset

fsp_err_t(* motor_driver_api_t::reset) (motor_driver_ctrl_t *const p_ctrl)

Reset variables of the Motor Driver Module

Implemented as

- RM_MOTOR_DRIVER_Reset()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ phaseVoltageSet

fsp_err_t(* motor_driver_api_t::phaseVoltageSet) (motor_driver_ctrl_t *const p_ctrl, float const u_voltage, float const v_voltage, float const w_voltage)

Set (Input) Phase Voltage data into the Motor Driver Module

Implemented as

- RM_MOTOR_DRIVER_PhaseVoltageSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	u_voltage	U phase voltage [V]
[in]	v_voltage	V phase voltage [V]
[in]	w_voltage	W phase voltage [V]

◆ currentGet

fsp_err_t(* motor_driver_api_t::currentGet) (motor_driver_ctrl_t *const p_ctrl, motor_driver_current_get_t *const p_current_get)

Get Phase current, Vdc and Va_max data from the Motor Driver Module

Implemented as

- RM_MOTOR_DRIVER_CurrentGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_current_get	Pointer to get data structure.

◆ flagCurrentOffsetGet

fsp_err_t(* motor_driver_api_t::flagCurrentOffsetGet) (motor_driver_ctrl_t *const p_ctrl, uint8_t *const p_flag_offset)

Get the flag of finish current offset detection from the Motor Driver Module

Implemented as

- RM_MOTOR_DRIVER_FlagCurrentOffsetGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_flag_offset	Flag of finish current offset detection

◆ currentOffsetRestart

fsp_err_t(* motor_driver_api_t::currentOffsetRestart) (motor_driver_ctrl_t *const p_ctrl)

Restart current offset detection

Implemented as

- RM_MOTOR_DRIVER_CurrentOffsetRestart()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ parameterUpdate

fsp_err_t(* motor_driver_api_t::parameterUpdate) (motor_driver_ctrl_t *const p_ctrl, motor_driver_cfg_t const *const p_cfg)

Update Configuration Parameters for the calculation in the Motor Driver Module

Implemented as

- RM_MOTOR_DRIVER_ParameterUpdate()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure include update parameters.

◆ motor_driver_instance_t

struct motor_driver_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
motor_driver_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
motor_driver_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
motor_driver_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ motor_driver_ctrl_t

typedef void motor_driver_ctrl_t

Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- motor_driver_ctrl_t

Enumeration Type Documentation

◆ motor_driver_event_t

enum motor_driver_event_t	
Events that can trigger a callback function	
Enumerator	
MOTOR_DRIVER_EVENT_FORWARD	Event before Motor Driver Process (before Current Control timing)
MOTOR_DRIVER_EVENT_CURRENT	Event Current Control timing.
MOTOR_DRIVER_EVENT_BACKWARD	Event after Motor Driver Process (after PWM duty setting)

◆ motor_driver_shunt_type_t

enum motor_driver_shunt_type_t	
Selection of shunt type	
Enumerator	
MOTOR_DRIVER_SHUNT_TYPE_1_SHUNT	Only use U phase current.
MOTOR_DRIVER_SHUNT_TYPE_2_SHUNT	Use U and W phase current.
MOTOR_DRIVER_SHUNT_TYPE_3_SHUNT	Use all phase current.

4.3.78 Motor position Interface

Interfaces

Detailed Description

Interface for motor position functions.

Summary

The Motor position interface for getting the speed references from Encoder Sensor

The motor position interface can be implemented by:

- Motor Position (rm_motor_position)

Data Structures

struct	motor_position_cfg_t
struct	motor_position_api_t
struct	motor_position_instance_t

Typedefs

typedef void	motor_position_ctrl_t

Enumerations

enum	motor_position_ctrl_mode_t

Data Structure Documentation

◆ motor_position_cfg_t

struct motor_position_cfg_t		
Configuration parameters.		
Data Fields		
void const *	p_context	Placeholder for user data.
void const *	p_extend	

◆ motor_position_api_t

struct motor_position_api_t	
Functions implemented at the HAL layer will follow these APIs.	
Data Fields	
fsp_err_t(*	open)(motor_position_ctrl_t *const p_ctrl, motor_position_cfg_t const *const p_cfg)
fsp_err_t(*	close)(motor_position_ctrl_t *const p_ctrl)
fsp_err_t(*	reset)(motor_position_ctrl_t *const p_ctrl)
fsp_err_t(*	positionGet)(motor_position_ctrl_t *const p_ctrl, int16_t *const p_position)
fsp_err_t(*	positionSet)(motor_position_ctrl_t *const p_ctrl, float const position_rad)
fsp_err_t(*	positionReferenceSet)(motor_position_ctrl_t *const p_ctrl, int16_t const position_reference_deg)

fsp_err_t(*	controlModeSet)(motor_position_ctrl_t *const p_ctrl, motor_position_ctrl_mode_t const mode)
fsp_err_t(*	positionControl)(motor_position_ctrl_t *const p_ctrl)
fsp_err_t(*	ipdSpeedPControl)(motor_position_ctrl_t *const p_ctrl, float const ref_speed_rad, float const speed_rad, float *const p_iq_ref)
fsp_err_t(*	speedReferencePControlGet)(motor_position_ctrl_t *const p_ctrl, float *const p_speed_ref)
fsp_err_t(*	speedReferenceIpdControlGet)(motor_position_ctrl_t *const p_ctrl, float const max_speed_rad, float *const p_speed_ref)
fsp_err_t(*	speedReferenceFeedforwardGet)(motor_position_ctrl_t *const p_ctrl, float *const p_speed_ref)
fsp_err_t(*	parameterUpdate)(motor_position_ctrl_t *const p_ctrl, motor_position_cfg_t const *const p_cfg)

Field Documentation

◆ open

fsp_err_t(* motor_position_api_t::open) (motor_position_ctrl_t *const p_ctrl, motor_position_cfg_t const *const p_cfg)

Initialize the Motor Position Module.

Implemented as

- RM_MOTOR_POSITION_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

fsp_err_t(* motor_position_api_t::close) (motor_position_ctrl_t *const p_ctrl)

Close (Finish) the Motor Position Module.

Implemented as

- RM_MOTOR_POSITION_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ reset

fsp_err_t(* motor_position_api_t::reset) (motor_position_ctrl_t *const p_ctrl)

Reset(Stop) the Motor Position Module.

Implemented as

- RM_MOTOR_POSITION_Reset()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ positionGet

fsp_err_t(* motor_position_api_t::positionGet) (motor_position_ctrl_t *const p_ctrl, int16_t *const p_position)

Get Position data.

Implemented as

- RM_MOTOR_POSITION_PositionGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_position	Pointer to get position data

◆ positionSet

fsp_err_t(* motor_position_api_t::positionSet) (motor_position_ctrl_t *const p_ctrl, float const position_rad)

Set Position data from Encoder.

Implemented as

- RM_MOTOR_POSITION_PositionSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	position_rad	Position data [radian]

◆ positionReferenceSet

fsp_err_t(* motor_position_api_t::positionReferenceSet) (motor_position_ctrl_t *const p_ctrl, int16_t const position_reference_deg)

Set (Input) Position reference into the Motor Position Module.

Implemented as

- RM_MOTOR_POSITION_PositionReferenceSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	position_refernce_deg	Position reference [degree]

◆ controlModeSet

fsp_err_t(* motor_position_api_t::controlModeSet) (motor_position_ctrl_t *const p_ctrl, motor_position_ctrl_mode_t const mode)

Set (Input) Position Control Mode.

Implemented as

- RM_MOTOR_POSITION_ControlModeSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	mode	Position Control Mode

◆ positionControl

fsp_err_t(* motor_position_api_t::positionControl) (motor_position_ctrl_t *const p_ctrl)

Calculate internal position reference

Implemented as

- RM_MOTOR_POSITION_PositionControl()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ ipdSpeedPControl

fsp_err_t(* motor_position_api_t::ipdSpeedPControl) (motor_position_ctrl_t *const p_ctrl, float const ref_speed_rad, float const speed_rad, float *const p_iq_ref)

Calculate iq reference

Implemented as

- RM_MOTOR_POSITION_IpdSpeedPControl()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	ref_speed_rad	Speed Reference [rad/sec]
[in]	speed_rad	Current Speed [rad/sec]
[out]	p_iq_ref	Pointer to get iq reference

◆ speedReferencePControlGet

fsp_err_t(* motor_position_api_t::speedReferencePControlGet) (motor_position_ctrl_t *const p_ctrl, float *const p_speed_ref)

Get Speed Reference by P Control

Implemented as

- RM_MOTOR_POSITION_SpeedReferencePControlGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_speed_ref	Pointer to get speed reference

◆ speedReferenceIpdControlGet

fsp_err_t(* motor_position_api_t::speedReferenceIpdControlGet) (motor_position_ctrl_t *const p_ctrl, float const max_speed_rad, float *const p_speed_ref)

Get Speed Reference by IPD Control

Implemented as

- RM_MOTOR_POSITION_SpeedReferenceIpdControlGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_speed_ref	Pointer to get speed reference

◆ speedReferenceFeedforwardGet

fsp_err_t(* motor_position_api_t::speedReferenceFeedforwardGet) (motor_position_ctrl_t *const p_ctrl, float *const p_speed_ref)

Get Speed Reference by Speed Feedforward

Implemented as

- RM_MOTOR_POSITION_SpeedReferenceFeedforwardGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_speed_ref	Pointer to get speed reference

◆ parameterUpdate

fsp_err_t(* motor_position_api_t::parameterUpdate) (motor_position_ctrl_t *const p_ctrl, motor_position_cfg_t const *const p_cfg)

Update Parameters for the calculation in the Motor Position Module.

Implemented as

- RM_MOTOR_POSITION_ParameterUpdate()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure include update parameters.

◆ motor_position_instance_t

struct motor_position_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields		
motor_position_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
motor_position_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
motor_position_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ motor_position_ctrl_t

typedef void motor_position_ctrl_t

Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- motor_position_ctrl_t

Enumeration Type Documentation

◆ motor_position_ctrl_mode_t

enum motor_position_ctrl_mode_t

Position Control Mode

4.3.79 Motor speed Interface

Interfaces

Detailed Description

Interface for motor speed functions.

Summary

The Motor speed interface for getting the current references from electric current and rotational speed

The motor speed interface can be implemented by:

- Motor Speed (rm_motor_speed)

Data Structures

struct	motor_speed_callback_args_t
struct	motor_speed_position_data_t
struct	motor_speed_cfg_t
struct	motor_speed_api_t
struct	motor_speed_instance_t

Typedefs

typedef void	motor_speed_ctrl_t

Enumerations

enum	motor_speed_event_t
enum	motor_speed_loop_mode_t
enum	motor_speed_step_t

Data Structure Documentation

◆ motor_speed_callback_args_t

struct motor_speed_callback_args_t		
Callback function parameter data		
Data Fields		
void const *	p_context	Placeholder for user data.
motor_speed_event_t	event	

◆ motor_speed_position_data_t

struct motor_speed_position_data_t		
Motor speed and position structure		
Data Fields		
motor_speed_step_t	e_step_mode	Select step mode.
motor_speed_loop_mode_t	e_loop_mode	Select control mode.
int16_t	position_reference_degree	Position reference [degree].

◆ motor_speed_cfg_t

struct motor_speed_cfg_t
Configuration parameters.

Data Fields	
motor_speed_input_t *	st_input
	Input data structure for automatic set.
motor_speed_output_t *	st_output
	Output data structure for automatic receive.
motor_position_instance_t const *	p_position_instance
	Position module instance.
void const *	p_context
	Placeholder for user data.

◆ motor_speed_api_t

struct motor_speed_api_t	
Functions implemented at the HAL layer will follow these APIs.	
Data Fields	
fsp_err_t(*	open)(motor_speed_ctrl_t *const p_ctrl, motor_speed_cfg_t const *const p_cfg)
fsp_err_t(*	close)(motor_speed_ctrl_t *const p_ctrl)
fsp_err_t(*	reset)(motor_speed_ctrl_t *const p_ctrl)
fsp_err_t(*	run)(motor_speed_ctrl_t *const p_ctrl)
fsp_err_t(*	speedReferenceSet)(motor_speed_ctrl_t *const p_ctrl, float const speed_reference_rpm)
fsp_err_t(*	positionReferenceSet)(motor_speed_ctrl_t *const p_ctrl, motor_speed_position_data_t const *const p_position_data)

fsp_err_t(*	parameterSet)(motor_speed_ctrl_t *const p_ctrl, motor_speed_input_t const *const p_st_input)
fsp_err_t(*	speedControl)(motor_speed_ctrl_t *const p_ctrl)
fsp_err_t(*	parameterGet)(motor_speed_ctrl_t *const p_ctrl, motor_speed_output_t *const p_st_output)
fsp_err_t(*	parameterUpdate)(motor_speed_ctrl_t *const p_ctrl, motor_speed_cfg_t const *const p_cfg)

Field Documentation

◆ open

fsp_err_t(* motor_speed_api_t::open) (motor_speed_ctrl_t *const p_ctrl, motor_speed_cfg_t const *const p_cfg)

Initialize the motor speed module.

Implemented as

- RM_MOTOR_SPEED_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ close

fsp_err_t(* motor_speed_api_t::close) (motor_speed_ctrl_t *const p_ctrl)

Close (Finish) the motor speed module.

Implemented as

- RM_MOTOR_SPEED_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ reset

fsp_err_t(* motor_speed_api_t::reset) (motor_speed_ctrl_t *const p_ctrl)

Reset(Stop) the motor speed module.

Implemented as

- RM_MOTOR_SPEED_Reset()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ run

fsp_err_t(* motor_speed_api_t::run) (motor_speed_ctrl_t *const p_ctrl)

Activate the motor speed control.

Implemented as

- RM_MOTOR_SPEED_Run()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ speedReferenceSet

fsp_err_t(* motor_speed_api_t::speedReferenceSet) (motor_speed_ctrl_t *const p_ctrl, float const speed_reference_rpm)

Set (Input) speed reference into the motor speed module.

Implemented as

- RM_MOTOR_SPEED_SpeedReferenceSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	speed_refernce_rpm	Speed reference [rpm]

◆ positionReferenceSet

fsp_err_t(* motor_speed_api_t::positionReferenceSet) (motor_speed_ctrl_t *const p_ctrl, motor_speed_position_data_t const *const p_position_data)

Set (Input) position reference and control mode

Implemented as

- RM_MOTOR_SPEED_PositionReferenceSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_position_data	Pointer to structure position data

◆ parameterSet

fsp_err_t(* motor_speed_api_t::parameterSet) (motor_speed_ctrl_t *const p_ctrl, motor_speed_input_t const *const p_st_input)

Set (Input) speed parameters into the motor speed module.

Implemented as

- RM_MOTOR_SPEED_ParameterSet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_st_input	Pointer to structure to input parameters.

◆ speedControl

fsp_err_t(* motor_speed_api_t::speedControl) (motor_speed_ctrl_t *const p_ctrl)

Calculate current reference

Implemented as

- RM_MOTOR_SPEED_SpeedControl()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ parameterGet

fsp_err_t(* motor_speed_api_t::parameterGet) (motor_speed_ctrl_t *const p_ctrl, motor_speed_output_t *const p_st_output)

Get speed control output parameters

Implemented as

- RM_MOTOR_SPEED_ParameterGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_st_output	Pointer to get speed control parameters

◆ parameterUpdate

fsp_err_t(* motor_speed_api_t::parameterUpdate) (motor_speed_ctrl_t *const p_ctrl, motor_speed_cfg_t const *const p_cfg)

Update Parameters for the calculation in the motor speed module.

Implemented as

- RM_MOTOR_SPEED_ParameterUpdate()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure include update parameters.

◆ motor_speed_instance_t

struct motor_speed_instance_t		
This structure encompasses everything that is needed to use an instance of this interface.		
Data Fields		
motor_speed_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
motor_speed_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
motor_speed_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ motor_speed_ctrl_t

typedef void motor_speed_ctrl_t

Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- motor_speed_ctrl_t

Enumeration Type Documentation

◆ motor_speed_event_t

enum motor_speed_event_t

Events that can trigger a callback function

Enumerator	
MOTOR_SPEED_EVENT_FORWARD	Event forward speed control.
MOTOR_SPEED_EVENT_BACKWARD	Event backward speed control.
MOTOR_SPEED_EVENT_ENCODER_CYCLIC	Event encoder cyclic.
MOTOR_SPEED_EVENT_ENCODER_ADJUST	Event encoder adjust.

◆ motor_speed_loop_mode_t

enum motor_speed_loop_mode_t

Enumerator	
MOTOR_SPEED_LOOP_MODE_SPEED	Speed control mode.
MOTOR_SPEED_LOOP_MODE_POSITION	Position control mode.

◆ motor_speed_step_t

enum motor_speed_step_t

Enumerator	
MOTOR_SPEED_STEP_DISABLE	Position control works without step mode.
MOTOR_SPEED_STEP_ENABLE	Position control works with step mode.

4.3.80 Touch Middleware Interface

Interfaces

Detailed Description

Interface for Touch Middleware functions.

Summary

The TOUCH interface provides TOUCH functionality.

The TOUCH interface can be implemented by:

- Capacitive Touch Middleware (rm_touch)

Data Structures

struct	touch_button_cfg_t
struct	touch_slider_cfg_t
struct	touch_wheel_cfg_t
struct	touch_pad_cfg_t
struct	touch_cfg_t
struct	touch_sensitivity_info_t
struct	touch_api_t
struct	touch_instance_t

Macros

#define	TOUCH_COUNT_MAX Value of Maximum count.
#define	TOUCH_OFF_VALUE Value of Non-touch.

Typedefs

typedef void	touch_ctrl_t

typedef struct st_ctsu_callback_args	touch_callback_args_t

Data Structure Documentation

◆ touch_button_cfg_t

struct touch_button_cfg_t		
Configuration of each button		
Data Fields		
uint8_t	elem_index	Element number used by this button.
uint16_t	threshold	Touch/non-touch judgment threshold.
uint16_t	hysteresis	Threshold hysteresis for chattering prevention.

◆ touch_slider_cfg_t

struct touch_slider_cfg_t		
Configuration of each slider		
Data Fields		
uint8_t const *	p_elem_index	Element number array used by this slider.
uint8_t	num_elements	Number of elements used by this slider.
uint16_t	threshold	Position calculation start threshold value.

◆ touch_wheel_cfg_t

struct touch_wheel_cfg_t		
Configuration of each wheel		
Data Fields		
uint8_t const *	p_elem_index	Element number array used by this wheel.
uint8_t	num_elements	Number of elements used by this wheel.
uint16_t	threshold	Position calculation start threshold value.

◆ touch_pad_cfg_t

struct touch_pad_cfg_t
Configuration of each pads

Data Fields		
uint8_t const *	p_elem_index_rx	RX of element number arrays used by this pad.
uint8_t const *	p_elem_index_tx	TX of element number arrays used by this pad.
uint8_t	num_elements	Number of elements used by this pad.
uint16_t	threshold	Coordinate calculation threshold value.
uint16_t	rx_pixel	rx coordinate resolution
uint16_t	tx_pixel	tx coordinate resolution
uint8_t	max_touch	Maximum number of touch judgments used by the pad.
uint8_t	num_drift	Number of pad drift.

◆ touch_cfg_t

struct touch_cfg_t		
User configuration structure, used in open function		
Data Fields		
touch_button_cfg_t const *	p_buttons	Pointer to array of button configuration.
touch_slider_cfg_t const *	p_sliders	Pointer to array of slider configuration.
touch_wheel_cfg_t const *	p_wheels	Pointer to array of wheel configuration.
touch_pad_cfg_t const *	p_pad	Pointer of pad configuration.
uint8_t	num_buttons	Number of buttons.
uint8_t	num_sliders	Number of sliders.
uint8_t	num_wheels	Number of wheels.
uint8_t	on_freq	The cumulative number of determinations of ON.
uint8_t	off_freq	The cumulative number of determinations of OFF.
uint16_t	drift_freq	Base value drift frequency. [0 : no use].
uint16_t	cancel_freq	Maximum continuous ON. [0 : no use].
uint8_t	number	Configuration number for QE monitor.

ctsu_instance_t const *	p_ctsu_instance	Pointer to CTSU instance.
uart_instance_t const *	p_uart_instance	Pointer to UART instance.
void const *	p_context	User defined context passed into callback function.
void const *	p_extend	Pointer to extended configuration by instance of interface.

◆ touch_sensitivity_info_t

struct touch_sensitivity_info_t		
Configuration of each touch sensitivity information		
Data Fields		
uint16_t *	p_touch_sensitivity_ratio	Pointer to sensitivity ratio array.
uint16_t	old_threshold_ratio	Old threshold ratio.
uint16_t	new_threshold_ratio	New threshold ratio.
uint8_t	new_hysteresis_ratio	New hysteresis ratio.

◆ touch_api_t

struct touch_api_t	
Functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(touch_ctrl_t *const p_ctrl, touch_cfg_t const *const p_cfg)
fsp_err_t(*	scanStart)(touch_ctrl_t *const p_ctrl)
fsp_err_t(*	dataGet)(touch_ctrl_t *const p_ctrl, uint64_t *p_button_status, uint16_t *p_slider_position, uint16_t *p_wheel_position)
fsp_err_t(*	scanStop)(ctsu_ctrl_t *const p_ctrl)
fsp_err_t(*	padDataGet)(touch_ctrl_t *const p_ctrl, uint16_t *p_pad_rx_coordinate, uint16_t *p_pad_tx_coordinate, uint8_t *p_pad_num_touch)
fsp_err_t(*	callbackSet)(touch_ctrl_t *const p_api_ctrl, void(*p_callback)(touch_callback_args_t *), void const *const p_context, touch_callback_args_t *const p_callback_memory)

fsp_err_t(*	close)(touch_ctrl_t *const p_ctrl)
fsp_err_t(*	sensitivityRatioGet)(touch_ctrl_t *const p_ctrl, touch_sensitivity_info_t *p_touch_sensitivity_info)
fsp_err_t(*	thresholdAdjust)(touch_ctrl_t *const p_ctrl, touch_sensitivity_info_t *p_touch_sensitivity_info)
fsp_err_t(*	driftControl)(touch_ctrl_t *const p_ctrl, uint16_t input_drift_freq)

Field Documentation

◆ open

fsp_err_t(* touch_api_t::open) (touch_ctrl_t *const p_ctrl, touch_cfg_t const *const p_cfg)

Open driver.

Implemented as

- RM_TOUCH_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ scanStart

fsp_err_t(* touch_api_t::scanStart) (touch_ctrl_t *const p_ctrl)

Scan start.

Implemented as

- RM_TOUCH_ScanStart()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ dataGet

fsp_err_t(* touch_api_t::dataGet) (touch_ctrl_t *const p_ctrl, uint64_t *p_button_status, uint16_t *p_slider_position, uint16_t *p_wheel_position)

Data get.

Implemented as

- RM_TOUCH_DataGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_button_status	Pointer to get data bitmap.
[out]	p_slider_position	Pointer to get data array.
[out]	p_wheel_position	Pointer to get data array.

◆ scanStop

fsp_err_t(* touch_api_t::scanStop) (ctsu_ctrl_t *const p_ctrl)

ScanStop.

Implemented as

- RM_TOUCH_ScanStop()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ padDataGet

fsp_err_t(* touch_api_t::padDataGet) (touch_ctrl_t *const p_ctrl, uint16_t *p_pad_rx_coordinate, uint16_t *p_pad_tx_coordinate, uint8_t *p_pad_num_touch)

pad data get.

Implemented as

- RM_TOUCH_PadDataGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[out]	p_pad_rx_coordinate	Pointer to get coordinate of receiver side.
[out]	p_pad_tx_coordinate	Pointer to get coordinate of transmitter side.
[out]	p_pad_num_touch	Pointer to get touch count.

◆ callbackSet

fsp_err_t(* touch_api_t::callbackSet) (touch_ctrl_t *const p_api_ctrl, void(*p_callback)(touch_callback_args_t *), void const *const p_context, touch_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- RM_TOUCH_CallbackSet()

Parameters

[in]	p_ctrl	Pointer to the CTSU control block.
[in]	p_callback	Callback function
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ close

fsp_err_t(* touch_api_t::close) (touch_ctrl_t *const p_ctrl)

Close driver.

Implemented as

- RM_TOUCH_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ sensitivityRatioGet

fsp_err_t(* touch_api_t::sensitivityRatioGet) (touch_ctrl_t *const p_ctrl, touch_sensitivity_info_t *p_touch_sensitivity_info)

Sensitivity ratio get.

Implemented as

- RM_TOUCH_SensitivityRatioGet()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in,out]	p_touch_sensitivity_info	Pointer to touch sensitivity structure.

◆ thresholdAdjust

fsp_err_t(* touch_api_t::thresholdAdjust) (touch_ctrl_t *const p_ctrl, touch_sensitivity_info_t *p_touch_sensitivity_info)

Threshold adjust.

Implemented as

- RM_TOUCH_ThresholdAdjust()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_touch_sensitivity_info	Pointer to touch sensitivity structure.

◆ driftControl

fsp_err_t(* touch_api_t::driftControl) (touch_ctrl_t *const p_ctrl, uint16_t input_drift_freq)

Drift control.

Implemented as

- RM_TOUCH_DriftControl()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	input_drift_freq	Drift frequency value.

◆ touch_instance_t

struct touch_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

touch_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
touch_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
touch_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ touch_ctrl_t

typedef void touch_ctrl_t

Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- touch_instance_ctrl_t

◆ touch_callback_args_t

typedef struct st_ctsu_callback_args touch_callback_args_t

Callback function parameter data

4.3.81 Virtual EEPROM Interface

Interfaces

Detailed Description

Interface for Virtual EEPROM access.

Summary

The Virtual EEPROM Port configures a fail-safe key value store designed for microcontrollers on top of a lower level storage device.

Implemented by: Virtual EEPROM (rm_vee_flash)

Data Structures

struct	rm_vee_callback_args_t
struct	rm_vee_cfg_t

struct	rm_vee_api_t
struct	rm_vee_instance_t

Typedefs

typedef void	rm_vee_ctrl_t

Enumerations

enum	rm_vee_state_t

Data Structure Documentation

◆ rm_vee_callback_args_t

struct rm_vee_callback_args_t		
User configuration structure, used in open function		
Data Fields		
rm_vee_state_t	state	State of the Virtual EEPROM.
void const *	p_context	Placeholder for user data. Set in rm_vee_api_t::open function in::rm_vee_cfg_t.

◆ rm_vee_cfg_t

struct rm_vee_cfg_t	
User configuration structure, used in open function	
Data Fields	
uint32_t	start_addr
	Start address to be used for Virtual EEPROM memory.
uint32_t	num_segments
	Number of segments to divide the volume into.
uint32_t	total_size
	Total size of the volume.
uint32_t	ref_data_size
	Size of the reference data stored at the end of the segment.

uint32_t	record_max_id
	Maximum record ID that can be used.
uint16_t *	rec_offset
	Pointer to buffer used for record offset caching.
void(*	p_callback)(rm_vee_callback_args_t *p_args)
	Callback provided when a Virtual EEPROM event occurs.
void const *	p_context
	Placeholder for user data.
void const *	p_extend
	Pointer to hardware dependent configuration.

◆ rm_vee_api_t

struct rm_vee_api_t	
Virtual EEPROM interface API.	
Data Fields	
fsp_err_t(*	open)(rm_vee_ctrl_t *const p_ctrl, rm_vee_cfg_t const *const p_cfg)
fsp_err_t(*	recordWrite)(rm_vee_ctrl_t *const p_ctrl, uint32_t const rec_id, uint8_t const *const p_rec_data, uint32_t num_bytes)
fsp_err_t(*	recordPtrGet)(rm_vee_ctrl_t *const p_ctrl, uint32_t rec_id, uint8_t **const pp_rec_data, uint32_t *const p_num_bytes)
fsp_err_t(*	refDataWrite)(rm_vee_ctrl_t *const p_ctrl, uint8_t const *const p_ref_data)

fsp_err_t(*	refDataPtrGet)(rm_vee_ctrl_t *const p_ctrl, uint8_t **const pp_ref_data)
fsp_err_t(*	statusGet)(rm_vee_ctrl_t *const p_ctrl, rm_vee_status_t *const p_status)
fsp_err_t(*	refresh)(rm_vee_ctrl_t *const p_ctrl)
fsp_err_t(*	format)(rm_vee_ctrl_t *const p_ctrl, uint8_t const *const p_ref_data)
fsp_err_t(*	callbackSet)(rm_vee_ctrl_t *const p_api_ctrl, void(*p_callback)(rm_vee_callback_args_t *), void const *const p_context, rm_vee_callback_args_t *const p_callback_memory)
fsp_err_t(*	close)(rm_vee_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* rm_vee_api_t::open) (rm_vee_ctrl_t *const p_ctrl, rm_vee_cfg_t const *const p_cfg)

Initializes the driver's internal structures and opens the Flash driver.

Implemented as

- RM_VEE_FLASH_Open

Parameters

[in]	p_ctrl	Pointer to control block. Must be declared by user. Elements set here.
[in]	p_cfg	Pointer to configuration structure. All elements of this structure must be set by user.

◆ recordWrite

fsp_err_t(* rm_vee_api_t::recordWrite) (rm_vee_ctrl_t *const p_ctrl, uint32_t const rec_id, uint8_t const *const p_rec_data, uint32_t num_bytes)

Writes a record to data flash.

Implemented as

- RM_VEE_FLASH_RecordWrite

Parameters

[in]	p_ctrl	Pointer to control block.
[in]	rec_id	ID of record to write.
[in]	p_rec_data	Pointer to record data to write.
[in]	num_bytes	Length of data to write.

◆ recordPtrGet

fsp_err_t(* rm_vee_api_t::recordPtrGet) (rm_vee_ctrl_t *const p_ctrl, uint32_t rec_id, uint8_t **const pp_rec_data, uint32_t *const p_num_bytes)

This function gets the pointer to the most recent version of a record specified by ID.

Implemented as

- RM_VEE_FLASH_RecordPtrGet

Parameters

[in]	p_ctrl	Pointer to control block.
[in]	rec_id	ID of record to locate.
[in]	pp_rec_data	Pointer to set to the most recent version of the record.
[in]	p_num_bytes	Variable to load with record length.

◆ refDataWrite

fsp_err_t(* rm_vee_api_t::refDataWrite) (rm_vee_ctrl_t *const p_ctrl, uint8_t const *const p_ref_data)

Writes new Reference data to the reference update area.

Implemented as

- RM_VEE_FLASH_RefDataWrite

Parameters

[in]	p_ctrl	Pointer to control block.
[in]	p_ref_data	Pointer to data to write to the reference data update area.

◆ refDataPtrGet

fsp_err_t(* rm_vee_api_t::refDataPtrGet) (rm_vee_ctrl_t *const p_ctrl, uint8_t **const pp_ref_data)

Gets a pointer to the most recent reference data.

Implemented as

- RM_VEE_FLASH_RefDataPtrGet

Parameters

[in]	p_ctrl	Pointer to control block.
[in]	pp_ref_data	Pointer to set to the most recent valid reference data.

◆ statusGet

fsp_err_t(* rm_vee_api_t::statusGet) (rm_vee_ctrl_t *const p_ctrl, rm_vee_status_t *const p_status)

Get the current status of the VEE driver.

Implemented as

- RM_VEE_FLASH_StatusGet

Parameters

[in]	p_ctrl	Pointer to control block.
[in]	p_status	Pointer to store the current status of the VEE driver.

◆ refresh

fsp_err_t(* rm_vee_api_t::refresh) (rm_vee_ctrl_t *const p_ctrl)

Manually start a refresh operation.

Implemented as

- RM_VEE_FLASH_Refresh

Parameters

[in]	p_ctrl	Pointer to control block.

◆ format

fsp_err_t(* rm_vee_api_t::format) (rm_vee_ctrl_t *const p_ctrl, uint8_t const *const p_ref_data)

Format the Virtual EEPROM.

Implemented as

- RM_VEE_FLASH_Format

Parameters

[in]	p_ctrl	Pointer to control block.
[in]	p_ref_data	Optional pointer to reference data to write during format.

◆ callbackSet

fsp_err_t(* rm_vee_api_t::callbackSet) (rm_vee_ctrl_t *const p_api_ctrl, void(*p_callback)(rm_vee_callback_args_t *), void const *const p_context, rm_vee_callback_args_t *const p_callback_memory)

Specify callback function and optional context pointer and working memory pointer.

Implemented as

- RM_VEE_FLASH_CallbackSet()

Parameters

[in]	p_ctrl	Control block set in rm_vee_api_t::open call.
[in]	p_callback	Callback function to register
[in]	p_context	Pointer to send to callback function
[in]	p_working_memory	Pointer to volatile memory where callback structure can be allocated. Callback arguments allocated here are only valid during the callback.

◆ close

fsp_err_t(* rm_vee_api_t::close) (rm_vee_ctrl_t *const p_ctrl)

Closes the module and lower level storage device.

Implemented as

- RM_VEE_FLASH_Close

Parameters

[in]	p_ctrl	Control block set in rm_vee_api_t::open call.

◆ rm_vee_instance_t

struct rm_vee_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields		
rm_vee_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
rm_vee_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
rm_vee_api_t const *	p_api	Pointer to the API structure for

		this instance.

Typedef Documentation

◆ rm_vee_ctrl_t

typedef void rm_vee_ctrl_t
Virtual EEPROM API control block. Allocate an instance specific control block to pass into the VEE API calls. **Implemented as** ◦ rm_vee_flash_instance_ctrl_t

Enumeration Type Documentation

◆ rm_vee_state_t

enum rm_vee_state_t	
Enumerator	
RM_VEE_STATE_READY	Ready.
RM_VEE_STATE_BUSY	Operation in progress.
RM_VEE_STATE_REFRESH	Refresh operation in progress.
RM_VEE_STATE_OVERFLOW	The amount of data written exceeds the space available.
RM_VEE_STATE_HARDWARE_FAIL	Lower level hardware failure.

4.3.82 ZMOD4XXX Middleware Interface

Interfaces

Detailed Description

Interface for ZMOD4XXX Middleware functions.

Summary

The ZMOD4XXX interface provides ZMOD4XXX functionality.

The ZMOD4XXX interface can be implemented by:

- ZMOD4XXX Sensor Middleware (rm_zmod4xxx)

Data Structures

struct	rm_zmod4xxx_callback_args_t
struct	rm_zmod4xxx_raw_data_t
struct	rm_zmod4xxx_iaq_1st_data_t
struct	rm_zmod4xxx_iaq_2nd_data_t
struct	rm_zmod4xxx_odor_data_t
struct	rm_zmod4xxx_sulfur_odor_data_t
struct	rm_zmod4xxx_oaq_1st_data_t
struct	rm_zmod4xxx_oaq_2nd_data_t
struct	rm_zmod4xxx_cfg_t
struct	rm_zmod4xxx_api_t
struct	rm_zmod4xxx_instance_t

Typedefs

typedef void	rm_zmod4xxx_ctrl_t

Enumerations

enum	rm_zmod4xxx_event_t
enum	rm_zmod4xxx_sulfur_odor_t

Data Structure Documentation

◆ rm_zmod4xxx_callback_args_t

struct rm_zmod4xxx_callback_args_t
ZMOD4XXX sensor API callback parameter definition

◆ rm_zmod4xxx_raw_data_t

struct rm_zmod4xxx_raw_data_t
ZMOD4XXX raw data structure

◆ rm_zmod4xxx_iaq_1st_data_t

struct rm_zmod4xxx_iaq_1st_data_t		
ZMOD4XXX IAQ 1st gen data structure		
Data Fields		
float	rmox	MOx resistance.
float	rcda	CDA resistance.
float	iaq	IAQ index.
float	tvoc	TVOC concentration (mg/m^3).
float	etoh	EtOH concentration (ppm).
float	eco2	eCO2 concentration (ppm).

◆ rm_zmod4xxx_iaq_2nd_data_t

struct rm_zmod4xxx_iaq_2nd_data_t		
ZMOD4XXX IAQ 2nd gen data structure		
Data Fields		
float	rmox[13]	MOx resistance.
float	log_rcda	log10 of CDA resistance for IAQ 2nd Gen.
float	log_nonlog_rcda[3]	log10 of CDA resistance for IAQ 2nd Gen ULP.
float	iaq	IAQ index.
float	tvoc	TVOC concentration (mg/m^3).
float	etoh	EtOH concentration (ppm).
float	eco2	eCO2 concentration (ppm).

◆ rm_zmod4xxx_odor_data_t

struct rm_zmod4xxx_odor_data_t		
ZMOD4XXX Odor structure		
Data Fields		
bool	control_signal	Control signal input for odor lib.
float	odor	Concentration ratio for odor lib.

◆ rm_zmod4xxx_sulfur_odor_data_t

struct rm_zmod4xxx_sulfur_odor_data_t		
ZMOD4XXX Sulfur-Odor structure		
Data Fields		
float	rmox[9]	MOx resistance.
float	intensity	odor intensity rating ranges

		from 0.0 to 5.0 for sulfur lib
rm_zmod4xxx_sulfur_odor_t	odor	sulfur_odor classification for lib

◆ rm_zmod4xxx_oaq_1st_data_t

struct rm_zmod4xxx_oaq_1st_data_t		
ZMOD4XXX OAQ 1st gen data structure		
Data Fields		
float	rmox[15]	MOx resistance.
float	aiq	Air Quality.

◆ rm_zmod4xxx_oaq_2nd_data_t

struct rm_zmod4xxx_oaq_2nd_data_t		
ZMOD4XXX OAQ 2nd gen data structure		
Data Fields		
float	rmox[8]	MOx resistance.
float	ozone_concentration	The ozone concentration in part-per-billion.
uint16_t	fast_aqi	1-minute average of the Air Quality Index according to the EPA standard based on ozone
uint16_t	epa_aqi	The Air Quality Index according to the EPA standard based on ozone.

◆ rm_zmod4xxx_cfg_t

struct rm_zmod4xxx_cfg_t	
ZMOD4XXX configuration block	
Data Fields	
rm_comms_instance_t const *	p_comms_instance
	Pointer to Communications Middleware instance.
void const *	p_irq_instance
	Pointer to IRQ instance.
void const *	p_zmod4xxx_device
	[DEPRECATED] This will be removed in FSP v4.0.0. Please use rm_zmod4xxx_lib_extended_cfg_t in rm_zmod4xxx.h

void const *	p_zmod4xxx_handle
	[DEPRECATED] This will be removed in FSP v4.0.0. Please use rm_zmod4xxx_lib_extended_cfg_t in rm_zmod4xxx.h
void const *	p_zmod4xxx_results
	[DEPRECATED] This will be removed in FSP v4.0.0. Please use rm_zmod4xxx_lib_extended_cfg_t in rm_zmod4xxx.h
void const *	p_context
	Pointer to the user-provided context.
void const *	p_extend
	Pointer to extended configuration by instance of interface.
void(*	p_comms_callback)(rm_zmod4xxx_callback_args_t *p_args)
	I2C Communications callback.
void(*	p_irq_callback)(rm_zmod4xxx_callback_args_t *p_args)
	IRQ callback.

◆ rm_zmod4xxx_api_t

struct rm_zmod4xxx_api_t	
ZMOD4XXX APIs	
Data Fields	
fsp_err_t(*	open)(rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_cfg_t const *const p_cfg)
fsp_err_t(*	measurementStart)(rm_zmod4xxx_ctrl_t *const p_api_ctrl)
fsp_err_t(*	measurementStop)(rm_zmod4xxx_ctrl_t *const p_api_ctrl)

fsp_err_t(*	statusCheck)(rm_zmod4xxx_ctrl_t *const p_api_ctrl)
fsp_err_t(*	read)(rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data)
fsp_err_t(*	iaq1stGenDataCalculate)(rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_iaq_1st_data_t *const p_zmod4xxx_data)
fsp_err_t(*	iaq2ndGenDataCalculate)(rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_iaq_2nd_data_t *const p_zmod4xxx_data)
fsp_err_t(*	odorDataCalculate)(rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_odor_data_t *const p_zmod4xxx_data)
fsp_err_t(*	sulfurOdorDataCalculate)(rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_sulfur_odor_data_t *const p_zmod4xxx_data)
fsp_err_t(*	oaq1stGenDataCalculate)(rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_1st_data_t *const p_zmod4xxx_data)
fsp_err_t(*	oaq2ndGenDataCalculate)(rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_2nd_data_t *const p_zmod4xxx_data)
fsp_err_t(*	temperatureAndHumiditySet)(rm_zmod4xxx_ctrl_t *const p_api_ctrl, float temperature, float humidity)
fsp_err_t(*	deviceErrorCheck)(rm_zmod4xxx_ctrl_t *const p_api_ctrl)
fsp_err_t(*	close)(rm_zmod4xxx_ctrl_t *const p_api_ctrl)

Field Documentation

◆ open

fsp_err_t(* rm_zmod4xxx_api_t::open) (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_cfg_t const *const p_cfg)

Open sensor.

Implemented as

- RM_ZMOD4XXX_Open()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to configuration structure.

◆ measurementStart

fsp_err_t(* rm_zmod4xxx_api_t::measurementStart) (rm_zmod4xxx_ctrl_t *const p_api_ctrl)

Start measurement

Implemented as

- RM_ZMOD4XXX_MeasurementStart()

Parameters

[in]	p_api_ctrl	Pointer to control structure.

◆ measurementStop

fsp_err_t(* rm_zmod4xxx_api_t::measurementStop) (rm_zmod4xxx_ctrl_t *const p_api_ctrl)

Stop measurement

Implemented as

- RM_ZMOD4XXX_MeasurementStop()

Parameters

[in]	p_api_ctrl	Pointer to control structure.

◆ statusCheck

fsp_err_t(* rm_zmod4xxx_api_t::statusCheck) (rm_zmod4xxx_ctrl_t *const p_api_ctrl)

Read status of the sensor

Implemented as

- RM_ZMOD4XXX_StatusCheck()

Parameters

[in]	p_api_ctrl	Pointer to control structure.

◆ read

fsp_err_t(* rm_zmod4xxx_api_t::read) (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data)

Read ADC data.

Implemented as

- RM_ZMOD4XXX_Read()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data structure.

◆ iaq1stGenDataCalculate

fsp_err_t(* rm_zmod4xxx_api_t::iaq1stGenDataCalculate) (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_iaq_1st_data_t *const p_zmod4xxx_data)

Calculate IAQ 1st Gen. values from ADC data.

Implemented as

- RM_ZMOD4XXX_Iaq1stGenDataCalculate()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data.
[in]	p_zmod4xxx_data	Pointer to ZMOD4XXXX data structure.

◆ iaq2ndGenDataCalculate

fsp_err_t(* rm_zmod4xxx_api_t::iaq2ndGenDataCalculate) (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_iaq_2nd_data_t *const p_zmod4xxx_data)

Calculate IAQ 2nd Gen. values from ADC data.

Implemented as

- RM_ZMOD4XXX_Iaq2ndGenDataCalculate()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data.
[in]	p_zmod4xxx_data	Pointer to ZMOD4XXXX data structure.

◆ odorDataCalculate

fsp_err_t(* rm_zmod4xxx_api_t::odorDataCalculate) (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_odor_data_t *const p_zmod4xxx_data)

Calculate Odor values from ADC data.

Implemented as

- RM_ZMOD4XXX_OdorDataCalculate()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data.
[in]	p_zmod4xxx_data	Pointer to ZMOD4XXXX data structure.

◆ sulfurOdorDataCalculate

fsp_err_t(* rm_zmod4xxx_api_t::sulfurOdorDataCalculate) (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_sulfur_odor_data_t *const p_zmod4xxx_data)

Calculate Sulfur Odor values from ADC data.

Implemented as

- RM_ZMOD4XXX_SulfurOdorDataCalculate()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data.
[in]	p_zmod4xxx_data	Pointer to ZMOD4XXXX data structure.

◆ oaq1stGenDataCalculate

fsp_err_t(* rm_zmod4xxx_api_t::oaq1stGenDataCalculate) (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_1st_data_t *const p_zmod4xxx_data)

Calculate OAQ 1st Gen. values from ADC data.

Implemented as

- RM_ZMOD4XXX_Oaq1stGenDataCalculate()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data.
[in]	p_zmod4xxx_data	Pointer to ZMOD4XXXX data structure.

◆ oaq2ndGenDataCalculate

fsp_err_t(* rm_zmod4xxx_api_t::oaq2ndGenDataCalculate) (rm_zmod4xxx_ctrl_t *const p_api_ctrl, rm_zmod4xxx_raw_data_t *const p_raw_data, rm_zmod4xxx_oaq_2nd_data_t *const p_zmod4xxx_data)

Calculate OAQ 2nd Gen. values from ADC data.

Implemented as

- RM_ZMOD4XXX_Oaq2ndGenDataCalculate()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	p_raw_data	Pointer to raw data.
[in]	p_zmod4xxx_data	Pointer to ZMOD4XXXX data structure.

◆ temperatureAndHumiditySet

fsp_err_t(* rm_zmod4xxx_api_t::temperatureAndHumiditySet) (rm_zmod4xxx_ctrl_t *const p_api_ctrl, float temperature, float humidity)

Set temperature and humidity.

Implemented as

- RM_ZMOD4XXX_TemperatureAndHumiditySet()

Parameters

[in]	p_api_ctrl	Pointer to control structure.
[in]	temperature	Temperature (deg C).
[in]	humidity	Humidity (percent).

◆ deviceErrorCheck

fsp_err_t(* rm_zmod4xxx_api_t::deviceErrorCheck) (rm_zmod4xxx_ctrl_t *const p_api_ctrl)

Check device error event.

Implemented as

- RM_ZMOD4XXX_DeviceErrorCheck()

Parameters

[in]	p_api_ctrl	Pointer to control structure.

◆ close

fsp_err_t(* rm_zmod4xxx_api_t::close) (rm_zmod4xxx_ctrl_t *const p_api_ctrl)
Close the sensor **Implemented as** ◦ RM_ZMOD4XXX_Close() **Parameters**

[in]	p_api_ctrl	Pointer to control structure.

◆ rm_zmod4xxx_instance_t

struct rm_zmod4xxx_instance_t		
ZMOD4XXX instance		
Data Fields		
rm_zmod4xxx_ctrl_t *	p_ctrl	Pointer to the control structure for this instance
rm_zmod4xxx_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance
rm_zmod4xxx_api_t const *	p_api	Pointer to the API structure for this instance

Typedef Documentation

◆ rm_zmod4xxx_ctrl_t

typedef void rm_zmod4xxx_ctrl_t
ZMOD4xxx Control block. Allocate an instance specific control block to pass into the API calls. **Implemented as** ◦ rm_zmod4xxx_instance_ctrl_t

Enumeration Type Documentation

◆ **rm_zmod4xxx_event_t**

enum rm_zmod4xxx_event_t	
Event in the callback function	
Enumerator	
RM_ZMOD4XXX_EVENT_DEV_ERR_POWER_ON_RESET	Unexpected reset.
RM_ZMOD4XXX_EVENT_DEV_ERR_ACCESS_CONFLICT	Getting invalid results while results readout.

◆ **rm_zmod4xxx_sulfur_odor_t**

enum rm_zmod4xxx_sulfur_odor_t
Sulfur-Odor status

4.3.83 SCE Interface

Interfaces

Detailed Description

Interface for Secure Crypto Engine (SCE) functions.

Summary

The SCE interface provides SCE functionality.

The SCE interface can be implemented by:

- Secure Crypto Engine (r_sce_protected)

struct sce_rsa4096_public_wrapped_key_t	value	

◆ **sce_rsa1024_wrapped_pair_key_t**

struct sce_rsa1024_wrapped_pair_key_t		
RSA 1024bit wrapped key pair structure. DO NOT MODIFY.		
Data Fields		
sce_rsa1024_private_wrapped_key_t	priv_key	RSA 1024-bit private wrapped key.
sce_rsa1024_public_wrapped_key_t	pub_key	RSA 1024-bit public wrapped key.

◆ **sce_rsa2048_wrapped_pair_key_t**

struct sce_rsa2048_wrapped_pair_key_t		
RSA 2048bit wrapped key pair structure. DO NOT MODIFY.		
Data Fields		
sce_rsa2048_private_wrapped_key_t	priv_key	RSA 2048-bit private wrapped key.
sce_rsa2048_public_wrapped_key_t	pub_key	RSA 2048-bit public wrapped key.

◆ **sce_ecc_public_wrapped_key_t**

struct sce_ecc_public_wrapped_key_t		
ECC P-192/224/256 public wrapped key data structure		
Data Fields		
uint32_t	type	key type
struct sce_ecc_public_wrapped_key_t	value	

◆ **sce_ecc_private_wrapped_key_t**

struct sce_ecc_private_wrapped_key_t		
ECC P-192/224/256 private wrapped key data structure		
Data Fields		
uint32_t	type	key type

uint32_t	value[HW_SCE_ECC_PRIVATE_KEY_MANAGEMENT_INFO_WORD_SIZE]	wrapped key value

◆ sce_ecc_wrapped_pair_key_t

struct sce_ecc_wrapped_pair_key_t		
ECC P-192/224/256 wrapped key pair structure		
Data Fields		
sce_ecc_private_wrapped_key_t	priv_key	ECC private wrapped key.
sce_ecc_public_wrapped_key_t	pub_key	ECC public wrapped key.

◆ sce_ecdh_wrapped_key_t

struct sce_ecdh_wrapped_key_t		
ECDH wrapped key data structure		
Data Fields		
uint32_t	type	key type
uint32_t	value[HW_SCE_SHARED_SECRET_KEY_INDEX_WORD_SIZE]	wrapped key value

◆ sce_key_update_key_t

struct sce_key_update_key_t		
Update key ring index data structure. DO NOT MODIFY.		
Data Fields		
uint32_t	type	key type
uint32_t	value[HW_SCE_UPDATE_KEY_RING_INDEX_WORD_SIZE]	wrapped key value

◆ sce_aes_handle_t

struct sce_aes_handle_t		
The work area for AES. DO NOT MODIFY.		
Data Fields		
uint32_t	id	serial number of this handle
sce_aes_wrapped_key_t	wrapped_key	wrapped key
uint32_t	current_input_data_size	text size under encryption / decryption
uint8_t	last_1_block_as_fraction[HW_SCE_AES_BLOCK_BYTE_SIZE]	text array less than the block long
uint8_t	last_2_block_as_fraction[HW_SCE_AES_BLOCK_BYTE_SIZE *2]	reserved

uint8_t	current_initial_vector[HW_SCE_AES_CBC_IV_BYTE_SIZE]	current initialization vector used in CBC mode
uint8_t	flag_call_init	control flag of calling function

◆ sce_gcm_handle_t

struct sce_gcm_handle_t		
The work area for GCM. DO NOT MODIFY.		
Data Fields		
uint32_t	id	serial number of this handle
sce_aes_wrapped_key_t	wrapped_key	wrapped key
uint8_t	gcm_buffer[HW_SCE_AES_BLOCK_BYTE_SIZE]	text array less than the block long
uint8_t	gcm_aad_buffer[HW_SCE_AES_GCM_AAD_BLOCK_BYTE_SIZE]	AAD array less than the block long.
uint32_t	all_received_length	entire length of text
uint32_t	all_received_aad_length	entire length of text
uint32_t	buffering_length	text array length less than the block long
uint32_t	buffering_aad_length	AAD array length less than the block long.
uint8_t	flag_call_init	control flag of calling function
uint8_t	flag_update_input_data	control flag of next input data

◆ sce_ccm_handle_t

struct sce_ccm_handle_t		
The work area for CCM. DO NOT MODIFY.		
Data Fields		
uint32_t	id	serial number of this handle
sce_aes_wrapped_key_t	wrapped_key	wrapped key
uint8_t	formatted_data[HW_SCE_AES_CCM_B_FORMAT_BYTE_SIZE]	formatted data area
uint8_t	counter[HW_SCE_AES_CCM_COUNTER_BYTE_SIZE]	counter of CTR mode
uint8_t	ccm_buffer[HW_SCE_AES_BLOCK_BYTE_SIZE]	text array less than the block long
uint32_t	all_received_length	entire length of text
uint32_t	buffering_length	text array length less than the block long
uint8_t	flag_call_init	control flag of calling function

◆ sce_cmac_handle_t

struct sce_cmac_handle_t		
The work area for CMAC. DO NOT MODIFY.		
Data Fields		
uint32_t	id	serial number of this handle
sce_aes_wrapped_key_t	wrapped_key	wrapped key
uint8_t	cmac_buffer[HW_SCE_AES_BLOCK_BYTE_SIZE]	message array less than the block long
uint32_t	all_received_length	entire length of message
uint32_t	buffering_length	message array length less than the block long
uint8_t	flag_call_init	control flag of calling function

◆ sce_sha_md5_handle_t

struct sce_sha_md5_handle_t		
The work area for SHA. DO NOT MODIFY.		
Data Fields		
uint32_t	id	serial number of this handle
uint8_t	sha_buffer[HW_SCE_SHA256_HASH_LENGTH_BYTE_SIZE *4]	message array length less than the block long
uint32_t	all_received_length	entire length of message
uint32_t	buffering_length	message array length less than the block long
uint8_t	current_hash[HW_SCE_SHA256_HASH_LENGTH_BYTE_SIZE]	last hash value
uint8_t	flag_call_init	control flag of calling function

◆ sce_hmac_sha_handle_t

struct sce_hmac_sha_handle_t		
The work area for HMAC-SHA. DO NOT MODIFY.		
Data Fields		
uint32_t	id	serial number of this handle
sce_hmac_sha_wrapped_key_t	wrapped_key	wrapped key
uint8_t	hmac_buffer[HW_SCE_SHA256_HASH_LENGTH_BYTE_SIZE *4]	message array length less than the block long
uint32_t	all_received_length	entire length of message
uint32_t	buffering_length	message array length less than the block long

uint8_t	flag_call_init	control flag of calling function

◆ sce_ecdh_handle_t

struct sce_ecdh_handle_t		
The work area for ECDH		
Data Fields		
uint32_t	id	serial number of this handle
uint32_t	flag_use_key_id	control frag that the key_id has already used or not
uint32_t	key_id	serial number of the wrapped key
uint32_t	key_type	key type
uint8_t	flag_call_init	control flag of calling function
uint8_t	flag_call_make_public	control flag of calling function
uint8_t	flag_call_read_public	control flag of calling function
uint8_t	flag_call_shared_secret	control flag of calling function

◆ sce_cfg_t

struct sce_cfg_t		
User configuration structure, used in open function		
Data Fields		
lifecycle_t	lifecycle	Data lifecycle.

◆ sce_api_t

struct sce_api_t	
Functions implemented at the HAL layer will follow this API.	
Data Fields	
fsp_err_t(*	open)(sce_ctrl_t *const p_ctrl, sce_cfg_t const *const p_cfg)
fsp_err_t(*	close)(sce_ctrl_t *const p_ctrl)

Field Documentation

◆ open

fsp_err_t(* sce_api_t::open) (sce_ctrl_t *const p_ctrl, sce_cfg_t const *const p_cfg)

Enables use of SCE functionality.

Implemented as

- R_SCE_Open()

Parameters

[in]	p_ctrl	Pointer to control structure.
[in]	p_cfg	Pointer to pin configuration structure.

◆ close

fsp_err_t(* sce_api_t::close) (sce_ctrl_t *const p_ctrl)

Stops supply of power to the SCE.

Implemented as

- R_SCE_Close()

Parameters

[in]	p_ctrl	Pointer to control structure.

◆ softwareReset

fsp_err_t(* sce_api_t::softwareReset) (void)

Software reset to SCE.

Implemented as

- R_SCE_SoftwareReset()

◆ randomNumberGenerate

fsp_err_t(* sce_api_t::randomNumberGenerate) (uint32_t *random)

Generates 4 words random number.

Implemented as

- R_SCE_RandomNumberGenerate()

Parameters

[in,out]	random	Stores 4words (16 bytes) random data.

◆ AES128_WrappedKeyGenerate

fsp_err_t(* sce_api_t::AES128_WrappedKeyGenerate) (sce_aes_wrapped_key_t *wrapped_key)

This API outputs 128-bit AES wrapped key.

Implemented as

- R_SCE_AES128_WrappedKeyGenerate()

Parameters

[in,out]	wrapped_key	128-bit AES wrapped key

◆ AES256_WrappedKeyGenerate

fsp_err_t(* sce_api_t::AES256_WrappedKeyGenerate) (sce_aes_wrapped_key_t *wrapped_key)

This API outputs 256-bit AES wrapped key.

Implemented as

- R_SCE_AES256_WrappedKeyGenerate()

Parameters

[in,out]	wrapped_key	256-bit AES wrapped key

◆ AES128_EncryptedKeyWrap

fsp_err_t(* sce_api_t::AES128_EncryptedKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_aes_wrapped_key_t *wrapped_key)

This API outputs 128-bit AES wrapped key.

Implemented as

- R_SCE_AES128_EncryptedKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	128-bit AES wrapped key

◆ AES256_EncryptedKeyWrap

fsp_err_t(* sce_api_t::AES256_EncryptedKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_aes_wrapped_key_t *wrapped_key)

This API outputs 256-bit AES wrapped key.

Implemented as

- R_SCE_AES256_EncryptedKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	256-bit AES wrapped key

◆ AES128_RFC3394KeyWrap

fsp_err_t(* sce_api_t::AES128_RFC3394KeyWrap) (sce_aes_wrapped_key_t *master_key, uint32_t target_key_type, sce_aes_wrapped_key_t *target_key, uint32_t *rfc3394_wrapped_key)

This API outputs 128-bit AES wrapped key.

Implemented as

- R_SCE_AES128_RFC3394KeyWrap()

Parameters

[in]	master_key	AES-128 key used for wrapping.
[in]	target_key_type	Selects key to be wrapped.
[in]	target_key	Key to be wrapped.
[out]	rfc3394_wrapped_key	Wrapped key.

◆ AES256_RFC3394KeyWrap

fsp_err_t(* sce_api_t::AES256_RFC3394KeyWrap) (sce_aes_wrapped_key_t *master_key, uint32_t target_key_type, sce_aes_wrapped_key_t *target_key, uint32_t *rfc3394_wrapped_key)

This API outputs 256-bit AES wrapped key.

Implemented as

- R_SCE_AES256_RFC3394KeyWrap()

Parameters

[in]	master_key	AES-256 key used for wrapping.
[in]	target_key_type	Selects key to be wrapped.
[in]	target_key	Key to be wrapped.
[out]	rfc3394_wrapped_key	Wrapped key.

◆ AES128_RFC3394KeyUnwrap

fsp_err_t(* sce_api_t::AES128_RFC3394KeyUnwrap) (sce_aes_wrapped_key_t *master_key, uint32_t target_key_type, uint32_t *rfc3394_wrapped_key, sce_aes_wrapped_key_t *target_key)

This API outputs 128-bit AES unwrapped key.

Implemented as

- R_SCE_AES128_RFC3394KeyUnwrap()

Parameters

[in]	master_key	AES-128 key used for unwrapping.
[in]	target_key_type	Selects key to be unwrapped.
[in]	rfc3394_wrapped_key	Wrapped key.
[out]	target_key	Key to be unwrapped.

◆ AES256_RFC3394KeyUnwrap

fsp_err_t(* sce_api_t::AES256_RFC3394KeyUnwrap) (sce_aes_wrapped_key_t *master_key, uint32_t target_key_type, uint32_t *rfc3394_wrapped_key, sce_aes_wrapped_key_t *target_key)

This API outputs 256-bit AES unwrapped key.

Implemented as

- R_SCE_AES256_RFC3394KeyUnwrap()

Parameters

[in]	master_key	AES-256 key used for unwrapping.
[in]	target_key_type	Selects key to be unwrapped.
[in]	rfc3394_wrapped_key	Wrapped key.
[out]	target_key	Key to be unwrapped.

◆ AES128ECB_EncryptInit

fsp_err_t(* sce_api_t::AES128ECB_EncryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)

Initialize AES128ECB encryption.

Implemented as

- R_SCE_AES128ECB_EncryptInit()

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	128-bit AES wrapped key

◆ AES128ECB_EncryptUpdate

fsp_err_t(* sce_api_t::AES128ECB_EncryptUpdate) (sce_aes_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_length)

Update AES128ECB encryption.

Implemented as

- R_SCE_AES128ECB_EncryptUpdate()

Parameters

[in,out]	handle	AES handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in,out]	plain_length	plaintext data length (must be a multiple of 16)

◆ AES128ECB_EncryptFinal

fsp_err_t(* sce_api_t::AES128ECB_EncryptFinal) (sce_aes_handle_t *handle, uint8_t *cipher, uint32_t *cipher_length)

Finalize AES128ECB encryption.

Implemented as

- R_SCE_AES128ECB_EncryptFinal()

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	cipher	ciphertext data area (nothing ever written here)
[in,out]	cipher_length	ciphertext data length (0 always written here)

◆ AES128ECB_DecryptInit

fsp_err_t(* sce_api_t::AES128ECB_DecryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)

Initialize AES128ECB decryption.

Implemented as

- R_SCE_AES128ECB_DecryptInit()

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	128-bit AES wrapped key

◆ AES128ECB_DecryptUpdate

fsp_err_t(* sce_api_t::AES128ECB_DecryptUpdate) (sce_aes_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_length)

Update AES128ECB decryption.

Implemented as

- R_SCE_AES128ECB_DecryptUpdate()

Parameters

[in,out]	handle	AES handler (work area)
[in]	cipher	ciphertext data area
[in,out]	plain	plaintext data area
[in,out]	cipher_length	ciphertext data length (must be a multiple of 16)

◆ AES128ECB_DecryptFinal

fsp_err_t(* sce_api_t::AES128ECB_DecryptFinal) (sce_aes_handle_t *handle, uint8_t *plain, uint32_t *plain_length)

Finalize AES128ECB decryption.

Implemented as

- R_SCE_AES128ECB_DecryptFinal()

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	plain	plaintext data area (nothing ever written here)
[in,out]	plain_length	plaintext data length (0 always written here)

◆ AES256ECB_EncryptInit

fsp_err_t(* sce_api_t::AES256ECB_EncryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)

Initialize AES256ECB encryption.

Implemented as

- R_SCE_AES256ECB_EncryptInit()

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	256-bit AES wrapped key

◆ AES256ECB_EncryptUpdate

fsp_err_t(* sce_api_t::AES256ECB_EncryptUpdate) (sce_aes_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_length)

Update AES256ECB encryption.

Implemented as

- R_SCE_AES256ECB_EncryptUpdate()

Parameters

[in,out]	handle	AES handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in,out]	plain_length	plaintext data length (must be a multiple of 16)

◆ AES256ECB_EncryptFinal

fsp_err_t(* sce_api_t::AES256ECB_EncryptFinal) (sce_aes_handle_t *handle, uint8_t *cipher, uint32_t *cipher_length)

Finalize AES256ECB encryption.

Implemented as

- R_SCE_AES256ECB_EncryptFinal()

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	cipher	ciphertext data area (nothing ever written here)
[in,out]	cipher_length	ciphertext data length (0 always written here)

◆ AES256ECB_DecryptInit

fsp_err_t(* sce_api_t::AES256ECB_DecryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)

Initialize AES256ECB decryption.

Implemented as

- R_SCE_AES256ECB_DecryptInit()

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	256-bit AES wrapped key

◆ AES256ECB_DecryptUpdate

fsp_err_t(* sce_api_t::AES256ECB_DecryptUpdate) (sce_aes_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_length)

Update AES256ECB decryption.

Implemented as

- R_SCE_AES256ECB_DecryptUpdate()

Parameters

[in,out]	handle	AES handler (work area)
[in]	cipher	ciphertext data area
[in,out]	plain	plaintext data area
[in,out]	cipher_length	ciphertext data length (must be a multiple of 16)

◆ AES256ECB_DecryptFinal

fsp_err_t(* sce_api_t::AES256ECB_DecryptFinal) (sce_aes_handle_t *handle, uint8_t *plain, uint32_t *plain_length)

Finalize AES256ECB decryption.

Implemented as

- R_SCE_AES256ECB_DecryptFinal()

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	plain	plaintext data area (nothing ever written here)
[in,out]	plain_length	plaintext data length (0 always written here)

◆ AES128CBC_EncryptInit

fsp_err_t(* sce_api_t::AES128CBC_EncryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector)

Initialize AES128CBC encryption.

Implemented as

- R_SCE_AES128CBC_EncryptInit()

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	128-bit AES wrapped key
[in]	initial_vector	initial vector area (16byte)

◆ AES128CBC_EncryptUpdate

fsp_err_t(* sce_api_t::AES128CBC_EncryptUpdate) (sce_aes_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_length)

Update AES128CBC encryption.

Implemented as

- R_SCE_AES128CBC_EncryptUpdate()

Parameters

[in,out]	handle	AES handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in,out]	plain_length	plaintext data length (must be a multiple of 16)

◆ AES128CBC_EncryptFinal

fsp_err_t(* sce_api_t::AES128CBC_EncryptFinal) (sce_aes_handle_t *handle, uint8_t *cipher, uint32_t *cipher_length)

Finalize AES128CBC encryption.

Implemented as

- R_SCE_AES128CBC_EncryptFinal()

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	cipher	ciphertext data area (nothing ever written here)
[in,out]	cipher_length	ciphertext data length (0 always written here)

◆ AES128CBC_DecryptInit

fsp_err_t(* sce_api_t::AES128CBC_DecryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector)

Initialize AES128CBC decryption.

Implemented as

- R_SCE_AES128CBC_DecryptInit()

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	128-bit AES wrapped key
[in]	initial_vector	initial vector area (16byte)

◆ AES128CBC_DecryptUpdate

fsp_err_t(* sce_api_t::AES128CBC_DecryptUpdate) (sce_aes_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_length)

Update AES128CBC decryption.

Implemented as

- R_SCE_AES128CBC_DecryptUpdate()

Parameters

[in,out]	handle	AES handler (work area)
[in]	cipher	ciphertext data area
[in,out]	plain	plaintext data area
[in,out]	cipher_length	ciphertext data length (must be a multiple of 16)

◆ AES128CBC_DecryptFinal

fsp_err_t(* sce_api_t::AES128CBC_DecryptFinal) (sce_aes_handle_t *handle, uint8_t *plain, uint32_t *plain_length)

Finalize AES128CBC decryption.

Implemented as

- R_SCE_AES128CBC_DecryptFinal()

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	plain	plaintext data area (nothing ever written here)
[in,out]	plain_length	plaintext data length (0 always written here)

◆ AES256CBC_EncryptInit

fsp_err_t(* sce_api_t::AES256CBC_EncryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector)

Initialize AES256CBC encryption.

Implemented as

- R_SCE_AES256CBC_EncryptInit()

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	256-bit AES wrapped key
[in]	initial_vector	initial vector area (16byte)

◆ AES256CBC_EncryptUpdate

fsp_err_t(* sce_api_t::AES256CBC_EncryptUpdate) (sce_aes_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_length)

Update AES256CBC encryption.

Implemented as

- R_SCE_AES256CBC_EncryptUpdate()

Parameters

[in,out]	handle	AES handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in,out]	plain_length	plaintext data length (must be a multiple of 16)

◆ AES256CBC_EncryptFinal

fsp_err_t(* sce_api_t::AES256CBC_EncryptFinal) (sce_aes_handle_t *handle, uint8_t *cipher, uint32_t *cipher_length)

Finalize AES256CBC encryption.

Implemented as

- R_SCE_AES256CBC_EncryptFinal()

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	cipher	ciphertext data area (nothing ever written here)
[in,out]	cipher_length	ciphertext data length (0 always written here)

◆ AES256CBC_DecryptInit

fsp_err_t(* sce_api_t::AES256CBC_DecryptInit) (sce_aes_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector)

Initialize AES256CBC decryption.

Implemented as

- R_SCE_AES256CBC_DecryptInit()

Parameters

[in,out]	handle	AES handler (work area)
[in]	wrapped_key	256-bit AES wrapped key
[in]	initial_vector	initial vector area (16byte)

◆ AES256CBC_DecryptUpdate

fsp_err_t(* sce_api_t::AES256CBC_DecryptUpdate) (sce_aes_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_length)

Update AES256CBC decryption.

Implemented as

- R_SCE_AES256CBC_DecryptUpdate()

Parameters

[in,out]	handle	AES handler (work area)
[in]	cipher	ciphertext data area
[in,out]	plain	plaintext data area
[in,out]	cipher_length	ciphertext data length (must be a multiple of 16)

◆ AES256CBC_DecryptFinal

fsp_err_t(* sce_api_t::AES256CBC_DecryptFinal) (sce_aes_handle_t *handle, uint8_t *plain, uint32_t *plain_length)

Finalize AES256CBC decryption.

Implemented as

- R_SCE_AES256CBC_DecryptFinal()

Parameters

[in,out]	handle	AES handler (work area)
[in,out]	plain	plaintext data area (nothing ever written here)
[in,out]	plain_length	plaintext data length (0 always written here)

◆ AES128GCM_EncryptInit

fsp_err_t(* sce_api_t::AES128GCM_EncryptInit) (sce_gcm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector, uint32_t initial_vector_length)

Initialize AES128GCM encryption.

Implemented as

- R_SCE_AES128GCM_EncryptInit()

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in]	wrapped_key	128-bit AES wrapped key
[in]	initial_vector	initialization vector area (initial_vector_length byte)
[in]	initial_vector_length	initialization vector length (1 ore more bytes)

◆ AES128GCM_EncryptUpdate

fsp_err_t(* sce_api_t::AES128GCM_EncryptUpdate) (sce_gcm_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_data_length, uint8_t *aad, uint32_t aad_length)

Update AES128GCM encryption.

Implemented as

- R_SCE_AES128GCM_EncryptUpdate()

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in]	plain_data_length	plaintext data length (0 or more bytes)
[in]	aad	additional authentication data (aad_length byte)
[in]	aad_length	additional authentication data length (0 or more bytes)

◆ AES128GCM_EncryptFinal

fsp_err_t(* sce_api_t::AES128GCM_EncryptFinal) (sce_gcm_handle_t *handle, uint8_t *cipher, uint32_t *cipher_data_length, uint8_t *atag)

Finalize AES128GCM encryption.

Implemented as

- R_SCE_AES128GCM_EncryptFinal()

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in,out]	cipher	ciphertext data area (cipher_data_length byte)
[in,out]	cipher_data_length	ciphertext data length (0 always written here)
[in,out]	atag	authentication tag area

◆ AES128GCM_DecryptInit

fsp_err_t(* sce_api_t::AES128GCM_DecryptInit) (sce_gcm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector, uint32_t initial_vector_length)

Initialize AES128GCM decryption.

Implemented as

- R_SCE_AES128GCM_DecryptInit()

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in]	wrapped_key	128-bit AES wrapped key
[in]	initial_vector	initialization vector area (initial_vector_length byte)
[in]	initial_vector_length	initialization vector length (1 ore more bytes)

◆ AES128GCM_DecryptUpdate

fsp_err_t(* sce_api_t::AES128GCM_DecryptUpdate) (sce_gcm_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_data_length, uint8_t *aad, uint32_t aad_length)

Update AES128GCM decryption.

Implemented as

- R_SCE_AES128GCM_DecryptUpdate()

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in,out]	cipher	ciphertext data area
[in]	plain	plaintext data area
[in]	cipher_data_length	ciphertext data length (0 or more bytes)
[in]	aad	additional authentication data (aad_length byte)
[in]	aad_length	additional authentication data length (0 or more bytes)

◆ AES128GCM_DecryptFinal

fsp_err_t(* sce_api_t::AES128GCM_DecryptFinal) (sce_gcm_handle_t *handle, uint8_t *plain, uint32_t *plain_data_length, uint8_t *atag, uint32_t atag_length)

Finalize AES128GCM decryption.

Implemented as

- R_SCE_AES128GCM_DecryptFinal()

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in,out]	plain	plaintext data area (cipher_data_length byte)
[in,out]	plain_data_length	plaintext data length (0 always written here)
[in,out]	atag	authentication tag area (atag_length byte)
[in]	atag_length	authentication tag length (4,8,12,13,14,15,16 bytes)

◆ AES256GCM_EncryptInit

fsp_err_t(* sce_api_t::AES256GCM_EncryptInit) (sce_gcm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector, uint32_t initial_vector_length)

Initialize AES256GCM encryption.

Implemented as

- R_SCE_AES256GCM_EncryptInit()

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in]	wrapped_key	256-bit AES wrapped key
[in]	initial_vector	initialization vector area (initial_vector_length byte)
[in]	initial_vector_length	initialization vector length (1 ore more bytes)

◆ AES256GCM_EncryptUpdate

fsp_err_t(* sce_api_t::AES256GCM_EncryptUpdate) (sce_gcm_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_data_length, uint8_t *aad, uint32_t aad_length)

Update AES256GCM encryption.

Implemented as

- R_SCE_AES256GCM_EncryptUpdate()

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in]	plain_data_length	plaintext data length (0 or more bytes)
[in]	aad	additional authentication data (aad_length byte)
[in]	aad_length	additional authentication data length (0 or more bytes)

◆ AES256GCM_EncryptFinal

fsp_err_t(* sce_api_t::AES256GCM_EncryptFinal) (sce_gcm_handle_t *handle, uint8_t *cipher, uint32_t *cipher_data_length, uint8_t *atag)

Finalize AES256GCM encryption.

Implemented as

- R_SCE_AES256GCM_EncryptFinal()

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in,out]	cipher	ciphertext data area (cipher_data_length byte)
[in,out]	cipher_data_length	ciphertext data length (0 always written here)
[in,out]	atag	authentication tag area

◆ AES256GCM_DecryptInit

fsp_err_t(* sce_api_t::AES256GCM_DecryptInit) (sce_gcm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *initial_vector, uint32_t initial_vector_length)

Initialize AES256GCM decryption.

Implemented as

- R_SCE_AES256GCM_DecryptInit()

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in]	wrapped_key	256-bit AES wrapped key
[in]	initial_vector	initialization vector area (initial_vector_length byte)
[in]	initial_vector_length	initialization vector length (1 ore more bytes)

◆ AES256GCM_DecryptUpdate

fsp_err_t(* sce_api_t::AES256GCM_DecryptUpdate) (sce_gcm_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_data_length, uint8_t *aad, uint32_t aad_length)

Update AES256GCM decryption.

Implemented as

- R_SCE_AES256GCM_DecryptUpdate()

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in,out]	cipher	ciphertext data area
[in]	plain	plaintext data area
[in]	cipher_data_length	ciphertext data length (0 or more bytes)
[in]	aad	additional authentication data (aad_length byte)
[in]	aad_length	additional authentication data length (0 or more bytes)

◆ AES256GCM_DecryptFinal

fsp_err_t(* sce_api_t::AES256GCM_DecryptFinal) (sce_gcm_handle_t *handle, uint8_t *plain, uint32_t *plain_data_length, uint8_t *atag, uint32_t atag_length)

Finalize AES256GCM decryption.

Implemented as

- R_SCE_AES256GCM_DecryptFinal()

Parameters

[in,out]	handle	AES-GCM handler (work area)
[in,out]	plain	plaintext data area (cipher_data_length byte)
[in,out]	plain_data_length	plaintext data length (0 always written here)
[in,out]	atag	authentication tag area (atag_length byte)
[in]	atag_length	authentication tag length (4,8,12,13,14,15,16 bytes)

◆ AES128CCM_EncryptInit

fsp_err_t(* sce_api_t::AES128CCM_EncryptInit) (sce_ccm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *nonce, uint32_t nonce_length, uint8_t *adata, uint8_t a_length, uint32_t payload_length, uint32_t mac_length)

Initialize AES128CCM encryption.

Implemented as

- R_SCE_AES128CCM_EncryptInit()

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	wrapped_key	128-bit AES wrapped key
[in]	nonce	Nonce
[in]	nonce_length	Nonce data length (7 to 13 bytes)
[in]	adata	additional authentication data
[in]	a_length	additional authentication data length (0 to 110 bytes)
[in]	payload_length	Payload length (any number of bytes)
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

◆ AES128CCM_EncryptUpdate

fsp_err_t(* sce_api_t::AES128CCM_EncryptUpdate) (sce_ccm_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_length)

Update AES128CCM encryption.

Implemented as

- R_SCE_AES128CCM_EncryptUpdate()

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in]	plain_length	plaintext data length

◆ AES128CCM_EncryptFinal

fsp_err_t(* sce_api_t::AES128CCM_EncryptFinal) (sce_ccm_handle_t *handle, uint8_t *cipher, uint32_t *cipher_length, uint8_t *mac, uint32_t mac_length)

Finalize AES128CCM encryption.

Implemented as

- R_SCE_AES128CCM_EncryptFinal()

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in,out]	cipher	ciphertext data area
[in,out]	cipher_length	ciphertext data length
[in,out]	mac	MAC area
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

◆ AES128CCM_DecryptInit

fsp_err_t(* sce_api_t::AES128CCM_DecryptInit) (sce_ccm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *nonce, uint32_t nonce_length, uint8_t *adata, uint8_t a_length, uint32_t payload_length, uint32_t mac_length)

Initialize AES128CCM decryption.

Implemented as

- R_SCE_AES128CCM_DecryptInit()

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	wrapped_key	128-bit AES wrapped key
[in]	nonce	Nonce
[in]	nonce_length	Nonce data length (7 to 13 bytes)
[in]	adata	additional authentication data
[in]	a_length	additional authentication data length (0 to 110 bytes)
[in]	payload_length	Payload length (any number of bytes)
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

◆ AES128CCM_DecryptUpdate

fsp_err_t(* sce_api_t::AES128CCM_DecryptUpdate) (sce_ccm_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_length)

Update AES128CCM decryption.

Implemented as

- R_SCE_AES128CCM_DecryptUpdate()

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	cipher	ciphertext data area
[in,out]	plain	plaintext data area
[in]	cipher_length	ciphertext data length

◆ AES128CCM_DecryptFinal

fsp_err_t(* sce_api_t::AES128CCM_DecryptFinal) (sce_ccm_handle_t *handle, uint8_t *plain, uint32_t *plain_length, uint8_t *mac, uint32_t mac_length)

Finalize AES128CCM decryption.

Implemented as

- R_SCE_AES128CCM_DecryptFinal()

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in,out]	plain	plaintext data area
[in,out]	plain_length	plaintext data length
[in]	mac	MAC area
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

◆ AES256CCM_EncryptInit

fsp_err_t(* sce_api_t::AES256CCM_EncryptInit) (sce_ccm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *nonce, uint32_t nonce_length, uint8_t *adata, uint8_t a_length, uint32_t payload_length, uint32_t mac_length)

Initialize AES256CCM encryption.

Implemented as

- R_SCE_AES256CCM_EncryptInit()

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	wrapped_key	256-bit AES wrapped key
[in]	nonce	Nonce
[in]	nonce_length	Nonce data length (7 to 13 bytes)
[in]	adata	additional authentication data
[in]	a_length	additional authentication data length (0 to 110 bytes)
[in]	payload_length	Payload length (any number of bytes)
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

◆ AES256CCM_EncryptUpdate

fsp_err_t(* sce_api_t::AES256CCM_EncryptUpdate) (sce_ccm_handle_t *handle, uint8_t *plain, uint8_t *cipher, uint32_t plain_length)

Update AES256CCM encryption.

Implemented as

- R_SCE_AES256CCM_EncryptUpdate()

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	plain	plaintext data area
[in,out]	cipher	ciphertext data area
[in]	plain_length	plaintext data length

◆ AES256CCM_EncryptFinal

fsp_err_t(* sce_api_t::AES256CCM_EncryptFinal) (sce_ccm_handle_t *handle, uint8_t *cipher, uint32_t *cipher_length, uint8_t *mac, uint32_t mac_length)

Finalize AES256CCM encryption.

Implemented as

- R_SCE_AES256CCM_EncryptFinal()

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in,out]	cipher	ciphertext data area
[in,out]	cipher_length	ciphertext data length
[in,out]	mac	MAC area
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

◆ AES256CCM_DecryptInit

fsp_err_t(* sce_api_t::AES256CCM_DecryptInit) (sce_ccm_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key, uint8_t *nonce, uint32_t nonce_length, uint8_t *adata, uint8_t a_length, uint32_t payload_length, uint32_t mac_length)

Initialize AES256CCM decryption.

Implemented as

- R_SCE_AES256CCM_DecryptInit()

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	wrapped_key	256-bit AES wrapped key
[in]	nonce	Nonce
[in]	nonce_length	Nonce data length (7 to 13 bytes)
[in]	adata	additional authentication data
[in]	a_length	additional authentication data length (0 to 110 bytes)
[in]	payload_length	Payload length (any number of bytes)
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

◆ AES256CCM_DecryptUpdate

fsp_err_t(* sce_api_t::AES256CCM_DecryptUpdate) (sce_ccm_handle_t *handle, uint8_t *cipher, uint8_t *plain, uint32_t cipher_length)

Update AES256CCM decryption.

Implemented as

- R_SCE_AES256CCM_DecryptUpdate()

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in]	cipher	ciphertext data area
[in,out]	plain	plaintext data area
[in]	cipher_length	ciphertext data length

◆ AES256CCM_DecryptFinal

fsp_err_t(* sce_api_t::AES256CCM_DecryptFinal) (sce_ccm_handle_t *handle, uint8_t *plain, uint32_t *plain_length, uint8_t *mac, uint32_t mac_length)

Finalize AES256CCM decryption.

Implemented as

- R_SCE_AES256CCM_DecryptFinal()

Parameters

[in,out]	handle	AES-CCM handler (work area)
[in,out]	plain	plaintext data area
[in,out]	plain_length	plaintext data length
[in]	mac	MAC area
[in]	mac_length	MAC length (4, 6, 8, 10, 12, 14, or 16 bytes)

◆ AES128CMAC_GenerateInit

fsp_err_t(* sce_api_t::AES128CMAC_GenerateInit) (sce_cmac_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)

Initialize AES128CMAC generation.

Implemented as

- R_SCE_AES128CMAC_GenerateInit()

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	wrapped_key	128-bit AES wrapped key

◆ AES128CMAC_GenerateUpdate

fsp_err_t(* sce_api_t::AES128CMAC_GenerateUpdate) (sce_cmac_handle_t *handle, uint8_t *message, uint32_t message_length)

Update AES128CMAC generation.

Implemented as

- R_SCE_AES128CMAC_GenerateUpdate()

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	message	message data area (message_length byte)
[in]	message_length	message data length (0 or more bytes)

◆ AES128CMAC_GenerateFinal

fsp_err_t(* sce_api_t::AES128CMAC_GenerateFinal) (sce_cmac_handle_t *handle, uint8_t *mac)

Finalize AES128CMAC generation.

Implemented as

- R_SCE_AES128CMAC_GenerateFinal()

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in,out]	mac	MAC data area (16byte)

◆ AES128CMAC_VerifyInit

fsp_err_t(* sce_api_t::AES128CMAC_VerifyInit) (sce_cmac_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)

Initialize AES128CMAC verification.

Implemented as

- R_SCE_AES128CMAC_VerifyInit()

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	wrapped_key	128-bit AES wrapped key

◆ AES128CMAC_VerifyUpdate

fsp_err_t(* sce_api_t::AES128CMAC_VerifyUpdate) (sce_cmac_handle_t *handle, uint8_t *message, uint32_t message_length)

Update AES128CMAC verification.

Implemented as

- R_SCE_AES128CMAC_VerifyUpdate()

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	message	message data area (message_length byte)
[in]	message_length	message data length (0 or more bytes)

◆ AES128CMAC_VerifyFinal

fsp_err_t(* sce_api_t::AES128CMAC_VerifyFinal) (sce_cmac_handle_t *handle, uint8_t *mac, uint32_t mac_length)

Finalize AES128CMAC verification.

Implemented as

- R_SCE_AES128CMAC_VerifyFinal()

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in,out]	mac	MAC data area (mac_length byte)
[in,out]	mac_length	MAC data length (2 to 16 bytes)

◆ AES256CMAC_GenerateInit

fsp_err_t(* sce_api_t::AES256CMAC_GenerateInit) (sce_cmac_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)

Initialize AES256CMAC generation.

Implemented as

- R_SCE_AES256CMAC_GenerateInit()

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	wrapped_key	256-bit AES wrapped key

◆ AES256CMAC_GenerateUpdate

fsp_err_t(* sce_api_t::AES256CMAC_GenerateUpdate) (sce_cmac_handle_t *handle, uint8_t *message, uint32_t message_length)

Update AES256CMAC generation.

Implemented as

- R_SCE_AES256CMAC_GenerateUpdate()

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	message	message data area (message_length byte)
[in]	message_length	message data length (0 or more bytes)

◆ AES256CMAC_GenerateFinal

fsp_err_t(* sce_api_t::AES256CMAC_GenerateFinal) (sce_cmac_handle_t *handle, uint8_t *mac)

Finalize AES256CMAC generation.

Implemented as

- R_SCE_AES256CMAC_GenerateFinal()

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in,out]	mac	MAC data area (16byte)

◆ AES256CMAC_VerifyInit

fsp_err_t(* sce_api_t::AES256CMAC_VerifyInit) (sce_cmac_handle_t *handle, sce_aes_wrapped_key_t *wrapped_key)

Initialize AES256CMAC verification.

Implemented as

- R_SCE_AES256CMAC_VerifyInit()

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	wrapped_key	256-bit AES wrapped key

◆ AES256CMAC_VerifyUpdate

fsp_err_t(* sce_api_t::AES256CMAC_VerifyUpdate) (sce_cmac_handle_t *handle, uint8_t *message, uint32_t message_length)

Update AES256CMAC verification.

Implemented as

- R_SCE_AES256CMAC_VerifyUpdate()

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in]	message	message data area (message_length byte)
[in]	message_length	message data length (0 or more bytes)

◆ AES256CMAC_VerifyFinal

fsp_err_t(* sce_api_t::AES256CMAC_VerifyFinal) (sce_cmac_handle_t *handle, uint8_t *mac, uint32_t mac_length)

Finalize AES256CMAC verification.

Implemented as

- R_SCE_AES256CMAC_VerifyFinal()

Parameters

[in,out]	handle	AES-CMAC handler (work area)
[in,out]	mac	MAC data area (mac_length byte)
[in,out]	mac_length	MAC data length (2 to 16 bytes)

◆ SHA256_Init

fsp_err_t(* sce_api_t::SHA256_Init) (sce_sha_md5_handle_t *handle)

Initialize SHA-256 Calculation.

Implemented as

- R_SCE_SHA256_Init()

Parameters

[in,out]	handle	SHA handler (work area)

◆ SHA256_Update

fsp_err_t(* sce_api_t::SHA256_Update) (sce_sha_md5_handle_t *handle, uint8_t *message, uint32_t message_length)

Update SHA-256 Calculation.

Implemented as

- R_SCE_SHA256_Update()

Parameters

[in,out]	handle	SHA handler (work area)
[in]	message	message data area
[in]	message_length	message data length

◆ SHA256_Final

fsp_err_t(* sce_api_t::SHA256_Final) (sce_sha_md5_handle_t *handle, uint8_t *digest, uint32_t *digest_length)

Finalize SHA-256 Calculation.

Implemented as

- R_SCE_SHA256_Final()

Parameters

[in,out]	handle	SHA handler (work area)
[in,out]	digest	hasha data area
[in,out]	digest_length	hash data length (32bytes)

◆ RSA1024_WrappedKeyPairGenerate

fsp_err_t(* sce_api_t::RSA1024_WrappedKeyPairGenerate) (sce_rsa1024_wrapped_pair_key_t *wrapped_pair_key)

This API outputs 1024-bit RSA wrapped pair key.

Implemented as

- R_SCE_RSA1024_WrappedKeyPairGenerate()

Parameters

[in,out]	wrapped_key	128-bit AES wrapped key

◆ RSA2048_WrappedKeyPairGenerate

fsp_err_t(* sce_api_t::RSA2048_WrappedKeyPairGenerate) (sce_rsa2048_wrapped_pair_key_t *wrapped_pair_key)

This API outputs 2048-bit RSA wrapped pair key.

Implemented as

- R_SCE_RSA2048_WrappedKeyPairGenerate()

Parameters

[in,out]	wrapped_key	128-bit AES wrapped key

◆ RSA1024_EncryptedPublicKeyWrap

fsp_err_t(* sce_api_t::RSA1024_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_rsa1024_public_wrapped_key_t *wrapped_key)

This API outputs 1024-bit RSA public wrapped key.

Implemented as

- R_SCE_RSA1024_EncryptedPublicKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	1024-bit RSA public wrapped key

◆ RSA1024_EncryptedPrivateKeyWrap

fsp_err_t(* sce_api_t::RSA1024_EncryptedPrivateKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_rsa1024_private_wrapped_key_t *wrapped_key)

This API outputs 1024-bit RSA private wrapped key.

Implemented as

- R_SCE_RSA1024_EncryptedPrivateKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	1024-bit RSA private wrapped key

◆ RSA2048_EncryptedPublicKeyWrap

fsp_err_t(* sce_api_t::RSA2048_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_rsa2048_public_wrapped_key_t *wrapped_key)

This API outputs 2048-bit RSA public wrapped key.

Implemented as

- R_SCE_RSA2048_EncryptedPublicKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	2048-bit RSA public wrapped key

◆ RSA2048_EncryptedPrivateKeyWrap

fsp_err_t(* sce_api_t::RSA2048_EncryptedPrivateKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_rsa2048_private_wrapped_key_t *wrapped_key)

This API outputs 2048-bit RSA private wrapped key.

Implemented as

- R_SCE_RSA2048_EncryptedPrivateKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	2048-bit RSA private wrapped key

◆ RSA3072_EncryptedPublicKeyWrap

fsp_err_t(* sce_api_t::RSA3072_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_rsa3072_public_wrapped_key_t *wrapped_key)

This API outputs 3072-bit RSA public wrapped key.

Implemented as

- R_SCE_RSA3072_EncryptedPublicKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	3072-bit RSA public wrapped key

◆ RSA4096_EncryptedPublicKeyWrap

fsp_err_t(* sce_api_t::RSA4096_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_rsa4096_public_wrapped_key_t *wrapped_key)

This API outputs 4096-bit RSA public wrapped key.

Implemented as

- R_SCE_RSA4096_EncryptedPublicKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	4096-bit RSA public wrapped key

◆ RSASSA_PKCS1024_SignatureGenerate

fsp_err_t(* sce_api_t::RSASSA_PKCS1024_SignatureGenerate) (sce_rsa_byte_data_t *message_hash, sce_rsa_byte_data_t *signature, sce_rsa1024_private_wrapped_key_t *wrapped_key, uint8_t hash_type)

RSASSA-PKCS1-V1_5 signature generation.

Implemented as

- R_SCE_RSASSA_PKCS1024_SignatureGenerate()

Parameters

[in]	message_hash	Message or hash value to which to attach signature
[in,out]	signature	Signature text storage destination information
[in]	wrapped_key	Inputs the 1024-bit RSA private wrapped key.
[in]	hash_type	Only HW_SCE_RSA_HASH_SHA256 is supported

◆ RSASSA_PKCS2048_SignatureGenerate

fsp_err_t(* sce_api_t::RSASSA_PKCS2048_SignatureGenerate) (sce_rsa_byte_data_t *message_hash, sce_rsa_byte_data_t *signature, sce_rsa2048_private_wrapped_key_t *wrapped_key, uint8_t hash_type)

RSASSA-PKCS1-V1_5 signature generation.

Implemented as

- R_SCE_RSASSA_PKCS2048_SignatureGenerate()

Parameters

[in]	message_hash	Message or hash value to which to attach signature
[in,out]	signature	Signature text storage destination information
[in]	wrapped_key	Inputs the 2048-bit RSA private wrapped key.
[in]	hash_type	Only HW_SCE_RSA_HASH_SHA256 is supported

◆ RSASSA_PKCS1024_SignatureVerify

fsp_err_t(* sce_api_t::RSASSA_PKCS1024_SignatureVerify) (sce_rsa_byte_data_t *signature, sce_rsa_byte_data_t *message_hash, sce_rsa1024_public_wrapped_key_t *wrapped_key, uint8_t hash_type)

RSASSA-PKCS1-V1_5 signature verification.

Implemented as

- R_SCE_RSASSA_PKCS1024_SignatureVerify()

Parameters

[in]	signature	Signature text information to verify
[in]	message_hash	Message text or hash value to verify
[in]	wrapped_key	Inputs the 1024-bit RSA public wrapped key.
[in]	hash_type	Only HW_SCE_RSA_HASH_SHA256 is supported

◆ RSASSA_PKCS2048_SignatureVerify

fsp_err_t(* sce_api_t::RSASSA_PKCS2048_SignatureVerify) (sce_rsa_byte_data_t *signature, sce_rsa_byte_data_t *message_hash, sce_rsa2048_public_wrapped_key_t *wrapped_key, uint8_t hash_type)

RSASSA-PKCS1-V1_5 signature verification.

Implemented as

- R_SCE_RSASSA_PKCS2048_SignatureVerify()

Parameters

[in]	signature	Signature text information to verify
[in]	message_hash	Message text or hash value to verify
[in]	wrapped_key	Inputs the 2048-bit RSA public wrapped key.
[in]	hash_type	Only HW_SCE_RSA_HASH_SHA256 is supported

◆ RSASSA_PKCS3072_SignatureVerify

fsp_err_t(* sce_api_t::RSASSA_PKCS3072_SignatureVerify) (sce_rsa_byte_data_t *signature, sce_rsa_byte_data_t *message_hash, sce_rsa3072_public_wrapped_key_t *wrapped_key, uint8_t hash_type)

RSASSA-PKCS1-V1_5 signature verification.

Implemented as

- R_SCE_RSASSA_PKCS3072_SignatureVerify()

Parameters

[in]	signature	Signature text information to verify
[in]	message_hash	Message text or hash value to verify
[in]	wrapped_key	Inputs the 3072-bit RSA public wrapped key.
[in]	hash_type	Only HW_SCE_RSA_HASH_SHA256 is supported

◆ RSASSA_PKCS4096_SignatureVerify

fsp_err_t(* sce_api_t::RSASSA_PKCS4096_SignatureVerify) (sce_rsa_byte_data_t *signature, sce_rsa_byte_data_t *message_hash, sce_rsa4096_public_wrapped_key_t *wrapped_key, uint8_t hash_type)

RSASSA-PKCS1-V1_5 signature verification.

Implemented as

- R_SCE_RSASSA_PKCS4096_SignatureVerify()

Parameters

[in]	signature	Signature text information to verify
[in]	message_hash	Message text or hash value to verify
[in]	wrapped_key	Inputs the 4096-bit RSA public wrapped key.
[in]	hash_type	Only HW_SCE_RSA_HASH_SHA256 is supported

◆ RSAES_PKCS1024_Encrypt

fsp_err_t(* sce_api_t::RSAES_PKCS1024_Encrypt) (sce_rsa_byte_data_t *plain, sce_rsa_byte_data_t *cipher, sce_rsa1024_public_wrapped_key_t *wrapped_key)

RSAES-PKCS1-V1_5 encryption.

Implemented as

- R_SCE_RSAES_PKCS1024_Encrypt()

Parameters

[in]	plain	plaintext
[in,out]	cipher	ciphertext
[in]	wrapped_key	Inputs the 1024-bit RSA public wrapped key.

◆ RSAES_PKCS2048_Encrypt

fsp_err_t(* sce_api_t::RSAES_PKCS2048_Encrypt) (sce_rsa_byte_data_t *plain, sce_rsa_byte_data_t *cipher, sce_rsa2048_public_wrapped_key_t *wrapped_key)

RSAES-PKCS1-V1_5 encryption.

Implemented as

- R_SCE_RSAES_PKCS2048_Encrypt()

Parameters

[in]	plain	plaintext
[in,out]	cipher	ciphertext
[in]	wrapped_key	Inputs the 2048-bit RSA public wrapped key.

◆ RSAES_PKCS3072_Encrypt

fsp_err_t(* sce_api_t::RSAES_PKCS3072_Encrypt) (sce_rsa_byte_data_t *plain, sce_rsa_byte_data_t *cipher, sce_rsa3072_public_wrapped_key_t *wrapped_key)

RSAES-PKCS1-V1_5 encryption.

Implemented as

- R_SCE_RSAES_PKCS3072_Encrypt()

Parameters

[in]	plain	plaintext
[in,out]	cipher	ciphertext
[in]	wrapped_key	Inputs the 3072-bit RSA public wrapped key.

◆ RSAES_PKCS4096_Encrypt

fsp_err_t(* sce_api_t::RSAES_PKCS4096_Encrypt) (sce_rsa_byte_data_t *plain, sce_rsa_byte_data_t *cipher, sce_rsa4096_public_wrapped_key_t *wrapped_key)

RSAES-PKCS1-V1_5 encryption.

Implemented as

- R_SCE_RSAES_PKCS4096_Encrypt()

Parameters

[in]	plain	plaintext
[in,out]	cipher	ciphertext
[in]	wrapped_key	Inputs the 4096-bit RSA public wrapped key.

◆ RSAES_PKCS1024_Decrypt

fsp_err_t(* sce_api_t::RSAES_PKCS1024_Decrypt) (sce_rsa_byte_data_t *cipher, sce_rsa_byte_data_t *plain, sce_rsa1024_private_wrapped_key_t *wrapped_key)

RSAES-PKCS1-V1_5 decryption.

Implemented as

- R_SCE_RSAES_PKCS1024_Decrypt()

Parameters

[in]	cipher	ciphertext
[in,out]	plain	plaintext
[in]	wrapped_key	Inputs the 1024-bit RSA private wrapped key.

◆ RSAES_PKCS2048_Decrypt

fsp_err_t(* sce_api_t::RSAES_PKCS2048_Decrypt) (sce_rsa_byte_data_t *cipher, sce_rsa_byte_data_t *plain, sce_rsa2048_private_wrapped_key_t *wrapped_key)

RSAES-PKCS1-V1_5 decryption.

Implemented as

- R_SCE_RSAES_PKCS2048_Decrypt()

Parameters

[in]	cipher	ciphertext
[in,out]	plain	plaintext
[in]	wrapped_key	Inputs the 2048-bit RSA private wrapped key.

◆ SHA256HMAC_EncryptedKeyWrap

fsp_err_t(* sce_api_t::SHA256HMAC_EncryptedKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_hmac_sha_wrapped_key_t *wrapped_key)

This API outputs HMAC-SHA256 wrapped key.

Implemented as

- R_SCE_SHA256HMAC_EncryptedKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	HMAC-SHA256 wrapped key

◆ SHA256HMAC_GenerateInit

fsp_err_t(* sce_api_t::SHA256HMAC_GenerateInit) (sce_hmac_sha_handle_t *handle, sce_hmac_sha_wrapped_key_t *wrapped_key)

Initialize HMAC-SHA256 generation.

Implemented as

- R_SCE_SHA256HMAC_GenerateInit()

Parameters

[in,out]	handle	SHA-HMAC handler (work area)
[in]	wrapped_key	MAC wrapped key

◆ SHA256HMAC_GenerateUpdate

fsp_err_t(* sce_api_t::SHA256HMAC_GenerateUpdate) (sce_hmac_sha_handle_t *handle, uint8_t *message, uint32_t message_length)

Update HMAC-SHA256 generation.

Implemented as

- R_SCE_SHA256HMAC_GenerateUpdate()

Parameters

[in,out]	handle	SHA-HMAC handle (work area)
[in]	message	Message area
[in]	message_length	Message length

◆ SHA256HMAC_GenerateFinal

fsp_err_t(* sce_api_t::SHA256HMAC_GenerateFinal) (sce_hmac_sha_handle_t *handle, uint8_t *mac)

Finalize HMAC-SHA256 generation.

Implemented as

- R_SCE_SHA256HMAC_GenerateFinal()

Parameters

[in,out]	handle	SHA-HMAC handle (work area)
[in,out]	mac	HMAC area (32 bytes)

◆ SHA256HMAC_VerifyInit

fsp_err_t(* sce_api_t::SHA256HMAC_VerifyInit) (sce_hmac_sha_handle_t *handle, sce_hmac_sha_wrapped_key_t *wrapped_key)

Initialize HMAC-SHA256 verification.

Implemented as

- R_SCE_SHA256HMAC_VerifyInit()

Parameters

[in,out]	handle	SHA-HMAC handler (work area)
[in]	wrapped_key	MAC wrapped key

◆ SHA256HMAC_VerifyUpdate

fsp_err_t(* sce_api_t::SHA256HMAC_VerifyUpdate) (sce_hmac_sha_handle_t *handle, uint8_t *message, uint32_t message_length)

Update HMAC-SHA256 verification.

Implemented as

- R_SCE_SHA256HMAC_VerifyUpdate()

Parameters

[in,out]	handle	SHA-HMAC handle (work area)
[in]	message	Message area
[in]	message_length	Message length

◆ SHA256HMAC_VerifyFinal

fsp_err_t(* sce_api_t::SHA256HMAC_VerifyFinal) (sce_hmac_sha_handle_t *handle, uint8_t *mac, uint32_t mac_length)

Finalize HMAC-SHA256 verification.

Implemented as

- R_SCE_SHA256HMAC_VerifyFinal()

Parameters

[in,out]	handle	SHA-HMAC handle (work area)
[in]	mac	HMAC area
[in]	mac_length	HMAC length

◆ ECC_secp192r1_WrappedKeyPairGenerate

fsp_err_t(* sce_api_t::ECC_secp192r1_WrappedKeyPairGenerate) (sce_ecc_wrapped_pair_key_t *wrapped_pair_key)

This API outputs secp192r1 wrapped pair key.

Implemented as

- R_SCE_ECC_secp192r1_WrappedKeyPairGenerate()

Parameters

[in,out]	wrapped_pair_key	Wrapped pair key for secp192r1 public key and private key pair

◆ ECC_secp224r1_WrappedKeyPairGenerate

fsp_err_t(* sce_api_t::ECC_secp224r1_WrappedKeyPairGenerate) (sce_ecc_wrapped_pair_key_t *wrapped_pair_key)

This API outputs secp224r1 wrapped pair key.

Implemented as

- R_SCE_ECC_secp224r1_WrappedKeyPairGenerate()

Parameters

[in,out]	wrapped_pair_key	Wrapped pair key for secp224r1 public key and private key pair

◆ ECC_secp256r1_WrappedKeyPairGenerate

fsp_err_t(* sce_api_t::ECC_secp256r1_WrappedKeyPairGenerate) (sce_ecc_wrapped_pair_key_t *wrapped_pair_key)

This API outputs secp256r1 wrapped pair key.

Implemented as

- R_SCE_ECC_secp256r1_WrappedKeyPairGenerate()

Parameters

[in,out]	wrapped_pair_key	Wrapped pair key for secp256r1 public key and private key pair

◆ ECC_secp384r1_WrappedKeyPairGenerate

fsp_err_t(* sce_api_t::ECC_secp384r1_WrappedKeyPairGenerate) (sce_ecc_wrapped_pair_key_t *wrapped_pair_key)

This API outputs secp384r1 wrapped pair key.

Implemented as

- R_SCE_ECC_secp384r1_WrappedKeyPairGenerate()

Parameters

[in,out]	wrapped_pair_key	Wrapped pair key for secp384r1 public key and private key pair

◆ ECC_secp192r1_EncryptedPublicKeyWrap

fsp_err_t(* sce_api_t::ECC_secp192r1_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_public_wrapped_key_t *wrapped_key)

This API outputs secp192r1 public wrapped key.

Implemented as

- R_SCE_ECC_secp192r1_EncryptedPublicKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp192r1 public wrapped key

◆ ECC_secp224r1_EncryptedPublicKeyWrap

fsp_err_t(* sce_api_t::ECC_secp224r1_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_public_wrapped_key_t *wrapped_key)

This API outputs secp224r1 public wrapped key.

Implemented as

- R_SCE_ECC_secp224r1_EncryptedPublicKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp224r1 public wrapped key

◆ ECC_secp256r1_EncryptedPublicKeyWrap

fsp_err_t(* sce_api_t::ECC_secp256r1_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_public_wrapped_key_t *wrapped_key)

This API outputs secp256r1 public wrapped key.

Implemented as

- R_SCE_ECC_secp256r1_EncryptedPublicKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp256r1 public wrapped key

◆ ECC_secp384r1_EncryptedPublicKeyWrap

fsp_err_t(* sce_api_t::ECC_secp384r1_EncryptedPublicKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_public_wrapped_key_t *wrapped_key)

This API outputs secp384r1 public wrapped key.

Implemented as

- R_SCE_ECC_secp384r1_EncryptedPublicKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp384r1 public wrapped key

◆ ECC_secp192r1_EncryptedPrivateKeyWrap

fsp_err_t(* sce_api_t::ECC_secp192r1_EncryptedPrivateKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_private_wrapped_key_t *wrapped_key)

This API outputs secp192r1 private wrapped key.

Implemented as

- R_SCE_ECC_secp192r1_EncryptedPrivateKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp192r1 private wrapped key

◆ ECC_secp224r1_EncryptedPrivateKeyWrap

fsp_err_t(* sce_api_t::ECC_secp224r1_EncryptedPrivateKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_private_wrapped_key_t *wrapped_key)

This API outputs secp224r1 private wrapped key.

Implemented as

- R_SCE_ECC_secp224r1_EncryptedPrivateKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp224r1 private wrapped key

◆ ECC_secp256r1_EncryptedPrivateKeyWrap

fsp_err_t(* sce_api_t::ECC_secp256r1_EncryptedPrivateKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_private_wrapped_key_t *wrapped_key)

This API outputs secp256r1 private wrapped key.

Implemented as

- R_SCE_ECC_secp256r1_EncryptedPrivateKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp256r1 private wrapped key

◆ ECC_secp384r1_EncryptedPrivateKeyWrap

fsp_err_t(* sce_api_t::ECC_secp384r1_EncryptedPrivateKeyWrap) (uint8_t *initial_vector, uint8_t *encrypted_key, sce_key_update_key_t *key_update_key, sce_ecc_private_wrapped_key_t *wrapped_key)

This API outputs secp384r1 private wrapped key.

Implemented as

- R_SCE_ECC_secp384r1_EncryptedPrivateKeyWrap()

Parameters

[in]	initial_vector	Initialization vector when generating encrypted_key
[in]	encrypted_key	User key encryptedand MAC appended
[in]	key_update_key	Key update keyring
[in,out]	wrapped_key	secp384r1 private wrapped key

◆ ECDSA_secp192r1_SignatureGenerate

fsp_err_t(* sce_api_t::ECDSA_secp192r1_SignatureGenerate) (sce_ecdsa_byte_data_t *message_hash, sce_ecdsa_byte_data_t *signature, sce_ecc_private_wrapped_key_t *wrapped_key)

ECDSA signature generation.

Implemented as

- R_SCE_ECDSA_secp192r1_SignatureGenerate()

Parameters

[in]	message_hash	Message or hash value to which to attach signature
[in,out]	signature	Signature text storage destination information
[in]	wrapped_key	Input wrapped key of secp192r1 private key.

◆ ECDSA_secp224r1_SignatureGenerate

fsp_err_t(* sce_api_t::ECDSA_secp224r1_SignatureGenerate) (sce_ecdsa_byte_data_t *message_hash, sce_ecdsa_byte_data_t *signature, sce_ecc_private_wrapped_key_t *wrapped_key)

ECDSA signature generation.

Implemented as

- R_SCE_ECDSA_secp224r1_SignatureGenerate()

Parameters

[in]	message_hash	Message or hash value to which to attach signature
[in,out]	signature	Signature text storage destination information
[in]	wrapped_key	Input wrapped key of secp224r1 private key.

◆ ECDSA_secp256r1_SignatureGenerate

fsp_err_t(* sce_api_t::ECDSA_secp256r1_SignatureGenerate) (sce_ecdsa_byte_data_t *message_hash, sce_ecdsa_byte_data_t *signature, sce_ecc_private_wrapped_key_t *wrapped_key)

ECDSA signature generation.

Implemented as

- R_SCE_ECDSA_secp256r1_SignatureGenerate()

Parameters

[in]	message_hash	Message or hash value to which to attach signature
[in,out]	signature	Signature text storage destination information
[in]	wrapped_key	Input wrapped key of secp256r1 private key.

◆ ECDSA_secp384r1_SignatureGenerate

fsp_err_t(* sce_api_t::ECDSA_secp384r1_SignatureGenerate) (sce_ecdsa_byte_data_t *message_hash, sce_ecdsa_byte_data_t *signature, sce_ecc_private_wrapped_key_t *wrapped_key)

ECDSA signature generation.

Implemented as

- R_SCE_ECDSA_secp384r1_SignatureGenerate()

Parameters

[in]	message_hash	Message or hash value to which to attach signature
[in,out]	signature	Signature text storage destination information
[in]	wrapped_key	Input wrapped key of secp384r1 private key.

◆ ECDSA_secp192r1_SignatureVerify

fsp_err_t(* sce_api_t::ECDSA_secp192r1_SignatureVerify) (sce_ecdsa_byte_data_t *signature, sce_ecdsa_byte_data_t *message_hash, sce_ecc_public_wrapped_key_t *wrapped_key)

ECDSA signature verification.

Implemented as

- R_SCE_ECDSA_secp192r1_SignatureVerify()

Parameters

[in]	signature	Signature text information to be verified
[in,out]	message_hash	Message or hash value to be verified
[in]	wrapped_key	Input wrapped key of secp192r1 public key.

◆ ECDSA_secp224r1_SignatureVerify

fsp_err_t(* sce_api_t::ECDSA_secp224r1_SignatureVerify) (sce_ecdsa_byte_data_t *signature, sce_ecdsa_byte_data_t *message_hash, sce_ecc_public_wrapped_key_t *wrapped_key)

ECDSA signature verification.

Implemented as

- R_SCE_ECDSA_secp224r1_SignatureVerify()

Parameters

[in]	signature	Signature text information to be verified
[in,out]	message_hash	Message or hash value to be verified
[in]	wrapped_key	Input wrapped key of secp224r1 public key.

◆ ECDSA_secp256r1_SignatureVerify

fsp_err_t(* sce_api_t::ECDSA_secp256r1_SignatureVerify) (sce_ecdsa_byte_data_t *signature, sce_ecdsa_byte_data_t *message_hash, sce_ecc_public_wrapped_key_t *wrapped_key)

ECDSA signature verification.

Implemented as

- R_SCE_ECDSA_secp256r1_SignatureVerify()

Parameters

[in]	signature	Signature text information to be verified
[in,out]	message_hash	Message or hash value to be verified
[in]	wrapped_key	Input wrapped key of secp256r1 public key.

◆ ECDSA_secp384r1_SignatureVerify

fsp_err_t(* sce_api_t::ECDSA_secp384r1_SignatureVerify) (sce_ecdsa_byte_data_t *signature, sce_ecdsa_byte_data_t *message_hash, sce_ecc_public_wrapped_key_t *wrapped_key)

ECDSA signature verification.

Implemented as

- R_SCE_ECDSA_secp384r1_SignatureVerify()

Parameters

[in]	signature	Signature text information to be verified
[in,out]	message_hash	Message or hash value to be verified
[in]	wrapped_key	Input wrapped key of secp384r1 public key.

◆ ECDH_secp256r1_Init

fsp_err_t(* sce_api_t::ECDH_secp256r1_Init) (sce_ecdh_handle_t *handle, uint32_t key_type, uint32_t use_key_id)

secp256r1 ECDH Initialization.

Implemented as

- R_SCE_ECDH_secp256r1_Init()

Parameters

[in,out]	handle	ECDH handler (work area)
[in]	key_type	Key exchange type
[in]	use_key_id	use key_id or not

◆ ECDH_secp256r1_PublicKeySign

fsp_err_t(* sce_api_t::ECDH_secp256r1_PublicKeySign) (sce_ecdh_handle_t *handle, sce_ecc_public_wrapped_key_t *ecc_public_wrapped_key, sce_ecc_private_wrapped_key_t *ecc_private_wrapped_key, uint8_t *public_key, sce_ecdsa_byte_data_t *signature, sce_ecc_private_wrapped_key_t *wrapped_key)

secp256r1 ECDH public key Signature.

Implemented as

- R_SCE_ECDH_secp256r1_PublicKeySign()

Parameters

[in,out]	handle	ECDH handler (work area)
[in]	ecc_public_wrapped_key	For ECDHE, input a null pointer. For ECDH, input the wrapped key of a secp256r1 public key.
[in]	ecc_private_wrapped_key	secp256r1 private key for signature generation
[in,out]	public_key	User secp256r1 public key (512-bit) for key exchange.
[in,out]	signature	Signature text storage destination information
[in,out]	wrapped_key	For ECDHE, a private wrapped key generated from a random number. Not output for ECDH.

◆ ECDH_secp256r1_PublicKeyVerify

fsp_err_t(* sce_api_t::ECDH_secp256r1_PublicKeyVerify) (sce_ecdh_handle_t *handle, sce_ecc_public_wrapped_key_t *ecc_public_wrapped_key, uint8_t *public_key_data, sce_ecdsa_byte_data_t *signature, sce_ecc_public_wrapped_key_t *wrapped_key)

secp256r1 ECDH public key verification.

Implemented as

- R_SCE_ECDH_secp256r1_PublicKeyVerify()

Parameters

[in,out]	handle	ECDH handler (work area)
[in]	ecc_public_wrapped_key	Public wrapped key area for signature verification
[in]	public_key_data	secp256r1 public key (512-bit)
[in]	signature	ECDSA secp256r1 signature of ecc_public_wrapped_key
[in,out]	wrapped_key	wrapped key of ecc_public_wrapped_key

◆ ECDH_secp256r1_PublicKeyReadWithoutSignature

fsp_err_t(* sce_api_t::ECDH_secp256r1_PublicKeyReadWithoutSignature) (sce_ecdh_handle_t *handle, uint8_t *public_key_data, sce_ecc_public_wrapped_key_t *wrapped_key)

Output the key index of QeU without signature verification.

Implemented as

- R_SCE_ECDH_secp256r1_PublicKeyReadWithoutSignature()

Parameters

[in,out]	handle	ECDH handler (work area)
[in]	public_key_data	secp256r1 public key (512-bit). When key_id is used: key_id (8-bit) || public key (512-bit)
[in,out]	wrapped_key	wrapped key of ecc_public_wrapped_key

◆ ECDH_secp256r1_SharedSecretCalculate

fsp_err_t(* sce_api_t::ECDH_secp256r1_SharedSecretCalculate) (sce_ecdh_handle_t *handle, sce_ecc_public_wrapped_key_t *ecc_public_wrapped_key, sce_ecc_private_wrapped_key_t *ecc_private_wrapped_key, sce_ecdh_wrapped_key_t *shared_secret_wrapped_key)

secp256r1 ECDH shared secret calculation.

Implemented as

- R_SCE_ECDH_secp256r1_SharedSecretCalculate()

Parameters

[in,out]	handle	ECDH handler (work area)
[in]	ecc_public_wrapped_key	Public wrapped key
[in]	ecc_private_wrapped_key	Private wrapped key
[in,out]	shared_secret_wrapped_key	Wrapped key of shared secret Z calculated by ECDH key exchange

◆ ECDH_secp256r1_KeyDerivation

fsp_err_t(* sce_api_t::ECDH_secp256r1_KeyDerivation) (sce_ecdh_handle_t *handle, sce_ecdh_wrapped_key_t *shared_secret_wrapped_key, uint32_t key_type, uint32_t kdf_type, uint8_t *other_info, uint32_t other_info_length, sce_hmac_sha_wrapped_key_t *salt_wrapped_key, sce_aes_wrapped_key_t *wrapped_key)

secp256r1 ECDH key derivation.

Implemented as

- R_SCE_ECDH_secp256r1_KeyDerivation()

Parameters

[in,out]	handle	ECDH handler (work area)
[in]	shared_secret_wrapped_key	Z wrapped key calculated by R_SCE_ECDH_secp256r1_SharedSecretCalculate
[in]	key_type	Derived key type
[in]	kdf_type	Algorithm used for key derivation calculation
[in]	other_info	Additional data used for key derivation calculation
[in]	other_info_length	Data length of other_info
[in]	salt_wrapped_key	Salt wrapped key
[in,out]	wrapped_key	Wrapped key corresponding to key_type.

◆ TLS_RootCertificateRSA2048PublicKeyInstall

fsp_err_t(* sce_api_t::TLS_RootCertificateRSA2048PublicKeyInstall) (uint8_t *encrypted_provisioning_key, uint8_t *initial_vector, uint8_t *encrypted_key, sce_tls_ca_certification_public_wrapped_key_t *wrapped_key)

Generate TLS RSA Public key index data

Implemented as

- R_SCE_TLS_RootCertificateRSA2048PublicKeyInstall()

Parameters

[in]	encrypted_provisioning_key	the provisioning key includes encrypted CBC/CBC-MAC key for user key
[in]	initial_vector	the initial_vector for user key CBC encrypt
[in]	encrypted_key	the user key encrypted with AES128-ECB mode
[out]	wrapped_key	the user Key Generation Information (141 words) of RSA2048 bit

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

◆ TLS_ECC_secp256r1_EphemeralWrappedKeyPairGenerate

fsp_err_t(* sce_api_t::TLS_ECC_secp256r1_EphemeralWrappedKeyPairGenerate) (sce_tls_p256_ecc_wrapped_key_t *tls_p256_ecc_wrapped_key, uint8_t *ephemeral_ecdh_public_key)

Generate TLS ECC key pair

Implemented as

- R_SCE_TLS_ECC_secp256r1_EphemeralWrappedKeyPairGenerate()

Parameters

[in]	tls_p256_ecc_wrapped_key	P256 ECC key index for TLS
[in]	ephemeral_ecdh_public_key	ephemeral ECDH public key

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

◆ TLS_RootCertificateVerify

fsp_err_t(* sce_api_t::TLS_RootCertificateVerify) (uint32_t public_key_type, uint8_t *certificate, uint32_t certificate_length, uint32_t public_key_n_start_position, uint32_t public_key_n_end_position, uint32_t public_key_e_start_position, uint32_t public_key_e_end_position, uint8_t *signature, uint32_t *encrypted_root_public_key)

Verify root CA certificate.

Implemented as

- R_SCE_TLS_RootCertificateVerify()

Parameters

[in]	public_key_type	key type
[in]	certificate	certificates.
[in]	certificate_length	byte size of certificates.
[in]	public_key_n_start_position	start position of public key n.
[in]	public_key_n_end_position	end position of public key n.
[in]	public_key_e_start_position	start position of public key e.
[in]	public_key_e_end_position	end position of public key e.
[in]	signature	signature for certificates.
[out]	encrypted_root_public_key	public key for RSA 2048bit.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

◆ TLS_CertificateVerify

fsp_err_t(* sce_api_t::TLS_CertificateVerify) (uint32_t public_key_type, uint32_t *encrypted_input_public_key, uint8_t *certificate, uint32_t certificate_length, uint8_t *signature, uint32_t public_key_n_start_position, uint32_t public_key_n_end_position, uint32_t public_key_e_start_position, uint32_t public_key_e_end_position, uint32_t *encrypted_output_public_key)

Verify server certificate and intermediate certificate.

Implemented as

- R_SCE_TLS_CertificateVerify()

Parameters

[in]	public_key_type	key type
[in]	input_public_key	public key.
[in]	certificate	certificates.
[in]	certificate_length	byte size of certificates.
[in]	signature	signature for certificates.
[in]	public_key_n_start_position	start position of public key n.
[in]	public_key_n_end_position	end position of public key n.
[in]	public_key_e_start_position	start position of public key e.
[in]	public_key_e_end_position	end position of public key e.
[out]	encrypted_output_public_key	public key for RSA 2048bit.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

◆ TLS_PreMasterSecretGenerateForRSA2048

fsp_err_t(* sce_api_t::TLS_PreMasterSecretGenerateForRSA2048) (uint32_t *sce_pre_master_secret)

Generate encrypted pre-master secret.

Implemented as

- R_SCE_TLS_PreMasterSecretGenerateForRSA2048()

Parameters

[out]	sce_pre_master_secret	pre-master secret value for SCE.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.

◆ TLS_MasterSecretGenerate

fsp_err_t(* sce_api_t::TLS_MasterSecretGenerate) (uint32_t select_cipher_suite, uint32_t *sce_pre_master_secret, uint8_t *client_random, uint8_t *server_random, uint32_t *sce_master_secret)

Generate encrypted master secret.

Implemented as

- R_SCE_TLS_MasterSecretGenerate()

Parameters

[in]	select_cipher_suite	cipher suite type
[in]	sce_pre_master_secret	pre-master secret value for SCE.
[in]	client_random	random value reported ClientHello.
[in]	server_random	random value reported ServerHello.
[out]	sce_master_secret	master secret value for SCE.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

◆ TLS_PreMasterSecretEncryptWithRSA2048

fsp_err_t(* sce_api_t::TLS_PreMasterSecretEncryptWithRSA2048) (uint32_t *encrypted_public_key, uint32_t *sce_pre_master_secret, uint8_t *encrypted_pre_master_secret)

Output the result encrypted pre-master secret with RSA 2048bit

Implemented as

- R_SCE_TLS_PreMasterSecretEncryptWithRSA2048()

Parameters

[in]	encrypted_public_key	public key data.
[in]	sce_pre_master_secret	pre-master secret value.
[out]	encrypted_pre_master_secret	the value encrypted pre-master secret.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

◆ TLS_SessionKeyGenerate

fsp_err_t(* sce_api_t::TLS_SessionKeyGenerate) (uint32_t select_cipher_suite, uint32_t *sce_master_secret, uint8_t *client_random, uint8_t *server_random, uint8_t *nonce_explicit, sce_hmac_sha_wrapped_key_t *client_mac_wrapped_key, sce_hmac_sha_wrapped_key_t *server_mac_wrapped_key, sce_aes_wrapped_key_t *client_crypto_wrapped_key, sce_aes_wrapped_key_t *server_crypto_wrapped_key, uint8_t *client_initial_vector, uint8_t *server_initial_vector)

Output various key information.

Implemented as

- R_SCE_TLS_SessionKeyGenerate()

Parameters

[in]	select_cipher_suite	Key suite information number.
[in]	sce_master_secret	master secret value.
[in]	client_random	random value reported ClientHello.
[in]	server_random	random value reported ServerHello.
[in]	nonce_explicit	nonce value

[out]	client_mac_wrapped_key	the mac key during communication from client to server.
[out]	server_mac_wrapped_key	the mac key during communication from server to client.
[out]	client_crypto_wrapped_key	the crypto key during communication from client to server.
[out]	server_crypto_wrapped_key	the crypto key during communication from server to client.
[in]	client_initial_vector	not use.
[in]	server_initial_vector	not use.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

◆ TLS_VerifyDataGenerate

fsp_err_t(* sce_api_t::TLS_VerifyDataGenerate) (uint32_t select_verify_data, uint32_t *sce_master_secret, uint8_t *hand_shake_hash, uint8_t *verify_data)

Generate verify data.

Implemented as

- R_SCE_TLS_VerifyDataGenerate()

Parameters

[in]	select_verify_data	Select Client/Server data.
[in]	sce_master_secret	master secret data.
[in]	hand_shake_hash	TLS hand shake message SHA256 HASH value.
[out]	verify_data	verify data.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

◆ TLS_ServerKeyExchangeVerify

fsp_err_t(* sce_api_t::TLS_ServerKeyExchangeVerify) (uint32_t public_key_type, uint8_t *client_random, uint8_t *server_random, uint8_t *server_ephemeral_ecdh_public_key, uint8_t *server_key_exchange_signature, uint32_t *encrypted_public_key, uint32_t *encrypted_ephemeral_ecdh_public_key)

Retrives ECDH public key.

Implemented as

- R_SCE_TLS_ServerKeyExchangeVerify()

Parameters

[in]	public_key_type	key type
[in]	client_random	random value reported ClientHello.
[in]	server_random	random value reported ServerHello.
[in]	server_ephemeral_ecdh_public_key	Ephemeral ECDH public key from Server.
[in]	server_key_exchange_siguna ture	Server Key Exchange sigunature.
[in]	encrypted_public_key	encrypted public key.
[out]	encrypted_ephemeral_ecdh_ public_key	encrypted Ephemeral ECDH public key.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLIC T	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

◆ TLS_PreMasterSecretGenerateForECC_secp256r1

fsp_err_t(* sce_api_t::TLS_PreMasterSecretGenerateForECC_secp256r1) (uint32_t *encrypted_public_key, sce_tls_p256_ecc_wrapped_key_t *tls_p256_ecc_wrapped_key, uint32_t *sce_pre_master_secret)

Generate encrypted pre-master secret.

Implemented as

- R_SCE_TLS_PreMasterSecretGenerateForECC_secp256r1()

Parameters

[in]	encrypted_public_key	encrypted public key
[in]	tls_p256_ecc_wrapped_key	P-256 ECC key index.
[out]	sce_pre_master_secret	encrypted pre-master secret value for SCE.

Return values

FSP_SUCCESS	Normal termination
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	A resource conflict occurred because a hardware resource needed by the processing routine was in use by another processing routine.
FSP_ERR_CRYPTO_SCE_FAIL	An internal error occurred.

◆ sce_instance_t

struct sce_instance_t

This structure encompasses everything that is needed to use an instance of this interface.

Data Fields

sce_ctrl_t *	p_ctrl	Pointer to the control structure for this instance.
sce_cfg_t const *	p_cfg	Pointer to the configuration structure for this instance.
sce_api_t const *	p_api	Pointer to the API structure for this instance.

Typedef Documentation

◆ sce_rsa_byte_data_t

typedef sce_byte_data_t sce_rsa_byte_data_t

byte data

RSA byte data structure

◆ sce_ecdsa_byte_data_t

typedef sce_byte_data_t sce_ecdsa_byte_data_t

byte data

ECDSA byte data structure

◆ sce_ctrl_t

typedef void sce_ctrl_t

SCE Control block. Allocate an instance specific control block to pass into the API calls.

Implemented as

- sce_instance_ctrl_t

Enumeration Type Documentation

◆ lifecycle_t

enum lifecycle_t

Data lifecycle
