Revision 2.60 Feb.25.2022

Table of Contents

Chapter 1 Introduction . . . 11
1.1 Overview . . . 11
1.2 Using this Manual . . . 11
1.3 Documentation Standard . . . 11
1.4 Introduction to FSP . . . 11
1.4.1 Purpose . . . 12
1.4.2 Quality . . . 12
1.4.3 Ease of Use . . . 12
1.4.4 Scalability . . . 12
1.4.5 Build Time Configurations . . . 12
1.4.6 e2 studio IDE . . . 12
Chapter 2 Starting Development . . . 13
2.1 Starting Development Introduction . . . 13
2.2 e2 studio User Guide . . . 14
2.2.1 What is e2 studio? . . . 14
2.2.2 e2 studio Prerequisites . . . 16
2.2.2.1 Obtaining an RA MCU Kit . . . 16
2.2.2.2 PC Requirements . . . 16
2.2.2.3 Installing e2 studio, platform installer and the FSP package . . . 16
2.2.2.4 Choosing a Toolchain . . . 16
2.2.2.5 Licensing . . . 17
2.2.3 What is a Project? . . . 17
2.2.4 Creating a Project . . . 19
2.2.4.1 Creating a New Project . . . 19
2.2.4.2 Selecting a Board and Toolchain . . . 20
2.2.4.3 Selecting Flat or Arm® TrustZone® Project . . . 21
2.2.4.4 Selecting a Project Template . . . 22
2.2.5 Configuring a Project . . . 25
2.2.5.1 Summary Tab . . . 25
2.2.5.2 Configuring the BSP . . . 26
2.2.5.3 Configuring Clocks . . . 27
2.2.5.4 Configuring Pins . . . 28
2.2.5.5 Configuring Interrupts from the Stacks Tab . . . 30
2.2.5.6 Viewing Event Links . . . 33
2.2.6 Adding Threads and Drivers . . . 33
2.2.6.1 Adding and Configuring HAL Drivers . . . 34
2.2.6.2 Adding Drivers to a Thread and Configuring the Drivers . . . 36
2.2.6.3 Configuring Threads . . . 40
2.2.7 Reviewing and Adding Components . . . 41
2.2.8 Writing the Application . . . 42
2.2.8.1 Coding Features . . . 42
2.2.8.2 HAL Modules in FSP: A Practical Description . . . 48
2.2.8.3 RTOS-Independent Applications . . . 49
2.2.8.4 RTOS Applications . . . 50
2.2.8.5 Additional Resources for Application Development . . . 52
2.2.9 Debugging the Project . . . 53
2.2.10 Modifying Toolchain Settings . . . 53
2.2.11 Creating RA project with ARM Compiler 6 in e2 studio . . . 54
2.2.12 Importing an Existing Project into e2 studio . . . 57
2.3 Tutorial: Your First RA MCU Project - Blinky . . . 61
2.3.1 Tutorial Blinky . . . 61

2.3.2 What Does Blinky Do? . . . 62
2.3.3 Prerequisites . . . 62
2.3.4 Create a New Project for Blinky . . . 62
2.3.4.1 Details about the Blinky Configuration . . . 65
2.3.4.2 Configuring the Blinky Clocks . . . 66
2.3.4.3 Configuring the Blinky Pins . . . 66
2.3.4.4 Configuring the Parameters for Blinky Components . . . 66
2.3.4.5 Where is main()? . . . 66
2.3.4.6 Blinky Example Code . . . 66
2.3.5 Build the Blinky Project . . . 66
2.3.6 Debug the Blinky Project . . . 67
2.3.6.1 Debug prerequisites . . . 67
2.3.6.2 Debug steps . . . 68
2.3.6.3 Details about the Debug Process . . . 69
2.3.7 Run the Blinky Project . . . 70
2.4 Tutorial: Using HAL Drivers - Programming the WDT . . . 70
2.4.1 Application WDT . . . 70
2.4.2 Creating a WDT Application Using the RA MCU FSP and e2 studio . . . 70
2.4.2.1 Using the FSP and e2 studio . . . 70
2.4.2.2 The WDT Application . . . 70
2.4.2.3 WDT Application flow . . . 71
2.4.3 Creating the Project with e2 studio . . . 71
2.4.4 Configuring the Project with e2 studio . . . 75
2.4.4.1 BSP Tab . . . 76
2.4.4.2 Clocks Tab . . . 76
2.4.4.3 Interrupts Tab . . . 77
2.4.4.4 Event Links Tab . . . 77
2.4.4.5 Pins Tab . . . 77
2.4.4.6 Stacks Tab . . . 77
2.4.4.7 Components Tab . . . 80
2.4.5 WDT Generated Project Files . . . 81
2.4.5.1 WDT hal_data.h . . . 83
2.4.5.2 WDT hal_data.c . . . 84
2.4.5.3 WDT main.c . . . 85
2.4.5.4 WDT hal_entry.c . . . 85
2.4.6 Building and Testing the Project . . . 88
2.5 Primer: ARM® TrustZone® Project Development . . . 89
2.5.1 Renesas Implementation of ARM® TrustZone® Technology . . . 90
2.5.1.1 Calling from Non-Secure to Secure . . . 91
2.5.1.2 Calling from Secure to Non-Secure . . . 91
2.5.2 Workflow . . . 91
2.5.2.1 Secure Project . . . 91
2.5.2.2 Non-Secure Project . . . 92
2.5.2.3 Flat Project . . . 92
2.5.3 RA Project Generator (PG) . . . 92
2.5.3.1 Secure Project Set Up . . . 94
2.5.3.2 RTOS Support in TZ Project . . . 94
2.5.3.3 Peripheral Security Attribution . . . 95
2.5.3.4 Non-Secure . . . 96
2.5.3.5 Flat Project Type . . . 96
2.5.3.6 Secure Connection to Non-Secure Project . . . 96
2.5.3.7 Debug Configurations . . . 97
2.5.4 Secure Projects . . . 97
2.5.4.1 Secure Clock . . . 98
2.5.4.2 Setting Drivers as NSC . . . 98

2.5.4.3 Guard Functions ... 99
2.5.5 Non-Secure projects ... 99
2.5.5.1 Clock Set Up ... 99
2.5.5.2 Selecting NSC Drivers ... 100
2.5.5.3 Locked Resources ... 100
2.5.5.4 Locked Channels ... 101
2.5.6 IDAU registers ... 101
2.5.6.1 SCI Boot Mode ... 103
2.5.6.2 DLM States ... 103
2.5.7 Debug ... 105
2.5.7.1 Non-Secure Debug ... 105
2.5.8 Debugger support ... 106
2.5.9 Third-Party IDEs ... 106
2.5.10 Renesas Flash Programmer (RFP) ... 107
2.5.11 Glossary ... 108
2.5.11.1 Configurator Icon Glossary ... 109
2.6 RA SC User Guide for MDK and IAR ... 109
2.6.1 What is RA SC? ... 109
2.6.2 Using RA Smart Configurator with Keil MDK ... 109
2.6.2.1 Prerequisites ... 109
2.6.2.2 Create new RA project ... 110
2.6.2.3 Modify existing RA project ... 111
2.6.2.4 Build and Debug RA project ... 111
2.6.2.5 Notes and Restrictions ... 112
2.6.3 Using RA Smart Configurator with IAR EWARM ... 113
2.6.3.1 Prerequisites ... 113
2.6.3.2 Create new RA project ... 113
2.6.3.3 Notes and Restrictions ... 114
Chapter 3 FSP Architecture ... 116
3.1 FSP Architecture Overview ... 116
3.1.1 C99 Use ... 116
3.1.2 Doxygen ... 116
3.1.3 Weak Symbols ... 116
3.1.4 Memory Allocation ... 116
3.1.5 FSP Terms ... 116
3.2 FSP Modules ... 118
3.2.1 Module Sources ... 119
3.2.2 Module Distribution ... 119
3.2.3 Module Versioning ... 119
3.3 FSP Stacks ... 119
3.4 FSP Interfaces ... 120
3.4.1 FSP Interface Enumerations ... 121
3.4.2 FSP Interface Callback Functions ... 121
3.4.3 FSP Interface Data Structures ... 123
3.4.3.1 FSP Interface Configuration Structure ... 123
3.4.3.2 FSP Interface API Structure ... 124
3.4.3.3 FSP Interface Instance Structure ... 126
3.5 FSP Instances ... 127
3.5.1 FSP Instance Control Structure ... 128
3.5.2 FSP Interface Extensions ... 128
3.5.2.1 FSP Extended Configuration Structure ... 128
3.5.3 FSP Instance API ... 129
3.6 FSP API Standards ... 129
3.6.1 FSP Function Names ... 129

3.6.2 Use of const in API parameters . . . 129
3.6.3 FSP Version Information . . . 129
3.7 FSP Build Time Configurations . . . 130
3.8 FSP File Structure . . . 130
3.9 FSP TrustZone Support . . . 131
3.9.1 FSP TrustZone Projects . . . 131
3.9.2 Non-Secure Callable Guard Functions . . . 131
3.9.3 Callbacks in Non-Secure from Non-Secure Callable Modules . . . 131
3.9.4 Additional TrustZone Information . . . 131
3.10 FSP Architecture in Practice . . . 131
3.10.1 FSP Connecting Layers . . . 131
3.10.2 Using FSP Modules in an Application . . . 132
3.10.2.1 Create a Module Instance in the RA Configuration Editor . . . 132
3.10.2.2 Use the Instance API in the Application . . . 132
Chapter 4 API Reference . . . 134
4.1 BSP . . . 134
4.1.1 Common Error Codes . . . 136
4.1.2 MCU Board Support Package . . . 147
4.1.2.1 RA2A1 . . . 182
4.1.2.2 RA2E1 . . . 187
4.1.2.3 RA2E2 . . . 192
4.1.2.4 RA2L1 . . . 197
4.1.2.5 RA4E1 . . . 204
4.1.2.6 RA4M1 . . . 210
4.1.2.7 RA4M2 . . . 215
4.1.2.8 RA4M3 . . . 222
4.1.2.9 RA4W1 . . . 228
4.1.2.10 RA6E1 . . . 233
4.1.2.11 RA6M1 . . . 240
4.1.2.12 RA6M2 . . . 246
4.1.2.13 RA6M3 . . . 251
4.1.2.14 RA6M4 . . . 256
4.1.2.15 RA6M5 . . . 263
4.1.2.16 RA6T1 . . . 270
4.1.2.17 RA6T2 . . . 276
4.1.3 BSP I/O access . . . 283
4.2 Modules . . . 297
4.2.1 Bluetooth Low Energy Mesh Network Modules . . . 311
4.2.1.1 Bluetooth Low Energy Mesh Network Access (rm_ble_mesh_access) . . . 314
4.2.1.2 Bluetooth Low Energy Mesh Network Bearer (rm_ble_mesh_bearer) . . . 374
4.2.1.3 Bluetooth Low Energy Mesh Network Lower Trans (rm_ble_mesh_lower_trans) . . . 386
4.2.1.4 Bluetooth Low Energy Mesh Network Network (rm_ble_mesh_network) . . . 391
4.2.1.5 Bluetooth Low Energy Mesh Network Provision (rm_ble_mesh_provision) . . . 404
4.2.1.6 Bluetooth Low Energy Mesh Network Upper Trans (rm_ble_mesh_upper_trans) . . . 413
4.2.1.7 Bluetooth Low Energy Mesh Network (rm_ble_mesh) . . . 430
4.2.1.8 Bluetooth Low Energy Mesh Network Bearer Platform (rm_mesh_bearer_platform) . . . 441
4.2.1.9 Bluetooth Low Energy Mesh Network Config Client (rm_mesh_config_clt) . . . 451
4.2.1.10 Bluetooth Low Energy Mesh Network Config Server (rm_mesh_config_srv) . . . 504
4.2.1.11 Bluetooth Low Energy Mesh Network Generic Admin Property Server (rm_mesh_generic_admin_prop_srv) . . . 506
4.2.1.12 Bluetooth Low Energy Mesh Network Generic Battery Client (rm_mesh_generic_battery_clt) . . . 509
4.2.1.13 Bluetooth Low Energy Mesh Network Generic Battery Server (rm_mesh_generic_battery_srv) . . . 514
4.2.1.14 Bluetooth Low Energy Mesh Network Generic Client Property Server (rm_mesh_generic_client_prop_srv) . . . 517
4.2.1.15 Bluetooth Low Energy Mesh Network Generic Default Transition Time Client (rm_mesh_generic_dtt_clt) . . . 520
4.2.1.16 Bluetooth Low Energy Mesh Network Generic Default Transition Time Server (rm_mesh_generic_dtt_srv) . . . 527
4.2.1.17 Bluetooth Low Energy Mesh Network Generic Level Client (rm_mesh_generic_level_clt) . . . 529

4.2.1.18 Bluetooth Low Energy Mesh Network Generic Level Server (rm_mesh_generic_level_srv) 541
4.2.1.19 Bluetooth Low Energy Mesh Network Generic Location Client (rm_mesh_generic_loc_clt) 544
4.2.1.20 Bluetooth Low Energy Mesh Network Generic Location Server (rm_mesh_generic_loc_srv) 555
4.2.1.21 Bluetooth Low Energy Mesh Network Generic Manufacturer Property Server (rm_mesh_generic_mfr_prop_srv) 560
4.2.1.22 Bluetooth Low Energy Mesh Network Generic On Off Client (rm_mesh_generic_on_off_clt) 563
4.2.1.23 Bluetooth Low Energy Mesh Network Generic On Off Server (rm_mesh_generic_on_off_srv) 570
4.2.1.24 Bluetooth Low Energy Mesh Network Generic Power Level Client (rm_mesh_generic_pl_clt) 573
4.2.1.25 Bluetooth Low Energy Mesh Network Generic Power Level Server (rm_mesh_generic_pl_srv) 588
4.2.1.26 Bluetooth Low Energy Mesh Network Generic Power On Off Client (rm_mesh_generic_poo_clt) 594
4.2.1.27 Bluetooth Low Energy Mesh Network Generic Power On Off Server (rm_mesh_generic_poo_srv) 601
4.2.1.28 Bluetooth Low Energy Mesh Network Generic Property Client (rm_mesh_generic_prop_clt) 605
4.2.1.29 Bluetooth Low Energy Mesh Network Generic User Property Server (rm_mesh_generic_user_prop_srv) 623
4.2.1.30 Bluetooth Low Energy Mesh Network Health Client (rm_mesh_health_clt) 626
4.2.1.31 Bluetooth Low Energy Mesh Network Health Server (rm_mesh_health_srv) 641
4.2.1.32 Bluetooth Low Energy Mesh Network Light Control Client (rm_mesh_light_ctl_clt) 645
4.2.1.33 Bluetooth Low Energy Mesh Network Light Control Server (rm_mesh_light_ctl_srv) 662
4.2.1.34 Bluetooth Low Energy Mesh Network Light Hsl Client (rm_mesh_light_hsl_clt) 668
4.2.1.35 Bluetooth Low Energy Mesh Network Light Hsl Server (rm_mesh_light_hsl_srv) 689
4.2.1.36 Bluetooth Low Energy Mesh Network Light Location Client (rm_mesh_light_lc_clt) 696
4.2.1.37 Bluetooth Low Energy Mesh Network Light Location Server (rm_mesh_light_lc_srv) 713
4.2.1.38 Bluetooth Low Energy Mesh Network Light Lightness Client (rm_mesh_light_lightness_clt) 717
4.2.1.39 Bluetooth Low Energy Mesh Network Light Lightness Server (rm_mesh_light_lightness_srv) 735
4.2.1.40 Bluetooth Low Energy Mesh Network Light Xyl Client (rm_mesh_light_xyl_clt) 741
4.2.1.41 Bluetooth Low Energy Mesh Network Light Xyl Server (rm_mesh_light_xyl_srv) 756
4.2.1.42 Bluetooth Low Energy Mesh Network Scene Client (rm_mesh_scene_clt) 761
4.2.1.43 Bluetooth Low Energy Mesh Network Scene Server (rm_mesh_scene_srv) 773
4.2.1.44 Bluetooth Low Energy Mesh Network Scheduler Client (rm_mesh_scheduler_clt) 777
4.2.1.45 Bluetooth Low Energy Mesh Network Scheduler Server (rm_mesh_scheduler_srv) 785
4.2.1.46 Bluetooth Low Energy Mesh Network Sensor Client (rm_mesh_sensor_clt) 789
4.2.1.47 Bluetooth Low Energy Mesh Network Sensor Server (rm_mesh_sensor_srv) 805
4.2.1.48 Bluetooth Low Energy Mesh Network Time Client (rm_mesh_time_clt) 813
4.2.1.49 Bluetooth Low Energy Mesh Network Time Server (rm_mesh_time_srv) 825
4.2.2 High-Speed Analog Comparator (r_acmphs) 829
4.2.3 Low-Power Analog Comparator (r_acmplp) 836
4.2.4 Analog to Digital Converter (r_adc) 844
4.2.5 Analog to Digital Converter (r_adc_b) 879
4.2.6 Asynchronous General Purpose Timer (r_agt) 912
4.2.7 Bluetooth Low Energy Library of Balance Configuration (r_ble) 938
4.2.8 Bluetooth Low Energy Library of Compact Configuration (r_ble) 940
4.2.9 Bluetooth Low Energy Library of Extended Configuration (r_ble) 943
4.2.10 Clock Frequency Accuracy Measurement Circuit (r_cac) 945
4.2.11 Controller Area Network (r_can) 951
4.2.12 Controller Area Network - Flexible Data (r_canfd) 988
4.2.13 Consumer Electronics Control (r_cec) 1015
4.2.14 Clock Generation Circuit (r_cgc) 1026
4.2.15 Cyclic Redundancy Check (CRC) Calculator (r_crc) 1047
4.2.16 Capacitive Touch Sensing Unit (r_ctsu) 1053
4.2.17 Digital to Analog Converter (r_dac) 1086
4.2.18 Digital to Analog Converter (r_dac8) 1092
4.2.19 Direct Memory Access Controller (r_dmac) 1098
4.2.20 Data Operation Circuit (r_doc) 1111
4.2.21 D/AVE 2D Port Interface (r_drw) 1117
4.2.22 Data Transfer Controller (r_dtc) 1119
4.2.23 Event Link Controller (r_elc) 1131

4.2.24 Ethernet (r_ether) 1139
4.2.25 Ethernet PHY (r_ether_phy) 1160
4.2.26 High-Performance Flash Driver (r_flash_hp) 1167
4.2.27 Low-Power Flash Driver (r_flash_lp) 1186
4.2.28 Graphics LCD Controller (r_glcdc) 1203
4.2.29 General PWM Timer (r_gpt) 1246
4.2.30 General PWM Timer Three-Phase Motor Control Driver (r_gpt_three_phase) 1289
4.2.31 I3C Bus Interface (r_i3c) 1298
4.2.32 Interrupt Controller Unit (r_icu) 1337
4.2.33 I2C Master on IIC/I3C (r_iic_b_master) 1343
4.2.34 I2C Slave on IIC/I3C (r_iic_b_slave) 1357
4.2.35 I2C Master on IIC (r_iic_master) 1368
4.2.36 I2C Slave on IIC (r_iic_slave) 1381
4.2.37 IIR Filter Accelerator (r_iirfa) 1392
4.2.38 I/O Ports (r_ioport) 1400
4.2.39 Independent Watchdog Timer (r_iwdt) 1422
4.2.40 JPEG Codec (r_jpeg) 1432
4.2.41 Key Interrupt (r_kint) 1459
4.2.42 Low Power Modes (r_lpm) 1463
4.2.43 Low Voltage Detection (r_lvd) 1472
4.2.44 Operational Amplifier (r_opamp) 1480
4.2.45 Octa Serial Peripheral Interface for Flash and RAM devices (r_ospi) 1498
4.2.46 Parallel Data Capture (r_pdc) 1524
4.2.47 Port Output Enable for GPT (r_poeg) 1531
4.2.48 Precision Time Protocol (r_ptp) 1538
4.2.49 Quad Serial Peripheral Interface Flash (r_qspi) 1560
4.2.50 Realtime Clock (r_rtc) 1579
4.2.51 Secure Crypto Engine (r_sce_protected) 1590
4.2.52 Secure Crypto Engine (r_sce_protected_cavp) 1748
4.2.53 Serial Communications Interface (SCI) I2C (r_sci_b_i2c) 1752
4.2.54 Serial Communications Interface (SCI) SPI (r_sci_b_spi) 1765
4.2.55 Serial Communications Interface (SCI) UART (r_sci_b_uart) 1776
4.2.56 Serial Communications Interface (SCI) I2C (r_sci_i2c) 1795
4.2.57 Serial Communications Interface (SCI) SPI (r_sci_spi) 1808
4.2.58 Serial Communications Interface (SCI) UART (r_sci_uart) 1820
4.2.59 Sigma Delta Analog to Digital Converter (r_sdadc) 1839
4.2.60 SD/MMC Host Interface (r_sdhi) 1861
4.2.61 Segment LCD Controller (r_slcdc) 1877
4.2.62 Serial Peripheral Interface (r_spi) 1885
4.2.63 Serial Peripheral Interface (r_spi_b) 1903
4.2.64 Serial Sound Interface (r_ssi) 1920
4.2.65 USB (r_usb_basic) 1935
4.2.66 USB Composite Class (r_usb_composite) 1965
4.2.67 USB Host Communications Device Class Driver (r_usb_hcdc) 1976
4.2.68 USB Host Human Interface Device Class Driver (r_usb_hhid) 1984
4.2.69 USB Host Mass Storage Class Driver (r_usb_hmsc) 1994
4.2.70 USB Host Vendor Class (r_usb_hvnd) 2004
4.2.71 USB Peripheral Communications Device Class (r_usb_pcdc) 2018
4.2.72 USB Peripheral Human Interface Device Class (r_usb_phid) 2025
4.2.73 USB Peripheral Mass Storage Class (r_usb_pmsc) 2041
4.2.74 USB Peripheral Vendor Class (r_usb_pvnd) 2047
4.2.75 Watchdog Timer (r_wdt) 2059
4.2.76 ADPCM Decoder (rm_adpcm_decoder) 2071
4.2.77 Audio Playback with PWM (rm_audio_playback_pwm) 2075

4.2.78 AWS PKCS11 PAL (rm_aws_pkcs11_pal) . . . 2086
4.2.79 AWS PKCS11 PAL LITTLEFS (rm_aws_pkcs11_pal_littlefs) . . . 2087
4.2.80 AWS Transport Interface Port (rm_aws_transport_interface_port) . . . 2088
4.2.81 Bluetooth Low Energy Abstraction (rm_ble_abs) . . . 2094
4.2.82 Bluetooth Low Energy Abstraction with RYZ012 (rm_ble_abs_spp) . . . 2129
4.2.83 SD/MMC Block Media Implementation (rm_block_media_sdmmc) . . . 2137
4.2.84 SPI Block Media Implementation (rm_block_media_spi) . . . 2144
4.2.85 USB HMSC Block Media Implementation (rm_block_media_usb) . . . 2154
4.2.86 User Block Media Implementation (rm_block_media_user) . . . 2161
4.2.87 AWS Cellular Comm Interface on UART (rm_cellular_comm_uart_aws) . . . 2163
4.2.88 RYZ AWS Cellular Interface Port (rm_cellular_ryz_aws) . . . 2168
4.2.89 I2C Communicatons Middleware (rm_comms_i2c) . . . 2174
4.2.90 SEGGER emWin Port (rm_emwin_port) . . . 2181
4.2.91 Azure RTOS FileX Block Media I/O Driver (rm_filex_block_media) . . . 2189
4.2.92 Azure RTOS FileX LevelX I/O Driver (rm_filex_levelx_nor) . . . 2206
4.2.93 FreeRTOS+FAT Port (rm_freertos_plus_fat) . . . 2220
4.2.94 FreeRTOS Plus TCP (rm_freertos_plus_tcp) . . . 2233
4.2.95 FreeRTOS Port (rm_freertos_port) . . . 2240
4.2.96 RTOS Context Management (rm_tz_context) . . . 2269

Chapter 1 Introduction

1.1 Overview

This manual describes how to use the Renesas Flexible Software Package (FSP) for writing applications for the RA microcontroller series.

1.2 Using this Manual

This manual provides a wide variety of information, so it can be helpful to know where to start. Here is a short description of each main section and how they can be used.

Starting Development - Provides a step by step guide on how to use e2 studio and FSP to develop a project for RA MCUs. This is a good place to start to get up to speed quickly and efficiently.

FSP Architecture - Provides useful background material on key FSP concepts such as Modules, Stacks, and API standards. Reference this section to extend or refresh your knowledge of FSP concepts.

API Reference - Provides detailed information on each module and interface including features, API functions, configuration settings, usage notes, function prototypes and code examples. Board Support Package (BSP) related API functions are also included.

Note

Much of the information in the API Reference section is available from within the e2 studio tool via the Developer Assistance feature. The information here can be referenced for additional details on API features.

1.3 Documentation Standard

Each Modules section user guide outlines the following:

- Features: A bullet list of high level features provided by the module.
- Configuration: A description of module specific configurations available in the RA Configuration editor.
- Usage Notes: Module specific documentation and limitations.
- Examples: Example code provided to help the user get started.
- API Reference: Usage notes for each API in the module, including the function prototype and hyperlinks to the interface documentation for parameter definitions.

Each Interfaces section user guide outlines the following:

- Detailed Description: A short description and summary of the interface functionality.
- Data Structures: A list and definition of each data structure used by the interface including the structure of the pointers that define the API and are shared by all modules that implement the interface.
- Typedefs: A list and description of the typedefs used by the interface.
- Enumerations: A list and description of the enumerations used by the interface.

1.4 Introduction to FSP

1.4.1 Purpose

The Renesas Flexible Software Package (FSP) is an optimized software package designed to provide easy to use, scalable, high quality software for embedded system design. The primary goal is to provide lightweight, efficient drivers that meet common use cases in embedded systems.

1.4.2 Quality

FSP code quality is enforced by peer reviews, automated requirements-based testing, and automated static analysis.

1.4.3 Ease of Use

FSP provides uniform and intuitive APIs that are well documented. Each module is supported with detailed user documentation including example code.

1.4.4 Scalability

FSP modules can be used on any MCU in the RA family, provided the MCU has any peripherals required by the module.

1.4.5 Build Time Configurations

FSP modules also have build time configurations that can be used to optimize the size of the module for the feature set required by the application.

1.4.6 e2 studio IDE

FSP provides a host of efficiency enhancing tools for developing projects targeting the Renesas RA series of MCU devices. The e2 studio IDE provides a familiar development cockpit from which the key steps of project creation, module selection and configuration, code development, code generation, and debugging are all managed.

Chapter 2 Starting Development

2.1 Starting Development Introduction

The wealth of resources available to learn about and use e2 studio and FSP can be overwhelming on first inspection, so this section provides a Starting Development Guide with a list of the most important initial steps. Following these highly recommended first 11 steps will bring you up to speed on the development environment in record time. Even experienced developers can benefit from the use of this guide, to learn the terminology that might be unfamiliar or different from previous environments.

1. Read the section What is e2 studio?, up to but not including e2 studio Prerequisites. This will provide a description of the various windows and views to use e2 studio to create a project, add modules and threads, configure module properties, add code, and debug a project. It also describes how to use key coding 'accelerators' like Developer Assist (to drag and drop parameter populated API function calls right into your code), a context aware Autocomplete (to easily find and select from suggested enumerations, functions, types, and many other coding elements), and many other similar productivity enhancers.
2. Read the FSP Architecture, FSP Modules and FSP Stacks sections. These provide the basic background on how FSP modules and stacks are used to construct your application. Understanding their definitions and the theory behind how they combine will make it easier to develop with FSP.
3. Read a few Modules sections to see how to use API function calls, structures, enumerations, types and callbacks. These module guides provide the information you will use to implement your project code.
4. After you have a Kit and you have downloaded and installed e2 studio and FSP, you can build and debug a simple project to test your installation, tool flow, and the kit. (If you do not have a Kit or have not yet installed the development software, use the links included in the e2 studio Prerequisites for more information.) The simple Tutorial: Your First RA MCU Project - Blinky will Blink an LED on and off. Follow the instructions for importing and running this project in section Create a New Project for Blinky. It will use some of the key steps for managing projects within e2 studio and is a good way to learn the basics.
5. Once you have successfully run Blinky you have a good starting point for using FSP for more complex projects. The Using HAL Drivers Tutorial, available at Tutorial: Using HAL Drivers - Programming the WDT, shows how to create a project from scratch, using FSP API functions. Do this next.
6. Several Hands-on Quick FSP Labs are available that cover key development topics with short 15-minute Do it Yourself (DiY) activities targeting the EK-RA6M3. Topics covered include code development accelerators like Developer Assistance, Autocomplete, Help, Visual Expressions and using Example Projects. The complete list of available Quick FSP Labs can be found here: https://en-support.renesas.com/knowledgeBase/category/31087/subcategory/31090. Doing a couple of these labs provides further details on using FSP, and is also good practice. Running these labs is highly recommended.
7. The balance of the FSP Architecture sections (that is, those not called out in step 2 above) contain additional reference material that may be helpful in the future. Scan them so you know what they contain, in case you need them.
8. The balance of the e2 studio User Guide, starting with the What is a Project? section up to, but not including, Writing the Application section, provides a detailed description of each of

the key steps, windows, and entries used to create, manage, configure, build and debug a project. Much of this may be familiar after running through the tutorials and Quick Labs. However, it is important to have a good grasp of what each of the configuration tabs are used for as that is where the bulk of the project preparation work takes place prior to writing code. Skim over this section as it may help with any questions in the future.

9. Read the Writing the Application section to get a short introduction to the steps used when creating application code with FSP. It covers both RTOS-independent and RTOS-dependent applications. It also includes a short description for several of the code accelerators you should be familiar with by now. Using additional Quick FSP Labs is a good way to become familiar with the application development process and links to them are included in the appropriate places in this section. You can find the complete list of available Quick FSP Labs here: https://en-support.renesas.com/knowledgeBase/19308277.
10. Scan the Debugging the Project section to see the steps required to download and start a debug session.
11. Explore the additional material available on the following web pages and bookmark the resources that look most valuable to you:
    a. RA Landing Page: https://www.renesas.com/ra
    b. FSP Landing Page: https://www.renesas.com/fsp
    c. Example Projects on GitHub: https://github.com/renesas/ra-fsp-examples
    d. Quick FSP Labs Listing: https://en-support.renesas.com/knowledgeBase/19308277
    e. RA and FSP Knowledge Base (with articles of interest on RA and FSP): https://en-support.renesas.com/knowledgeBase/category/31087

    i. Online Technical Support: https://www.renesas.com/us/en/support/contact.html

2.2 e2 studio User Guide

2.2.1 What is e2 studio?

Renesas e2 studio is a development tool encompassing code development, build, and debug. e2 studio is based on the open-source Eclipse IDE and the associated C/C++ Development Tooling (CDT).

When developing for RA MCUs, e2 studio hosts the Renesas Flexible Software Package (FSP). FSP provides a wide range of time saving tools to simplify the selection, configuration, and management of modules and threads, to easily implement complex applications. The time saving tools available in e2 studio and FSP include the following:

- A Graphical User Interface (GUI) (see Adding Threads and Drivers) with numerous wizards for configuring and auto-generating code
- A context sensitive Autocomplete (see Tutorial: Using HAL Drivers - Programming the WDT) feature that provides intelligent options for completing a programming element
- A Developer Assistance tool for selection of and drag and drop placement of API functions directly in application code
- A Welcome Window with links to example projects, application notes and a variety of other self-help support resources
- An Information Icon from each module is provided in the graphic configuration viewer that links to specific design resources, including code 'cheat sheets' that provide useful starting points for common application implementations.

Figure 1: e2 studio Splash Screen

e2 studio organizes project work based on Perspectives, Views, Windows, Panes, and Pages (sometimes called Tabs). A window is a section of the e2 studio GUI that presents information on a key topic. Windows often use tabs to select sub-topics. For example, an editor window might have a tab available for each open file, so it is easy to switch back and forth between them. A window Pane is a section of a window. Within a window, multiple Panes can be opened and viewed simultaneously, as opposed to a tabbed window, where only individual content is displayed. A memory-display Window, for example, might have multiple Panes that allow the data to be displayed in different formats, simultaneously. A Perspective is a collection of Views and Windows typical for a specific stage of development. The default perspectives are a C/C++ Perspective, an FSP Configuration Perspective and a Debug Perspective. These provide specific Views, Windows, Tabs, and Panes tailored for the common tasks needed during the specific development stage.

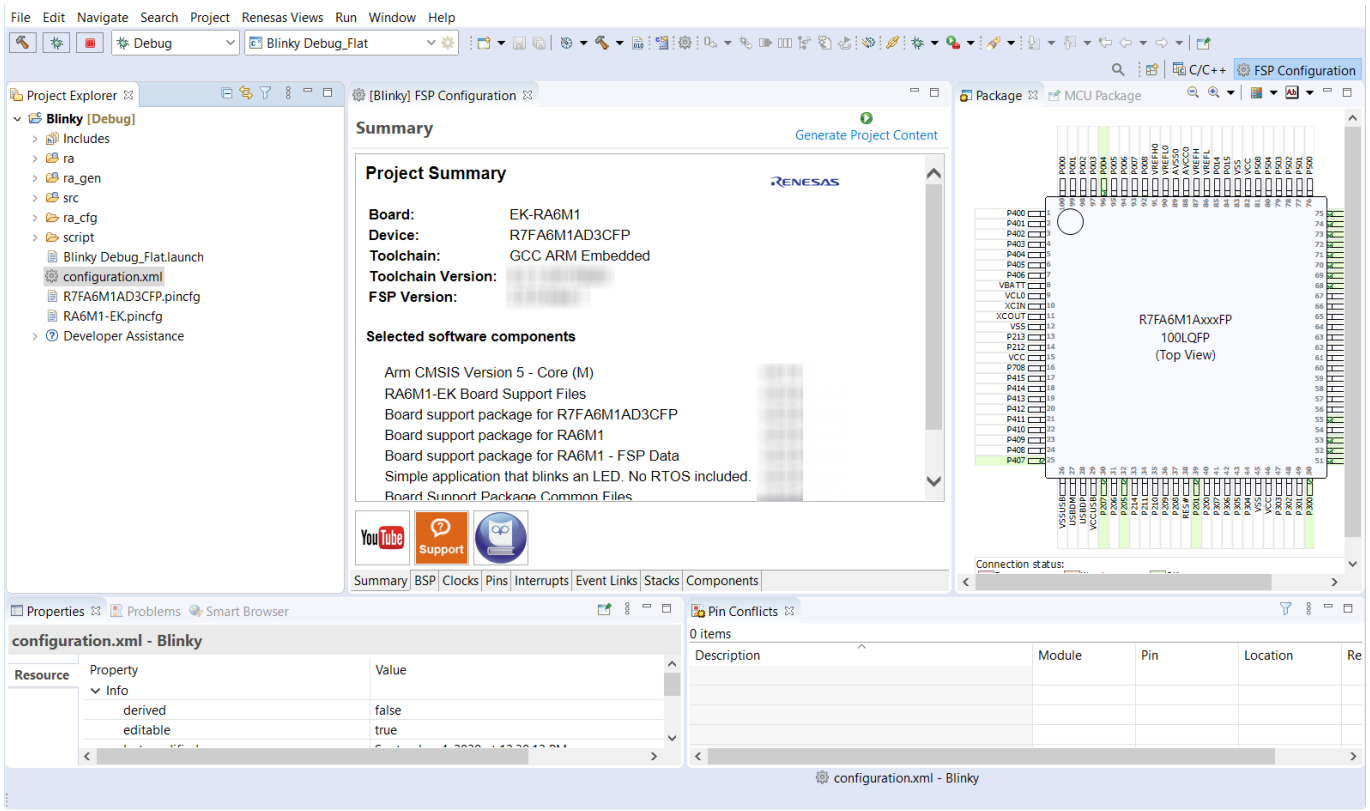

Figure 2: Default Perspective

In addition to managing project development, selecting modules, configuring them and simplifying code development, e2 studio also hosts the engine for automatically generating code based on module selections and configurations. The engine continually checks for dependencies and automatically adds any needed lower level modules to the module stack. It also identifies any lower level modules that require configuration (for example, an interrupt that needs to have a priority assigned). It also provides a guide for selecting between multiple choices or options to make it easy to complete a fully functional module stack.

The Generate Project Content function takes the selected and configured modules and automatically generates the complete and correct configuration code. The code is added to the folders visible in the **Project Explorer** window in e2 studio. The configuration.xml file in the project folder holds all the generated configuration settings. This file can be opened in the GUI-based RA Configuration editor to make further edits and changes. Once a project has been generated, you can go back and reconfigure any of the modules and settings if required using this editor.

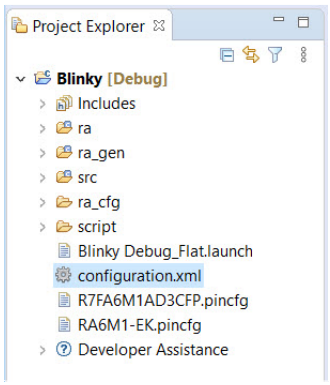

Figure 3: Project Explorer Window showing generated folders and configuration.xml file

2.2.2 e2 studio Prerequisites

2.2.2.1 Obtaining an RA MCU Kit

To develop applications with FSP, start with one of the Renesas RA MCU Evaluation Kits. The Renesas RA MCU Evaluation Kits are designed to seamlessly integrate with the e2 studio.

Ordering information, Quick Start Guides, User Manuals, and other related documents for all RA MCU Evaluation Kits are available at https://www.renesas.com/ra.

2.2.2.2 PC Requirements

The following are the minimum PC requirements to use e2 studio:

- Windows 10 with Intel i5 or i7, or AMD A10-7850K or FX
- Memory: 8-GB DDR3 or DDR4 DRAM (16-GB DDR4/2400-MHz RAM is preferred)
- Minimum 250-GB hard disk

2.2.2.3 Installing e2 studio, platform installer and the FSP package

Detailed installation instructions for the e2 studio and the FSP are available on the Renesas website https://www.renesas.com/fsp. Review the release notes for e2 studio to ensure that the e2 studio version supports the selected FSP version. The starting version of the installer includes all features of the RA MCUs.

2.2.2.4 Choosing a Toolchain

e2 studio can work with several toolchains and toolchain versions such as the GNU Arm compiler and Arm AC6. A version of the GNU Arm compiler is included in the e2 studio installer and has been verified to run with the FSP version.

2.2.2.5 Licensing

FSP licensing includes full source code, limited to Renesas hardware only.

2.2.3 What is a Project?

In e2 studio, all FSP applications are organized in RA MCU projects. Setting up an RA MCU project involves:

1. Creating a Project
2. Configuring a Project

These steps are described in detail in the next two sections. When you have existing projects already, after you launch e2 studio and select a workspace, all projects previously saved in the selected workspace are loaded and displayed in the **Project Explorer** window. Each project has an associated configuration file named configuration.xml, which is located in the project's root directory.

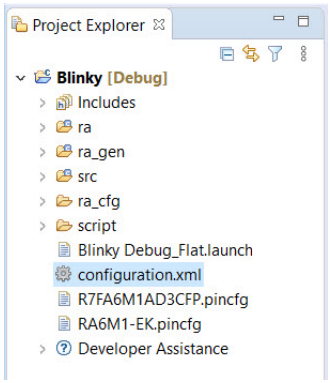

Figure 4: e2 studio Project Configuration file

Double-click on the configuration.xml file to open the RA MCU Project Editor. To edit the project configuration, make sure that the **FSP Configuration** perspective is selected in the upper right hand corner of the e2 studio window. Once selected, you can use the editor to view or modify the configuration settings associated with this project.

Figure 5: e2 studio FSP Configuration Perspective

Note

Whenever the RA project configuration (that is, the configuration.xml file) is saved, a verbose RA Project Report file (ra_cfg.txt) with all the project settings is generated. The format allows differences to be easily viewed using a text comparison tool. The generated file is located in the project root directory.

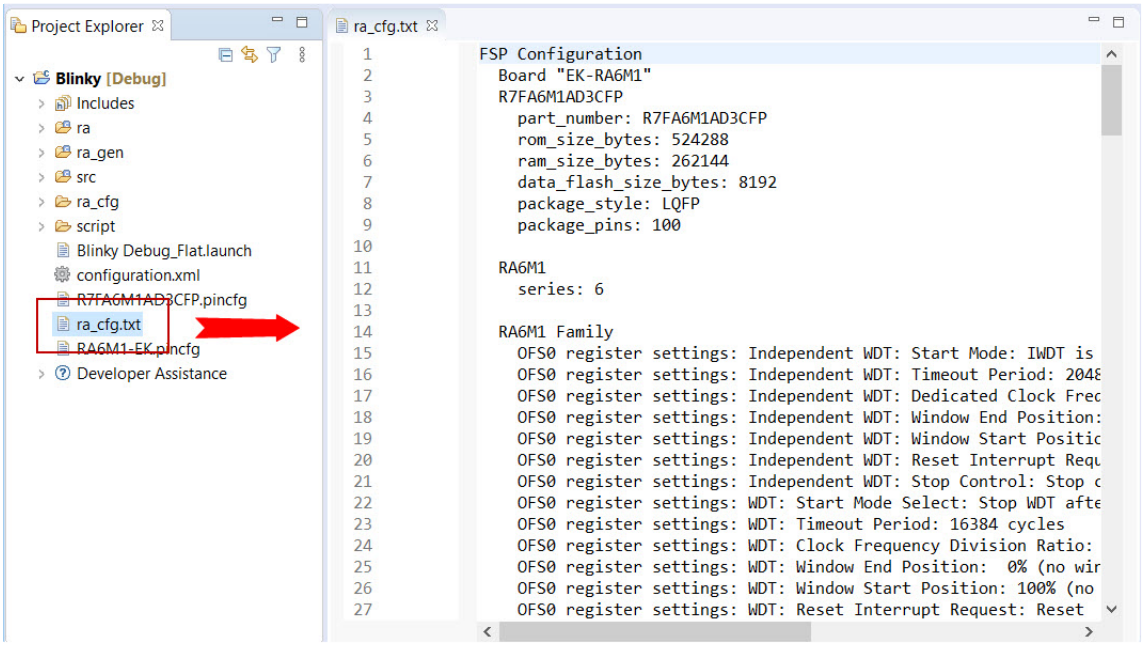

Figure 6: RA Project Report

The RA Project Editor has a number of tabs. The configuration steps and options for individual tabs are discussed in the following sections.

Note

The tabs available in the RA Project Editor depend on the e2 studio version and the layout may vary slightly, however the functionality should be easy to follow..

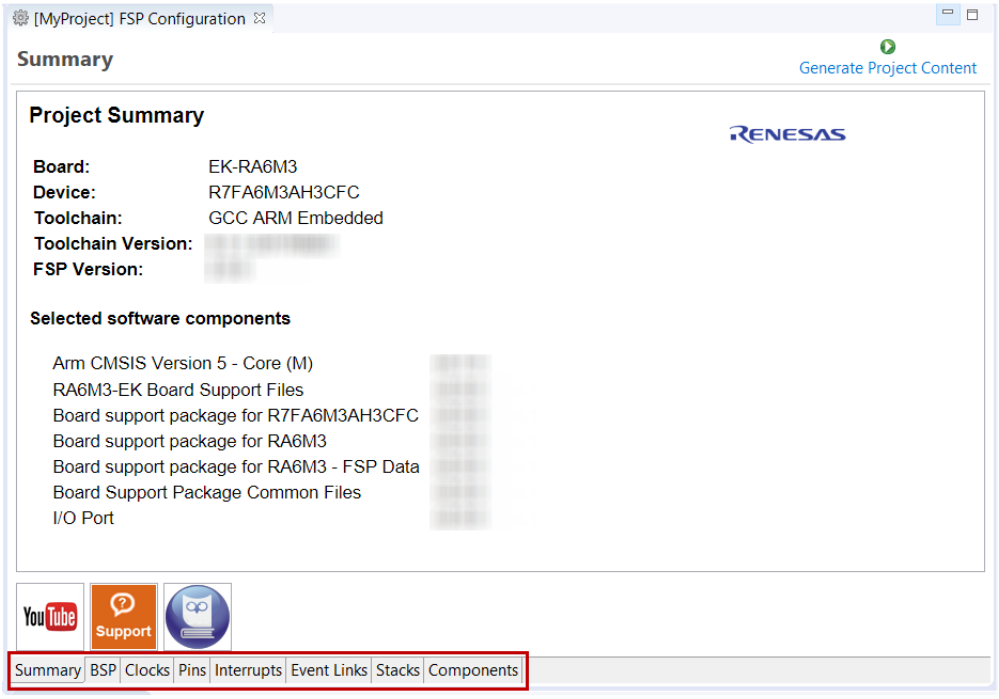

Figure 7: RA Project Editor tabs

- Click on the YouTube icon to visit the Renesas FSP playlist on YouTube
- Click on the Support icon to visit RA support pages at Renesas.com
- Click on the user manual (owl) icon to open the RA software package User's Manual

2.2.4 Creating a Project

During project creation, you specify the type of project, give it a project name and location, and configure the project settings for version, target board, whether an RTOS is included, the toolchain version, and the beginning template. This section includes easy-to-follow step-by-step instructions for all of the project creation tasks. Once you have created the project, you can move to configuring the project hardware (clocks, pins, interrupts) and the parameters of all the modules that are part of your application.

2.2.4.1 Creating a New Project

For RA MCU applications, generate a new project using the following steps:

1. Click on **File > New > RA C/C++ Project**.

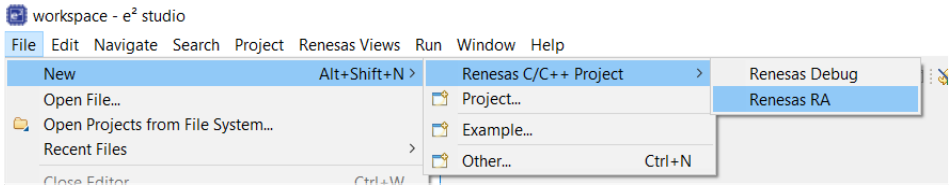

Figure 8: New RA MCU Project

Then click on the type of template for the type of project you are creating.

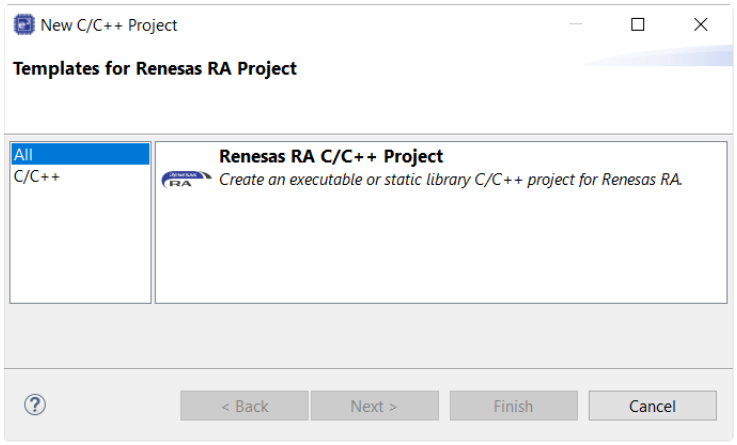

Figure 9: New Project Templates

2. Select a project name and location.

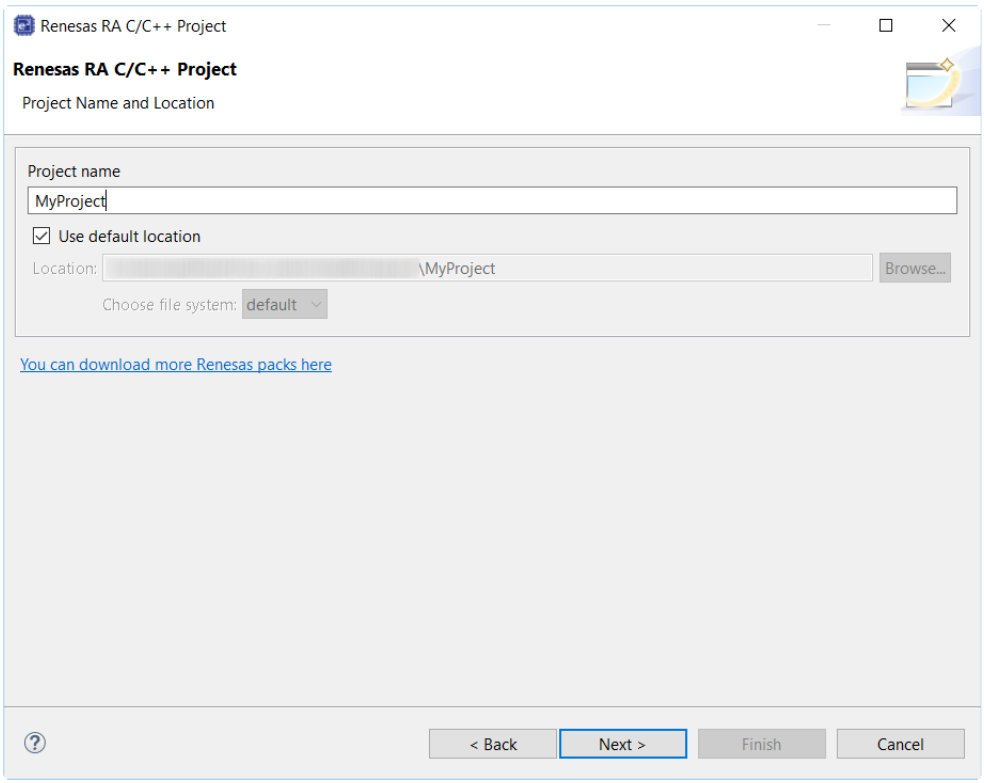

Figure 10: RA MCU Project Generator (Screen 1)

3. Click **Next**.

2.2.4.2 Selecting a Board and Toolchain

In the **Project Configuration** window select the hardware and software environment:

1. Select the **FSP version**.
2. Select the **Board** for your application. You can select an existing RA MCU Evaluation Kit or select **Custom User Board** for any of the RA MCU devices with your own BSP definition.
3. Select the **Device**. The **Device** is automatically populated based on the **Board** selection. Only change the **Device** when using the **Custom User Board (Any Device)** board selection.
4. To add threads, select **RTOS**, or **No RTOS** if an RTOS is not being used.
5. The **Toolchain** selection defaults to **GCC Arm Embedded**.
6. Select the **Toolchain version**. This should default to the installed toolchain version.
7. Select the **Debugger**. The J-Link Arm Debugger is preselected.

8. Click **Next**.

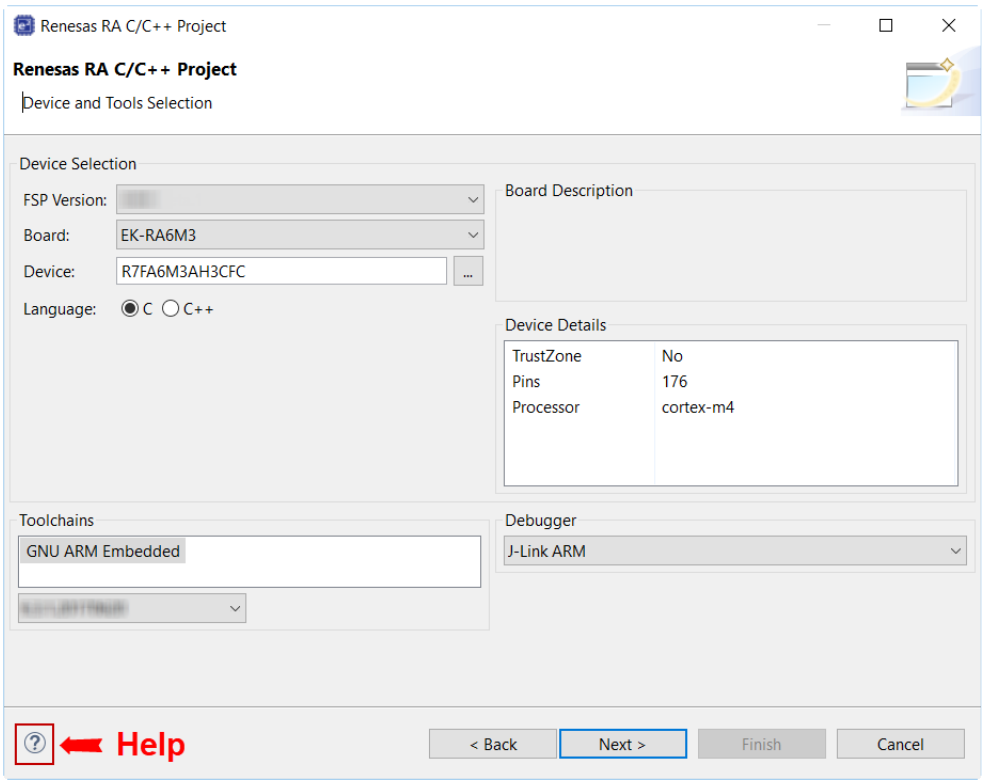

Figure 11: RA MCU Project Generator (Screen 2)

Note

*Click on the **Help** icon (?) for user guides, RA contents, and other documents.*

2.2.4.3 Selecting Flat or Arm® TrustZone® Project

If you selected a device or tool based on an Arm® Cortex®-M33, you next select whether to use Arm® TrustZone® in your project. For normal, non-TrustZone projects, select "Flat".

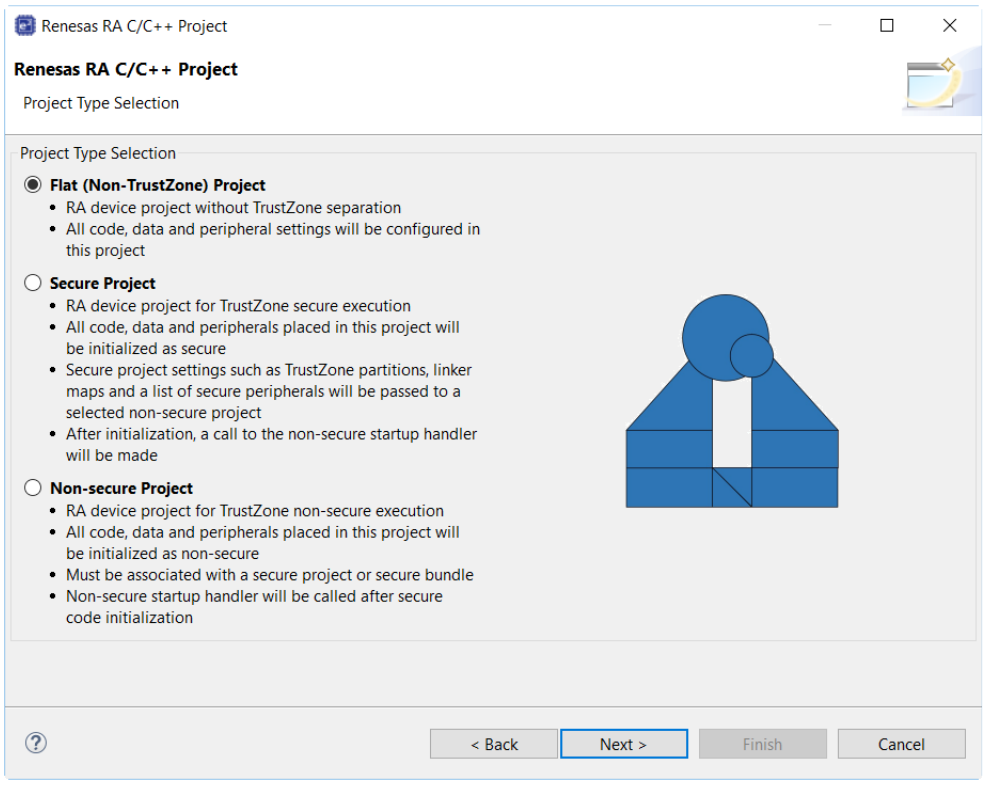

Figure 12: Flat, Secure, or Non-Secure Project

For more information on Arm® TrustZone®, see Primer: ARM® TrustZone® Project Development.

2.2.4.4 Selecting a Project Template

In the next window, select the buiild artifact and RTOS.

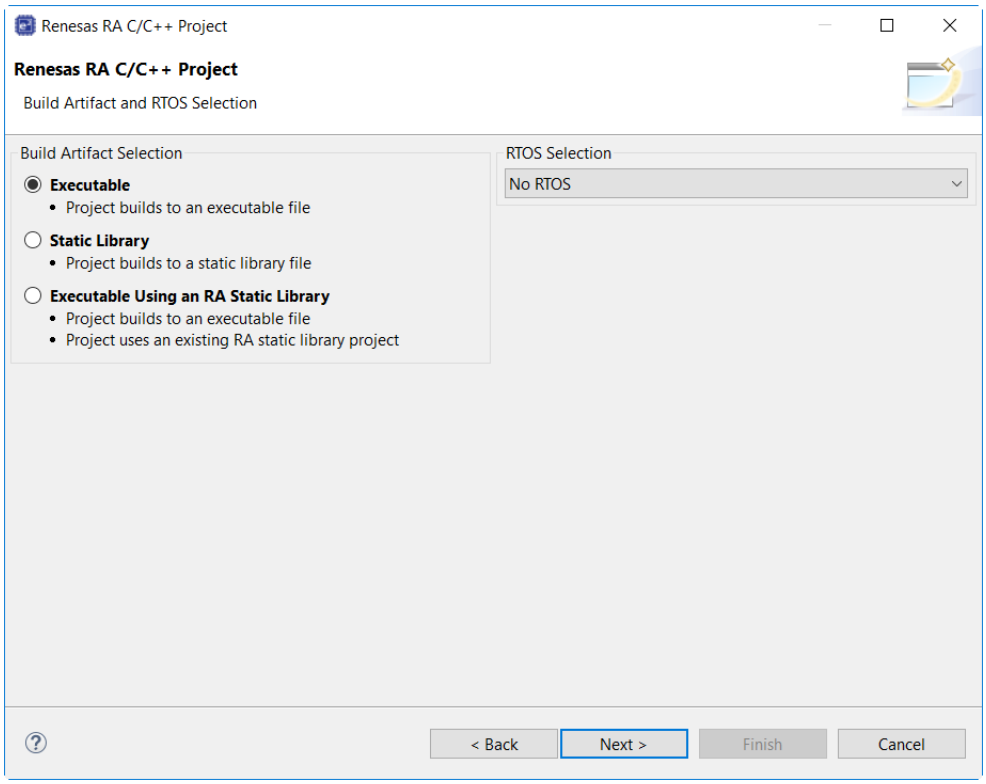

Figure 13: RA MCU Project Generator (Screen 3)

In the next window, select a project template from the list of available templates. By default, this screen shows the templates that are included in your current RA MCU pack. Once you have selected the appropriate template, click **Finish**.

Note

If you want to develop your own application, select the basic template for your board, ***Bare Metal - Minimal****.*

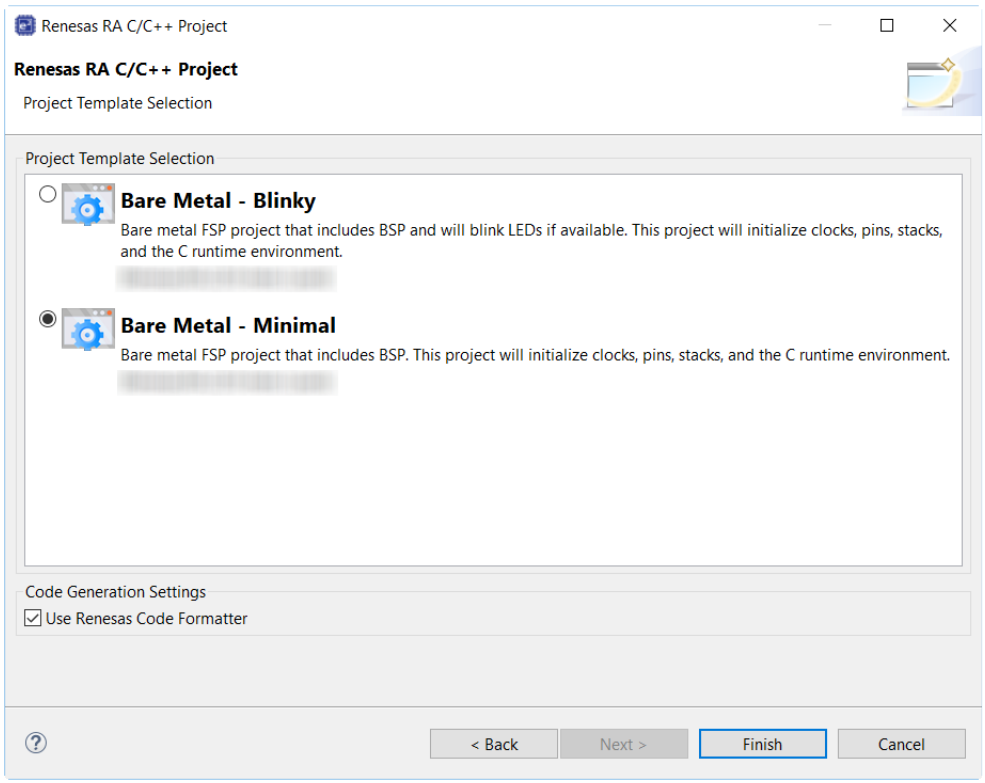

Figure 14: RA MCU Project Generator (Screen 4)

When the project is created, e2 studio displays a summary of the current project configuration in the RA MCU Project Editor.

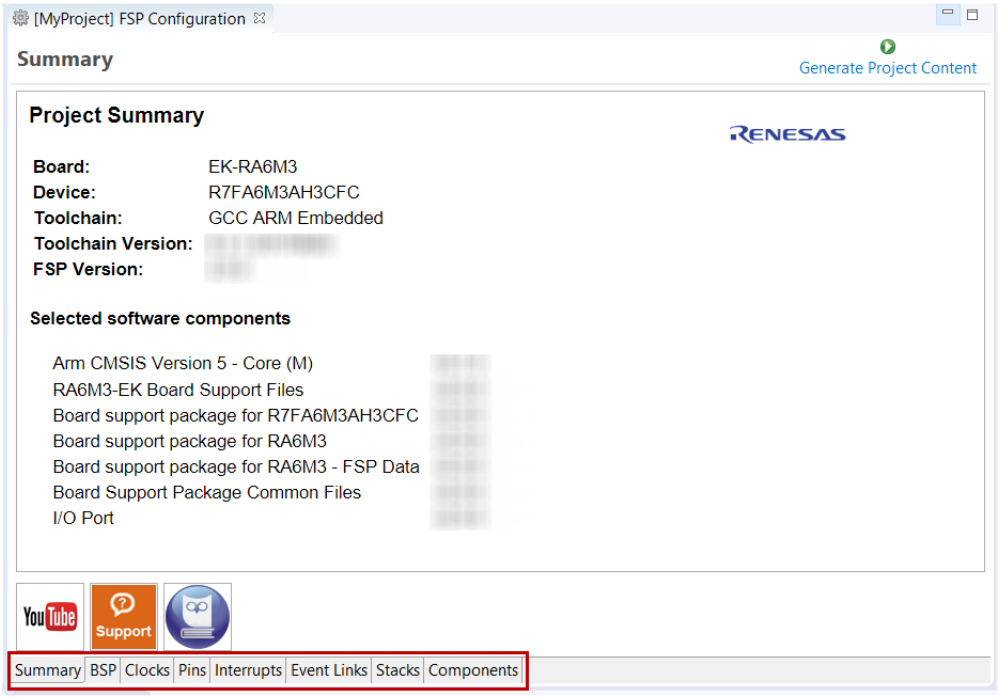

Figure 15: RA MCU Project Editor and available editor tabs

On the bottom of the RA MCU Project Editor view, you can find the tabs for configuring multiple aspects of your project:

- With the **Summary** tab, you can see all they key characteristics of the project: board, device, toolchain, and more.
- With the **BSP** tab, you can change board specific parameters from the initial project selection.
- With the **Clocks** tab, you can configure the MCU clock settings for your project.
- With the **Pins** tab, you can configure the electrical characteristics and functions of each port pin.
- With the **Interrupts** tab, you can add new user events/interrupts.
- With the **Event Links** tab, you can configure events used by the Event Link Controller.
- With the **Stacks** tab, you can add and configure FSP modules. For each module selected in this tab, the **Properties** window provides access to the configuration parameters, interrupt priorities, and pin selections.
- The **Components** tab provides an overview of the selected modules. Although you can also add drivers for specific FSP releases and application sample code here, this tab is normally only used for reference.

The functions and use of each of these tabs is explained in detail in the next section.

2.2.5 Configuring a Project

Each of the configurable elements in an FSP project can be edited using the appropriate tab in the RA Configuration editor window. Importantly, the initial configuration of the MCU after reset and before any user code is executed is set by the configuration settings in the **BSP**, **Clocks** and **Pins** tabs. When you select a project template during project creation, e2 studio configures default values that are appropriate for the associated board. You can change those default values as needed. The following sections detail the process of configuring each of the project elements for each of the associated tabs.

2.2.5.1 Summary Tab

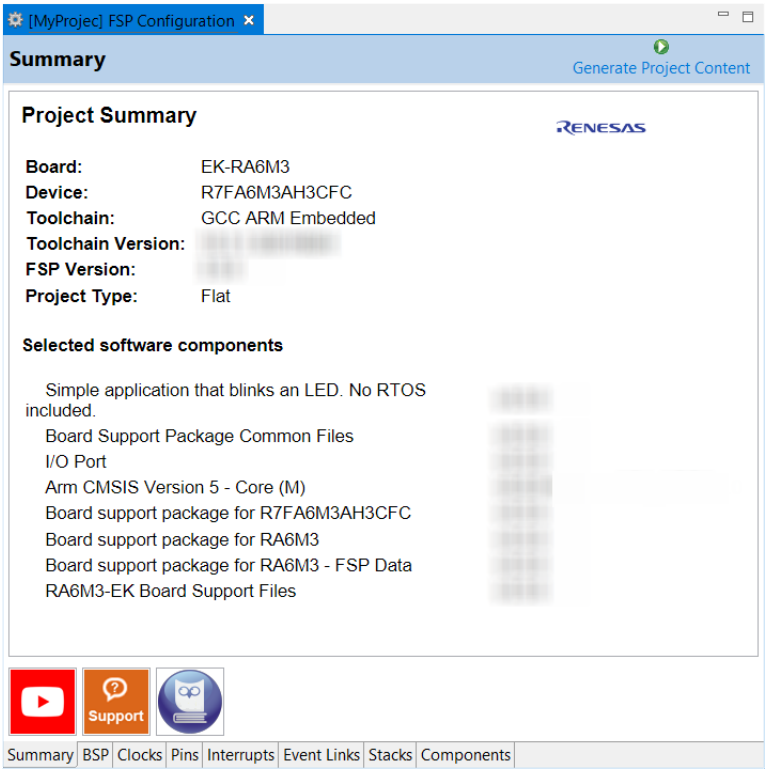

Figure 16: Configuration Summary tab

The **Summary** tab, seen in the above figure, identifies all the key elements and components of a project. It shows the target board, the device, toolchain and FSP version. Additionally, it provides a list of all the selected software components and modules used by the project. This is a more convenient summary view when compared to the **Components** tab.

The summary tab also includes handy icons with links to the Renesas YouTube channel, the Renesas support page and to the RA FSP User Manual that was downloaded during the installation process.

2.2.5.2 Configuring the BSP

The **BSP** tab shows the currently selected board (if any) and device. The Properties view is located in the lower left of the Project Configurations view as shown below.

Note

*If the Properties view is not visible, click **Window** > **Show View** > **Properties** in the top menu bar.*

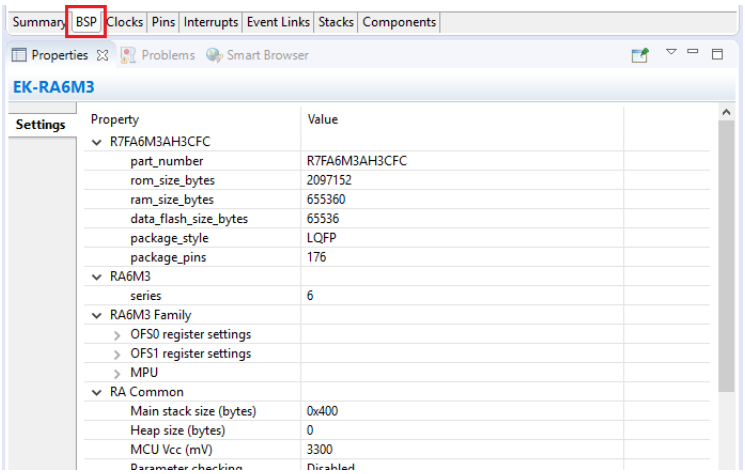

Figure 17: Configuration BSP tab

The **Properties** view shows the configurable options available for the BSP. These can be changed as required. The BSP is the FSP layer above the MCU hardware. e2 studio checks the entry fields to flag invalid entries. For example, only valid numeric values can be entered for the stack size.

When you click the **Generate Project Content** button, the BSP configuration contents are written to ra_cfg/fsp_cfg/bsp/bsp_cfg.h

This file is created if it does not already exist.

Warning

Do not edit this file as it is overwritten whenever the **Generate Project Content** button is clicked.

2.2.5.3 Configuring Clocks

The **Clocks** tab presents a graphical view of the MCU's clock tree, allowing the various clock dividers and sources to be modified. If a clock setting is invalid, the offending clock value is highlighted in red. It is still possible to generate code with this setting, but correct operation cannot be guaranteed. In the figure below, the USB clock UCLK has been changed so the resulting clock frequency is 60 MHz instead of the required 48 MHz. This parameter is colored red.

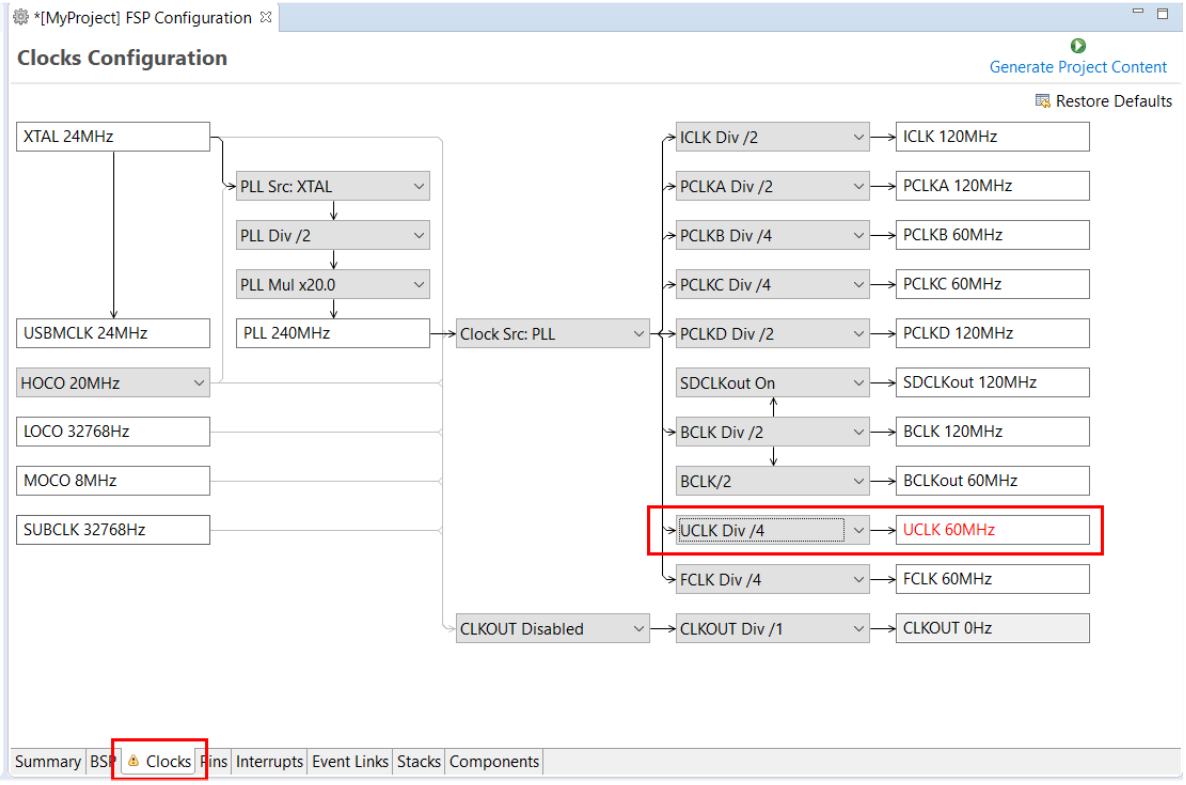

Figure 18: Configuration Clocks tab

When you click the **Generate Project Content** button, the clock configuration contents are written to: ra_gen/bsp_clock_cfg.h

This file will be created if it does not already exist.

Warning

Do not edit this file as it is overwritten whenever the **Generate Project Content** button is clicked.

2.2.5.4 Configuring Pins

The **Pins** tab provides flexible configuration of the MCU's pins. As many pins are able to provide multiple functions, they can be configured on a peripheral basis. For example, selecting a serial channel via the SCI peripheral offers multiple options for the location of the receive and transmit pins for that module and channel. Once a pin is configured, it is shown as green in the **Package** view.

Note

*If the **Package** view window is not open in e2 studio, select **Window** > **Show View** > **Pin Configurator** > **Package** from the top menu bar to open it.*

The **Pins** tab simplifies the configuration of large packages with highly multiplexed pins by highlighting errors and presenting the options for each pin or for each peripheral. If you selected a project template for a specific board such as the EK-RA6M3, some peripherals connected on the board are preselected.

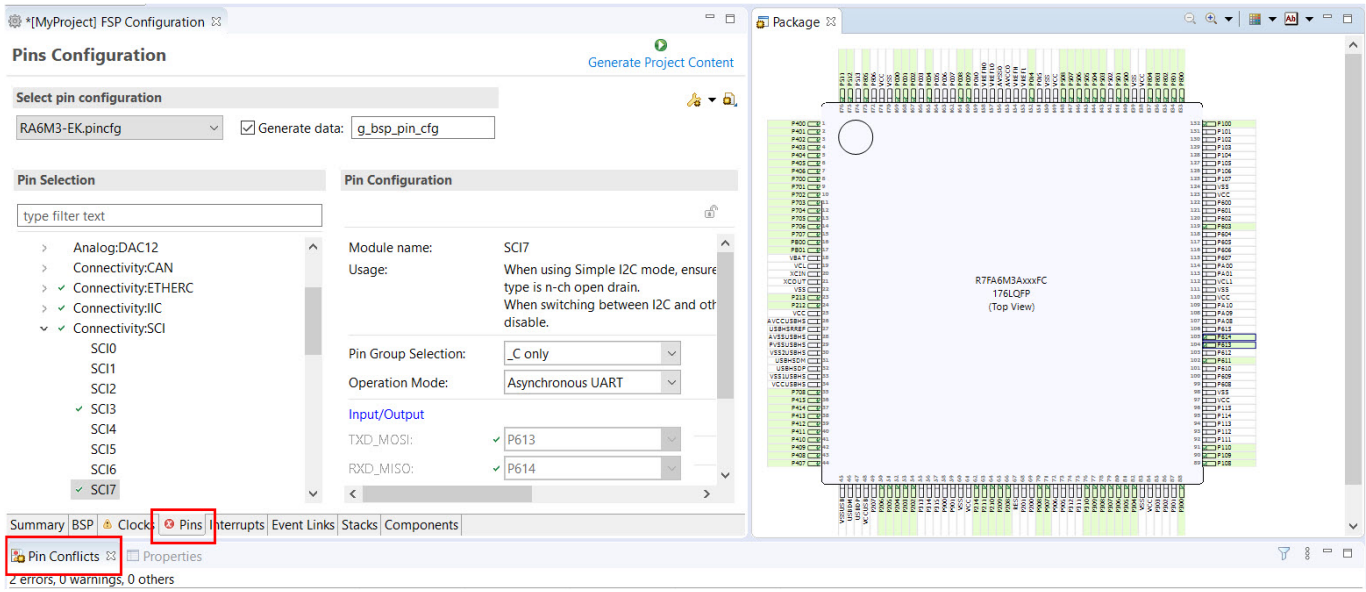

Figure 19: Pins Configuration

The pin configurator includes a built-in conflict checker, so if the same pin is allocated to another peripheral or I/O function the pin will be shown as red in the package view and also with white cross in a red square in the **Pin Selection** pane and **Pin Configuration** pane in the main **Pins** tab. The **Pin Conflicts** view provides a list of conflicts, so conflicts can be quickly identified and fixed.

In the example shown below, port P611 is already used by the CAC, and the attempt to connect this port to the Serial Communications Interface (SCI) results in a dangling connection error. To fix this error, select another port from the pin drop-down list or disable the CAC in the **Pin Selection** pane on the left side of the tab.

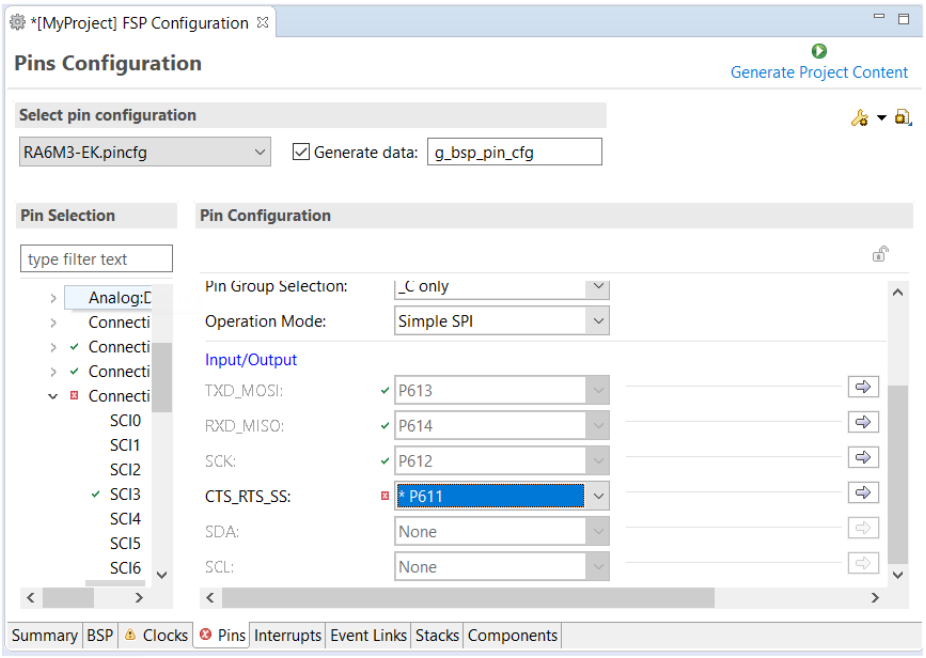

Figure 20: e2 studio Pin configurator

The pin configurator also shows a package view and the selected electrical or functional characteristics of each pin.

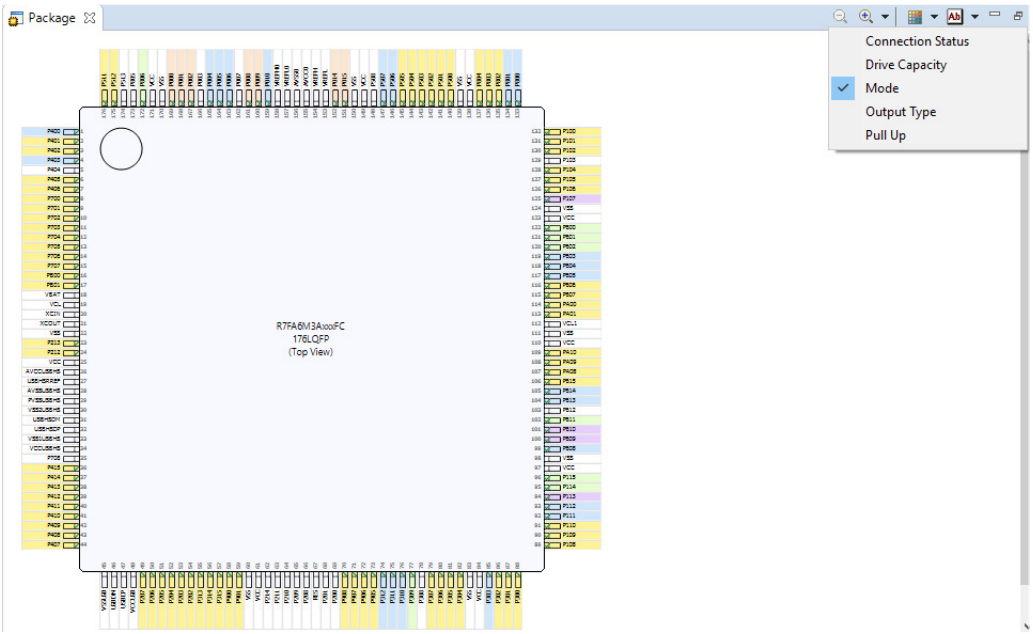

Figure 21: e2 studio Pin configurator package view

When you click the **Generate Project Content** button, the pin configuration contents are written to: ra_gen\bsp_pin_cfg.h

This file will be created if it does not already exist.

Warning

Do not edit this file as it is overwritten whenever the **Generate Project Content** button is clicked.

To make it easy to share pinning information for your project, e2 studio exports your pin configuration settings to a csv format and copies the csv file to ra_gen/<MCU package>.csv.

2.2.5.5 Configuring Interrupts from the Stacks Tab

You can use the **Properties** view in the **Stacks** tab to enable interrupts by setting the interrupt priority. Select the driver in the **Stacks** pane to view and edit its properties.

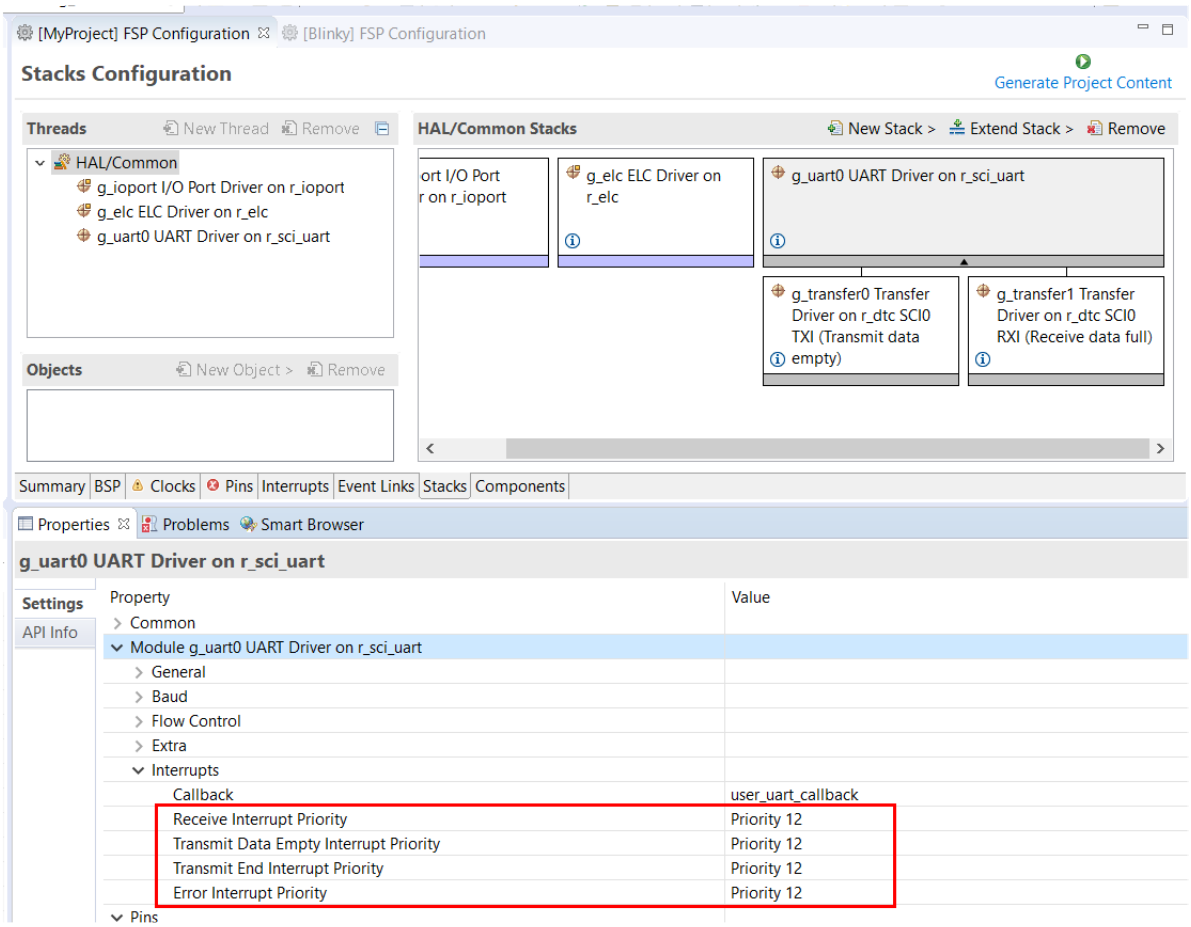

Figure 22: Configuring Interrupts in the Stacks tab

Creating Interrupts from the Interrupts Tab

On the **Interrupts** tab, the user can bypass a peripheral interrupt set by the FSP by setting a user-defined ISR. This can be done by adding a new event via the **New User Event** button.

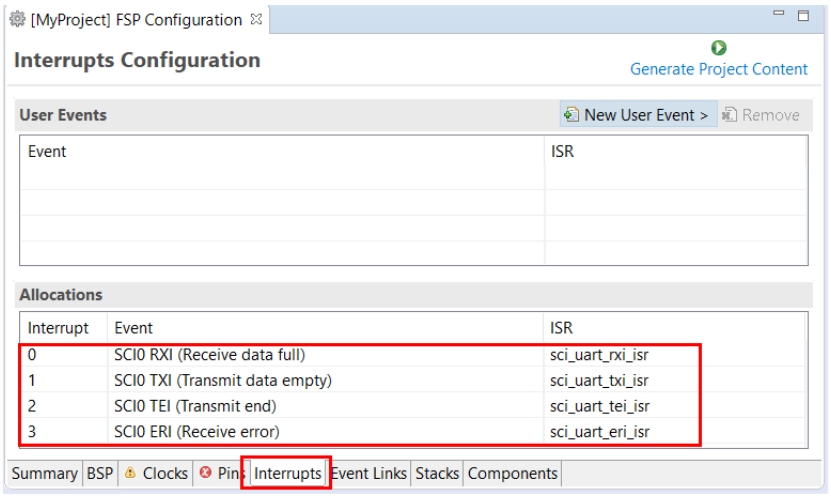

Figure 23: Configuring interrupt in Interrupt Tab

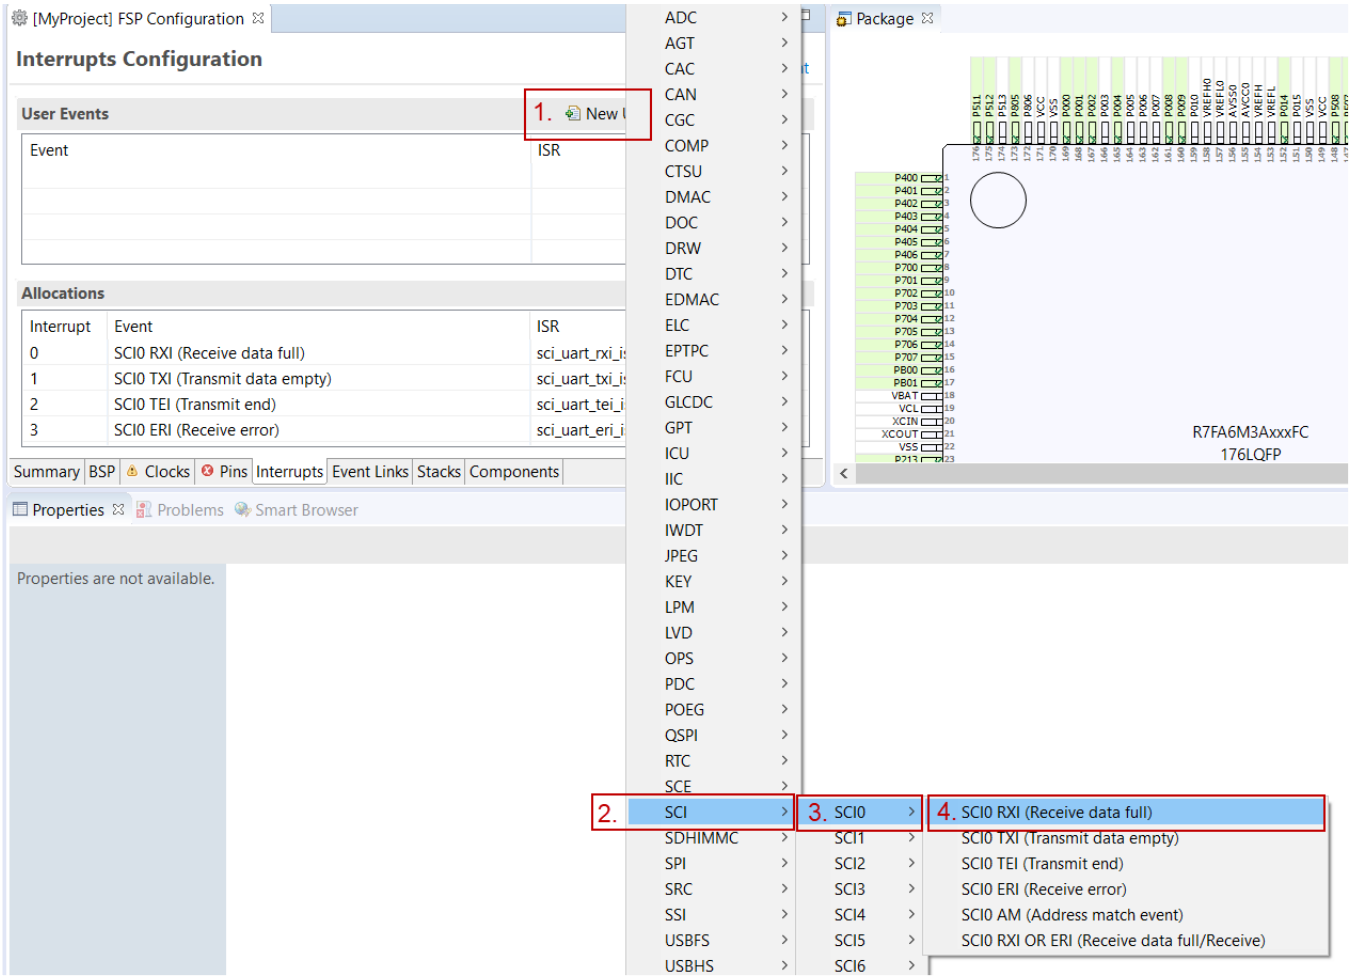

Figure 24: Adding user-defined event

Enter the name of ISR for the new user event.

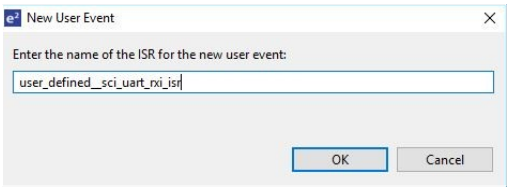

Figure 25: User-defined event ISR

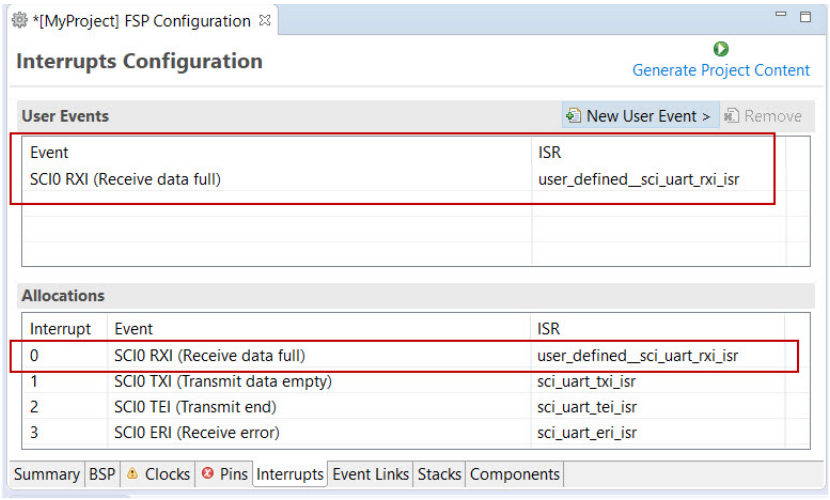

Figure 26: Using a user-defined event

2.2.5.6 Viewing Event Links

The Event Links tab can be used to view the Event Link Controller events. The events are sorted by peripheral to make it easy to find and verify them.

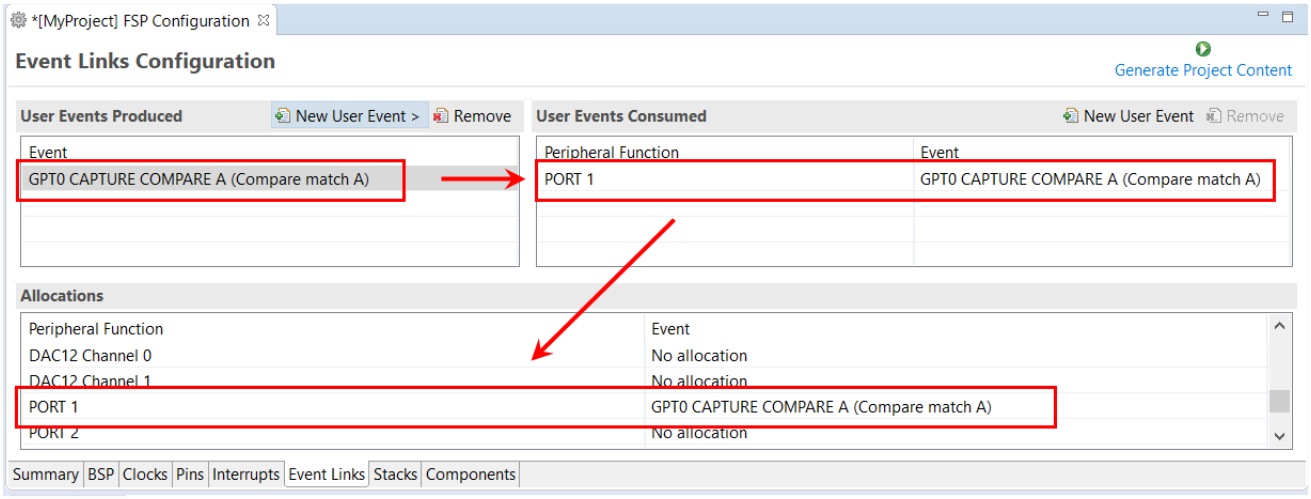

Figure 27: Viewing Event Links

Like the Interrupts tab, user-defined event sources and destinations (producers and consumers) can be defined by clicking the relevant **New User Event** button. Once a consumer is linked to a producer the link will appear in the **Allocations** section at the bottom.

Note

When selecting an ELC event to receive for a module (or when manually defining an event link), only the events that are made available by the modules configured in the project will be shown.

2.2.6 Adding Threads and Drivers

Every RTOS-based RA Project includes at least one RTOS Thread and a stack of FSP modules running

in that thread. The **Stacks** tab is a graphical user interface which helps you to add the right modules to a thread and configure the properties of both the threads and the modules associated with each thread. Once you have configured the thread, e2 studio automatically generates the code reflecting your configuration choices.

For any driver, or, more generally, any module that you add to a thread, e2 studio automatically resolves all dependencies with other modules and creates the appropriate stack. This stack is displayed in the Stacks pane, which e2 studio populates with the selected modules and module options for the selected thread.

The default view of the **Stacks** tab includes a Common Thread called **HAL/Common**. This thread includes the driver for I/O control (IOPORT). The default stack is shown in the **HAL/Common Stacks** pane. The default modules added to the HAL/Common driver are special in that the FSP only requires a single instance of each, which e2 studio then includes in every user-defined thread by default.

In applications that do not use an RTOS or run outside of the RTOS, the HAL/Common thread becomes the default location where you can add additional drivers to your application.

For a detailed description on how to add and configure modules and stacks, see the following sections:

- Adding and Configuring HAL Drivers
- Adding Drivers to a Thread and Configuring the Drivers

Once you have added a module either to HAL/Common or to a new thread, you can access the driver's configuration options in the **Properties** view. If you added thread objects, you can access the objects configuration options in the **Properties** view in the same way.

You can find details about how to configure threads here: Configuring Threads

Note

Driver and module selections and configuration options are defined in the FSP pack and can therefore change when the FSP version changes.

2.2.6.1 Adding and Configuring HAL Drivers

For applications that run outside or without the RTOS, you can add additional HAL drivers to your application using the HAL/Common thread. To add drivers, follow these steps:

1. Click on the HAL/Common icon in the **Stacks** pane. The Modules pane changes to **HAL/Common Stacks**.

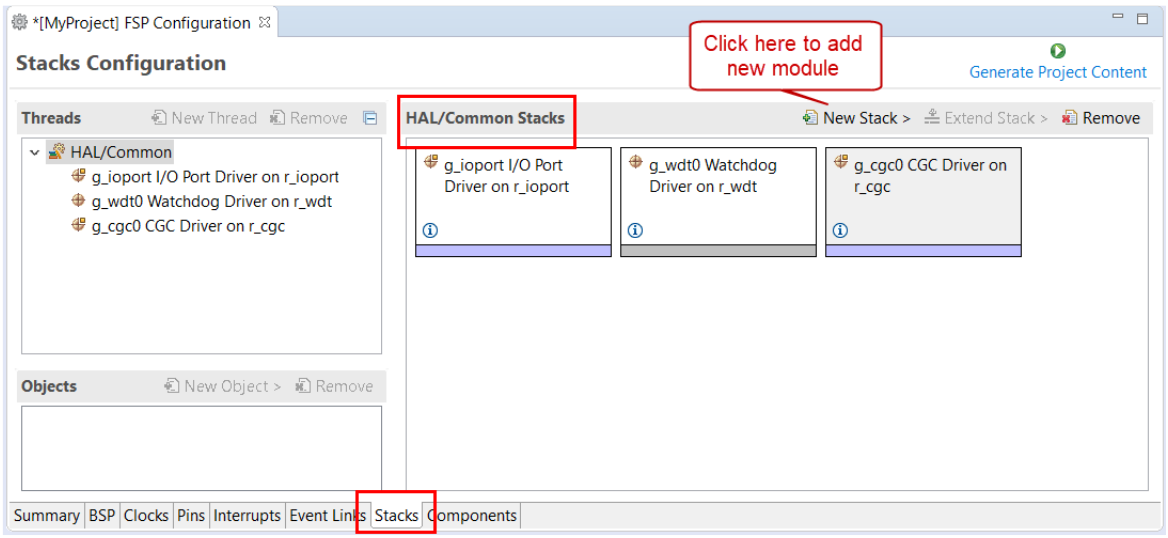

Figure 28: e2 studio Project configurator - Adding drivers

2. Click **New Stack** to see a drop-down list of HAL level drivers available in the FSP.

3. Select a driver from the menu **New Stack > Driver**.

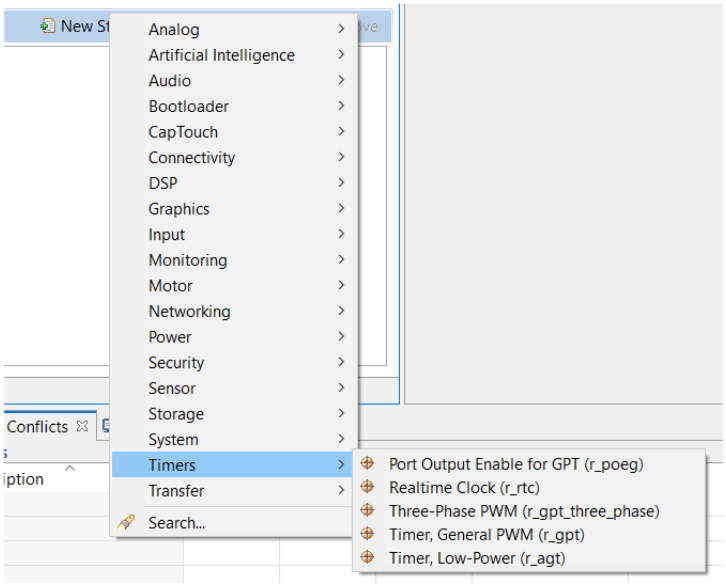

Figure 29: Select a driver

4. Select the driver module in the **HAL/Common Modules** pane and configure the driver properties in the **Properties** view.

e2 studio adds the following files when you click the **Generate Project Content** button:

- The selected driver module and its files to the ra/fsp directory
- The main() function and configuration structures and header files for your application as shown in the table below.

File	Contents	Overwritten by Generate Project Content?
ra_gen/main.c	Contains main() calling generated and user code. When called, the BSP already has Initialized the MCU.	Yes
ra_gen/hal_data.c	Configuration structures for HAL Driver only modules.	Yes
ra_gen/hal_data.h	Header file for HAL driver only modules.	Yes
src/hal_entry.c	User entry point for HAL Driver only code. Add your code here.	No

The configuration header files for all included modules are created or overwritten in this folder: ra_cfg/fsp_cfg

2.2.6.2 Adding Drivers to a Thread and Configuring the Drivers

For an application that uses the RTOS, you can add one or more threads, and for each thread at least one module that runs in the thread. You can select modules from the Driver dropdown menu. To add modules to a thread, follow these steps:

1. In the **Threads** pane, click **New Thread** to add a Thread.

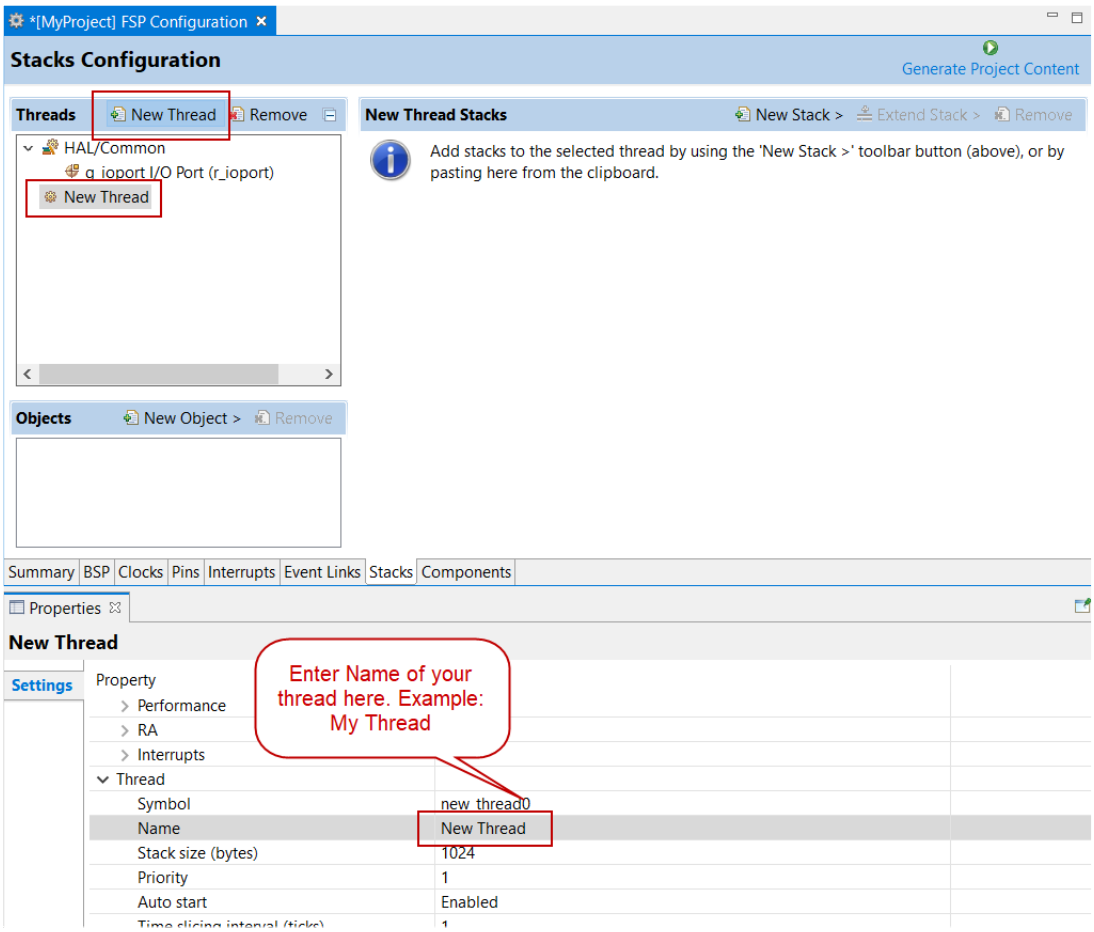

Figure 30: Adding a new RTOS Thread on the Stacks tab

2. In the **Properties** view, click on the **Name** and **Symbol** entries and enter a distinctive name and symbol for the new thread.

   Note

   *e2 studio updates the name of the thread stacks pane to **My Thread Stacks**.*

3. In the **My Thread Stacks** pane, click on **New Stack** to see a list of modules and drivers. HAL-level drivers can be added here.

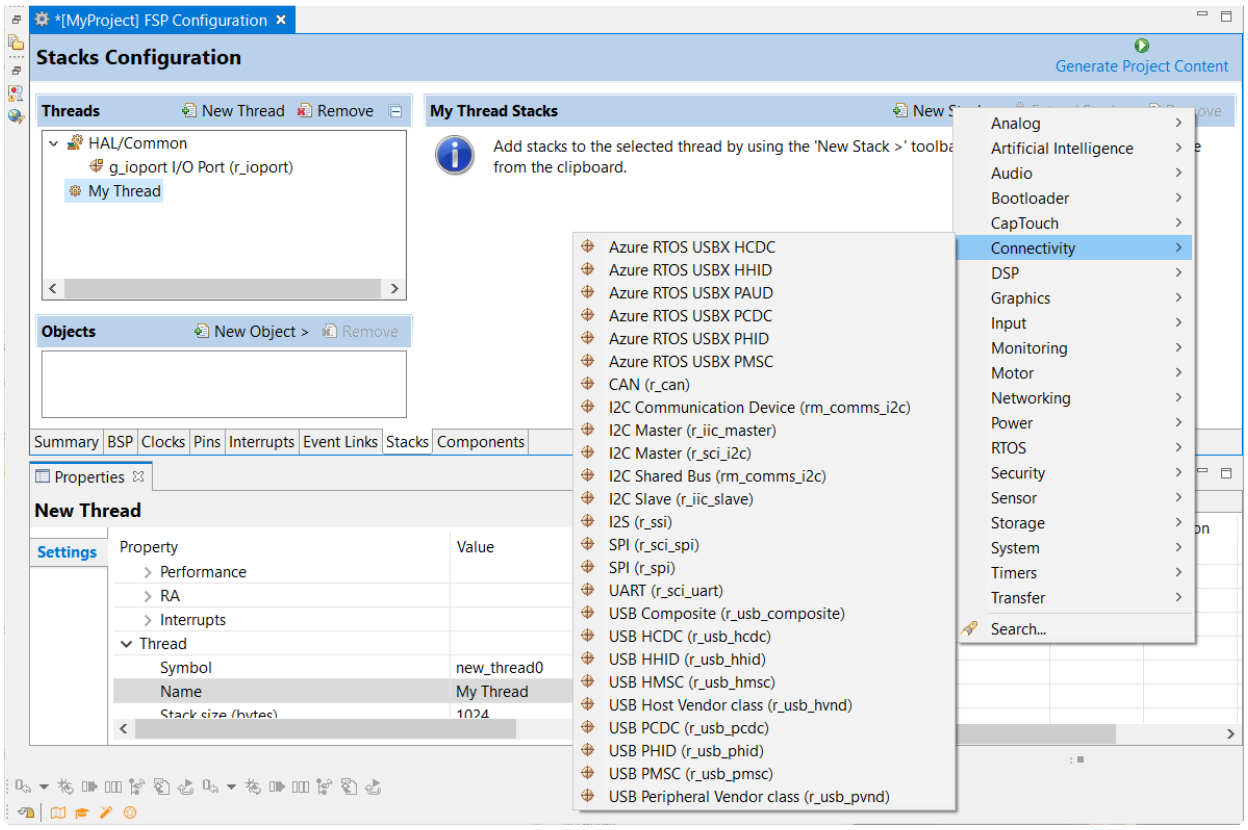

Figure 31: Adding Modules and Drivers to a thread

4. Select a module or driver from the list.

5. Click on the added driver and configure the driver as required by the application by updating the configuration parameters in the **Properties** view. To see the selected module or driver and be able to edit its properties, make sure the Thread containing the driver is highlighted in the **Threads** pane.

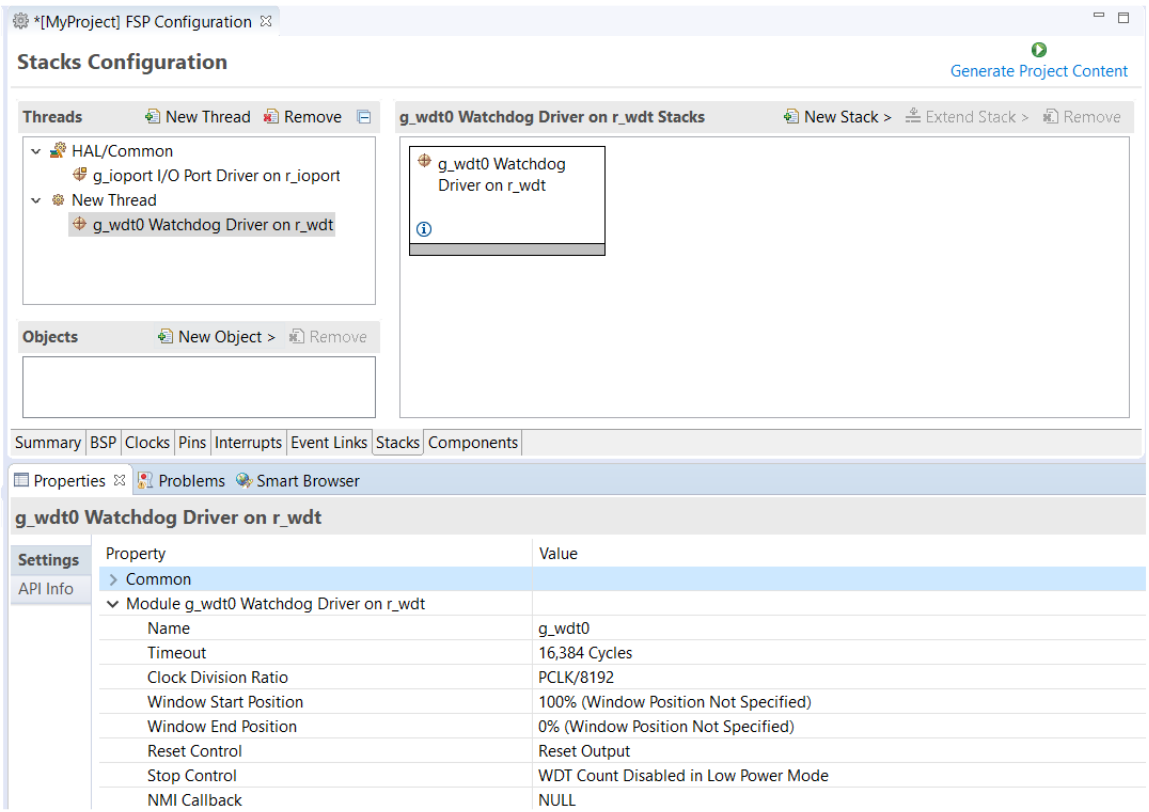

Figure 32: Configuring Module or Driver properties

6. If needed, add another thread by clicking **New Thread** in the **Threads** pane.

When you press the **Generate Project Content** button for the example above, e2 studio creates the files as shown in the following table:

File	Contents	Overwritten by Generate Project Content?
ra_gen/main.c	Contains main() calling generated and user code. When called the BSP will have initialized the MCU.	Yes
ra_gen/my_thread.c	Generated thread "my_thread" and configuration structures for modules added to this thread.	Yes
ra_gen/my_thread.h	Header file for thread "my_thread"	Yes
ra_gen/hal_data.c	Configuration structures for HAL Driver only modules.	Yes
ra_gen/hal_data.h	Header file for HAL Driver only modules.	Yes
src/hal_entry.c	User entry point for HAL Driver only code. Add your code here.	No

src/my_thread_entry.c	User entry point for thread "my_thread". Add your code here.	No

The configuration header files for all included modules and drivers are created or overwritten in the following folders: ra_cfg/fsp_cfg/<header files>

2.2.6.3 Configuring Threads

If the application uses an RTOS, the **Stacks** tab can be used to simplify the creation of RTOS threads, semaphores, mutexes, and event flags.

The components of each thread can be configured from the **Properties** view as shown below.

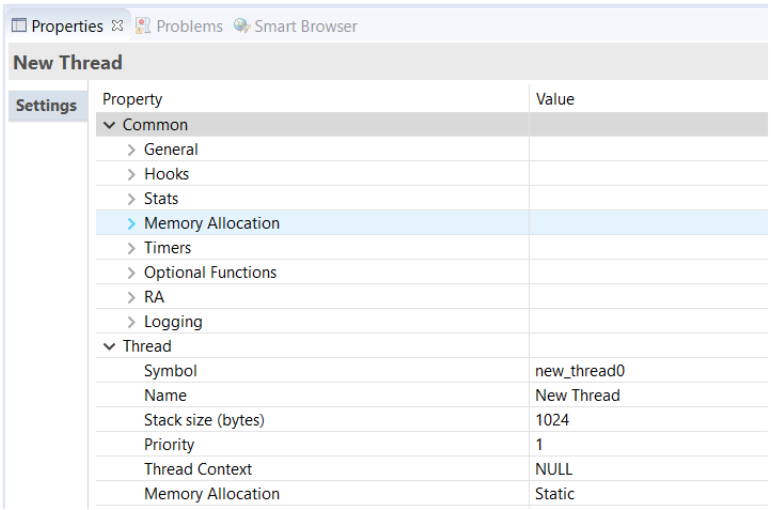

Figure 33: New Thread Properties

The **Properties** view contains settings common for all Threads (**Common**) and settings for this particular thread (**Thread**).

For this thread instance, the thread's name and properties (such as priority level or stack size) can be easily configured. e2 studio checks that the entries in the property field are valid. For example, it will verify that the field **Priority**, which requires an integer value, only contains numeric values between 0 and 9.

To add RTOS resources to a Thread, select a thread and click on **New Object** in the Thread Objects pane. The pane takes on the name of the selected thread, in this case **My Thread Objects**.

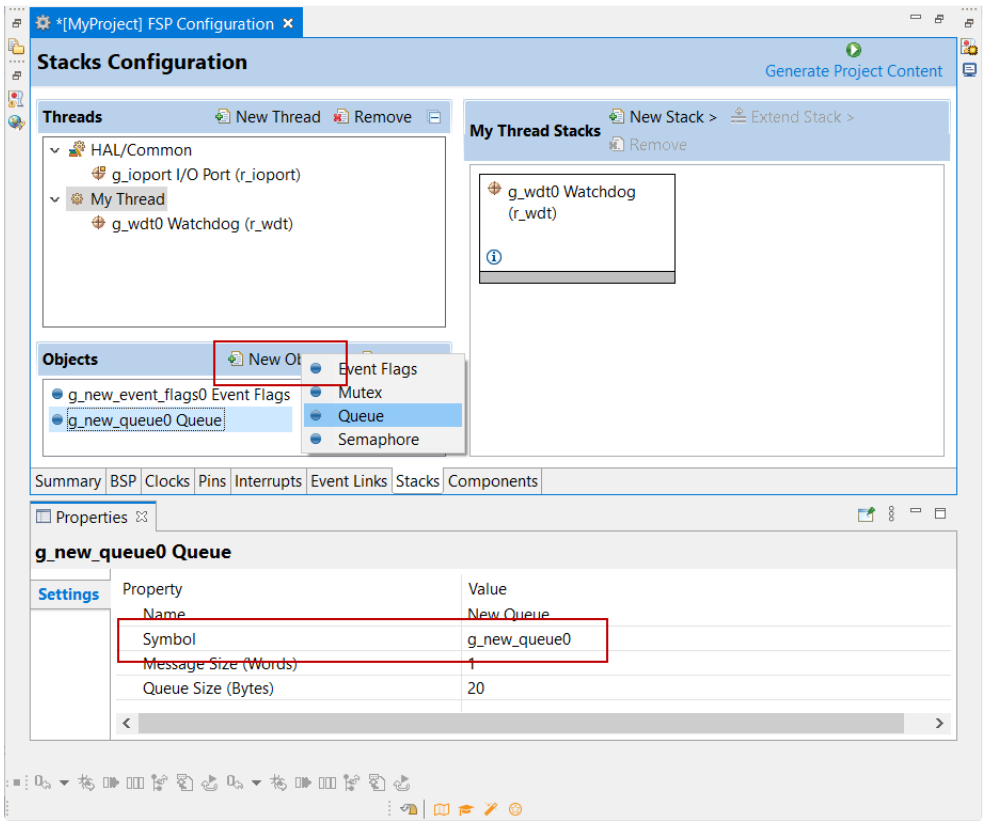

Figure 34: Configuring Thread Object Properties

Make sure to give each thread object a unique name and symbol by updating the **Name** and **Symbol** entries in the **Properties** view.

2.2.7 Reviewing and Adding Components

The **Components** tab enables the individual modules required by the application to be included or excluded. Modules common to all RA MCU projects are preselected (for example: **BSP > BSP > Board-specific BSP** and **HAL Drivers > all > r_cgc**). All modules that are necessary for the modules selected in the **Stacks** tab are included automatically. You can include or exclude additional modules by ticking the box next to the required component.

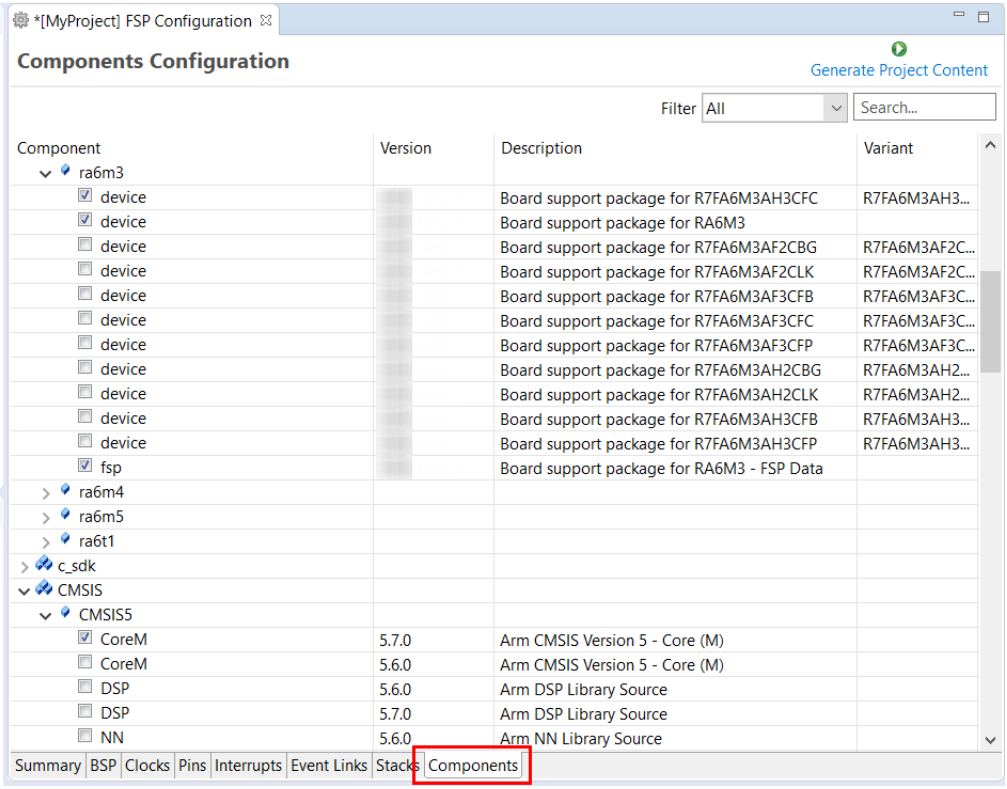

Figure 35: Components Tab

Clicking the **Generate Project Content** button copies the .c and .h files for each selected component into the following folders:

- ra/fsp/inc/api
- ra/fsp/inc/instances
- ra/fsp/src/bsp
- ra/fsp/src/<Driver_Name>

e2 studio also creates configuration files in the ra_cfg/fsp_cfg folder with configuration options set in the **Stacks** tab.

2.2.8 Writing the Application

Once you have added Modules and drivers and set their configuration parameters in the **Stacks** tab, you can add the application code that calls the Modules and drivers.

Note

To check your configuration, build the project once without errors before adding any of your own application code.

2.2.8.1 Coding Features

e2 studio provides several efficiency improving features that help write code. Review these features prior to digging into the code development step-by-step sections that follow.

Autocomplete

Autocomplete is a context aware coding accelerator that suggests possible completions for partially

typed-in code elements. If you can 'guess' the first part of a macro, for example, the Autocomplete function can suggest options for completing the rest of the macro.

In the following example, a macro related to a BSP_IO setting needs to be found. After typing BSP_IO_ in a source code file, pressing Ctrl + Space opens the Autocomplete list. This list shows a selection of context aware options for completing the macro. Scroll through the window to find the desired macro (in this case BSP_IO_LEVEL_HIGH) and click on it to add it to your code.

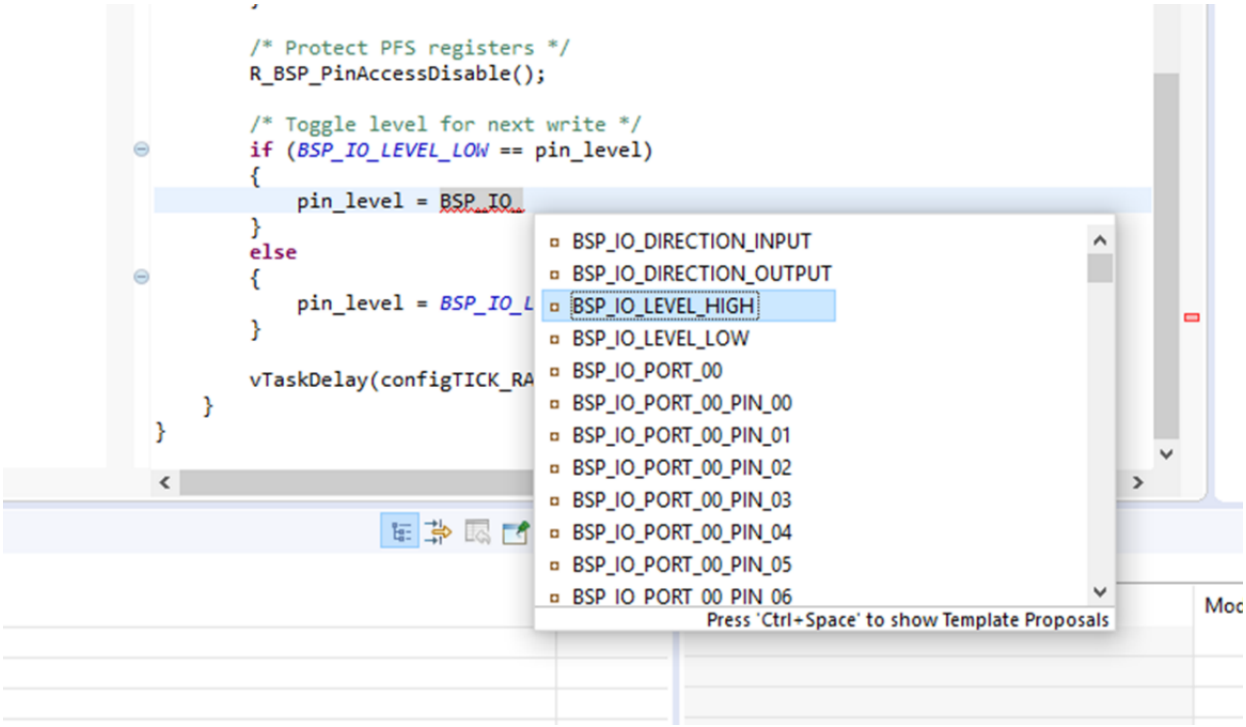

Figure 36: Autocomplete example

Other code elements can use autocomplete too. Some of the more common uses for Autocomplete include Enumerations, Types, and API functions - but try it in any situation you think the tool may have enough context to determine what you might be looking for.

For a hands-on experience using Autocomplete use the Quick FSP Labs for Creating Blinky from Scratch and Creating an RTC Blinky from Scratch. These 15-minute Do it Yourself labs take you through the step-by-step process of using Autocomplete, Developer Assistance, and the Help system.

Welcome Window

The e2 studio Welcome window displays useful information and common links to assist in development. Check out these resources to see what is available. They are updated with each release, so check back to see what has been added after a new release.

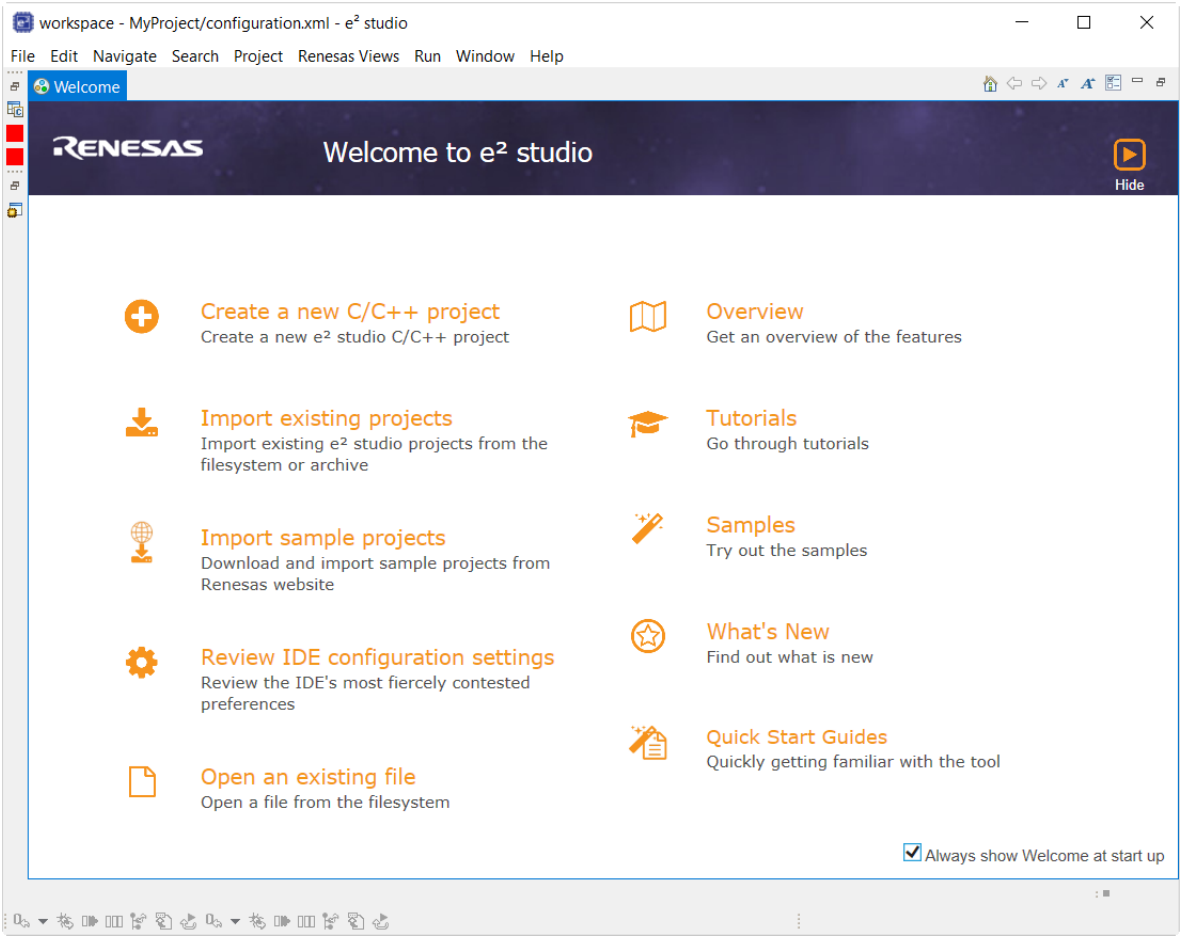

Figure 37: Welcome window

Cheat Sheets

Cheat sheets are macro driven illustrations of some common tasks. They show, step-by-step, what commands and menus are used. These will be populated with more examples on each release. Cheat Sheets are available from the **Help** menu.

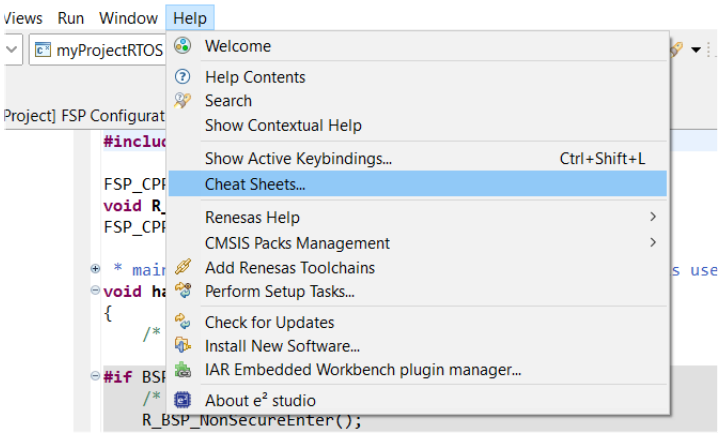

Figure 38: Cheat Sheets

Developer Assistance

FSP Developer Assistance provides developers with module and Application Programming Interface (API) reference documentation in e2 studio. After configuring the threads and software stacks for an FSP project with the RA Configuration editor, Developer Assistance quickly helps you get started writing C/C++ application code for the project using the configured stack modules.

1. Expand the project explorer to view Developer Assistance

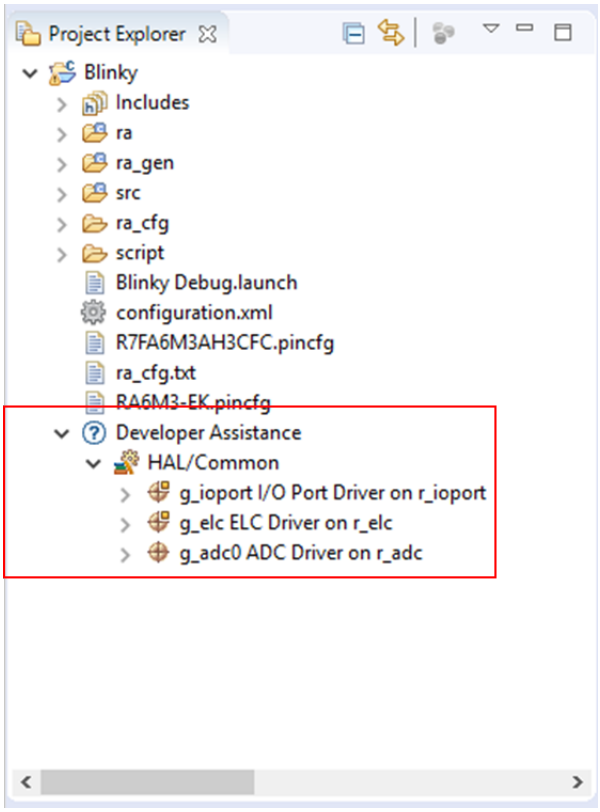

Figure 39: Developer Assistance

2. Expand a stack module to show its APIs

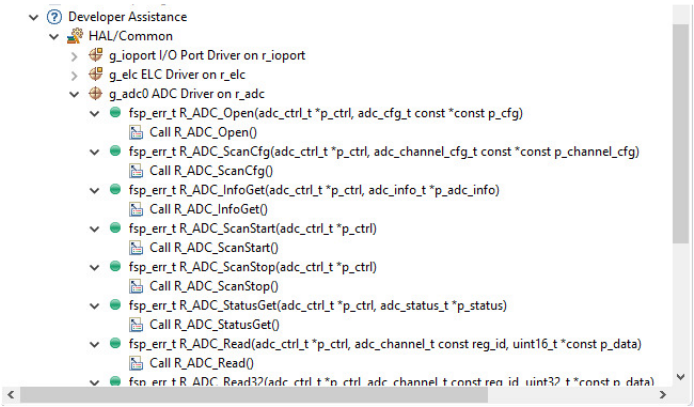

Figure 40: Developer Assistance APIs

3. Dragging and dropping an API from Develop Assistance to a source file helps to write source code quickly.

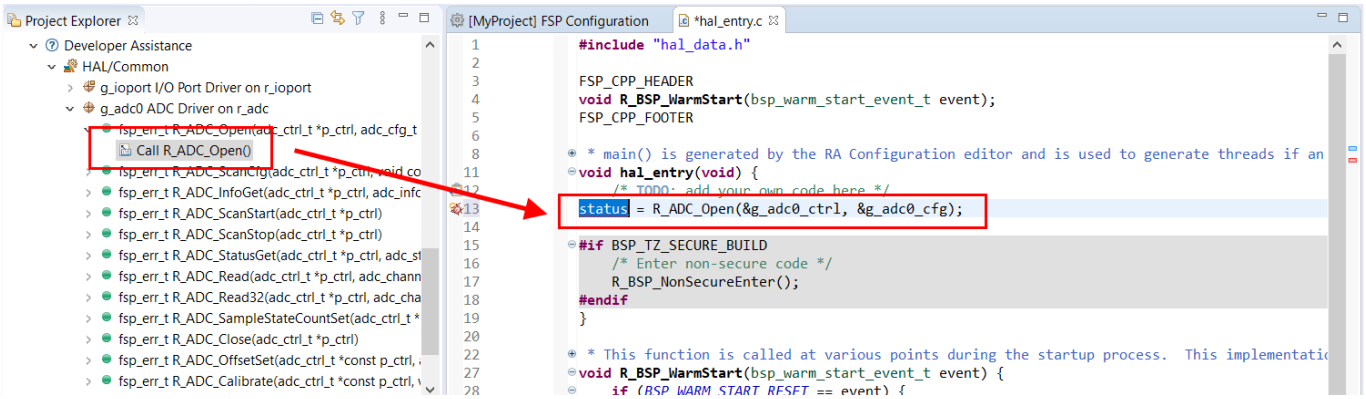

Figure 41: Dragging and Dropping an API in Developer Assistance

For a hands-on experience using Developer Assistance use the Quick FSP Labs for An Introduction to Developer Assistance, Creating Blinky from Scratch and Creating an RTC Blinky from Scratch. These 15-minute Do it Yourself labs take you through the step-by-step process of using Autocomplete, Developer Assistance, and the Help system.

Information Icon

Information icons are available on each module in the thread stack. Clicking on these icons opens a module folder on GitHub that contains additional information on the module. An example information Icon is shown below:

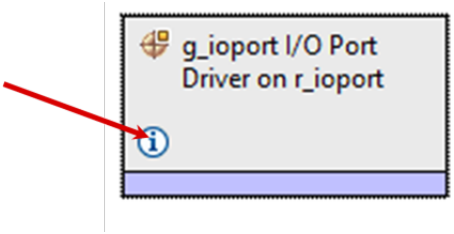

Figure 42: Information icon

IDE Help

A good source of additional information for many FSP topics is the Help system. To get to the Help system, click on **Help** and then select **Help Contents** as seen below.

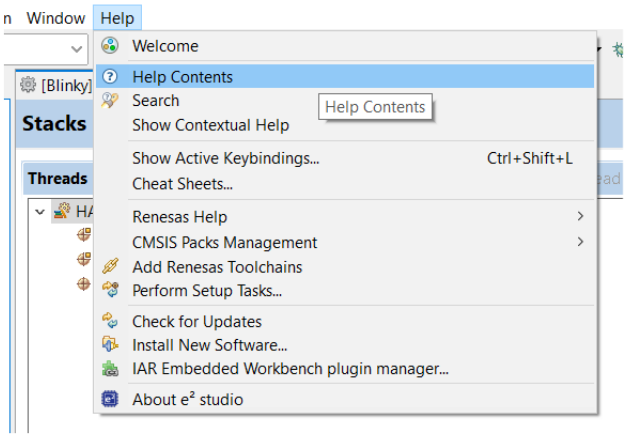

Figure 43: Opening the Help System

Once the Help system is open, select the **RA Contents** entry in the left side Guide-bar. Expand it to see the main RA Topics.

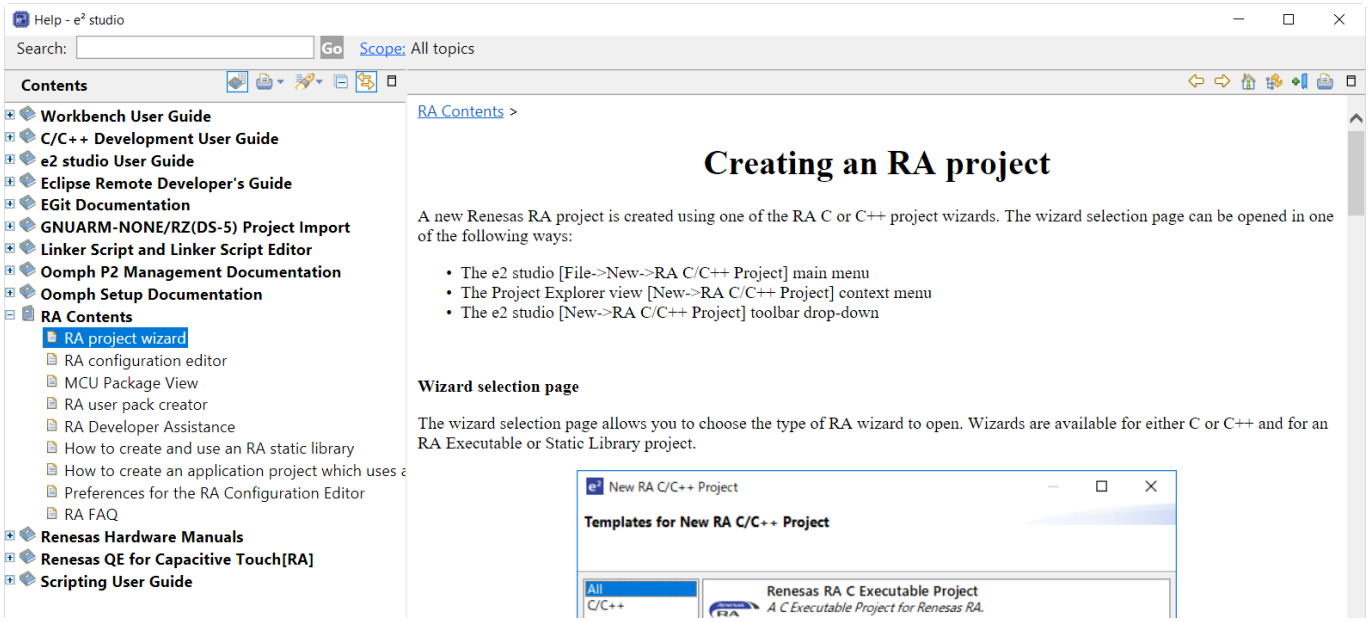

Figure 44: RA Content Help

You can also search for help topics by using the Search bar. Below is an example searching for Visual Expressions, a helpful feature in the e2 studio debugger.

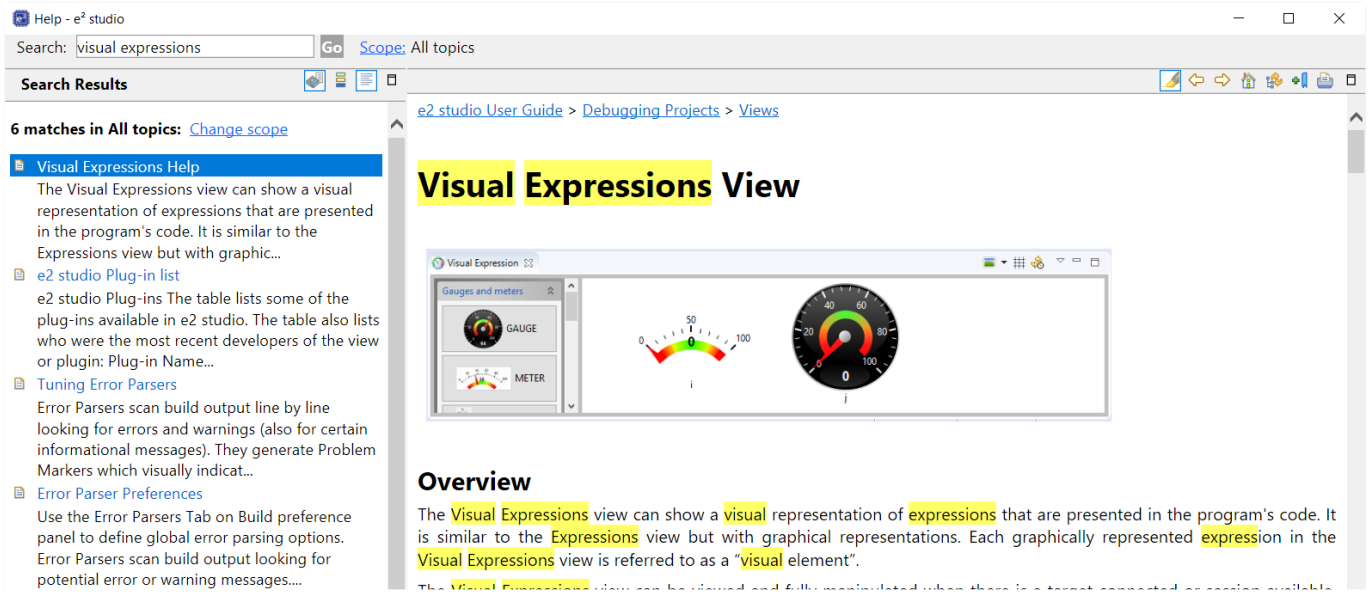

Figure 45: e2 studio Help from the Search Bar

For a hands-on experience using the Help system use the Quick FSP Labs for An Introduction to Developer Assistance, Creating Blinky from Scratch and Creating an RTC Blinky from Scratch. These 15-minute Do it Yourself labs take you through the step-by-step process of using Autocomplete, Developer Assistance, and the Help system.

2.2.8.2 HAL Modules in FSP: A Practical Description

The FSP Architecture section describes FSP stacks, modules and interfaces in significant detail, providing an understanding of the theory behind them. The following sections provides a quick and practical introduction on how to use API functions when writing code and where in the API reference sections you can find useful API related information.

Introduction to HAL Modules

In FSP, HAL module drivers provide convenient API functions that access RA processor peripheral features. Module properties are defined in the RA GUI configurator, eliminating the tedious and error prone process of setting peripheral control registers. When configuration is complete, the generator automatically creates the code needed to implement the associated API functions. API functions are the main way a developer interacts with the target processor and peripherals.

HAL Driver API Function Call Formats

HAL driver API functions all have a similar format. They all start with "R_" to indicate they are HAL related functions. Next comes the module name followed by the function and any parameters. This format is illustrated below:

```
R_<module>_<function>(<parameters>);
```

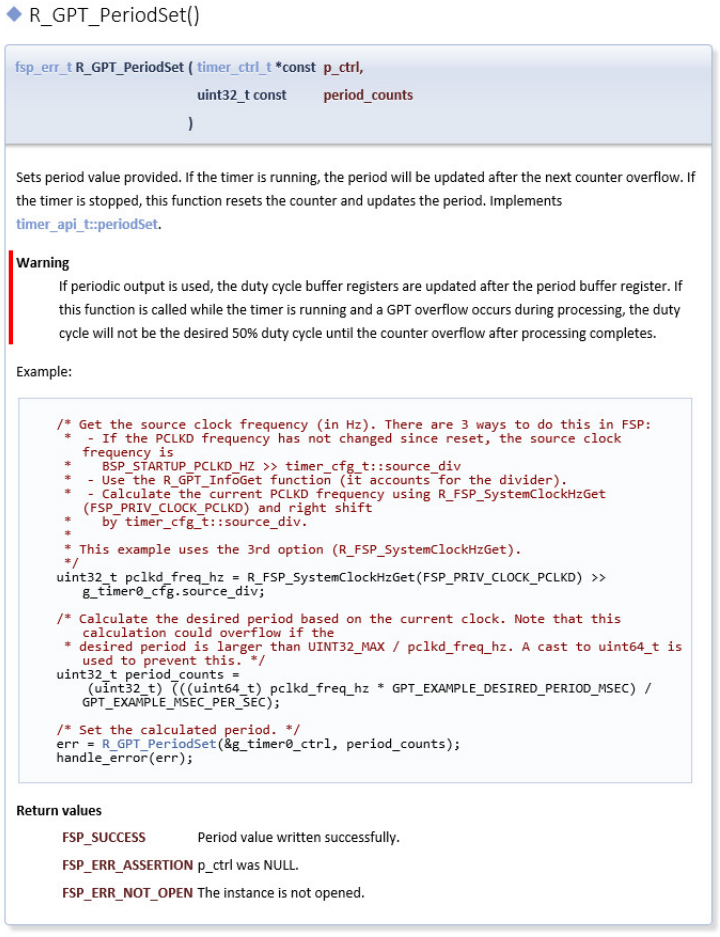
Here are some examples:

```
```

```
status = R_GPT_Open(&g_timer0_ctrl, &g_timer0_cfg);
status = R_GPT_Start(&g_timer0_ctrl);
status = R_GPT_PeriodSet(&g_timer0_ctrl, period);
status = R_ADC_Open(&g_adc0_ctrl, &g_adc0_cfg);
status = R_ADC_InfoGet(&g_adc0_ctrl, &adc_info);
```

HAL Driver API Call Reference Information

Each HAL module has a useful API Reference section that includes key details on each function. The function prototype is presented first, showing the return type (usually fsp_status_t for HAL functions) and the function parameters. A short description and any warnings or notes follow the function definition. In some cases, a code snippet is included to illustrate use of the function. Finally, all possible return values are provided to assist in debugging and error management.



◆ R_GPT_PeriodSet()

```
fsp_err_t R_GPT_PeriodSet ( timer_ctrl_t *const  p_ctrl,
                            uint32_t const       period_counts
                          )
```

Sets period value provided. If the timer is running, the period will be updated after the next counter overflow. If the timer is stopped, this function resets the counter and updates the period. Implements timer_api_t::periodSet.

Warning

If periodic output is used, the duty cycle buffer registers are updated after the period buffer register. If this function is called while the timer is running and a GPT overflow occurs during processing, the duty cycle will not be the desired 50% duty cycle until the counter overflow after processing completes.

Example:

```
/* Get the source clock frequency (in Hz). There are 3 ways to do this in FSP:
 *  - If the PCLKD frequency has not changed since reset, the source clock
   frequency is
 *    BSP_STARTUP_PCLKD_HZ >> timer_cfg_t::source_div
 *  - Use the R_GPT_InfoGet function (it accounts for the divider).
 *  - Calculate the current PCLKD frequency using R_FSP_SystemClockHzGet
   (FSP_PRIV_CLOCK_PCLKD) and right shift
 *    by timer_cfg_t::source_div.
 *
 * This example uses the 3rd option (R_FSP_SystemClockHzGet).
 */
uint32_t pclkd_freq_hz = R_FSP_SystemClockHzGet(FSP_PRIV_CLOCK_PCLKD) >>
   g_timer0_cfg.source_div;

/* Calculate the desired period based on the current clock. Note that this
   calculation could overflow if the
 * desired period is larger than UINT32_MAX / pclkd_freq_hz. A cast to uint64_t is
   used to prevent this. */
uint32_t period_counts =
    (uint32_t) (((uint64_t) pclkd_freq_hz * GPT_EXAMPLE_DESIRED_PERIOD_MSEC) /
   GPT_EXAMPLE_MSEC_PER_SEC);

/* Set the calculated period. */
err = R_GPT_PeriodSet(&g_timer0_ctrl, period_counts);
handle_error(err);
```

Return values

FSP_SUCCESS	Period value written successfully.
FSP_ERR_ASSERTION	p_ctrl was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

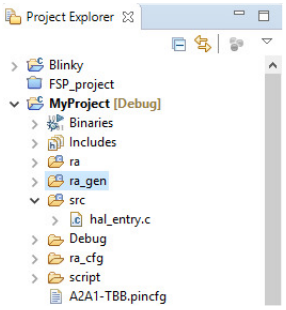
Figure 46: Module Api Reference Section Example

2.2.8.3 RTOS-Independent Applications

To write application code:

1. Add all drivers and modules in the **Stacks** tab and resolve all dependencies flagged by e2 studio such as missing interrupts or drivers.
2. Configure the drivers in the **Properties** view.
3. In the Project Configuration view, click the **Generate Project Content** button.

4. In the **Project Explorer** view, double-click on the src/hal_entry.c file to edit the source file.



Note

All configuration structures necessary for the driver to be called in the application are initialized in ra_gen/hal_data.c.

Warning

Do not modify the files in the directory ra_gen. These files are overwritten every time you push the **Generate Project Content** button.

5. Add your application code here:

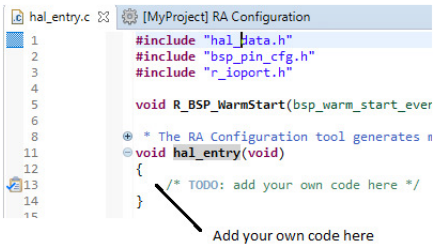


Figure 47: Adding user code to hal_entry.c

6. Build the project without errors by clicking on **Project > Build Project**.

The following tutorial shows how execute the steps above and add application code: Tutorial: Using HAL Drivers - Programming the WDT.

The WDT example is a HAL level application which does not use an RTOS. The user guides for each module also include basic application code that you can add to hal_entry.c.

2.2.8.4 RTOS Applications

To write RTOS-aware application code using RTOS, follow these steps:

1. Add a thread using the **Stacks** tab.
2. Provide a unique name for the thread in the **Properties** view for this thread.

3. Configure all drivers and resources for this thread and resolve all dependencies flagged by e2 studio such as missing interrupts or drivers.
4. Configure the thread objects.
5. Provide unique names for each thread object in the **Properties** view for each object.
6. Add more threads if needed and repeat steps 1 to 5.
7. In the **RA Project Editor**, click the **Generate Project Content** button.

8. In the **Project Explorer** view, double-click on the src/my_thread_1_entry.c file to edit the source file.

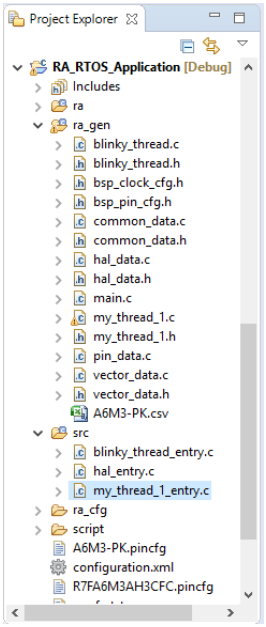

Figure 48: Generated files for an RTOS application

Note

All configuration structures necessary for the driver to be called in the application are initialized in ra_gen/my_thread_1.c and my_thread_2.c

Warning

Do not modify the files in the directory ra_gen. These files are overwritten every time you push the **Generate Project Content** button.

9. Add your application code here:

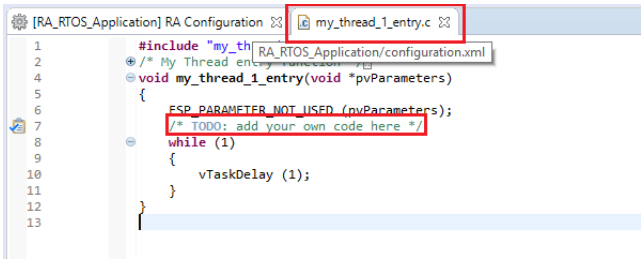

Figure 49: Adding user code to my_thread_1.entry

10. Repeat steps 1 to 9 for the next thread.

11. Build your project without errors by clicking on **Project > Build Project**.

2.2.8.5 Additional Resources for Application Development

Example Projects

A wide variety of Example Projects for FSP and RA MCUs is available on the GitHub site here: https://github.com/renesas/ra-fsp-examples. Example projects are organized by target kit so it is easy to find all the examples for your kit of choice.

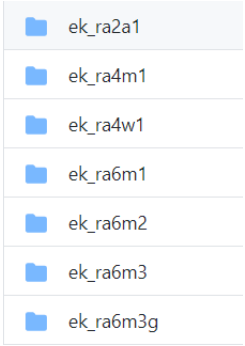

Figure 50: FSP Example Projects Organized by Kit

Projects are available as both downloadable zip files and as project source files. Typically, there is a project for each module. New example projects are being added periodically, so check back if a particular module isn't yet available.

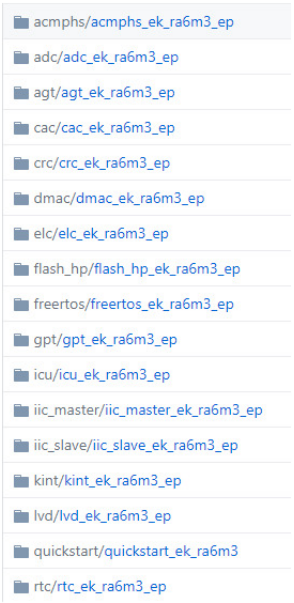

Figure 51: A Selection of Example Projects Available on GitHub

Quick Labs

A variety of Hands-on Do It Yourself labs are available on the Renesas RA and FSP Knowledge Base. Quick FSP Labs target the EK-RA6M3 kit and typically require only 15 minutes to complete. Each lab covers a couple related development tools and techniques like Autocomplete, Developer Assistance,

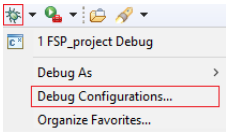
console I/O over RTT, and Visual Expressions, that can speed up the development process. A list of all available Quick Labs can be found here: https://en-support.renesas.com/knowledgeBase/19450948

2.2.9 Debugging the Project

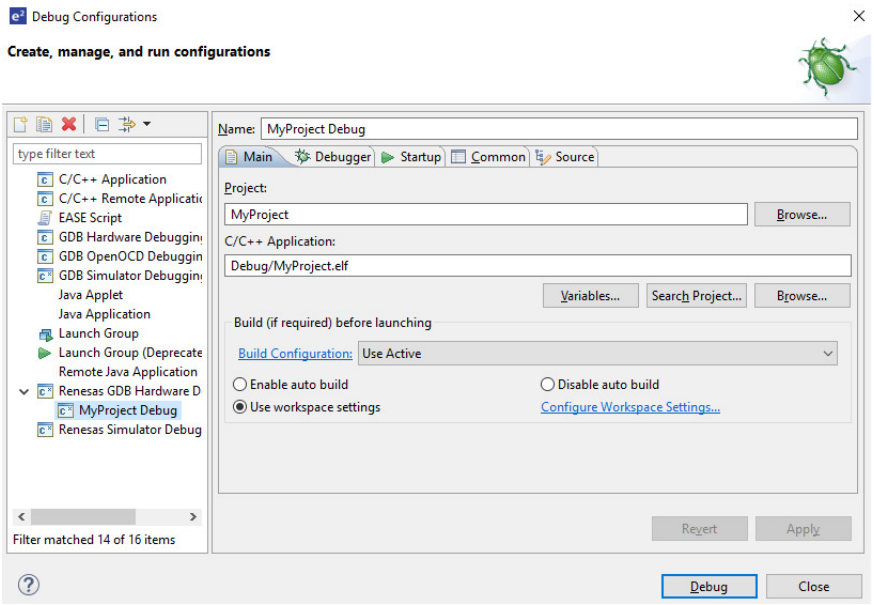
Once your project builds without errors, you can use the Debugger to download your application to the board and execute it.

To debug an application follow these steps:

1. On the drop-down list next to the debug icon, select **Debug Configurations**.



2. In the **Debug Configurations** view, click on your project listed as **MyProject Debug**.



3. Connect the board to your PC via either a standalone Segger J-Link debugger, a Segger J-Link On-Board (included on all RA EKs), or an E2 or E2 Lite and click **Debug**.

Note

For details on using J-Link and connecting the board to the PC, see the Quick Start Guide included in the RA MCU Kit.

2.2.10 Modifying Toolchain Settings

There are instances where it may be necessary to make changes to the toolchain being used (for example, to change optimization level of the compiler or add a library to the linker). Such modifications can be made from within e2 studio through the menu **Project > Properties > Settings** when the project is selected. The following screenshot shows the settings dialog for the GNU Arm toolchain. This dialog will look slightly different depending upon the toolchain being used.

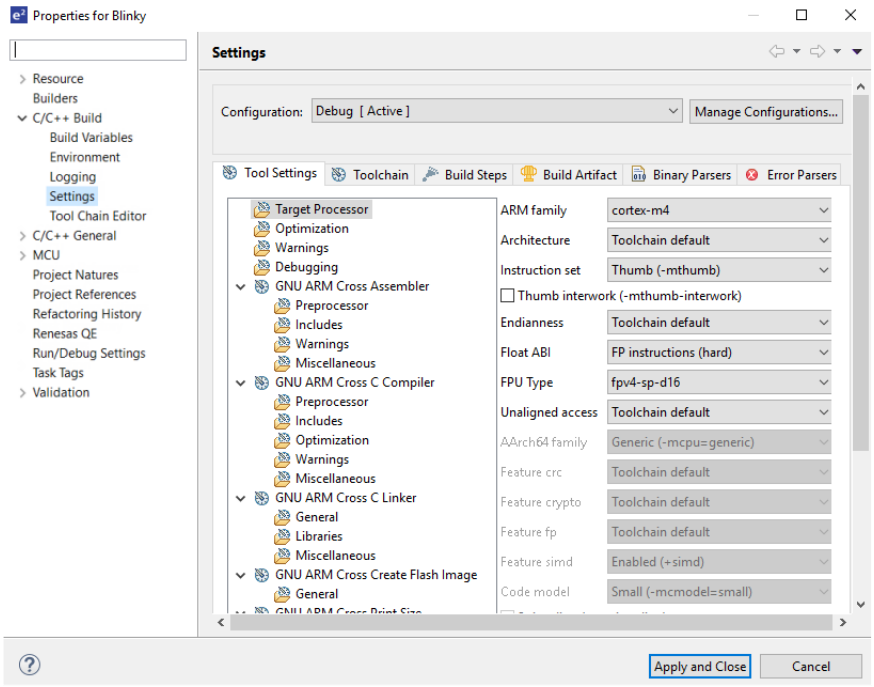


Figure 52: e2 studio Project toolchain settings

The scope for the settings is project scope which means that the settings are valid only for the project being modified.

The settings for the linker which control the location of the various memory sections are contained in a script file specific for the device being used. This script file is included in the project when it is created and is found in the script folder (for example, /script/a6m3.ld).

2.2.11 Creating RA project with ARM Compiler 6 in e2 studio

e2 studio does not include the ARM Compiler 6 (AC6) toolchain by default. Follow the steps below to integrate AC6 into e2 studio and create an AC6 RA project.

Note

It is assumed that the user is already familiar with RA project creation in e2 studio. e2 studio does not include ARM Compiler 6 (AC6) toolchain by default.

Steps 1 through 8 describe the process for integrating ARM Compiler 6 into e2 studio.

1. Download, install, and configure license for the AC6 toolchain (https://developer.arm.com/tools-and-software/embedded/arm-compiler/downloads/version-6).
2. Launch e2 studio.
3. Go to **Window > Preferences > Toolchains**.

4. Click **Add**.

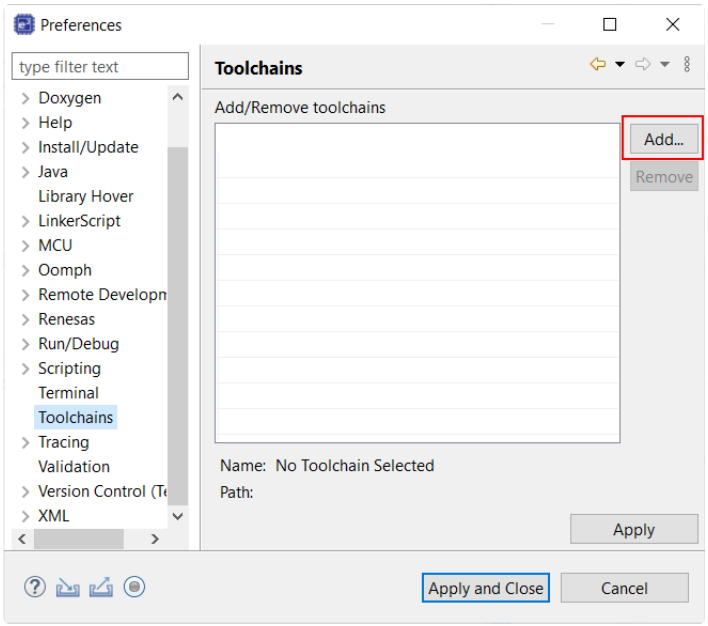

Figure 53: Add Toolchain

5. Browse to the path where AC6 toolchain is installed and select the \bin folder. Click **Next**.

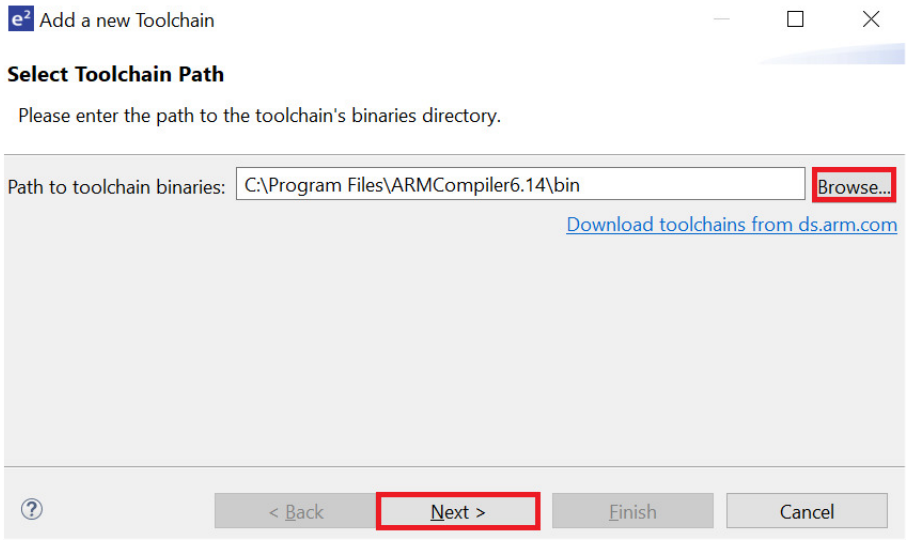

Figure 54: Browse to AC6 Compiler

6. Toolchain information in displayed. Click **Finish**.

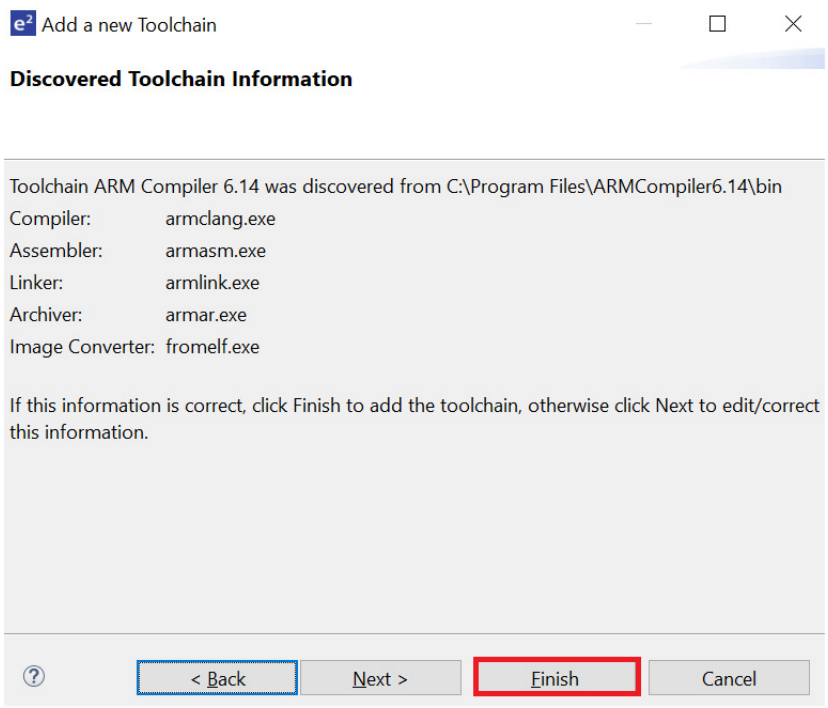

Figure 55: Toolchain Information

7. Click **Apply and Close**.

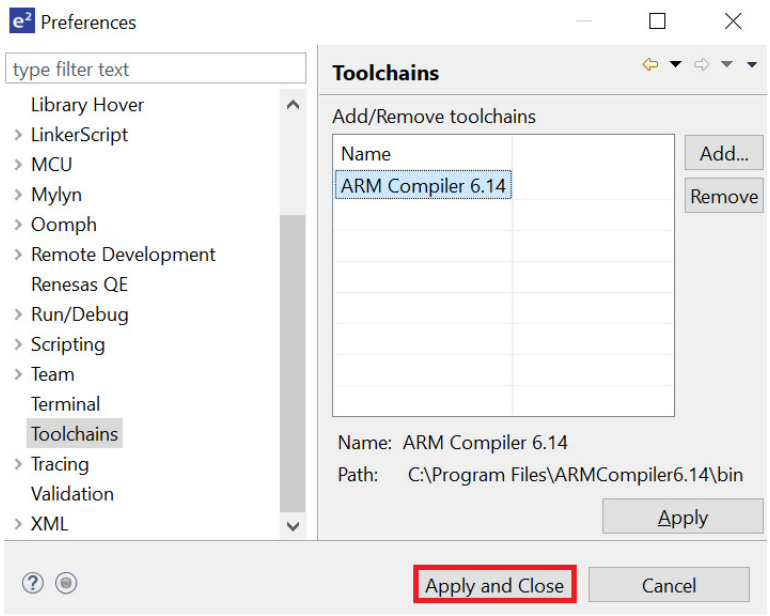

Figure 56: Apply and Close

8. Click **Restart Eclipse** when prompted.

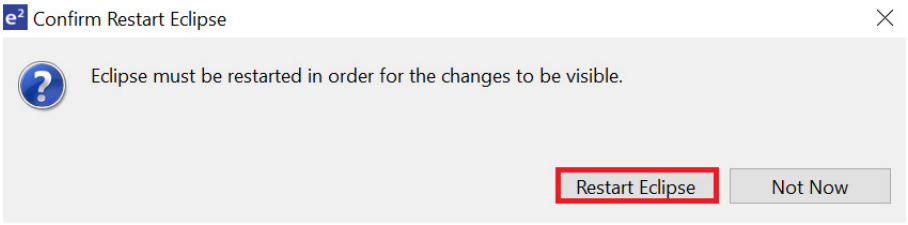

Figure 57: Restart Eclipse

9. When creating a new RA C/C++ project, select **ARM Compiler 6** included in the Toolchains section.

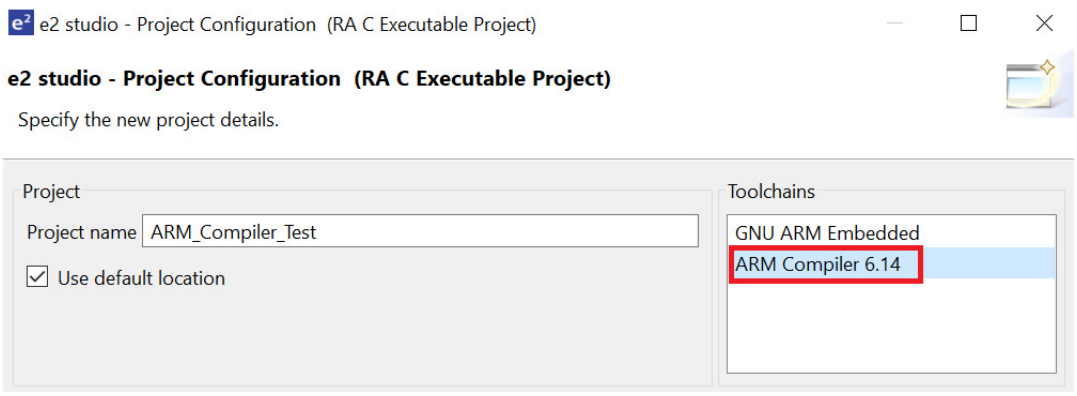

Figure 58: Select Arm Compiler

2.2.12 Importing an Existing Project into e2 studio

1. Start by opening e2 studio.
2. Open an existing Workspace to import the project and skip to step d. If the workspace doesn't exist, proceed with the following steps:

    a. At the end of e2 studio startup, you will see the Workspace Launcher Dialog box as shown in the following figure.

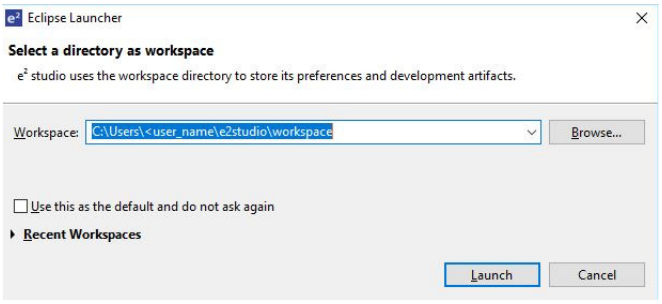

Figure 59: Workspace Launcher dialog

b. Enter a new workspace name in the Workspace Launcher Dialog as shown in the following figure. e2 studio creates a new workspace with this name.

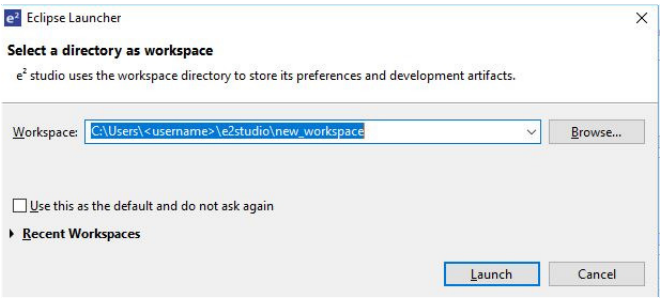

Figure 60: Workspace Launcher dialog - Select Workspace

c. Click **Launch**.

d. When the workspace is opened, you may see the Welcome Window. Click on the **Workbench** arrow button to proceed past the Welcome Screen as seen in the following figure.

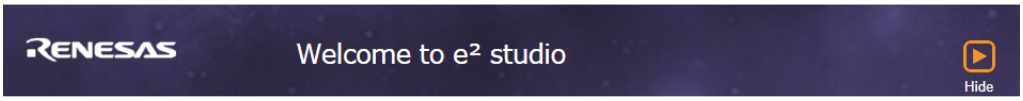

Figure 61: Workbench arrow button

3. You are now in the workspace that you want to import the project into. Click the **File** menu in the menu bar, as shown in the following figure.

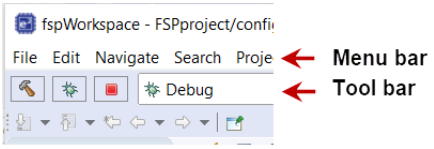

Figure 62: Menu and tool bar

4. Click **Import** on the **File** menu or in the menu bar, as shown in the following figure.

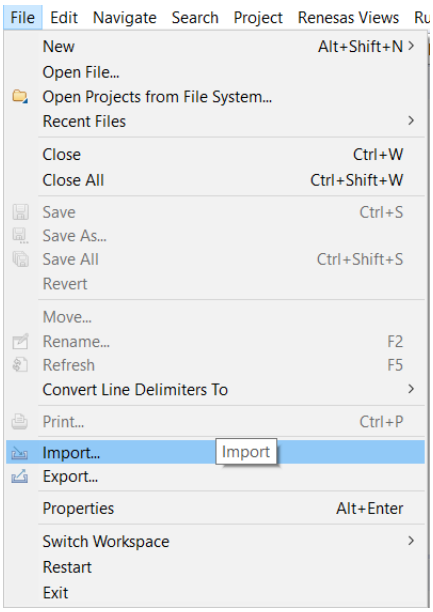

Figure 63: File drop-down menu

5. In the **Import** dialog box, as shown in the following figure, choose the **General** option, then **Existing Projects into Workspace**, to import the project into the current workspace.

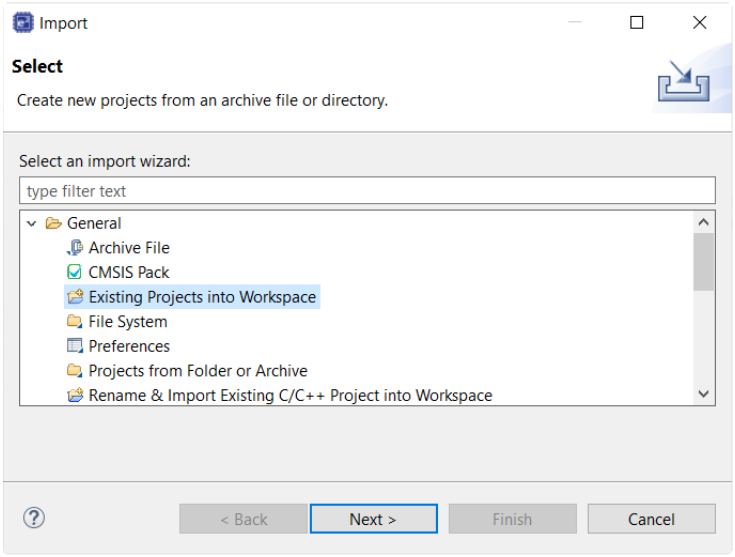

Figure 64: Project Import dialog with "Existing Projects into Workspace" option selected

6. Click **Next**.
7. To import the project, use either **Select archive file** or **Select root directory**.

    a. Click **Select archive file** as shown in the following figure.

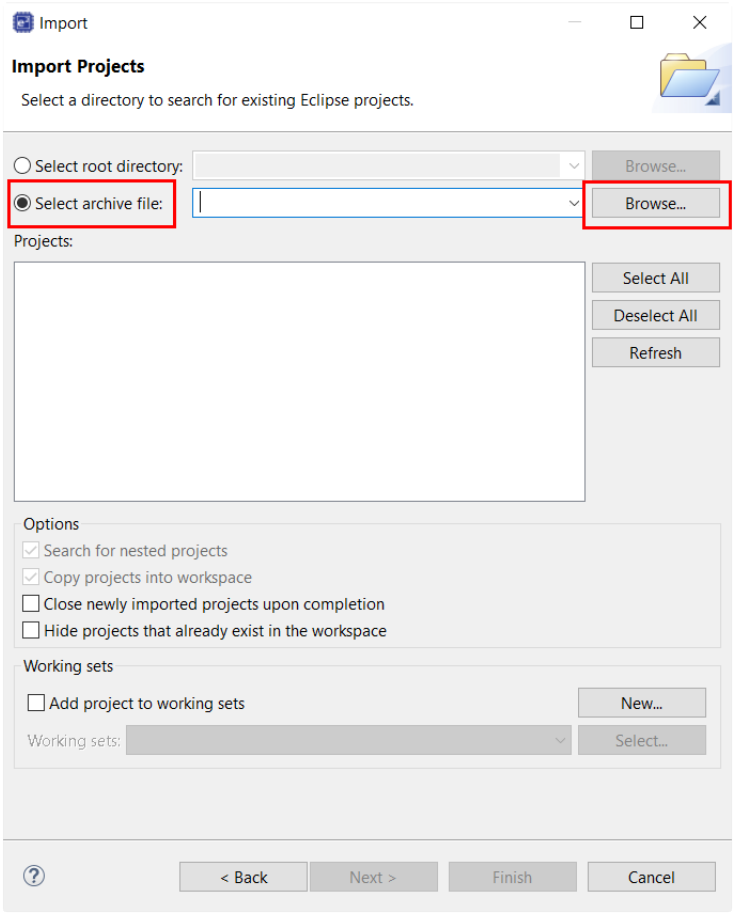

Figure 65: Import Existing Project dialog 1 - Select archive file

b. Click **Select root directory** as shown in the following figure.

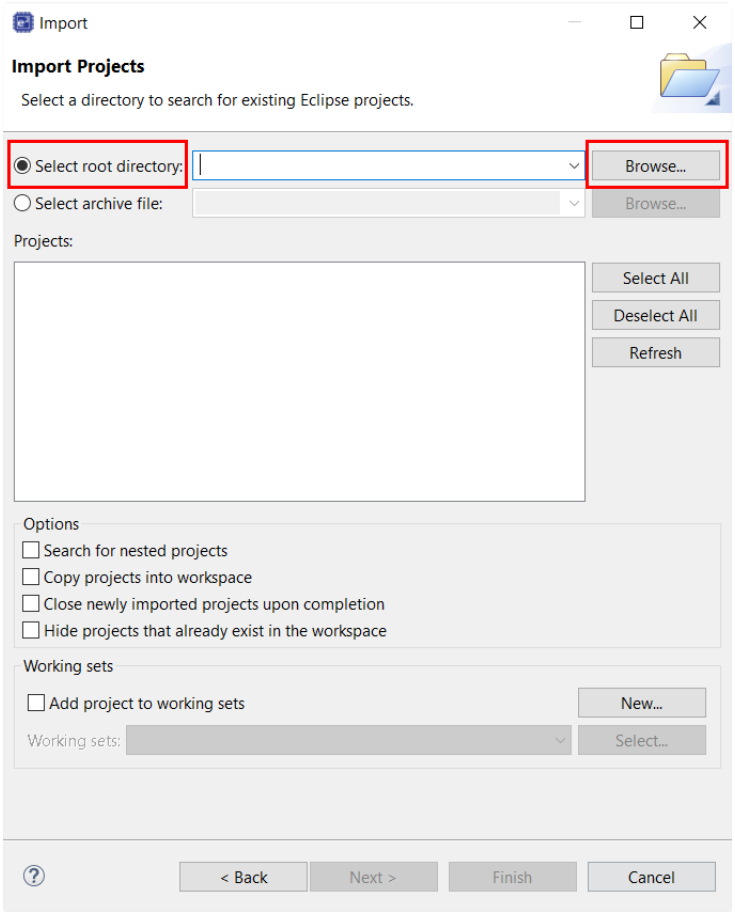

Figure 66: Import Existing Project dialog 1 - Select root directory

8. Click **Browse**.
9. For **Select archive file**, browse to the folder where the zip file for the project you want to import is located. For **Select root directory**, browse to the project folder that you want to import.
10. Select the file for import. In our example, it is CAN_HAL_MG_AP.zip or CAN_HAL_MG_AP.
11. Click **Open**.

12. Select the project to import from the list of **Projects**, as shown in the following figure.

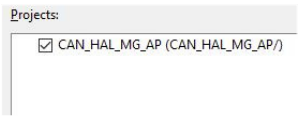

Figure 67: Import Existing Project dialog 2

13. Click **Finish** to import the project.

2.3 Tutorial: Your First RA MCU Project - Blinky

2.3.1 Tutorial Blinky

The goal of this tutorial is to quickly get acquainted with the Flexible Platform by moving through the

steps of creating a simple application using e2 studio and running that application on an RA MCU board.

2.3.2 What Does Blinky Do?

The application used in this tutorial is Blinky, traditionally the first program run in a new embedded development environment.

Blinky is the "Hello World" of microcontrollers. If the LED blinks you know that:

- The toolchain is setup correctly and builds a working executable image for your chip.
- The debugger has installed with working drivers and is properly connected to the board.
- The board is powered up and its jumper and switch settings are probably correct.
- The microcontroller is alive, the clocks are running, and the memory is initialized.

The Blinky example application used in this tutorial is designed to run the same way on all boards offered by Renesas that hold the RA microcontroller. The code in Blinky is completely board independent. It does the work by calling into the BSP (board support package) for the particular board it is running on. This works because:

- Every board has at least one LED connected to a GPIO pin.
- That one LED is always labelled LED1 on the silk screen.
- Every BSP supports an API that returns a list of LEDs on a board, and their port and pin assignments.

2.3.3 Prerequisites

To follow this tutorial, you need:

- Windows based PC
- e2 studio
- Flexible Software Package
- An RA MCU board kit

2.3.4 Create a New Project for Blinky

The creation and configuration of an RA MCU project is the first step in the creation of an application. The base RA MCU pack includes a pre-written Blinky example application that is simple and works on all Renesas RA MCU boards.

Follow these steps to create an RA MCU project:

1. In e2 studio, click **File > New > C/C++ Project** and select **Renesas RA** and **Renesas RA C/C++ Project**.
2. Assign a name to this new project. Blinky is a good name to use for this tutorial.

3. Click **Next**. The **Project Configuration** window shows your selection.

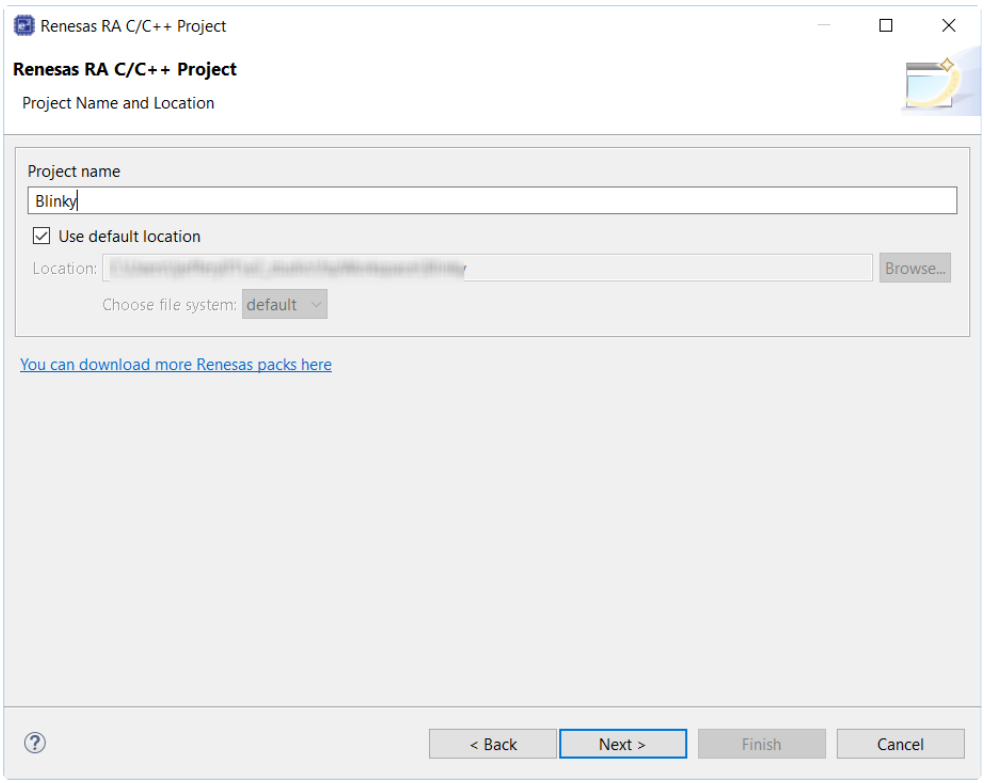

Figure 68: e2 studio Project Configuration window (part 1)

4. Select the board support package by selecting the name of your board from the **Device Selection** drop-down list and click **Next**.

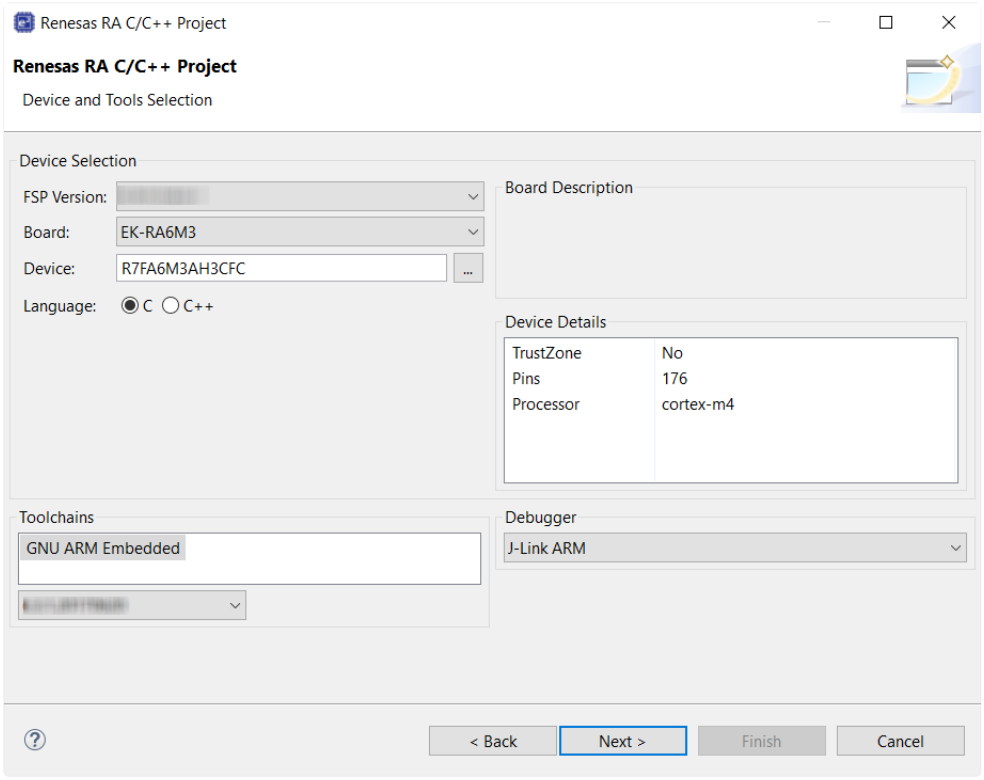

Figure 69: e2 studio Project Configuration window (part 2)

5. Select the build artifact and RTOS.

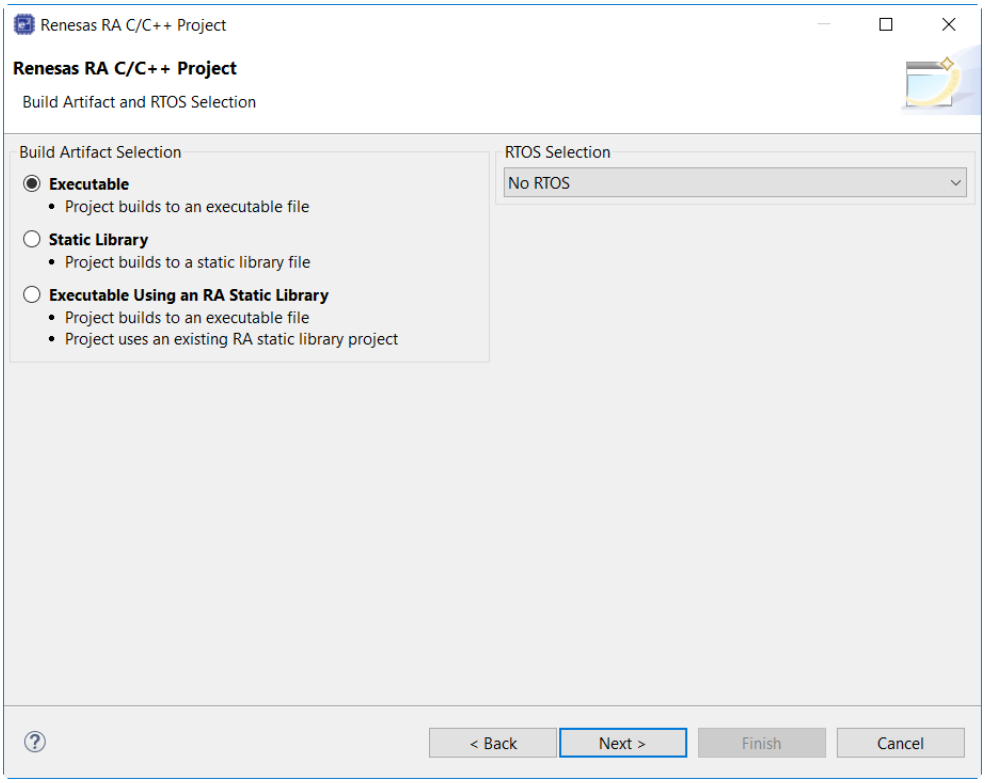

Figure 70: e2 studio Project Configuration window (part 3)

6. Select the Blinky template for your board and click **Finish**.

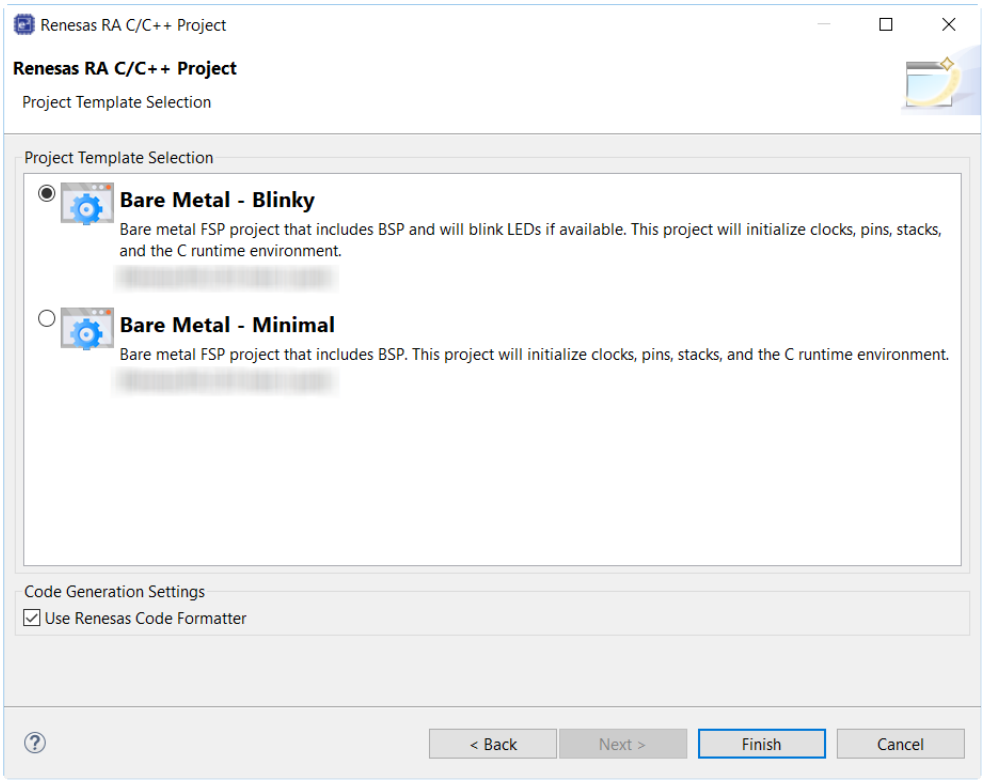

Figure 71: e2 studio Project Configuration window (part 4)

Once the project has been created, the name of the project will show up in the **Project Explorer** window of e2 studio. Now click the **Generate Project Content** button in the top right corner of the **Project Configuration** window to generate your board specific files.

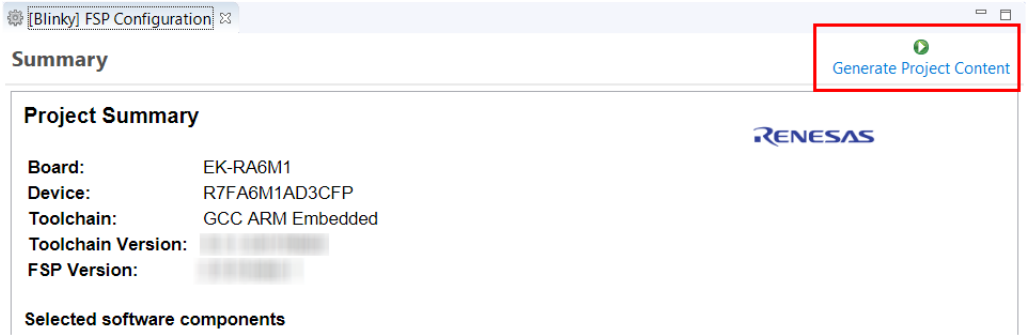

Figure 72: e2 studio Project Configuration tab

Your new project is now created, configured, and ready to build.

2.3.4.1 Details about the Blinky Configuration

The **Generate Project Content** button creates configuration header files, copies source files from templates, and generally configures the project based on the state of the **Project Configuration** screen.

For example, if you check a box next to a module in the **Components** tab and click the **Generate Project Content** button, all the files necessary for the inclusion of that module into the project will be copied or created. If that same check box is then unchecked those files will be deleted.

2.3.4.2 Configuring the Blinky Clocks

By selecting the Blinky template, the clocks are configured by e2 studio for the Blinky application. The clock configuration tab (see Configuring Clocks) shows the Blinky clock configuration. The Blinky clock configuration is stored in the BSP clock configuration file (see BSP Clock Configuration).

2.3.4.3 Configuring the Blinky Pins

By selecting the Blinky template, the GPIO pins used to toggle the LED1 are configured by e2 studio for the Blinky application. The pin configuration tab shows the pin configuration for the Blinky application (see Configuring Pins). The Blinky pin configuration is stored in the BSP configuration file (see BSP Pin Configuration).

2.3.4.4 Configuring the Parameters for Blinky Components

The Blinky project automatically selects the following HAL components in the Components tab:

- r_ioport

To see the configuration parameters for any of the components, check the **Properties** tab in the HAL window for the respective driver (see Adding and Configuring HAL Drivers).

2.3.4.5 Where is main()?

The main function is located in < project >/ra_gen/main.c. It is one of the files that are generated during the project creation stage and only contains a call to hal_entry(). For more information on generated files, see Adding and Configuring HAL Drivers.

2.3.4.6 Blinky Example Code

The blinky application is stored in the hal_entry.c file. This file is generated by e2 studio when you select the Blinky Project template and is located in the project's src/ folder.

The application performs the following steps:

1. Get the LED information for the selected board by bsp_leds_t structure.
2. Define the output level HIGH for the GPIO pins controlling the LEDs for the selected board.
3. Get the selected system clock speed and scale down the clock, so the LED toggling can be observed.
4. Toggle the LED by writing to the GPIO pin with R_BSP_PinWrite((bsp_io_port_pin_t) pin, pin_level);

2.3.5 Build the Blinky Project

Highlight the new project in the **Project Explorer** window by clicking on it and build it.

There are three ways to build a project:

1. Click on **Project** in the menu bar and select **Build Project**.
2. Click on the hammer icon.
3. Right-click on the project and select **Build Project**.

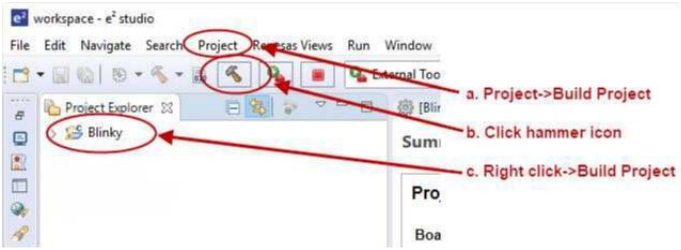

Figure 73: e2 studio Project Explorer window

Once the build is complete a message is displayed in the build **Console** window that displays the final image file name and section sizes in that image.

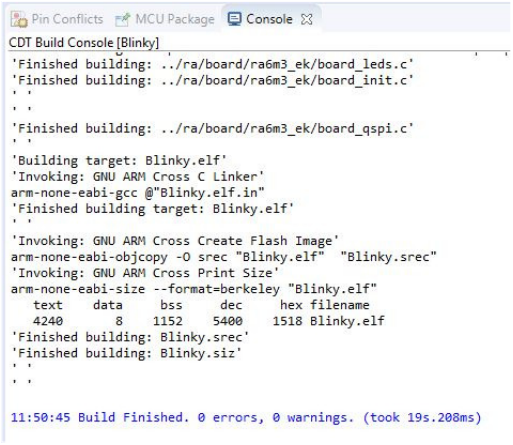

Figure 74: e2 studio Project Build console

2.3.6 Debug the Blinky Project

2.3.6.1 Debug prerequisites

To debug the project on a board, you need

- The board to be connected to e2 studio
- The debugger to be configured to talk to the board
- The application to be programmed to the microcontroller

Applications run from the internal flash of your microcontroller. To run or debug the application, the application must first be programmed to the microcontroller's flash. There are two ways to do this:

- JTAG debugger
- Built-in boot-loader via UART or USB

Some boards have an on-board JTAG debugger and others require an external JTAG debugger connected to a header on the board.

Refer to your board's user manual to learn how to connect the JTAG debugger to e2 studio.

2.3.6.2 Debug steps

To debug the Blinky application, follow these steps:

1. Configure the debugger for your project by clicking **Run > Debugger Configurations ...**

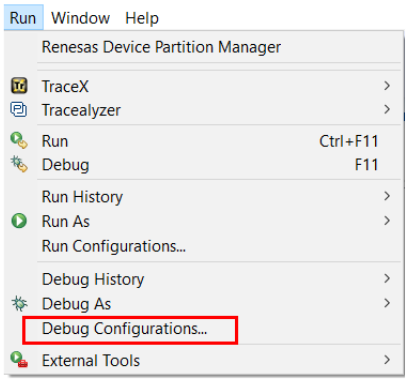

Figure 75: e2 studio Debug icon

or by selecting the drop-down menu next to the bug icon and selecting **Debugger Configurations ...**

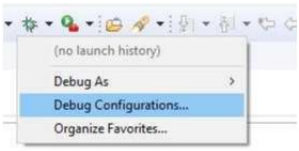

Figure 76: e2 studio Debugger Configurations selection option

2. Select your debugger configuration in the window. If it is not visible then it must be created by clicking the **New** icon in the top left corner of the window. Once selected, the **Debug Configuration** window displays the Debug configuration for your Blinky project.

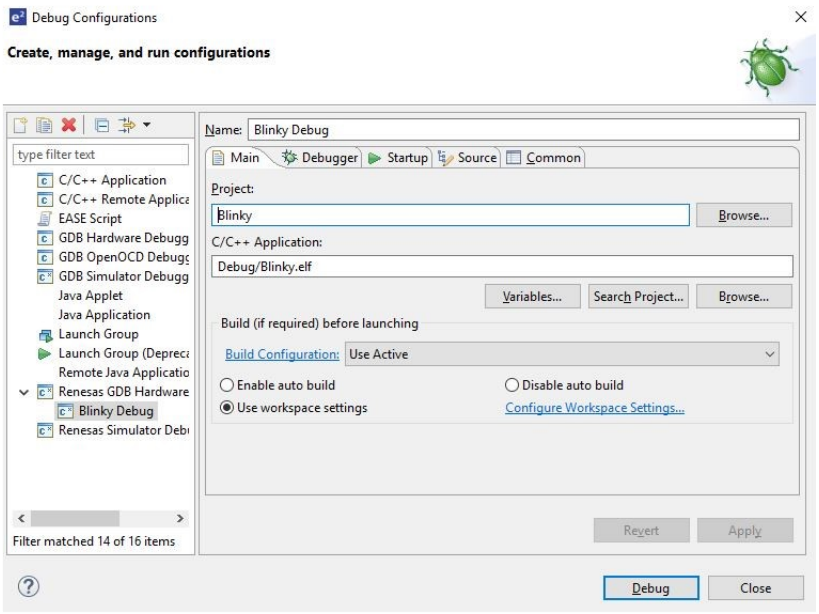

Figure 77: e2 studio Debugger Configurations window with Blinky project

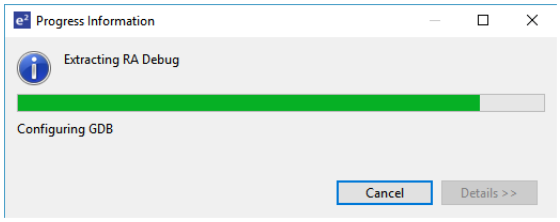
3. Click **Debug** to begin debugging the application.

4. Extracting RA Debug.



2.3.6.3 Details about the Debug Process

In debug mode, e2 studio executes the following tasks:

1. Downloading the application image to the microcontroller and programming the image to the internal flash memory.
2. Setting a breakpoint at main().
3. Setting the stack pointer register to the stack.
4. Loading the program counter register with the address of the reset vector.
5. Displaying the startup code where the program counter points to.

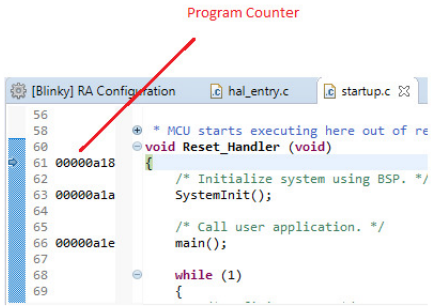


Figure 78: e2 studio Debugger memory window

2.3.7 Run the Blinky Project

While in Debug mode, click **Run > Resume** or click on the **Play** icon twice.

Figure 79: e2 studio Debugger Play icon

The LEDs on the board marked LED1, LED2, and LED3 should now be blinking.

2.4 Tutorial: Using HAL Drivers - Programming the WDT

2.4.1 Application WDT

This tutorial illustrates the creation of a simple application that uses the Watchdog Timer module to monitor program operation. The tutorial shows each step in the development process and in particular identifies the auto-generated files and project structure created when using FSP and its GUI based configurator. The level of detail provided here is more than is normally needed during development but can be helpful in explaining how FSP works behind the scenes to simplify your work.

This application makes use of the following FSP modules:

- MCU Board Support Package
- Watchdog Timer (r_wdt)
- I/O Ports (r_ioport)

2.4.2 Creating a WDT Application Using the RA MCU FSP and e2 studio

2.4.2.1 Using the FSP and e2 studio

The Flexible Software Package (FSP) from Renesas provides a complete driver library for developing RA MCU applications. The FSP provides Hardware Abstraction Layer (HAL) drivers, Board Support Package (BSP) drivers for the developer to use to create applications. The FSP is integrated into Renesas e2 studio based on eclipse providing build (editor, compiler and linker) and debug phases with an extended GNU Debug (GDB) interface.

2.4.2.2 The WDT Application

The flowchart for the WDT application is shown below.

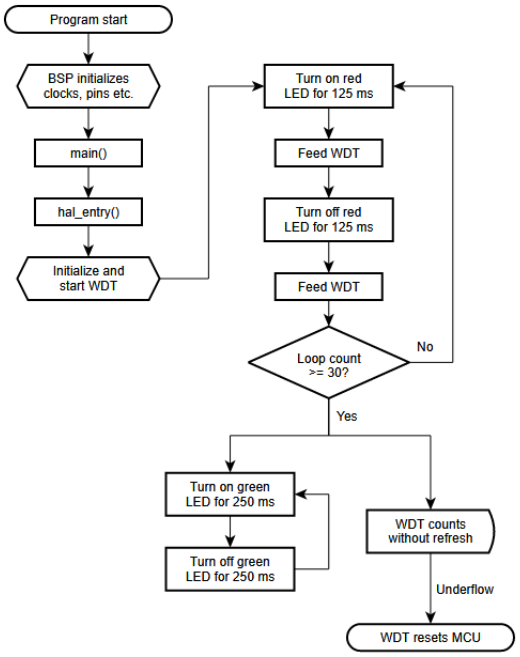

Figure 80: WDT Application flow diagram

2.4.2.3 WDT Application flow

The main sections of the WDT application are:

1. The BSP initializes the clocks, pins and other elements of the MCU readying the application to run.
2. main() calls hal_entry(). The function hal_entry() is created by the FSP with a placeholder for user code. The code for the WDT is added to this function.
3. Initialize the WDT, but do not start it.
4. Start the WDT by refreshing it.
5. In the first loop the red LED flashes 30 times and refreshes the watchdog each time the LED state is changed.
6. In the second loop, the green LED flashes, but the program DOES NOT refresh the watchdog. After the watchdog timeout period the device will reset which can be observed by the red LED flashing again as the sequence repeats.

2.4.3 Creating the Project with e2 studio

Start e2 studio and choose a workspace folder in the Workspace Launcher. Configure a new RA MCU project as follows.

1. Select **File > New > RA C/C++ Project**. Then select the template for the project.

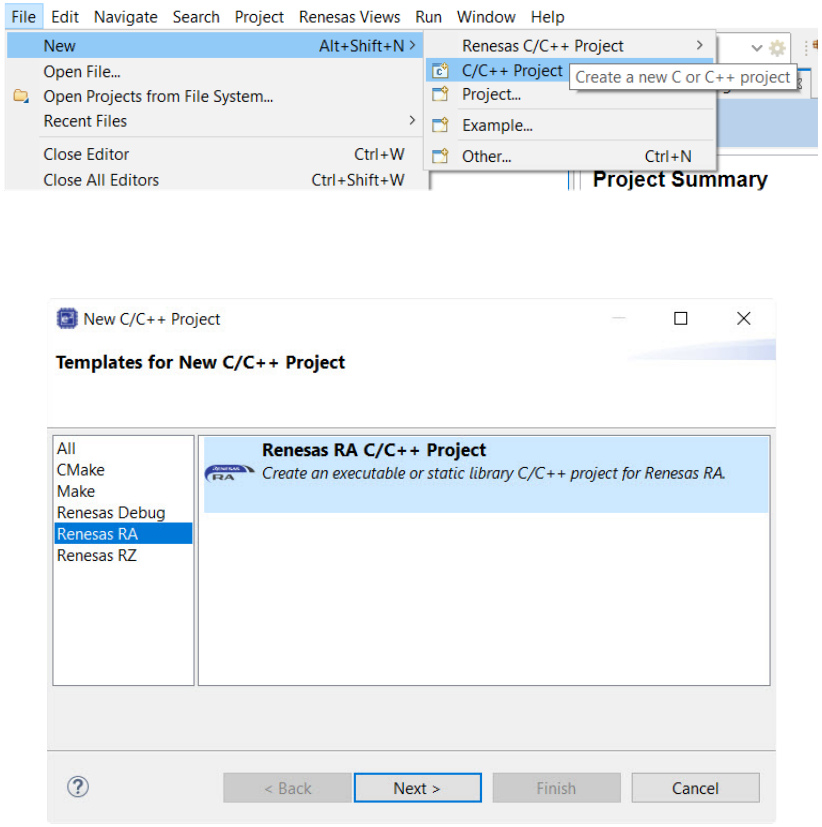

Figure 81: Creating a new project

2. In the e2 studio Project **Configuration (RA Project)** window enter a project name, for example, WDT_Application. In addition, select the toolchain. If you want to choose new locations for the project unselect **Use default location**. Click **Next**.

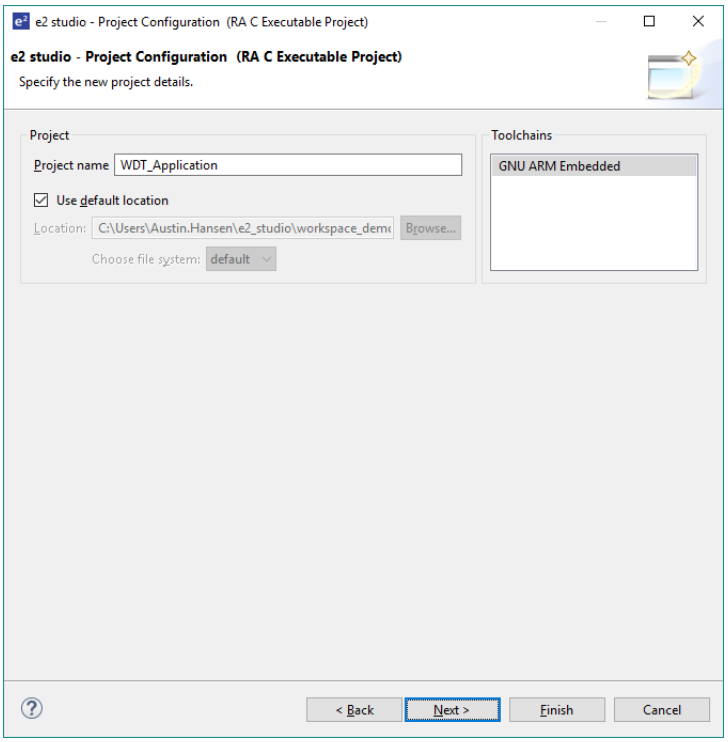

Figure 82: Project configuration (part 1)

3. This application runs on the EK-RA6M3 board. So, for the **Board** select **EK-RA6M3**.

   This will automatically populate the **Device** drop-down with the correct device used on this board. Select the **Toolchain** version. Select **J-Link ARM** as the **Debugger**. Click **Next** to configure the project.

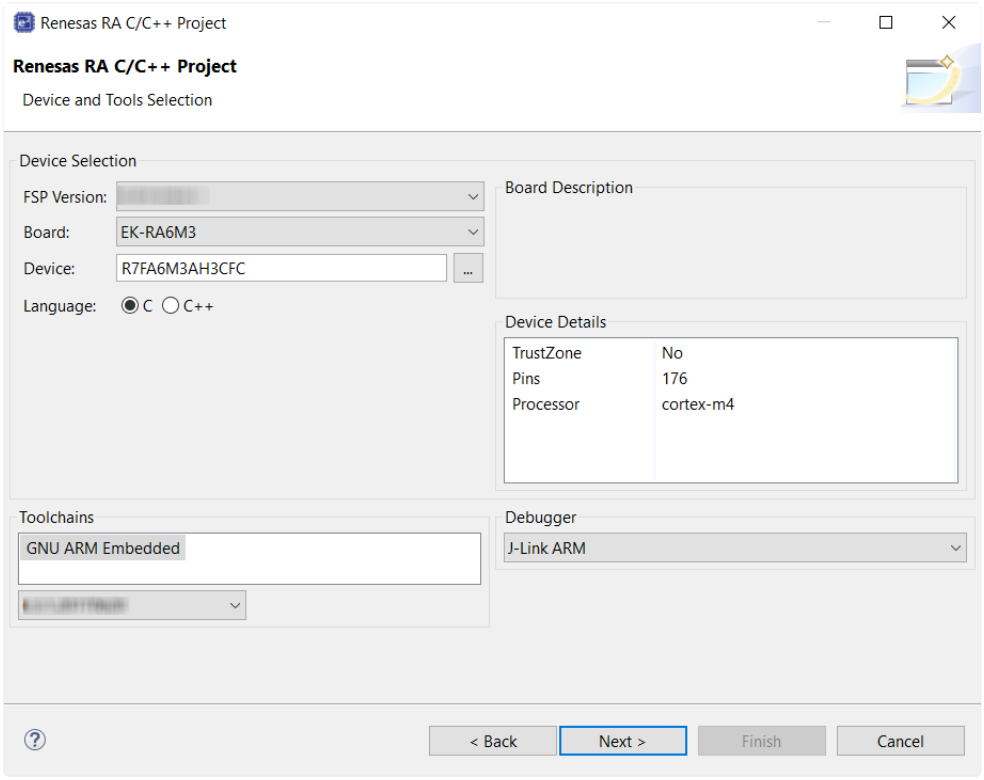

Figure 83: Project configuration (part 2)

The project template is now selected. As no RTOS is required select **Bare Metal - Blinky**.

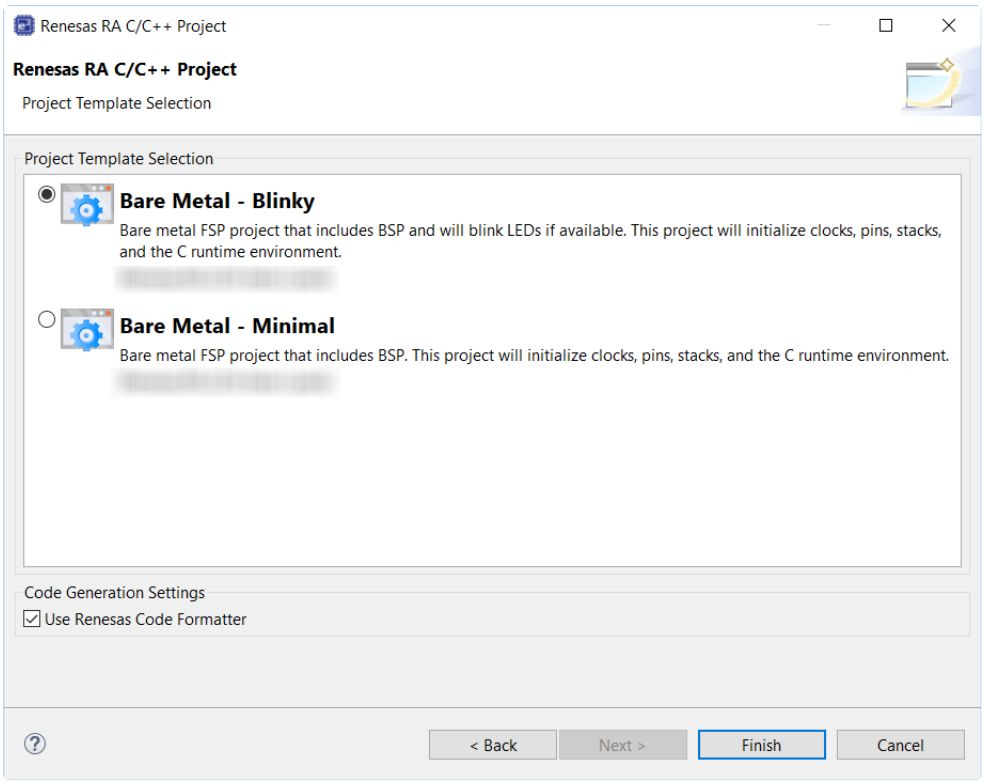

Figure 84: Project configuration (part 3)

4. Click **Finish**.

   e2 studio creates the project and opens the **Project Explorer** and **Project Configuration Settings** views with the **Summary** page showing a summary of the project configuration.

2.4.4 Configuring the Project with e2 studio

e2 studio simplifies and accelerates the project configuration process by providing a GUI interface for selecting the options to configure the project.

e2 studio offers a selection of perspectives presenting different windows to the user depending on the operation in progress. The default perspectives are **C/C++**, **FSP Configuration** and **Debug**. The perspective can be changed by selecting a new one from the buttons at the top right.

Figure 85: Selecting a perspective

The **C/C++** perspective provides a layout selected for code editing. The **FSP Configuration** perspective provides elements for configuring a RA MCU project, and the **Debug** perspective provides a view suited for debugging.

1. In order to configure the project settings ensure the **FSP Configuration** perspective is selected.
2. Ensure the **Project Configuration [WDT Application]** is open. It is already open if the Summary information is visible. To open the Project Configuration now or at any time make sure the **RA Configuration** perspective is selected and double-click on the configuration.xml file in the Project Explorer pane on the right side of e2 studio.

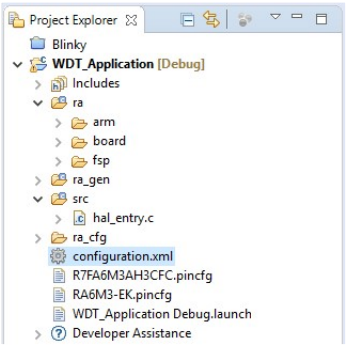

Figure 86: RA MCU Project Configuration Settings

At the base of the Project Configuration view there are several tabs for configuring the project. A project may require changes to some or all of these tabs. The tabs are shown below.

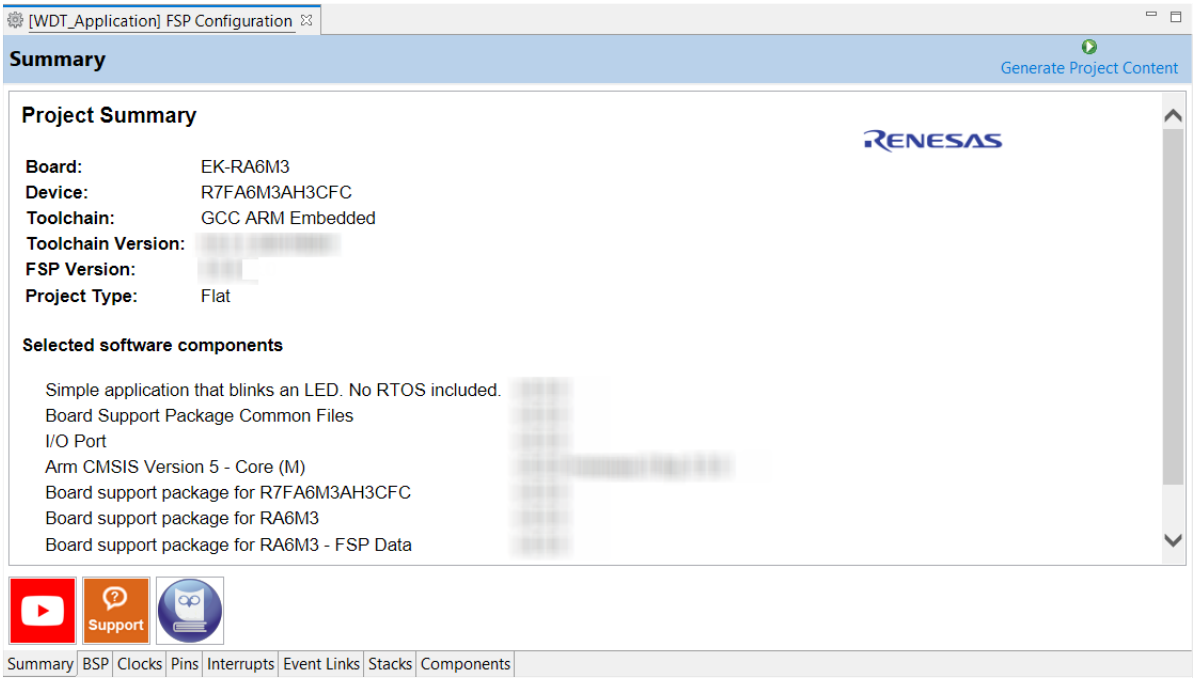

Figure 87: Project Configuration Tabs

2.4.4.1 BSP Tab

The **BSP** tab allows the Board Support Package (BSP) options to be modified from their defaults. For this particular WDT project no changes are required. However, if you want to use the WDT in auto-start mode, you can configure the settings of the OFS0 (Option Function Select Register 0) register in the **BSP** tab. See the RA Hardware User's Manual for details on the WDT autostart mode.

2.4.4.2 Clocks Tab

The **Clocks** tab presents a graphical view of the clock tree of the device. The drop-down boxes in the GUI enables configuration of the various clocks. The WDT uses PCLCKB. The default output frequency for this clock is 60 MHz. Ensure this clock is outputting this value.

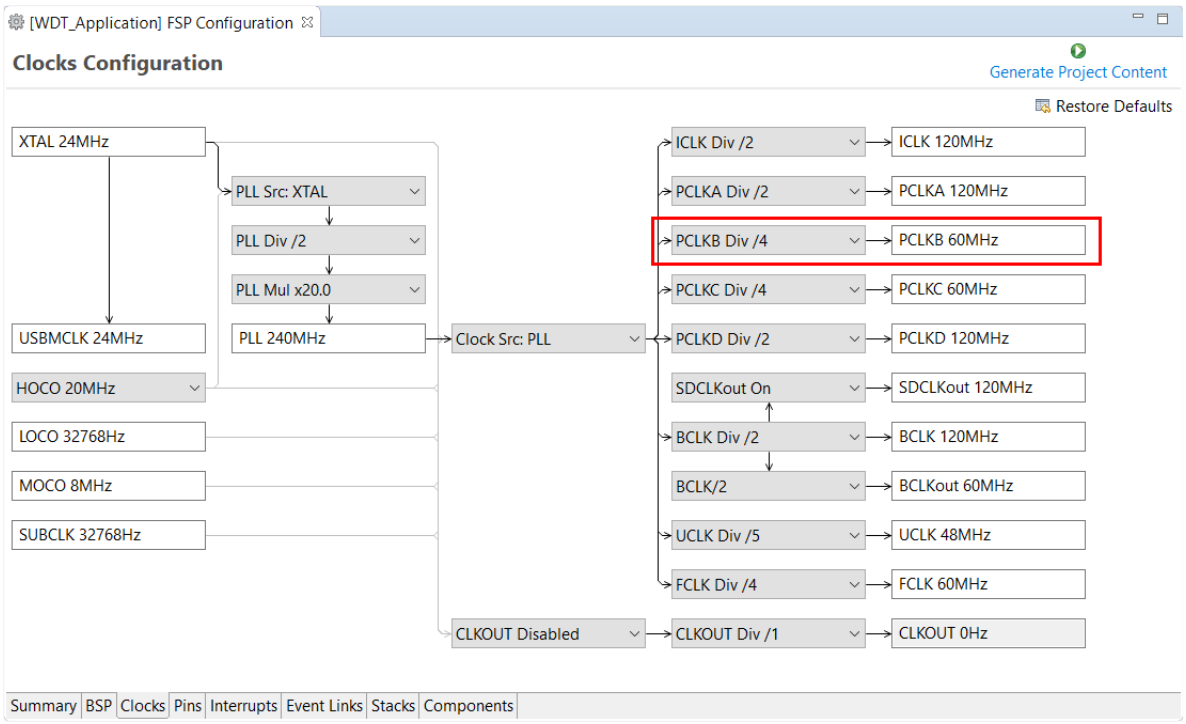

Figure 88: Clock configuration

2.4.4.3 Interrupts Tab

The **Interrupts** tab is used to add new user events or interrupts. No new interrupts or events are needed by the application, so no edits in this tab are required.

2.4.4.4 Event Links Tab

The **Event Links** tab is used to configure events used by the Event Link Controller (ELC). This project doesn't use the ELC, so no edits in this tab are required.

2.4.4.5 Pins Tab

The **Pins** tab provides a graphical tool for configuring the functionality of the pins of the device. For the WDT project no pin configuration is required. Although the project uses two LEDs connected to pins on the device, these pins are pre-configured as output GPIO pins by the BSP.

2.4.4.6 Stacks Tab

You can add any driver to the project using the **Stacks** tab. The HAL driver IO port pins are added automatically by e2 studio when the project is configured. The WDT application uses no RTOS Resources, so you only need to add the HAL WDT driver.

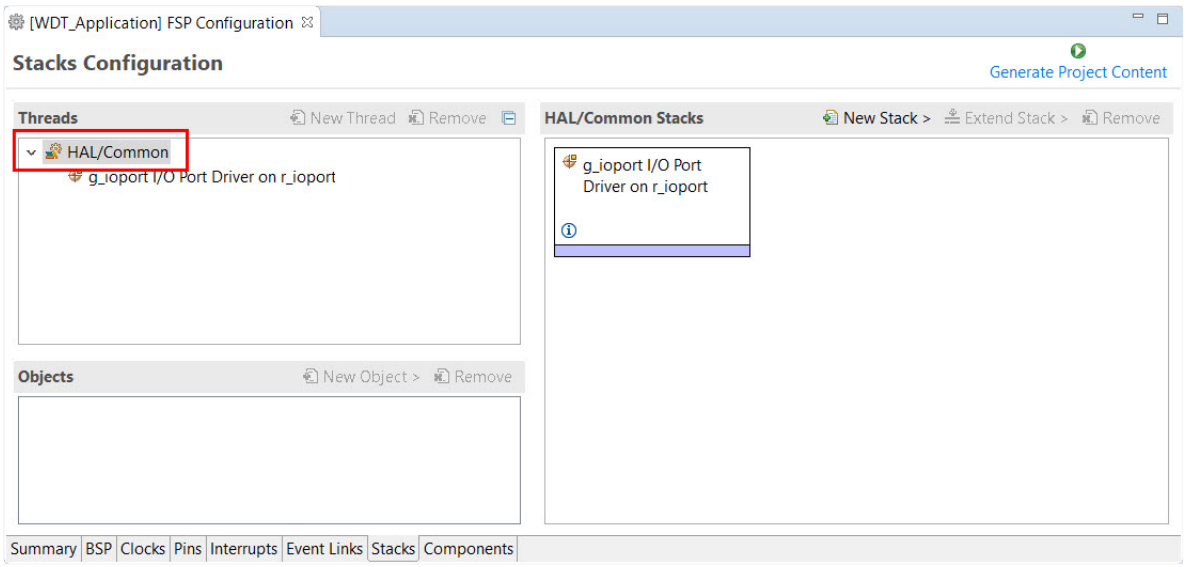

Figure 89: Stacks tab

1. Click on the **HAL/Common Panel** in the Threads Window as indicated in the figure above.

   The Stacks Panel becomes a **HAL/Common Stacks** panel and is populated with the modules preselected by e2 studio.

2. Click on **New Stack** to find a pop-up window with the available HAL level drivers.
3. Select **WATCHDOG Driver on r_wdt**.

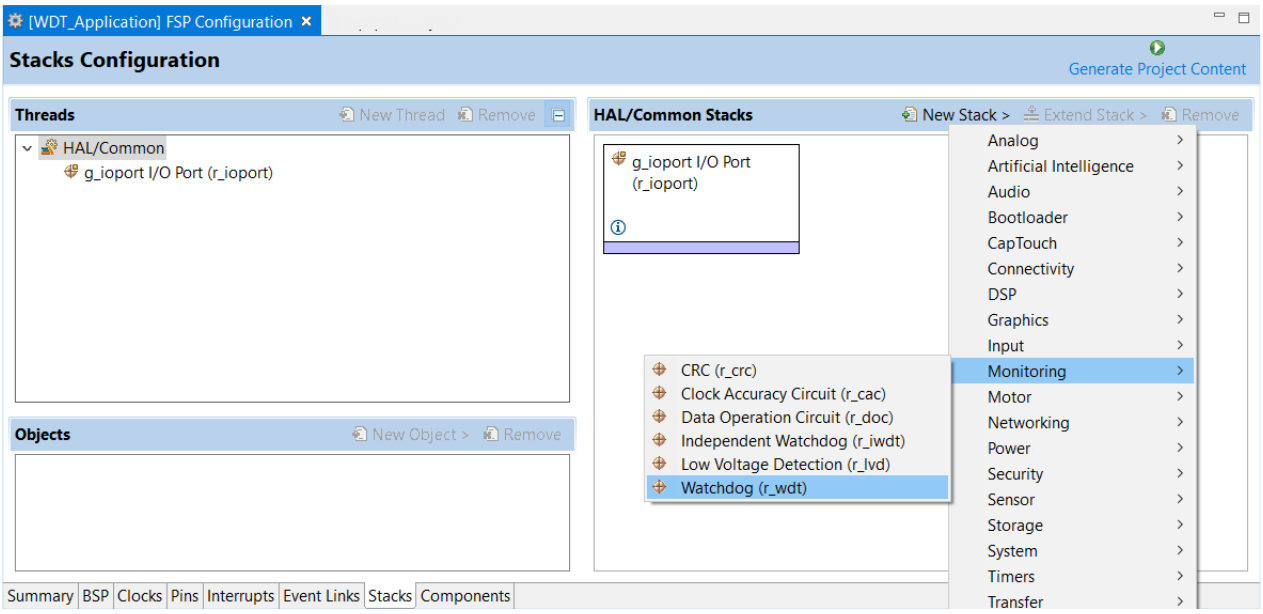

Figure 90: Module Selection

The selected HAL WDT driver is added to the **HAL/Common Stacks** Panel and the **Property** Window shows all configuration options for the selected module. The **Property** tab for the WDT should be visible at the bottom left of the screen. If it is not visible, check that the **FSP Configuration** perspective is selected.

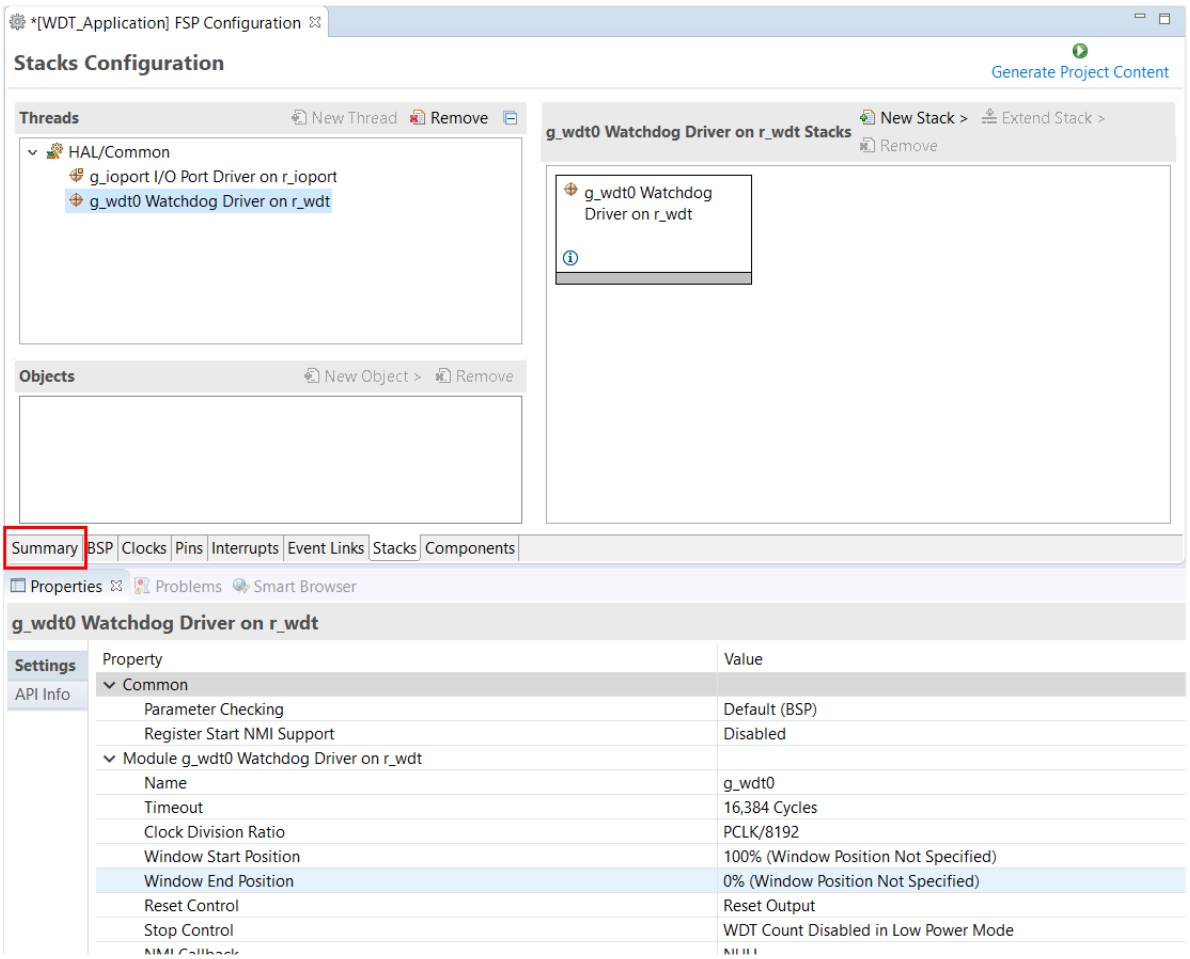

Figure 91: Module Properties

All parameters can be left with their default values.

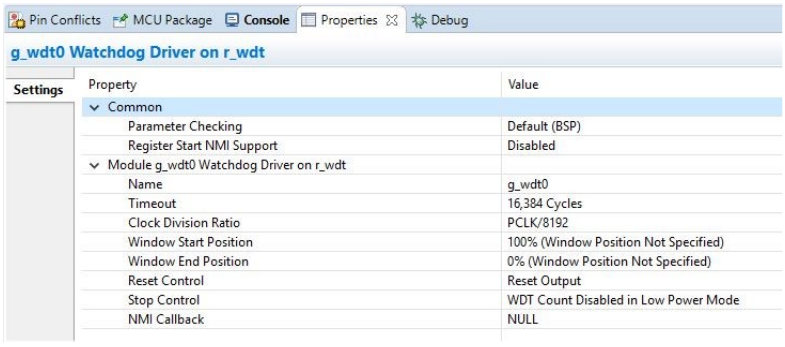

Figure 92: g_wdt WATCHDOG Driver on WDT properties

With PCLKB running at 60 MHz the WDT will reset the device 2.23 seconds after the last refresh.

WDT clock = 60 MHz / 8192 = 7.32 kHz

Cycle time = 1 / 7.324 kHz = 136.53 us

Timeout = 136.53 us x 16384 = 2.23 seconds

Save the **Project Configuration** file and click the **Generate Project Content** button in the top right corner of the **Project Configuration** pane.

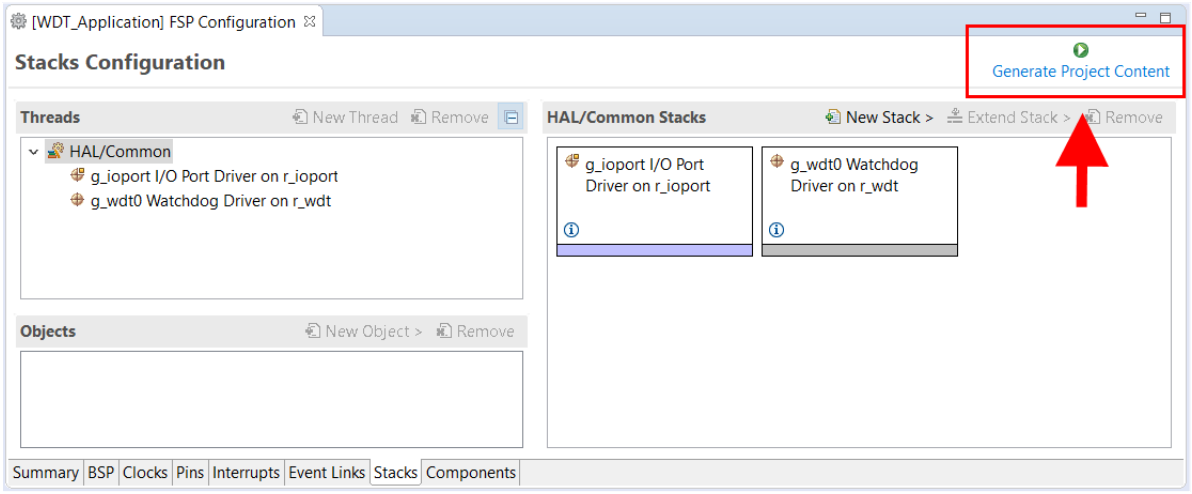

Figure 93: Generate Project Content button

e2 studio generates the project files.

2.4.4.7 Components Tab

The components tab is included for reference to see which modules are included in the project. Modules are selected automatically in the Components view after they are added in the Stacks Tab.

For the WDT project ensure that the following modules are selected:

1. HAL_Drivers -> r_ioport
2. HAL_Drivers -> r_wdt

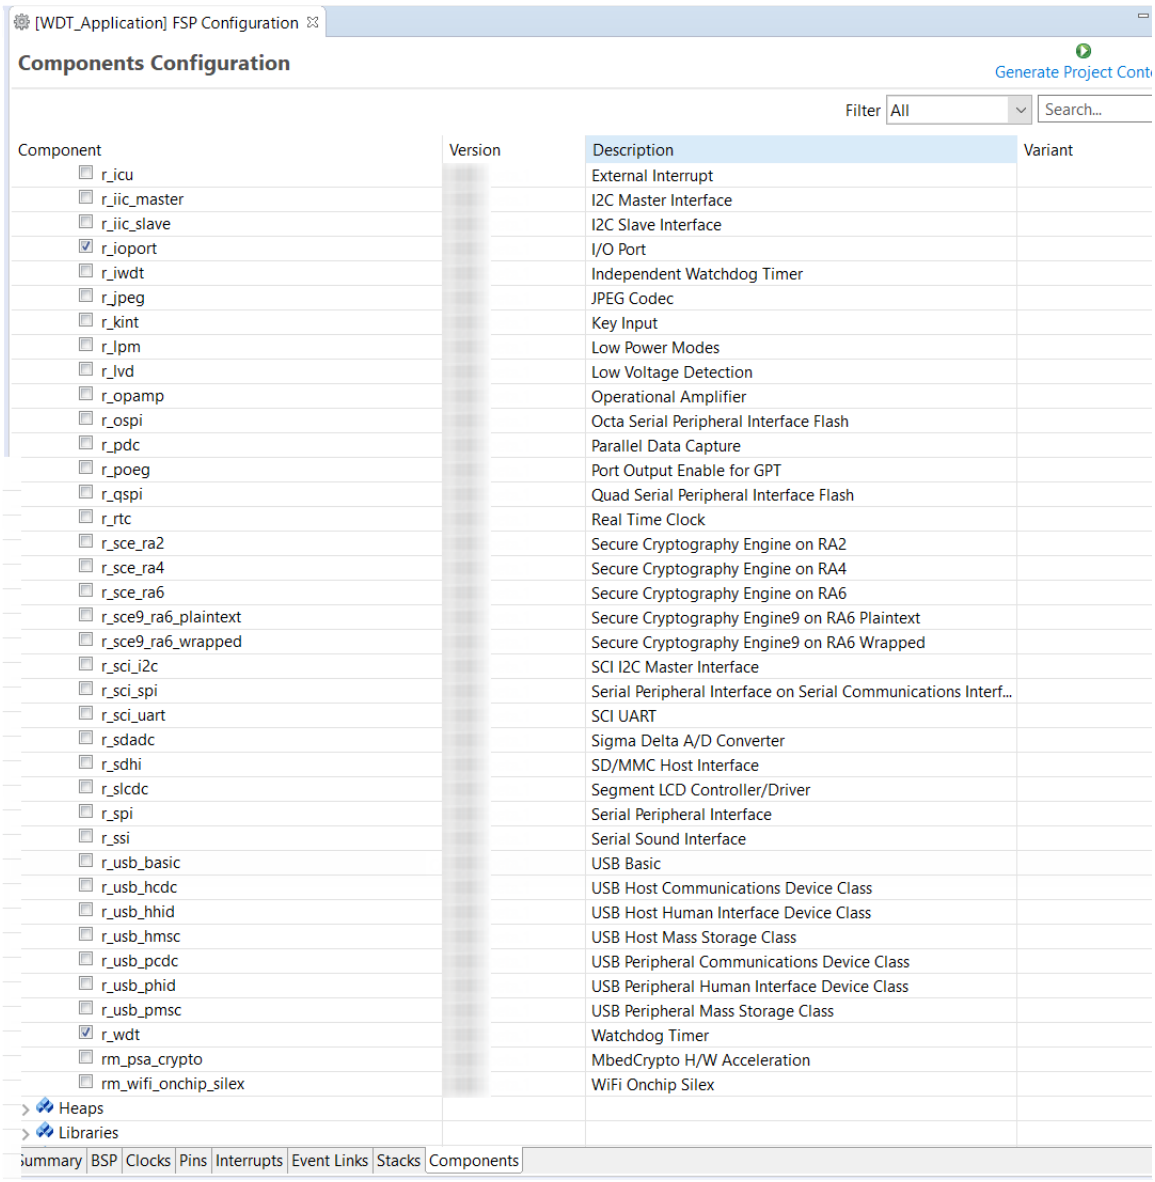

Figure 94: Component Selection

Note

The list of modules displayed in the Components tab depends on the installed FSP version.

The versioning scheme used on the Components tab is described in Module Versioning.

2.4.5 WDT Generated Project Files

Clicking the Generate Project Content button performs the following tasks.

- r_wdt folder and WDT driver contents created at:

  ra/fsp/src

- r_wdt_api.h created in:

ra/fsp/inc/api

- r_wdt.h created in:

  ra/fsp/inc/instances

The above files are the standard files for the WDT HAL module. They contain no specific project contents. They are the driver files for the WDT. Further information on the contents of these files can be found in the documentation for the WDT HAL module.

Configuration information for the WDT HAL module in the WDT project is found in:

ra_cfg/fsp_cfg/r_wdt_cfg.h

The above file's contents are based upon the **Common** settings in the **g_wdt WATCHDOG Driver on WDT Properties** pane.

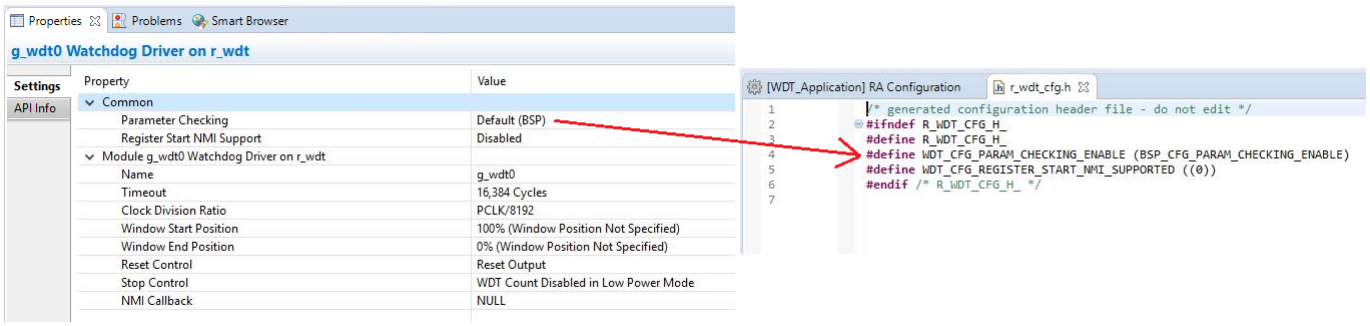

Figure 95: r_wdt_cfg.h contents

Warning

Do not edit any of these files as they are recreated every time the Generate Project Content button is clicked and so any changes will be overwritten.

The r_ioport folder is not created at ra/fsp/src as this module is required by the BSP and so already exists. It is included in the WDT project in order to include the correct header file in ra_gen/hal_data.c–see later in this document for further details. For the same reason the other IOPORT header files– ra/fsp/inc/api/r_ioport_api.handra/fsp/inc/instances/r_ioport.h–are not created as they already exist.

In addition to generating the HAL driver files for the WDT and IOPORT files e2 studio also generates files containing configuration data for the WDT and a file where user code can safely be added. These files are shown below.

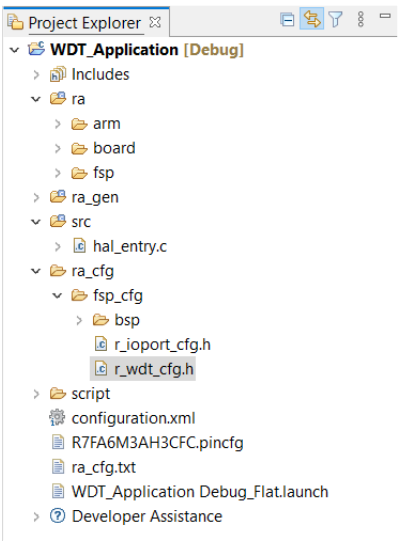

Figure 96: WDT project files

2.4.5.1 WDT hal_data.h

The contents of hal_data.h are shown below.

```
/* generated HAL header file - do not edit */
#ifndef HAL_DATA_H_
 #define HAL_DATA_H_
 #include <stdint.h>
 #include "bsp_api.h"
 #include "common_data.h"
 #include "r_wdt.h"
 #include "r_wdt_api.h"
 #ifdef __cplusplus
extern "C"
{
 #endif
extern const wdt_instance_t g_wdt0;
 #ifndef NULL
void NULL(wdt_callback_args_t * p_args);
 #endif
extern wdt_instance_ctrl_t g_wdt0_ctrl;
extern const wdt_cfg_t g_wdt0_cfg;
void hal_entry(void);
```

```
void g_hal_init(void);
 #ifdef __cplusplus
} /* extern "C" */
 #endif
#endif  /* HAL_DATA_H_ */
```

hal_data.h contains the header files required by the generated project. In addition this file includes external references to the **g_wdt0** instance structure which contains pointers to the configuration, control, api structures used for WDT HAL driver.

Warning

This file is regenerated each time Generate Project Content is clicked and must not be edited.

2.4.5.2 WDT hal_data.c

The contents of hal_data.c are shown below.

```
/* generated HAL source file - do not edit */
#include "hal_data.h"
wdt_instance_ctrl_t g_wdt0_ctrl;
const wdt_cfg_t g_wdt0_cfg =
{
    .timeout       = WDT_TIMEOUT_16384,
    .clock_division = WDT_CLOCK_DIVISION_8192,
    .window_start   = WDT_WINDOW_START_100,
    .window_end    = WDT_WINDOW_END_0,
    .reset_control = WDT_RESET_CONTROL_RESET,
    .stop_control   = WDT_STOP_CONTROL_ENABLE,
    .p_callback    = NULL,
};
/* Instance structure to use this module. */
const wdt_instance_t g_wdt0 =
{.p_ctrl = &g_wdt0_ctrl, .p_cfg = &g_wdt0_cfg, .p_api = &g_wdt_on_wdt};
void g_hal_init (void)
{
    g_common_init();
}
```

hal_data.c contains g_wdt0_ctrl which is the control structure for this instance of the WDT HAL driver. This structure should not be initialized as this is done by the driver when it is opened.

The contents of g_wdt0_cfg are populated in this file using the **Watchdog Driver on g_wdt0** pane in the Project Configuration **Stacks** tab. If the contents of this structure do not reflect the settings made in the IDE, ensure the **Project Configuration** settings are saved before clicking the **Generate Project Content** button.

Warning

This file is regenerated each time Generate Project Content is clicked and so should not be edited.

2.4.5.3 WDT main.c

Contains main() called by the BSP start-up code. main() calls hal_entry() which contains user developed code (see next file). Here are the contents of main.c.

```
/* generated main source file - do not edit*/
#include "hal_data.h"
int main (void)
{
    hal_entry();
 return 0;
}
```

Warning

This file is regenerated each time Generate Project Content is clicked and so should not be edited.

2.4.5.4 WDT hal_entry.c

This file contains the function hal_entry() called from main(). User developed code should be placed in this file and function.

For the WDT project edit the contents of this file to contain the code below. This code implements the flowchart in overview section of this document.

```
#include "hal_data.h"
#include "bsp_pin_cfg.h"
#include "r_ioport.h"
#define RED_LED_NO_OF_FLASHES 30
#define RED_LED_PIN BSP_IO_PORT_01_PIN_00
```

```
#define GREEN_LED_PIN BSP_IO_PORT_04_PIN_00
#define RED_LED_DELAY_MS 125
#define GREEN_LED_DELAY_MS 250
volatile uint32_t delay_counter;
volatile uint16_t loop_counter;
void R_BSP_WarmStart(bsp_warm_start_event_t event);
/*******************************************************************************
*******************************/
void hal_entry (void)
{
 /* Allow the WDT to run when the debugger is connected */
    R_DEBUG->DBGSTOPCR_b.DBGSTOP_WDT = 0;
 /* Open the WDT */
 R_WDT_Open(&g_wdt0_ctrl, &g_wdt0_cfg);
 /* Start the WDT by refreshing it */
 R_WDT_Refresh(&g_wdt0_ctrl);
 /* Flash the red LED and feed the WDT for a few seconds */
 for (loop_counter = 0; loop_counter < RED_LED_NO_OF_FLASHES; loop_counter++)
    {
 /* Turn red LED on */
 R_IOPORT_PinWrite(&g_ioport_ctrl, RED_LED_PIN, BSP_IO_LEVEL_LOW);
 /* Delay */
 R_BSP_SoftwareDelay(RED_LED_DELAY_MS, BSP_DELAY_UNITS_MILLISECONDS);
 /* Refresh WDT */
 R_WDT_Refresh(&g_wdt0_ctrl);
 R_IOPORT_PinWrite(&g_ioport_ctrl, RED_LED_PIN, BSP_IO_LEVEL_HIGH);
 /* Delay */
 R_BSP_SoftwareDelay(RED_LED_DELAY_MS, BSP_DELAY_UNITS_MILLISECONDS);
 /* Refresh WDT */
 R_WDT_Refresh(&g_wdt0_ctrl);
    }
 /* Flash green LED but STOP feeding the WDT. WDT should reset the
  * device */
 while (1)
```

```
    {
 /* Turn green LED on */
 R_IOPORT_PinWrite(&g_ioport_ctrl, GREEN_LED_PIN, BSP_IO_LEVEL_LOW);
 /* Delay */
 R_BSP_SoftwareDelay(GREEN_LED_DELAY_MS, BSP_DELAY_UNITS_MILLISECONDS);
 /* Turn green off */
 R_IOPORT_PinWrite(&g_ioport_ctrl, GREEN_LED_PIN, BSP_IO_LEVEL_HIGH);
 /* Delay */
 R_BSP_SoftwareDelay(GREEN_LED_DELAY_MS, BSP_DELAY_UNITS_MILLISECONDS);
    }
}
/**********************************************************************************
*******************************/
void R_BSP_WarmStart (bsp_warm_start_event_t event)
{
 if (BSP_WARM_START_RESET == event)
    {
#if BSP_FEATURE_FLASH_LP_VERSION != 0
 /* Enable reading from data flash. */
       R_FACI_LP->DFLCTL = 1U;
 /* Would normally have to wait for tDSTOP(6us) for data flash recovery. Placing the
enable here, before clock and
  * C runtime initialization, should negate the need for a delay since the
initialization will typically take more than 6us. */
#endif
    }
 if (BSP_WARM_START_POST_C == event)
    {
 /* C runtime environment and system clocks are setup. */
 /* Configure pins. */
 R_IOPORT_Open(&g_ioport_ctrl, &g_bsp_pin_cfg);
    }
}
```

The WDT HAL driver API functions are defined in r_wdt.h. The WDT HAL driver is opened through the open API call using the instance structure defined in r_wdt_api.h:

```
/* Open the WDT */
R_WDT_Open(&g_wdt0_ctrl, &g_wdt0_cfg);
```

The first passed parameter is the pointer to the control structure g_wdt0_ctrl instantiated in hal_data.c. The second parameter is the pointer to the configuration data g_wdto_cfg instantiated in the same hal_data.c file.

The WDT is started and refreshed through the API call:

```
/* Start the WDT by refreshing it */
R_WDT_Refresh(&g_wdt0_ctrl);
```

Again the first (and only in this case) parameter passed to this API is the pointer to the control structure of this instance of the driver.

2.4.6 Building and Testing the Project

Build the project in e2 studio by clicking **Build > Build Project** or by clicking the build icon. The project should build without errors.

To debug the project

1. Connect the USB cable between the target board debug port and host PC.
2. In the **Project Explorer** pane on the left side of e2 studio, right-click on the WDT project **WDT_Application** and select **Debug As > Debug Configurations**.

3. Under **Renesas GDB Hardware Debugging** select **WDT_Application Debug** as shown below.

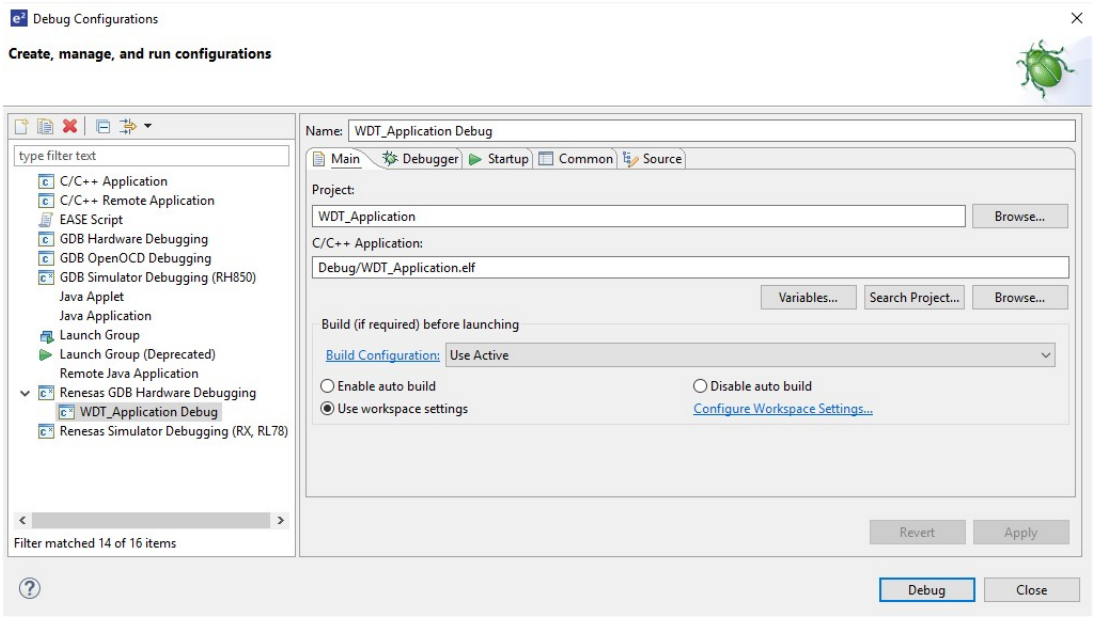

Figure 97: Debug configuration

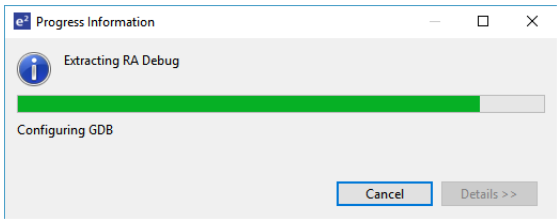
4. Click the **Debug** button. Click Yes to the debug perspective if asked.



5. The code should run the Reset_Handler() function.
6. Resume execution via **Run > Resume**. Execution will stop in main() at the call to hal_entry().
7. Resume execution again.

The red LED should start flashing. After 30 flashes the green LED will start flashing and the red LED will stop flashing.

While the green LED is flashing the WDT will underflow and reset the device resulting in the red LED to flash again as the sequence repeats.

1. Stop the debugger in e2 studio via **Run > Terminate**.
2. Click the reset button on the target board. The LEDs begin flashing.

2.5 Primer: ARM® TrustZone® Project Development

This section will introduce the user to the tools supporting ARM® TrustZone® configuration for the RA Family of microcontrollers. It is intended to be read by development engineers implementing RA ARM® TrustZone® projects for the first time. It will introduce basic concepts followed by workflow

and tooling functions designed to simplify and accelerate their first ARM® TrustZone® development. A background knowledge of e^2 studio and RA device hardware is expected.

Target Device

RA Cortex®-M33 or Cortex®-M23 devices with ARM® TrustZone® security extension.

2.5.1 Renesas Implementation of ARM® TrustZone® Technology

For brevity, ARM® TrustZone® will be abbreviated to TZ in this document.

The following section is supplied for reference only. For full details of TZ implementation, refer to Arm documentation (https://developer.arm.com/ip-products/security-ip/trustzone) and the RA6M4 device manual.

Arm TZ technology divides the MCU and therefore the application into Secure and Non-Secure partitions. Secure applications can access both Secure and Non-Secure memory and resources. Non-Secure code can access Non-Secure memory and resources as well as Secure resources through a set of so-called veneers located in the Non-Secure Callable (NSC) region. This ensures a single access point for Secure code when called from the Non-Secure partition. The MCU starts up in the Secure partition by default. The security state of the CPU can be either Secure or Non-Secure.

The MCU code flash, data flash, and SRAM are divided into Secure (S) and Non-Secure (NS) regions. Code flash and SRAM include a further region known as Non-Secure Callable (NSC). These memory security attributes are set into the non-volatile memory via SCI or USB boot mode commands when the device lifecycle is Secure Software Debug (SSD) state. The memory security attributes are loaded into the Implementation Defined Attribution Unit (IDAU) peripheral and the memory controller before application execution and cannot be updated by application code.

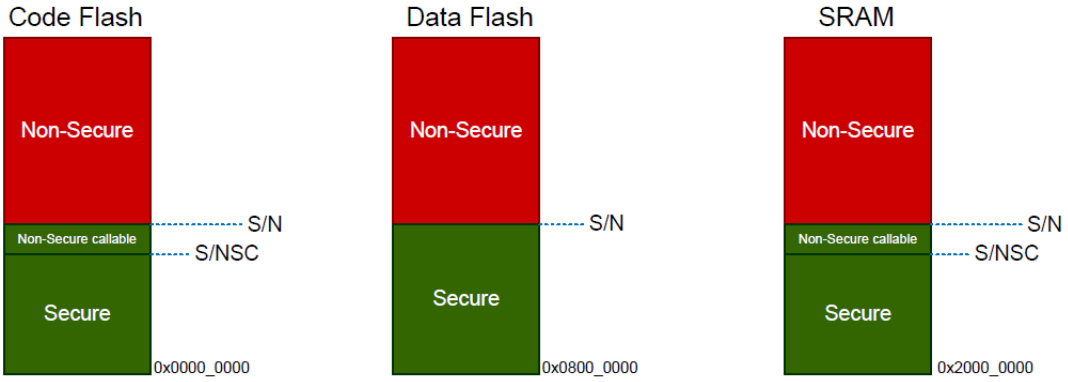


Figure 98: Secure and Non-Secure Regions

Note: All external memory accesses are considered to be Non-Secure.

Code Flash and SRAM can be divided into Secure, Non-Secure, and Non-Secure Callable. All secure memory accesses from the Non-Secure region MUST go through the Non-Secure Callable gateway and target a specific Secure Gateway (SG) assembler instruction. This forces access to Secure APIs at a fixed location and prevents calls to sub-functions and so on. Failing to target an SG instruction will generate a TZ exception.

TZ enabled compilers will manage generation of the NSC veneer automatically using CMSE extensions.

2.5.1.1 Calling from Non-Secure to Secure

A new instruction SG (Secure Gateway) has been added to the Armv8-M architecture. This MUST be the destination instruction for any branch within the Non-Secure Callable region. If an attempt is made to branch to any other instruction from the Non-Secure partition, a TZ exception will be thrown.

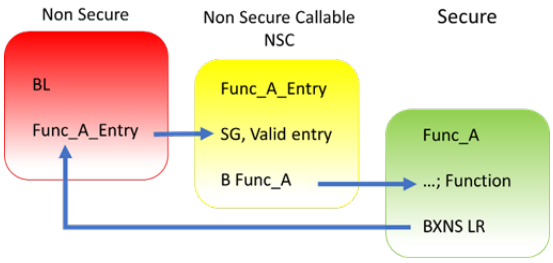

Figure 99: Calling from Non-Secure to Secure Functions

2.5.1.2 Calling from Secure to Non-Secure

Secure code uses B(L)XNS instructions to make direct calls to Non-Secure functions. While this is certainly possible, it can create a security vulnerability in the application. It is also challenging for the Secure application to determine the address of the non-secure function during build phase. From the RA Tools and FSP point view, calling directly from Secure to Non-Secure via FSP API is not supported.

Preference is for the Secure code to initialise as necessary from reset, then pass control to the Non-Secure partition. It will manage any data transfers and so forth via FSP call-backs as security checks. For example, secure data can be copied to Non-Secure RAM.

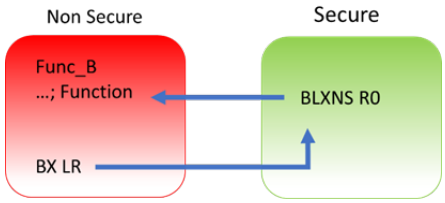

Figure 100: Calling from Secure to Non-Secure Functions

2.5.2 Workflow

ARM® TrustZone® MCU development normally consists of two projects within a workspace, Secure and Non-Secure. General project workflows are described in the following sections. The Renesas project generator also supports development with "Flat project" model with no ARM® TrustZone® awareness.

2.5.2.1 Secure Project

1. Start a new Secure project in e^2 studio.
2. Select and configure pins and drivers/stacks that need to be initialized and used in Secure

mode. This should be kept to a minimum to reduce the security attack surface.
3. Expose top of stacks as Non-Secure Callable (NSC) ***if*** they need to be accessed from Non-Secure partition. Again, this should be kept to a minimum.
4. Generate project content and write Secure code such as key handling and opening drives as needed.
5. Modify/remove any unnecessary "Guard" functions as needed to control access via NSC.
6. Build project.
7. A Non-Secure project will be needed before debugging. If necessary, prepare a "dummy" Non-Secure project or replace R_BSP_NonSecureEnter(); with while(1); in hal_entry.c.

2.5.2.2 Non-Secure Project

1. Start a new Non-Secure project.
2. If you have access to the Secure project, choose this option. However, if you only have access to a device with pre-programmed Secure code (commonly referred to as provisioned device) choose "Secure Bundle".
3. Select and configure pins and drivers/stacks that need to be initialized and used in Non-Secure mode.
4. Note that you can add NSC drivers and stacks as needed.
5. Generate project content and write Non-Secure code as needed
6. Access NSC drivers and Stacks via Guard functions.
7. Build and debug project.

2.5.2.3 Flat Project

A flat project does not technically use ARM® TrustZone® as the developer has made a decision to place the entire application in Secure partition from restart.

Notes:

- Any code placed in external memory (such as OSPI or QSPI) will be Non-Secure.
- The Ethernet EDMAC is designed to be a Non-Secure bus master so associated Ethernet RAM buffers will be placed in Non-Secure RAM. The tooling will automatically manage this.

The workflow is as follows:

1. Start a new Flat project.
2. Select and configure pins and drivers/stacks as needed.
3. Generate project content and write code as needed.
4. Build and debug project.

2.5.3 RA Project Generator (PG)

The RA project generators have been created to help users through setting up new TZ enabled projects. User will be prompted for project settings such as Project Type (Secure, Non-Secure, or Flat), compiler, RTOS and debugger. Care is needed when setting up a TZ project to ensure that the connection between Secure and Non-Secure partitions are managed correctly.

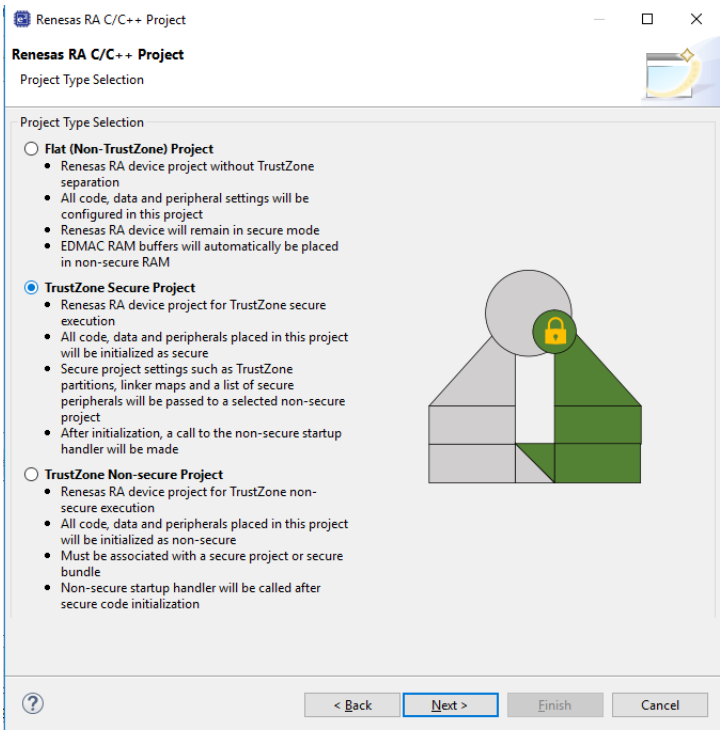

Figure 101: Secure Project (following Arm notation as green)

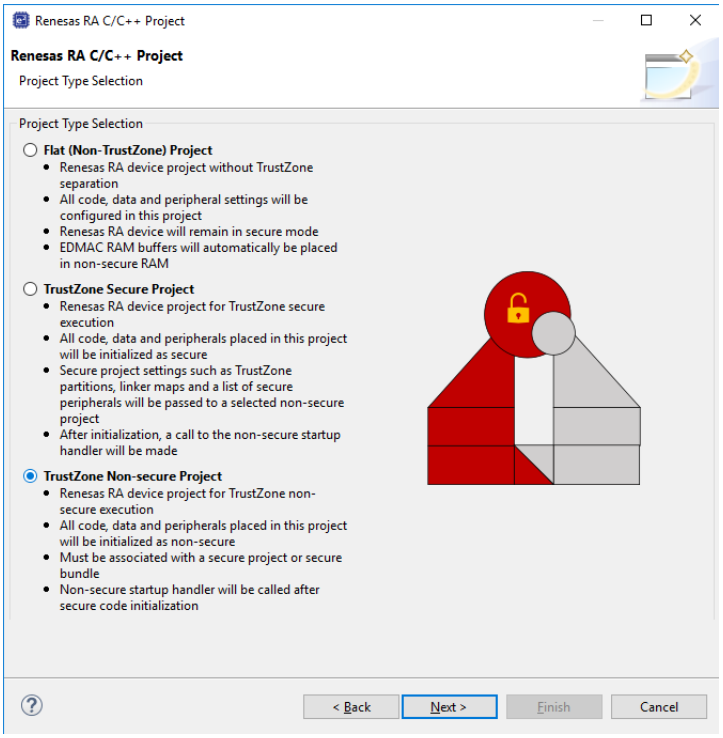

Figure 102: Non-Secure Project (following Arm notation as red)

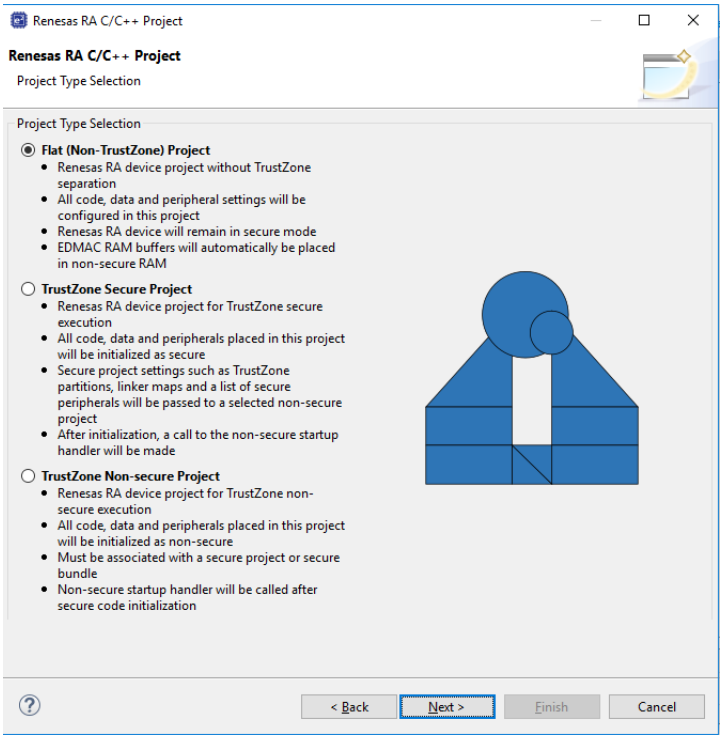

Figure 103: Flat Project

2.5.3.1 Secure Project Set Up

All code, data, and peripherals in this project will be configured as Secure using the device Peripheral Security Attribution (PSA) registers. Although it is very application specific, we recommend keeping the Secure project code as small as possible to reduce the attack surface. For example, secure key handling may be the only application code in the secure project.

Necessary values to set up the TZ memory partition (IDAU registers) will be automatically calculated after the project is built to ensure they match the code and data size, keeping the attack surface as small as possible.

Typically, ANSI C start up code (clearing of RAM, variable initialisation, etc) , clock, and secure peripheral initialisation will occur in this project.

At the end of the Secure code, a call will be made to R_BSP_NonSecureEnter(); to pass control to the Non-Secure partition.

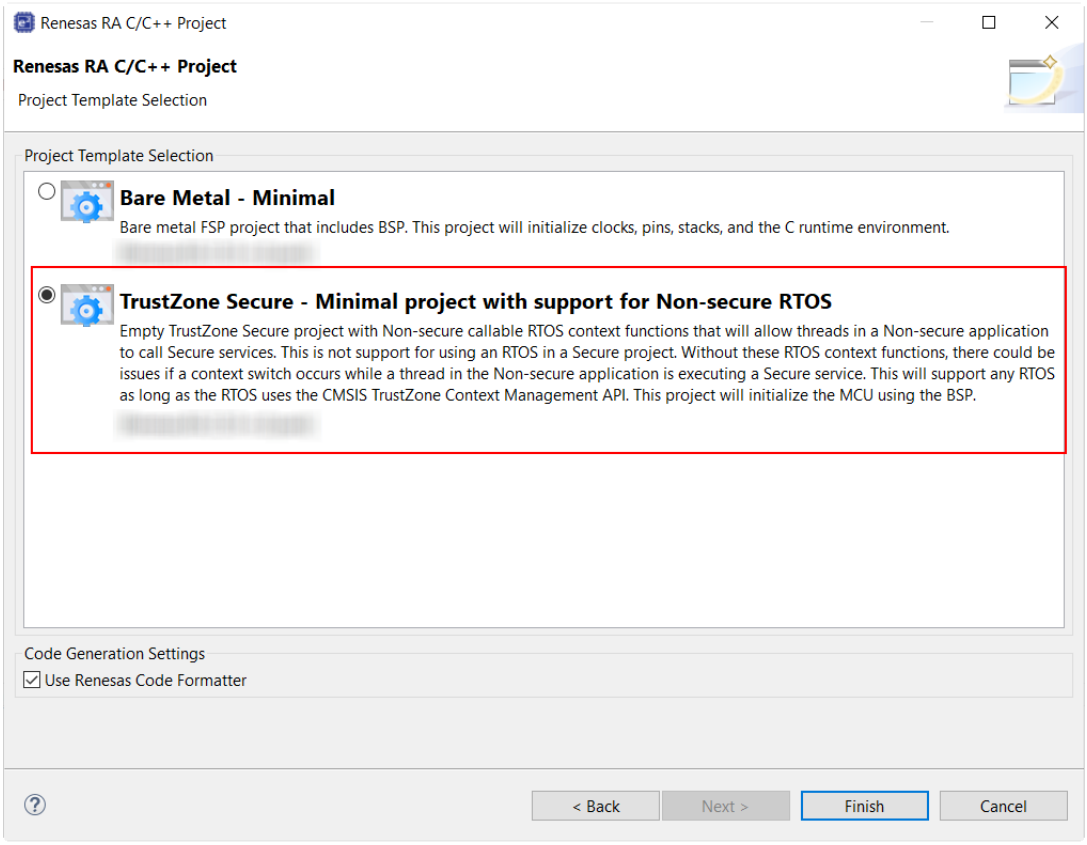
Non-Secure Callable (NSC) "Guard" functions are added to the project and expose selected modules to Non-Secure projects. User can add application-specific access checks as needed in these functions.

Output of this project type will be an elf file that must be either pre-programmed (provisioned) into a device or referenced by a Non-Secure project (via Secure bundle *.SBD) to build a final image.

This project type will NOT typically be debugged in isolation and will normally require a Non-Secure project such as a call to a R_BSP_NonSecureEnter() to be made. This can be replaced with while(1); if needed.

2.5.3.2 RTOS Support in TZ Project

Although the RTOS kernel and user tasks will reside in the Non-Secure partition, the Secure partition needs to allocate stack space and so on. It is essential when starting a new RTOS project that the TrustZone Secure RTOS-Minimal template is selected. This will add the Arm TrustZone Context RA Port as below.



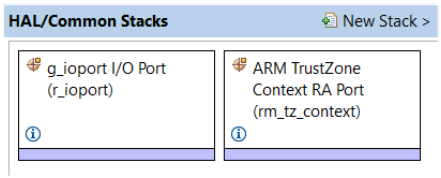


Figure 104: Secure RTOS-Minimal Template

2.5.3.3 Peripheral Security Attribution

Each peripheral can be configured to be Secure or Non-Secure. Peripherals are divided into two types.

Type-1 peripherals have one security attribute. Access to all registers is controlled by one security attribute. The Type-1 peripheral security attribute is set in the PSARx (x = B to E) register by the secure application.

Type-2 peripherals have the security attribute for each register or for each bit. Access to each register or bit field is controlled according to these security attributes. The Type-2 peripheral security

attribute is set in the Security Attribution register in each module by the Secure application. For more information about the Security Attribution register, see sections in the Appropriate MCU's User's Manual for each peripheral.

Table 1. Secure and Non-Secure Peripherals

Type	Peripheral
Type 1	SCI, SPI, USBFS, CAN, IIC, SCE9, DOC, SDHI, SSIE, CTSU, CRC, CAC, TSN, ADC12, DAC12, POEG, AGT, GPT, RTC, IWDT, WDT
Type 2	System control (Resets, LVD, Clock Generation Circuit, Low Power Modes, Battery Backup Function), FLASH CACHE, SRAM controller, CPU CACHE, DMAC, DTC, ICU, MPU, BUS, Security setting, ELC, I/O ports
Always Non-Secure	CS Area Controller, QSPI, OSPI, ETHERC, EDMAC

FSP will initialise the arbitration registers during Secure project BSP start up. User code may also be written to set or clear further arbitration. However care must be taken not to undermine FSP.

2.5.3.4 Non-Secure

All code, data, and peripherals in this project will be configured as Non-Secure. This project type must be associated with a Secure project to enable access to secure code, peripherals, linker scripts and others.

2.5.3.5 Flat Project Type

All code, data, and peripherals are configured in a Secure single partition except for the EDMAC RAM buffers that will remain in the Non-Secure partition. Effectively, TZ is disabled.

2.5.3.6 Secure Connection to Non-Secure Project

When starting a new Non-Secure Project, the user will be prompted for either a Secure Project or Secure Bundle. In each case, details of the linker settings, Non-Secure Callable functions, and Secure peripherals will be read to enable the Non-Secure project setup.

Should the Secure project or bundle be rebuilt, the Non-Secure editor will detect this and prompt user to regenerate the Non-Secure project configuration.

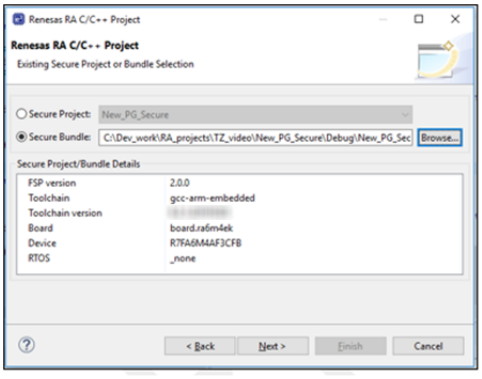

Figure 105: Secure Project or Bundle Selection

Secure Project (Combined)

A Secure project must reside in the same Workspace as the Non-Secure project and will typically be used when a design engineer has access to both the Secure and Non-Secure project sources. This is sometimes known as "Combined model".

A Secure .elf file will be referenced and included in the debug configuration for download to the target device. The development engineer will have visibility of Secure and Non-Secure project source code and configuration.

Secure Bundle (Split)

A Secure Bundle will ONLY include linker memory ranges, symbol references, and details of locked Secure peripheral configuration settings but no access to Secure source code (API header files will be included as necessary).

The Secure bundle file (*.SBD) must be supplied to the Non-Secure developer by the Secure project developer.

The development engineer will typically not have access to the Secure project or .elf file which MUST be pre-programmed or provisioned into the target MCU.

The DLM state of target device should then be switched to NSECSD (see section 6.2) before the device is provided to the non-secure developer.

This is often referred to as "Split model" where a basic security set up is developed by a Secure team and then passed to the Non-Secure team in the same facility or at a third party. The Non-Secure team has no access to the Secure source code and cannot directly access Secure peripherals, data, or APIs.

2.5.3.7 Debug Configurations

After each project type has been selected, a suitable debug configuration will be generated.

Non-Secure with Secure Project (Combined)

Both Secure and Non-Secure .elf files will be downloaded.

A debug configuration called <project name>_SSD will be generated.

Non-Secure with Secure Bundle (Split)

Only a Non-Secure elf will be downloaded. This configuration must be used with a pre-provisioned device (Secure project pre-programmed into MCU Flash).

A debug configuration called <project name>_NSECSD will be generated.

Flat Debug

A single .elf file will be downloaded.

A debug configuration called <project name>_FLAT will be generated.

2.5.4 Secure Projects

As mentioned, Secure code will be called immediately after device reset and run ANSI C start up, clock, interrupt vector table, and secure peripheral initialization before starting user code. All selected peripheral configuration settings will be automatically initialised as Secure.

2.5.4.1 Secure Clock

Device clock settings are the possible exception in that they will be initialised in the Secure project (to enable faster start up from reset) but can be set as Secure or Non-Secure as user application may need to change settings during execution (for low-power mode and so on). The Secure and Non-Secure FSP BSPs can both change the clock settings.

However, clock settings can be locked as Secure should the developer choose to do so.

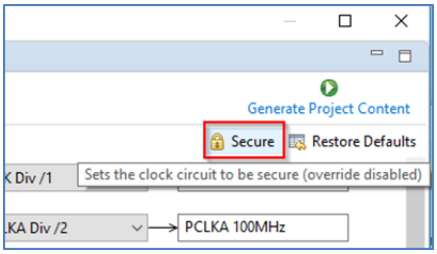

Figure 106: Secure Clock Setting

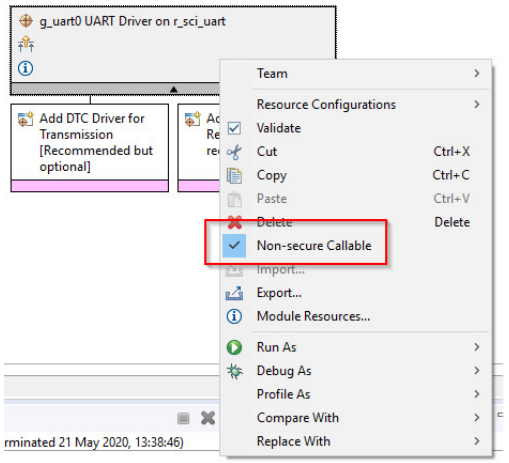
2.5.4.2 Setting Drivers as NSC

Some driver and middleware stacks in the Secure project may need to be accessed by the Non-Secure partition. To enable generation of NSC veneers, set "Non-Secure Callable" from the right-click context menu for the selected modules in the Configurator.

Note: It is only possible to "expose" top of stacks as NSC.



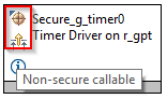


Figure 107: Generate NSC Veneers

The top of the stack will be marked with a new icon and tool tip to signify NSC access.

2.5.4.3 Guard Functions

Access to NSC drivers from a Non-Secure project is possible through the Guard APIs. FSP will automatically generate Guard functions for all the top of stack/driver APIs added to the project as Non-Secure Callable.

User can choose to add further levels of access control or delete guard function if they wish to only expose a limited range of APIs to a Non-Secure developer.

```
BSP_CMSE_NONSECURE_ENTRY fsp_err_t g_uart0_open_guard(
       uart_ctrl_t *const p_api_ctrl, uart_cfg_t const *const p_cfg) {
    /* TODO: add your own security checks here */
    FSP_PARAMETER_NOT_USED(p_api_ctrl);
    FSP_PARAMETER_NOT_USED(p_cfg);
    return R_SCI_UART_Open(&g_uart0_ctrl, &g_uart0_cfg);
}
```

For example, an SCI channel may be opened and configured for a desired baud rate by the Secure developer, but only enable the Write API to the Non-Secure developer. In which case, all but g_uart0_write_guard() could be deleted. CTRL structures are not required as they will be added on the Secure side.

For example, the call from the Non-Secure partition would be as follows:

```
err = g_uart0_open_guard(0,0);
```

2.5.5 Non-Secure projects

Configuration of the project can continue as for other RA devices, but certain resources will be locked if they have been previously set up as Secure.

The Non-Secure project will be called from the Secure project via R_BSP_NonSecureEnter();

2.5.5.1 Clock Set Up

You may recall that clocks can be set as Secure or Non-Secure. If they are set as Secure, settings will

only be available to view, and user will not be able to change them. The Override button will be greyed. This is useful to preserve CGC sync with secure project by not overriding unless necessary. If it is NOT set as Secure, user can choose to override the initial Secure settings

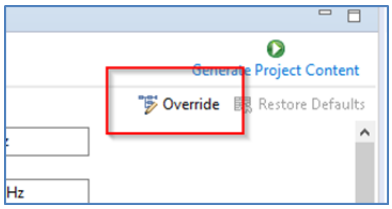

Figure 108: Clock Setting as Non-Secure

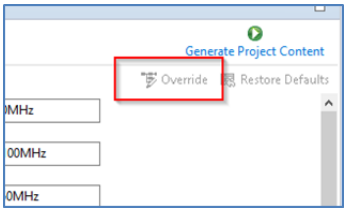

Figure 109: Clock Setting as Secure

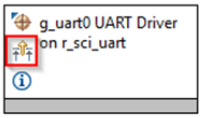
2.5.5.2 Selecting NSC Drivers

Drivers declared as NSC in a Secure project can be selected and added to Non-Secure project and will be decorated as before.



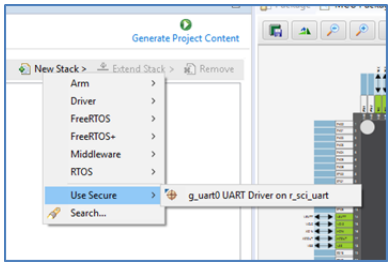


Figure 110: Selecting NSC Drivers

2.5.5.3 Locked Resources

When a NSC Secure driver is added to a Non-Secure project, the configuration settings are locked and are available for information only. A padlock is added for indication.

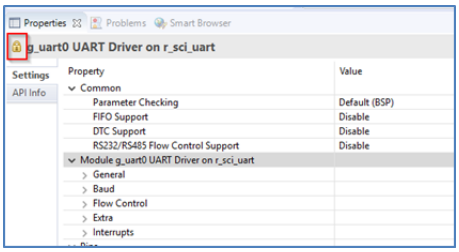

Figure 111: Locked Resources

2.5.5.4 Locked Channels

In a peripheral with multiple channels, for example, DMA, if a Non-Secure developer tries to select a channel that has already been defined as Secure, the following error message type will be displayed.

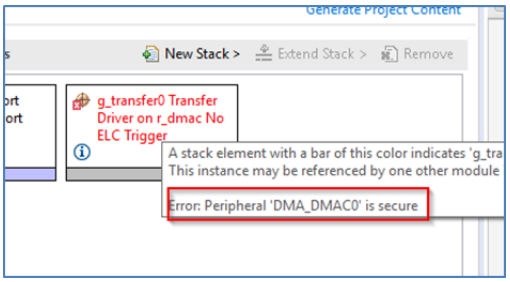

Figure 112: Error Message when Selecting a Secure Channel

2.5.6 IDAU registers

Renesas RA TZ-enabled devices include a set of registers known as Implementation Defined Attribution Unit (IDAU) that are used to set up partitions between Secure, Non-Secure Callable, and Non-Secure regions. The IDAU registers can only be programmed during MCU ***boot mode*** and NOT through the debug interfaces. Because of this, special debugger firmware has been developed to manage bringing the device up in SCI boot mode to set up the IDAU registers (automatically drives MD pin) and then switch back to debug mode as needed.

Note: Please be aware of the extra signal connection (MD pin) needed on the debug interface connector. The Renesas Evaluation Kit (EK) for your selected device is a good reference.

Pin No.	SWD	JTAG	Serial Programming using SCI
1	VCC	VCC	VCC
2	P108/SWDIO	P108/TMS	NC
4	P300/SWCLK Wired OR with MD	P300/TCK Wired OR with MD	P201/MD
6	P109/SWO/TXD9	P109/TDO/TXD9	P109/TXD9
8	P110/RXD9	P110/TDI/RXD9	P110/RXD9
9	GNDdetect	GNDdetect	GNDdetect
10	nRESET	nRESET	nRESET
12	P214/TRACECLK	P214/TRACECLK	NC
14	P211/TRACEDATA[0]	P211/TRACEDATA[0]	NC
16	P210/TRACEDATA[1]	P210/TRACEDATA[1]	NC
18	P209/TRACEDATA[2]	P209/TRACEDATA[2]	NC
20	P208/TRACEDATA[3]	P208/TRACEDATA[3]	NC
3, 5, 15,17, 19	GND	GND	GND
7	NC	NC	NC
11, 13	NC	NC	NC

The e^2 studio build phase automatically extracts the IDAU partition register settings from the Secure .elf file and programs them into the device during debug connection, which can be observed in the console.

This is an important phase of TZ development as the Secure partitions should be set as small as possible to ensure that the security attack surface is as small as possible.

However, should the developer wish to make these partitions larger to accommodate, for example during field firmware updates, const or data arrays should be placed in the Secure project as needed.

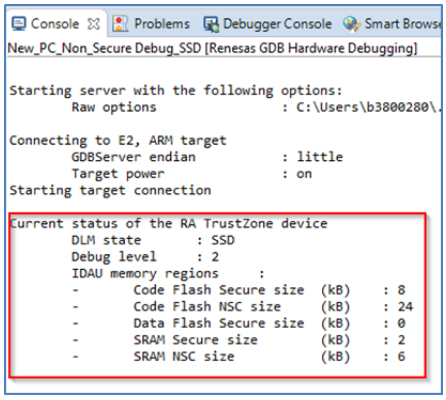

Figure 113: RA TrustZone Device Current Status

It is also possible to manually set up the partition registers through the Renesas Device Partition Manager.

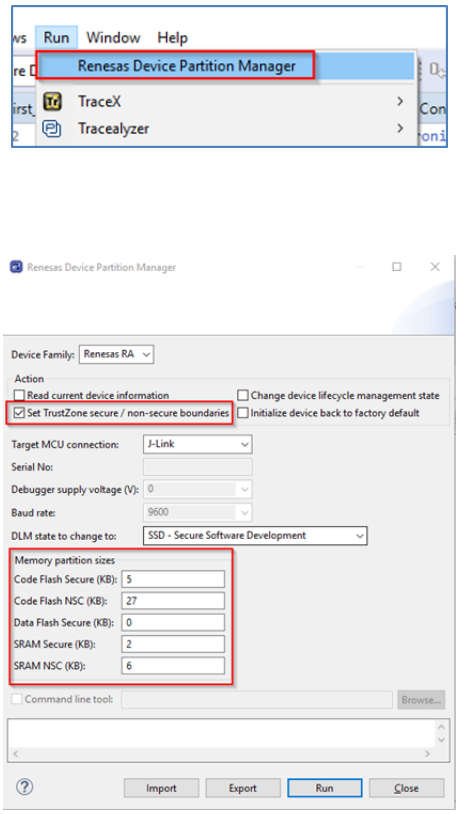

Figure 114: Renesas Device Partition Manager

2.5.6.1 SCI Boot Mode

Example of MD mode pin connection to debugger connector (from EK schematic).

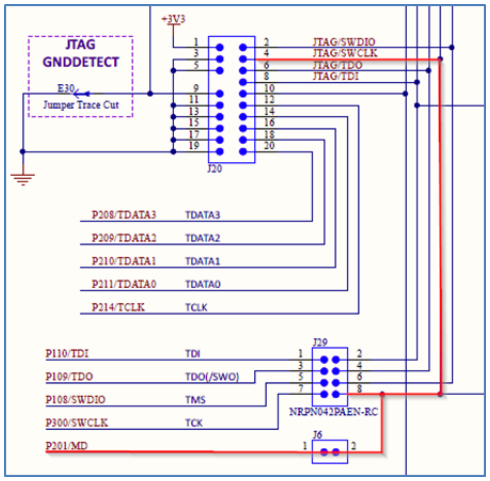

Figure 115: Example of MD Mode Pin Connection to Debugger Connector (from EK schematic

2.5.6.2 DLM States

Device lifecycle defines the current phase of the device and controls the capabilities of the debug interface, the serial programming interface and Renesas test mode. The following illustration shows the lifecycle definitions and capability in each lifecycle.

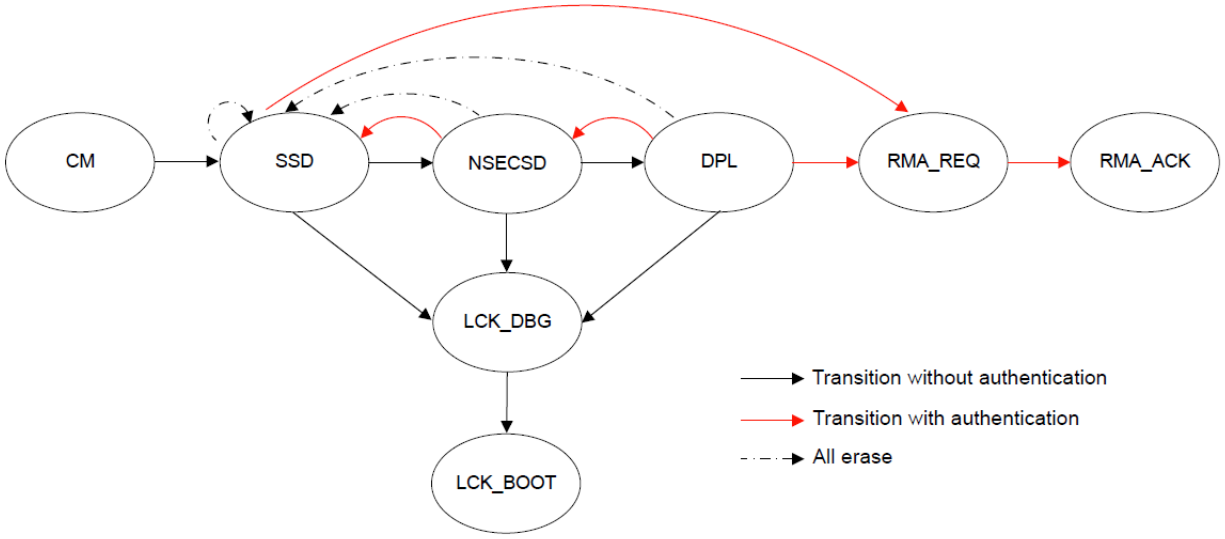

Figure 116: Lifecycle Stages

Note: All authentication key exchange and transitioning to LCK_DBG, LCK_BOOT, RMA_REQ is only managed by Renesas Flash Programmer (RFP) and NOT within e^2 studio.

Lifecycle	Definition	Debug level	Serial programming	Test mode
CM	"Chip Manufacturing" The state when the customer received the device.	DBG2	Available, cannot access code/data flash	Not available
SSD	"Secure Software Development" The secure part of application is being developed.	DBG2	Available can program/erase/read all code/data flash area	Not available
NSECSD	"Non-SECure Software Development" The non-secure part of application is being developed.	DBG1	Available can program/erase/read all code/data flash area	Not available
DPL	"DePLoyed" The device is in-field.	DBG0	Available cannot access code/data flash area	Not available
LCK_DBG	"LoCKed DeBuG" The debug interface is permanently disabled.	DBG0	Available cannot access code/data flash area	Not available
LCK_BOOT	"LoCKed BOOT interface" The debug interface and the serial programming interface are permanently disabled.	DBG0	Not available	Not available
RMA_REQ	"Return Material Authorization REQuest" Request for RMA. The customer must send the device to Renesas in this state.	DBG0	Available cannot access code/data flash area	Not available
RMA_ACK	"Return Material Authorization ACKnowledged" Failure analysis in Renesas	DBG2	Available cannot access code/data flash area	Available

Figure 117: Lifecycle Stages and Debug Levels

There are three debug access levels. The debug access level changes according to the lifecycle state.

- DBG2: The debugger connection is allowed, and no restriction to access memories and peripherals

- DBG1: The debugger connection is allowed, and restricted to access only Non-Secure memory regions and peripherals
- DBG0: The debugger connection is not allowed

Transitions for one state to another can be performed using the Renesas Flash Programmer (RFP, see section below) or using the Renesas Device Partition Manager (limited number of states possible). It is possible to secure transitions between states using authentication keys. For more information on DLM states and transitions (device specific), please refer to device user manual.

2.5.7 Debug

By default, the device will be in SSD mode and so allow access to Secure and Non-Secure partitions. In this mode both Secure and Non-Secure .elf files will be downloaded.

The current debugger status is displayed in the lower left corner and includes the DLM state (SSD or NSECSD) and current partition (Secure, Non-Secure, or Non-Secure Callable) when the debugger is stopped, for example.

Figure 118: Current Debugger Status

2.5.7.1 Non-Secure Debug

Once the device is transitioned to NSECSD mode, only Non-Secure Flash, RAM and Peripherals can be accessed. In this mode, a Secure .elf must be pre-programmed (provisioned) into the device, and only a Non-Secure .elf file will be downloaded.

When in NSECSD mode access to Secure elements will be blocked and data displayed as ????????.

In NSECSD mode, it is not possible to set breakpoints on Secure code or data.

It is not possible to step into Secure code; the debugger will perform a step-over of any Secure function calls. Should the user press the Suspend button during execution, the debugger will stop at the next Non-Secure code access.

Assuming Secure memory region finishes at 32K (0x8000) in NSECSD debug mode (colour coding added for indication only), memory will be displayed as shown in the following figure.

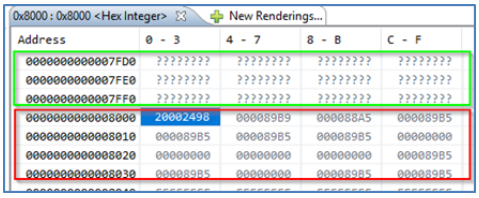

Figure 119: Memory Display in NSECSD Debug Mode

Disassembly will be displayed as shown in the following figure.

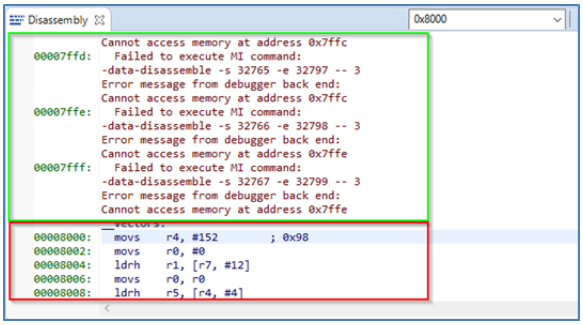

Figure 120: Disassembly Display in NSECSD Debug Mode

2.5.8 Debugger support

Renesas E2, E2 Lite, and SEGGER J-Link are supported in e^2 studio for TZ projects.

Debugger Support for TZ Projects

Feature	E2 Lite	E2	J-Link	J-Link OB	ULINK	IAR i-Jet
JTAG	Yes	Yes	Yes	No	Yes	Yes
SWD	Yes	Yes	Yes	Yes	Yes	Yes
ETB trace	Yes	Yes	Yes	Yes	Yes	Yes
ETM trace	No	Yes	Yes	No	Yes	Yes
TZ partition programming	Yes	Yes	Yes	Yes	No	No
Non secure debug	Yes	Yes	Yes	Yes	Yes	Yes
e^2 studio	Yes	Yes	Yes	Yes	No	TBC
IAR EW Arm	Under consideration	Under consideration	Yes	Yes	No	Yes
Keil MDK	Under consideration	Under consideration	Yes	Yes	Yes	No

2.5.9 Third-Party IDEs

Third-party IDEs such as IAR Systems EWARM and Keil MDK (uVision) are supported by the RA Smart Configurator (RA SC).

In general, RA SC offers the same configurator functionality as e^2 studio documented above. Project

generators are available to initialise workspaces in the target IDEs as well as setting up debug configurations and so forth. However, there are some limitations that need to be noted especially with regards to IDAU TZ partition register programming. See the specific RA SC documentation for usage details.

2.5.10 Renesas Flash Programmer (RFP)

Updated versions of Renesas Flash Programmer (RFP) are available to support setting of partitions, DLM state and Authentication keys.

RFP can be downloaded free of charge on the Renesas web site.

A new mode has been added to Program Flash Options as shown in the following graphics.

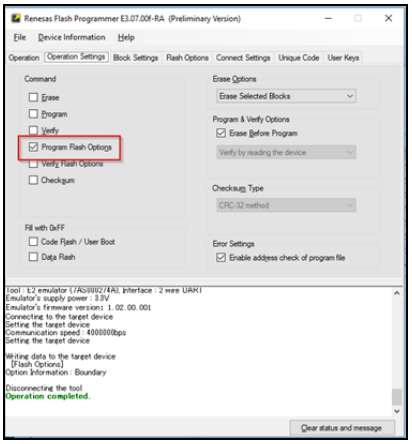

Figure 121: RFP Program Flash Options

Options to set partition boundaries are shown in the following figure.

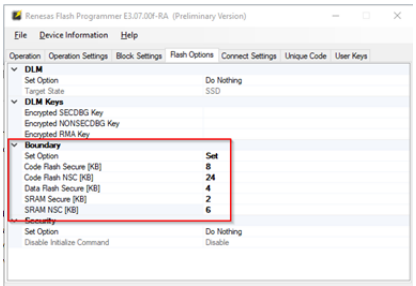

Figure 122: RFP Partition Boundaries

Options to set DLM state, Authentication keys, and Security settings are shown in the following figure.

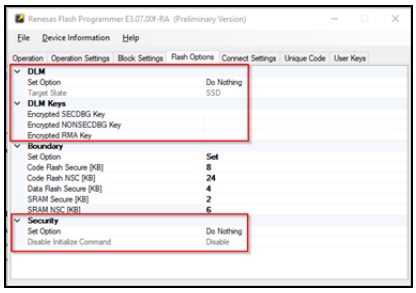

Figure 123: RFP DLM State, Authentication Keys, and Security Settings

Great care is needed here as some DLM states can **permanently** turn off debug and boot mode on the devices. Equally programming a security access authentication key can lead to permanently locked devices if the key is lost.

2.5.11 Glossary

IDAU

Implementation Defined Attribute Unit. Used to program TZ partitions in SCI book mode.

NSECSD

Non-Secure Software Development mode

SSD

Secure Software Development mode

NSC

Non-Secure Callable. Special Secure memory region used for Veneer to allow access to Secure APIs from Non-Secure code.

Provisioned

Device with Secure code pre-programmed and DLM state set to **NSECSD**

Flat project

All code, data and peripherals are configured as secure with the exception of the EDMAC RAM buffer which are placed in Non-Secure RAM due to the configuration of the internal bus masters.

Veneer

Code that resides in Non-Secure Callable region

Combined model

Development engineer has access to both Secure and Non-Secure project and source code

Split model

Development Engineer has access to only the Non-Secure partition. No visibility of Secure source code. Secure code will be provisioned into device.

2.5.11.1 Configurator Icon Glossary

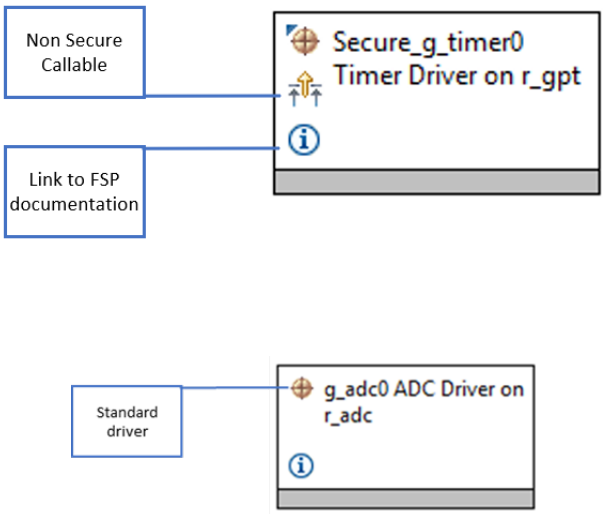

Figure 124: Configurator Icons

2.6 RA SC User Guide for MDK and IAR

2.6.1 What is RA SC?

The Renesas RA Smart Configurator (RA SC) is a desktop application designed to configure device hardware such as clock set up and pin assignment as well as initialization of FSP software components for a Renesas RA microcontroller project when using a 3rd-party IDE and toolchain.

The RA Smart Configurator can currently be used with

1. Keil MDK and the Arm compiler toolchain.
2. IAR EWARM with IAR toolchain for Arm

Projects can be configured and the project content generated in the same way as in e2 studio. Please refer to Configuring a Project section for more details.

2.6.2 Using RA Smart Configurator with Keil MDK

2.6.2.1 Prerequisites

- Keil MDK and Arm compiler are installed and licensed. Please refer to the RASC Release notes for the version to be installed.
- Import the RA device pack. Download the RA device pack archive file (ex: MDK_Device_Packs_2.x.x.zip) from the FSP GitHub release page. Extract the archive file to locate the RA device pack. To import the RA device pack, launch the PackInstaller.exe from <keil_mdk_install_dir>\UV4. Select the menu item **File > Import...** and browse to the extracted .pack file.
- Verify that the latest updates for RA devices are included in Keil MDK. To verify, select the menu "Packs" in Pack Installer and verify that the menu item **Check for Updates on Launch** is selected. If not, select **Check for Updates on Launch** and relaunch Pack

Installer.
- For flashing and debugging, the latest Segger J-Link DLL is installed into Keil MDK.
- Install RA SC and FSP using the Platform Installer from the GitHub release page.

2.6.2.2 Create new RA project

The following steps are required to create an RA project using Keil MDK, RA SC and FSP:

1. Start the RA Smart Configurator.

2. Enter a project folder and project name.

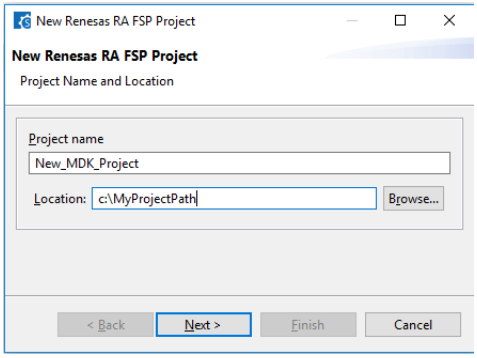

Figure 125: RA SC project settings

3. Select the target device and IDE.

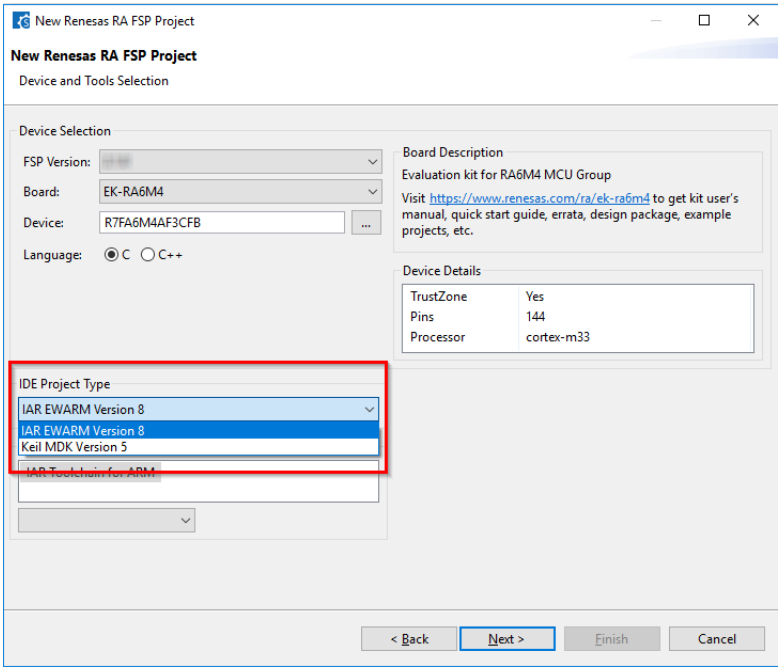

Figure 126: Target device and IDE selection

4. The rest of the project generator and FSP configuration is the same as e2 studio. Please

refer to the previous sections for details.

5. On completion of the FSP configuration, press "Generate Project Content"

6. A new Keil MDK project file will be generated in the project path. Double click this file to open MDK and continue development as usual.

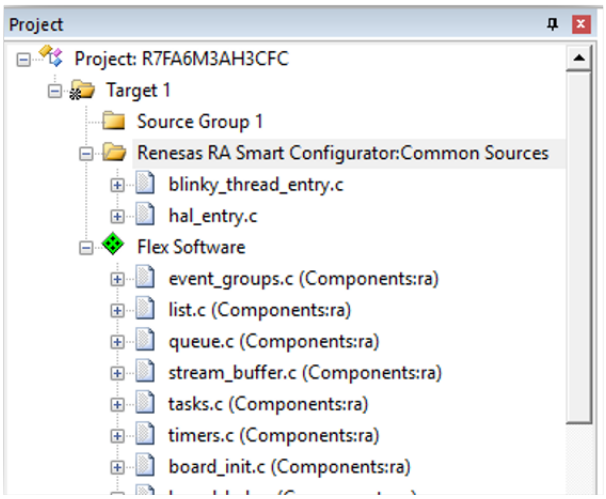

Figure 127: uVision project workspace with imported project data

2.6.2.3 Modify existing RA project

Once an initial project has been generated and configured, it is also possible to make changes using RA SC as follows.

Note

This setup only needs to be done once per project.

Set up the following links to RA SC:

1. In Keil MDK uVision, select **Tools > Customize Tools Menu...**.
2. Select the **new** icon and fill in the fields as follows for each tool:
    a. RA Smart Configurator:
        - Menu item name: Enter: RA Smart Configurator
        - Command: Select "..." and navigate to rasc.exe
        - Initial Folder: Enter: $P
        - Arguments: Enter: --device $D –-compiler ARMv6 configuration.xml

    b. Device Partition Manager:
        - Menu item name: Enter: Device Partition Manager
        - Command: Select "..." and navigate to rasc.exe
        - Initial Folder: Enter: $P
        - Arguments: Enter: -application com.renesas.cdt.ddsc.dpm.ui.dpmapplication configuration.xml "SL%L"

To reconfigure an existing project select **Tools > RA Smart Configurator**

To reconfigure the TrustZone partitions select **Tools > Device Partition Manager**

2.6.2.4 Build and Debug RA project

The project can be built by selecting the menu item **Project > Build Target** or tool bar item **Rebuild** or the keyboard shortcut F7.

Assembler, Compiler, Linker and Debugger settings can be changed in **Options for Target** dialog, which can be launched using the menu item **Project > Options for Target**, the tool bar item **Options for Target** or the keyboard shortcut Alt+F7.

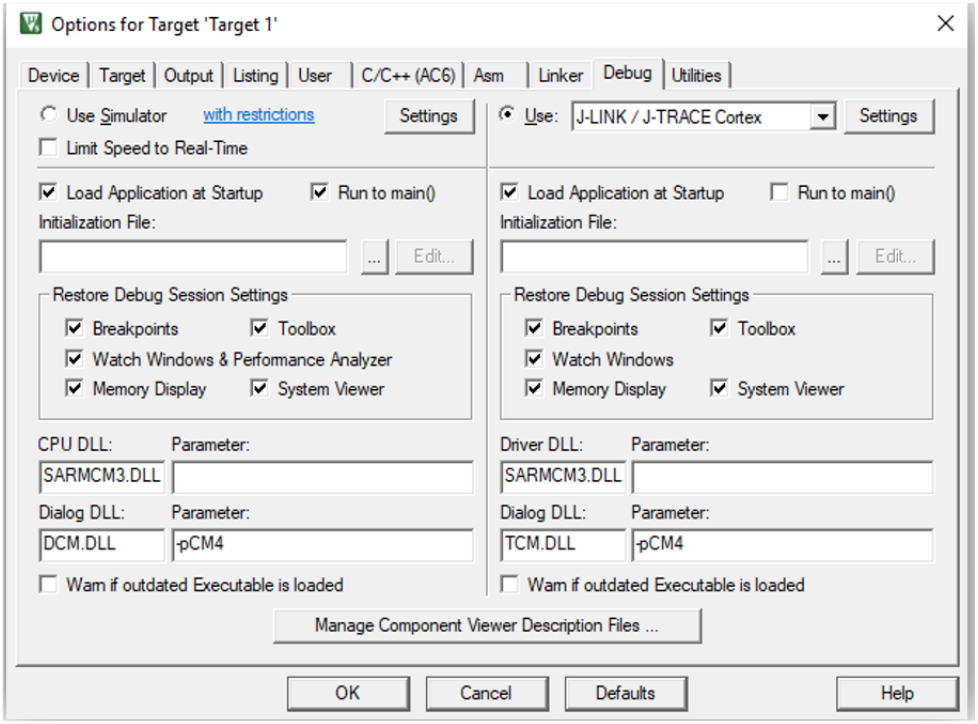

Figure 128: Options for Target

RA SC will set up the uVision project to debug the selected device using J-Link or J-Link OB debugger by default.

A Debug session can be started or stopped by selecting the menu item **Debug > Start/Stop Debug Session** or keyboard shortcut CTRL+F5. When debugging for the first time, J-Link firmware update may be needed if requested by the tool.

Refer to the documentation from Keil to get more information on the debug features in uVision. Note that not all features supported by uVision debugger are implemented in the J-Link interface. Consult SEGGER J-Link documentation for more information.

2.6.2.5 Notes and Restrictions

1. **When debugging a TrustZone based project, the Secure project image MUST be downloaded before the Non Secure project.**

2. For TrustZone enabled devices, the user will need to manually set up the memory partitions using the "Renesas Device Partition Manager" from inside RA SC before downloading.

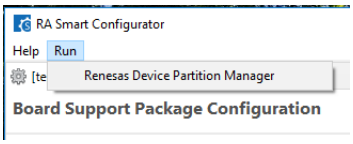

Figure 129: Renesas Device partition Manager

3. RA FSP contains a full set of drivers and middleware and may not be compatible with other CMSIS packs from Keil, Arm or third parties.
4. Flash programming is currently only supported through the debugger connection.

2.6.3 Using RA Smart Configurator with IAR EWARM

IAR Systems Embedded Workbench for Arm (EWARM) includes support for Renesas RA devices. These can be set up as bare metal designs within EWARM. However, most RA developers will want to integrate RA FSP drivers and middleware into their designs. RA SC will facilitate this.

RA SC generates a "Project Connection" file that can be loaded directly into EWARM to update project files.

2.6.3.1 Prerequisites

- IAR EWARM installed and licensed. Pleae refer to the Release notes for the version to be installed.
- RA SC and FSP Installed

2.6.3.2 Create new RA project

The following steps are required to create an RA project using IAR EWARM, RA SC and FSP:

1. Start the RA Smart Configurator.

2. Enter a project folder and project name.

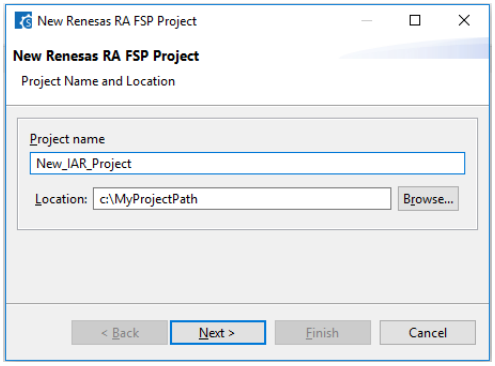

Figure 130: RA SC project settings

3. Select the target device and IDE.

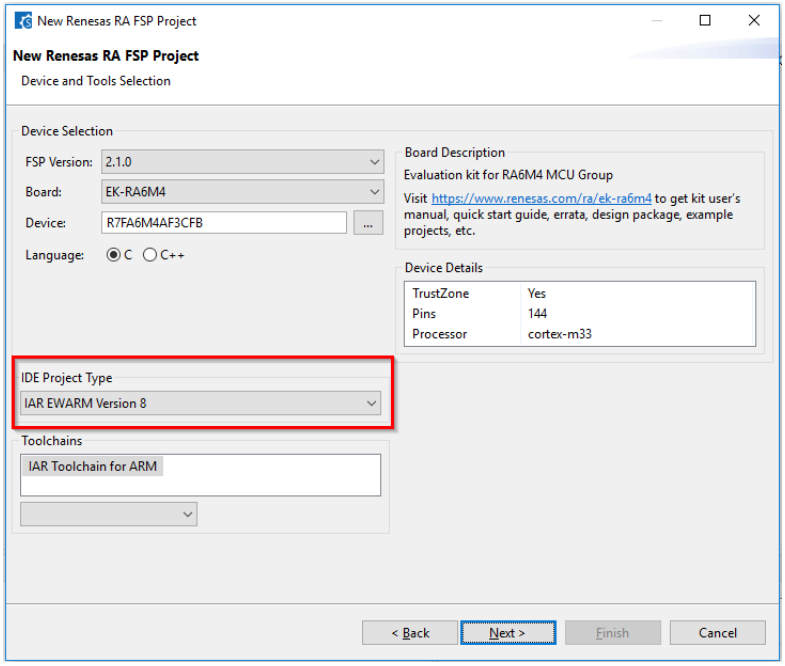

Figure 131: Target device and IDE selection

4. The rest of the project generator and FSP configuration operates the same as e2 studio. Refer to the previous sections for details.
5. On completion of the FSP configuration, press **Generate Project Content**.
6. A new IAR EWARM project file will be generated in the project path. Double click this file to open IAR EWARM and continue development as usual.
7. To Use RA SC with EWARM, RA SC needs to configured as a tool in EWARM by selecting the menu item **Tools > Configure Tools...**. Select **New** to create a new tool in the dialog shown and add the following information:
    - Menu Text: **RA Smart Configurator**
        a. Command: Select **Browse...** and navigate to rasc.exe in the installed RA SC
        b. Argument: –compiler IAR configuration.xml
        c. Initial Directory: $PROJ_DIR$
        d. Tool Available: Always
    - Menu Text: **Device Partition Manager**
        a. Command: Select **Browse...** and navigate to rasc.exe in the installed RA SC
        b. Argument: -application com.renesas.cdt.ddsc.dpm.ui.dpmapplication configuration.xml "$TARGET_PATH$"
        c. Initial Directory: $PROJ_DIR$
        d. Tool Available: Always
8. RA SC can now be re-launched from EWARM using the menu item **Tools > RA Smart Configurator**.
9. A Project connection needs to be set up in EWARM to build the project. Select **Project > Add Project Connection** in EWARM and select **IAR Project Connection**. Navigate to the project folder and select buildinfo.ipcf and click **Open**. The project can now build in EWARM.

2.6.3.3 Notes and Restrictions

When starting a TrustZone enabled debug session Partition sizes are checked automatically.

- If partition sizes are set correctly, the debug session will launch as normal.

- If partition sizes need to be changed, IAR EWARM will prompt to run the Renesas Device Partition Manager. Select **Yes**. The Device Partition Manager will start with the required partition sizes prefilled.
- Select **Set TrustZone secure / non-secure boundaries** as the only action.
- Enter debugger details, if required.
- Select **Run** to program the partitions.
- Return to the IDE and relaunch the debug session

Chapter 3 FSP Architecture

3.1 FSP Architecture Overview

This guide describes the Renesas Flexible Software Package (FSP) architecture and how to use the FSP Application Programming Interface (API).

3.1.1 C99 Use

The FSP uses the ISO/IEC 9899:1999 (C99) C programming language standard. Specific features introduced in C99 that are used include standard integer types (stdint.h), booleans (stdbool.h), designated initializers, and the ability to intermingle declarations and code.

3.1.2 Doxygen

Doxygen is the default documentation tool used by FSP. You can find Doxygen comments throughout the FSP source.

3.1.3 Weak Symbols

Weak symbols are used occasionally in the FSP. They are used to ensure that a project builds even when the user has not defined an optional function.

3.1.4 Memory Allocation

Dynamic memory allocation through use of the malloc() and free() functions are not used in FSP modules; all memory required by FSP modules is allocated in the application and passed to the module in a pointer. Exceptions are considered only for ports of 3rd party code that require dynamic memory.

3.1.5 FSP Terms

Term	Description	Reference
BSP	Short for Board Support Package. In the FSP the BSP provides just enough foundation to allow other FSP modules to work together without issue.	MCU Board Support Package

Module	Modules can be peripheral drivers, purely software, or anything in between. Each module consists of a folder with source code, documentation, and anything else that the customer needs to use the code effectively. Modules are independent units, but they may depend on other modules. Applications can be built by combining multiple modules to provide the user with the features they need.	FSP Modules
Driver	A driver is a specific kind of module that directly modifies registers on the MCU.	-
Interface	An interface contains API definitions that can be shared by modules with similar features. Interfaces are definitions only and do not add to code size.	FSP Interfaces
Stacks	The FSP architecture is designed such that modules work together to form a stack. A stack consists of a top level module and all its dependencies.	FSP Stacks
Module Instance	Single and independent instantiation of a module. An application may require two GPT timers. Each of these timers is a module instance of the r_gpt module.	-
Application	Code that is owned and maintained by the user. Application code may be based on sample application code provided by Renesas, but it is the responsibility of the user to maintain as necessary.	-

Callback Function	This term refers to a function that is called when an event occurs. As an example, suppose the user would like to be notified every second based on the RTC. As part of the RTC configuration, a callback function can be supplied that will be jumped to during each RTC interrupt. When a single callback services multiple events, the arguments contain the triggering event. Callback functions for interrupts should be kept short and handled carefully because when they are called the MCU is still inside of an interrupt, delaying any pending interrupts.	-

3.2 FSP Modules

Modules are the core building block of FSP. Modules can do many different things, but all modules share the basic concept of providing functionality upwards and requiring functionality from below.

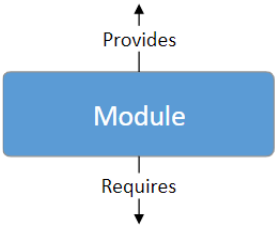

Figure 132: Modules

The amount of functionality provided by a module is determined based on functional use cases. Common functionality required by multiple modules is often placed into a self-contained submodule so it can be reused. Code size, speed and complexity are also considered when defining a module.

The simplest FSP application consists of one module with the Board Support Package (BSP) and the user application on top.

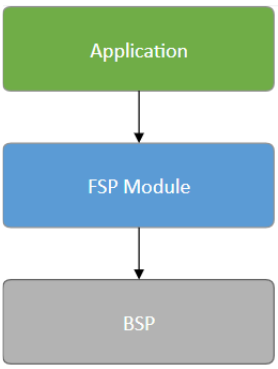

Figure 133: Module with application

The Board Support Package (BSP) is the foundation for FSP modules, providing functionality to determine the MCU used as well as configuring clocks, interrupts and pins. For the sake of clarity, the BSP will be omitted from further diagrams.

3.2.1 Module Sources

Some modules distributed alongside FSP originate from outside sources. A full list of sources for FSP modules, including versions and hyperlinks, can be found in the Third Party Software section of the release notes for each release.

3.2.2 Module Distribution

All modules distributed with FSP are packaged as CMSIS components in CMSIS packs. Each module consists of source files and a tooling support file used to integrate the module with e2 studio or RASC. The tooling support file defines the configurations used to generate code in the ra_gen and ra_cfg folders.

3.2.3 Module Versioning

Module versions can be seen on the Components tab of the FSP Configuration editor. The FSP Configuration editor automatically selects compatible components.

All third party modules have a semantic version are versioned with their original semantic version plus added metadata fsp.<fsp_semantic_version>. The metadata is added to reflect the tooling support file added for the FSP configuration tool.

Third party modules versioned with +renesas.<counter> in the metadata have been forked and updated for FSP. If +renesas.<counter> is not in the metadata, the third party code is unchanged from its original source.

If changes are made to third party module source code to support FSP, the changes are pushed to a public Renesas GitHub fork of the original source. Links to Renesas forks are provided in the Third Party Software section of the release notes for each release.

Modules that originate from outside sources that do not have a semantic version are versioned with the FSP version.

All modules that are part of FSP or integrated with FSP are tested as a package. Mixing versions is not encouraged and may lead to support issues.

3.3 FSP Stacks

When modules are layered atop one another, an FSP stack is formed. The stacking process is performed by matching what one module provides with what another module requires. For example, the SPI module (Serial Peripheral Interface (r_spi)) requires a module that provides the transfer interface (Transfer Interface) to send or receive data without a CPU interrupt. The transfer interface requirement can be fulfilled by the DTC driver module (Data Transfer Controller (r_dtc)).

Through this methodology the same code can be shared by several modules simultaneously. The example below illustrates how the same DTC module can be used with SPI (Serial Peripheral Interface (r_spi)), UART (Serial Communications Interface (SCI) UART (r_sci_uart)) and SDHI (SD/MMC Host Interface (r_sdhi)).

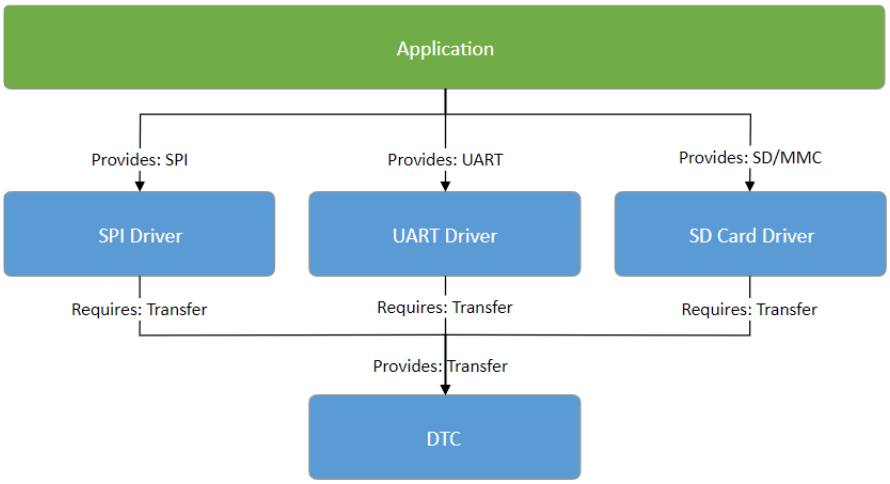

Figure 134: Stacks -- Shared DTC Module

The ability to stack modules ensures the flexibility of the architecture as a whole. If multiple modules include the same functionality issues arise when application features must work across different user designs. To ensure that modules are reusable, any dependent modules must be capable of being swapped out for other modules that provide the same features. The FSP architecture provides this flexibility to swap modules in and out through the use of FSP interfaces.

3.4 FSP Interfaces

At the architecture level, interfaces are the way that modules provide common features. This commonality allows modules that adhere to the same interface to be used interchangeably. Interfaces can be thought of as a contract between two modules - the modules agree to work together using the information that was established in the contract.

On RA hardware there is occasionally an overlap of features between different peripherals. For example, I2C communications can be achieved through use of the IIC peripheral or the SCI peripheral. However, there is a difference in the level of features provided by both peripherals; in I2C mode the SCI peripheral will only support a subset of the capabilities of the fully-featured IIC.

Interfaces aim to provide support for the common features that most users would expect. This means that some of the advanced features of a peripheral (such as IIC) might not be available in the interface. In most cases these features are still available through interface extensions.

In FSP design, interfaces are defined in header files. All interface header files are located in the folder ra/fsp/inc/api and end with *_api.h. Interface extensions are defined in header files in the folder ra/fsp/inc/instances. The following sections detail what makes up an interface.

3.4.1 FSP Interface Enumerations

Whenever possible, interfaces use typed enumerations for function parameters and structure members.

```
typedef enum e_i2c_master_addr_mode
{
    I2C_MASTER_ADDR_MODE_7BIT = 1,    ///< Use 7-bit addressing mode
    I2C_MASTER_ADDR_MODE_10BIT = 2,    ///< Use 10-bit addressing mode
} i2c_master_addr_mode_t;
```

Enumerations remove uncertainty when deciding what values are available for a parameter. FSP enumeration options follow a strict naming convention where the name of the type is prefixed on the available options. Combining the naming convention with the autocomplete feature available in e2 studio (Ctrl + Space) provides the benefits of rapid coding while maintaining high readability.

3.4.2 FSP Interface Callback Functions

Callback functions allow modules to asynchronously alert the user application when an event has occurred, such as when a byte has been received over a UART channel or an IRQ pin is toggled. FSP driver modules define and handle the interrupt service routines for RA MCU peripherals to ensure any required hardware procedures are implemented. The interrupt service routines in FSP modules then call the user-defined callbacks to allow the application to respond.

Callback functions must be defined in the user application. They always return void and take a structure for their one parameter. The structure is defined in the interface for the module and is named <interface>_callback_args_t. The contents of the structure may vary depending on the interface, but two members are common: event and p_context.

The event member is an enumeration defined in the interface used by the application to determine why the callback was called. Using the UART example, the callback could be triggered for many different reasons, including when a byte is received, all bytes have been transmitted, or a framing error has occurred. The event member allows the application to determine which of these three events has occurred and handle it appropriately.

The p_context member is used for providing user-specified data to the callback function. In many cases a callback function is shared between multiple channels or module instances; when the callback occurs, the code handling the callback needs context information so that it can determine which module instance the callback is for. For example, if the callback wanted to make an FSP API call in the callback, then at a minimum the callback will need a reference to the relevant control structure. To make this easy, the user can provide a pointer to the control structure as the p_context. When the callback occurs, the control structure is passed in the p_context element of the callback structure.

Callback functions are called from within an interrupt service routine. For this reason callback functions should be kept as short as possible so they do not affect the real time performance of the

user's system. An example skeleton function for the flash interface callback is shown below.

```
void flash_callback (flash_callback_args_t * p_args)
{
 /* See what event caused this callback. */
 switch (p_args->event)
    {
 case FLASH_EVENT_ERASE_COMPLETE:
      {
 /* Handle event. */
 break;
       }
 case FLASH_EVENT_WRITE_COMPLETE:
      {
 /* Handle event. */
 break;
       }
 case FLASH_EVENT_BLANK:
      {
 /* Handle event. */
 break;
       }
 case FLASH_EVENT_NOT_BLANK:
      {
 /* Handle event. */
 break;
       }
 case FLASH_EVENT_ERR_DF_ACCESS:
      {
 /* Handle error. */
 break;
       }
 case FLASH_EVENT_ERR_CF_ACCESS:
      {
 /* Handle error. */
```

```
break;
      }
case FLASH_EVENT_ERR_CMD_LOCKED:
     {
/* Handle error. */
break;
      }
case FLASH_EVENT_ERR_FAILURE:
     {
/* Handle error. */
break;
      }
case FLASH_EVENT_ERR_ONE_BIT:
     {
/* Handle error. */
break;
      }
   }
}
```

When a module is not directly used in the user application (that is, it is not the top layer of the stack), its callback function will be handled by the module above. For example, if a module requires a UART interface module the upper layer module will control and use the UART's callback function. In this case the user would not need to create a callback function for the UART module in their application code.

3.4.3 FSP Interface Data Structures

At a minimum, all FSP interfaces include three data structures: a configuration structure, an API structure, and an instance structure.

3.4.3.1 FSP Interface Configuration Structure

The configuration structure is used for the initial configuration of a module during the <MODULE>_Open() call. The structure consists of members such as channel number, bitrate, and operating mode.

The configuration structure is used purely as an input into the module. It may be stored and referenced by the module, so the configuration structure and anything it references must persist as long as the module is open.

The configuration structure is allocated for each module instance in files generated by the RA Configuration editor.

When FSP stacks are used, it is also important to understand that configuration structures only have members that apply to the current interface. If multiple layers in the same stack define the same configuration parameters then it becomes difficult to know where to modify the option. For example, the baud rate for a UART is only defined in the UART module instance. Any modules that use the UART interface rely on the baud rate being provided in the UART module instance and do not offer it in their own configuration structures.

3.4.3.2 FSP Interface API Structure

All interfaces include an API structure which contains function pointers for all the supported interface functions. An example structure for the Digital to Analog Converter (r_dac) is shown below.

```
typedef struct st_dac_api
{
    /** Initial configuration.
    * @par Implemented as
    * - @ref R_DAC_Open()
    * - @ref R_DAC8_Open()
    *
    * @param[in] p_ctrl Pointer to control block. Must be declared by user. Elements
set here.
    * @param[in] p_cfg Pointer to configuration structure. All elements of this
structure must be set by user.
    */
    fsp_err_t (* open)(dac_ctrl_t * const p_ctrl, dac_cfg_t const * const p_cfg);
    /** Close the D/A Converter.
    * @par Implemented as
    * - @ref R_DAC_Close()
    * - @ref R_DAC8_Close()
    *
    * @param[in] p_ctrl Control block set in @ref dac_api_t::open call for this
timer.
    */
    fsp_err_t (* close)(dac_ctrl_t * const p_ctrl);
    /** Write sample value to the D/A Converter.
    * @par Implemented as
    * - @ref R_DAC_Write()
```

```
    * - @ref R_DAC8_Write()
    *
    * @param[in] p_ctrl Control block set in @ref dac_api_t::open call for this
timer.
    * @param[in] value Sample value to be written to the D/A Converter.
    */
    fsp_err_t (* write)(dac_ctrl_t * const p_ctrl, uint16_t value);
    /** Start the D/A Converter if it has not been started yet.
    * @par Implemented as
    * - @ref R_DAC_Start()
    * - @ref R_DAC8_Start()
    *
    * @param[in] p_ctrl Control block set in @ref dac_api_t::open call for this
timer.
    */
    fsp_err_t (* start)(dac_ctrl_t * const p_ctrl);
    /** Stop the D/A Converter if the converter is running.
    * @par Implemented as
    * - @ref R_DAC_Stop()
    * - @ref R_DAC8_Stop()
    *
    * @param[in] p_ctrl Control block set in @ref dac_api_t::open call for this
timer.
    */
    fsp_err_t (* stop)(dac_ctrl_t * const p_ctrl);
} dac_api_t;
```

The API structure is what allows for modules to easily be swapped in and out for other modules that are instances of the same interface. Let's look at an example application using the DAC interface above.

RA MCUs have an internal DAC peripheral. If the DAC API structure in the DAC interface is not used the application can make calls directly into the module. In the example below the application is making calls to the R_DAC_Write() function which is provided in the r_dac module.

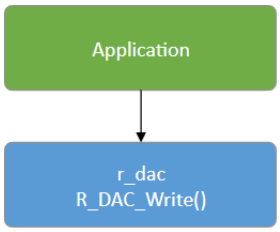

Figure 135: DAC Write example

Now let's assume that the user needs more DAC channels than are available on the MCU and decides to add an external DAC module named dac_external using I2C for communications. The application must now distinguish between the two modules, adding complexity and further dependencies to the application.

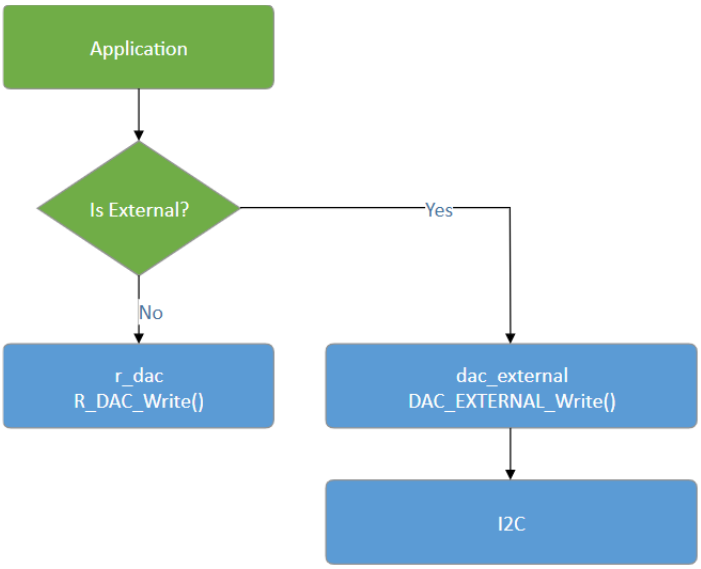

Figure 136: DAC Write with two write modules

The use of interfaces and the API structure allows for the use of an abstracted DAC. This means that no extra logic is needed if the user's dac_external module implements the FSP DAC interface, so the application no longer depends upon hard-coded module function names. Instead the application now depends on the DAC interface API which can be implemented by any number of modules.

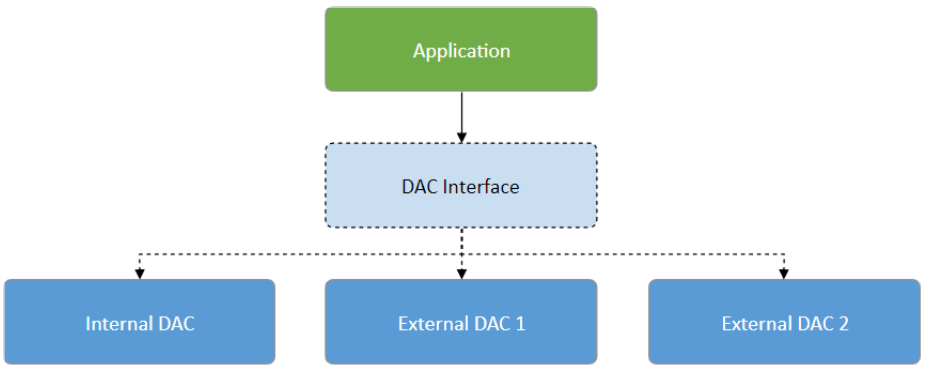

Figure 137: DAC Interface

3.4.3.3 FSP Interface Instance Structure

Every FSP interface also has an instance structure. The instance structure encapsulates everything required to use the module:

- A pointer to the instance API structure (FSP Instance API)
- A pointer to the configuration structure
- A pointer to the control structure

The instance structure is not required at the application layer. It is used to connect modules to their dependencies (other than the BSP).

Instance structures have a standardized name of <interface>_instance_t. An example from the Transfer Interface is shown below.

```
typedef struct st_transfer_instance
{
  transfer_ctrl_t     * p_ctrl; ///< Pointer to the control structure for this
instance
    transfer_cfg_t const * p_cfg;      ///< Pointer to the configuration structure
for this instance
    transfer_api_t const * p_api;      ///< Pointer to the API structure for this
instance
} transfer_instance_t;
```

Note that when an instance structure variable is declared, the API is the only thing that is instance specific, not *module instance* specific. This is because all module instances of the same module share the same underlying module source code. If SPI is being used on SCI channels 0 and 2 then both module instances use the same API while the configuration and control structures are typically different.

3.5 FSP Instances

While interfaces dictate the features that are provided, instances actually implement those features. Each instance is tied to a specific interface. Instances use the enumerations, data structures, and API prototypes from the interface. This allows an application that uses an interface to swap out the instance when needed.

On RA MCUs some peripherals are used to implement multiple interfaces. In the example below the IIC and SPI peripherals map to only one interface each while the SCI peripheral implements three interfaces.

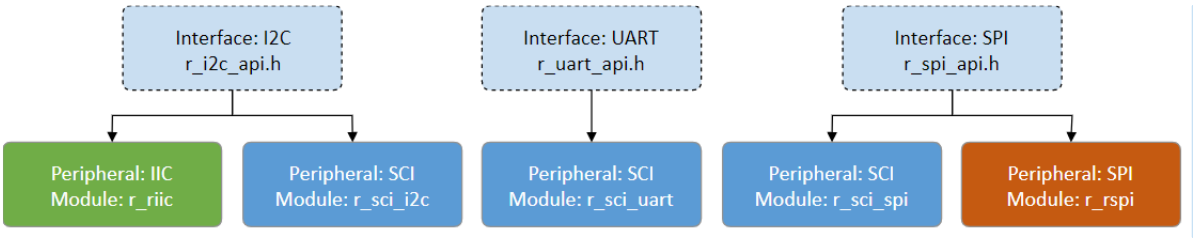

Figure 138: Instances

In FSP design, instances consist of the interface extension and API defined in the instance header file located in the folder ra/fsp/inc/instances and the module source ra/fsp/src/<module>.

3.5.1 FSP Instance Control Structure

The control structure is used as a unique identifier for the module instance and contains memory required by the module. Elements in the control structure are owned by the module and *must not be modified* by the application. The user allocates storage for a control structure, often as a global variable, then sends a pointer to it into the <MODULE>_Open() call for a module. At this point, the module initializes the structure as needed. The user must then send in a pointer to the control structure for all subsequent module calls.

3.5.2 FSP Interface Extensions

In some cases, instances require more information than is provided in the interface. This situation can occur in the following cases:

- An instance offers extra features that are not common to most instances of the interface. An example of this is the start source selection of the GPT (General PWM Timer (r_gpt)). The GPT can be configured to start based on hardware events such as a falling edge on a trigger pin. This feature is not common to all timers, so it is included in the GPT instance.
- An interface must be very generic out of necessity. As an interface becomes more generic, the number of possible instances increases. An example of an interface that must be generic is a block media interface that abstracts functions required by a file system. Possible instances include SD card, SPI Flash, SDRAM, USB, and many more.

The p_extend member provides this extension function.

Use of interface extensions is not always necessary. Some instances do not offer an extension since all functionality is provided in the interface. In these cases the p_extend member can be set to NULL. The documentation for each instance indicates whether an interface extension is available and whether it is mandatory or optional.

3.5.2.1 FSP Extended Configuration Structure

When extended configuration is required it can be supplied through the p_extend parameter of the interface configuration structure.

The extended configuration structure is part of the instance, but it is also still considered to be part of the configuration structure. All usage notes about the configuration structure described in FSP Interface Configuration Structure apply to the extended configuration structure as well.

The extended configuration structure and all typed structures and enumerations required to define it

make up the interface extension.

3.5.3 FSP Instance API

Each instance includes a constant global variable tying the interface API functions to the functions provided by the module. The name of this structure is standardized as g_<interface>_on_<instance>. Examples include g_spi_on_spi, g_transfer_on_dtc, and g_adc_on_adc. This structure is available to be used through an extern in the instance header file (r_spi.h, r_dtc.h, and r_adc.h respectively).

3.6 FSP API Standards

3.6.1 FSP Function Names

FSP functions start with the uppercase module name (<MODULE>). All modules have <MODULE>_Open() and <MODULE>_Close() functions. The <MODULE>_Open() function must be called before any of the other functions.

Other functions that will commonly be found are <MODULE>_Read(), <MODULE>_Write(), <MODULE>_InfoGet(), and <MODULE>_StatusGet(). The <MODULE>_StatusGet() function provides a status that could change asynchronously, while <MODULE>_InfoGet() provides information that cannot change after open or can only be updated by API calls. Example function names include:

- R_SPI_Read(), R_SPI_Write(), R_SPI_WriteRead()
- R_SDHI_StatusGet()
- R_RTC_CalendarAlarmSet(), R_RTC_CalendarAlarmGet()
- R_FLASH_HP_AccessWindowSet(), R_FLASH_HP_AccessWindowClear()

3.6.2 Use of const in API parameters

The const qualifier is used with API parameters whenever possible. An example case is shown below.

```
fsp_err_t R_FLASH_HP_Open(flash_ctrl_t * const p_api_ctrl, flash_cfg_t const * const
p_cfg);
```

In this example, flash_cfg_t is a structure of configuration parameters for the r_flash_hp module. The parameter p_cfg is a pointer to this structure. The first const qualifier on p_cfg ensures the flash_cfg_t structure cannot be modified by R_FLASH_HP_Open(). This allows the structure to be allocated as a const variable and stored in ROM instead of RAM.

The const qualifier after the pointer star for both p_ctrl and p_cfg ensures the FSP function does not modify the input pointer addresses. While not fool-proof by any means this does provide some extra checking inside the FSP code to ensure that arguments that should not be altered are treated as such.

3.6.3 FSP Version Information

The BSP provides a function R_FSP_VersionGet() which fills in a structure of type fsp_pack_version_t. This can be used to determine the FSP version at runtime.

There are also FSP_VERSION_* macros in fsp_version.h that can be used to determine the FSP version at build time.

3.7 FSP Build Time Configurations

All modules have a build-time configuration header file. Most configuration options are supplied at run time, though options that are rarely used or apply to all instances of a module may be moved to build time. The advantage of using a build-time configuration option is to potentially reduce code size reduction by removing an unused feature.

All modules have a build time option to enable or disable parameter checking for the module. FSP modules check function arguments for validity when possible, though this feature is disabled by default to reduce code size. Enabling it can help catch parameter errors during development and debugging. By default, each module's parameter checking configuration inherits the BSP parameter checking setting (set on the BSP tab of the RA Configuration editor). Leaving each module's parameter checking configuration set to Default (BSP) allows parameter checking to be enabled or disabled globally in all FSP code through the parameter checking setting on the BSP tab.

If an error condition can reasonably be avoided it is only checked in a section of code that can be disabled by disabling parameter checking. Most FSP APIs can only return FSP_SUCCESS if parameter checking is disabled. An example of an error that cannot be reasonably avoided is the "bus busy" error that occurs when another master is using an I2C bus. This type of error can be returned even if parameter checking is disabled.

3.8 FSP File Structure

The high-level file structure of an FSP project is shown below.

```
ra_gen
ra
+---fsp
    +---inc
    |   +---api
    |   \---instances
    \---src
       +---bsp
       \---r_module
ra_cfg
+---fsp_cfg
    +---bsp
    +---driver
```

Directly underneath the base ra folder the folders are split into the source and include folders. Include folders are kept separate from the source for easy browsing and easy setup of include paths.

The ra_gen folder contains code generated by the RA Configuration editor. This includes global variables for the control structure and configuration structure for each module.

The ra_cfg folder is where configuration header files are stored for each module. See FSP Build Time Configurations for information on what is provided in these header files.

3.9 FSP TrustZone Support

TrustZone support for FSP is primarily handled in the RA Configuration Tool.

3.9.1 FSP TrustZone Projects

During development of a TrustZone project, users create an RA TrustZone Secure Project first, followed by an RA TrustZone Non-secure Project that is linked to the RA TrustZone Secure Project. Allocation of secure memory is handled automatically within the tooling. The non-secure project starts at the required alignment boundary beyond the memory taken by the secure project.

3.9.2 Non-Secure Callable Guard Functions

The tooling generates guard functions for any module marked as Non-secure Callable. These guard functions are owned by the application once generated, so they can be modified as necessary by the secure application developer.

The default non-secure callable guard functions limit the configuration and control structure to the structures generated in the secure project. They also check any input pointers to ensure the caller does not overwrite secure memory.

3.9.3 Callbacks in Non-Secure from Non-Secure Callable Modules

If the non-secure project needs a callback function from a non-secure callable module, the callback can be registered after the module is opened using the callback_set() guard function.

3.9.4 Additional TrustZone Information

The following resources provide technical background, application notes and example projects that demonstrate key TrustZone concepts and implementation procedures.

- The Benefits of Using Arm® TrustZone® in Your Design (Brochure)
- RA Arm® TrustZone® Tooling Primer (Application Note)
- Renesas RA Family Security Design with Arm® TrustZone® - IP Protection (Application Note)
- Renesas RA Family Securing Data at Rest Using the Arm® TrustZone® (Application Note)

3.10 FSP Architecture in Practice

3.10.1 FSP Connecting Layers

FSP modules are meant to be both reusable and stackable. It is important to remember that modules are not dependent upon other modules, but upon other interfaces. The user is then free to fulfill the interface using the instance that best fits their needs.

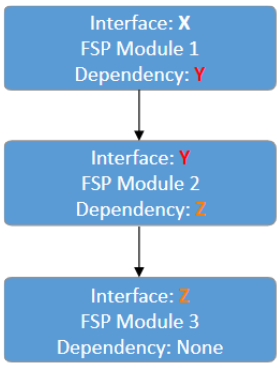

Figure 139: Connecting layers

In the image above interface Y is a dependency of interface X and has its own dependency on interface Z. Interface X only has a dependency on interface Y. Interface X has no knowledge of interface Z. This is a requirement for ensuring that layers can easily be swapped out.

3.10.2 Using FSP Modules in an Application

The typical use of an FSP module involves generating required module data then using the API in the application.

3.10.2.1 Create a Module Instance in the RA Configuration Editor

The RA Configuration editor (available both in the Renesas e2 studio IDE as well as through the standalone RA Smart Configurator) provides a graphical user interface for setting the parameters of the interface and instance configuration structures. It also automatically includes those structures (once they are configured in the GUI) in application-specific header files that can be included in application code.

The RA Configuration editor allocates storage for the control structures, all required configuration structures, and the instance structure in generated files in the ra_gen folder. Use the **Properties** window to set the values for the members of the configuration structures as needed. Refer to the Configuration section of the module usage notes for documentation about the configuration options.

If the interface has a callback function option then the application must declare and define the function. The return value is always of type void and the parameter to the function is a typed structure of name <interface>_callback_args_t. Once the function has been defined, assign its name to the p_callback member of the configuration structure. Callback function names can be assigned through the **Properties** window for the selected module.

3.10.2.2 Use the Instance API in the Application

Call the module's <MODULE>_Open() function. Pass pointers to the generated control structure and configuration structure. The names of these structures are based on the 'Name' field provided in the configuration editor. The control structure is <Name>_ctrl and the configuration structure is <Name>_cfg. An example <MODULE>_Open() call for an r_rtc module instance named g_clock is:

```
R_RTC_Open(&g_clock_ctrl, &g_clock_cfg);
```

Note

Each layer in the FSP Stack is responsible for calling the API functions of its dependencies. This means that users are only responsible for calling the API functions at the layer at which they are interfacing. Using the example above of a SPI module with a DTC dependency, the application uses only SPI APIs. The application starts by calling R_SPI_Open(). Internally, the SPI module opens the DTC. It locates R_DTC_Open() by accessing the dependent transfer interface function pointers from the pointers DTC instances (spi_cfg_t::p_transfer_tx and spi_cfg_t::p_transfer_rx) to open the DTC.

Refer to the module usage notes for example code to help get started with any particular module.

Chapter 4 API Reference

This section includes the FSP API Reference for the Module and Interface level functions.

►BSP	Common code shared by FSP drivers
►Modules	Modules are the smallest unit of software available in the FSP. Each module implements one interface
►Interfaces	The FSP interfaces provide APIs for common functionality. They can be implemented by one or more modules. Modules can use other modules as dependencies using this interface layer

4.1 BSP

Detailed Description

Common code shared by FSP drivers.

Modules

	Common Error Codes
	MCU Board Support Package The BSP is responsible for getting the MCU from reset to the user's application. Before reaching the user's application, the BSP sets up the stacks, heap, clocks, interrupts, C runtime environment, and stack monitor.
	BSP I/O access This module provides basic read/write access to port pins.

Data Structures

union	fsp_pack_version_t
struct	fsp_pack_version_t.__unnamed__

Macros

#define	FSP_VERSION_MAJOR
#define	FSP_VERSION_MINOR
#define	FSP_VERSION_PATCH
#define	FSP_VERSION_BUILD
#define	FSP_VERSION_STRING
#define	FSP_VERSION_BUILD_STRING

Data Structure Documentation

◆ fsp_pack_version_t

union fsp_pack_version_t		
FSP Pack version structure		
Data Fields		
uint32_t	version_id	Version id
struct fsp_pack_version_t	__unnamed__	Code version parameters, little endian order. DEPRECATED: Anonymous structure.
struct version_id_b_s	version_id_b	

◆ fsp_pack_version_t.__unnamed__

struct fsp_pack_version_t.__unnamed__		
Code version parameters, little endian order. DEPRECATED: Anonymous structure.		
Data Fields		
uint8_t	build	Build version of FSP Pack.
uint8_t	patch	Patch version of FSP Pack.
uint8_t	minor	Minor version of FSP Pack.
uint8_t	major	Major version of FSP Pack.

Macro Definition Documentation

◆ FSP_VERSION_MAJOR

#define FSP_VERSION_MAJOR
FSP pack major version.

◆ FSP_VERSION_MINOR

#define FSP_VERSION_MINOR
FSP pack minor version.

◆ FSP_VERSION_PATCH

#define FSP_VERSION_PATCH
FSP pack patch version.

◆ FSP_VERSION_BUILD

#define FSP_VERSION_BUILD
FSP pack version build number (currently unused).

◆ FSP_VERSION_STRING

#define FSP_VERSION_STRING
Public FSP version name.

◆ FSP_VERSION_BUILD_STRING

#define FSP_VERSION_BUILD_STRING
Unique FSP version ID.

4.1.1 Common Error Codes

BSP

Detailed Description

All FSP modules share these common error codes.

Macros

#define	FSP_PARAMETER_NOT_USED(p)
#define	FSP_CPP_HEADER

#define	FSP_HEADER
#define	FSP_SECURE_ARGUMENT

Enumerations

enum	fsp_err_t

Macro Definition Documentation

◆ FSP_PARAMETER_NOT_USED

#define FSP_PARAMETER_NOT_USED (p)

This macro is used to suppress compiler messages about a parameter not being used in a function. The nice thing about using this implementation is that it does not take any extra RAM or ROM.

◆ FSP_CPP_HEADER

#define FSP_CPP_HEADER

Determine if a C++ compiler is being used. If so, ensure that standard C is used to process the API information.

◆ FSP_HEADER

#define FSP_HEADER

FSP Header and Footer definitions

◆ FSP_SECURE_ARGUMENT

#define FSP_SECURE_ARGUMENT

Macro to be used when argument to function is ignored since function call is NSC and the parameter is statically defined on the Secure side.

Enumeration Type Documentation

◆ fsp_err_t

enum fsp_err_t	
Common error codes	
Enumerator	
FSP_ERR_ASSERTION	A critical assertion has failed.
FSP_ERR_INVALID_POINTER	Pointer points to invalid memory location.
FSP_ERR_INVALID_ARGUMENT	Invalid input parameter.
FSP_ERR_INVALID_CHANNEL	Selected channel does not exist.
FSP_ERR_INVALID_MODE	Unsupported or incorrect mode.
FSP_ERR_UNSUPPORTED	Selected mode not supported by this API.
FSP_ERR_NOT_OPEN	Requested channel is not configured or API not open.
FSP_ERR_IN_USE	Channel/peripheral is running/busy.
FSP_ERR_OUT_OF_MEMORY	Allocate more memory in the driver's cfg.h.
FSP_ERR_HW_LOCKED	Hardware is locked.
FSP_ERR_IRQ_BSP_DISABLED	IRQ not enabled in BSP.
FSP_ERR_OVERFLOW	Hardware overflow.
FSP_ERR_UNDERFLOW	Hardware underflow.
FSP_ERR_ALREADY_OPEN	Requested channel is already open in a different configuration.
FSP_ERR_APPROXIMATION	Could not set value to exact result.
FSP_ERR_CLAMPED	Value had to be limited for some reason.
FSP_ERR_INVALID_RATE	Selected rate could not be met.
FSP_ERR_ABORTED	An operation was aborted.
FSP_ERR_NOT_ENABLED	Requested operation is not enabled.
FSP_ERR_TIMEOUT	Timeout error.

FSP_ERR_INVALID_BLOCKS	Invalid number of blocks supplied.
FSP_ERR_INVALID_ADDRESS	Invalid address supplied.
FSP_ERR_INVALID_SIZE	Invalid size/length supplied for operation.
FSP_ERR_WRITE_FAILED	Write operation failed.
FSP_ERR_ERASE_FAILED	Erase operation failed.
FSP_ERR_INVALID_CALL	Invalid function call is made.
FSP_ERR_INVALID_HW_CONDITION	Detected hardware is in invalid condition.
FSP_ERR_INVALID_FACTORY_FLASH	Factory flash is not available on this MCU.
FSP_ERR_INVALID_STATE	API or command not valid in the current state.
FSP_ERR_NOT_ERASED	Erase verification failed.
FSP_ERR_SECTOR_RELEASE_FAILED	Sector release failed.
FSP_ERR_NOT_INITIALIZED	Required initialization not complete.
FSP_ERR_NOT_FOUND	The requested item could not be found.
FSP_ERR_NO_CALLBACK_MEMORY	Non-secure callback memory not provided for non-secure callback.
FSP_ERR_BUFFER_EMPTY	No data available in buffer.
FSP_ERR_INVALID_DATA	Accuracy of data is not guaranteed.
FSP_ERR_INTERNAL	Internal error.
FSP_ERR_WAIT_ABORTED	Wait aborted.
FSP_ERR_FRAMING	Framing error occurs.
FSP_ERR_BREAK_DETECT	Break signal detects.
FSP_ERR_PARITY	Parity error occurs.
FSP_ERR_RXBUF_OVERFLOW	Receive queue overflow.
FSP_ERR_QUEUE_UNAVAILABLE	Can't open s/w queue.
FSP_ERR_INSUFFICIENT_SPACE	Not enough space in transmission circular

	buffer.
FSP_ERR_INSUFFICIENT_DATA	Not enough data in receive circular buffer.
FSP_ERR_TRANSFER_ABORTED	The data transfer was aborted.
FSP_ERR_MODE_FAULT	Mode fault error.
FSP_ERR_READ_OVERFLOW	Read overflow.
FSP_ERR_SPI_PARITY	Parity error.
FSP_ERR_OVERRUN	Overrun error.
FSP_ERR_CLOCK_INACTIVE	Inactive clock specified as system clock.
FSP_ERR_CLOCK_ACTIVE	Active clock source cannot be modified without stopping first.
FSP_ERR_NOT_STABILIZED	Clock has not stabilized after its been turned on/off.
FSP_ERR_PLL_SRC_INACTIVE	PLL initialization attempted when PLL source is turned off.
FSP_ERR_OSC_STOP_DET_ENABLED	Illegal attempt to stop LOCO when Oscillation stop is enabled.
FSP_ERR_OSC_STOP_DETECTED	The Oscillation stop detection status flag is set.
FSP_ERR_OSC_STOP_CLOCK_ACTIVE	Attempt to clear Oscillation Stop Detect Status with PLL/MAIN_OSC active.
FSP_ERR_CLKOUT_EXCEEDED	Output on target output clock pin exceeds maximum supported limit.
FSP_ERR_USB_MODULE_ENABLED	USB clock configure request with USB Module enabled.
FSP_ERR_HARDWARE_TIMEOUT	A register read or write timed out.
FSP_ERR_LOW_VOLTAGE_MODE	Invalid clock setting attempted in low voltage mode.
FSP_ERR_PE_FAILURE	Unable to enter Programming mode.
FSP_ERR_CMD_LOCKED	Peripheral in command locked state.
FSP_ERR_FCLK	

	FCLK must be >= 4 MHz.
FSP_ERR_INVALID_LINKED_ADDRESS	Function or data are linked at an invalid region of memory.
FSP_ERR_BLANK_CHECK_FAILED	Blank check operation failed.
FSP_ERR_INVALID_CAC_REF_CLOCK	Measured clock rate < reference clock rate.
FSP_ERR_INVALID_RESULT	The result of one or more calculations was +/- infinity.
FSP_ERR_CLOCK_GENERATION	Clock cannot be specified as system clock.
FSP_ERR_INVALID_TIMING_SETTING	Invalid timing parameter.
FSP_ERR_INVALID_LAYER_SETTING	Invalid layer parameter.
FSP_ERR_INVALID_ALIGNMENT	Invalid memory alignment found.
FSP_ERR_INVALID_GAMMA_SETTING	Invalid gamma correction parameter.
FSP_ERR_INVALID_LAYER_FORMAT	Invalid color format in layer.
FSP_ERR_INVALID_UPDATE_TIMING	Invalid timing for register update.
FSP_ERR_INVALID_CLUT_ACCESS	Invalid access to CLUT entry.
FSP_ERR_INVALID_FADE_SETTING	Invalid fade-in/fade-out setting.
FSP_ERR_INVALID_BRIGHTNESS_SETTING	Invalid gamma correction parameter.
FSP_ERR_JPEG_ERR	JPEG error.
FSP_ERR_JPEG_SOI_NOT_DETECTED	SOI not detected until EOI detected.
FSP_ERR_JPEG_SOF1_TO_SOFF_DETECTED	SOF1 to SOFF detected.
FSP_ERR_JPEG_UNSUPPORTED_PIXEL_FORMAT	Unprovided pixel format detected.
FSP_ERR_JPEG_SOF_ACCURACY_ERROR	SOF accuracy error: other than 8 detected.
FSP_ERR_JPEG_DQT_ACCURACY_ERROR	DQT accuracy error: other than 0 detected.
FSP_ERR_JPEG_COMPONENT_ERROR1	Component error 1: the number of SOF0 header components detected is other than 1, 3, or 4.
FSP_ERR_JPEG_COMPONENT_ERROR2	Component error 2: the number of components

	differs between SOF0 header and SOS.
FSP_ERR_JPEG_SOF0_DQT_DHT_NOT_DETECTED	SOF0, DQT, and DHT not detected when SOS detected.
FSP_ERR_JPEG_SOS_NOT_DETECTED	SOS not detected: SOS not detected until EOI detected.
FSP_ERR_JPEG_EOI_NOT_DETECTED	EOI not detected (default)
FSP_ERR_JPEG_RESTART_INTERVAL_DATA_NUMBER_ERROR	Restart interval data number error detected.
FSP_ERR_JPEG_IMAGE_SIZE_ERROR	Image size error detected.
FSP_ERR_JPEG_LAST_MCU_DATA_NUMBER_ERROR	Last MCU data number error detected.
FSP_ERR_JPEG_BLOCK_DATA_NUMBER_ERROR	Block data number error detected.
FSP_ERR_JPEG_BUFFERSIZE_NOT_ENOUGH	User provided buffer size not enough.
FSP_ERR_JPEG_UNSUPPORTED_IMAGE_SIZE	JPEG Image size is not aligned with MCU.
FSP_ERR_CALIBRATE_FAILED	Calibration failed.
FSP_ERR_IIRFA_ECC_1BIT	1-bit ECC error detected
FSP_ERR_IIRFA_ECC_2BIT	2-bit ECC error detected
FSP_ERR_IP_HARDWARE_NOT_PRESENT	Requested IP does not exist on this device.
FSP_ERR_IP_UNIT_NOT_PRESENT	Requested unit does not exist on this device.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	Requested channel does not exist on this device.
FSP_ERR_NO_MORE_BUFFER	No more buffer found in the memory block pool.
FSP_ERR_ILLEGAL_BUFFER_ADDRESS	Buffer address is out of block memory pool.
FSP_ERR_INVALID_WORKBUFFER_SIZE	Work buffer size is invalid.
FSP_ERR_INVALID_MSG_BUFFER_SIZE	Message buffer size is invalid.
FSP_ERR_TOO_MANY_BUFFERS	Number of buffer is too many.
FSP_ERR_NO_SUBSCRIBER_FOUND	No message subscriber found.

FSP_ERR_MESSAGE_QUEUE_EMPTY	No message found in the message queue.
FSP_ERR_MESSAGE_QUEUE_FULL	No room for new message in the message queue.
FSP_ERR_ILLEGAL_SUBSCRIBER_LISTS	Message subscriber lists is illegal.
FSP_ERR_BUFFER_RELEASED	Buffer has been released.
FSP_ERR_D2D_ERROR_INIT	D/AVE 2D has an error in the initialization.
FSP_ERR_D2D_ERROR_DEINIT	D/AVE 2D has an error in the initialization.
FSP_ERR_D2D_ERROR_RENDERING	D/AVE 2D has an error in the rendering.
FSP_ERR_D2D_ERROR_SIZE	D/AVE 2D has an error in the rendering.
FSP_ERR_ETHER_ERROR_NO_DATA	No Data in Receive buffer.
FSP_ERR_ETHER_ERROR_LINK	ETHERC/EDMAC has an error in the Auto-negotiation.
FSP_ERR_ETHER_ERROR_MAGIC_PACKET_MODE	As a Magic Packet is being detected, and transmission/reception is not enabled.
FSP_ERR_ETHER_ERROR_TRANSMIT_BUFFER_FULL	Transmit buffer is not empty.
FSP_ERR_ETHER_ERROR_FILTERING	Detect multicast frame when multicast frame filtering enable.
FSP_ERR_ETHER_ERROR_PHY_COMMUNICATION	ETHERC/EDMAC has an error in the phy communication.
FSP_ERR_ETHER_RECEIVE_BUFFER_ACTIVE	Receive buffer is active.
FSP_ERR_ETHER_PHY_ERROR_LINK	PHY is not link up.
FSP_ERR_ETHER_PHY_NOT_READY	PHY has an error in the Auto-negotiation.
FSP_ERR_QUEUE_FULL	Queue is full, cannot queue another data.
FSP_ERR_QUEUE_EMPTY	Queue is empty, no data to dequeue.
FSP_ERR_CTSU_SCANNING	Scanning.
FSP_ERR_CTSU_NOT_GET_DATA	Not processed previous scan data.
FSP_ERR_CTSU_INCOMPLETE_TUNING	Incomplete initial offset tuning.

FSP_ERR_CTSU_DIAG_NOT_YET	Diagnosis of data collected no yet.
FSP_ERR_CTSU_DIAG_LDO_OVER_VOLTAGE	Diagnosis of LDO over voltage failed.
FSP_ERR_CTSU_DIAG_CCO_HIGH	Diagnosis of CCO into 19.2uA failed.
FSP_ERR_CTSU_DIAG_CCO_LOW	Diagnosis of CCO into 2.4uA failed.
FSP_ERR_CTSU_DIAG_SSCG	Diagnosis of SSCG frequency failed.
FSP_ERR_CTSU_DIAG_DAC	Diagnosis of non-touch count value failed.
FSP_ERR_CTSU_DIAG_OUTPUT_VOLTAGE	Diagnosis of LDO output voltage failed.
FSP_ERR_CTSU_DIAG_OVER_VOLTAGE	Diagnosis of over voltage detection circuit failed.
FSP_ERR_CTSU_DIAG_OVER_CURRENT	Diagnosis of over current detection circuit failed.
FSP_ERR_CTSU_DIAG_LOAD_RESISTANCE	Diagnosis of LDO internal resistance value failed.
FSP_ERR_CTSU_DIAG_CURRENT_SOURCE	Diagnosis of Current source value failed.
FSP_ERR_CTSU_DIAG_SENSCLK_GAIN	Diagnosis of SENSCLK frequency gain failed.
FSP_ERR_CTSU_DIAG_SUCLK_GAIN	Diagnosis of SUCLK frequency gain failed.
FSP_ERR_CTSU_DIAG_CLOCK_RECOVERY	Diagnosis of SUCLK clock recovery function failed.
FSP_ERR_CTSU_DIAG_CFC_GAIN	Diagnosis of CFC oscillator gain failed.
FSP_ERR_CARD_INIT_FAILED	SD card or eMMC device failed to initialize.
FSP_ERR_CARD_NOT_INSERTED	SD card not installed.
FSP_ERR_DEVICE_BUSY	Device is holding DAT0 low or another operation is ongoing.
FSP_ERR_CARD_NOT_INITIALIZED	SD card was removed.
FSP_ERR_CARD_WRITE_PROTECTED	Media is write protected.
FSP_ERR_TRANSFER_BUSY	Transfer in progress.
FSP_ERR_RESPONSE	Card did not respond or responded with an error.

FSP_ERR_MEDIA_FORMAT_FAILED	Media format failed.
FSP_ERR_MEDIA_OPEN_FAILED	Media open failed.
FSP_ERR_CAN_DATA_UNAVAILABLE	No data available.
FSP_ERR_CAN_MODE_SWITCH_FAILED	Switching operation modes failed.
FSP_ERR_CAN_INIT_FAILED	Hardware initialization failed.
FSP_ERR_CAN_TRANSMIT_NOT_READY	Transmit in progress.
FSP_ERR_CAN_RECEIVE_MAILBOX	Mailbox is setup as a receive mailbox.
FSP_ERR_CAN_TRANSMIT_MAILBOX	Mailbox is setup as a transmit mailbox.
FSP_ERR_CAN_MESSAGE_LOST	Receive message has been overwritten or overrun.
FSP_ERR_CAN_TRANSMIT_FIFO_FULL	Transmit FIFO is full.
FSP_ERR_WIFI_CONFIG_FAILED	WiFi module Configuration failed.
FSP_ERR_WIFI_INIT_FAILED	WiFi module initialization failed.
FSP_ERR_WIFI_TRANSMIT_FAILED	Transmission failed.
FSP_ERR_WIFI_INVALID_MODE	API called when provisioned in client mode.
FSP_ERR_WIFI_FAILED	WiFi Failed.
FSP_ERR_WIFI_SCAN_COMPLETE	Wifi scan has completed.
FSP_ERR_WIFI_AP_NOT_CONNECTED	WiFi module is not connected to access point.
FSP_ERR_CELLULAR_CONFIG_FAILED	Cellular module Configuration failed.
FSP_ERR_CELLULAR_INIT_FAILED	Cellular module initialization failed.
FSP_ERR_CELLULAR_TRANSMIT_FAILED	Transmission failed.
FSP_ERR_CELLULAR_FW_UPTODATE	Firmware is uptodate.
FSP_ERR_CELLULAR_FW_UPGRADE_FAILED	Firmware upgrade failed.
FSP_ERR_CELLULAR_FAILED	Cellular Failed.
FSP_ERR_CELLULAR_INVALID_STATE	API Called in invalid state.

FSP_ERR_CELLULAR_REGISTRATION_FAILED	Cellular Network registration failed.
FSP_ERR_BLE_FAILED	BLE operation failed.
FSP_ERR_BLE_INIT_FAILED	BLE device initialization failed.
FSP_ERR_BLE_CONFIG_FAILED	BLE device configuration failed.
FSP_ERR_BLE_PRF_ALREADY_ENABLED	BLE device Profile already enabled.
FSP_ERR_BLE_PRF_NOT_ENABLED	BLE device not enabled.
FSP_ERR_BLE_ABS_INVALID_OPERATION	Invalid operation is executed.
FSP_ERR_BLE_ABS_NOT_FOUND	Valid data or free space is not found.
FSP_ERR_CRYPTO_CONTINUE	Continue executing function.
FSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	Hardware resource busy.
FSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty.
FSP_ERR_CRYPTO_SCE_HRK_INVALID_INDEX	Invalid index.
FSP_ERR_CRYPTO_SCE_RETRY	Retry.
FSP_ERR_CRYPTO_SCE_VERIFY_FAIL	Verify is failed.
FSP_ERR_CRYPTO_SCE_ALREADY_OPEN	HW SCE module is already opened.
FSP_ERR_CRYPTO_NOT_OPEN	Hardware module is not initialized.
FSP_ERR_CRYPTO_UNKNOWN	Some unknown error occurred.
FSP_ERR_CRYPTO_NULL_POINTER	Null pointer input as a parameter.
FSP_ERR_CRYPTO_NOT_IMPLEMENTED	Algorithm/size not implemented.
FSP_ERR_CRYPTO_RNG_INVALID_PARAM	An invalid parameter is specified.
FSP_ERR_CRYPTO_RNG_FATAL_ERROR	A fatal error occurred.
FSP_ERR_CRYPTO_INVALID_SIZE	Size specified is invalid.
FSP_ERR_CRYPTO_INVALID_STATE	Function used in an valid state.
FSP_ERR_CRYPTO_ALREADY_OPEN	control block is already opened

FSP_ERR_CRYPTO_INSTALL_KEY_FAILED	Specified input key is invalid.
FSP_ERR_CRYPTO_AUTHENTICATION_FAILED	Authentication failed.
FSP_ERR_CRYPTO_SCE_KEY_SET_FAIL	Failure to Init Cipher.
FSP_ERR_CRYPTO_SCE_AUTHENTICATION	Authentication failed.
FSP_ERR_CRYPTO_SCE_PARAMETER	Input date is illegal.
FSP_ERR_CRYPTO_SCE_PROHIBIT_FUNCTION	An invalid function call occurred.
FSP_ERR_CRYPTO_COMMON_NOT_OPENED	Crypto Framework Common is not opened.
FSP_ERR_CRYPTO_HAL_ERROR	Cryoto HAL module returned an error.
FSP_ERR_CRYPTO_KEY_BUF_NOT_ENOUGH	Key buffer size is not enough to generate a key.
FSP_ERR_CRYPTO_BUF_OVERFLOW	Attempt to write data larger than what the buffer can hold.
FSP_ERR_CRYPTO_INVALID_OPERATION_MODE	Invalid operation mode.
FSP_ERR_MESSAGE_TOO_LONG	Message for RSA encryption is too long.
FSP_ERR_RSA_DECRYPTION_ERROR	RSA Decryption error.
FSP_ERR_SENSOR_INVALID_DATA	Data is invalid. *Note* *SF_CRYPTO APIs may return an error code starting from 0x10000 which is of Crypto module. Refer to sf_cryoto_err.h for Crypto error codes.*
FSP_ERR_SENSOR_IN_STABILIZATION	Sensor is stabilizing.
FSP_ERR_SENSOR_MEASUREMENT_NOT_FINISHED	Measurement is not finished.
FSP_ERR_COMMS_BUS_NOT_OPEN	Bus is not open.

4.1.2 MCU Board Support Package

Detailed Description

The BSP is responsible for getting the MCU from reset to the user's application. Before reaching the user's application, the BSP sets up the stacks, heap, clocks, interrupts, C runtime environment, and stack monitor.

- BSP Features
- BSP Clock Configuration
- System Interrupts
- Group Interrupts
- External and Peripheral Interrupts
- Error Logging
- BSP Weak Symbols
- Warm Start Callbacks
- C Runtime Initialization
- Register Protection
- ID Codes
- TrustZone Security Attribution Registers
- Software Delay
- Trignometric Function
- Octal-SPI Clock Update
- Board Specific Features
- Configuration

Overview

BSP Features

BSP Clock Configuration

All system clocks are set up during BSP initialization based on the settings in bsp_clock_cfg.h. These settings are derived from clock configuration information provided from the RA Configuration editor **Clocks** tab.

- Clock configuration is performed prior to initializing the C runtime environment to speed up the startup process, as it is possible to start up on a relatively slow (that is, 32 kHz) clock.
- The BSP implements the required delays to allow the selected clock to stabilize.
- The BSP will configure the CMSIS SystemCoreClock variable after clock initialization with the current system clock frequency.

System Interrupts

As RA MCUs are based on the Cortex-M ARM architecture, the NVIC Nested Vectored Interrupt Controller (NVIC) handles exceptions and interrupt configuration, prioritization and interrupt masking. In the ARM architecture, the NVIC handles exceptions. Some exceptions are known as System Exceptions. System exceptions are statically located at the "top" of the vector table and occupy vector numbers 1 to 15. Vector zero is reserved for the MSP Main Stack Pointer (MSP). The remaining 15 system exceptions are shown below:

- Reset
- NMI
- Cortex-M4 Hard Fault Handler
- Cortex-M4 MPU Fault Handler
- Cortex-M4 Bus Fault Handler
- Cortex-M4 Usage Fault Handler

- Reserved
- Reserved
- Reserved
- Reserved
- Cortex-M4 SVCall Handler
- Cortex-M4 Debug Monitor Handler
- Reserved
- Cortex-M4 PendSV Handler
- Cortex-M4 SysTick Handler

NMI and Hard Fault exceptions are enabled out of reset and have fixed priorities. Other exceptions have configurable priorities and some can be disabled.

Group Interrupts

Group interrupt is the term used to describe the 12 sources that can trigger the Non-Maskable Interrupt (NMI). When an NMI occurs the NMI Handler examines the NMISR (status register) to determine the source of the interrupt. NMI interrupts take precedence over all interrupts, are usable only as CPU interrupts, and cannot activate the RA peripherals Data Transfer Controller (DTC) or Direct Memory Access Controller (DMAC).

Possible group interrupt sources include:

- IWDT Underflow/Refresh Error
- WDT Underflow/Refresh Error
- Voltage-Monitoring 1 Interrupt
- Voltage-Monitoring 2 Interrupt
- VBATT monitor Interrupt
- Oscillation Stop is detected
- NMI pin
- RAM Parity Error
- RAM ECC Error
- MPU Bus Slave Error
- MPU Bus Master Error
- MPU Stack Error
- TrustZone Filter Error A user may enable notification for one or more group interrupts by registering a callback using the BSP API function R_BSP_GroupIrqWrite(). When an NMI interrupt occurs, the NMI handler checks to see if there is a callback registered for the cause of the interrupt and if so calls the registered callback function.

External and Peripheral Interrupts

User configurable interrupts begin with slot 16. These may be external, or peripheral generated interrupts.

Although the number of available slots for the NVIC interrupt vector table may seem small, the BSP defines up to 512 events that are capable of generating an interrupt. By using Event Mapping, the BSP maps user-enabled events to NVIC interrupts. For an RA6M3 MCU, only 96 of these events may be active at any one time, but the user has flexibility by choosing which events generate the active event.

By allowing the user to select only the events they are interested in as interrupt sources, we are able to provide an interrupt service routine that is fast and event specific.

For example, on other microcontrollers a standard NVIC interrupt vector table might contain a single

vector entry for the SCI0 (Serial Communications Interface) peripheral. The interrupt service routine for this would have to check a status register for the 'real' source of the interrupt. In the RA implementation there is a vector entry for each of the SCI0 events that we are interested in.

BSP Weak Symbols

You might wonder how the BSP is able to place ISR addresses in the NVIC table without the user having explicitly defined one. All that is required by the BSP is that the interrupt event be given a priority.

This is accomplished through the use of the 'weak' attribute. The weak attribute causes the declaration to be emitted as a weak symbol rather than a global. A weak symbol is one that can be overridden by an accompanying strong reference with the same name. When the BSP declares a function as weak, user code can define the same function and it will be used in place of the BSP function. By defining all possible interrupt sources as weak, the vector table can be built at compile time and any user declarations (strong references) will be used at runtime.

Weak symbols are supported for ELF targets and also for a.out targets when using the GNU assembler and linker.

Note that in CMSIS system.c, there is also a weak definition (and a function body) for the Warm Start callback function R_BSP_WarmStart(). Because this function is defined in the same file as the weak declaration, it will be called as the 'default' implementation. The function may be overridden by the user by copying the body into their user application and modifying it as necessary. The linker identifies this as the 'strong' reference and uses it.

Warm Start Callbacks

As the BSP is in the process of bringing up the board out of reset, there are three points where the user can request a callback. These are defined as the 'Pre Clock Init', 'Post Clock Init' and 'Post C' warm start callbacks.

As described above, this function is already weakly defined as R_BSP_WarmStart(), so it is a simple matter of redefining the function or copying the existing body from CMSIS system.c into the application code to get a callback. R_BSP_WarmStart() takes an event parameter of type bsp_warm_start_event_t which describes the type of warm start callback being made.

This function is not enabled/disabled and is always called for both events as part of the BSP startup. Therefore it needs a function body, which will not be called if the user is overriding it. The function body is located in system.c. To use this function just copy this function into your own code and modify it to meet your needs.

C Runtime Initialization

This BSP configuration allows the user to skip the FSP C runtime initialization code by setting the "C Runtime Initialization" to "Disabled" on the BSP tab of the RA Configuration editor. Disabling this option is useful in cases where a non-standard linker script is being used or other modifications to the runtime initialization are desired. If this macro is disabled, the user must use the 'Post Clock Init' event from the warm start (described above) to run their own runtime initialization code.

Heap Allocation

The relatively low amount of on-chip SRAM available and lack of memory protection in an MCU means that heap use must be very carefully controlled to avoid memory leaks, overruns and attempted overallocation. Further, many RTOSes provide their own dynamic memory allocation

system. For these reasons the default heap size is set at 0 bytes, effectively disabling dynamic memory. If it is required for an application setting a positive value to the "Heap size (bytes)" option in the RA Common configurations on the **BSP** tab will allocate a heap.

Note

When using printf/sprintf (and other variants) to output floating point numbers a heap is required. A minimum size of 0x1000 (4096) bytes is recommended when starting development in this case.

Error Logging

When error logging is enabled, the error logging function can be redefined on the command line by defining FSP_ERROR_LOG(err) to the desired function call. The default function implementation is FSP_ERROR_LOG(err)=fsp_error_log(err, **FILE**, **LINE**). This implementation uses the predefined macros **FILE** and **LINE** to help identify the location where the error occurred. Removing the line from the function call can reduce code size when error logging is enabled. Some compilers may support other predefined macros like **FUNCTION**, which could be helpful for customizing the error logger.

Register Protection

The BSP register protection functions utilize reference counters to ensure that an application which has specified a certain register and subsequently calls another function doesn't have its register protection settings inadvertently modified.

Each time R_BSP_RegisterProtectDisable() is called, the respective reference counter is incremented.

Each time R_BSP_RegisterProtectEnable() is called, the respective reference counter is decremented.

Both functions will only modify the protection state if their reference counter is zero.

```
/* Enable writing to protected CGC registers */
R_BSP_RegisterProtectDisable(BSP_REG_PROTECT_CGC);
/* Insert code to modify protected CGC registers. */
/* Disable writing to protected CGC registers */
R_BSP_RegisterProtectEnable(BSP_REG_PROTECT_CGC);
```

Option-setting memory

Option-setting memory includes OFS registers OFS0 and OFS1, OSIS debugger ID code, and block protections settings BPS and PBPS. Option-setting memory is MCU specific, and not all MCUs implement all option-setting registers. Option-setting configurations available on the selected device are configurable in the BSP properties. These configurations are placed in sections to be loaded at the required flash address by the linker.

The ID code is a 16-byte value that can be used to protect the MCU from being connected to a debugger or from connecting in Serial Boot Mode. There are different settings that can be set for the ID code; please refer to the hardware manual for your device for available options.

On MCUs that support TrustZone, option-setting registers are placed in a different locations for Non-Secure projects than for Secure or Flat projects. This is handled automatically by the BSP and linker scripts.

All *_SEL registers default to allowing both Secure and Non-Secure access unless otherwise noted here. If block protection is configured in a Secure project, the BSP sets the corresponding configuration to Secure access only by updating the corresponding *_SEL register. Similarly, the LVD related settings in the OFSn_SEL registers are automatically set to Secure if the corresponding LVD monitor is used in the Secure project.

TrustZone Security Attribution Registers

On MCUs that support TrustZone, Security Attribution Registers for modules used in the Secure project are configured to allow Secure access only as part of the startup code of the Secure project. This logic is skipped for Flat projects.

Software Delay

Implements a blocking software delay. A delay can be specified in microseconds, milliseconds or seconds. The delay is implemented based on the system clock rate.

```
 /* Delay at least 1 second. Depending on the number of wait states required for the
region of memory
  * that the software_delay_loop has been linked in this could take longer. The
default is 4 cycles per loop.
  * This can be modified by redefining DELAY_LOOP_CYCLES. BSP_DELAY_UNITS_SECONDS,
BSP_DELAY_UNITS_MILLISECONDS,
  * and BSP_DELAY_UNITS_MICROSECONDS can all be used with R_BSP_SoftwareDelay. */
 R_BSP_SoftwareDelay(1, BSP_DELAY_UNITS_SECONDS);
```

Trignometric Function

Implements Trignometric math inline functions utilizing TFU hardware. These functions can calculate sine, cosine, arctangent and hypotenuse. The trigonometric library functions sinf(), cosf(), atan2f(), and hypotf() can be mapped to respective TFU functions by enabling TFU Mathlib property in FSP Configuration tool. Extended functions sincosf() and atan2hypotf() are also available when the TFU Mathlib property is enabled in the RA Configuration editor.

TFU functions are not reentrant. Disable the TFU Mathlib property in RA Configuration editor if reentrant access to trigonometric library functions is required.

Note

Refer to the MCU hardware user's manual or datasheet to determine if it has TFU support.

Critical Section Macros

Implements a critical section. Some MCUs (MCUs with the BASEPRI register) support allowing high priority interrupts to execute during critical sections. On these MCUs, interrupts with priority less than or equal to BSP_CFG_IRQ_MASK_LEVEL_FOR_CRITICAL_SECTION are not serviced in critical sections. Interrupts with higher priority than BSP_CFG_IRQ_MASK_LEVEL_FOR_CRITICAL_SECTION still execute in critical sections.

```
    FSP_CRITICAL_SECTION_DEFINE;
 /* Store the current interrupt posture. */
 FSP_CRITICAL_SECTION_ENTER;
 /* Interrupts cannot run in this section unless their priority is less than
BSP_CFG_IRQ_MASK_LEVEL_FOR_CRITICAL_SECTION. */
 /* Restore saved interrupt posture. */
 FSP_CRITICAL_SECTION_EXIT;
```

OctaClock Update

Supports changing the Octal-SPI Clock (OCTACLK) during runtime if supported by the MCU. The OCTACLK source and clock divisor can be updated. It is user's responsibility to ensure the selected clock source is running before attempting to update OCTACLK.

Sealing the Main Stack (TrustZone Secure Projects)

In TrustZone secure projects, the BSP seals the main stack by placing the value 0xFEF5EDA5 above the stack top. For more information, refer to section 3.5 "Sealing a Stack" in "Secure software guidelines for ARMv8-M": https://developer.arm.com/documentation/100720/0300.

Board Specific Features

The BSP will call the board's initialization function (bsp_init) which can initialize board specific features. Possible board features are listed below.

Board Feature	Description
SDRAM Support	The BSP will initialize SDRAM if the board supports it
QSPI Support	The BSP will initialize QSPI if the board supports it and put it into ROM mode. Use the R_QSPI module to write and erase the QSPI chip.

Configuration

The BSP is heavily data driven with most features and functionality being configured based on the content from configuration files. Configuration files represent the settings specified by the user and are generated when the project is built and/or when the Generate Project Content button is clicked in the RA Configuration editor.

Build Time Configurations for fsp_common

The following build time configurations are defined in fsp_cfg/bsp/bsp_cfg.h:

Configuration	Options	Default	Description

Main stack size (bytes)	Value must be an integer multiple of 8 and between 8 and 0xFFFFFFFF	0x400	Set the size of the main program stack. NOTE: This entry is for the main stack. When using an RTOS, thread stacks can be configured in the properties for each thread.
Heap size (bytes)	Value must be 0 or an integer multiple of 8 between 8 and 0xFFFFFFFF.	0	The main heap is disabled by default. Set the heap size to a positive integer divisible by 8 to enable it. A minimum of 4K (0x1000) is recommended if standard library functions are to be used.
MCU Vcc (mV)	Value must between 0 and 5500 (5.5V)	3300	Some peripherals require different settings based on the supplied voltage. Entering Vcc here (in mV) allows the relevant driver modules to configure the associated peripherals accordingly.
Parameter checking	• Enabled • Disabled	Disabled	When enabled, parameter checking for the BSP is turned on. In addition, any modules whose parameter checking configuration is set to 'Default (BSP)' will perform parameter checking as well.
Assert Failures	• Return FSP_ERR_ASSERTION • Call fsp_error_log then Return FSP_ERR_ASSERTION • Use assert() to Halt Execution • Disable checks	Return FSP_ERR_ASSERTION	Define the behavior of the FSP_ASSERT() macro.

	that would return FSP_ERR_ASSERTION		
Error Log	• No Error Log • Errors Logged via fsp_error_log	No Error Log	Specify error logging behavior.
Clock Registers not Reset Values during Startup	• Disabled • Enabled	Disabled	If enabled, registers are assumed to be set to their reset value during startup. Enable this if another application such as a bootloader or Secure project has already configured the clocks before the startup code runs.
Main Oscillator Populated	• Populated • Not Populated	Populated	Select whether or not there is a main oscillator (XTAL) on the board. This setting can be overridden in board_cfg.h.
PFS Protect	• Disabled • Enabled	Enabled	Keep the PFS registers locked when they are not being modified. If disabled they will be unlocked during startup.
C Runtime Initialization	• Enabled • Disabled	Enabled	Select if the C runtime initialization in the BSP is to be used. If disabled, use the BSP_WARM_START_POST_CLOCK event to run user defined equivalent.
Early BSP Initialization	• Enabled • Disabled	Disabled	Enable this option to use BSP functions before C runtime initialization (BSP_WARM_START_RESET or BSP_WARM_START_POST_CLOCK).
Main Oscillator Clock Source	• External Oscillator • Crystal or Resonator	Crystal or Resonator	Select the main oscillator clock source. This setting can be overridden in board_cfg.h
Subclock Populated	• Populated	Populated	Select whether or not

	• Not Populated		there is a subclock crystal on the board. This setting can be overridden in board_cfg.h.
Subclock Drive (Drive capacitance availability varies by MCU)	• Standard/Normal mode • Low/Low power mode 1 • Low power mode 2 • Low power mode 3	Standard/Normal mode	Select the subclock oscillator drive capacitance. This setting can be overridden in board_cfg.h
Subclock Stabilization Time (ms)	Value must between 0 and 10000	1000	Select the subclock oscillator stabilization time. This is only used in the startup code if the subclock is selected as the system clock on the Clocks tab or if the HOCO FLL function is enabled. This setting can be overridden in board_cfg.h

Macro Definition Documentation

◆ BSP_IRQ_DISABLED

#define BSP_IRQ_DISABLED
Used to signify that an ELC event is not able to be used as an interrupt.

◆ FSP_LOG_PRINT

#define FSP_LOG_PRINT (X)
Macro that can be defined in order to enable logging in FSP modules.

◆ FSP_RETURN

#define FSP_RETURN (err)
Macro to log and return error without an assertion.

◆ FSP_ERROR_LOG

#define FSP_ERROR_LOG (err)
This function is called before returning an error code. To stop on a runtime error, define fsp_error_log in user code and do required debugging (breakpoints, stack dump, etc) in this function.

◆ FSP_ASSERT

#define FSP_ASSERT (a)
Default assertion calls FSP_ERROR_RETURN if condition "a" is false. Used to identify incorrect use of API's in FSP functions.

◆ FSP_ERROR_RETURN

#define FSP_ERROR_RETURN (a, err)
All FSP error codes are returned using this macro. Calls FSP_ERROR_LOG function if condition "a" is false. Used to identify runtime errors in FSP functions.

◆ FSP_CRITICAL_SECTION_ENTER

#define FSP_CRITICAL_SECTION_ENTER
This macro temporarily saves the current interrupt state and disables interrupts.

◆ FSP_CRITICAL_SECTION_EXIT

#define FSP_CRITICAL_SECTION_EXIT
This macro restores the previously saved interrupt state, reenabling interrupts.

◆ FSP_INVALID_VECTOR

#define FSP_INVALID_VECTOR
Used to signify that the requested IRQ vector is not defined in this system.

◆ BSP_CFG_HANDLE_UNRECOVERABLE_ERROR

#define BSP_CFG_HANDLE_UNRECOVERABLE_ERROR (x)
In the event of an unrecoverable error the BSP will by default call the __BKPT() intrinsic function which will alert the user of the error. The user can override this default behavior by defining their own BSP_CFG_HANDLE_UNRECOVERABLE_ERROR macro.

◆ BSP_STACK_ALIGNMENT

#define BSP_STACK_ALIGNMENT
Stacks (and heap) must be sized and aligned to an integer multiple of this number.

◆ R_BSP_MODULE_START

#define R_BSP_MODULE_START (ip, channel)
Cancels the module stop state. **Parameters** ip — fsp_ip_t enum value for the module to be stopped channel — The channel. Use channel 0 for modules without channels.

◆ R_BSP_MODULE_STOP

#define R_BSP_MODULE_STOP (ip, channel)
Enables the module stop state. **Parameters** ip — fsp_ip_t enum value for the module to be stopped channel — The channel. Use channel 0 for modules without channels.

Enumeration Type Documentation

◆ fsp_ip_t

enum fsp_ip_t	
Available modules.	
Enumerator	
FSP_IP_CFLASH	Code Flash.
FSP_IP_DFLASH	Data Flash.
FSP_IP_RAM	RAM.
FSP_IP_LVD	Low Voltage Detection.
FSP_IP_CGC	Clock Generation Circuit.
FSP_IP_LPM	Low Power Modes.
FSP_IP_FCU	Flash Control Unit.
FSP_IP_ICU	Interrupt Control Unit.
FSP_IP_DMAC	DMA Controller.
FSP_IP_DTC	Data Transfer Controller.
FSP_IP_IOPORT	I/O Ports.
FSP_IP_PFS	Pin Function Select.
FSP_IP_ELC	Event Link Controller.
FSP_IP_MPU	Memory Protection Unit.
FSP_IP_MSTP	Module Stop.
FSP_IP_MMF	Memory Mirror Function.
FSP_IP_KEY	Key Interrupt Function.
FSP_IP_CAC	Clock Frequency Accuracy Measurement Circuit.
FSP_IP_DOC	Data Operation Circuit.
FSP_IP_CRC	Cyclic Redundancy Check Calculator.
FSP_IP_SCI	Serial Communications Interface.

FSP_IP_IIC	I2C Bus Interface.
FSP_IP_SPI	Serial Peripheral Interface.
FSP_IP_CTSU	Capacitive Touch Sensing Unit.
FSP_IP_SCE	Secure Cryptographic Engine.
FSP_IP_SLCDC	Segment LCD Controller.
FSP_IP_AES	Advanced Encryption Standard.
FSP_IP_TRNG	True Random Number Generator.
FSP_IP_FCACHE	Flash Cache.
FSP_IP_SRAM	SRAM.
FSP_IP_ADC	A/D Converter.
FSP_IP_DAC	12-Bit D/A Converter
FSP_IP_TSN	Temperature Sensor.
FSP_IP_DAAD	D/A A/D Synchronous Unit.
FSP_IP_ACMPHS	High Speed Analog Comparator.
FSP_IP_ACMPLP	Low Power Analog Comparator.
FSP_IP_OPAMP	Operational Amplifier.
FSP_IP_SDADC	Sigma Delta A/D Converter.
FSP_IP_RTC	Real Time Clock.
FSP_IP_WDT	Watch Dog Timer.
FSP_IP_IWDT	Independent Watch Dog Timer.
FSP_IP_GPT	General PWM Timer.
FSP_IP_POEG	Port Output Enable for GPT.
FSP_IP_OPS	Output Phase Switch.
FSP_IP_AGT	Asynchronous General-Purpose Timer.

FSP_IP_CAN	Controller Area Network.
FSP_IP_IRDA	Infrared Data Association.
FSP_IP_QSPI	Quad Serial Peripheral Interface.
FSP_IP_USBFS	USB Full Speed.
FSP_IP_SDHI	SD/MMC Host Interface.
FSP_IP_SRC	Sampling Rate Converter.
FSP_IP_SSI	Serial Sound Interface.
FSP_IP_DALI	Digital Addressable Lighting Interface.
FSP_IP_ETHER	Ethernet MAC Controller.
FSP_IP_EDMAC	Ethernet DMA Controller.
FSP_IP_EPTPC	Ethernet PTP Controller.
FSP_IP_PDC	Parallel Data Capture Unit.
FSP_IP_GLCDC	Graphics LCD Controller.
FSP_IP_DRW	2D Drawing Engine
FSP_IP_JPEG	JPEG.
FSP_IP_DAC8	8-Bit D/A Converter
FSP_IP_USBHS	USB High Speed.
FSP_IP_OSPI	Octa Serial Peripheral Interface.
FSP_IP_CEC	HDMI CEC.
FSP_IP_TFU	Trigonometric Function Unit.
FSP_IP_IIRFA	IIR Filter Accelerator.
FSP_IP_CANFD	CAN-FD.

◆ fsp_signal_t

enum fsp_signal_t	
Signals that can be mapped to an interrupt.	
Enumerator	
FSP_SIGNAL_ADC_COMPARE_MATCH	ADC COMPARE MATCH.
FSP_SIGNAL_ADC_COMPARE_MISMATCH	ADC COMPARE MISMATCH.
FSP_SIGNAL_ADC_SCAN_END	ADC SCAN END.
FSP_SIGNAL_ADC_SCAN_END_B	ADC SCAN END B.
FSP_SIGNAL_ADC_WINDOW_A	ADC WINDOW A.
FSP_SIGNAL_ADC_WINDOW_B	ADC WINDOW B.
FSP_SIGNAL_AES_RDREQ	AES RDREQ.
FSP_SIGNAL_AES_WRREQ	AES WRREQ.
FSP_SIGNAL_AGT_COMPARE_A	AGT COMPARE A.
FSP_SIGNAL_AGT_COMPARE_B	AGT COMPARE B.
FSP_SIGNAL_AGT_INT	AGT INT.
FSP_SIGNAL_CAC_FREQUENCY_ERROR	CAC FREQUENCY ERROR.
FSP_SIGNAL_CAC_MEASUREMENT_END	CAC MEASUREMENT END.
FSP_SIGNAL_CAC_OVERFLOW	CAC OVERFLOW.
FSP_SIGNAL_CAN_ERROR	CAN ERROR.
FSP_SIGNAL_CAN_FIFO_RX	CAN FIFO RX.
FSP_SIGNAL_CAN_FIFO_TX	CAN FIFO TX.
FSP_SIGNAL_CAN_MAILBOX_RX	CAN MAILBOX RX.
FSP_SIGNAL_CAN_MAILBOX_TX	CAN MAILBOX TX.
FSP_SIGNAL_CGC_MOSC_STOP	CGC MOSC STOP.
FSP_SIGNAL_LPM_SNOOZE_REQUEST	LPM SNOOZE REQUEST.

FSP_SIGNAL_LVD_LVD1	LVD LVD1.
FSP_SIGNAL_LVD_LVD2	LVD LVD2.
FSP_SIGNAL_VBATT_LVD	VBATT LVD.
FSP_SIGNAL_LVD_VBATT	LVD VBATT.
FSP_SIGNAL_ACMPHS_INT	ACMPHS INT.
FSP_SIGNAL_ACMPLP_INT	ACMPLP INT.
FSP_SIGNAL_CTSU_END	CTSU END.
FSP_SIGNAL_CTSU_READ	CTSU READ.
FSP_SIGNAL_CTSU_WRITE	CTSU WRITE.
FSP_SIGNAL_DALI_DEI	DALI DEI.
FSP_SIGNAL_DALI_CLI	DALI CLI.
FSP_SIGNAL_DALI_SDI	DALI SDI.
FSP_SIGNAL_DALI_BPI	DALI BPI.
FSP_SIGNAL_DALI_FEI	DALI FEI.
FSP_SIGNAL_DALI_SDI_OR_BPI	DALI SDI OR BPI.
FSP_SIGNAL_DMAC_INT	DMAC INT.
FSP_SIGNAL_DOC_INT	DOC INT.
FSP_SIGNAL_DRW_INT	DRW INT.
FSP_SIGNAL_DTC_COMPLETE	DTC COMPLETE.
FSP_SIGNAL_DTC_END	DTC END.
FSP_SIGNAL_EDMAC_EINT	EDMAC EINT.
FSP_SIGNAL_ELC_SOFTWARE_EVENT_0	ELC SOFTWARE EVENT 0.
FSP_SIGNAL_ELC_SOFTWARE_EVENT_1	ELC SOFTWARE EVENT 1.
FSP_SIGNAL_EPTPC_IPLS	EPTPC IPLS.

FSP_SIGNAL_EPTPC_MINT	EPTPC MINT.
FSP_SIGNAL_EPTPC_PINT	EPTPC PINT.
FSP_SIGNAL_EPTPC_TIMER0_FALL	EPTPC TIMER0 FALL.
FSP_SIGNAL_EPTPC_TIMER0_RISE	EPTPC TIMER0 RISE.
FSP_SIGNAL_EPTPC_TIMER1_FALL	EPTPC TIMER1 FALL.
FSP_SIGNAL_EPTPC_TIMER1_RISE	EPTPC TIMER1 RISE.
FSP_SIGNAL_EPTPC_TIMER2_FALL	EPTPC TIMER2 FALL.
FSP_SIGNAL_EPTPC_TIMER2_RISE	EPTPC TIMER2 RISE.
FSP_SIGNAL_EPTPC_TIMER3_FALL	EPTPC TIMER3 FALL.
FSP_SIGNAL_EPTPC_TIMER3_RISE	EPTPC TIMER3 RISE.
FSP_SIGNAL_EPTPC_TIMER4_FALL	EPTPC TIMER4 FALL.
FSP_SIGNAL_EPTPC_TIMER4_RISE	EPTPC TIMER4 RISE.
FSP_SIGNAL_EPTPC_TIMER5_FALL	EPTPC TIMER5 FALL.
FSP_SIGNAL_EPTPC_TIMER5_RISE	EPTPC TIMER5 RISE.
FSP_SIGNAL_FCU_FIFERR	FCU FIFERR.
FSP_SIGNAL_FCU_FRDYI	FCU FRDYI.
FSP_SIGNAL_GLCDC_LINE_DETECT	GLCDC LINE DETECT.
FSP_SIGNAL_GLCDC_UNDERFLOW_1	GLCDC UNDERFLOW 1.
FSP_SIGNAL_GLCDC_UNDERFLOW_2	GLCDC UNDERFLOW 2.
FSP_SIGNAL_GPT_CAPTURE_COMPARE_A	GPT CAPTURE COMPARE A.
FSP_SIGNAL_GPT_CAPTURE_COMPARE_B	GPT CAPTURE COMPARE B.
FSP_SIGNAL_GPT_COMPARE_C	GPT COMPARE C.
FSP_SIGNAL_GPT_COMPARE_D	GPT COMPARE D.
FSP_SIGNAL_GPT_COMPARE_E	GPT COMPARE E.

FSP_SIGNAL_GPT_COMPARE_F	GPT COMPARE F.
FSP_SIGNAL_GPT_COUNTER_OVERFLOW	GPT COUNTER OVERFLOW.
FSP_SIGNAL_GPT_COUNTER_UNDERFLOW	GPT COUNTER UNDERFLOW.
FSP_SIGNAL_GPT_AD_TRIG_A	GPT AD TRIG A.
FSP_SIGNAL_GPT_AD_TRIG_B	GPT AD TRIG B.
FSP_SIGNAL_OPS_UVW_EDGE	OPS UVW EDGE.
FSP_SIGNAL_ICU_IRQ0	ICU IRQ0.
FSP_SIGNAL_ICU_IRQ1	ICU IRQ1.
FSP_SIGNAL_ICU_IRQ2	ICU IRQ2.
FSP_SIGNAL_ICU_IRQ3	ICU IRQ3.
FSP_SIGNAL_ICU_IRQ4	ICU IRQ4.
FSP_SIGNAL_ICU_IRQ5	ICU IRQ5.
FSP_SIGNAL_ICU_IRQ6	ICU IRQ6.
FSP_SIGNAL_ICU_IRQ7	ICU IRQ7.
FSP_SIGNAL_ICU_IRQ8	ICU IRQ8.
FSP_SIGNAL_ICU_IRQ9	ICU IRQ9.
FSP_SIGNAL_ICU_IRQ10	ICU IRQ10.
FSP_SIGNAL_ICU_IRQ11	ICU IRQ11.
FSP_SIGNAL_ICU_IRQ12	ICU IRQ12.
FSP_SIGNAL_ICU_IRQ13	ICU IRQ13.
FSP_SIGNAL_ICU_IRQ14	ICU IRQ14.
FSP_SIGNAL_ICU_IRQ15	ICU IRQ15.
FSP_SIGNAL_ICU_SNOOZE_CANCEL	ICU SNOOZE CANCEL.
FSP_SIGNAL_IIC_ERI	IIC ERI.

FSP_SIGNAL_IIC_RXI	IIC RXI.
FSP_SIGNAL_IIC_TEI	IIC TEI.
FSP_SIGNAL_IIC_TXI	IIC TXI.
FSP_SIGNAL_IIC_WUI	IIC WUI.
FSP_SIGNAL_IOPORT_EVENT_1	IOPORT EVENT 1.
FSP_SIGNAL_IOPORT_EVENT_2	IOPORT EVENT 2.
FSP_SIGNAL_IOPORT_EVENT_3	IOPORT EVENT 3.
FSP_SIGNAL_IOPORT_EVENT_4	IOPORT EVENT 4.
FSP_SIGNAL_IOPORT_EVENT_B	IOPORT EVENT B.
FSP_SIGNAL_IOPORT_EVENT_C	IOPORT EVENT C.
FSP_SIGNAL_IOPORT_EVENT_D	IOPORT EVENT D.
FSP_SIGNAL_IOPORT_EVENT_E	IOPORT EVENT E.
FSP_SIGNAL_IWDT_UNDERFLOW	IWDT UNDERFLOW.
FSP_SIGNAL_JPEG_JDTI	JPEG JDTI.
FSP_SIGNAL_JPEG_JEDI	JPEG JEDI.
FSP_SIGNAL_KEY_INT	KEY INT.
FSP_SIGNAL_PDC_FRAME_END	PDC FRAME END.
FSP_SIGNAL_PDC_INT	PDC INT.
FSP_SIGNAL_PDC_RECEIVE_DATA_READY	PDC RECEIVE DATA READY.
FSP_SIGNAL_POEG_EVENT	POEG EVENT.
FSP_SIGNAL_QSPI_INT	QSPI INT.
FSP_SIGNAL_RTC_ALARM	RTC ALARM.
FSP_SIGNAL_RTC_PERIOD	RTC PERIOD.
FSP_SIGNAL_RTC_CARRY	RTC CARRY.

FSP_SIGNAL_SCE_INTEGRATE_RDRDY	SCE INTEGRATE RDRDY.
FSP_SIGNAL_SCE_INTEGRATE_WRRDY	SCE INTEGRATE WRRDY.
FSP_SIGNAL_SCE_LONG_PLG	SCE LONG PLG.
FSP_SIGNAL_SCE_PROC_BUSY	SCE PROC BUSY.
FSP_SIGNAL_SCE_RDRDY_0	SCE RDRDY 0.
FSP_SIGNAL_SCE_RDRDY_1	SCE RDRDY 1.
FSP_SIGNAL_SCE_ROMOK	SCE ROMOK.
FSP_SIGNAL_SCE_TEST_BUSY	SCE TEST BUSY.
FSP_SIGNAL_SCE_WRRDY_0	SCE WRRDY 0.
FSP_SIGNAL_SCE_WRRDY_1	SCE WRRDY 1.
FSP_SIGNAL_SCE_WRRDY_4	SCE WRRDY 4.
FSP_SIGNAL_SCI_AM	SCI AM.
FSP_SIGNAL_SCI_ERI	SCI ERI.
FSP_SIGNAL_SCI_RXI	SCI RXI.
FSP_SIGNAL_SCI_RXI_OR_ERI	SCI RXI OR ERI.
FSP_SIGNAL_SCI_TEI	SCI TEI.
FSP_SIGNAL_SCI_TXI	SCI TXI.
FSP_SIGNAL_SDADC_ADI	SDADC ADI.
FSP_SIGNAL_SDADC_SCANEND	SDADC SCANEND.
FSP_SIGNAL_SDADC_CALIEND	SDADC CALIEND.
FSP_SIGNAL_SDHIMMC_ACCS	SDHIMMC ACCS.
FSP_SIGNAL_SDHIMMC_CARD	SDHIMMC CARD.
FSP_SIGNAL_SDHIMMC_DMA_REQ	SDHIMMC DMA REQ.
FSP_SIGNAL_SDHIMMC_SDIO	SDHIMMC SDIO.

FSP_SIGNAL_SPI_ERI	SPI ERI.
FSP_SIGNAL_SPI_IDLE	SPI IDLE.
FSP_SIGNAL_SPI_RXI	SPI RXI.
FSP_SIGNAL_SPI_TEI	SPI TEI.
FSP_SIGNAL_SPI_TXI	SPI TXI.
FSP_SIGNAL_SRC_CONVERSION_END	SRC CONVERSION END.
FSP_SIGNAL_SRC_INPUT_FIFO_EMPTY	SRC INPUT FIFO EMPTY.
FSP_SIGNAL_SRC_OUTPUT_FIFO_FULL	SRC OUTPUT FIFO FULL.
FSP_SIGNAL_SRC_OUTPUT_FIFO_OVERFLOW	SRC OUTPUT FIFO OVERFLOW.
FSP_SIGNAL_SRC_OUTPUT_FIFO_UNDERFLOW	SRC OUTPUT FIFO UNDERFLOW.
FSP_SIGNAL_SSI_INT	SSI INT.
FSP_SIGNAL_SSI_RXI	SSI RXI.
FSP_SIGNAL_SSI_TXI	SSI TXI.
FSP_SIGNAL_SSI_TXI_RXI	SSI TXI RXI.
FSP_SIGNAL_TRNG_RDREQ	TRNG RDREQ.
FSP_SIGNAL_USB_FIFO_0	USB FIFO 0.
FSP_SIGNAL_USB_FIFO_1	USB FIFO 1.
FSP_SIGNAL_USB_INT	USB INT.
FSP_SIGNAL_USB_RESUME	USB RESUME.
FSP_SIGNAL_USB_USB_INT_RESUME	USB USB INT RESUME.
FSP_SIGNAL_WDT_UNDERFLOW	WDT UNDERFLOW.

◆ bsp_warm_start_event_t

enum bsp_warm_start_event_t	
Different warm start entry locations in the BSP.	
Enumerator	
BSP_WARM_START_RESET	Called almost immediately after reset. No C runtime environment, clocks, or IRQs.
BSP_WARM_START_POST_CLOCK	Called after clock initialization. No C runtime environment or IRQs.
BSP_WARM_START_POST_C	Called after clocks and C runtime environment have been set up.

◆ fsp_priv_source_clock_t

enum fsp_priv_source_clock_t	
Enumerator	
FSP_PRIV_CLOCK_HOCO	The high speed on chip oscillator.
FSP_PRIV_CLOCK_MOCO	The middle speed on chip oscillator.
FSP_PRIV_CLOCK_LOCO	The low speed on chip oscillator.
FSP_PRIV_CLOCK_MAIN_OSC	The main oscillator.
FSP_PRIV_CLOCK_SUBCLOCK	The subclock oscillator.
FSP_PRIV_CLOCK_PLL	The PLL oscillator.
FSP_PRIV_CLOCK_PLL2	The PLL2 oscillator.

◆ bsp_delay_units_t

enum bsp_delay_units_t	
Available delay units for R_BSP_SoftwareDelay(). These are ultimately used to calculate a total # of microseconds	
Enumerator	
BSP_DELAY_UNITS_SECONDS	Requested delay amount is in seconds.
BSP_DELAY_UNITS_MILLISECONDS	Requested delay amount is in milliseconds.
BSP_DELAY_UNITS_MICROSECONDS	Requested delay amount is in microseconds.

◆ bsp_grp_irq_t

enum bsp_grp_irq_t	
Which interrupts can have callbacks registered.	
Enumerator	
BSP_GRP_IRQ_IWDT_ERROR	IWDT underflow/refresh error has occurred.
BSP_GRP_IRQ_WDT_ERROR	WDT underflow/refresh error has occurred.
BSP_GRP_IRQ_LVD1	Voltage monitoring 1 interrupt.
BSP_GRP_IRQ_LVD2	Voltage monitoring 2 interrupt.
BSP_GRP_IRQ_VBATT	VBATT monitor interrupt.
BSP_GRP_IRQ_OSC_STOP_DETECT	Oscillation stop is detected.
BSP_GRP_IRQ_NMI_PIN	NMI Pin interrupt.
BSP_GRP_IRQ_RAM_PARITY	RAM Parity Error.
BSP_GRP_IRQ_RAM_ECC	RAM ECC Error.
BSP_GRP_IRQ_MPU_BUS_SLAVE	MPU Bus Slave Error.
BSP_GRP_IRQ_MPU_BUS_MASTER	MPU Bus Master Error.
BSP_GRP_IRQ_MPU_STACK	MPU Stack Error.
BSP_GRP_IRQ_TRUSTZONE	MPU Stack Error.
BSP_GRP_IRQ_CACHE_PARITY	MPU Stack Error.

◆ bsp_reg_protect_t

enum bsp_reg_protect_t

The different types of registers that can be protected.

Enumerator	
BSP_REG_PROTECT_CGC	Enables writing to the registers related to the clock generation circuit.
BSP_REG_PROTECT_OM_LPC_BATT	Enables writing to the registers related to operating modes, low power consumption, and battery backup function.
BSP_REG_PROTECT_LVD	Enables writing to the registers related to the LVD: LVCMPCR, LVDLVLR, LVD1CR0, LVD1CR1, LVD1SR, LVD2CR0, LVD2CR1, LVD2SR.
BSP_REG_PROTECT_SAR	Enables writing to the registers related to the security function.

Function Documentation

◆ R_FSP_VersionGet()

fsp_err_t R_FSP_VersionGet (fsp_pack_version_t *const *p_version*)

Get the FSP version based on compile time macros.

Parameters

[out]	p_version	Memory address to return version information to.

Return values

FSP_SUCCESS	Version information stored.
FSP_ERR_ASSERTION	The parameter p_version is NULL.

◆ Reset_Handler()

void Reset_Handler (void)

MCU starts executing here out of reset. Main stack pointer is set up already.

◆ Default_Handler()

void Default_Handler (void)
Default exception handler.

◆ NMI_Handler()

void NMI_Handler (void)
Non-maskable interrupt handler. This exception is defined by the BSP, unlike other system exceptions, because there are many sources that map to the NMI exception.

◆ SystemInit()

void SystemInit (void)
Initialize the MCU and the runtime environment.

◆ R_BSP_WarmStart()

void R_BSP_WarmStart (bsp_warm_start_event_t *event*)
This function is called at various points during the startup process. This function is declared as a weak symbol higher up in this file because it is meant to be overridden by a user implemented version. One of the main uses for this function is to call functional safety code during the startup process. To use this function just copy this function into your own code and modify it to meet your needs. **Parameters** [in] event Where the code currently is in the start up process This function is called at various points during the startup process. This implementation uses the event that is called right before main() to set up the pins. **Parameters** [in] event Where at in the start up process the code is currently at

◆ R_BSP_SourceClockHzGet()

uint32_t R_BSP_SourceClockHzGet (fsp_priv_source_clock_t *clock*)

Gets the frequency of a source clock.

Parameters

[in]	clock	Pointer to Octaclk setting structure which provides information regarding Octaclk source and divider settings to be applied.

Returns

Frequency of requested clock in Hertz.

◆ R_FSP_CurrentIrqGet()

__STATIC_INLINE IRQn_Type R_FSP_CurrentIrqGet (void)

Return active interrupt vector number value

Returns

Active interrupt vector number value

◆ R_FSP_SystemClockHzGet()

__STATIC_INLINE uint32_t R_FSP_SystemClockHzGet (fsp_priv_clock_t *clock*)

Gets the frequency of a system clock.

Returns

Frequency of requested clock in Hertz.

◆ R_BSP_UniqueIdGet()

__STATIC_INLINE bsp_unique_id_t const* R_BSP_UniqueIdGet ( )

Get unique ID for this device.

Returns

A pointer to the unique identifier structure

◆ R_BSP_FlashCacheDisable()

__STATIC_INLINE void R_BSP_FlashCacheDisable ( )

Disables the flash cache.

◆ R_BSP_FlashCacheEnable()

__STATIC_INLINE void R_BSP_FlashCacheEnable ( )
Enables the flash cache.

◆ R_BSP_SoftwareDelay()

void R_BSP_SoftwareDelay (uint32_t *delay*, bsp_delay_units_t *units*)

Delay for at least the specified duration in units and return.

Parameters

[in]	delay	The number of 'units' to delay.
[in]	units	The 'base' (bsp_delay_units_t) for the units specified. Valid values are: BSP_DELAY_UNITS_SECONDS, BSP_DELAY_UNITS_MILLISECONDS, BSP_DELAY_UNITS_MICROSECONDS. For example: At 1 MHz one cycle takes 1 microsecond (.000001 seconds). At 12 MHz one cycle takes 1/12 microsecond or 83 nanoseconds. Therefore one run through bsp_prv_software_delay_loop() takes: ~ (83 * BSP_DELAY_LOOP_CYCLES) or 332 ns. A delay of 2 us therefore requires 2000ns/332ns or 6 loops.

The 'theoretical' maximum delay that may be obtained is determined by a full 32 bit loop count and the system clock rate. @120MHz: ((0xFFFFFFFF loops * 4 cycles /loop) / 120000000) = 143 seconds. @32MHz: ((0xFFFFFFFF loops * 4 cycles /loop) / 32000000) = 536 seconds

Note that requests for very large delays will be affected by rounding in the calculations and the actual delay achieved may be slightly longer. @32 MHz, for example, a request for 532 seconds will be closer to 536 seconds.

Note also that if the calculations result in a loop_cnt of zero, the bsp_prv_software_delay_loop() function is not called at all. In this case the requested delay is too small (nanoseconds) to be carried out by the loop itself, and the overhead associated with executing the code to just get to this point has certainly satisfied the requested delay.

Note

This function calls bsp_cpu_clock_get() which ultimately calls R_CGC_SystemClockFreqGet() and therefore requires that the BSP has already initialized the CGC (which it does as part of the Sysinit). Care should be taken to ensure this remains the case if in the future this function were to be called as part of the BSP initialization.
*This function will delay for **at least** the specified duration. Due to overhead in calculating the correct number of loops to delay, very small delay values (generally 1-5 microseconds) may be significantly longer than specified. Approximate overhead for this function is as follows:*

- *CM4: 20-50 cycles*
- *CM33: 10-60 cycles*
- *CM23: 75-200 cycles*

If more accurate microsecond timing must be performed in software it is recommended to use bsp_prv_software_delay_loop() directly. In this case, use BSP_DELAY_LOOP_CYCLES or BSP_DELAY_LOOPS_CALCULATE() to convert a calculated delay cycle count to a number of software delay loops.
Delays may be longer than expected when compiler optimization is turned off.

Warning

The delay will be longer than specified on CM23 devices when the core clock is greater than 32 MHz. Setting BSP_DELAY_LOOP_CYCLES to 6 will improve accuracy at 48 MHz but will result in shorter than expected delays at lower speeds.

◆ R_BSP_GroupIrqWrite()

fsp_err_t R_BSP_GroupIrqWrite (bsp_grp_irq_t *irq*, void(*)(bsp_grp_irq_t irq) *p_callback*)

Register a callback function for supported interrupts. If NULL is passed for the callback argument then any previously registered callbacks are unregistered.

Parameters

[in]	irq	Interrupt for which to register a callback.
[in]	p_callback	Pointer to function to call when interrupt occurs.

Return values

FSP_SUCCESS	Callback registered
FSP_ERR_ASSERTION	Callback pointer is NULL

◆ R_BSP_RegisterProtectEnable()

void R_BSP_RegisterProtectEnable (bsp_reg_protect_t *regs_to_protect*)

Enable register protection. Registers that are protected cannot be written to. Register protection is enabled by using the Protect Register (PRCR) and the MPC's Write-Protect Register (PWPR).

Parameters

[in]	regs_to_protect	Registers which have write protection enabled.

◆ R_BSP_RegisterProtectDisable()

void R_BSP_RegisterProtectDisable (bsp_reg_protect_t *regs_to_unprotect*)

Disable register protection. Registers that are protected cannot be written to. Register protection is disabled by using the Protect Register (PRCR) and the MPC's Write-Protect Register (PWPR).

Parameters

[in]	regs_to_unprotect	Registers which have write protection disabled.

◆ __sinf()

BSP_TFU_INLINE float __sinf (float *angle*)

Calculates sine of the given angle.

Parameters

[in]	angle	The value of an angle in radian.

Return values

Sine	value of an angle.

◆ __cosf()

BSP_TFU_INLINE float __cosf (float *angle*)

Calculates cosine of the given angle.

Parameters

[in]	angle	The value of an angle in radian.

Return values

Cosine	value of an angle.

◆ __sincosf()

BSP_TFU_INLINE void __sincosf (float *angle*, float * *sin*, float * *cos*)

Calculates sine and cosine of the given angle.

Parameters

[in]	angle	The value of an angle in radian.
[out]	sin	Sine value of an angle.
[out]	cos	Cosine value of an angle.

◆ __atan2f()

BSP_TFU_INLINE float __atan2f (float *y_cord*, float *x_cord*)

Calculates the arc tangent based on given X-cordinate and Y-cordinate values.

Parameters

[in]	y_cord	Y-Axis cordinate value.
[in]	x_cord	X-Axis cordinate value.

Return values

Arc	tangent for given values.

◆ __hypotf()

BSP_TFU_INLINE float __hypotf (float *x_cord*, float *y_cord*)

Calculates the hypotenuse based on given X-cordinate and Y-cordinate values.

Parameters

[in]	y_cord	Y-cordinate value.
[in]	x_cord	X-cordinate value.

Return values

Hypotenuse	for given values.

◆ __atan2hypotf()

BSP_TFU_INLINE void __atan2hypotf (float *y_cord*, float *x_cord*, float * *atan2*, float * *hypot*)
Calculates the arc tangent and hypotenuse based on given X-cordinate and Y-cordinate values.

Parameters

[in]	y_cord	Y-cordinate value.
[in]	x_cord	X-cordinate value.
[out]	atan2	Arc tangent for given values.
[out]	hypot	Hypotenuse for given values.

Detailed Description

Build Time Configurations for ra2a1_fsp

The following build time configurations are defined in fsp_cfg/bsp/bsp_mcu_family_cfg.h:

Configuration	Options	Default	Description
OFS0 register settings > Independent WDT > Start Mode	• IWDT is Disabled • IWDT is automatically activated after a reset (Autostart mode)	IWDT is Disabled	
OFS0 register settings > Independent WDT > Timeout Period	• 128 cycles • 512 cycles • 1024 cycles • 2048 cycles	2048 cycles	

OFS0 register settings > Independent WDT > Dedicated Clock Frequency Divisor	• 1 • 16 • 32 • 64 • 128 • 256	128
OFS0 register settings > Independent WDT > Window End Position	• 75% • 50% • 25% • 0% (no window end position)	0% (no window end position)
OFS0 register settings > Independent WDT > Window Start Position	• 25% • 50% • 75% • 100% (no window start position)	100% (no window start position)
OFS0 register settings > Independent WDT > Reset Interrupt Request Select	• NMI request or interrupt request is enabled • Reset is enabled	Reset is enabled
OFS0 register settings > Independent WDT > Stop Control	• Counting continues • Stop counting when in Sleep, Snooze mode, or Software Standby	Stop counting when in Sleep, Snooze mode, or Software Standby
OFS0 register settings > WDT > Start Mode Select	• Automatically activate WDT after a reset (auto-start mode) • Stop WDT after a reset (register-start mode)	Stop WDT after a reset (register-start mode)
OFS0 register settings > WDT > Timeout Period	• 1024 cycles • 4096 cycles • 8192 cycles • 16384 cycles	16384 cycles
OFS0 register settings > WDT > Clock Frequency Division Ratio	• 4 • 64 • 128 • 512 • 2048 • 8192	128
OFS0 register settings > WDT > Window End	• 75% • 50%	0% (no window end position)

Position	• 25% • 0% (no window end position)		
OFS0 register settings > WDT > Window Start Position	• 25% • 50% • 75% • 100% (no window start position)	100% (no window start position)	
OFS0 register settings > WDT > Reset Interrupt Request	• NMI • Reset	Reset	
OFS0 register settings > WDT > Stop Control	• Counting continues • Stop counting when entering Sleep mode	Stop counting when entering Sleep mode	
OFS1 register settings > Voltage Detection 0 Circuit Start	• Voltage monitor 0 reset is enabled after reset • Voltage monitor 0 reset is disabled after reset	Voltage monitor 0 reset is disabled after reset	
OFS1 register settings > Voltage Detection 0 Level	• 3.84 V • 2.82 V • 2.51 V • 1.90 V • 1.70 V	1.90 V	
OFS1 register settings > HOCO Oscillation Enable	HOCO oscillation is enabled after reset	HOCO oscillation is enabled after reset	HOCO must be enabled out of reset because the MCU starts up in low voltage mode and the HOCO must be operating in low voltage mode.
MPU > Enable or disable PC Region 0	• Enabled • Disabled	Disabled	
MPU > PC0 Start	Value must be an integer between 0 and 0x000FFFFC (ROM) or between 0x1FF00000 and 0x200FFFFC (RAM)	0x000FFFFC	
MPU > PC0 End	Value must be an integer between 0x00000003 and 0x000FFFFF (ROM) or between 0x1FF00003	0x000FFFFF	

	and 0x200FFFFF (RAM)	
MPU > Enable or disable PC Region 1	• Enabled • Disabled	Disabled
MPU > PC1 Start	Value must be an integer between 0 and 0x000FFFFC (ROM) or between 0x1FF00000 and 0x200FFFFC (RAM)	0x000FFFFC
MPU > PC1 End	Value must be an integer between 0x00000003 and 0x000FFFFF (ROM) or between 0x1FF00003 and 0x200FFFFF (RAM)	0x000FFFFF
MPU > Enable or disable Memory Region 0	• Enabled • Disabled	Disabled
MPU > Memory Region 0 Start	Value must be an integer between 0 and 0x000FFFFC	0x000FFFFC
MPU > Memory Region 0 End	Value must be an integer between 0x00000003 and 0x000FFFFF	0x000FFFFF
MPU > Enable or disable Memory Region 1	• Enabled • Disabled	Disabled
MPU > Memory Region 1 Start	Value must be an integer between 0x1FF00000 and 0x200FFFFC	0x200FFFFC
MPU > Memory Region 1 End	Value must be an integer between 0x1FF00003 and 0x200FFFFF	0x200FFFFF
MPU > Enable or disable Memory Region 2	• Enabled • Disabled	Disabled
MPU > Memory Region 2 Start	Value must be an integer between 0x400C0000 and 0x400DFFFC or between 0x40100000 and 0x407FFFFC	0x407FFFFC
MPU > Memory Region 2 End	Value must be an integer between 0x400C0003 and	0x407FFFFF

	0x400DFFFF or between 0x40100003 and 0x407FFFFF		
MPU > Enable or disable Memory Region 3	• Enabled • Disabled	Disabled	
MPU > Memory Region 3 Start	Value must be an integer between 0x400C0000 and 0x400DFFFC or between 0x40100000 and 0x407FFFFC	0x400DFFFC	
MPU > Memory Region 3 End	Value must be an integer between 0x400C0003 and 0x400DFFFF or between 0x40100003 and 0x407FFFFF	0x400DFFFF	
Use Low Voltage Mode	• Enabled • Disabled	Disabled	Use the low voltage mode. This limits the ICLK operating frequency to 4 MHz and requires all clock dividers to be at least 4 when oscillation stop detection is used.
Main Oscillator Wait Time	• 2 cycles • 1024 cycles • 2048 cycles • 4096 cycles • 8192 cycles • 16384 cycles • 32768 cycles • 65536 cycles • 131072 cycles • 262144 cycles	262144 cycles	Number of cycles to wait for the main oscillator clock to stabilize.
ID Code Mode	• Unlocked (Ignore ID) • Locked with All Erase support • Locked	Unlocked (Ignore ID)	When set to 'Locked with All Erase support', the ID Code must be set in the debugger to read or write data to the MCU, but the All Erase command is still accepted regardless. When set to 'Locked', all erase/download/debug access is disabled unless the ID Code is provided.
ID Code (32 Hex	Value must be a 32	FFFFFFFFFFFFFFFFFFFF	Set the ID Code for

Characters)	character long hex string	FFFFFFFFFFFF	locking debug access. This setting is only used when the ID Code Mode is not set to Unlocked.

OFS0 register settings > WDT > Window End Position	• 75% • 50% • 25% • 0% (no window end position)	0% (no window end position)	
OFS0 register settings > WDT > Window Start Position	• 25% • 50% • 75% • 100% (no window start position)	100% (no window start position)	
OFS0 register settings > WDT > Reset Interrupt Request	• NMI • Reset	Reset	
OFS0 register settings > WDT > Stop Control	• Counting continues • Stop counting when entering Sleep mode	Stop counting when entering Sleep mode	
OFS1 register settings > Internal Clock Supply Architecture Type	• Type B • Type A	Type A	
OFS1 register settings > Voltage Detection 0 Circuit Start	• Voltage monitor 0 reset is enabled after reset • Voltage monitor 0 reset is disabled after reset	Voltage monitor 0 reset is disabled after reset	
OFS1 register settings > Voltage Detection 0 Level	• 3.84 V • 2.82 V • 2.51 V • 1.90 V • 1.70 V	1.90 V	
OFS1 register settings > HOCO Oscillation Enable	• HOCO oscillation is enabled after reset • HOCO oscillation is disabled after reset	HOCO oscillation is enabled after reset	HOCO must be enabled out of reset because the MCU starts up in low voltage mode and the HOCO must be operating in low voltage mode.

MPU > Enable or disable PC Region 0	• Enabled • Disabled	Disabled
MPU > PC0 Start	Value must be an integer between 0 and 0x000FFFFC (ROM) or between 0x1FF00000 and 0x200FFFFC (RAM)	0x000FFFFC
MPU > PC0 End	Value must be an integer between 0x00000003 and 0x000FFFFF (ROM) or between 0x1FF00003 and 0x200FFFFF (RAM)	0x000FFFFF
MPU > Enable or disable PC Region 1	• Enabled • Disabled	Disabled
MPU > PC1 Start	Value must be an integer between 0 and 0x000FFFFC (ROM) or between 0x1FF00000 and 0x200FFFFC (RAM)	0x000FFFFC
MPU > PC1 End	Value must be an integer between 0x00000003 and 0x000FFFFF (ROM) or between 0x1FF00003 and 0x200FFFFF (RAM)	0x000FFFFF
MPU > Enable or disable Memory Region 0	• Enabled • Disabled	Disabled
MPU > Memory Region 0 Start	Value must be an integer between 0 and 0x000FFFFC	0x000FFFFC
MPU > Memory Region 0 End	Value must be an integer between 0x00000003 and 0x000FFFFF	0x000FFFFF
MPU > Enable or disable Memory Region 1	• Enabled • Disabled	Disabled
MPU > Memory Region 1 Start	Value must be an integer between 0x1FF00000 and 0x200FFFFC	0x200FFFFC
MPU > Memory Region 1 End	Value must be an integer between 0x1FF00003 and 0x200FFFFF	0x200FFFFF

MPU > Enable or disable Memory Region 2	• Enabled • Disabled	Disabled	
MPU > Memory Region 2 Start	Value must be an integer between 0x400C0000 and 0x400DFFFC or between 0x40100000 and 0x407FFFFC	0x407FFFFC	
MPU > Memory Region 2 End	Value must be an integer between 0x400C0003 and 0x400DFFFF or between 0x40100003 and 0x407FFFFF	0x407FFFFF	
MPU > Enable or disable Memory Region 3	• Enabled • Disabled	Disabled	
MPU > Memory Region 3 Start	Value must be an integer between 0x400C0000 and 0x400DFFFC or between 0x40100000 and 0x407FFFFC	0x400DFFFC	
MPU > Memory Region 3 End	Value must be an integer between 0x400C0003 and 0x400DFFFF or between 0x40100003 and 0x407FFFFF	0x400DFFFF	
Power > DC-DC Regulator	• Disabled • Enabled • Enabled at startup	Disabled	To use the DCDC regulator an external inductor and capacitor must be connected as specified in chapter 40 of the RA2L1 manual. In addition the supply voltage must be above 2.4V and ICLK must be 2 MHz or higher. When set to 'Enabled at startup' the BSP will switch to the DCDC regulator during startup using the voltage range specified below.
Power > DC-DC Supply Range	• 2.4V to 2.7V • 2.7V to 3.6V • 3.6V to 4.5V	2.7V to 3.6V	Set this to the expected MCU supply voltage (Vcc) at startup

	• 4.5V to 5.5V		when using the DCDC regulator.
Use Low Voltage Mode	Not Supported	config.bsp.low_voltage_mode.disabled	Use the low voltage mode. This limits the ICLK operating frequency to 4 MHz and requires all clock dividers to be at least 4 when oscillation stop detection is used.
Main Oscillator Wait Time	• 2 cycles • 1024 cycles • 2048 cycles • 4096 cycles • 8192 cycles • 16384 cycles • 32768 cycles • 65536 cycles • 131072 cycles • 262144 cycles	262144 cycles	Number of cycles to wait for the main oscillator clock to stabilize.
ID Code Mode	• Unlocked (Ignore ID) • Locked with All Erase support • Locked	Unlocked (Ignore ID)	When set to 'Locked with All Erase support', the ID Code must be set in the debugger to read or write data to the MCU, but the All Erase command is still accepted regardless. When set to 'Locked', all erase/download/debug access is disabled unless the ID Code is provided.
ID Code (32 Hex Characters)	Value must be a 32 character long hex string	FFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF	Set the ID Code for locking debug access. This setting is only used when the ID Code Mode is not set to Unlocked.

Common macro for FSP header files. There is also a corresponding FSP_FOOTER macro at the end of this file.

Enumerations

enum	elc_event_t
enum	icu_event_t
enum	bsp_power_mode_t

Enumeration Type Documentation

◆ elc_event_t

enum elc_event_t
Sources of event signals to be linked to other peripherals or the CPU ***Note*** *This list may change based on based on the device.*

◆ icu_event_t

enum icu_event_t
Events to be used with the IELSR register to link interrupt events to the NVIC ***Note*** *This list is device specific.*

◆ bsp_power_mode_t

enum bsp_power_mode_t	
Voltage regulator mode	
Enumerator	
BSP_POWER_MODE_DCDC_2V4_TO_2V7	DCDC mode; 2.4V to 2.7V supply.
BSP_POWER_MODE_DCDC_2V7_TO_3V6	DCDC mode; 2.7V to 3.6V supply.
BSP_POWER_MODE_DCDC_3V6_TO_4V5	DCDC mode; 3.6V to 4.5V supply.
BSP_POWER_MODE_DCDC_4V5_TO_5V5	DCDC mode; 4.5V to 5.5V supply.
BSP_POWER_MODE_LDO	LDO mode.

Function Documentation

◆ R_BSP_PowerModeSet()

bsp_power_mode_t R_BSP_PowerModeSet (bsp_power_mode_t *mode*)
Select either the LDO or DCDC regulator and/or update the MCU supply voltage range. Returns the previously selected mode. ***Note*** *DCDC mode has the following limitations:* ◦ *Supply voltage must be 2.4V or greater* ◦ *Low- and Subosc-speed modes are not available* ◦ *Software Standby is not available Ensure these limitations are respected before entering DCDC mode. If supply voltage may drop below 2.4V during operation, configure a LVD channel to interrupt or reset the MCU near this threshold to switch back to the LDO.* *Switching to DCDC mode temporarily disables all interrupts and blocks for 22 microseconds; switching to LDO from DCDC temporarily disables all peripherals and interrupts and blocks for 60 microseconds.* *If the supply voltage falls outside the range originally specified when starting the DCDC regulator, call this function again with the updated supply voltage.* **Returns** The previously selected power mode.

Detailed Description

Build Time Configurations for ra4e1_fsp

The following build time configurations are defined in fsp_cfg/bsp/bsp_mcu_family_cfg.h:

Configuration	Options	Default	Description
Security > Exceptions > Exception Response	• Non-Maskable Interrupt • Reset	Non-Maskable Interrupt	Configure the result of a TrustZone Filter exception. This exception is generated when a the TrustZone Filter detects access to a protected region. This setting is only valid when building projects with TrustZone.
Security > Exceptions > BusFault, HardFault, and NMI Target	• Non-Secure State • Secure State	Secure State	Value for SCB->AIRCR register bit BFHFNMINS. Defines whether BusFault and NMI exceptions are Non-secure, and whether

			exceptions target the Non-secure HardFault exception. This setting is only valid when building projects with TrustZone.
Security > Exceptions > Prioritize Secure Exceptions	• Enabled • Disabled	Disabled	Value for SCB->AIRCR register bit PRIS. When enabled, all Non-secure interrupt priorities are automatically demoted by right shifting their priority by one then setting the most significant bit. As there is effectively one less bit care must be taken to ensure the prioritization of non-secure interrupts is correct. This setting is only valid when building projects with TrustZone.
Security > SRAM Accessibility > SRAM Protection	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether SRAMPRCR is write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > SRAM Accessibility > SRAM ECC	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether SRAM ECC registers are write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > SRAM Accessibility > Standby RAM	• Regions 7-0 are all Secure. • Region 7 is Non-secure. Regions 6-0 are Secure. • Regions 7-6 are	config.bsp.fsp.tz.stbramsar.both	Defines whether Standby RAM registers are accessible for the Non-secure application. This setting is only

	Non-secure. Regions 5-0 are Secure. • Regions 7-5 are Non-secure. Regions 4-0 are Secure. • Regions 7-4 are Non-secure. Regions 3-0 are Secure. • Regions 7-3 are Non-secure. Regions 2-0 are Secure. • Regions 7-2 are Non-secure. Regions 1-0 are Secure. • Regions 7-1 are Non-secure. Region 0 is Secure. • Regions 7-0 are all Non-secure.		valid when building projects with TrustZone.
Security > BUS Accessibility > Bus Security Attribution Register A	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the Slave Bus Control Registers (BUSSCNT<slave>) are write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > BUS Accessibility > Bus Security Attribution Register B	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the Bus and DMAC/DTC Error Clear Registers are write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > System Reset Request Accessibility	• Both Secure and Non-Secure State • Secure State	Secure State	Value for SCB->AIRCR register bit SYSRESETREQS. Defines whether the SYSRESETREQ bit is functional for Non-

			secure use. This setting is only valid when building projects with TrustZone.
Security > System Reset Status Accessibility	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the reset status registers (RSTSRn) can be cleared from the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > Battery Backup Accessibility	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the battery backup registers are accessible for the Non-secure application. If Secure State is selected, all battery backup registers are read only except for VBTBKRn registers which are both read and write protected. This setting is only valid when building projects with TrustZone.
OFS0 register settings > Independent WDT > Start Mode	• IWDT is Disabled • IWDT is automatically activated after a reset (Autostart mode)	IWDT is Disabled	
OFS0 register settings > Independent WDT > Timeout Period	• 128 cycles • 512 cycles • 1024 cycles • 2048 cycles	2048 cycles	
OFS0 register settings > Independent WDT > Dedicated Clock Frequency Divisor	• 1 • 16 • 32 • 64 • 128 • 256	128	

OFS0 register settings > Independent WDT > Window End Position	• 75% • 50% • 25% • 0% (no window end position)	0% (no window end position)
OFS0 register settings > Independent WDT > Window Start Position	• 25% • 50% • 75% • 100% (no window start position)	100% (no window start position)
OFS0 register settings > Independent WDT > Reset Interrupt Request Select	• NMI request or interrupt request is enabled • Reset is enabled	Reset is enabled
OFS0 register settings > Independent WDT > Stop Control	• Counting continues (Note: Device will not enter Deep Standby Mode when selected. Device will enter Software Standby Mode) • Stop counting when in Sleep, Snooze mode, or Software Standby	Stop counting when in Sleep, Snooze mode, or Software Standby
OFS0 register settings > WDT > Start Mode Select	• Automatically activate WDT after a reset (auto-start mode) • Stop WDT after a reset (register-start mode)	Stop WDT after a reset (register-start mode)
OFS0 register settings > WDT > Timeout Period	• 1024 cycles • 4096 cycles • 8192 cycles • 16384 cycles	16384 cycles
OFS0 register settings > WDT > Clock Frequency Division Ratio	• 4 • 64 • 128 • 512 • 2048 • 8192	128
OFS0 register settings	• 75%	0% (no window end

> WDT > Window End Position	• 50% • 25% • 0% (no window end position)	position)	
OFS0 register settings > WDT > Window Start Position	• 25% • 50% • 75% • 100% (no window start position)	100% (no window start position)	
OFS0 register settings > WDT > Reset Interrupt Request	• NMI • Reset	Reset	
OFS0 register settings > WDT > Stop Control	• Counting continues • Stop counting when entering Sleep mode	Stop counting when entering Sleep mode	
OFS1 register settings > Voltage Detection 0 Circuit Start	• Voltage monitor 0 reset is enabled after reset • Voltage monitor 0 reset is disabled after reset	Voltage monitor 0 reset is disabled after reset	
OFS1 register settings > Voltage Detection 0 Level	• 2.94 V • 2.87 V • 2.80 V	2.80 V	
OFS1 register settings > HOCO Oscillation Enable	• HOCO oscillation is enabled after reset • HOCO oscillation is disabled after reset	HOCO oscillation is enabled after reset	
Block Protection Settings (BPS) > BPS	Refer to the RA Configuration tool for available options.	0U	Configure Block Protection Register
Permanent Block Protection Settings (PBPS) > PBPS	Refer to the RA Configuration tool for available options.	0U	Configure Permanent Block Protection Register
Clocks > HOCO FLL Function	• Enabled • Disabled	Disabled	Setting this option to Enabled improves HOCO accuracy significantly by using the subclock, but incurs certain

			restrictions. The FLL function requires the subclock oscillator to be running and stabilized. When enabled and running the PLL or system clock from HOCO, the BSP will wait for both the Subclock Stabilization Time as well as the FLL Stabilization Time when setting up clocks at startup. When FLL is enabled Software Standby and Deep Software Standby modes are not available.
Main Oscillator Wait Time	• 3 cycles • 35 cycles • 67 cycles • 131 cycles • 259 cycles • 547 cycles • 1059 cycles • 2147 cycles • 4291 cycles • 8163 cycles	8163 cycles	Number of cycles to wait for the main oscillator clock to stabilize.

OFS0 register settings > Independent WDT > Stop Control	• Counting continues • Stop counting when in Sleep, Snooze mode, or Software Standby	Stop counting when in Sleep, Snooze mode, or Software Standby	
OFS0 register settings	• Automatically	Stop WDT after a reset	

> WDT > Start Mode Select	activate WDT after a reset (auto-start mode) • Stop WDT after a reset (register-start mode)	(register-start mode)
OFS0 register settings > WDT > Timeout Period	• 1024 cycles • 4096 cycles • 8192 cycles • 16384 cycles	16384 cycles
OFS0 register settings > WDT > Clock Frequency Division Ratio	• 4 • 64 • 128 • 512 • 2048 • 8192	128
OFS0 register settings > WDT > Window End Position	• 75% • 50% • 25% • 0% (no window end position)	0% (no window end position)
OFS0 register settings > WDT > Window Start Position	• 25% • 50% • 75% • 100% (no window start position)	100% (no window start position)
OFS0 register settings > WDT > Reset Interrupt Request	• NMI • Reset	Reset
OFS0 register settings > WDT > Stop Control	• Counting continues • Stop counting when entering Sleep mode	Stop counting when entering Sleep mode
OFS1 register settings > Voltage Detection 0 Circuit Start	• Voltage monitor 0 reset is enabled after reset • Voltage monitor 0 reset is disabled after reset	Voltage monitor 0 reset is disabled after reset
OFS1 register settings > Voltage Detection 0 Level	• 3.84 V • 2.82 V • 2.51 V • 1.90 V • 1.70 V	1.90 V

OFS1 register settings > HOCO Oscillation Enable	HOCO oscillation is enabled after reset	HOCO oscillation is enabled after reset	HOCO must be enabled out of reset because the MCU starts up in low voltage mode and the HOCO must be operating in low voltage mode.
MPU > Enable or disable PC Region 0	• Enabled • Disabled	Disabled	
MPU > PC0 Start	Value must be an integer between 0 and 0x00FFFFFC (ROM) or between 0x1FF00000 and 0x200FFFFC (RAM)	0x00FFFFFC	
MPU > PC0 End	Value must be an integer between 0x00000003 and 0x00FFFFFF (ROM) or between 0x1FF00003 and 0x200FFFFF (RAM)	0x00FFFFFF	
MPU > Enable or disable PC Region 1	• Enabled • Disabled	Disabled	
MPU > PC1 Start	Value must be an integer between 0 and 0x00FFFFFC (ROM) or between 0x1FF00000 and 0x200FFFFC (RAM)	0x00FFFFFC	
MPU > PC1 End	Value must be an integer between 0x00000003 and 0x00FFFFFF (ROM) or between 0x1FF00003 and 0x200FFFFF (RAM)	0x00FFFFFF	
MPU > Enable or disable Memory Region 0	• Enabled • Disabled	Disabled	
MPU > Memory Region 0 Start	Value must be an integer between 0 and 0x00FFFFFC	0x00FFFFFC	
MPU > Memory Region 0 End	Value must be an integer between 0x00000003 and 0x00FFFFFF	0x00FFFFFF	
MPU > Enable or disable Memory Region 1	• Enabled • Disabled	Disabled	
MPU > Memory Region 1 Start	Value must be an integer between	0x200FFFFC	

	0x1FF00000 and 0x200FFFFC		
MPU > Memory Region 1 End	Value must be an integer between 0x1FF00003 and 0x200FFFFF	0x200FFFFF	
MPU > Enable or disable Memory Region 2	• Enabled • Disabled	Disabled	
MPU > Memory Region 2 Start	Value must be an integer between 0x400C0000 and 0x400DFFFC or between 0x40100000 and 0x407FFFFC	0x407FFFFC	
MPU > Memory Region 2 End	Value must be an integer between 0x400C0003 and 0x400DFFFF or between 0x40100003 and 0x407FFFFF	0x407FFFFF	
MPU > Enable or disable Memory Region 3	• Enabled • Disabled	Disabled	
MPU > Memory Region 3 Start	Value must be an integer between 0x400C0000 and 0x400DFFFC or between 0x40100000 and 0x407FFFFC	0x400DFFFC	
MPU > Memory Region 3 End	Value must be an integer between 0x400C0003 and 0x400DFFFF or between 0x40100003 and 0x407FFFFF	0x400DFFFF	
Use Low Voltage Mode	• Enabled • Disabled	Disabled	Use the low voltage mode. This limits the ICLK operating frequency to 4 MHz and requires all clock dividers to be at least 4.
Main Oscillator Wait Time	• 2 cycles • 1024 cycles • 2048 cycles • 4096 cycles • 8192 cycles • 16384 cycles	262144 cycles	Number of cycles to wait for the main oscillator clock to stabilize.

	• 32768 cycles • 65536 cycles • 131072 cycles • 262144 cycles		
ID Code Mode	• Unlocked (Ignore ID) • Locked with All Erase support • Locked	Unlocked (Ignore ID)	When set to 'Locked with All Erase support', the ID Code must be set in the debugger to read or write data to the MCU, but the All Erase command is still accepted regardless. When set to 'Locked', all erase/download/debug access is disabled unless the ID Code is provided.
ID Code (32 Hex Characters)	Value must be a 32 character long hex string	FFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF	Set the ID Code for locking debug access. This setting is only used when the ID Code Mode is not set to Unlocked.

Build Time Configurations for ra4m2_fsp

The following build time configurations are defined in fsp_cfg/bsp/bsp_mcu_family_cfg.h:

Configuration	Options	Default	Description

Security > Exceptions > Exception Response	• Non-Maskable Interrupt • Reset	Non-Maskable Interrupt	Configure the result of a TrustZone Filter exception. This exception is generated when the TrustZone Filter detects access to a protected region. This setting is only valid when building projects with TrustZone.
Security > Exceptions > BusFault, HardFault, and NMI Target	• Non-Secure State • Secure State	Secure State	Value for SCB->AIRCR register bit BFHFNMINS. Defines whether BusFault and NMI exceptions are Non-secure, and whether exceptions target the Non-secure HardFault exception. This setting is only valid when building projects with TrustZone.
Security > Exceptions > Prioritize Secure Exceptions	• Enabled • Disabled	Disabled	Value for SCB->AIRCR register bit PRIS. When enabled, all Non-secure interrupt priorities are automatically demoted by right shifting their priority by one then setting the most significant bit. As there is effectively one less bit care must be taken to ensure the prioritization of non-secure interrupts is correct. This setting is only valid when building projects with TrustZone.
Security > SRAM Accessibility > SRAM Protection	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether SRAMPRCR is write accessible for the Non-secure application. This setting is only valid when building

			projects with TrustZone.
Security > SRAM Accessibility > SRAM ECC	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether SRAM ECC registers are write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > SRAM Accessibility > Standby RAM	• Regions 7-0 are all Secure. • Region 7 is Non-secure. Regions 6-0 are Secure. • Regions 7-6 are Non-secure. Regions 5-0 are Secure. • Regions 7-5 are Non-secure. Regions 4-0 are Secure. • Regions 7-4 are Non-secure. Regions 3-0 are Secure. • Regions 7-3 are Non-secure. Regions 2-0 are Secure. • Regions 7-2 are Non-secure. Regions 1-0 are Secure. • Regions 7-1 are Non-secure. Region 0 is Secure. • Regions 7-0 are all Non-secure.	config.bsp.fsp.tz.stbramsar.both	Defines whether Standby RAM registers are accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > BUS Accessibility > Bus Security Attribution Register A	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the Slave Bus Control Registers (BUSSCNT<slave>) are write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.

Security > BUS Accessibility > Bus Security Attribution Register B	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the Bus and DMAC/DTC Error Clear Registers are write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > System Reset Request Accessibility	• Both Secure and Non-Secure State • Secure State	Secure State	Value for SCB->AIRCR register bit SYSRESETREQS. Defines whether the SYSRESETREQ bit is functional for Non-secure use. This setting is only valid when building projects with TrustZone.
Security > Cache Accessibility	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the Cache registers are write accessible for the Non-secure application. This setting is only valid when building protjects with TrustZone.
Security > System Reset Status Accessibility	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the reset status registers (RSTSRn) can be cleared from the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > Battery Backup Accessibility	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the battery backup registers are accessible for the Non-secure application. If Secure State is selected, all battery backup registers are read only except for VBTBKRn registers which are

			both read and write protected. This setting is only valid when building projects with TrustZone.
OFS0 register settings > Independent WDT > Start Mode	• IWDT is Disabled • IWDT is automatically activated after a reset (Autostart mode)	IWDT is Disabled	
OFS0 register settings > Independent WDT > Timeout Period	• 128 cycles • 512 cycles • 1024 cycles • 2048 cycles	2048 cycles	
OFS0 register settings > Independent WDT > Dedicated Clock Frequency Divisor	• 1 • 16 • 32 • 64 • 128 • 256	128	
OFS0 register settings > Independent WDT > Window End Position	• 75% • 50% • 25% • 0% (no window end position)	0% (no window end position)	
OFS0 register settings > Independent WDT > Window Start Position	• 25% • 50% • 75% • 100% (no window start position)	100% (no window start position)	
OFS0 register settings > Independent WDT > Reset Interrupt Request Select	• NMI request or interrupt request is enabled • Reset is enabled	Reset is enabled	
OFS0 register settings > Independent WDT > Stop Control	• Counting continues (Note: Device will not enter Deep Standby Mode when selected. Device will enter Software	Stop counting when in Sleep, Snooze mode, or Software Standby	

	Standby Mode) • Stop counting when in Sleep, Snooze mode, or Software Standby	
OFS0 register settings > WDT > Start Mode Select	• Automatically activate WDT after a reset (auto-start mode) • Stop WDT after a reset (register-start mode)	Stop WDT after a reset (register-start mode)
OFS0 register settings > WDT > Timeout Period	• 1024 cycles • 4096 cycles • 8192 cycles • 16384 cycles	16384 cycles
OFS0 register settings > WDT > Clock Frequency Division Ratio	• 4 • 64 • 128 • 512 • 2048 • 8192	128
OFS0 register settings > WDT > Window End Position	• 75% • 50% • 25% • 0% (no window end position)	0% (no window end position)
OFS0 register settings > WDT > Window Start Position	• 25% • 50% • 75% • 100% (no window start position)	100% (no window start position)
OFS0 register settings > WDT > Reset Interrupt Request	• NMI • Reset	Reset
OFS0 register settings > WDT > Stop Control	• Counting continues • Stop counting when entering Sleep mode	Stop counting when entering Sleep mode
OFS1 register settings > Voltage Detection 0 Circuit Start	• Voltage monitor 0 reset is enabled after reset • Voltage monitor 0 reset is disabled after	Voltage monitor 0 reset is disabled after reset

	reset		
OFS1 register settings > Voltage Detection 0 Level	• 2.94 V • 2.87 V • 2.80 V	2.80 V	
OFS1 register settings > HOCO Oscillation Enable	• HOCO oscillation is enabled after reset • HOCO oscillation is disabled after reset	HOCO oscillation is disabled after reset	
Block Protection Settings (BPS) > BPS0	Refer to the RA Configuration tool for available options.	0U	Configure Block Protection Register 0
Permanent Block Protection Settings (PBPS) > PBPS0	Refer to the RA Configuration tool for available options.	0U	Configure Permanent Block Protection Register 0
Clocks > HOCO FLL Function	• Enabled • Disabled	Disabled	Setting this option to Enabled improves HOCO accuracy significantly by using the subclock, but incurs certain restrictions. The FLL function requires the subclock oscillator to be running and stabilized. When enabled and running the PLL or system clock from HOCO, the BSP will wait for both the Subclock Stabilization Time as well as the FLL Stabilization Time when setting up clocks at startup. When FLL is enabled Software Standby and Deep Software Standby modes are not available.
Startup C-Cache Line Size	• 32 Bytes • 64 Bytes	32 Bytes	Set the C-Cache line size configured during startup.
Main Oscillator Wait Time	• 3 cycles • 35 cycles • 67 cycles	8163 cycles	Number of cycles to wait for the main oscillator clock to

	• 131 cycles • 259 cycles • 547 cycles • 1059 cycles • 2147 cycles • 4291 cycles • 8163 cycles	stabilize.

BSP » MCU Board Support Package

Build Time Configurations for ra4m3_fsp

The following build time configurations are defined in fsp_cfg/bsp/bsp_mcu_family_cfg.h:

Configuration	Options	Default	Description
Security > Exceptions > Exception Response	• Non-Maskable Interrupt • Reset	Non-Maskable Interrupt	Configure the result of a TrustZone Filter exception. This exception is generated when the TrustZone Filter detects access to a protected region. This setting is only valid when building projects with TrustZone.
Security > Exceptions > BusFault, HardFault, and NMI Target	• Non-Secure State • Secure State	Secure State	Value for SCB->AIRCR register bit BFHFNMINS. Defines whether BusFault and NMI exceptions are Non-secure, and whether exceptions target the Non-secure HardFault exception. This setting is only valid when building projects with TrustZone.
Security > Exceptions > Prioritize Secure Exceptions	• Enabled • Disabled	Disabled	Value for SCB->AIRCR register bit PRIS. When enabled, all Non-secure interrupt priorities are automatically demoted by right shifting their

			priority by one then setting the most significant bit. As there is effectively one less bit care must be taken to ensure the prioritization of non-secure interrupts is correct. This setting is only valid when building projects with TrustZone.
Security > SRAM Accessibility > SRAM Protection	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether SRAMPRCR is write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > SRAM Accessibility > SRAM ECC	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether SRAM ECC registers are write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > SRAM Accessibility > Standby RAM	• Regions 7-0 are all Secure. • Region 7 is Non-secure. Regions 6-0 are Secure. • Regions 7-6 are Non-secure. Regions 5-0 are Secure. • Regions 7-5 are Non-secure. Regions 4-0 are Secure. • Regions 7-4 are Non-secure. Regions 3-0 are Secure. • Regions 7-3 are Non-secure. Regions 2-0 are Secure.	config.bsp.fsp.tz.stbramsar.both	Defines whether Standby RAM registers are accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.

	• Regions 7-2 are Non-secure. Regions 1-0 are Secure. • Regions 7-1 are Non-secure. Region 0 is Secure. • Regions 7-0 are all Non-secure.		
Security > BUS Accessibility > Bus Security Attribution Register A	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the Slave Bus Control Registers (BUSSCNT<slave>) are write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > BUS Accessibility > Bus Security Attribution Register B	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the Bus and DMAC/DTC Error Clear Registers are write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > System Reset Request Accessibility	• Both Secure and Non-Secure State • Secure State	Secure State	Value for SCB->AIRCR register bit SYSRESETREQS. Defines whether the SYSRESETREQ bit is functional for Non-secure use. This setting is only valid when building projects with TrustZone.
Security > Cache Accessibility	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the Cache registers are write accessible for the Non-secure application. This setting is only valid when building protjects with

			TrustZone.
Security > System Reset Status Accessibility	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the reset status registers (RSTSRn) can be cleared from the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > Battery Backup Accessibility	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the battery backup registers are accessible for the Non-secure application. If Secure State is selected, all battery backup registers are read only except for VBTBKRn registers which are both read and write protected. This setting is only valid when building projects with TrustZone.
OFS0 register settings > Independent WDT > Start Mode	• IWDT is Disabled • IWDT is automatically activated after a reset (Autostart mode)	IWDT is Disabled	
OFS0 register settings > Independent WDT > Timeout Period	• 128 cycles • 512 cycles • 1024 cycles • 2048 cycles	2048 cycles	
OFS0 register settings > Independent WDT > Dedicated Clock Frequency Divisor	• 1 • 16 • 32 • 64 • 128 • 256	128	
OFS0 register settings > Independent WDT > Window End Position	• 75% • 50% • 25% • 0% (no window end position)	0% (no window end position)	

OFS0 register settings > Independent WDT > Window Start Position	• 25% • 50% • 75% • 100% (no window start position)	100% (no window start position)
OFS0 register settings > Independent WDT > Reset Interrupt Request Select	• NMI request or interrupt request is enabled • Reset is enabled	Reset is enabled
OFS0 register settings > Independent WDT > Stop Control	• Counting continues (Note: Device will not enter Deep Standby Mode when selected. Device will enter Software Standby Mode) • Stop counting when in Sleep, Snooze mode, or Software Standby	Stop counting when in Sleep, Snooze mode, or Software Standby
OFS0 register settings > WDT > Start Mode Select	• Automatically activate WDT after a reset (auto-start mode) • Stop WDT after a reset (register-start mode)	Stop WDT after a reset (register-start mode)
OFS0 register settings > WDT > Timeout Period	• 1024 cycles • 4096 cycles • 8192 cycles • 16384 cycles	16384 cycles
OFS0 register settings > WDT > Clock Frequency Division Ratio	• 4 • 64 • 128 • 512 • 2048 • 8192	128
OFS0 register settings > WDT > Window End Position	• 75% • 50% • 25% • 0% (no window end position)	0% (no window end position)
OFS0 register settings	• 25%	100% (no window start

> WDT > Window Start Position	• 50% • 75% • 100% (no window start position)	position)	
OFS0 register settings > WDT > Reset Interrupt Request	• NMI • Reset	Reset	
OFS0 register settings > WDT > Stop Control	• Counting continues • Stop counting when entering Sleep mode	Stop counting when entering Sleep mode	
OFS1 register settings > Voltage Detection 0 Circuit Start	• Voltage monitor 0 reset is enabled after reset • Voltage monitor 0 reset is disabled after reset	Voltage monitor 0 reset is disabled after reset	
OFS1 register settings > Voltage Detection 0 Level	• 2.94 V • 2.87 V • 2.80 V	2.80 V	
OFS1 register settings > HOCO Oscillation Enable	• HOCO oscillation is enabled after reset • HOCO oscillation is disabled after reset	HOCO oscillation is disabled after reset	
Block Protection Settings (BPS) > BPS0	Refer to the RA Configuration tool for available options.	0U	Configure Block Protection Register 0
Block Protection Settings (BPS) > BPS1	• Flash Block 32 • Flash Block 33 • Flash Block 34 • Flash Block 35 • Flash Block 36 • Flash Block 37	0U	Configure Block Protection Register 1
Permanent Block Protection Settings (PBPS) > PBPS0	Refer to the RA Configuration tool for available options.	0U	Configure Permanent Block Protection Register 0
Permanent Block Protection Settings (PBPS) > PBPS1	• Flash Block 32 • Flash Block 33 • Flash Block 34 • Flash Block 35 • Flash Block 36	0U	Configure Permanent Block Protection Register 1

	• Flash Block 37		
Clocks > HOCO FLL Function	• Enabled • Disabled	Disabled	Setting this option to Enabled improves HOCO accuracy significantly by using the subclock, but incurs certain restrictions. The FLL function requires the subclock oscillator to be running and stabilized. When enabled and running the PLL or system clock from HOCO, the BSP will wait for both the Subclock Stabilization Time as well as the FLL Stabilization Time when setting up clocks at startup. When FLL is enabled Software Standby and Deep Software Standby modes are not available.
Startup C-Cache Line Size	• 32 Bytes • 64 Bytes	32 Bytes	Set the C-Cache line size configured during startup.
Main Oscillator Wait Time	• 3 cycles • 35 cycles • 67 cycles • 131 cycles • 259 cycles • 547 cycles • 1059 cycles • 2147 cycles • 4291 cycles • 8163 cycles	8163 cycles	Number of cycles to wait for the main oscillator clock to stabilize.

OFS0 register settings > WDT > Reset Interrupt Request	• NMI • Reset	Reset
OFS0 register settings > WDT > Stop Control	• Counting continues • Stop counting when entering Sleep mode	Stop counting when entering Sleep mode
OFS1 register settings > Voltage Detection 0 Circuit Start	• Voltage monitor 0 reset is enabled after reset • Voltage monitor 0 reset is disabled after reset	Voltage monitor 0 reset is disabled after reset
OFS1 register settings > Voltage Detection 0 Level	• 2.82 V • 2.51 V • 1.90 V	1.90 V
OFS1 register settings > HOCO Oscillation Enable	HOCO oscillation is enabled after reset	config.bsp.fsp.OFS1.hoco_osc.disabled
MPU > Enable or disable PC Region 0	• Enabled • Disabled	Disabled

MPU > PC0 Start	Value must be an integer between 0 and 0x00FFFFFC (ROM) or between 0x1FF00000 and 0x200FFFFC (RAM)	0x00FFFFFC
MPU > PC0 End	Value must be an integer between 0x00000003 and 0x00FFFFFF (ROM) or between 0x1FF00003 and 0x200FFFFF (RAM)	0x00FFFFFF
MPU > Enable or disable PC Region 1	• Enabled • Disabled	Disabled
MPU > PC1 Start	Value must be an integer between 0 and 0x00FFFFFC (ROM) or between 0x1FF00000 and 0x200FFFFC (RAM)	0x00FFFFFC
MPU > PC1 End	Value must be an integer between 0x00000003 and 0x00FFFFFF (ROM) or between 0x1FF00003 and 0x200FFFFF (RAM)	0x00FFFFFF
MPU > Enable or disable Memory Region 0	• Enabled • Disabled	Disabled
MPU > Memory Region 0 Start	Value must be an integer between 0 and 0x00FFFFFC	0x00FFFFFC
MPU > Memory Region 0 End	Value must be an integer between 0x00000003 and 0x00FFFFFF	0x00FFFFFF
MPU > Enable or disable Memory Region 1	• Enabled • Disabled	Disabled
MPU > Memory Region 1 Start	Value must be an integer between 0x1FF00000 and 0x200FFFFC	0x200FFFFC
MPU > Memory Region 1 End	Value must be an integer between 0x1FF00003 and 0x200FFFFF	0x200FFFFF
MPU > Enable or disable Memory Region 2	• Enabled • Disabled	Disabled

MPU > Memory Region 2 Start	Value must be an integer between 0x400C0000 and 0x400DFFFC or between 0x40100000 and 0x407FFFFC	0x407FFFFC	
MPU > Memory Region 2 End	Value must be an integer between 0x400C0003 and 0x400DFFFF or between 0x40100003 and 0x407FFFFF	0x407FFFFF	
MPU > Enable or disable Memory Region 3	• Enabled • Disabled	Disabled	
MPU > Memory Region 3 Start	Value must be an integer between 0x400C0000 and 0x400DFFFC or between 0x40100000 and 0x407FFFFC	0x400DFFFC	
MPU > Memory Region 3 End	Value must be an integer between 0x400C0003 and 0x400DFFFF or between 0x40100003 and 0x407FFFFF	0x400DFFFF	
Use Low Voltage Mode	• Enabled • Disabled	Disabled	Use the low voltage mode. This limits the ICLK operating frequency to 4 MHz and requires all clock dividers to be at least 4.
Main Oscillator Wait Time	• 2 cycles • 1024 cycles • 2048 cycles • 4096 cycles • 8192 cycles • 16384 cycles • 32768 cycles • 65536 cycles • 131072 cycles • 262144 cycles	262144 cycles	Number of cycles to wait for the main oscillator clock to stabilize.
ID Code Mode	• Unlocked (Ignore ID) • Locked with All Erase support • Locked	Unlocked (Ignore ID)	When set to 'Locked with All Erase support', the ID Code must be set in the debugger to read or write data to the MCU, but the All Erase command is still

			accepted regardless. When set to 'Locked', all erase/download/debug access is disabled unless the ID Code is provided.
ID Code (32 Hex Characters)	Value must be a 32 character long hex string	FFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF	Set the ID Code for locking debug access. This setting is only used when the ID Code Mode is not set to Unlocked.

Detailed Description

Build Time Configurations for ra6e1_fsp

The following build time configurations are defined in fsp_cfg/bsp/bsp_mcu_family_cfg.h:

Configuration	Options	Default	Description
Security > Exceptions > Exception Response	• Non-Maskable Interrupt • Reset	Non-Maskable Interrupt	Configure the result of a TrustZone Filter exception. This exception is generated when a the TrustZone Filter detects access to a protected region. This setting is only valid when building

			projects with TrustZone.
Security > Exceptions > BusFault, HardFault, and NMI Target	• Non-Secure State • Secure State	Secure State	Value for SCB->AIRCR register bit BFHFNMINS. Defines whether BusFault and NMI exceptions are Non-secure, and whether exceptions target the Non-secure HardFault exception. This setting is only valid when building projects with TrustZone.
Security > Exceptions > Prioritize Secure Exceptions	• Enabled • Disabled	Disabled	Value for SCB->AIRCR register bit PRIS. When enabled, all Non-secure interrupt priorities are automatically demoted by right shifting their priority by one then setting the most significant bit. As there is effectively one less bit care must be taken to ensure the prioritization of non-secure interrupts is correct. This setting is only valid when building projects with TrustZone.
Security > SRAM Accessibility > SRAM Protection	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether SRAMPRCR is write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > SRAM Accessibility > SRAM ECC	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether SRAM ECC registers are write accessible for the Non-secure application. This setting is only valid when building

			projects with TrustZone.
Security > SRAM Accessibility > Standby RAM	• Regions 7-0 are all Secure. • Region 7 is Non-secure. Regions 6-0 are Secure. • Regions 7-6 are Non-secure. Regions 5-0 are Secure. • Regions 7-5 are Non-secure. Regions 4-0 are Secure. • Regions 7-4 are Non-secure. Regions 3-0 are Secure. • Regions 7-3 are Non-secure. Regions 2-0 are Secure. • Regions 7-2 are Non-secure. Regions 1-0 are Secure. • Regions 7-1 are Non-secure. Region 0 is Secure. • Regions 7-0 are all Non-secure.	config.bsp.fsp.tz.stbramsar.both	Defines whether Standby RAM registers are accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > BUS Accessibility > Bus Security Attribution Register A	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the Slave Bus Control Registers (BUSSCNT<slave>) are write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > BUS Accessibility > Bus Security Attribution Register B	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the Bus and DMAC/DTC Error Clear Registers are write accessible for the Non-secure application. This setting is only valid when building

			projects with TrustZone.
Security > System Reset Request Accessibility	• Both Secure and Non-Secure State • Secure State	Secure State	Value for SCB->AIRCR register bit SYSRESETREQS. Defines whether the SYSRESETREQ bit is functional for Non-secure use. This setting is only valid when building projects with TrustZone.
Security > Cache Accessibility	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the Cache registers are write accessible for the Non-secure application. This setting is only valid when building protjects with TrustZone.
Security > System Reset Status Accessibility	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the reset status registers (RSTSRn) can be cleared from the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > Battery Backup Accessibility	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the battery backup registers are accessible for the Non-secure application. If Secure State is selected, all battery backup registers are read only except for VBTBKRn registers which are both read and write protected. This setting is only valid when building projects with TrustZone.
OFS0 register settings > Independent WDT >	• IWDT is Disabled	IWDT is Disabled	

Start Mode	• IWDT is automatically activated after a reset (Autostart mode)	
OFS0 register settings > Independent WDT > Timeout Period	• 128 cycles • 512 cycles • 1024 cycles • 2048 cycles	2048 cycles

OFS0 register settings > Independent WDT > Window End Position	• 75% • 50% • 25% • 0% (no window end position)	0% (no window end position)
OFS0 register settings > Independent WDT > Window Start Position	• 25% • 50% • 75% • 100% (no window start position)	100% (no window start position)
OFS0 register settings > Independent WDT > Reset Interrupt Request Select	• NMI request or interrupt request is enabled • Reset is enabled	Reset is enabled
OFS0 register settings > Independent WDT > Stop Control	• Counting continues (Note: Device will not enter Deep Standby Mode when selected. Device will enter Software Standby Mode) • Stop counting when in Sleep, Snooze mode, or Software Standby	Stop counting when in Sleep, Snooze mode, or Software Standby
OFS0 register settings > WDT > Start Mode Select	• Automatically activate WDT after a reset	Stop WDT after a reset (register-start mode)

	(auto-start mode) • Stop WDT after a reset (register-start mode)	
OFS0 register settings > WDT > Timeout Period	• 1024 cycles • 4096 cycles • 8192 cycles • 16384 cycles	16384 cycles
OFS0 register settings > WDT > Clock Frequency Division Ratio	• 4 • 64 • 128 • 512 • 2048 • 8192	128
OFS0 register settings > WDT > Window End Position	• 75% • 50% • 25% • 0% (no window end position)	0% (no window end position)
OFS0 register settings > WDT > Window Start Position	• 25% • 50% • 75% • 100% (no window start position)	100% (no window start position)
OFS0 register settings > WDT > Reset Interrupt Request	• NMI • Reset	Reset
OFS0 register settings > WDT > Stop Control	• Counting continues • Stop counting when entering Sleep mode	Stop counting when entering Sleep mode
OFS1 register settings > Voltage Detection 0 Circuit Start	• Voltage monitor 0 reset is enabled after reset • Voltage monitor 0 reset is disabled after reset	Voltage monitor 0 reset is disabled after reset
OFS1 register settings > Voltage Detection 0 Level	• 2.94 V • 2.87 V • 2.80 V	2.80 V
OFS1 register settings > HOCO Oscillation Enable	• HOCO oscillation is enabled after reset	HOCO oscillation is enabled after reset

	• HOCO oscillation is disabled after reset		
Block Protection Settings (BPS) > BPS0	Refer to the RA Configuration tool for available options.	0U	Configure Block Protection Register 0
Block Protection Settings (BPS) > BPS1	• Flash Block 32 • Flash Block 33 • Flash Block 34 • Flash Block 35 • Flash Block 36 • Flash Block 37	0U	Configure Block Protection Register 1
Block Protection Settings (BPS) > BPS2	Refer to the RA Configuration tool for available options.	0U	Configure Block Protection Register 2
Permanent Block Protection Settings (PBPS) > PBPS0	Refer to the RA Configuration tool for available options.	0U	Configure Permanent Block Protection Register 0
Permanent Block Protection Settings (PBPS) > PBPS1	• Flash Block 32 • Flash Block 33 • Flash Block 34 • Flash Block 35 • Flash Block 36 • Flash Block 37	0U	Configure Permanent Block Protection Register 1
Permanent Block Protection Settings (PBPS) > PBPS2	Refer to the RA Configuration tool for available options.	0U	Configure Permanent Block Protection Register 2
Clocks > HOCO FLL Function	• Enabled • Disabled	Disabled	Setting this option to Enabled improves HOCO accuracy significantly by using the subclock, but incurs certain restrictions. The FLL function requires the subclock oscillator to be running and stabilized. When enabled and running the PLL or system clock from HOCO, the BSP will wait for both the Subclock Stabilization Time as well as the FLL Stabilization Time when setting up clocks at startup. When FLL is enabled

			Software Standby and Deep Software Standby modes are not available.
Startup C-Cache Line Size	• 32 Bytes • 64 Bytes	32 Bytes	Set the C-Cache line size configured during startup.
Dual Bank Mode	• Enabled • Disabled	Disabled	Enabling dual bank mode splits the flash into two banks that can be swapped by programming the BANKSEL non-volatile register. When enabled, one bank will start at address 0x0 and the other will start at 0x200000. Each bank contains exactly half the capacity of the entire code flash. When Dual Bank mode is enabled, Startup Program Protection and Block Swap functions cannot be used.
Main Oscillator Wait Time	• 3 cycles • 35 cycles • 67 cycles • 131 cycles • 259 cycles • 547 cycles • 1059 cycles • 2147 cycles • 4291 cycles • 8163 cycles	8163 cycles	Number of cycles to wait for the main oscillator clock to stabilize.

OFS0 register settings > WDT > Reset Interrupt Request	• NMI • Reset	Reset
OFS0 register settings > WDT > Stop Control	• Counting continues • Stop counting when entering Sleep mode	Stop counting when entering Sleep mode

OFS1 register settings > Voltage Detection 0 Circuit Start	• Voltage monitor 0 reset is enabled after reset • Voltage monitor 0 reset is disabled after reset	Voltage monitor 0 reset is disabled after reset
OFS1 register settings > Voltage Detection 0 Level	• 2.94 V • 2.87 V • 2.80 V	2.80 V
OFS1 register settings > HOCO Oscillation Enable	• HOCO oscillation is enabled after reset • HOCO oscillation is disabled after reset	HOCO oscillation is disabled after reset
MPU > Enable or disable PC Region 0	• Enabled • Disabled	Disabled
MPU > PC0 Start	Value must be an integer between 0 and 0xFFFFFFFC	0xFFFFFFFC
MPU > PC0 End	Value must be an integer between 0x00000003 and 0xFFFFFFFF	0xFFFFFFFF
MPU > Enable or disable PC Region 1	• Enabled • Disabled	Disabled
MPU > PC1 Start	Value must be an integer between 0 and 0xFFFFFFFC	0xFFFFFFFC
MPU > PC1 End	Value must be an integer between 0x00000003 and 0xFFFFFFFF	0xFFFFFFFF
MPU > Enable or disable Memory Region 0	• Enabled • Disabled	Disabled
MPU > Memory Region 0 Start	Value must be an integer between 0 and 0x00FFFFFC	0x00FFFFFC
MPU > Memory Region 0 End	Value must be an integer between 0x00000003 and 0x00FFFFFF	0x00FFFFFF

MPU > Enable or disable Memory Region 1	• Enabled • Disabled	Disabled	
MPU > Memory Region 1 Start	Value must be an integer between 0x1FF00000 and 0x200FFFFC	0x200FFFFC	
MPU > Memory Region 1 End	Value must be an integer between 0x1FF00003 and 0x200FFFFF	0x200FFFFF	
MPU > Enable or disable Memory Region 2	• Enabled • Disabled	Disabled	
MPU > Memory Region 2 Start	Value must be an integer between 0x400C0000 and 0x400DFFFC or between 0x40100000 and 0x407FFFFC	0x407FFFFC	
MPU > Memory Region 2 End	Value must be an integer between 0x400C0003 and 0x400DFFFF or between 0x40100003 and 0x407FFFFF	0x407FFFFF	
MPU > Enable or disable Memory Region 3	• Enabled • Disabled	Disabled	
MPU > Memory Region 3 Start	Value must be an integer between 0x400C0000 and 0x400DFFFC or between 0x40100000 and 0x407FFFFC	0x400DFFFC	
MPU > Memory Region 3 End	Value must be an integer between 0x400C0003 and 0x400DFFFF or between 0x40100003 and 0x407FFFFF	0x400DFFFF	
Clocks > HOCO FLL Function	• Enabled • Disabled	Disabled	Setting this option to Enabled improves HOCO accuracy significantly by using the subclock, but incurs certain restrictions.

			The FLL function requires the subclock oscillator to be running and stabilized. When enabled and running the PLL or system clock from HOCO, the BSP will wait for both the Subclock Stabilization Time as well as the FLL Stabilization Time when setting up clocks at startup. When FLL is enabled Software Standby and Deep Software Standby modes are not available.
Main Oscillator Wait Time	• 35 cycles • 67 cycles • 131 cycles • 259 cycles • 547 cycles • 1059 cycles • 2147 cycles • 4291 cycles • 8163 cycles	8163 cycles	Number of cycles to wait for the main oscillator clock to stabilize. Drive capability automatic switching function is by default disabled.
ID Code Mode	• Unlocked (Ignore ID) • Locked with All Erase support • Locked	Unlocked (Ignore ID)	When set to 'Locked with All Erase support', the ID Code must be set in the debugger to read or write data to the MCU, but the All Erase command is still accepted regardless. When set to 'Locked', all erase/download/debug access is disabled unless the ID Code is provided.
ID Code (32 Hex Characters)	Value must be a 32 character long hex string	FFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF	Set the ID Code for locking debug access. This setting is only used when the ID Code Mode is not set to Unlocked.

4.1.2.14 RA6M4

BSP » MCU Board Support Package

Build Time Configurations for ra6m4_fsp

The following build time configurations are defined in fsp_cfg/bsp/bsp_mcu_family_cfg.h:

Configuration	Options	Default	Description
Security > Exceptions > Exception Response	• Non-Maskable Interrupt • Reset	Non-Maskable Interrupt	Configure the result of a TrustZone Filter exception. This exception is generated when the TrustZone Filter detects access to a protected region. This setting is only

			valid when building projects with TrustZone.
Security > Exceptions > BusFault, HardFault, and NMI Target	• Non-Secure State • Secure State	Secure State	Value for SCB->AIRCR register bit BFHFNMINS. Defines whether BusFault and NMI exceptions are Non-secure, and whether exceptions target the Non-secure HardFault exception. This setting is only valid when building projects with TrustZone.
Security > Exceptions > Prioritize Secure Exceptions	• Enabled • Disabled	Disabled	Value for SCB->AIRCR register bit PRIS. When enabled, all Non-secure interrupt priorities are automatically demoted by right shifting their priority by one then setting the most significant bit. As there is effectively one less bit care must be taken to ensure the prioritization of non-secure interrupts is correct. This setting is only valid when building projects with TrustZone.
Security > SRAM Accessibility > SRAM Protection	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether SRAMPRCR is write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > SRAM Accessibility > SRAM ECC	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether SRAM ECC registers are write accessible for the Non-secure application. This setting is only

			valid when building projects with TrustZone.
Security > SRAM Accessibility > Standby RAM	• Regions 7-0 are all Secure. • Region 7 is Non-secure. Regions 6-0 are Secure. • Regions 7-6 are Non-secure. Regions 5-0 are Secure. • Regions 7-5 are Non-secure. Regions 4-0 are Secure. • Regions 7-4 are Non-secure. Regions 3-0 are Secure. • Regions 7-3 are Non-secure. Regions 2-0 are Secure. • Regions 7-2 are Non-secure. Regions 1-0 are Secure. • Regions 7-1 are Non-secure. Region 0 is Secure. • Regions 7-0 are all Non-secure.	config.bsp.fsp.tz.stbramsar.both	Defines whether Standby RAM registers are accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > BUS Accessibility > Bus Security Attribution Register A	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the Slave Bus Control Registers (BUSSCNT<slave>) are write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > BUS Accessibility > Bus Security Attribution Register B	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the Bus and DMAC/DTC Error Clear Registers are write accessible for the Non-secure application. This setting is only

			valid when building projects with TrustZone.
Security > System Reset Request Accessibility	• Both Secure and Non-Secure State • Secure State	Secure State	Value for SCB->AIRCR register bit SYSRESETREQS. Defines whether the SYSRESETREQ bit is functional for Non-secure use. This setting is only valid when building projects with TrustZone.
Security > Cache Accessibility	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the Cache registers are write accessible for the Non-secure application. This setting is only valid when building protjects with TrustZone.
Security > System Reset Status Accessibility	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the reset status registers (RSTSRn) can be cleared from the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > Battery Backup Accessibility	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the battery backup registers are accessible for the Non-secure application. If Secure State is selected, all battery backup registers are read only except for VBTBKRn registers which are both read and write protected. This setting is only valid when building projects with TrustZone.
OFS0 register settings	• IWDT is	IWDT is Disabled	

> Independent WDT > Start Mode	Disabled • IWDT is automatically activated after a reset (Autostart mode)	
OFS0 register settings > Independent WDT > Timeout Period	• 128 cycles • 512 cycles • 1024 cycles • 2048 cycles	2048 cycles
OFS0 register settings > Independent WDT > Dedicated Clock Frequency Divisor	• 1 • 16 • 32 • 64 • 128 • 256	128
OFS0 register settings > Independent WDT > Window End Position	• 75% • 50% • 25% • 0% (no window end position)	0% (no window end position)
OFS0 register settings > Independent WDT > Window Start Position	• 25% • 50% • 75% • 100% (no window start position)	100% (no window start position)
OFS0 register settings > Independent WDT > Reset Interrupt Request Select	• NMI request or interrupt request is enabled • Reset is enabled	Reset is enabled
OFS0 register settings > Independent WDT > Stop Control	• Counting continues (Note: Device will not enter Deep Standby Mode when selected. Device will enter Software Standby Mode) • Stop counting when in Sleep, Snooze mode, or Software Standby	Stop counting when in Sleep, Snooze mode, or Software Standby
OFS0 register settings > WDT > Start Mode	• Automatically activate WDT	Stop WDT after a reset (register-start mode)

Select	after a reset (auto-start mode) • Stop WDT after a reset (register-start mode)	
OFS0 register settings > WDT > Timeout Period	• 1024 cycles • 4096 cycles • 8192 cycles • 16384 cycles	16384 cycles
OFS0 register settings > WDT > Clock Frequency Division Ratio	• 4 • 64 • 128 • 512 • 2048 • 8192	128
OFS0 register settings > WDT > Window End Position	• 75% • 50% • 25% • 0% (no window end position)	0% (no window end position)
OFS0 register settings > WDT > Window Start Position	• 25% • 50% • 75% • 100% (no window start position)	100% (no window start position)
OFS0 register settings > WDT > Reset Interrupt Request	• NMI • Reset	Reset
OFS0 register settings > WDT > Stop Control	• Counting continues • Stop counting when entering Sleep mode	Stop counting when entering Sleep mode
OFS1 register settings > Voltage Detection 0 Circuit Start	• Voltage monitor 0 reset is enabled after reset • Voltage monitor 0 reset is disabled after reset	Voltage monitor 0 reset is disabled after reset
OFS1 register settings > Voltage Detection 0 Level	• 2.94 V • 2.87 V • 2.80 V	2.80 V
OFS1 register settings > HOCO Oscillation Enable	• HOCO oscillation is enabled after	HOCO oscillation is disabled after reset

	reset • HOCO oscillation is disabled after reset		
Block Protection Settings (BPS) > BPS0	Refer to the RA Configuration tool for available options.	0U	Configure Block Protection Register 0
Block Protection Settings (BPS) > BPS1	• Flash Block 32 • Flash Block 33 • Flash Block 34 • Flash Block 35 • Flash Block 36 • Flash Block 37	0U	Configure Block Protection Register 1
Block Protection Settings (BPS) > BPS2	Refer to the RA Configuration tool for available options.	0U	Configure Block Protection Register 2
Permanent Block Protection Settings (PBPS) > PBPS0	Refer to the RA Configuration tool for available options.	0U	Configure Permanent Block Protection Register 0
Permanent Block Protection Settings (PBPS) > PBPS1	• Flash Block 32 • Flash Block 33 • Flash Block 34 • Flash Block 35 • Flash Block 36 • Flash Block 37	0U	Configure Permanent Block Protection Register 1
Permanent Block Protection Settings (PBPS) > PBPS2	Refer to the RA Configuration tool for available options.	0U	Configure Permanent Block Protection Register 2
Clocks > HOCO FLL Function	• Enabled • Disabled	Disabled	Setting this option to Enabled improves HOCO accuracy significantly by using the subclock, but incurs certain restrictions. The FLL function requires the subclock oscillator to be running and stabilized. When enabled and running the PLL or system clock from HOCO, the BSP will wait for both the Subclock Stabilization Time as well as the FLL Stabilization Time when setting up clocks at startup.

			When FLL is enabled Software Standby and Deep Software Standby modes are not available.
Startup C-Cache Line Size	• 32 Bytes • 64 Bytes	32 Bytes	Set the C-Cache line size configured during startup.
Dual Bank Mode	• Enabled • Disabled	Disabled	Enabling dual bank mode splits the flash into two banks that can be swapped by programming the BANKSEL non-volatile register. When enabled, one bank will start at address 0x0 and the other will start at 0x200000. Each bank contains exactly half the capacity of the entire code flash. When Dual Bank mode is enabled, Startup Program Protection and Block Swap functions cannot be used.
Main Oscillator Wait Time	• 3 cycles • 35 cycles • 67 cycles • 131 cycles • 259 cycles • 547 cycles • 1059 cycles • 2147 cycles • 4291 cycles • 8163 cycles	8163 cycles	Number of cycles to wait for the main oscillator clock to stabilize.

4.1.2.15 RA6M5

BSP » MCU Board Support Package

Build Time Configurations for ra6m5_fsp

The following build time configurations are defined in fsp_cfg/bsp/bsp_mcu_family_cfg.h:

Configuration	Options	Default	Description
Security > Exceptions > Exception Response	• Non-Maskable Interrupt	Non-Maskable Interrupt	Configure the result of a TrustZone Filter

	• Reset		exception. This exception is generated when the TrustZone Filter detects access to a protected region. This setting is only valid when building projects with TrustZone.
Security > Exceptions > BusFault, HardFault, and NMI Target	• Non-Secure State • Secure State	Secure State	Value for SCB->AIRCR register bit BFHFNMINS. Defines whether BusFault and NMI exceptions are Non-secure, and whether exceptions target the Non-secure HardFault exception. This setting is only valid when building projects with TrustZone.
Security > Exceptions > Prioritize Secure Exceptions	• Enabled • Disabled	Disabled	Value for SCB->AIRCR register bit PRIS. When enabled, all Non-secure interrupt priorities are automatically demoted by right shifting their priority by one then setting the most significant bit. As there is effectively one less bit care must be taken to ensure the prioritization of non-secure interrupts is correct. This setting is only valid when building projects with TrustZone.
Security > SRAM Accessibility > SRAM Protection	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether SRAMPRCR is write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.

Security > SRAM Accessibility > SRAM ECC	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether SRAM ECC registers are write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > SRAM Accessibility > Standby RAM	• Regions 7-0 are all Secure. • Region 7 is Non-secure. Regions 6-0 are Secure. • Regions 7-6 are Non-secure. Regions 5-0 are Secure. • Regions 7-5 are Non-secure. Regions 4-0 are Secure. • Regions 7-4 are Non-secure. Regions 3-0 are Secure. • Regions 7-3 are Non-secure. Regions 2-0 are Secure. • Regions 7-2 are Non-secure. Regions 1-0 are Secure. • Regions 7-1 are Non-secure. Region 0 is Secure. • Regions 7-0 are all Non-secure.	config.bsp.fsp.tz.stbramsar.both	Defines whether Standby RAM registers are accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > BUS Accessibility > Bus Security Attribution Register A	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the Slave Bus Control Registers (BUSSCNT<slave>) are write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > BUS Accessibility > Bus	• Both Secure and Non-Secure	Both Secure and Non-Secure State	Defines whether the Bus and DMAC/DTC

Security Attribution Register B	State • Secure State		Error Clear Registers are write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > System Reset Request Accessibility	• Both Secure and Non-Secure State • Secure State	Secure State	Value for SCB->AIRCR register bit SYSRESETREQS. Defines whether the SYSRESETREQ bit is functional for Non-secure use. This setting is only valid when building projects with TrustZone.
Security > Cache Accessibility	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the Cache registers are write accessible for the Non-secure application. This setting is only valid when building protjects with TrustZone.
Security > System Reset Status Accessibility	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the reset status registers (RSTSRn) can be cleared from the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > Battery Backup Accessibility	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the battery backup registers are accessible for the Non-secure application. If Secure State is selected, all battery backup registers are read only except for VBTBKRn registers which are both read and write protected.

			This setting is only valid when building projects with TrustZone.
OFS0 register settings > Independent WDT > Start Mode	• IWDT is Disabled • IWDT is automatically activated after a reset (Autostart mode)	IWDT is Disabled

Clocks > HOCO FLL Function	• Enabled • Disabled	Disabled	Setting this option to Enabled improves HOCO accuracy significantly by using the subclock, but incurs certain restrictions. The FLL function requires the subclock oscillator to be running and stabilized. When enabled and running the PLL or system clock from HOCO, the BSP

			will wait for both the Subclock Stabilization Time as well as the FLL Stabilization Time when setting up clocks at startup. When FLL is enabled Software Standby and Deep Software Standby modes are not available.
Startup C-Cache Line Size	• 32 Bytes • 64 Bytes	32 Bytes	Set the C-Cache line size configured during startup.
Dual Bank Mode	• Enabled • Disabled	Disabled	Enabling dual bank mode splits the flash into two banks that can be swapped by programming the BANKSEL non-volatile register. When enabled, one bank will start at address 0x0 and the other will start at 0x200000. Each bank contains exactly half the capacity of the entire code flash. When Dual Bank mode is enabled, Startup Program Protection and Block Swap functions cannot be used.
Main Oscillator Wait Time	• 3 cycles • 35 cycles • 67 cycles • 131 cycles • 259 cycles • 547 cycles • 1059 cycles • 2147 cycles • 4291 cycles • 8163 cycles	8163 cycles	Number of cycles to wait for the main oscillator clock to stabilize.

Detailed Description

Build Time Configurations for ra6t2_fsp

The following build time configurations are defined in fsp_cfg/bsp/bsp_mcu_family_cfg.h:

Configuration	Options	Default	Description
Security > Exceptions > Exception Response	• Non-Maskable Interrupt • Reset	Non-Maskable Interrupt	Configure the result of a TrustZone Filter exception. This exception is generated when a the TrustZone Filter detects access to a protected region. This setting is only valid when building projects with TrustZone.
Security > Exceptions > BusFault, HardFault, and NMI Target	• Non-Secure State • Secure State	Secure State	Value for SCB->AIRCR register bit BFHFNMINS. Defines whether BusFault and NMI exceptions are Non-secure, and whether exceptions target the Non-secure HardFault exception. This setting is only valid when building projects with TrustZone.
Security > Exceptions > Prioritize Secure Exceptions	• Enabled • Disabled	Disabled	Value for SCB->AIRCR register bit PRIS. When enabled, all Non-secure interrupt priorities are automatically demoted by right shifting their priority by one then setting the most significant bit. As there is effectively one less bit care must be taken to ensure the

			prioritization of non-secure interrupts is correct. This setting is only valid when building projects with TrustZone.
Security > SRAM Accessibility > SRAM Protection	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether SRAMPRCR is write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > SRAM Accessibility > SRAM ECC	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether SRAM ECC registers are write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > SRAM Accessibility > Standby RAM	• Regions 7-0 are all Secure. • Region 7 is Non-secure. Regions 6-0 are Secure. • Regions 7-6 are Non-secure. Regions 5-0 are Secure. • Regions 7-5 are Non-secure. Regions 4-0 are Secure. • Regions 7-4 are Non-secure. Regions 3-0 are Secure. • Regions 7-3 are Non-secure. Regions 2-0 are Secure. • Regions 7-2 are Non-secure. Regions 1-0 are Secure. • Regions 7-1 are Non-secure.	config.bsp.fsp.tz.stbramsar.both	Defines whether Standby RAM registers are accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.

	Region 0 is Secure. • Regions 7-0 are all Non-secure.		
Security > BUS Accessibility > Bus Security Attribution Register A	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the Slave Bus Control Registers (BUSSCNT<slave>) are write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > BUS Accessibility > Bus Security Attribution Register B	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the Bus and DMAC/DTC Error Clear Registers are write accessible for the Non-secure application. This setting is only valid when building projects with TrustZone.
Security > System Reset Request Accessibility	• Both Secure and Non-Secure State • Secure State	Secure State	Value for SCB->AIRCR register bit SYSRESETREQS. Defines whether the SYSRESETREQ bit is functional for Non-secure use. This setting is only valid when building projects with TrustZone.
Security > Cache Accessibility	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the Cache registers are write accessible for the Non-secure application. This setting is only valid when building protjects with TrustZone.
Security > System Reset Status Accessibility	• Both Secure and Non-Secure State • Secure State	Both Secure and Non-Secure State	Defines whether the reset status registers (RSTSRn) can be cleared from the Non-secure application.

			This setting is only valid when building projects with TrustZone.
OFS0 register settings > Independent WDT > Start Mode	• IWDT is Disabled • IWDT is automatically activated after a reset (Autostart mode)	IWDT is Disabled	
OFS0 register settings > Independent WDT > Timeout Period	• 128 cycles • 512 cycles • 1024 cycles • 2048 cycles	2048 cycles	
OFS0 register settings > Independent WDT > Dedicated Clock Frequency Divisor	• 1 • 16 • 32 • 64 • 128 • 256	128	
OFS0 register settings > Independent WDT > Window End Position	• 75% • 50% • 25% • 0% (no window end position)	0% (no window end position)	
OFS0 register settings > Independent WDT > Window Start Position	• 25% • 50% • 75% • 100% (no window start position)	100% (no window start position)	
OFS0 register settings > Independent WDT > Reset Interrupt Request Select	• NMI request or interrupt request is enabled • Reset is enabled	Reset is enabled	
OFS0 register settings > Independent WDT > Stop Control	• Counting continues (Note: Device will not enter Deep Standby Mode when selected. Device will enter Software Standby Mode) • Stop counting	Stop counting when in Sleep, Snooze mode, or Software Standby	

	when in Sleep, Snooze mode, or Software Standby	
OFS0 register settings > WDT > Start Mode Select	• Automatically activate WDT after a reset (auto-start mode) • Stop WDT after a reset (register-start mode)	Stop WDT after a reset (register-start mode)
OFS0 register settings > WDT > Timeout Period	• 1024 cycles • 4096 cycles • 8192 cycles • 16384 cycles	16384 cycles
OFS0 register settings > WDT > Clock Frequency Division Ratio	• 4 • 64 • 128 • 512 • 2048 • 8192	128
OFS0 register settings > WDT > Window End Position	• 75% • 50% • 25% • 0% (no window end position)	0% (no window end position)
OFS0 register settings > WDT > Window Start Position	• 25% • 50% • 75% • 100% (no window start position)	100% (no window start position)
OFS0 register settings > WDT > Reset Interrupt Request	• NMI • Reset	Reset
OFS0 register settings > WDT > Stop Control	• Counting continues • Stop counting when entering Sleep mode	Stop counting when entering Sleep mode
OFS1 register settings > Voltage Detection 0 Circuit Start	• Voltage monitor 0 reset is enabled after reset • Voltage monitor 0 reset is disabled after reset	Voltage monitor 0 reset is disabled after reset

OFS1 register settings > Voltage Detection 0 Level	• 2.94 V • 2.87 V • 2.80 V	2.80 V	
OFS1 register settings > HOCO Oscillation Enable	• HOCO oscillation is enabled after reset • HOCO oscillation is disabled after reset	HOCO oscillation is disabled after reset	
OFS1 register settings > PGA0 Pseudo-Differential Input Enable	• Disabled (single-ended input) after reset • Enabled after reset	Disabled (single-ended input) after reset	
OFS1 register settings > PGA1 Pseudo-Differential Input Enable	• Disabled (single-ended input) after reset • Enabled after reset	Disabled (single-ended input) after reset	
OFS1 register settings > PGA2 Pseudo-Differential Input Enable	• Disabled (single-ended input) after reset • Enabled after reset	Disabled (single-ended input) after reset	
OFS1 register settings > PGA3 Pseudo-Differential Input Enable	• Disabled (single-ended input) after reset • Enabled after reset	Disabled (single-ended input) after reset	
Block Protection Settings (BPS) > BPS0	Refer to the RA Configuration tool for available options.	0U	Configure Block Protection Register 0
Permanent Block Protection Settings (PBPS) > PBPS0	Refer to the RA Configuration tool for available options.	0U	Configure Permanent Block Protection Register 0
Clocks > HOCO FLL Function	• Enabled • Disabled	Disabled	Setting this option to Enabled improves HOCO accuracy significantly by using the subclock, but incurs certain restrictions. The FLL function requires the subclock oscillator to be running and stabilized. When enabled and running

			the PLL or system clock from HOCO, the BSP will wait for both the Subclock Stabilization Time as well as the FLL Stabilization Time when setting up clocks at startup. When FLL is enabled Software Standby and Deep Software Standby modes are not available.
Startup C-Cache Line Size	• 32 Bytes • 64 Bytes	32 Bytes	Set the C-Cache line size configured during startup.
TFU Mathlib	• Disabled • Enabled	Enabled	If enabled, trigonometric library functions sinf, cosf, atan2f, and hypotf are replaced with hardware accelerated TFU functions. Disable this if reentrant access to these functions is required.
Main Oscillator Wait Time	• 3 cycles • 35 cycles • 67 cycles • 131 cycles • 259 cycles • 547 cycles • 1059 cycles • 2147 cycles • 4291 cycles • 8163 cycles	8163 cycles	Number of cycles to wait for the main oscillator clock to stabilize.

BSP_IO_PORT_03_PIN_01	IO port 3 pin 1.

BSP_IO_PORT_03_PIN_02	IO port 3 pin 2.
BSP_IO_PORT_03_PIN_03	IO port 3 pin 3.
BSP_IO_PORT_03_PIN_04	IO port 3 pin 4.
BSP_IO_PORT_03_PIN_05	IO port 3 pin 5.
BSP_IO_PORT_03_PIN_06	IO port 3 pin 6.
BSP_IO_PORT_03_PIN_07	IO port 3 pin 7.
BSP_IO_PORT_03_PIN_08	IO port 3 pin 8.
BSP_IO_PORT_03_PIN_09	IO port 3 pin 9.
BSP_IO_PORT_03_PIN_10	IO port 3 pin 10.
BSP_IO_PORT_03_PIN_11	IO port 3 pin 11.
BSP_IO_PORT_03_PIN_12	IO port 3 pin 12.
BSP_IO_PORT_03_PIN_13	IO port 3 pin 13.
BSP_IO_PORT_03_PIN_14	IO port 3 pin 14.
BSP_IO_PORT_03_PIN_15	IO port 3 pin 15.
BSP_IO_PORT_04_PIN_00	IO port 4 pin 0.
BSP_IO_PORT_04_PIN_01	IO port 4 pin 1.
BSP_IO_PORT_04_PIN_02	IO port 4 pin 2.
BSP_IO_PORT_04_PIN_03	IO port 4 pin 3.
BSP_IO_PORT_04_PIN_04	IO port 4 pin 4.
BSP_IO_PORT_04_PIN_05	IO port 4 pin 5.
BSP_IO_PORT_04_PIN_06	IO port 4 pin 6.
BSP_IO_PORT_04_PIN_07	IO port 4 pin 7.
BSP_IO_PORT_04_PIN_08	IO port 4 pin 8.
BSP_IO_PORT_04_PIN_09	IO port 4 pin 9.

BSP_IO_PORT_04_PIN_10	IO port 4 pin 10.
BSP_IO_PORT_04_PIN_11	IO port 4 pin 11.
BSP_IO_PORT_04_PIN_12	IO port 4 pin 12.
BSP_IO_PORT_04_PIN_13	IO port 4 pin 13.
BSP_IO_PORT_04_PIN_14	IO port 4 pin 14.
BSP_IO_PORT_04_PIN_15	IO port 4 pin 15.
BSP_IO_PORT_05_PIN_00	IO port 5 pin 0.
BSP_IO_PORT_05_PIN_01	IO port 5 pin 1.
BSP_IO_PORT_05_PIN_02	IO port 5 pin 2.
BSP_IO_PORT_05_PIN_03	IO port 5 pin 3.
BSP_IO_PORT_05_PIN_04	IO port 5 pin 4.
BSP_IO_PORT_05_PIN_05	IO port 5 pin 5.
BSP_IO_PORT_05_PIN_06	IO port 5 pin 6.
BSP_IO_PORT_05_PIN_07	IO port 5 pin 7.
BSP_IO_PORT_05_PIN_08	IO port 5 pin 8.
BSP_IO_PORT_05_PIN_09	IO port 5 pin 9.
BSP_IO_PORT_05_PIN_10	IO port 5 pin 10.
BSP_IO_PORT_05_PIN_11	IO port 5 pin 11.
BSP_IO_PORT_05_PIN_12	IO port 5 pin 12.
BSP_IO_PORT_05_PIN_13	IO port 5 pin 13.
BSP_IO_PORT_05_PIN_14	IO port 5 pin 14.
BSP_IO_PORT_05_PIN_15	IO port 5 pin 15.
BSP_IO_PORT_06_PIN_00	IO port 6 pin 0.
BSP_IO_PORT_06_PIN_01	IO port 6 pin 1.

BSP_IO_PORT_06_PIN_02	IO port 6 pin 2.
BSP_IO_PORT_06_PIN_03	IO port 6 pin 3.
BSP_IO_PORT_06_PIN_04	IO port 6 pin 4.
BSP_IO_PORT_06_PIN_05	IO port 6 pin 5.
BSP_IO_PORT_06_PIN_06	IO port 6 pin 6.
BSP_IO_PORT_06_PIN_07	IO port 6 pin 7.
BSP_IO_PORT_06_PIN_08	IO port 6 pin 8.
BSP_IO_PORT_06_PIN_09	IO port 6 pin 9.
BSP_IO_PORT_06_PIN_10	IO port 6 pin 10.
BSP_IO_PORT_06_PIN_11	IO port 6 pin 11.
BSP_IO_PORT_06_PIN_12	IO port 6 pin 12.
BSP_IO_PORT_06_PIN_13	IO port 6 pin 13.
BSP_IO_PORT_06_PIN_14	IO port 6 pin 14.
BSP_IO_PORT_06_PIN_15	IO port 6 pin 15.
BSP_IO_PORT_07_PIN_00	IO port 7 pin 0.
BSP_IO_PORT_07_PIN_01	IO port 7 pin 1.
BSP_IO_PORT_07_PIN_02	IO port 7 pin 2.
BSP_IO_PORT_07_PIN_03	IO port 7 pin 3.
BSP_IO_PORT_07_PIN_04	IO port 7 pin 4.
BSP_IO_PORT_07_PIN_05	IO port 7 pin 5.
BSP_IO_PORT_07_PIN_06	IO port 7 pin 6.
BSP_IO_PORT_07_PIN_07	IO port 7 pin 7.
BSP_IO_PORT_07_PIN_08	IO port 7 pin 8.
BSP_IO_PORT_07_PIN_09	IO port 7 pin 9.

BSP_IO_PORT_07_PIN_10	IO port 7 pin 10.
BSP_IO_PORT_07_PIN_11	IO port 7 pin 11.
BSP_IO_PORT_07_PIN_12	IO port 7 pin 12.
BSP_IO_PORT_07_PIN_13	IO port 7 pin 13.
BSP_IO_PORT_07_PIN_14	IO port 7 pin 14.
BSP_IO_PORT_07_PIN_15	IO port 7 pin 15.
BSP_IO_PORT_08_PIN_00	IO port 8 pin 0.
BSP_IO_PORT_08_PIN_01	IO port 8 pin 1.
BSP_IO_PORT_08_PIN_02	IO port 8 pin 2.
BSP_IO_PORT_08_PIN_03	IO port 8 pin 3.
BSP_IO_PORT_08_PIN_04	IO port 8 pin 4.
BSP_IO_PORT_08_PIN_05	IO port 8 pin 5.
BSP_IO_PORT_08_PIN_06	IO port 8 pin 6.
BSP_IO_PORT_08_PIN_07	IO port 8 pin 7.
BSP_IO_PORT_08_PIN_08	IO port 8 pin 8.
BSP_IO_PORT_08_PIN_09	IO port 8 pin 9.
BSP_IO_PORT_08_PIN_10	IO port 8 pin 10.
BSP_IO_PORT_08_PIN_11	IO port 8 pin 11.
BSP_IO_PORT_08_PIN_12	IO port 8 pin 12.
BSP_IO_PORT_08_PIN_13	IO port 8 pin 13.
BSP_IO_PORT_08_PIN_14	IO port 8 pin 14.
BSP_IO_PORT_08_PIN_15	IO port 8 pin 15.
BSP_IO_PORT_09_PIN_00	IO port 9 pin 0.
BSP_IO_PORT_09_PIN_01	IO port 9 pin 1.

BSP_IO_PORT_09_PIN_02	IO port 9 pin 2.
BSP_IO_PORT_09_PIN_03	IO port 9 pin 3.
BSP_IO_PORT_09_PIN_04	IO port 9 pin 4.
BSP_IO_PORT_09_PIN_05	IO port 9 pin 5.
BSP_IO_PORT_09_PIN_06	IO port 9 pin 6.
BSP_IO_PORT_09_PIN_07	IO port 9 pin 7.
BSP_IO_PORT_09_PIN_08	IO port 9 pin 8.
BSP_IO_PORT_09_PIN_09	IO port 9 pin 9.
BSP_IO_PORT_09_PIN_10	IO port 9 pin 10.
BSP_IO_PORT_09_PIN_11	IO port 9 pin 11.
BSP_IO_PORT_09_PIN_12	IO port 9 pin 12.
BSP_IO_PORT_09_PIN_13	IO port 9 pin 13.
BSP_IO_PORT_09_PIN_14	IO port 9 pin 14.
BSP_IO_PORT_09_PIN_15	IO port 9 pin 15.
BSP_IO_PORT_10_PIN_00	IO port 10 pin 0.
BSP_IO_PORT_10_PIN_01	IO port 10 pin 1.
BSP_IO_PORT_10_PIN_02	IO port 10 pin 2.
BSP_IO_PORT_10_PIN_03	IO port 10 pin 3.
BSP_IO_PORT_10_PIN_04	IO port 10 pin 4.
BSP_IO_PORT_10_PIN_05	IO port 10 pin 5.
BSP_IO_PORT_10_PIN_06	IO port 10 pin 6.
BSP_IO_PORT_10_PIN_07	IO port 10 pin 7.
BSP_IO_PORT_10_PIN_08	IO port 10 pin 8.
BSP_IO_PORT_10_PIN_09	IO port 10 pin 9.

BSP_IO_PORT_10_PIN_10	IO port 10 pin 10.
BSP_IO_PORT_10_PIN_11	IO port 10 pin 11.
BSP_IO_PORT_10_PIN_12	IO port 10 pin 12.
BSP_IO_PORT_10_PIN_13	IO port 10 pin 13.
BSP_IO_PORT_10_PIN_14	IO port 10 pin 14.
BSP_IO_PORT_10_PIN_15	IO port 10 pin 15.
BSP_IO_PORT_11_PIN_00	IO port 11 pin 0.
BSP_IO_PORT_11_PIN_01	IO port 11 pin 1.
BSP_IO_PORT_11_PIN_02	IO port 11 pin 2.
BSP_IO_PORT_11_PIN_03	IO port 11 pin 3.
BSP_IO_PORT_11_PIN_04	IO port 11 pin 4.
BSP_IO_PORT_11_PIN_05	IO port 11 pin 5.
BSP_IO_PORT_11_PIN_06	IO port 11 pin 6.
BSP_IO_PORT_11_PIN_07	IO port 11 pin 7.
BSP_IO_PORT_11_PIN_08	IO port 11 pin 8.
BSP_IO_PORT_11_PIN_09	IO port 11 pin 9.
BSP_IO_PORT_11_PIN_10	IO port 11 pin 10.
BSP_IO_PORT_11_PIN_11	IO port 11 pin 11.
BSP_IO_PORT_11_PIN_12	IO port 11 pin 12.
BSP_IO_PORT_11_PIN_13	IO port 11 pin 13.
BSP_IO_PORT_11_PIN_14	IO port 11 pin 14.
BSP_IO_PORT_11_PIN_15	IO port 11 pin 15.
BSP_IO_PORT_12_PIN_00	IO port 12 pin 0.
BSP_IO_PORT_12_PIN_01	IO port 12 pin 1.

BSP_IO_PORT_12_PIN_02	IO port 12 pin 2.
BSP_IO_PORT_12_PIN_03	IO port 12 pin 3.
BSP_IO_PORT_12_PIN_04	IO port 12 pin 4.
BSP_IO_PORT_12_PIN_05	IO port 12 pin 5.
BSP_IO_PORT_12_PIN_06	IO port 12 pin 6.
BSP_IO_PORT_12_PIN_07	IO port 12 pin 7.
BSP_IO_PORT_12_PIN_08	IO port 12 pin 8.
BSP_IO_PORT_12_PIN_09	IO port 12 pin 9.
BSP_IO_PORT_12_PIN_10	IO port 12 pin 10.
BSP_IO_PORT_12_PIN_11	IO port 12 pin 11.
BSP_IO_PORT_12_PIN_12	IO port 12 pin 12.
BSP_IO_PORT_12_PIN_13	IO port 12 pin 13.
BSP_IO_PORT_12_PIN_14	IO port 12 pin 14.
BSP_IO_PORT_12_PIN_15	IO port 12 pin 15.
BSP_IO_PORT_13_PIN_00	IO port 13 pin 0.
BSP_IO_PORT_13_PIN_01	IO port 13 pin 1.
BSP_IO_PORT_13_PIN_02	IO port 13 pin 2.
BSP_IO_PORT_13_PIN_03	IO port 13 pin 3.
BSP_IO_PORT_13_PIN_04	IO port 13 pin 4.
BSP_IO_PORT_13_PIN_05	IO port 13 pin 5.
BSP_IO_PORT_13_PIN_06	IO port 13 pin 6.
BSP_IO_PORT_13_PIN_07	IO port 13 pin 7.
BSP_IO_PORT_13_PIN_08	IO port 13 pin 8.
BSP_IO_PORT_13_PIN_09	IO port 13 pin 9.

BSP_IO_PORT_13_PIN_10	IO port 13 pin 10.
BSP_IO_PORT_13_PIN_11	IO port 13 pin 11.
BSP_IO_PORT_13_PIN_12	IO port 13 pin 12.
BSP_IO_PORT_13_PIN_13	IO port 13 pin 13.
BSP_IO_PORT_13_PIN_14	IO port 13 pin 14.
BSP_IO_PORT_13_PIN_15	IO port 13 pin 15.
BSP_IO_PORT_14_PIN_00	IO port 14 pin 0.
BSP_IO_PORT_14_PIN_01	IO port 14 pin 1.
BSP_IO_PORT_14_PIN_02	IO port 14 pin 2.
BSP_IO_PORT_14_PIN_03	IO port 14 pin 3.
BSP_IO_PORT_14_PIN_04	IO port 14 pin 4.
BSP_IO_PORT_14_PIN_05	IO port 14 pin 5.
BSP_IO_PORT_14_PIN_06	IO port 14 pin 6.
BSP_IO_PORT_14_PIN_07	IO port 14 pin 7.
BSP_IO_PORT_14_PIN_08	IO port 14 pin 8.
BSP_IO_PORT_14_PIN_09	IO port 14 pin 9.
BSP_IO_PORT_14_PIN_10	IO port 14 pin 10.
BSP_IO_PORT_14_PIN_11	IO port 14 pin 11.
BSP_IO_PORT_14_PIN_12	IO port 14 pin 12.
BSP_IO_PORT_14_PIN_13	IO port 14 pin 13.
BSP_IO_PORT_14_PIN_14	IO port 14 pin 14.
BSP_IO_PORT_14_PIN_15	IO port 14 pin 15.

Function Documentation

◆ R_BSP_PinRead()

__STATIC_INLINE uint32_t R_BSP_PinRead (bsp_io_port_pin_t *pin*)

Read the current input level of the pin.

Parameters

[in]	pin	The pin

Return values

Current	input level

◆ R_BSP_PinWrite()

__STATIC_INLINE void R_BSP_PinWrite (bsp_io_port_pin_t *pin*, bsp_io_level_t *level*)

Set a pin to output and set the output level to the level provided. If PFS protection is enabled, disable PFS protection using R_BSP_PinAccessEnable() before calling this function.

Parameters

[in]	pin	The pin
[in]	level	The level

◆ R_BSP_PinCfg()

__STATIC_INLINE void R_BSP_PinCfg (bsp_io_port_pin_t *pin*, uint32_t *cfg*)

Configure a pin. If PFS protection is enabled, disable PFS protection using R_BSP_PinAccessEnable() before calling this function.

Parameters

[in]	pin	The pin
[in]	cfg	Configuration for the pin (PmnPFS register setting)

◆ R_BSP_PinAccessEnable()

__STATIC_INLINE void R_BSP_PinAccessEnable (void)

Enable access to the PFS registers. Uses a reference counter to protect against interrupts that could occur via multiple threads or an ISR re-entering this code.

◆ R_BSP_PinAccessDisable()

__STATIC_INLINE void R_BSP_PinAccessDisable (void)
Disable access to the PFS registers. Uses a reference counter to protect against interrupts that could occur via multiple threads or an ISR re-entering this code.

4.2 Modules

Detailed Description

Modules are the smallest unit of software available in the FSP. Each module implements one interface.

For more information on FSP Modules and Interfaces review FSP Modules, FSP Stacks and FSP Interfaces in the FSP Architecutre section of this manual.

Note

Not all modules are available for all MCUs. For more information, see the User's Manual for the specific MCU.

Organization of Module Sections

Each module within FSP has a detailed Users' Guide listed below. Each guide typically includes the following content:

- Functions: A list of all the API functions associated with the module
- Detailed Description: A short description of the module and the peripherals used
- Overview: An operational summary and a list of high level features provided by the module
- Configuration: A description of module specific settings available in the configuration tool including clock and pin configurations
- Usage Notes: Module specific documentation and limitations
- Examples: Illustrative code snippets that help the user better understand API use and operation
- Data Structure and Enumeration: Definitions for data structures, enumerations and similar elements used by the module API
- Function Documentation: Details on each API function, including the function prototype, a function summary, a simple use example, list of return values and links to documentation for any needed parameter definitions

Modules

	Bluetooth Low Energy Mesh Network Modules This is a subcategory for Bluetooth Low Energy Mesh Network modules.
	High-Speed Analog Comparator (r_acmphs) Driver for the ACMPHS peripheral on RA MCUs. This module

	implements the Comparator Interface.
	Low-Power Analog Comparator (r_acmplp) Driver for the ACMPLP peripheral on RA MCUs. This module implements the Comparator Interface.
	Analog to Digital Converter (r_adc) Driver for the ADC12, ADC14, and ADC16 peripherals on RA MCUs. This module implements the ADC Interface.
	Analog to Digital Converter (r_adc_b) Driver for the ADC_B peripheral on RA MCUs. This module implements the ADC Interface.
	Asynchronous General Purpose Timer (r_agt) Driver for the AGT peripheral on RA MCUs. This module implements the Timer Interface.
	Bluetooth Low Energy Library of Balance Configuration (r_ble) Driver for the Radio peripheral on RA MCUs. This module implements the BLE Interface.
	Bluetooth Low Energy Library of Compact Configuration (r_ble) Driver for the Radio peripheral on RA MCUs. This module implements the BLE Interface.
	Bluetooth Low Energy Library of Extended Configuration (r_ble) Driver for the Radio peripheral on RA MCUs. This module implements the BLE Interface.
	Clock Frequency Accuracy Measurement Circuit (r_cac) Driver for the CAC peripheral on RA MCUs. This module implements the CAC Interface.
	Controller Area Network (r_can) Driver for the CAN peripheral on RA MCUs. This module implements the CAN Interface.

	Controller Area Network - Flexible Data (r_canfd) Driver for the CANFD peripheral on RA MCUs. This module implements the CAN Interface.
	Consumer Electronics Control (r_cec) Driver for the CEC peripheral on RA MCUs. This module implements the CEC Interface.
	Clock Generation Circuit (r_cgc) Driver for the CGC peripheral on RA MCUs. This module implements the CGC Interface.
	Cyclic Redundancy Check (CRC) Calculator (r_crc) Driver for the CRC peripheral on RA MCUs. This module implements the CRC Interface.
	Capacitive Touch Sensing Unit (r_ctsu) This HAL driver supports the Capacitive Touch Sensing Unit (CTSU). It implements the CTSU Interface.
	Digital to Analog Converter (r_dac) Driver for the DAC12 peripheral on RA MCUs. This module implements the DAC Interface.
	Digital to Analog Converter (r_dac8) Driver for the DAC8 peripheral on RA MCUs. This module implements the DAC Interface.
	Direct Memory Access Controller (r_dmac) Driver for the DMAC peripheral on RA MCUs. This module implements the Transfer Interface.
	Data Operation Circuit (r_doc) Driver for the DOC peripheral on RA MCUs. This module implements the DOC Interface.
	D/AVE 2D Port Interface (r_drw)

	Driver for the DRW peripheral on RA MCUs. This module is a port of D/AVE 2D.
	Data Transfer Controller (r_dtc) Driver for the DTC peripheral on RA MCUs. This module implements the Transfer Interface.
	Event Link Controller (r_elc) Driver for the ELC peripheral on RA MCUs. This module implements the ELC Interface.
	Ethernet (r_ether) Driver for the Ethernet peripheral on RA MCUs. This module implements the Ethernet Interface.
	Ethernet PHY (r_ether_phy) The Ethernet PHY module (r_ether_phy) provides an API for standard Ethernet PHY communications applications that use the ETHERC peripheral. It implements the Ethernet PHY Interface.
	High-Performance Flash Driver (r_flash_hp) Driver for the flash memory on RA high-performance MCUs. This module implements the Flash Interface.
	Low-Power Flash Driver (r_flash_lp) Driver for the flash memory on RA low-power MCUs. This module implements the Flash Interface.
	Graphics LCD Controller (r_glcdc) Driver for the GLCDC peripheral on RA MCUs. This module implements the Display Interface.
	General PWM Timer (r_gpt) Driver for the GPT32 and GPT16 peripherals on RA MCUs. This module implements the Timer Interface.
	General PWM Timer Three-Phase Motor Control Driver (r_gpt_three_phase)

	Driver for 3-phase motor control using the GPT peripheral on RA MCUs. This module implements the Three-Phase Interface.
	I3C Bus Interface (r_i3c) Driver for the I3C peripheral on RA MCUs. This module implements the I3C Interface.
	Interrupt Controller Unit (r_icu) Driver for the ICU peripheral on RA MCUs. This module implements the External IRQ Interface.
	I2C Master on IIC/I3C (r_iic_b_master) I2C Driver for the IIC/I3C peripheral on RA MCUs. This module implements the I2C Master Interface.
	I2C Slave on IIC/I3C (r_iic_b_slave) Driver for the IIC/I3C peripheral on RA MCUs. This module implements the I2C Slave Interface.
	I2C Master on IIC (r_iic_master) Driver for the IIC peripheral on RA MCUs. This module implements the I2C Master Interface.
	I2C Slave on IIC (r_iic_slave) Driver for the IIC peripheral on RA MCUs. This module implements the I2C Slave Interface.
	IIR Filter Accelerator (r_iirfa) Driver for the IIRFA peripheral on RA MCUs. This module implements the IIR Interface.
	I/O Ports (r_ioport) Driver for the I/O Ports peripheral on RA MCUs. This module implements the I/O Port Interface.
	Independent Watchdog Timer (r_iwdt) Driver for the IWDT peripheral on RA MCUs. This module implements

	the WDT Interface.
	JPEG Codec (r_jpeg) Driver for the JPEG peripheral on RA MCUs. This module implements the JPEG Codec Interface.
	Key Interrupt (r_kint) Driver for the KINT peripheral on RA MCUs. This module implements the Key Matrix Interface.
	Low Power Modes (r_lpm) Driver for the LPM peripheral on RA MCUs. This module implements the Low Power Modes Interface.
	Low Voltage Detection (r_lvd) Driver for the LVD peripheral on RA MCUs. This module implements the Low Voltage Detection Interface.
	Operational Amplifier (r_opamp) Driver for the OPAMP peripheral on RA MCUs. This module implements the OPAMP Interface.
	Octa Serial Peripheral Interface for Flash and RAM devices (r_ospi) Driver for the OSPI peripheral on RA MCUs. This module implements the SPI Flash Interface.
	Parallel Data Capture (r_pdc) Driver for the PDC peripheral on RA MCUs. This module implements the PDC Interface.
	Port Output Enable for GPT (r_poeg) Driver for the POEG peripheral on RA MCUs. This module implements the POEG Interface.
	Precision Time Protocol (r_ptp) Driver for the PTP peripheral on RA MCUs. This module implements the PTP Interface.

	Quad Serial Peripheral Interface Flash (r_qspi) Driver for the QSPI peripheral on RA MCUs. This module implements the SPI Flash Interface.
	Realtime Clock (r_rtc) Driver for the RTC peripheral on RA MCUs. This module implements the RTC Interface.
	Secure Crypto Engine (r_sce_protected) Driver for the Secure Crypto Engine (SCE9) on RA MCUs.
	Secure Crypto Engine (r_sce_protected_cavp) Driver for the CAVP Certified Secure Crypto Engine (SCE) on RA MCUs.
	Serial Communications Interface (SCI) I2C (r_sci_b_i2c) Driver for the SCI_B peripheral on RA MCUs. This module implements the I2C Master Interface.
	Serial Communications Interface (SCI) SPI (r_sci_b_spi) Driver for the SCI peripheral on RA MCUs. This module implements the SPI Interface.
	Serial Communications Interface (SCI) UART (r_sci_b_uart) Driver for the SCI peripheral on RA MCUs. This module implements the UART Interface.
	Serial Communications Interface (SCI) I2C (r_sci_i2c) Driver for the SCI peripheral on RA MCUs. This module implements the I2C Master Interface.
	Serial Communications Interface (SCI) SPI (r_sci_spi) Driver for the SCI peripheral on RA MCUs. This module implements the SPI Interface.
	Serial Communications Interface (SCI) UART (r_sci_uart)

	Driver for the SCI peripheral on RA MCUs. This module implements the UART Interface.
	Sigma Delta Analog to Digital Converter (r_sdadc) Driver for the SDADC24 peripheral on RA MCUs. This module implements the ADC Interface.
	SD/MMC Host Interface (r_sdhi) Driver for the SD/MMC Host Interface (SDHI) peripheral on RA MCUs. This module implements the SD/MMC Interface.
	Segment LCD Controller (r_slcdc) Driver for the SLCDC peripheral on RA MCUs. This module implements the SLCDC Interface.
	Serial Peripheral Interface (r_spi) Driver for the SPI peripheral on RA MCUs. This module implements the SPI Interface.
	Serial Peripheral Interface (r_spi_b) Driver for the SPI peripheral on RA MCUs. This module implements the SPI Interface.
	Serial Sound Interface (r_ssi) Driver for the SSIE peripheral on RA MCUs. This module implements the I2S Interface.
	USB (r_usb_basic) Driver for the USB peripheral on RA MCUs. This module implements the USB Interface.
	USB Composite Class (r_usb_composite)
	USB Host Communications Device Class Driver (r_usb_hcdc) This module provides a USB Host Communications Device Class (HCDC) driver. It implements the USB HCDC Interface.
	USB Host Human Interface Device Class Driver (r_usb_hhid)

	This module provides a USB Host Human Interface Device Class Driver (HHID). It implements the USB HHID Interface.
	USB Host Mass Storage Class Driver (r_usb_hmsc) This module provides a USB Host Mass Storage Class (HMSC) driver. It implements the USB HMSC Interface.
	USB Host Vendor Class (r_usb_hvnd)
	USB Peripheral Communications Device Class (r_usb_pcdc) This module provides a USB Peripheral Communications Device Class Driver (PCDC). It implements the USB PCDC Interface.
	USB Peripheral Human Interface Device Class (r_usb_phid) This module is USB Peripheral Human Interface Device Class Driver (PHID). It implements the USB PHID Interface.
	USB Peripheral Mass Storage Class (r_usb_pmsc) This module provides a USB Peripheral Mass Storage Class (PMSC) driver. It implements the USB PMSC Interface.
	USB Peripheral Vendor Class (r_usb_pvnd)
	Watchdog Timer (r_wdt) Driver for the WDT peripheral on RA MCUs. This module implements the WDT Interface.
	ADPCM Decoder (rm_adpcm_decoder) Middleware to implement the ADPCM Audio Decoder. This module implements the ADPCM Decoder Interface.
	Audio Playback with PWM (rm_audio_playback_pwm) Driver for the Audio Playback middleware on RA MCUs. This module implements the AUDIO PLAYBACK Interface.
	AWS PKCS11 PAL (rm_aws_pkcs11_pal) PKCS#11 PAL layer implementation for use by FreeRTOS TLS.

	AWS PKCS11 PAL LITTLEFS (rm_aws_pkcs11_pal_littlefs) PKCS#11 PAL LittleFS layer implementation for use by FreeRTOS TLS.
	AWS Transport Interface Port (rm_aws_transport_interface_port) Middleware implementing a transport interface through MbedTLS and PKCS11.
	Bluetooth Low Energy Abstraction (rm_ble_abs) Middleware for the Bluetooth peripheral on RA MCUs. This module implements the BLE ABS Interface.
	Bluetooth Low Energy Abstraction with RYZ012 (rm_ble_abs_spp) Middleware for the Bluetooth peripheral on RA MCUs. This module implements the BLE ABS Interface.
	SD/MMC Block Media Implementation (rm_block_media_sdmmc) Middleware to implement the block media interface on SD cards. This module implements the Block Media Interface.
	SPI Block Media Implementation (rm_block_media_spi) Middleware to implement the block media interface on SPI flash memory. This module implements the Block Media Interface.
	USB HMSC Block Media Implementation (rm_block_media_usb) Middleware to implement the block media interface on USB mass storage devices. This module implements the Block Media Interface.
	User Block Media Implementation (rm_block_media_user) Middleware that implements a block media interface on the media of your choice. This module implements the Block Media Interface.
	AWS Cellular Comm Interface on UART (rm_cellular_comm_uart_aws) Middleware implementing the AWS Cellular Comm Interface for the FSP UART API.
	RYZ AWS Cellular Interface Port (rm_cellular_ryz_aws)

	Middleware implementing the AWS Cellular API for RYZ cellular modems.
	I2C Communicatons Middleware (rm_comms_i2c) Middleware to implement the I2C communications interface. This module implements the Communicatons Middleware Interface.
	SEGGER emWin Port (rm_emwin_port) SEGGER emWin port for RA MCUs.
	Azure RTOS FileX Block Media I/O Driver (rm_filex_block_media) Middleware for the Azure RTOS FileX File System control using Block Media on RA MCUs.
	Azure RTOS FileX LevelX I/O Driver (rm_filex_levelx_nor) Middleware for the Azure RTOS FileX File System control using LevelX NOR on RA MCUs.
	FreeRTOS+FAT Port (rm_freertos_plus_fat) Middleware for the FAT File System control on RA MCUs.
	FreeRTOS Plus TCP (rm_freertos_plus_tcp) Middleware for using TCP on RA MCUs.
	FreeRTOS Port (rm_freertos_port) FreeRTOS port for RA MCUs.
	RTOS Context Management (rm_tz_context) RTOS Context Management for RA MCUs.
	FS2012 Sensor Middleware (rm_fs2012) Middleware to implement the FS2012 sensor interface. This module implements the FSXXXX Middleware Interface.
	Azure RTOS GUIX Port (rm_guix_port)

	HS300X Sensor Middleware (rm_hs300x) Middleware to implement the HS300X sensor interface. This module implements the HS300X Middleware Interface.
	Azure RTOS LevelX NOR SPI Driver (rm_levelx_nor_spi) Middleware for using Azure RTOS LevelX on NOR SPI memory.
	LittleFS Flash Port (rm_littlefs_flash) Middleware for the LittleFS File System control on RA MCUs.
	MCUboot Port (rm_mcuboot_port) MCUboot Port for RA MCUs.
	Motor 120 Control Hall (motor_120_control_hall) Calculation process for the motor control on RA MCUs. This module implements the Interface.
	Motor 120 Control Sensorless (motor_120_control_sensorless) Calculation process for the motor control on RA MCUs. This module implements the Interface.
	Motor 120 Degree (rm_motor_120_degree) Usual control of a SPM (Surface Permanent Magnet) motor on RA MCUs. This module implements the Motor 120 Degree (rm_motor_120_degree).
	Motor 120 degree driver (rm_motor_120_driver) Calculation process for the motor control on RA MCUs. This module implements the Interface.
	Motor Current (rm_motor_current) Calculation process for the motor control on RA MCUs. This module implements the Motor current Interface.
	Motor Driver (rm_motor_driver) Calculation process for the motor control on RA MCUs. This module implements the Motor driver Interface.

	Motor encoder vector control (rm_motor_encoder) Control a SPM motor on RA MCUs. This module implements the Motor encoder vector control (rm_motor_encoder).
	Motor Angle and Speed Estimation (rm_motor_estimate) Calculation proccess for the motor control on RA MCUs. This module implements the Motor angle Interface.
	Motor Position (rm_motor_position) Calculation process for the motor control on RA MCUs. This module implements the Motor position Interface.
	Motor Angle and Speed Calculation with an Encoder (rm_motor_sense_encoder) Calculation proccess for the motor control on RA MCUs. This module implements the Motor angle Interface.
	Motor Sensorless Vector Control (rm_motor_sensorless) Usual control of a SPM motor on RA MCUs. This module implements the Motor Sensorless Vector Control (rm_motor_sensorless).
	Motor Speed (rm_motor_speed) Calculation process for the motor control on RA MCUs. This module implements the Motor speed Interface.
	Azure RTOS NetX Secure Crypto Hardware Acceleration (rm_netx_secure_crypto) Hardware acceleration for the Netx Crypto implementation of the Microsoft Azure RTOS NetX Crypto API.
	Azure RTOS NetX Duo Ether Driver (rm_netxduo_ether)
	Azure RTOS NetX Duo WiFi Driver (rm_netxduo_wifi)
	Crypto Middleware (rm_psa_crypto) Hardware acceleration for the mbedCrypto implementation of the ARM PSA Crypto API.

	Azure RTOS ThreadX Port (rm_threadx_port) ThreadX port for RA MCUs.
	Intel TinyCrypt (rm_tinycrypt_port) AES128 Hardware acceleration for TinyCrypt on the RA2 family.
	Capacitive Touch Middleware (rm_touch) This module supports the Capacitive Touch Sensing Unit (CTSU). It implements the Touch Middleware Interface.
	USBX Porting Layer (rm_usbx_port)
	Virtual EEPROM (rm_vee_flash) Virtual EEPROM on RA MCUs. This module implements the Virtual EEPROM Interface.
	AWS Device Provisioning AWS Device Provisioning example software.
	AWS HTTPS This module provides the AWS HTTPS integration documentation.
	AWS MQTT This module provides the AWS MQTT integration documentation.
	Wifi Middleware (rm_wifi_onchip_silex) Wifi and Socket implementation using the Silex SX-ULPGN WiFi module on RA MCUs.
	AWS Secure Sockets This module provides the AWS Secure Sockets implementation.
	ZMOD4XXX Sensor Middleware (rm_zmod4xxx) Middleware to implement the ZMOD4XXX sensor interface. This module implements the ZMOD4XXX Middleware Interface.

4.2.1 Bluetooth Low Energy Mesh Network Modules

Modules

Detailed Description

This is a subcategory for Bluetooth Low Energy Mesh Network modules.

Modules

	Bluetooth Low Energy Mesh Network Access (rm_ble_mesh_access)
	Bluetooth Low Energy Mesh Network Bearer (rm_ble_mesh_bearer)
	Bluetooth Low Energy Mesh Network Lower Trans (rm_ble_mesh_lower_trans)
	Bluetooth Low Energy Mesh Network Network (rm_ble_mesh_network)
	Bluetooth Low Energy Mesh Network Provision (rm_ble_mesh_provision)
	Bluetooth Low Energy Mesh Network Upper Trans (rm_ble_mesh_upper_trans)
	Bluetooth Low Energy Mesh Network (rm_ble_mesh)
	Bluetooth Low Energy Mesh Network Bearer Platform (rm_mesh_bearer_platform)
	Bluetooth Low Energy Mesh Network Config Client (rm_mesh_config_clt)
	Bluetooth Low Energy Mesh Network Config Server (rm_mesh_config_srv)
	Bluetooth Low Energy Mesh Network Generic Admin Property Server (rm_mesh_generic_admin_prop_srv)
	Bluetooth Low Energy Mesh Network Generic Battery Client (rm_mesh_generic_battery_clt)
	Bluetooth Low Energy Mesh Network Generic Battery Server (rm_mesh_generic_battery_srv)
	Bluetooth Low Energy Mesh Network Generic Client Property Server

	(rm_mesh_generic_client_prop_srv)
	Bluetooth Low Energy Mesh Network Generic Default Transition Time Client (rm_mesh_generic_dtt_clt)
	Bluetooth Low Energy Mesh Network Generic Default Transition Time Server (rm_mesh_generic_dtt_srv)
	Bluetooth Low Energy Mesh Network Generic Level Client (rm_mesh_generic_level_clt)
	Bluetooth Low Energy Mesh Network Generic Level Server (rm_mesh_generic_level_srv)
	Bluetooth Low Energy Mesh Network Generic Location Client (rm_mesh_generic_loc_clt)
	Bluetooth Low Energy Mesh Network Generic Location Server (rm_mesh_generic_loc_srv)
	Bluetooth Low Energy Mesh Network Generic Manufacturer Property Server (rm_mesh_generic_mfr_prop_srv)
	Bluetooth Low Energy Mesh Network Generic On Off Client (rm_mesh_generic_on_off_clt)
	Bluetooth Low Energy Mesh Network Generic On Off Server (rm_mesh_generic_on_off_srv)
	Bluetooth Low Energy Mesh Network Generic Power Level Client (rm_mesh_generic_pl_clt)
	Bluetooth Low Energy Mesh Network Generic Power Level Server (rm_mesh_generic_pl_srv)
	Bluetooth Low Energy Mesh Network Generic Power On Off Client (rm_mesh_generic_poo_clt)
	Bluetooth Low Energy Mesh Network Generic Power On Off Server (rm_mesh_generic_poo_srv)
	Bluetooth Low Energy Mesh Network Generic Property Client (rm_mesh_generic_prop_clt)
	Bluetooth Low Energy Mesh Network Generic User Property Server (rm_mesh_generic_user_prop_srv)
	Bluetooth Low Energy Mesh Network Health Client (rm_mesh_health_clt)

	Bluetooth Low Energy Mesh Network Health Server (rm_mesh_health_srv)
	Bluetooth Low Energy Mesh Network Light Control Client (rm_mesh_light_ctl_clt)
	Bluetooth Low Energy Mesh Network Light Control Server (rm_mesh_light_ctl_srv)
	Bluetooth Low Energy Mesh Network Light Hsl Client (rm_mesh_light_hsl_clt)
	Bluetooth Low Energy Mesh Network Light Hsl Server (rm_mesh_light_hsl_srv)
	Bluetooth Low Energy Mesh Network Light Location Client (rm_mesh_light_lc_clt)
	Bluetooth Low Energy Mesh Network Light Location Server (rm_mesh_light_lc_srv)
	Bluetooth Low Energy Mesh Network Light Lightness Client (rm_mesh_light_lightness_clt)
	Bluetooth Low Energy Mesh Network Light Lightness Server (rm_mesh_light_lightness_srv)
	Bluetooth Low Energy Mesh Network Light Xyl Client (rm_mesh_light_xyl_clt)
	Bluetooth Low Energy Mesh Network Light Xyl Server (rm_mesh_light_xyl_srv)
	Bluetooth Low Energy Mesh Network Scene Client (rm_mesh_scene_clt)
	Bluetooth Low Energy Mesh Network Scene Server (rm_mesh_scene_srv)
	Bluetooth Low Energy Mesh Network Scheduler Client (rm_mesh_scheduler_clt)
	Bluetooth Low Energy Mesh Network Scheduler Server (rm_mesh_scheduler_srv)
	Bluetooth Low Energy Mesh Network Sensor Client (rm_mesh_sensor_clt)
	Bluetooth Low Energy Mesh Network Sensor Server (rm_mesh_sensor_srv)

	Bluetooth Low Energy Mesh Network Time Client (rm_mesh_time_clt)
	Bluetooth Low Energy Mesh Network Time Server (rm_mesh_time_srv)

4.2.1.1 Bluetooth Low Energy Mesh Network Access (rm_ble_mesh_access)

Modules » Bluetooth Low Energy Mesh Network Modules

Functions

fsp_err_t	RM_BLE_MESH_ACCESS_Open (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_cfg_t const *const p_cfg)
fsp_err_t	RM_BLE_MESH_ACCESS_Close (rm_ble_mesh_access_ctrl_t *const p_ctrl)
fsp_err_t	RM_BLE_MESH_ACCESS_RegisterModel (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_t const *const p_model, rm_ble_mesh_access_model_handle_t *const p_model_handle)
fsp_err_t	RM_BLE_MESH_ACCESS_GetElementHandle (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t elem_addr, rm_ble_mesh_access_element_handle_t *const p_handle)
fsp_err_t	RM_BLE_MESH_ACCESS_GetElementHandleForModelHandle (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, rm_ble_mesh_access_element_handle_t *const p_elem_handle)
fsp_err_t	RM_BLE_MESH_ACCESS_GetModelHandle (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_element_handle_t elem_handle, rm_ble_mesh_access_model_id_t model_id, rm_ble_mesh_access_model_handle_t *const p_handle)
fsp_err_t	RM_BLE_MESH_ACCESS_Publish (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t const *const p_handle, rm_ble_mesh_access_req_msg_raw_t const *const p_publish_message, uint8_t reliable)
fsp_err_t	RM_BLE_MESH_ACCESS_ReliablePublish (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t const *const p_handle, rm_ble_mesh_access_req_msg_raw_t const *const p_publish_message, uint32_t rsp_opcode)
fsp_err_t	RM_BLE_MESH_ACCESS_Reply (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_req_msg_context_t const *const p_req_msg_context, uint8_t ttl, rm_ble_mesh_access_req_msg_raw_t const *const p_req_msg_raw)

fsp_err_t	RM_BLE_MESH_ACCESS_ReplyAndPublish (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_req_msg_context_t const *const p_req_msg_context, rm_ble_mesh_access_req_msg_raw_t const *const p_req_msg_raw, rm_ble_mesh_access_publish_setting_t const *const p_publish_setting)
fsp_err_t	RM_BLE_MESH_ACCESS_SendPdu (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_pdu_t const *const p_pdu, uint8_t reliable)
fsp_err_t	RM_BLE_MESH_ACCESS_GetCompositionData (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_buffer_t *const p_buffer)
fsp_err_t	RM_BLE_MESH_ACCESS_Reset (rm_ble_mesh_access_ctrl_t *const p_ctrl)
fsp_err_t	RM_BLE_MESH_ACCESS_GetElementCount (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t *const p_count)
fsp_err_t	RM_BLE_MESH_ACCESS_SetPrimaryUnicastAddress (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t addr)
fsp_err_t	RM_BLE_MESH_ACCESS_GetPrimaryUnicastAddress (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t *const p_addr)
fsp_err_t	RM_BLE_MESH_ACCESS_SetDefaultTtl (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t ttl)
fsp_err_t	RM_BLE_MESH_ACCESS_GetDefaultTtl (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t const *const p_ttl)
fsp_err_t	RM_BLE_MESH_ACCESS_SetIvIndex (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint32_t iv_index, uint8_t iv_update_flag)
fsp_err_t	RM_BLE_MESH_ACCESS_GetIvIndex (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint32_t *const p_iv_index, uint8_t *const p_iv_update_flag)
fsp_err_t	RM_BLE_MESH_ACCESS_GetIvIndexByIvi (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t ivi, uint32_t *const p_iv_index)
fsp_err_t	RM_BLE_MESH_ACCESS_SetFeaturesField (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t enable, uint8_t feature)
fsp_err_t	RM_BLE_MESH_ACCESS_GetFeaturesField (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t *const p_enable,

	uint8_t feature)
fsp_err_t	RM_BLE_MESH_ACCESS_GetFeatures (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t *const p_features)
fsp_err_t	RM_BLE_MESH_ACCESS_GetFriendshipRole (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t *const p_friend_role)
fsp_err_t	RM_BLE_MESH_ACCESS_SetFriendshipRole (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t friend_role)
fsp_err_t	RM_BLE_MESH_ACCESS_AddDeviceKey (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t const *const p_dev_key, rm_ble_mesh_network_address_t uaddr, uint8_t num_elements)
fsp_err_t	RM_BLE_MESH_ACCESS_GetDeviceKey (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t dev_key_index, uint8_t **const p_dev_key)
fsp_err_t	RM_BLE_MESH_ACCESS_RemoveAllDeviceKeys (rm_ble_mesh_access_ctrl_t *const p_ctrl)
fsp_err_t	RM_BLE_MESH_ACCESS_GetProvisionedDeviceList (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_provisioned_device_entry_t const *const p_prov_dev_list, uint16_t *const p_num_entries)
fsp_err_t	RM_BLE_MESH_ACCESS_GetDeviceKeyHandle (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t prim_elem_uaddr, rm_ble_mesh_access_device_key_handle_t *const p_handle)
fsp_err_t	RM_BLE_MESH_ACCESS_GetAppKey (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_appkey_handle_t appkey_handle, uint8_t **const p_app_key, uint8_t *const p_aid)
fsp_err_t	RM_BLE_MESH_ACCESS_AddUpdateNetkey (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint16_t netkey_index, uint32_t opcode, uint8_t const *const p_net_key)
fsp_err_t	RM_BLE_MESH_ACCESS_AddFriendSecurityCredential (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t friend_index, rm_ble_mesh_access_friend_security_credential_info_t info)
fsp_err_t	RM_BLE_MESH_ACCESS_DeleteFriendSecurityCredential (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t friend_index)

fsp_err_t	RM_BLE_MESH_ACCESS_FindSubnet (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint16_t netkey_index, rm_ble_mesh_network_subnet_handle_t *const p_subnet_handle)
fsp_err_t	RM_BLE_MESH_ACCESS_FindMasterSubnet (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t friend_subnet_handle, rm_ble_mesh_network_subnet_handle_t *const p_master_subnet_handle)
fsp_err_t	RM_BLE_MESH_ACCESS_DeleteNetKey (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle)
fsp_err_t	RM_BLE_MESH_ACCESS_GetNetKey (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint8_t *const p_net_key)
fsp_err_t	RM_BLE_MESH_ACCESS_GetNetKeyIndexList (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint16_t *const p_netkey_count, uint16_t *const p_netkey_index_list)
fsp_err_t	RM_BLE_MESH_ACCESS_LookUpNid (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t nid, rm_ble_mesh_network_subnet_handle_t *const p_subnet_handle, rm_ble_mesh_access_associated_keys_t *const p_key_set)
fsp_err_t	RM_BLE_MESH_ACCESS_LookUpNetworkId (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t const *const p_network_id, rm_ble_mesh_network_subnet_handle_t *const p_subnet_handle, rm_ble_mesh_access_associated_keys_t *const p_key_set)
fsp_err_t	RM_BLE_MESH_ACCESS_LookUpAid (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t aid, rm_ble_mesh_network_appkey_handle_t *const p_appkey_handle, uint8_t *const p_app_key)
fsp_err_t	RM_BLE_MESH_ACCESS_SetProvisioningData (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_provision_data_t const *const p_prov_data)
fsp_err_t	RM_BLE_MESH_ACCESS_GetSubnetNid (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t handle, uint8_t *const p_nid)
fsp_err_t	RM_BLE_MESH_ACCESS_GetSubnetPrivacyKey (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t handle, uint8_t *const p_privacy_key)
fsp_err_t	RM_BLE_MESH_ACCESS_GetSubnetNetworkId (rm_ble_mesh_access_ctrl_t *const p_ctrl,

	rm_ble_mesh_network_subnet_handle_t handle, uint8_t *const p_network_id)
fsp_err_t	RM_BLE_MESH_ACCESS_GetSubnetBeaconKey (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t handle, uint8_t *const p_beacon_key)
fsp_err_t	RM_BLE_MESH_ACCESS_GetSubnetIdentityKey (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t handle, uint8_t *const p_identity_key)
fsp_err_t	RM_BLE_MESH_ACCESS_GetSubnetEncryptionKey (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t handle, uint8_t *const p_encrypt_key)
fsp_err_t	RM_BLE_MESH_ACCESS_GetNodeIdentity (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint8_t *const p_id_state)
fsp_err_t	RM_BLE_MESH_ACCESS_SetNodeIdentity (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint8_t *const p_id_state)
fsp_err_t	RM_BLE_MESH_ACCESS_GetKeyRefreshPhase (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint8_t *const p_key_refresh_state)
fsp_err_t	RM_BLE_MESH_ACCESS_SetKeyRefreshPhase (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint8_t const *const p_key_refresh_state)
fsp_err_t	RM_BLE_MESH_ACCESS_SetTransmitState (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t tx_state_type, uint8_t tx_state)
fsp_err_t	RM_BLE_MESH_ACCESS_GetTransmitState (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint8_t tx_state_type, uint8_t *const p_tx_state)
fsp_err_t	RM_BLE_MESH_ACCESS_AddAppKey (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t appkey_index, uint8_t const *const p_app_key)
fsp_err_t	RM_BLE_MESH_ACCESS_UpdateAppKey (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t appkey_index, uint8_t const *const p_app_key)

fsp_err_t	RM_BLE_MESH_ACCESS_DeleteAppKey (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t appkey_index, uint8_t const *const p_app_key)
fsp_err_t	RM_BLE_MESH_ACCESS_GetAppKeyHandle (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t appkey_index, uint8_t const *const p_app_key, rm_ble_mesh_network_appkey_handle_t *const p_appkey_handle)
fsp_err_t	RM_BLE_MESH_ACCESS_GetAppKeyIndexList (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_subnet_handle_t subnet_handle, uint16_t *const p_appkey_count, uint16_t *const p_appkey_index_list)
fsp_err_t	RM_BLE_MESH_ACCESS_BindModelWithAppKey (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, uint16_t appkey_index)
fsp_err_t	RM_BLE_MESH_ACCESS_UnbindModelWithAppKey (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, uint16_t appkey_index)
fsp_err_t	RM_BLE_MESH_ACCESS_GetModelAppKeyList (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, uint16_t *const p_appkey_count, uint16_t *const p_appkey_index_list)
fsp_err_t	RM_BLE_MESH_ACCESS_SetModelPublication (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, rm_ble_mesh_access_publish_info_t *const p_publish_info)
fsp_err_t	RM_BLE_MESH_ACCESS_SetModelPublicationPeriodDivisor (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, uint8_t period_divisor)
fsp_err_t	RM_BLE_MESH_ACCESS_GetModelPublication (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, rm_ble_mesh_access_publish_info_t *const p_publish_info)
fsp_err_t	RM_BLE_MESH_ACCESS_AddModelSubscription (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, rm_ble_mesh_access_address_t const *const p_sub_addr)
fsp_err_t	RM_BLE_MESH_ACCESS_DeleteModelSubscription (rm_ble_mesh_access_ctrl_t *const p_ctrl,

	rm_ble_mesh_access_model_handle_t model_handle, rm_ble_mesh_access_address_t const *const p_sub_addr)
fsp_err_t	RM_BLE_MESH_ACCESS_DeleteAllModelSubscription (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle)
fsp_err_t	RM_BLE_MESH_ACCESS_GetModelSubscriptionList (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle, uint16_t *const p_sub_addr_count, uint16_t *const p_sub_addr_list)
fsp_err_t	RM_BLE_MESH_ACCESS_GetAllModelSubscriptionList (rm_ble_mesh_access_ctrl_t *const p_ctrl, uint16_t *const p_sub_addr_count, uint16_t *const p_sub_addr_list)
fsp_err_t	RM_BLE_MESH_ACCESS_IsValidElementAddress (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t addr)
fsp_err_t	RM_BLE_MESH_ACCESS_IsFixedGroupAddressToBeProcessed (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t addr)
fsp_err_t	RM_BLE_MESH_ACCESS_IsValidSubscriptionAddress (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_network_address_t addr)
fsp_err_t	RM_BLE_MESH_ACCESS_EnableIvUpdateTestMode (rm_ble_mesh_access_ctrl_t *const p_ctrl, rm_ble_mesh_access_iv_update_test_mode_t mode)

Detailed Description

Overview

Data Structures

struct	rm_ble_mesh_access_instance_ctrl_t

Data Structure Documentation

◆ rm_ble_mesh_access_instance_ctrl_t

struct rm_ble_mesh_access_instance_ctrl_t
RM_BLE_MESH_ACCESS private control block. DO NOT MODIFY. Initialization occurs when RM_BLE_MESH_ACCESS_Open() is called.

Function Documentation

◆ RM_BLE_MESH_ACCESS_Open()

fsp_err_t RM_BLE_MESH_ACCESS_Open (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_cfg_t const *const *p_cfg*)

Open access middleware. This routine creates a new node in the device. This can be used by the application to create extra nodes if required in addition to the default primary node. And this routine registers an element that can be populated with the models information to a specific node in the device identified by the node id.

Implements rm_ble_mesh_access_api_t::open.

Example:

```
/* Open the module. */
   err = RM_BLE_MESH_ACCESS_Open(&g_ble_mesh_access0_ctrl, &g_ble_mesh_access0_cfg);
```

Return values

FSP_SUCCESS	Module opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Module is already open.

◆ RM_BLE_MESH_ACCESS_Close()

fsp_err_t RM_BLE_MESH_ACCESS_Close (rm_ble_mesh_access_ctrl_t *const *p_ctrl*)

Close access middleware. Implements rm_ble_mesh_access_api_t::close.

Example:

```
/* Close the module. */
   err = RM_BLE_MESH_ACCESS_Close(&g_ble_mesh_access0_ctrl);
```

Return values

FSP_SUCCESS	Module successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.

◆ RM_BLE_MESH_ACCESS_RegisterModel()

fsp_err_t RM_BLE_MESH_ACCESS_RegisterModel (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_t const *const *p_model*, rm_ble_mesh_access_model_handle_t *const *p_model_handle*)

Register a model with the access layer. This routine registers a model associated with an element with the access layer.

Implements rm_ble_mesh_access_api_t::registerModel.

Example:

```
/* Register a model with the access layer. */
   err = RM_BLE_MESH_ACCESS_RegisterModel(&g_ble_mesh_access0_ctrl, &model,
&model_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_model and p_model_handle are NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_ACCESS_GetElementHandle()

fsp_err_t RM_BLE_MESH_ACCESS_GetElementHandle (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_address_t *elem_addr*, rm_ble_mesh_access_element_handle_t *const *p_handle*)

Get element handle. This routine searches for the element handle associated with specific element address.

Implements rm_ble_mesh_access_api_t::getElementHandle.

Example:

```
/* Get element handle. */
   err = RM_BLE_MESH_ACCESS_GetElementHandle(&g_ble_mesh_access0_ctrl, elem_addr,
&elem_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_handle is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ADDRESS	Invalid source address.

◆ RM_BLE_MESH_ACCESS_GetElementHandleForModelHandle()

fsp_err_t RM_BLE_MESH_ACCESS_GetElementHandleForModelHandle (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*, rm_ble_mesh_access_element_handle_t *const *p_elem_handle*)

Get element handle for a given model handle. This routine searches for the element handle associated with specific model handle.

Implements rm_ble_mesh_access_api_t::getElementHandleForModelHandle.

Example:

```
/* Get element handle for a given model handle. */
   err = RM_BLE_MESH_ACCESS_GetElementHandleForModelHandle(&g_ble_mesh_access0_ctrl,
model_handle, &elem_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_elem_handle is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_ACCESS_GetModelHandle()

fsp_err_t RM_BLE_MESH_ACCESS_GetModelHandle (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_element_handle_t *elem_handle*, rm_ble_mesh_access_model_id_t *model_id*, rm_ble_mesh_access_model_handle_t *const *p_handle*)

Get model handle. This routine searches for the model handle associated with specific model ID.

Implements rm_ble_mesh_access_api_t::getModelHandle.

Example:

```
/* Get model handle. */
   err = RM_BLE_MESH_ACCESS_GetModelHandle(&g_ble_mesh_access0_ctrl, elem_handle,
model_id, &model_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_handle is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_Publish()

fsp_err_t RM_BLE_MESH_ACCESS_Publish (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t const *const *p_handle*, rm_ble_mesh_access_req_msg_raw_t const *const *p_publish_message*, uint8_t *reliable*)

API to publish access layer message. This routine publishes Access Layer message to the publish address associated with the model.

Implements rm_ble_mesh_access_api_t::publish.

Example:

```
/* Publish access layer message. */
   err = RM_BLE_MESH_ACCESS_Publish(&g_ble_mesh_access0_ctrl, &model_handle,
&publish_message, reliable);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_handle and p_publish_message are NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.

◆ RM_BLE_MESH_ACCESS_ReliablePublish()

fsp_err_t RM_BLE_MESH_ACCESS_ReliablePublish (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t const *const *p_handle*, rm_ble_mesh_access_req_msg_raw_t const *const *p_publish_message*, uint32_t *rsp_opcode*)

API to reliably publish Access layer message. This routine reliably publishes Access Layer message to the publish address associated with the model.

Implements rm_ble_mesh_access_api_t::reliablePublish.

Example:

```
/* Reliably publish access layer message. */
   err = RM_BLE_MESH_ACCESS_ReliablePublish(&g_ble_mesh_access0_ctrl, &model_handle,
&req_msg_raw, rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_handle and p_publish_message are NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.

◆ RM_BLE_MESH_ACCESS_Reply()

fsp_err_t RM_BLE_MESH_ACCESS_Reply (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_req_msg_context_t const *const *p_req_msg_context*, uint8_t *ttl*, rm_ble_mesh_access_req_msg_raw_t const *const *p_req_msg_raw*)

API to reply to Access Layer message. This routine replies to Access Layer message.

Implements rm_ble_mesh_access_api_t::reply.

Example:

```
/* Reply to access layer message. */
   err = RM_BLE_MESH_ACCESS_Reply(&g_ble_mesh_access0_ctrl, &req_msg_context, ttl,
&req_msg_raw);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_req_msg_context and p_req_msg_raw are NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.

◆ RM_BLE_MESH_ACCESS_ReplyAndPublish()

fsp_err_t RM_BLE_MESH_ACCESS_ReplyAndPublish (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_req_msg_context_t const *const *p_req_msg_context*, rm_ble_mesh_access_req_msg_raw_t const *const *p_req_msg_raw*, rm_ble_mesh_access_publish_setting_t const *const *p_publish_setting*)

API to reply to Access Layer message and optionally also to publish. This routine replies to Access Layer message and also publish if requested by application.

Implements rm_ble_mesh_access_api_t::replyAndPublish.

Example:

```
/* Reply to access layer message. */
   err =
RM_BLE_MESH_ACCESS_ReplyAndPublish(&g_ble_mesh_access0_ctrl, &req_msg_context,
&req_msg_raw, &publish_setting);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_req_msg_context and p_req_msg_raw are NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.

◆ RM_BLE_MESH_ACCESS_SendPdu()

fsp_err_t RM_BLE_MESH_ACCESS_SendPdu (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_pdu_t const *const *p_pdu*, uint8_t *reliable*)

API to send access PDUs. This routine sends transport PDUs to peer device.

Implements rm_ble_mesh_access_api_t::sendPdu.

Example:

```
/* Send Access PDUs. */
   err = RM_BLE_MESH_ACCESS_SendPdu(&g_ble_mesh_access0_ctrl, &pdu, reliable);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_pdu is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_GetCompositionData()

fsp_err_t RM_BLE_MESH_ACCESS_GetCompositionData (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_buffer_t *const *p_buffer*)

Get composition data.

Implements rm_ble_mesh_access_api_t::getCompositionData.

Example:

```
/* Get composition data. */
   err = RM_BLE_MESH_ACCESS_GetCompositionData(&g_ble_mesh_access0_ctrl, &buffer);
```

Return values

FSP_SUCCESS	Module successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_buffer is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_Reset()

fsp_err_t RM_BLE_MESH_ACCESS_Reset (rm_ble_mesh_access_ctrl_t *const *p_ctrl*)

To reset a node. This routine resets a node (other than a Provisioner) and removes it from the network.

Implements rm_ble_mesh_access_api_t::reset.

Example:

```
/* Reset a node. */
   err = RM_BLE_MESH_ACCESS_Reset(&g_ble_mesh_access0_ctrl);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_ACCESS_GetElementCount()

fsp_err_t RM_BLE_MESH_ACCESS_GetElementCount (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint8_t *const *p_count*)

To get the number of elements in local node. This routine retrieves the number of elements in local node.

Implements rm_ble_mesh_access_api_t::getElementCount.

Example:

```
/* Get the number of elements in local node. */
   err = RM_BLE_MESH_ACCESS_GetElementCount(&g_ble_mesh_access0_ctrl, &count);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_count is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_ACCESS_SetPrimaryUnicastAddress()

fsp_err_t RM_BLE_MESH_ACCESS_SetPrimaryUnicastAddress (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_address_t *addr*)

To set primary unicast address. This routine sets primary unicast address.

Implements rm_ble_mesh_access_api_t::setPrimaryUnicastAddress.

Example:

```
/* Set primary unicast address. */
   err = RM_BLE_MESH_ACCESS_SetPrimaryUnicastAddress(&g_ble_mesh_access0_ctrl,
addr);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ADDRESS	Invalid source address.

◆ RM_BLE_MESH_ACCESS_GetPrimaryUnicastAddress()

fsp_err_t RM_BLE_MESH_ACCESS_GetPrimaryUnicastAddress (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_address_t *const *p_addr*)

To get primary unicast address. This routine gets primary unicast address.

Implements rm_ble_mesh_access_api_t::getPrimaryUnicastAddress.

Example:

```
/* Get primary unicast address. */
   err = RM_BLE_MESH_ACCESS_GetPrimaryUnicastAddress(&g_ble_mesh_access0_ctrl,
&addr);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_addr is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_SetDefaultTtl()

fsp_err_t RM_BLE_MESH_ACCESS_SetDefaultTtl (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint8_t *ttl*)

To set default TTL. This routine sets default TTL.

Implements rm_ble_mesh_access_api_t::setDefaultTtl.

Example:

```
/* Set default TTL. */
   err = RM_BLE_MESH_ACCESS_SetDefaultTtl(&g_ble_mesh_access0_ctrl, ttl);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_ACCESS_GetDefaultTtl()

fsp_err_t RM_BLE_MESH_ACCESS_GetDefaultTtl (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint8_t const *const *p_ttl*)

To get default TTL. This routine gets default TTL.

Implements rm_ble_mesh_access_api_t::getDefaultTtl.

Example:

```
/* Get default TTL. */
   err = RM_BLE_MESH_ACCESS_GetDefaultTtl(&g_ble_mesh_access0_ctrl, &ttl);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_ttl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_SetIvIndex()

fsp_err_t RM_BLE_MESH_ACCESS_SetIvIndex (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint32_t *iv_index*, uint8_t *iv_update_flag*)

To set IV Index. This routine sets IV Index.

Implements rm_ble_mesh_access_api_t::setIvIndex.

Example:

```
/* Set IV Index. */
   err = RM_BLE_MESH_ACCESS_SetIvIndex(&g_ble_mesh_access0_ctrl, iv_index,
iv_update_flag);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.
FSP_ERR_IN_USE	Resource is busy.

◆ RM_BLE_MESH_ACCESS_GetIvIndex()

fsp_err_t RM_BLE_MESH_ACCESS_GetIvIndex (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint32_t *const *p_iv_index*, uint8_t *const *p_iv_update_flag*)

To get IV Index. This routine gets IV Index.

Implements rm_ble_mesh_access_api_t::getIvIndex.

Example:

```
/* Get IV Index. */
   err = RM_BLE_MESH_ACCESS_GetIvIndex(&g_ble_mesh_access0_ctrl, &iv_index,
&iv_update_flag);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_iv_index and p_iv_update_flag are NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_GetIvIndexByIvi()

fsp_err_t RM_BLE_MESH_ACCESS_GetIvIndexByIvi (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint8_t *ivi*, uint32_t *const *p_iv_index*)

To get IV Index by IVI. This routine gets IV Index based on the IVI in the received packet.

Implements rm_ble_mesh_access_api_t::getIvIndexByIvi.

Example:

```
/* Get IV Index by IVI. */
   err = RM_BLE_MESH_ACCESS_GetIvIndexByIvi(&g_ble_mesh_access0_ctrl, ivi,
&iv_index);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_iv_index is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_SetFeaturesField()

fsp_err_t RM_BLE_MESH_ACCESS_SetFeaturesField (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint8_t *enable*, uint8_t *feature*)

To enable/disable a feature. This routine enables/disables a feature field.

Implements rm_ble_mesh_access_api_t::setFeaturesField.

Example:

```
/* Enable/Disable a feature. */
   err = RM_BLE_MESH_ACCESS_SetFeaturesField(&g_ble_mesh_access0_ctrl, enable,
features);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_ACCESS_GetFeaturesField()

fsp_err_t RM_BLE_MESH_ACCESS_GetFeaturesField (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint8_t *const *p_enable*, uint8_t *feature*)

To get state of a feature. This routine gets the state of a feature field.

Implements rm_ble_mesh_access_api_t::getFeaturesField.

Example:

```
/* Get state of a feature. */
   err = RM_BLE_MESH_ACCESS_GetFeaturesField(&g_ble_mesh_access0_ctrl, &enable,
features);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_enable is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_ACCESS_GetFeatures()

fsp_err_t RM_BLE_MESH_ACCESS_GetFeatures (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint8_t *const *p_features*)

To get state of all features. This routine gets the state of all features.

Implements rm_ble_mesh_access_api_t::getFeatures.

Example:

```
/* Get state of all features. */
   err = RM_BLE_MESH_ACCESS_GetFeatures(&g_ble_mesh_access0_ctrl, &features);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_features is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_ACCESS_GetFriendshipRole()

fsp_err_t RM_BLE_MESH_ACCESS_GetFriendshipRole (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint8_t *const *p_friend_role*)

To get friendship role of the node. This routine gets the current friendship role of the node.

Implements rm_ble_mesh_access_api_t::getFriendshipRole.

Example:

```
/* Get friendship role of the node. */
   err = RM_BLE_MESH_ACCESS_GetFriendshipRole(&g_ble_mesh_access0_ctrl,
&friend_role);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_friend_role is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_ACCESS_SetFriendshipRole()

fsp_err_t RM_BLE_MESH_ACCESS_SetFriendshipRole (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint8_t *friend_role*)

To set friendship role of the node. This routine sets the current friendship role of the node.

Implements rm_ble_mesh_access_api_t::setFriendshipRole.

Example:

```
/* Set friendship role of the node. */
   err = RM_BLE_MESH_ACCESS_SetFriendshipRole(&g_ble_mesh_access0_ctrl,
friend_role);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_ACCESS_AddDeviceKey()

fsp_err_t RM_BLE_MESH_ACCESS_AddDeviceKey (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint8_t const *const *p_dev_key*, rm_ble_mesh_network_address_t *uaddr*, uint8_t *num_elements*)

To add Device Key. This routine adds Device Key entry, along with corresponding Primary Device Address and Number of elements.

Implements rm_ble_mesh_access_api_t::addDeviceKey.

Example:

```
/* Add Device Key. */
   err = RM_BLE_MESH_ACCESS_AddDeviceKey(&g_ble_mesh_access0_ctrl, &dev_key, uaddr,
num_elements);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_dev_key is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_OVERFLOW	Device key table is full.

◆ RM_BLE_MESH_ACCESS_GetDeviceKey()

fsp_err_t RM_BLE_MESH_ACCESS_GetDeviceKey (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint8_t *dev_key_index*, uint8_t **const *p_dev_key*)

To get Device Key. This routine gets Device Key entry.

Implements rm_ble_mesh_access_api_t::getDeviceKey.

Example:

```
/* Get Device Key. */
   err = RM_BLE_MESH_ACCESS_GetDeviceKey(&g_ble_mesh_access0_ctrl, dev_key_index,
p_dev_key);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_dev_key is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_RemoveAllDeviceKeys()

fsp_err_t RM_BLE_MESH_ACCESS_RemoveAllDeviceKeys (rm_ble_mesh_access_ctrl_t *const *p_ctrl*)

To remove all Device Keys. This routine removes all Device Keys from table.

Implements rm_ble_mesh_access_api_t::removeAllDeviceKeys.

Example:

```
/* Remove all Device Keys. */
   err = RM_BLE_MESH_ACCESS_RemoveAllDeviceKeys(&g_ble_mesh_access0_ctrl);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_ACCESS_GetProvisionedDeviceList()

fsp_err_t RM_BLE_MESH_ACCESS_GetProvisionedDeviceList (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_provisioned_device_entry_t const *const *p_prov_dev_list*, uint16_t *const *p_num_entries*)

To get list of Provisioned Device List. This routine returns list of Provisioned Devices from the Device Key Table.

Implements rm_ble_mesh_access_api_t::getProvisionedDeviceList.

Example:

```
/* Get list of provisioned device list. */
   err = RM_BLE_MESH_ACCESS_GetProvisionedDeviceList(&g_ble_mesh_access0_ctrl,
&prov_dev_list, &num_entries);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_prov_dev_list and p_num_entries are NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_GetDeviceKeyHandle()

fsp_err_t RM_BLE_MESH_ACCESS_GetDeviceKeyHandle (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_address_t *prim_elem_uaddr*, rm_ble_mesh_access_device_key_handle_t *const *p_handle*)

To get device key handle. This routine returns Device Key Handle for a given Primary Element Address entry in Device Key Table.

Implements rm_ble_mesh_access_api_t::getDeviceKeyHandle.

Example:

```
/* Get Device Key handle. */
   err = RM_BLE_MESH_ACCESS_GetDeviceKeyHandle(&g_ble_mesh_access0_ctrl,
prim_elem_uaddr, &handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_handle is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_GetAppKey()

fsp_err_t RM_BLE_MESH_ACCESS_GetAppKey (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_appkey_handle_t *appkey_handle*, uint8_t **const *p_app_key*, uint8_t *const *p_aid*)

To get AppKey. This routine gets AppKey along with AID entry.

Implements rm_ble_mesh_access_api_t::getAppKey.

Example:

```
/* Get AppKey. */
   err = RM_BLE_MESH_ACCESS_GetAppKey(&g_ble_mesh_access0_ctrl, appkey_handle,
p_app_key, &aid);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_app_key and p_aid are NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_AddUpdateNetkey()

fsp_err_t RM_BLE_MESH_ACCESS_AddUpdateNetkey (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint16_t *netkey_index*, uint32_t *opcode*, uint8_t const *const *p_net_key*)

To add/update NetKey. This routine adds/updates NetKey entry. Each NetKey is associated with a subnet.

Implements rm_ble_mesh_access_api_t::addUpdateNetkey.

Example:

```
/* Add/Update NetKey. */
   err = RM_BLE_MESH_ACCESS_AddUpdateNetkey(&g_ble_mesh_access0_ctrl, netkey_index,
opcode, &net_key);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_net_key is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_AddFriendSecurityCredential()

fsp_err_t RM_BLE_MESH_ACCESS_AddFriendSecurityCredential (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *subnet_handle*, uint16_t *friend_index*, rm_ble_mesh_access_friend_security_credential_info_t *info*)

To add Security Credential of a LPN or the Friend. This routine adds NID, privacy and encryption keys associated with a friendship.

Implements rm_ble_mesh_access_api_t::addFriendSecurityCredential.

Example:

```
/* Add security credential of a LPN or the friend. */
   err =
RM_BLE_MESH_ACCESS_AddFriendSecurityCredential(&g_ble_mesh_access0_ctrl,
subnet_handle, friend_index, info);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_DeleteFriendSecurityCredential()

fsp_err_t RM_BLE_MESH_ACCESS_DeleteFriendSecurityCredential (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *subnet_handle*, uint16_t *friend_index*)

To delete the Security Credential of a LPN or the Friend. This routine deletes NID, privacy and encryption keys associated with a friendship.

Implements rm_ble_mesh_access_api_t::deleteFriendSecurityCredential.

Example:

```
/* Delete the security credential of a LPN or the Friend. */
   err = RM_BLE_MESH_ACCESS_DeleteFriendSecurityCredential(&g_ble_mesh_access0_ctrl,
subnet_handle, friend_index);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_ACCESS_FindSubnet()

fsp_err_t RM_BLE_MESH_ACCESS_FindSubnet (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint16_t *netkey_index*, rm_ble_mesh_network_subnet_handle_t *const *p_subnet_handle*)

To find a Subnet associated with the NetKey. This routine finds a Subnet based on the NetKey entry. Each NetKey is associated with a subnet.

Implements rm_ble_mesh_access_api_t::findSubnet.

Example:

```
/* Find a subnet associated with the NetKey. */
   err = RM_BLE_MESH_ACCESS_FindSubnet(&g_ble_mesh_access0_ctrl, netkey_index,
&subnet_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_subnet_handle is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_FindMasterSubnet()

fsp_err_t RM_BLE_MESH_ACCESS_FindMasterSubnet (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *friend_subnet_handle*, rm_ble_mesh_network_subnet_handle_t *const* *p_master_subnet_handle*)

To find the Master Subnet associated with the friend security credential, identified by Friend Subnet Handle. This routine finds the Master Subnet based on the friend security credential, identified by Friend Subnet Handle.

Implements rm_ble_mesh_access_api_t::findMasterSubnet.

Example:

```
/* Close the module. */
   err =
RM_BLE_MESH_ACCESS_FindMasterSubnet(&g_ble_mesh_access0_ctrl, friend_subnet_handle,
&master_subnet_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_master_subnet_handle is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_ACCESS_DeleteNetKey()

fsp_err_t RM_BLE_MESH_ACCESS_DeleteNetKey (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *subnet_handle*)

To delete NetKey. This routine deletes a NetKey entry. Each NetKey is associated with a subnet.

Implements rm_ble_mesh_access_api_t::deleteNetKey.

Example:

```
/* Delete NetKey. */
   err = RM_BLE_MESH_ACCESS_DeleteNetKey(&g_ble_mesh_access0_ctrl, subnet_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_ACCESS_GetNetKey()

fsp_err_t RM_BLE_MESH_ACCESS_GetNetKey (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *subnet_handle*, uint8_t *const *p_net_key*)

To get NetKey. This routine fetches a NetKey entry. Each NetKey is associated with a subnet.

Implements rm_ble_mesh_access_api_t::getNetKey.

Example:

```
/* Close the module. */
   err = RM_BLE_MESH_ACCESS_GetNetKey(&g_ble_mesh_access0_ctrl, subnet_handle,
&net_key);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_net_key is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_GetNetKeyIndexList()

fsp_err_t RM_BLE_MESH_ACCESS_GetNetKeyIndexList (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint16_t *const *p_netkey_count*, uint16_t *const *p_netkey_index_list*)

To get list of all known NetKeys. This routine returns a list of known NetKey Indices.

Implements rm_ble_mesh_access_api_t::getNetKeyIndexList.

Example:

```
/* Get list of all known NetKeys. */
   err = RM_BLE_MESH_ACCESS_GetNetKeyIndexList(&g_ble_mesh_access0_ctrl,
&netkey_count, &netkey_index_list);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_netkey_count and p_netkey_index_list are NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_LookUpNid()

fsp_err_t RM_BLE_MESH_ACCESS_LookUpNid (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint8_t *nid*, rm_ble_mesh_network_subnet_handle_t *const *p_subnet_handle*, rm_ble_mesh_access_associated_keys_t *const *p_key_set*)

To search for NID. This routine searches for matching NID in subnet table.

Implements rm_ble_mesh_access_api_t::lookUpNid.

Example:

```
/* Search for NID. */
   err = RM_BLE_MESH_ACCESS_LookUpNid(&g_ble_mesh_access0_ctrl, nid, &subnet_handle,
&key_set);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_subnet_handle and p_key_set are NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_LookUpNetworkId()

fsp_err_t RM_BLE_MESH_ACCESS_LookUpNetworkId (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint8_t const *const *p_network_id*, rm_ble_mesh_network_subnet_handle_t *const *p_subnet_handle*, rm_ble_mesh_access_associated_keys_t *const *p_key_set*)

To search for Network ID. This routine searches for matching Network ID in subnet table.

Implements rm_ble_mesh_access_api_t::lookUpNetworkId.

Example:

```
/* Search for NID. */
   err = RM_BLE_MESH_ACCESS_LookUpNid(&g_ble_mesh_access0_ctrl, nid, &subnet_handle,
&key_set);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_network_id, p_subnet_handle and p_key_set are NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_LookUpAid()

fsp_err_t RM_BLE_MESH_ACCESS_LookUpAid (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint8_t *aid*, rm_ble_mesh_network_appkey_handle_t *const *p_appkey_handle*, uint8_t *const *p_app_key*)

To search for AID. This routine searches for matching NID in subnet table.

Implements rm_ble_mesh_access_api_t::lookUpAid.

Example:

```
/* Search for AID. */
   err = RM_BLE_MESH_ACCESS_LookUpAid(&g_ble_mesh_access0_ctrl, aid, &appkey_handle,
&app_key);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_appkey_handle and p_app_key are NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_SetProvisioningData()

fsp_err_t RM_BLE_MESH_ACCESS_SetProvisioningData (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_provision_data_t const *const *p_prov_data*)

Set Provisioning Data. This routine configures the provisioning data with Access Layer.

Implements rm_ble_mesh_access_api_t::setProvisioningData.

Example:

```
/* Set provisioning data. */
   err = RM_BLE_MESH_ACCESS_SetProvisioningData(&g_ble_mesh_access0_ctrl,
&prov_data);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_prov_data is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_GetSubnetNid()

fsp_err_t RM_BLE_MESH_ACCESS_GetSubnetNid (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *handle*, uint8_t *const *p_nid*)

To get NID associated with a subnet. This routine fetches the NID associated with a subnet.

Implements rm_ble_mesh_access_api_t::getSubnetNid.

Example:

```
/* Get NID associated with a subnet. */
   err = RM_BLE_MESH_ACCESS_GetSubnetNid(&g_ble_mesh_access0_ctrl, subnet_handle,
&nid);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_nid is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_GetSubnetPrivacyKey()

fsp_err_t RM_BLE_MESH_ACCESS_GetSubnetPrivacyKey (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *handle*, uint8_t *const *p_privacy_key*)

To get Privacy Key associated with a subnet. This routine fetches the Privacy Key associated with a subnet.

Implements rm_ble_mesh_access_api_t::getSubnetPrivacyKey.

Example:

```
/* Get Privacy Key associated with a subnet. */
   err = RM_BLE_MESH_ACCESS_GetSubnetPrivacyKey(&g_ble_mesh_access0_ctrl,
subnet_handle, &privacy_key);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_privacy_key is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_GetSubnetNetworkId()

fsp_err_t RM_BLE_MESH_ACCESS_GetSubnetNetworkId (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *handle*, uint8_t *const *p_network_id*)

To get Network ID associated with a subnet. This routine fetches the Netowrk ID associated with a subnet.

Implements rm_ble_mesh_access_api_t::getSubnetNetworkId.

Example:

```
/* Get Network ID associated with a subnet. */
   err = RM_BLE_MESH_ACCESS_GetSubnetNetworkId(&g_ble_mesh_access0_ctrl,
subnet_handle, &network_id);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_network_id is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_GetSubnetBeaconKey()

fsp_err_t RM_BLE_MESH_ACCESS_GetSubnetBeaconKey (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *handle*, uint8_t *const *p_beacon_key*)

To get Beacon Key associated with a subnet. This routine fetches the Beacon Key associated with a subnet.

Implements rm_ble_mesh_access_api_t::getSubnetBeaconKey.

Example:

```
/* Get Beacon Key associated with a subnet. */
   err = RM_BLE_MESH_ACCESS_GetSubnetBeaconKey(&g_ble_mesh_access0_ctrl,
subnet_handle, &beacon_key);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_beacon_key is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_GetSubnetIdentityKey()

fsp_err_t RM_BLE_MESH_ACCESS_GetSubnetIdentityKey (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *handle*, uint8_t *const *p_identity_key*)

To get Identity Key associated with a subnet. This routine fetches the Identity Key associated with a subnet.

Implements rm_ble_mesh_access_api_t::getSubnetIdentityKey.

Example:

```
/* Get Identity Key associated with a subnet. */
   err = RM_BLE_MESH_ACCESS_GetSubnetIdentityKey(&g_ble_mesh_access0_ctrl,
subnet_handle, &identity_key);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_identity_key is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_GetSubnetEncryptionKey()

fsp_err_t RM_BLE_MESH_ACCESS_GetSubnetEncryptionKey (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *handle*, uint8_t *const *p_encrypt_key*)

To get Encryption Key associated with a subnet. This routine fetches the Encryption Key associated with a subnet.

Implements rm_ble_mesh_access_api_t::getSubnetEncryptionKey.

Example:

```
/* Get Encryption Key associated with a subnet. */
   err = RM_BLE_MESH_ACCESS_GetSubnetEncryptionKey(&g_ble_mesh_access0_ctrl,
subnet_handle, &encrypt_key);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_encrypt_key is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_GetNodeIdentity()

fsp_err_t RM_BLE_MESH_ACCESS_GetNodeIdentity (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *subnet_handle*, uint8_t *const *p_id_state*)

To get Node Identity. This routine gets Node Identity State of a node

Implements rm_ble_mesh_access_api_t::getNodeIdentity.

Example:

```
/* Get node identity. */
   err = RM_BLE_MESH_ACCESS_GetNodeIdentity(&g_ble_mesh_access0_ctrl, subnet_handle,
&id_state);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_id_state is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_SetNodeIdentity()

fsp_err_t RM_BLE_MESH_ACCESS_SetNodeIdentity (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *subnet_handle*, uint8_t *const *p_id_state*)

To set Node Identity. This routine sets Node Identity State of a node.

Implements rm_ble_mesh_access_api_t::setNodeIdentity.

Example:

```
/* Set node identity. */
   err = RM_BLE_MESH_ACCESS_SetNodeIdentity(&g_ble_mesh_access0_ctrl, subnet_handle,
&id_state);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_id_state is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_GetKeyRefreshPhase()

fsp_err_t RM_BLE_MESH_ACCESS_GetKeyRefreshPhase (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *subnet_handle*, uint8_t *const *p_key_refresh_state*)

To get Key Refresh Phase. This routine gets Key Refresh Phase State of a node

Implements rm_ble_mesh_access_api_t::getKeyRefreshPhase.

Example:

```
/* Get key refresh phase. */
   err = RM_BLE_MESH_ACCESS_GetKeyRefreshPhase(&g_ble_mesh_access0_ctrl,
subnet_handle, &key_refresh_state);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_key_refresh_state is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_SetKeyRefreshPhase()

fsp_err_t RM_BLE_MESH_ACCESS_SetKeyRefreshPhase (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *subnet_handle*, uint8_t const *const *p_key_refresh_state*)

To set Key Refresh Phase. This routine sets Key Refresh Phase State of a node.

Implements rm_ble_mesh_access_api_t::setKeyRefreshPhase.

Example:

```
/* Set key refresh phase. */
   err = RM_BLE_MESH_ACCESS_SetKeyRefreshPhase(&g_ble_mesh_access0_ctrl,
subnet_handle, &key_refresh_state);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_key_refresh_state is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_SetTransmitState()

fsp_err_t RM_BLE_MESH_ACCESS_SetTransmitState (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint8_t *tx_state_type*, uint8_t *tx_state*)

To set Network/Relay Transmit state. This routine sets Network/Relay Transmit state.

Implements rm_ble_mesh_access_api_t::setTransmitState.

Example:

```
/* Set network/relay transmit state. */
   err = RM_BLE_MESH_ACCESS_SetTransmitState(&g_ble_mesh_access0_ctrl,
tx_state_type, tx_state);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_ACCESS_GetTransmitState()

fsp_err_t RM_BLE_MESH_ACCESS_GetTransmitState (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint8_t *tx_state_type*, uint8_t *const *p_tx_state*)

To get Network/Relay Transmit state. This routine gets Network/Relay Transmit state.

Implements rm_ble_mesh_access_api_t::getTransmitState.

Example:

```
/* Get network/relay transmit state. */
   err = RM_BLE_MESH_ACCESS_GetTransmitState(&g_ble_mesh_access0_ctrl,
tx_state_type, &tx_state);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_tx_state is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_ACCESS_AddAppKey()

fsp_err_t RM_BLE_MESH_ACCESS_AddAppKey (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *subnet_handle*, uint16_t *appkey_index*, uint8_t const *const *p_app_key*)

To add AppKey. This routine adds AppKey entry. Each AppKey is associated with a subnet.

Implements rm_ble_mesh_access_api_t::addAppKey.

Example:

```
/* Add AppKey. */
   err = RM_BLE_MESH_ACCESS_AddAppKey(&g_ble_mesh_access0_ctrl, subnet_handle,
appkey_index, &app_key);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_app_key is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_UpdateAppKey()

fsp_err_t RM_BLE_MESH_ACCESS_UpdateAppKey (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *subnet_handle*, uint16_t *appkey_index*, uint8_t const *const *p_app_key*)

To update AppKey. This routine updates AppKey entry. Each AppKey is associated with a subnet.

Implements rm_ble_mesh_access_api_t::updateAppKey.

Example:

```
/* Update AppKey. */
   err = RM_BLE_MESH_ACCESS_UpdateAppKey(&g_ble_mesh_access0_ctrl, subnet_handle,
appkey_index, &app_key);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_app_key is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_DeleteAppKey()

fsp_err_t RM_BLE_MESH_ACCESS_DeleteAppKey (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *subnet_handle*, uint16_t *appkey_index*, uint8_t const *const *p_app_key*)

To delete AppKey. This routine deletes AppKey entry. Each AppKey is associated with a subnet.

Implements rm_ble_mesh_access_api_t::deleteAppKey.

Example:

```
/* Delete AppKey. */
   err = RM_BLE_MESH_ACCESS_DeleteAppKey(&g_ble_mesh_access0_ctrl, subnet_handle,
appkey_index, &app_key);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_app_key is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_GetAppKeyHandle()

fsp_err_t RM_BLE_MESH_ACCESS_GetAppKeyHandle (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *subnet_handle*, uint16_t *appkey_index*, uint8_t const *const *p_app_key*, rm_ble_mesh_network_appkey_handle_t *const *p_appkey_handle*)

To get AppKey Handle for a given AppKey Index. This routine gets AppKey Handle for a given AppKey Index. Each AppKey is associated with a subnet.

Implements rm_ble_mesh_access_api_t::getAppKeyHandle.

Example:

```
/* Get AppKey handle for a given AppKey index. */
   err = RM_BLE_MESH_ACCESS_GetAppKeyHandle(&g_ble_mesh_access0_ctrl,
                                            subnet_handle,
                                            appkey_index,
                                            &app_key,
                                            &appkey_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_appkey_handle is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_GetAppKeyIndexList()

fsp_err_t RM_BLE_MESH_ACCESS_GetAppKeyIndexList (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *subnet_handle*, uint16_t *const *p_appkey_count*, uint16_t *const *p_appkey_index_list*)

To get list of all known AppKeys. This routine returns a list of known AppKey Indices associated with a subnet.

Implements rm_ble_mesh_access_api_t::getAppKeyIndexList.

Example:

```
/* Get list of all known AppKeys. */
   err = RM_BLE_MESH_ACCESS_GetAppKeyIndexList(&g_ble_mesh_access0_ctrl,
                                               subnet_handle,
                                                &appkey_count,
                                                &appkey_index_list);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_appkey_count and p_appkey_index_list are NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_BindModelWithAppKey()

fsp_err_t RM_BLE_MESH_ACCESS_BindModelWithAppKey (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*, uint16_t *appkey_index*)

To bind a model with an AppKey. This routine binds a model with an AppKey.

Implements rm_ble_mesh_access_api_t::bindModelWithAppKey.

Example:

```
/* Bind a model with an AppKey. */
   err = RM_BLE_MESH_ACCESS_BindModelWithAppKey(&g_ble_mesh_access0_ctrl,
model_handle, appkey_index);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_UnbindModelWithAppKey()

fsp_err_t RM_BLE_MESH_ACCESS_UnbindModelWithAppKey (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*, uint16_t *appkey_index*)

To unbind a model with an AppKey. This routine unbinds a model with an AppKey.

Implements rm_ble_mesh_access_api_t::unbindModelWithAppKey.

Example:

```
/* Unbind a model with an AppKey. */
   err = RM_BLE_MESH_ACCESS_UnbindModelWithAppKey(&g_ble_mesh_access0_ctrl,
model_handle, appkey_index);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_GetModelAppKeyList()

fsp_err_t RM_BLE_MESH_ACCESS_GetModelAppKeyList (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*, uint16_t *const *p_appkey_count*, uint16_t *const *p_appkey_index_list*)

To get list of all AppKeys associated with a model. This routine returns a list of known AppKey Indices associated with a model.

Implements rm_ble_mesh_access_api_t::getModelAppKeyList.

Example:

```
/* Get list of all AppKeys associated with a model. */
   err = RM_BLE_MESH_ACCESS_GetModelAppKeyList(&g_ble_mesh_access0_ctrl,
                                               model_handle,
                                               &appkey_count,
                                               &appkey_index_list);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_appkey_count and p_appkey_index_list are NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_SetModelPublication()

fsp_err_t RM_BLE_MESH_ACCESS_SetModelPublication (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*, rm_ble_mesh_access_publish_info_t *const *p_publish_info*)

To set Publication information associated with a model. This routine sets Publication information associated with a model.

Implements rm_ble_mesh_access_api_t::setModelPublication.

Example:

```
/* Set publication information associated with a model. */
   err = RM_BLE_MESH_ACCESS_SetModelPublication(&g_ble_mesh_access0_ctrl,
model_handle, &publish_info);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_publish_info is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_SetModelPublicationPeriodDivisor()

fsp_err_t RM_BLE_MESH_ACCESS_SetModelPublicationPeriodDivisor (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*, uint8_t *period_divisor*)

To set Publication Fast Period Divisor information associated with a model. This routine sets Publication Fast Period Divisor information associated with a model.

Implements rm_ble_mesh_access_api_t::setModelPublicationPeriodDivisor.

Example:

```
/* Set publication fast period divisor information associated with a model. */
   err =
RM_BLE_MESH_ACCESS_SetModelPublicationPeriodDivisor(&g_ble_mesh_access0_ctrl,
model_handle, period_divisor);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_GetModelPublication()

fsp_err_t RM_BLE_MESH_ACCESS_GetModelPublication (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*, rm_ble_mesh_access_publish_info_t *const *p_publish_info*)

To get Publication information associated with a model. This routine returns Publication information associated with a model.

Implements rm_ble_mesh_access_api_t::getModelPublication.

Example:

```
/* Get publication information associated with a model. */
   err = RM_BLE_MESH_ACCESS_GetModelPublication(&g_ble_mesh_access0_ctrl,
model_handle, &publish_info);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_publish_info is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_AddModelSubscription()

fsp_err_t RM_BLE_MESH_ACCESS_AddModelSubscription (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*, rm_ble_mesh_access_address_t const *const *p_sub_addr*)

To add an address to a model subscription list. This routine adds an address to a subscription list of a model.

Implements rm_ble_mesh_access_api_t::addModelSubscription.

Example:

```
/* Add an address to a model subscription list. */
   err = RM_BLE_MESH_ACCESS_AddModelSubscription(&g_ble_mesh_access0_ctrl,
model_handle, &sub_addr);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_sub_addr is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_DeleteModelSubscription()

fsp_err_t RM_BLE_MESH_ACCESS_DeleteModelSubscription (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*, rm_ble_mesh_access_address_t const *const *p_sub_addr*)

To delete an address to a model subscription list. This routine deletes an address to a subscription list of a model.

Implements rm_ble_mesh_access_api_t::deleteModelSubscription.

Example:

```
/* Delete an address to a model subscription list. */
   err = RM_BLE_MESH_ACCESS_DeleteModelSubscription(&g_ble_mesh_access0_ctrl,
model_handle, &sub_addr);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_sub_addr is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_DeleteAllModelSubscription()

fsp_err_t RM_BLE_MESH_ACCESS_DeleteAllModelSubscription (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*)

To discard a model subscription list. This routine discards a subscription list of a model.

Implements rm_ble_mesh_access_api_t::deleteAllModelSubscription.

Example:

```
/* Discard a model subscription list. */
   err = RM_BLE_MESH_ACCESS_DeleteAllModelSubscription(&g_ble_mesh_access0_ctrl,
model_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_GetModelSubscriptionList()

fsp_err_t RM_BLE_MESH_ACCESS_GetModelSubscriptionList (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*, uint16_t *const *p_sub_addr_count*, uint16_t *const *p_sub_addr_list*)

To get list of subscription addresses of a model. This routine returns a list of subscription addresses of a model.

Implements rm_ble_mesh_access_api_t::getModelSubscriptionList.

Example:

```
/* Get list of subscription addresses of a model. */
   err = RM_BLE_MESH_ACCESS_GetModelSubscriptionList(&g_ble_mesh_access0_ctrl,
                                                     model_handle,
                                                         &sub_addr_count,
                                                         &sub_addr_list);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_sub_addr_count and p_sub_addr_list are NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_GetAllModelSubscriptionList()

fsp_err_t RM_BLE_MESH_ACCESS_GetAllModelSubscriptionList (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, uint16_t *const *p_sub_addr_count*, uint16_t *const *p_sub_addr_list*)

To get list of subscription addresses of all the models. This routine returns a consolidated list of subscription addresses of all the models.

Implements rm_ble_mesh_access_api_t::getAllModelSubscriptionList.

Example:

```
/* Get list of subscription addresses of all the models. */
   err = RM_BLE_MESH_ACCESS_GetAllModelSubscriptionList(&g_ble_mesh_access0_ctrl,
&sub_addr_count, &sub_addr_list);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_sub_addr_count and p_sub_addr_list are NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_ACCESS_IsValidElementAddress()

fsp_err_t RM_BLE_MESH_ACCESS_IsValidElementAddress (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_address_t *addr*)

To check if valid element address to receive a packet. This routine checks if destination address in a received packet matches with any of the known element address of local or friend device.

Implements rm_ble_mesh_access_api_t::isValidElementAddress.

Example:

```
/* Check if valid element address to receive a packet. */
   err = RM_BLE_MESH_ACCESS_IsValidElementAddress(&g_ble_mesh_access0_ctrl, addr);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.

◆ RM_BLE_MESH_ACCESS_IsFixedGroupAddressToBeProcessed()

fsp_err_t RM_BLE_MESH_ACCESS_IsFixedGroupAddressToBeProcessed (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_address_t *addr*)

To check if Fixed Group Address in receive packet to be processed. This routine checks if destination address in a received packet as a Fixed Group Address to be processed.

Implements rm_ble_mesh_access_api_t::isFixedGroupAddressToBeProcessed.

Example:

```
/* Check if fixed group address in receive packet to be processed. */
   err =
RM_BLE_MESH_ACCESS_IsFixedGroupAddressToBeProcessed(&g_ble_mesh_access0_ctrl, addr);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_ACCESS_IsValidSubscriptionAddress()

fsp_err_t RM_BLE_MESH_ACCESS_IsValidSubscriptionAddress (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_address_t *addr*)

To check if valid subscription address to receive a packet. This routine checks if destination address in a received packet matches with any of the known subscription address of local or friend device.

Implements rm_ble_mesh_access_api_t::isValidSubscriptionAddress.

Example:

```
/* Check if valid subscription address to receive a packet. */
   err = RM_BLE_MESH_ACCESS_IsValidSubscriptionAddress(&g_ble_mesh_access0_ctrl,
addr);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ACCESS_EnableIvUpdateTestMode()

fsp_err_t RM_BLE_MESH_ACCESS_EnableIvUpdateTestMode (rm_ble_mesh_access_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_iv_update_test_mode_t *mode*)

To set the IV Update Test Mode feature. This routine is used to set the IV Update Test Mode flag.

Implements rm_ble_mesh_access_api_t::enableIvUpdateTestMode.

Example:

```
/* Set the IV update test mode feature. */
   err = RM_BLE_MESH_ACCESS_EnableIvUpdateTestMode(&g_ble_mesh_access0_ctrl, mode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

4.2.1.2 Bluetooth Low Energy Mesh Network Bearer (rm_ble_mesh_bearer)

Detailed Description

Overview

Data Structures

struct	rm_ble_mesh_bearer_instance_ctrl_t

Data Structure Documentation

◆ rm_ble_mesh_bearer_instance_ctrl_t

struct rm_ble_mesh_bearer_instance_ctrl_t
RM_BLE_MESH_BEARER private control block. DO NOT MODIFY. Initialization occurs when RM_BLE_MESH_BEARER_Open() is called.

Function Documentation

◆ RM_BLE_MESH_BEARER_Open()

fsp_err_t RM_BLE_MESH_BEARER_Open (rm_ble_mesh_bearer_ctrl_t *const *p_ctrl*, rm_ble_mesh_bearer_cfg_t const *const *p_cfg*)

Open bearer middleware.
Implements rm_ble_mesh_bearer_api_t::open.
Example:
`/* Open the module. */`
`err = RM_BLE_MESH_BEARER_Open(&g_ble_mesh_bearer0_ctrl, &g_ble_mesh_bearer0_cfg);`

Return values

FSP_SUCCESS	Module opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.

◆ RM_BLE_MESH_BEARER_Close()

fsp_err_t RM_BLE_MESH_BEARER_Close (rm_ble_mesh_bearer_ctrl_t *const *p_ctrl*)

Close bearer middleware. Implements rm_ble_mesh_bearer_api_t::close.

Example:

```
/* Open the module. */
   err = RM_BLE_MESH_BEARER_Close(&g_ble_mesh_bearer0_ctrl);
```

Return values

FSP_SUCCESS	Module successfully closed.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.

◆ RM_BLE_MESH_BEARER_RegisterInterface()

fsp_err_t RM_BLE_MESH_BEARER_RegisterInterface (rm_ble_mesh_bearer_ctrl_t *const *p_ctrl*, rm_ble_mesh_bearer_type_t *brr_type*, rm_ble_mesh_bearer_ntf_callback_result_t(*)(rm_ble_mesh_bearer_ntf_callback_args_t *p_args) *p_callback*)

Register interface with Bearer Layer. This routine registers interface with the Bearer Layer. Bearer Layer supports single Application, hence this rouine shall be called once.

Implements rm_ble_mesh_bearer_api_t::registerInterface.

Example:

```
/* Register Bearer interface. */
   err = RM_BLE_MESH_BEARER_RegisterInterface(&g_ble_mesh_bearer0_ctrl, brr_type,
rm_ble_mesh_bearer_ntf_callback);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_BEARER_RegisterBeaconHandler()

fsp_err_t RM_BLE_MESH_BEARER_RegisterBeaconHandler (rm_ble_mesh_bearer_ctrl_t *const *p_ctrl*, rm_ble_mesh_bearer_beacon_type_t *bcon_type*, void(*)(rm_ble_mesh_bearer_beacon_callback_args_t *p_args) *p_handler*)

Register beacon interface with Bearer Layer. This routine registers interface with the Bearer Layer to process Beacons. Bearer Layer supports single Application, hence this rouine shall be called once.

Implements rm_ble_mesh_bearer_api_t::registerBeaconHandler.

Example:

```
/* Register beacon handler. */
   err = RM_BLE_MESH_BEARER_RegisterBeaconHandler(&g_ble_mesh_bearer0_ctrl,
RM_BLE_MESH_BEARER_TYPE_BCON,
                                                  rm_ble_mesh_bearer_beacon_callback
);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_BEARER_AddBearer()

fsp_err_t RM_BLE_MESH_BEARER_AddBearer (rm_ble_mesh_bearer_ctrl_t *const *p_ctrl*, rm_ble_mesh_bearer_type_t *brr_type*, rm_ble_mesh_bearer_info_t const *const *p_brr_info*, rm_ble_mesh_bearer_handle_t *const *p_brr_handle*)

Add a bearer to Bearer Layer. This routine adds a bearer that is setup by the application for use by the Mesh Stack. Bearer Layer supports single Application, hence this rouine shall be called once.

Implements rm_ble_mesh_bearer_api_t::addBearer.

Example:

```
/* Add Bearer. */
   err = RM_BLE_MESH_BEARER_AddBearer(&g_ble_mesh_bearer0_ctrl,
RM_BLE_MESH_BEARER_TYPE_BCON, &brr_info, &brr_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_brr_info and p_brr_handle are NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_BEARER_RemoveBearer()

fsp_err_t RM_BLE_MESH_BEARER_RemoveBearer (rm_ble_mesh_bearer_ctrl_t *const *p_ctrl*, rm_ble_mesh_bearer_type_t *brr_type*, rm_ble_mesh_bearer_handle_t const *const *p_brr_handle*)

Remove a bearer from Bearer Layer. This routine removes a bearer from the Mesh Stack. Bearer Layer supports single Application, hence this rouine shall be called once.

Implements rm_ble_mesh_bearer_api_t::removeBearer.

Example:

```
/* Remove Bearer. */
   err = RM_BLE_MESH_BEARER_RemoveBearer(&g_ble_mesh_bearer0_ctrl,
RM_BLE_MESH_BEARER_TYPE_BCON, &brr_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_brr_handle is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_BEARER_ObserveBeacon()

fsp_err_t RM_BLE_MESH_BEARER_ObserveBeacon (rm_ble_mesh_bearer_ctrl_t *const *p_ctrl*, uint8_t *bcon_type*, uint8_t *enable*)

Observe on/off for the beacon type. This routine sends enables/disables the observation procedure for the given beacon type.

Implements rm_ble_mesh_bearer_api_t::observeBeacon.

Example:

```
/* Observe beacon. */
   err = RM_BLE_MESH_BEARER_ObserveBeacon(&g_ble_mesh_bearer0_ctrl, bcon_type,
enable);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_BEARER_BcastUnprovisionedBeacon()

fsp_err_t RM_BLE_MESH_BEARER_BcastUnprovisionedBeacon (rm_ble_mesh_bearer_ctrl_t *const *p_ctrl*, uint8_t *type*, uint8_t const *const *p_dev_uuid*, uint16_t *oob_info*, rm_ble_mesh_buffer_t const *const *p_uri*)

API to send unprovisioned device beacon. This routine sends Unprovisioned Device Beacon.

Implements rm_ble_mesh_bearer_api_t::bcastUnprovisionedBeacon.

Example:

```
/* Broadcast unprovisioned beacon. */
   err = RM_BLE_MESH_BEARER_BcastUnprovisionedBeacon(&g_ble_mesh_bearer0_ctrl, type,
&dev_uuid, oob_info, &uri);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_dev_uuid and p_uri are NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_BEARER_BroadcastBeacon()

fsp_err_t RM_BLE_MESH_BEARER_BroadcastBeacon (rm_ble_mesh_bearer_ctrl_t *const *p_ctrl*, uint8_t *type*, uint8_t const *const *p_packet*, uint16_t *length*)

API to broadcast a beacon. This routine sends the beacon of given type on Adv and GATT bearers.

Implements rm_ble_mesh_bearer_api_t::broadcastBeacon.

Example:

```
/* Broadcast beacon. */
   err = RM_BLE_MESH_BEARER_BroadcastBeacon(&g_ble_mesh_bearer0_ctrl, type, &packet,
length);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_packet is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.

◆ RM_BLE_MESH_BEARER_StartProxyAdv()

fsp_err_t RM_BLE_MESH_BEARER_StartProxyAdv (rm_ble_mesh_bearer_ctrl_t *const *p_ctrl*, uint8_t *type*, uint8_t const *const *p_data*, uint16_t *datalen*)

API to send proxy device ADV. This routine sends Proxy Device ADV.

Implements rm_ble_mesh_bearer_api_t::startProxyAdv.

Example:

```
/* Start proxy advertising. */
   err = RM_BLE_MESH_BEARER_StartProxyAdv(&g_ble_mesh_bearer0_ctrl, type, &data,
length);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_data is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.

◆ RM_BLE_MESH_BEARER_SendPdu()

fsp_err_t RM_BLE_MESH_BEARER_SendPdu (rm_ble_mesh_bearer_ctrl_t *const *p_ctrl*, rm_ble_mesh_bearer_handle_t const *const *p_brr_handle*, rm_ble_mesh_bearer_type_t *brr_type*, rm_ble_mesh_buffer_t const *const *p_buffer*)

Send a bearer PDU. This routine sends a PDU from the Mesh stack to over the bearer indicated by the bearer handle.

Implements rm_ble_mesh_bearer_api_t::sendPdu.

Example:

```
/* Send common Bearer PDUs. */
   err = RM_BLE_MESH_BEARER_SendPdu(&g_ble_mesh_bearer0_ctrl, &brr_handle,
RM_BLE_MESH_BEARER_TYPE_BCON, &buffer);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_brr_handle and p_buffer are NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_BEARER_GetPacketRssi()

fsp_err_t RM_BLE_MESH_BEARER_GetPacketRssi (rm_ble_mesh_bearer_ctrl_t *const *p_ctrl*, uint8_t * *p_rssi_value*)

Get the RSSI of current received packet being processed. This routine returns the RSSI value of the received packet in its context when called from the Mesh stack.

Implements rm_ble_mesh_bearer_api_t::getPacketRssi.

Example:

```
/* Get the RSSI of current received packet being processed. */
   err = RM_BLE_MESH_BEARER_GetPacketRssi(&g_ble_mesh_bearer0_ctrl, &rssi_value);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_rssi_value is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_BEARER_Sleep()

fsp_err_t RM_BLE_MESH_BEARER_Sleep (rm_ble_mesh_bearer_ctrl_t *const *p_ctrl*)

Put the bearer to sleep. This routine requests the underlying bearer interface to sleep. Default bearer interface is that of advertising bearer.

Implements rm_ble_mesh_bearer_api_t::sleep.

Example:

```
/* Put the bearer to sleep. */
   err = RM_BLE_MESH_BEARER_Sleep(&g_ble_mesh_bearer0_ctrl);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_BEARER_Wakeup()

fsp_err_t RM_BLE_MESH_BEARER_Wakeup (rm_ble_mesh_bearer_ctrl_t *const *p_ctrl*, uint8_t *mode*)

Wakeup the bearer. This routine requests the underlying bearer interface to wakeup. Default bearer interface is that of advertising bearer.

Implements rm_ble_mesh_bearer_api_t::wakeup.

Example:

```
/* Wakeup the bearer. */
   err = RM_BLE_MESH_BEARER_Wakeup(&g_ble_mesh_bearer0_ctrl, mode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

Detailed Description

Overview

Data Structures

struct	rm_ble_mesh_lower_trans_instance_ctrl_t

Data Structure Documentation

◆ rm_ble_mesh_lower_trans_instance_ctrl_t

struct rm_ble_mesh_lower_trans_instance_ctrl_t
RM_BLE_MESH_LOWER_TRANS private control block. DO NOT MODIFY. Initialization occurs when RM_BLE_MESH_LOWER_TRANS_Open() is called.

Function Documentation

◆ RM_BLE_MESH_LOWER_TRANS_Open()

fsp_err_t RM_BLE_MESH_LOWER_TRANS_Open (rm_ble_mesh_lower_trans_ctrl_t *const *p_ctrl*, rm_ble_mesh_lower_trans_cfg_t const *const *p_cfg*)

Register Inerface with Lower Transport Layer. This routine registers interface with the Lower Transport Layer. Transport Layer supports single Application, hence this rouine shall be called once.

Implements rm_ble_mesh_lower_trans_api_t::open.

Example:

```
/* Open the module. */
   err = RM_BLE_MESH_LOWER_TRANS_Open(&g_ble_mesh_lower_trans0_ctrl,
&g_ble_mesh_lower_trans0_cfg);
```

Return values

FSP_SUCCESS	Module opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Module is already open.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.

◆ RM_BLE_MESH_LOWER_TRANS_Close()

fsp_err_t RM_BLE_MESH_LOWER_TRANS_Close (rm_ble_mesh_provision_ctrl_t *const *p_ctrl*)

Unregister Inerface with Lower Transport Layer. Implements rm_ble_mesh_lower_trans_api_t::close.

Example:

```
/* Close the module. */
   err = RM_BLE_MESH_LOWER_TRANS_Close(&g_ble_mesh_lower_trans0_ctrl);
```

Return values

FSP_SUCCESS	Module successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.

◆ RM_BLE_MESH_LOWER_TRANS_SendPdu()

fsp_err_t RM_BLE_MESH_LOWER_TRANS_SendPdu (rm_ble_mesh_lower_trans_ctrl_t *const *p_ctrl*, rm_ble_mesh_lower_trans_transmit_setting_t const *const *p_transmit_setting*, rm_ble_mesh_buffer_t const *const *p_buffer*, rm_ble_mesh_lower_trans_reliable_t *reliable*)

API to send transport PDUs. This routine sends transport PDUs to peer device.

Implements rm_ble_mesh_lower_trans_api_t::sendPdu.

Example:

```
/* Send transport PDUs. */
   err = RM_BLE_MESH_LOWER_TRANS_SendPdu(&g_ble_mesh_lower_trans0_ctrl,
                                         &transmit_setting,
                                         &buffer,
RM_BLE_MESH_LOWER_TRANS_RELIABLE_ENABLE);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_transmit_setting and p_buffer are NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_LOWER_TRANS_ClearSarContexts()

fsp_err_t RM_BLE_MESH_LOWER_TRANS_ClearSarContexts (rm_ble_mesh_lower_trans_ctrl_t *const *p_ctrl*)

To clear all segmentation and reassembly contexts. This routine clears all segmentation and reassembly contexts.

Implements rm_ble_mesh_lower_trans_api_t::clearSarContexts.

Example:

```
/* Clear all segmentation and reassembly contexts. */
   err = RM_BLE_MESH_LOWER_TRANS_ClearSarContexts(&g_ble_mesh_lower_trans0_ctrl);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_LOWER_TRANS_ClearSubnetSarContexts()

fsp_err_t RM_BLE_MESH_LOWER_TRANS_ClearSubnetSarContexts (rm_ble_mesh_lower_trans_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *subnet_handle*)

To clear all segmentation and reassembly contexts for a given subnet. This routine clears all segmentation and reassembly contexts.

Implements rm_ble_mesh_lower_trans_api_t::clearSubnetSarContexts.

Example:

```
/* Clear all segmentation and reassembly contexts for a given subnet. */
   err =
RM_BLE_MESH_LOWER_TRANS_ClearSubnetSarContexts(&g_ble_mesh_lower_trans0_ctrl,
subnet_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_LOWER_TRANS_ReinitReplayCache()

fsp_err_t RM_BLE_MESH_LOWER_TRANS_ReinitReplayCache (rm_ble_mesh_lower_trans_ctrl_t *const *p_ctrl*)

To reinitialize all Lower Transport replay cache entries. This routine clears and reinitializes all Transport Replay Cache Entries. This needs to be invoked by the upper layer when the Network moves to a newer IV Index (Normal State) and the Sequence numbers are reset.

Implements rm_ble_mesh_lower_trans_api_t::reinitReplayCache.

Example:

```
/* Reinitialize all Lower Transport replay cache Entries. */
   err = RM_BLE_MESH_LOWER_TRANS_ReinitReplayCache(&g_ble_mesh_lower_trans0_ctrl);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_LOWER_TRANS_TriggerPendingTransmits()

fsp_err_t RM_BLE_MESH_LOWER_TRANS_TriggerPendingTransmits (rm_ble_mesh_lower_trans_ctrl_t *const *p_ctrl*)

To trigger any LTRN pending transmissions. Trigger pending transmits is an interface to check for pending segments in the tx queue and schedule for transmission, which is mainly used by the LPN operation.

Implements rm_ble_mesh_lower_trans_api_t::triggerPendingTransmits.

Example:

```
/* Trigger any Lower Transport pending transmissions. */
   err =
RM_BLE_MESH_LOWER_TRANS_TriggerPendingTransmits(&g_ble_mesh_lower_trans0_ctrl);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

fsp_err_t	RM_BLE_MESH_NETWORK_ResetNetCache (rm_ble_mesh_network_ctrl_t *const p_ctrl)

Detailed Description

Overview

Data Structures

struct	rm_ble_mesh_network_instance_ctrl_t

Data Structure Documentation

◆ rm_ble_mesh_network_instance_ctrl_t

struct rm_ble_mesh_network_instance_ctrl_t
RM_BLE_MESH_NETWORK private control block. DO NOT MODIFY. Initialization occurs when RM_BLE_MESH_NETWORK_Open() is called.

Function Documentation

◆ RM_BLE_MESH_NETWORK_Open()

fsp_err_t RM_BLE_MESH_NETWORK_Open (rm_ble_mesh_network_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_cfg_t const *const *p_cfg*)

Register Inerface with Network Layer. This routine registers interface with the Network Layer. Network Layer supports only one upper layer, hence this routine shall be called once.

Implements rm_ble_mesh_network_api_t::open.

Example:

```
/* Open the module. */
   err = RM_BLE_MESH_NETWORK_Open(&g_ble_mesh_network0_ctrl,
&g_ble_mesh_network0_cfg);
```

Return values

FSP_SUCCESS	Module opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.
FSP_ERR_ALREADY_OPEN	Module is already open.

◆ RM_BLE_MESH_NETWORK_Close()

fsp_err_t RM_BLE_MESH_NETWORK_Close (rm_ble_mesh_network_ctrl_t *const *p_ctrl*)

Unregister Inerface with Network Layer. Implements rm_ble_mesh_network_api_t::close.

Example:

```
/* Close the module. */
   err = RM_BLE_MESH_NETWORK_Close(&g_ble_mesh_network0_ctrl);
```

Return values

FSP_SUCCESS	Module successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_NETWORK_BroadcastSecureBeacon()

fsp_err_t RM_BLE_MESH_NETWORK_BroadcastSecureBeacon (rm_ble_mesh_network_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *subnet_handle*)

API to send Secure Network Beacon. This routine sends Secure Network Beacon for the given subnet handle.

Implements rm_ble_mesh_network_api_t::broadcastSecureBeacon.

Example:

```
/* Send secure network beacon. */
   err = RM_BLE_MESH_NETWORK_BroadcastSecureBeacon(&g_ble_mesh_network0_ctrl,
subnet_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_NETWORK_SendPduOnInterface()

fsp_err_t RM_BLE_MESH_NETWORK_SendPduOnInterface (rm_ble_mesh_network_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_route_info_t const *const *p_route_info*, rm_ble_mesh_network_header_t const *const *p_header*, rm_ble_mesh_buffer_t const *const *p_buffer*)

Extension API to send Network PDUs on selected network interfaces. This routine sends NETWORK PDUs on all or selected Network Interfaces.

Implements rm_ble_mesh_network_api_t::sendPduOnInterface.

Example:

```
/* Send network PDUs on selected network interfaces. */
   err = RM_BLE_MESH_NETWORK_SendPduOnInterface(&g_ble_mesh_network0_ctrl,
&route_info, &header, &buffer);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_route_info, p_header and p_buffer are NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_NETWORK_GetAddressType()

fsp_err_t RM_BLE_MESH_NETWORK_GetAddressType (rm_ble_mesh_network_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_address_t *addr*, rm_ble_mesh_network_address_type_t *const *p_type*)

To get address type. This routine is to get address type for a given address.

Implements rm_ble_mesh_network_api_t::getAddressType.

Example:

```
/* Get address type. */
   err = RM_BLE_MESH_NETWORK_GetAddressType(&g_ble_mesh_network0_ctrl, addr, &type);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_type is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_NETWORK_FetchProxyState()

fsp_err_t RM_BLE_MESH_NETWORK_FetchProxyState (rm_ble_mesh_network_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_gatt_proxy_state_t *const *p_proxy_state*)

Check if the proxy module is ready to handle proxy messages/events. This routine returns the current state of the Proxy. The valid states of proxy are:

1. RM_BLE_MESH_NETWORK_GATT_PROXY_STATE_NULL - If no callback registered by Upper Layers
2. RM_BLE_MESH_NEgTWORK_GATT_PROXY_STATE_READY - If callback registered and Proxy not connected
3. RM_BLE_MESH_NETWORK_GATT_PROXY_STATE_CONNECTED - if callback registered and Proxy connected

Implements rm_ble_mesh_network_api_t::fetchProxyState.

Example:

```
/* Check if the proxy module is ready to handle proxy messages/events. */
   err = RM_BLE_MESH_NETWORK_FetchProxyState(&g_ble_mesh_network0_ctrl,
&proxy_state);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_proxy_state is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_NETWORK_SetProxyFilter()

fsp_err_t RM_BLE_MESH_NETWORK_SetProxyFilter (rm_ble_mesh_network_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_route_info_t const *const *p_route_info*, rm_ble_mesh_proxy_filter_type_t *type*)

Set proxy server's filter type. This function is used by the Proxy Client to set the filter type on the Proxy Server.

Implements rm_ble_mesh_network_api_t::setProxyFilter.

Example:

```
/* Set proxy server's filter type. */
   err = RM_BLE_MESH_NETWORK_SetProxyFilter(&g_ble_mesh_network0_ctrl, &route_info,
filter_type);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_route_info is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_NETWORK_ConfigProxyFilter()

fsp_err_t RM_BLE_MESH_NETWORK_ConfigProxyFilter (rm_ble_mesh_network_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_route_info_t const *const *p_route_info*, rm_ble_mesh_proxy_config_opcode_t *opcode*, rm_ble_mesh_network_proxy_address_list_t *const *p_addr_list*)

Add or Delete/Remove addresses to/from proxy filter list. This function is used by the Proxy Client to add/delete Addresses to/from the Proxy Server's filter List.

Implements rm_ble_mesh_network_api_t::configProxyFilter.

Example:

```
/* Add or delete/remove addresses to/from proxy filter list. */
   err = RM_BLE_MESH_NETWORK_ConfigProxyFilter(&g_ble_mesh_network0_ctrl,
&route_info, opcode, &addr_list);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_route_info and p_addr_list are NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_NETWORK_StartProxyServerAdv()

fsp_err_t RM_BLE_MESH_NETWORK_StartProxyServerAdv (rm_ble_mesh_network_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *subnet_handle*, rm_ble_mesh_network_gatt_proxy_adv_mode_t *proxy_adv_mode*)

Start connectable advertisements for a proxy server. This function is used by the Proxy Server to start Connectable Undirected Advertisements.

Implements rm_ble_mesh_network_api_t::startProxyServerAdv.

Example:

```
/* Start connectable advertisements for a proxy server. */
   err = RM_BLE_MESH_NETWORK_StartProxyServerAdv(&g_ble_mesh_network0_ctrl,
subnet_handle, proxy_adv_mode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The internal parameter is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_NETWORK_StopProxyServerAdv()

fsp_err_t RM_BLE_MESH_NETWORK_StopProxyServerAdv (rm_ble_mesh_network_ctrl_t *const *p_ctrl*)

Stop connectable advertisements for a proxy server. This function is used by the Proxy Server to stop Connectable Undirected Advertisements.

Implements rm_ble_mesh_network_api_t::stopProxyServerAdv.

Example:

```
/* Stop connectable advertisements for a proxy server. */
   err = RM_BLE_MESH_NETWORK_StopProxyServerAdv(&g_ble_mesh_network0_ctrl);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_NETWORK_AllocateSeqNumber()

fsp_err_t RM_BLE_MESH_NETWORK_AllocateSeqNumber (rm_ble_mesh_network_ctrl_t *const *p_ctrl*, uint32_t *const *p_seq_num*)

To allocate sequence number. This function is used to allocate Sequence Number.

Implements rm_ble_mesh_network_api_t::allocateSeqNumber.

Example:

```
/* Allocate sequence number. */
   err = RM_BLE_MESH_NETWORK_AllocateSeqNumber(&g_ble_mesh_network0_ctrl, &seq_num);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_seq_num is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_NETWORK_GetSeqNumberState()

fsp_err_t RM_BLE_MESH_NETWORK_GetSeqNumberState (rm_ble_mesh_network_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_seq_number_state_t *const *p_seq_num_state*)

To get current sequence number state. This function is used to get current Sequence Number state.

Implements rm_ble_mesh_network_api_t::getSeqNumberState.

Example:

```
/* Get current sequence number state. */
   err = RM_BLE_MESH_NETWORK_GetSeqNumberState(&g_ble_mesh_network0_ctrl,
&seq_num_state);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_seq_num_state is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_NETWORK_SetSeqNumberState()

fsp_err_t RM_BLE_MESH_NETWORK_SetSeqNumberState (rm_ble_mesh_network_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_seq_number_state_t const *const *p_seq_num_state*)

To set current sequence number state. This function is used to get current Sequence Number state, which acquiring lock. Used from persistent storage.

Implements rm_ble_mesh_network_api_t::setSeqNumberState.

Example:

```
/* Set current sequence number state. */
   err = RM_BLE_MESH_NETWORK_SetSeqNumberState(&g_ble_mesh_network0_ctrl,
&seq_num_state);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_seq_num_state is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_NETWORK_ResetNetCache()

fsp_err_t RM_BLE_MESH_NETWORK_ResetNetCache (rm_ble_mesh_network_ctrl_t *const *p_ctrl*)

To reinitialize all Network Layer cache entries. This routine clears and reinitializes all Network Cache Entries. This needs to be invoked by the upper layer when the Network moves to a newer IV Index (Normal State) and the Sequence numbers are reset.

Implements rm_ble_mesh_network_api_t::resetNetCache.

Example:

```
/* Reinitialize all Network Layer cache entries. */
   err = RM_BLE_MESH_NETWORK_ResetNetCache(&g_ble_mesh_network0_ctrl);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

fsp_err_t	RM_BLE_MESH_PROVISION_Setup (rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_role_t role, rm_ble_mesh_provision_device_info_t info, uint16_t timeout)
fsp_err_t	RM_BLE_MESH_PROVISION_Bind (rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_device_info_t info, uint8_t attention, rm_ble_mesh_provision_handle_t *const p_handle)
fsp_err_t	RM_BLE_MESH_PROVISION_SendPdu (rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_handle_t const *const p_handle, rm_ble_mesh_provision_pdu_type_t type, rm_ble_mesh_buffer_t pdu_data)
fsp_err_t	RM_BLE_MESH_PROVISION_SetAuthVal (rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_handle_t const *const p_handle, rm_ble_mesh_buffer_t auth_value)

fsp_err_t	RM_BLE_MESH_PROVISION_Abort (rm_ble_mesh_provision_ctrl_t *const p_ctrl, rm_ble_mesh_provision_handle_t const *const p_handle, rm_ble_mesh_provision_link_close_reason_t reason)
fsp_err_t	RM_BLE_MESH_PROVISION_GetLocalPublicKey (rm_ble_mesh_provision_ctrl_t *const p_ctrl, uint8_t *const public_key)
fsp_err_t	RM_BLE_MESH_PROVISION_SetLocalPublicKey (rm_ble_mesh_provision_ctrl_t *const p_ctrl, uint8_t const *const public_key)

Detailed Description

Overview

Data Structures

struct	rm_ble_mesh_provision_instance_ctrl_t

Data Structure Documentation

◆ rm_ble_mesh_provision_instance_ctrl_t

struct rm_ble_mesh_provision_instance_ctrl_t
RM_BLE_MESH_PROVISION private control block. DO NOT MODIFY. Initialization occurs when RM_BLE_MESH_PROVISION_Open() is called.

Function Documentation

◆ RM_BLE_MESH_PROVISION_Open()

fsp_err_t RM_BLE_MESH_PROVISION_Open (rm_ble_mesh_provision_ctrl_t *const *p_ctrl*, rm_ble_mesh_provision_cfg_t const *const *p_cfg*)

Open access middleware. This function registers the provisioning capabilities of the application along with the application callback to notify events during the provisioning procedure.

Implements rm_ble_mesh_provision_api_t::open.

Example:

```
/* Open the module. */
   err = RM_BLE_MESH_PROVISION_Open(&g_ble_mesh_provision0_ctrl,
&g_ble_mesh_provision0_cfg);
```

Return values

FSP_SUCCESS	Module opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Module is already open.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.

◆ RM_BLE_MESH_PROVISION_Close()

fsp_err_t RM_BLE_MESH_PROVISION_Close (rm_ble_mesh_provision_ctrl_t *const *p_ctrl*)

Close access middleware. Implements rm_ble_mesh_provision_api_t::close.

Example:

```
/* Close the module. */
   err = RM_BLE_MESH_PROVISION_Close(&g_ble_mesh_provision0_ctrl);
```

Return values

FSP_SUCCESS	Module successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.

◆ RM_BLE_MESH_PROVISION_Setup()

fsp_err_t RM_BLE_MESH_PROVISION_Setup (rm_ble_mesh_provision_ctrl_t *const *p_ctrl*, rm_ble_mesh_provision_role_t *role*, rm_ble_mesh_provision_device_info_t *info*, uint16_t *timeout*)

Setup the device for provisioning. This function configures the device to get in a provisionable state by specifying the role, bearer and creating a context.

Implements rm_ble_mesh_provision_api_t::setup.

Example:

```
/* Setup the device for provisioning. */
   err = RM_BLE_MESH_PROVISION_Setup(&g_ble_mesh_provision0_ctrl, role, info,
timeout);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_POINTER	The parameter info->p_device is NULL.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.

◆ RM_BLE_MESH_PROVISION_Bind()

fsp_err_t RM_BLE_MESH_PROVISION_Bind (rm_ble_mesh_provision_ctrl_t *const *p_ctrl*, rm_ble_mesh_provision_device_info_t *info*, uint8_t *attention*, rm_ble_mesh_provision_handle_t *const *p_handle*)

Bind to the peer device for provisioning. This function establishes a provisioning link with the peer device and exchanges the capabilities for provisioning.

Implements rm_ble_mesh_provision_api_t::bind.

Example:

```
/* Bind to the peer device for provisioning. */
   err = RM_BLE_MESH_PROVISION_Bind(&g_ble_mesh_provision0_ctrl, info, attention,
&provision_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_POINTER	The parameter p_handle is NULL.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.

◆ RM_BLE_MESH_PROVISION_SendPdu()

fsp_err_t RM_BLE_MESH_PROVISION_SendPdu (rm_ble_mesh_provision_ctrl_t *const *p_ctrl*, rm_ble_mesh_provision_handle_t const *const *p_handle*, rm_ble_mesh_provision_pdu_type_t *type*, rm_ble_mesh_buffer_t *pdu_data*)

Send provisioning PDUs to the peer. This function is used by the provisioning application to send the provisioning PDUs to the peer device during the procedure.

Implements rm_ble_mesh_provision_api_t::sendPdu.

Example:

```
/* Send provisioning PDUs to the peer. */
   err = RM_BLE_MESH_PROVISION_SendPdu(&g_ble_mesh_provision0_ctrl,
&provision_handle, type, pdu_data);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_POINTER	The parameter p_handle is NULL.
FSP_ERR_UNSUPPORTED	The pdu type is not supported.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_PROVISION_SetAuthVal()

fsp_err_t RM_BLE_MESH_PROVISION_SetAuthVal (rm_ble_mesh_provision_ctrl_t *const *p_ctrl*, rm_ble_mesh_provision_handle_t const *const *p_handle*, rm_ble_mesh_buffer_t *auth_value*)

Set the display authval. This function shall be used by the provisioning application to set the authval being displayed to the user on receiving RM_BLE_MESH_PROVISION_EVENT_TYPE_OOB_DISPLAY event with the respective OOB Action and Size.

Implements rm_ble_mesh_provision_api_t::setAuthVal.

Example:

```
rm_ble_mesh_buffer_t auth_value = {.payload = NULL, .length = 0};;

/* Set the display authval. */

   err = RM_BLE_MESH_PROVISION_SetAuthVal(&g_ble_mesh_provision0_ctrl,
&provision_handle, auth_value);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_handle is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_PROVISION_Abort()

fsp_err_t RM_BLE_MESH_PROVISION_Abort (rm_ble_mesh_provision_ctrl_t *const *p_ctrl*,
rm_ble_mesh_provision_handle_t const *const *p_handle*,
rm_ble_mesh_provision_link_close_reason_t *reason*)

Abort the provisioning procedure. This API can be used by the application to abort the ongoing provisioning procedure. This routine closes the provisioning link with the reason as specified.

Implements rm_ble_mesh_provision_api_t::abort.

Example:

```
/* Abort the provisioning procedure. */
   err = RM_BLE_MESH_PROVISION_Abort(&g_ble_mesh_provision0_ctrl, &provision_handle,
reason);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_handle is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.

◆ RM_BLE_MESH_PROVISION_GetLocalPublicKey()

fsp_err_t RM_BLE_MESH_PROVISION_GetLocalPublicKey (rm_ble_mesh_provision_ctrl_t *const *p_ctrl*, uint8_t *const *p_public_key*)

Utility API to get current ECDH public key to be used for provisioning. This API can be used by the application to fetch the current ECDH P256 Public Key which is to be used for the Provisioning Procedure.

Implements rm_ble_mesh_provision_api_t::getLocalPublicKey.

Example:

```
/* Get current ECDH Public Key to be used for Provisioning. */
   err = RM_BLE_MESH_PROVISION_GetLocalPublicKey(&g_ble_mesh_provision0_ctrl,
&public_key);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_public_key is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_PROVISION_SetLocalPublicKey()

fsp_err_t RM_BLE_MESH_PROVISION_SetLocalPublicKey (rm_ble_mesh_provision_ctrl_t *const *p_ctrl*, uint8_t const *const *p_public_key*)

Utility API to set current ECDH public key to be used for provisioning. This API can be used by the application to fetch the current ECDH P256 Public Key which is to be used for the Provisioning Procedure.

Implements rm_ble_mesh_provision_api_t::setLocalPublicKey.

Example:

```
/* Set current ECDH Public Key to be used for Provisioning. */
   err = RM_BLE_MESH_PROVISION_SetLocalPublicKey(&g_ble_mesh_provision0_ctrl,
&public_key);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_public_key is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

Detailed Description

Overview

Data Structures

struct	rm_ble_mesh_upper_trans_instance_ctrl_t

Data Structure Documentation

◆ rm_ble_mesh_upper_trans_instance_ctrl_t

struct rm_ble_mesh_upper_trans_instance_ctrl_t
RM_BLE_MESH_UPPER_TRANS private control block. DO NOT MODIFY. Initialization occurs when RM_BLE_MESH_UPPER_TRANS_Open() is called.

Function Documentation

◆ RM_BLE_MESH_UPPER_TRANS_Open()

fsp_err_t RM_BLE_MESH_UPPER_TRANS_Open (rm_ble_mesh_upper_trans_ctrl_t *const *p_ctrl*, rm_ble_mesh_upper_trans_cfg_t const *const *p_cfg*)

Register Inerface with Transport Layer. This routine registers interface with the Transport Layer. Transport Layer supports single Application, hence this rouine shall be called once.

Implements rm_ble_mesh_upper_trans_api_t::open.

Example:

```
/* Open the module. */
   err = RM_BLE_MESH_UPPER_TRANS_Open(&g_ble_mesh_upper_trans0_ctrl,
&g_ble_mesh_upper_trans0_cfg);
```

Return values

FSP_SUCCESS	Module opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Module is already open.

◆ RM_BLE_MESH_UPPER_TRANS_Close()

fsp_err_t RM_BLE_MESH_UPPER_TRANS_Close (rm_ble_mesh_provision_ctrl_t *const *p_ctrl*)

Unregister Inerface with Transport Layer. Implements rm_ble_mesh_upper_trans_api_t::close.

Example:

```
/* Close the module. */
   err = RM_BLE_MESH_UPPER_TRANS_Close(&g_ble_mesh_upper_trans0_ctrl);
```

Return values

FSP_SUCCESS	Module successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.

◆ RM_BLE_MESH_UPPER_TRANS_SendAccessPdu()

fsp_err_t RM_BLE_MESH_UPPER_TRANS_SendAccessPdu (rm_ble_mesh_upper_trans_ctrl_t *const *p_ctrl*, rm_ble_mesh_upper_trans_access_layer_pdu_t const *const *p_access_layer_pdu*, rm_ble_mesh_lower_trans_reliable_t *reliable*)

API to send Access Layer PDUs. This routine sends Access Layer PDUs to peer device.

Implements rm_ble_mesh_upper_trans_api_t::sendAccessPdu.

Example:

```
/* Send Access Layer PDUs. */
   err = RM_BLE_MESH_UPPER_TRANS_SendAccessPdu(&g_ble_mesh_upper_trans0_ctrl,
                                               &access_layer_pdu,
RM_BLE_MESH_LOWER_TRANS_RELIABLE_ENABLE);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_access_layer_pdu is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_UPPER_TRANS_SendControlPdu()

fsp_err_t RM_BLE_MESH_UPPER_TRANS_SendControlPdu (rm_ble_mesh_upper_trans_ctrl_t *const *p_ctrl*, rm_ble_mesh_upper_trans_control_pdu_t const *const *p_control_pdu*)

API to send transport Control PDUs. This routine sends transport Control PDUs to peer device.

Implements rm_ble_mesh_upper_trans_api_t::sendControlPdu.

Example:

```
/* Send Upper Transport control PDUs. */
   err = RM_BLE_MESH_UPPER_TRANS_SendControlPdu(&g_ble_mesh_upper_trans0_ctrl,
&control_pdu);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_control_pdu is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_UPPER_TRANS_LpnSetupFriendship()

fsp_err_t RM_BLE_MESH_UPPER_TRANS_LpnSetupFriendship (rm_ble_mesh_upper_trans_ctrl_t *const *p_ctrl*, rm_ble_mesh_upper_trans_friendship_setting_t const *const *p_setting*)

API to setup Friendship. This routine is used by the device acting as a low power node to setup a friendship procedure to any available friend nodes.

Implements rm_ble_mesh_upper_trans_api_t::lpnSetupFriendship.

Example:

```
/* Setup friendship. */
   err = RM_BLE_MESH_UPPER_TRANS_LpnSetupFriendship(&g_ble_mesh_upper_trans0_ctrl,
&setting);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_setting is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_STATE	Lower layer is invalid state.

◆ RM_BLE_MESH_UPPER_TRANS_LpnClearFriendship()

fsp_err_t RM_BLE_MESH_UPPER_TRANS_LpnClearFriendship (rm_ble_mesh_upper_trans_ctrl_t *const *p_ctrl*)

API to terminate friendship. This routine is used by the device acting as a low power node terminate friendship with an active Friend node.

Implements rm_ble_mesh_upper_trans_api_t::lpnClearFriendship.

Example:

```
/* Terminate friendship. */
   err = RM_BLE_MESH_UPPER_TRANS_LpnClearFriendship(&g_ble_mesh_upper_trans0_ctrl);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_UPPER_TRANS_LpnManageSubscription()

fsp_err_t RM_BLE_MESH_UPPER_TRANS_LpnManageSubscription (rm_ble_mesh_upper_trans_ctrl_t *const *p_ctrl*, rm_ble_mesh_upper_trans_control_opcode_t *action*, uint16_t const *const *p_addr_list*, uint16_t *count*)

API to manage friend subscription list. This routine is used by the device acting as a low power node add/remove addresses to/from the friends subscription list.

Implements rm_ble_mesh_upper_trans_api_t::lpnManageSubscription.

Example:

```
/* Manage friend subscription list. */
   err =
RM_BLE_MESH_UPPER_TRANS_LpnManageSubscription(&g_ble_mesh_upper_trans0_ctrl,
 RM_BLE_MESH_UPPER_TRANS_CONTROL_OPCODE_FRIEND_POLL,
                                                &addr_list,
                                                count);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_addr_list is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.

◆ RM_BLE_MESH_UPPER_TRANS_LpnPoll()

fsp_err_t RM_BLE_MESH_UPPER_TRANS_LpnPoll (rm_ble_mesh_upper_trans_ctrl_t *const *p_ctrl*)

To trigger Friend Poll from application. This routine enables the application to trigger a Friend Poll even before the expiry of an active poll period configured during the friendship establishment. The poll peroid will get reset at this point.

Implements rm_ble_mesh_upper_trans_api_t::lpnPoll.

Example:

```
/* Trigger friend poll from application. */
   err = RM_BLE_MESH_UPPER_TRANS_LpnPoll(&g_ble_mesh_upper_trans0_ctrl);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_UPPER_TRANS_IsValidLpnElementAddress()

fsp_err_t RM_BLE_MESH_UPPER_TRANS_IsValidLpnElementAddress (rm_ble_mesh_upper_trans_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_address_t *addr*, rm_ble_mesh_lower_trans_lpn_handle_t *const *p_lpn_handle*)

To check if address matches with any of the LPN. This routine checks if destination address in a received packet matches with any of the known element address of LPN.

Implements rm_ble_mesh_upper_trans_api_t::isValidLpnElementAddress.

Example:

```
/* Check if address matches with any of the LPN. */
   err =
RM_BLE_MESH_UPPER_TRANS_IsValidLpnElementAddress(&g_ble_mesh_upper_trans0_ctrl, addr,
&lpn_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_lpn_handle is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_UPPER_TRANS_IsValidLpnSubscriptionAddress()

fsp_err_t RM_BLE_MESH_UPPER_TRANS_IsValidLpnSubscriptionAddress (rm_ble_mesh_upper_trans_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_address_t *addr*, rm_ble_mesh_lower_trans_lpn_handle_t *const *p_lpn_handle*)

To check if valid subscription address of an LPN to receive a packet. This routine checks if destination address in a received packet matches with any of the known subscription address of an LPN.

Implements rm_ble_mesh_upper_trans_api_t::isValidLpnSubscriptionAddress.

Example:

```
/* Check if valid subscription address of an LPN to receive a packet. */
   err =
RM_BLE_MESH_UPPER_TRANS_IsValidLpnSubscriptionAddress(&g_ble_mesh_upper_trans0_ctrl,
addr, &lpn_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_lpn_handle is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_UPPER_TRANS_GetLpnPolltimeout()

fsp_err_t RM_BLE_MESH_UPPER_TRANS_GetLpnPolltimeout (rm_ble_mesh_upper_trans_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_address_t *lpn_addr*, uint32_t *const *p_poll_timeout*)

To get Poll Timeout of an LPN. This routine checks if LPN address is valid and then returns Poll Timeout configured for the LPN.

Implements rm_ble_mesh_upper_trans_api_t::getLpnPolltimeout.

Example:

```
/* Get poll timeout of an LPN. */
   err = RM_BLE_MESH_UPPER_TRANS_GetLpnPolltimeout(&g_ble_mesh_upper_trans0_ctrl,
addr, &poll_timeout);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_poll_timeout is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_UPPER_TRANS_GetFriendshipInfo()

fsp_err_t RM_BLE_MESH_UPPER_TRANS_GetFriendshipInfo (rm_ble_mesh_upper_trans_ctrl_t *const *p_ctrl*, rm_ble_mesh_upper_trans_friend_role_t *role*, uint16_t *lpn_index*, rm_ble_mesh_upper_trans_friendship_info_t *const *p_node*)

To get the LPN node information. This routine fetches the node information of the LPN element at the given index

Implements rm_ble_mesh_upper_trans_api_t::getFriendshipInfo.

Example:

```
/* Get the LPN node information. */
   err = RM_BLE_MESH_UPPER_TRANS_GetFriendshipInfo(&g_ble_mesh_upper_trans0_ctrl,
RM_BLE_MESH_UPPER_TRANS_FRIEND_ROLE_FRIEND,
                                                   lpn_index,
                                                   &node);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_node is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_UPPER_TRANS_LpnRegisterSecurityUpdate()

fsp_err_t RM_BLE_MESH_UPPER_TRANS_LpnRegisterSecurityUpdate (rm_ble_mesh_upper_trans_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_subnet_handle_t *subnet_handle*, uint8_t *flag*, uint32_t *ivindex*)

To add the security update information. This routine updates the security state of the network to all the active LPN elements. This will be forwarded to the elements when it polls for the next packet available.

Implements rm_ble_mesh_upper_trans_api_t::lpnRegisterSecurityUpdate.

Example:

```
/* Add the security update information. */
   err =
RM_BLE_MESH_UPPER_TRANS_LpnRegisterSecurityUpdate(&g_ble_mesh_upper_trans0_ctrl,
subnet_handle, flag, ivindex);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_UPPER_TRANS_ClearAllLpn()

fsp_err_t RM_BLE_MESH_UPPER_TRANS_ClearAllLpn (rm_ble_mesh_upper_trans_ctrl_t *const *p_ctrl*)

To clear information related to all LPNs. This routine clears information related to all LPNs.

Implements rm_ble_mesh_upper_trans_api_t::clearAllLpn.

Example:

```
/* Clear information related to all LPNs. */
   err = RM_BLE_MESH_UPPER_TRANS_ClearAllLpn(&g_ble_mesh_upper_trans0_ctrl);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_UPPER_TRANS_SetHeartbeatPublication()

fsp_err_t RM_BLE_MESH_UPPER_TRANS_SetHeartbeatPublication (rm_ble_mesh_upper_trans_ctrl_t *const *p_ctrl*, rm_ble_mesh_upper_trans_heartbeat_publication_info_t *const *p_info*)

To set the Heartbeat publication data. This routine configures the Heartbeat publication information

Implements rm_ble_mesh_upper_trans_api_t::setHeartbeatPublication.

Example:

```
 /* Set the heartbeat publication data. */
    err =
RM_BLE_MESH_UPPER_TRANS_SetHeartbeatPublication(&g_ble_mesh_upper_trans0_ctrl,
&ut_hp_info);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_info is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_BLE_MESH_UPPER_TRANS_GetHeartbeatPublication()

fsp_err_t RM_BLE_MESH_UPPER_TRANS_GetHeartbeatPublication (rm_ble_mesh_upper_trans_ctrl_t *const *p_ctrl*, rm_ble_mesh_upper_trans_heartbeat_publication_info_t *const *p_info*)

To get the Heartbeat publication data. This routine retrieves the Heartbeat publication information

Implements rm_ble_mesh_upper_trans_api_t::getHeartbeatPublication.

Example:

```
/* Get the heartbeat publication data. */
   err =
RM_BLE_MESH_UPPER_TRANS_GetHeartbeatPublication(&g_ble_mesh_upper_trans0_ctrl,
&ut_hp_info);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_info is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_UPPER_TRANS_SetHeartbeatSubscription()

fsp_err_t RM_BLE_MESH_UPPER_TRANS_SetHeartbeatSubscription (rm_ble_mesh_upper_trans_ctrl_t *const *p_ctrl*, rm_ble_mesh_upper_trans_heartbeat_subscription_info_t *const *p_info*)

To set the Heartbeat subscription data. This routine configures the Heartbeat subscription information

Implements rm_ble_mesh_upper_trans_api_t::setHeartbeatSubscription.

Example:

```
/* Set the heartbeat subscription data. */
   err =
RM_BLE_MESH_UPPER_TRANS_SetHeartbeatSubscription(&g_ble_mesh_upper_trans0_ctrl,
&ut_hs_info);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_info is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ADDRESS	Invalid source address.

◆ RM_BLE_MESH_UPPER_TRANS_GetHeartbeatSubscription()

fsp_err_t RM_BLE_MESH_UPPER_TRANS_GetHeartbeatSubscription (
rm_ble_mesh_upper_trans_ctrl_t *const *p_ctrl*,
rm_ble_mesh_upper_trans_heartbeat_subscription_info_t *const *p_info*)

To get the Heartbeat subscription data. This routine retrieves the Heartbeat subscription information

Implements rm_ble_mesh_upper_trans_api_t::getHeartbeatSubscription.

Example:

```
/* Get the heartbeat subscription data. */
   err =
RM_BLE_MESH_UPPER_TRANS_GetHeartbeatSubscription(&g_ble_mesh_upper_trans0_ctrl,
&ut_hs_info);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_info is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_UPPER_TRANS_TriggerHeartbeat()

fsp_err_t RM_BLE_MESH_UPPER_TRANS_TriggerHeartbeat (rm_ble_mesh_upper_trans_ctrl_t *const *p_ctrl*, uint8_t *change_in_feature_bit*)

To trigger Heartbeat send on change in feature. This routine triggers the Heartbeat send on change in state of supported features.

Implements rm_ble_mesh_upper_trans_api_t::triggerHeartbeat.

Example:

```
/* Trigger heartbeat send on change in feature. */
   err = RM_BLE_MESH_UPPER_TRANS_TriggerHeartbeat(&g_ble_mesh_upper_trans0_ctrl,
change_in_feature_bit);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_POINTER	The internal parameter is NULL.

fsp_err_t	RM_BLE_MESH_ConvertTransitionTimeToMs (rm_ble_mesh_ctrl_t *const p_ctrl, uint8_t transition_time, uint32_t *const p_transition_time_in_ms)

Detailed Description

Overview

Bluetooth Mesh defines a managed-flood-based mesh network. Any device in the network can send a message at any time as long as there is a sufficient density of devices that are listening and relaying messages.

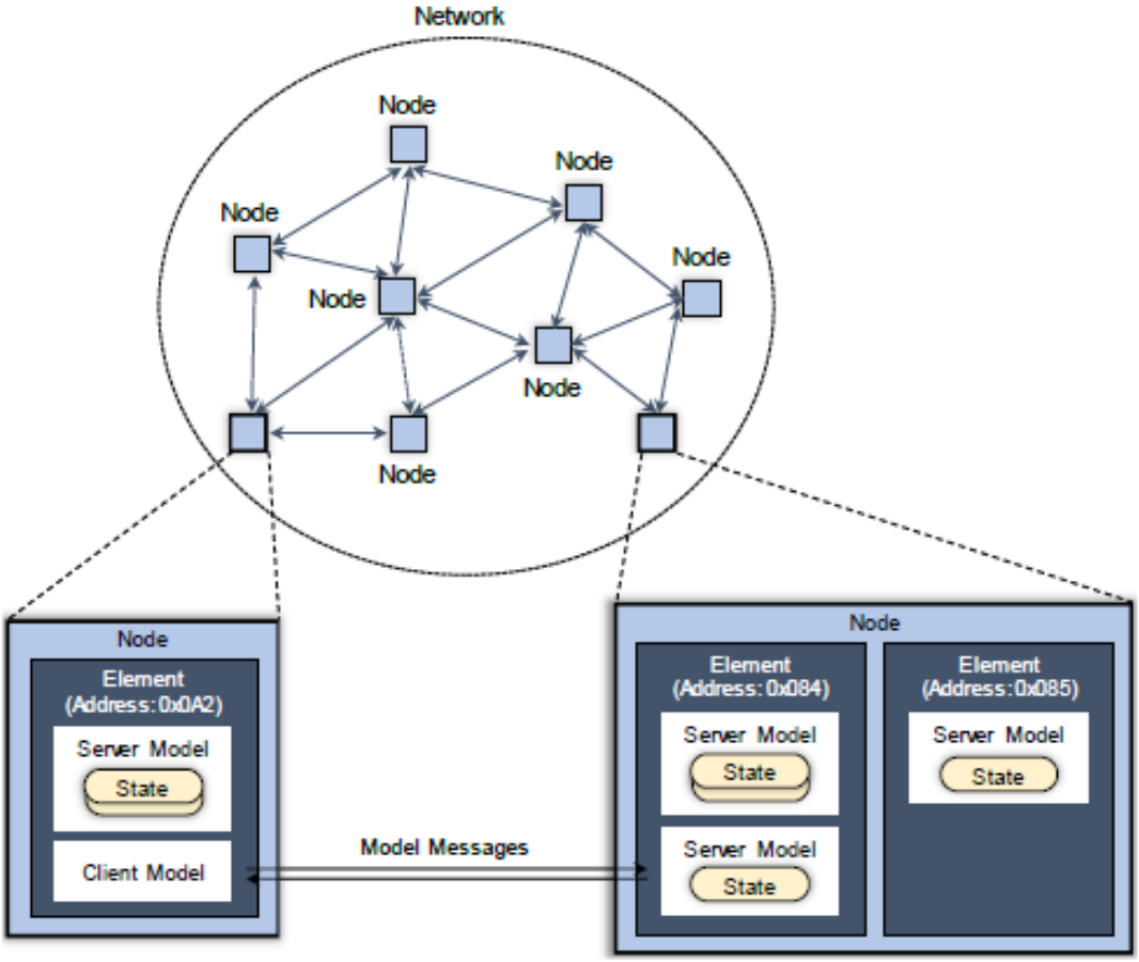

Figure 140: Overview Of Bletooth Mesh

Features

The BLE Mesh middleware has the following features:

- Supports one-to-one and one-to-many message transmission
- Supports relay messages to other nodes
- Supports secure message transmission against the following attack
  - Wiretap attack
  - Man-in-the-middle attack
  - Replay attack
  - Trash-can attack
  - Brute Force Key attack
- Supports following optional features
  - Supports Relay feature
  - Supports Proxy feature
  - Supports Friend feature
  - Supports Low Power feature

Configuration

Clock Configuration

Note

System clock (ICLK): 8 MHz or more
Peripheral module clock A (PCLKA): 8MHz or more
The BLE Protocol Stack is optimized for ICLK and PCLKA frequencies of 32 MHz.
It is recommended that the clock be set so that the ICLK and PCLKA frequencies are 32MHz in order to get the best performance from the BLE.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Mesh System Architecture

Purpose of each layer is,

Model layer

Model is a standardized typical functionality so that nodes perform operations in accordance with application scenario.

Foundation Model layer

Foundation Models are models to configure and manage operations of elements.

Access layer

The access layer defines how higher layer applications can use the upper transport layer.

Upper transport layer

The upper transport layer encrypts, decrypts, and authenticates application data and is designed to provide confidentiality of access messages.

Lower transport layer

The lower transport layer defines how upper transport layer messages are segmented and reassembled into multiple Lower Transport PDUs to deliver large upper transport layer messages to other nodes.

Network layer

The network layer defines how transport messages are addressed towards one or more elements.

Bearer layer

The bearer layer defines how network messages are transported between nodes.

Device Life Cycle

The device not joined in the mesh network is an Unprovisioned Device and the device joined in the mesh network is called a Node.

- Unprovisioned Device
  Unprovisioned device cannot send or receive mesh messages. However, it will advertise its presence to the provisioner. By the provisioner, Unprovisioned Devices are invited to join the mesh network and become nodes(Provisioning).
- Node
  Nodes can send and receive mesh messages. It is managed by the configuration client through the mesh network, which configures how the nodes communicate. The configuration client can also remove a Node from the mesh network, which will return the node to an Unprovisioned Device.

To communicate with other nodes by using Models, each node needs Configuration. By Configuration process, information required for Model operation such as Application Keys, Publish Address, Subscription Address is configured. Following shows a typical lifecycle of a node.

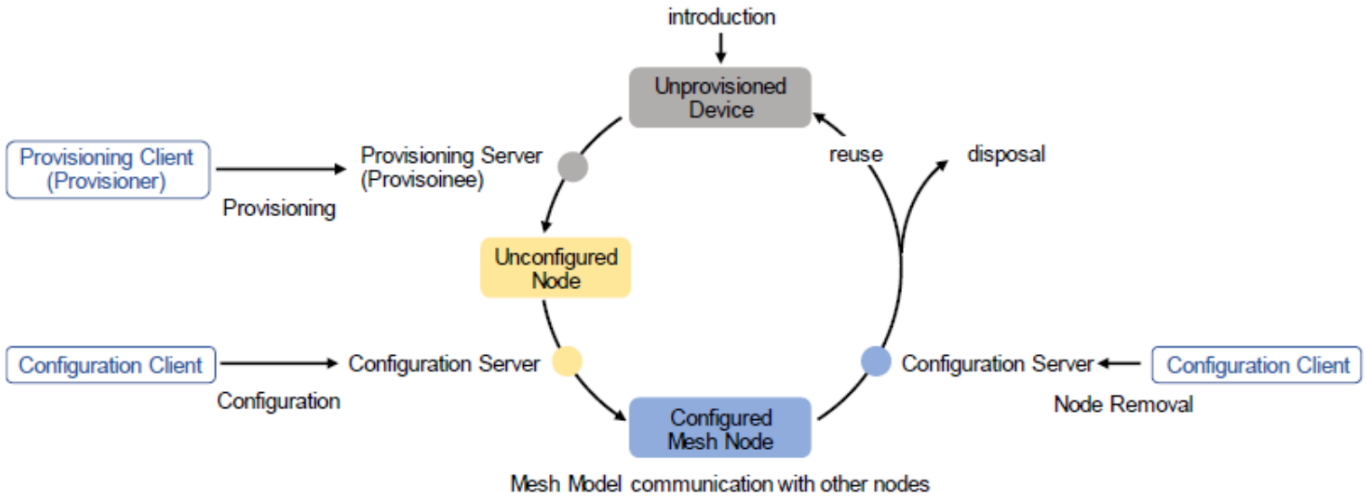

Figure 141: Device Life Cycle Image

Newly introduced device is provisioned by Provisioner and joins a network. Furthermore, this device is configured by Configuration Client and becomes to be able to communicate with other nodes with Mesh Model. Generally, Configuration Client is a smart phone or other mobile computing device. Configuration Client removes a node from a network by sending Config Node Reset message. Besides, Configuration Client updates encryption keys used in the network, and the removed node becomes unable to communicate with other nodes.

Examples

BLE_MESH Basic Example

This is a basic example of minimal use of the BLE_MESH in an application.

```

Data Structures

struct	rm_ble_mesh_instance_ctrl_t

Data Structure Documentation

◆ rm_ble_mesh_instance_ctrl_t

struct rm_ble_mesh_instance_ctrl_t
RM_BLE_MESH_BEARER private control block. DO NOT MODIFY. Initialization occurs when RM_BLE_MESH_BEARER_Open() is called.

Function Documentation

◆ RM_BLE_MESH_Open()

fsp_err_t RM_BLE_MESH_Open (rm_ble_mesh_ctrl_t *const *p_ctrl*, rm_ble_mesh_cfg_t const *const *p_cfg*)

Open ble mesh middleware. API to initialize Mesh Stack. This is the first API that the application should call before any other API. This function initializes all the internal stack modules and data structures.

Implements rm_ble_mesh_api_t::open.

Example:

```
/* Open the module. */
   err = RM_BLE_MESH_Open(&g_ble_mesh0_ctrl, &g_ble_mesh0_cfg);
```

Return values

FSP_SUCCESS	Module opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Module is already open.

◆ RM_BLE_MESH_Close()

fsp_err_t RM_BLE_MESH_Close (rm_ble_mesh_ctrl_t *const *p_ctrl*)

Close ble mesh middleware. API to turn off Bluetooth Hardware. This API should be called after RM_BLE_MESH_Open.

Implements rm_ble_mesh_api_t::close.

Example:

```
/* Close the module. */
   err = RM_BLE_MESH_Close(&g_ble_mesh0_ctrl);
```

Return values

FSP_SUCCESS	Module successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_StartTransitionTimer()

fsp_err_t RM_BLE_MESH_StartTransitionTimer (rm_ble_mesh_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_state_transition_t const *const *p_transition*, uint16_t *const *p_transition_time_handle*)

To start transition timer. API to start a transition timer.

Implements rm_ble_mesh_api_t::startTransitionTimer.

Example:

```
/* Start transition timer. */
   err = RM_BLE_MESH_StartTransitionTimer(&g_ble_mesh0_ctrl, &transition,
&transition_time_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_transition is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.

◆ RM_BLE_MESH_StopTransitionTimer()

fsp_err_t RM_BLE_MESH_StopTransitionTimer (rm_ble_mesh_ctrl_t *const *p_ctrl*, uint16_t *transition_time_handle*)

To stop transition timer. API to stop a transition timer.

Implements rm_ble_mesh_api_t::stopTransitionTimer.

Example:

```
/* Stop transition timer. */
   err = RM_BLE_MESH_StopTransitionTimer(&g_ble_mesh0_ctrl, transition_time_handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_GetRemainingTransitionTime()

fsp_err_t RM_BLE_MESH_GetRemainingTransitionTime (rm_ble_mesh_ctrl_t *const *p_ctrl*, uint16_t *transition_time_handle*, uint8_t *const *p_remaining_transition_time*)

To get remaining Transition Time. API to get remaining Transition Time.

Implements rm_ble_mesh_api_t::getRemainingTransitionTime.

Example:

```
/* Get remaining transition time. */
   err = RM_BLE_MESH_GetRemainingTransitionTime(&g_ble_mesh0_ctrl,
transition_time_handle, &remaining_transition_time);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_remaining_transition_time is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_GetRemainingTransitionTimeWithOffset()

fsp_err_t RM_BLE_MESH_GetRemainingTransitionTimeWithOffset (rm_ble_mesh_ctrl_t *const *p_ctrl*, uint16_t *transition_time_handle*, uint32_t *offset_in_ms*, uint8_t *const *p_remaining_transition_time*)

To get remaining Transition Time, with offset. API to get remaining Transition Time with offset in ms.

Implements rm_ble_mesh_api_t::getRemainingTransitionTimeWithOffset.

Example:

```
/* Get remaining transition time with offset. */
   err = RM_BLE_MESH_GetRemainingTransitionTimeWithOffset(&g_ble_mesh0_ctrl,
                                                          transition_time_handle,
                                                          offset_in_ms,

&remaining_transition_time);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_remaining_transition_time is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_NOT_FOUND	Input parameter is not found.

◆ RM_BLE_MESH_ConvertTransitionTimeFromMs()

fsp_err_t RM_BLE_MESH_ConvertTransitionTimeFromMs (rm_ble_mesh_ctrl_t *const *p_ctrl*, uint32_t *transition_time_in_ms*, uint8_t *const *p_transition_time*)

To convert transition time from milisecond. API to convert transition timer in milisecond to Generic Default Transition Time state format.

Implements rm_ble_mesh_api_t::convertTransitionTimeFromMs.

Example:

```
/* Convert transition time from milliseconds. */
   err = RM_BLE_MESH_ConvertTransitionTimeFromMs(&g_ble_mesh0_ctrl,
transition_time_in_ms, &transition_time);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_transition_time is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_BLE_MESH_ConvertTransitionTimeToMs()

fsp_err_t RM_BLE_MESH_ConvertTransitionTimeToMs (rm_ble_mesh_ctrl_t *const *p_ctrl*, uint8_t *transition_time*, uint32_t *const *p_transition_time_in_ms*)

To convert transition time to milisecond. API to convert Generic Default Transition Time state format to required transition time value in miliseconds.

Implements rm_ble_mesh_api_t::convertTransitionTimeToMs.

Example:

```
/* Convert transition time to milliseconds. */
   err = RM_BLE_MESH_ConvertTransitionTimeToMs(&g_ble_mesh0_ctrl, transition_time,
&transition_time_in_ms);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_transition_time_in_ms is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

4.2.1.8 Bluetooth Low Energy Mesh Network Bearer Platform (rm_mesh_bearer_platform)

Modules » Bluetooth Low Energy Mesh Network Modules

fsp_err_t	RM_MESH_BEARER_PLATFORM_ConfigureNotification (rm_mesh_bearer_platform_ctrl_t *const p_ctrl, uint16_t handle, rm_mesh_bearer_platform_state_t state, rm_mesh_bearer_platform_gatt_mode_t mode)

fsp_err_t	RM_MESH_BEARER_PLATFORM_Disconnect (rm_mesh_bearer_platform_ctrl_t *const p_ctrl, uint16_t handle)

Detailed Description

Overview

Data Structures

struct	rm_mesh_bearer_platform_instance_ctrl_t
struct	rm_mesh_bearer_platform_extended_cfg_t

Data Structure Documentation

◆ rm_mesh_bearer_platform_instance_ctrl_t

struct rm_mesh_bearer_platform_instance_ctrl_t
RM_BLE_MESH_BEARER private control block. DO NOT MODIFY. Initialization occurs when RM_BLE_MESH_BEARER_Open() is called.

◆ rm_mesh_bearer_platform_extended_cfg_t

struct rm_mesh_bearer_platform_extended_cfg_t
Bearer port extension for renesas BLE stack.

Function Documentation

◆ RM_MESH_BEARER_PLATFORM_Open()

fsp_err_t RM_MESH_BEARER_PLATFORM_Open (rm_mesh_bearer_platform_ctrl_t *const *p_ctrl*, rm_mesh_bearer_platform_cfg_t const *const *p_cfg*)

Open Bearer Platform middleware. Initialize underlying BLE Protocol Stack to use as a Mesh Bearer. API to initialize underlying BLE Protocol Stack to use as a Mesh Bearer. Completion of the initialization is notified by the callback function.

Implements rm_mesh_bearer_platform_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_BEARER_PLATFORM_Open(&g_mesh_bearer_platform0_ctrl,
&g_mesh_bearer_platform0_cfg);
```

Return values

FSP_SUCCESS	Module opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Module is already open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_MESH_BEARER_PLATFORM_Close()

fsp_err_t RM_MESH_BEARER_PLATFORM_Close (rm_mesh_bearer_platform_ctrl_t *const *p_ctrl*)

Close Bearer Platform middleware. Terminate BLE stack.

Implements rm_mesh_bearer_platform_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_BEARER_PLATFORM_Close(&g_mesh_bearer_platform0_ctrl);
```

Return values

FSP_SUCCESS	Module opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MESH_BEARER_PLATFORM_Setup()

fsp_err_t RM_MESH_BEARER_PLATFORM_Setup (rm_mesh_bearer_platform_ctrl_t *const *p_ctrl*)

Register ADV bearer with Mesh stack and start scan. API to register ADV bearer with Mesh stack. After registering, this routine starts Scan.

Parameters

[in]	p_ctrl	rm_mesh_bearer_platform control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_BEARER_PLATFORM_CallbackSet()

fsp_err_t RM_MESH_BEARER_PLATFORM_CallbackSet (rm_mesh_bearer_platform_ctrl_t *const *p_ctrl*, rm_mesh_bearer_platform_gatt_iface_cb_t *callback*)

Register callback function to receive GATT interface events. API to register callback function to receive GATT interface events.

Parameters

[in]	p_ctrl	rm_mesh_bearer_platform control block.
[in]	callback	Callback function.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_BEARER_PLATFORM_SetGattMode()

fsp_err_t RM_MESH_BEARER_PLATFORM_SetGattMode (rm_mesh_bearer_platform_ctrl_t *const *p_ctrl*, rm_mesh_bearer_platform_gatt_mode_t *mode*)

Set GATT Bearer mode.

Parameters

[in]	p_ctrl	rm_mesh_bearer_platform control block.
[in]	mode	GATT interface mode, either RM_MESH_BEARER_PLATFORM_GATT_MODE_PROVISION or RM_MESH_BEARER_PLATFORM_GATT_MODE_PROXY.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_BEARER_PLATFORM_GetGattMode()

fsp_err_t RM_MESH_BEARER_PLATFORM_GetGattMode (rm_mesh_bearer_platform_ctrl_t *const *p_ctrl*, rm_mesh_bearer_platform_gatt_mode_t * *p_mode*)

Get current GATT Bearer mode.

Parameters

[in]	p_ctrl	rm_mesh_bearer_platform control block.
[in]	p_mode	GATT interface mode, either RM_MESH_BEARER_PLATFORM_GATT_MODE_PROVISION or RM_MESH_BEARER_PLATFORM_GATT_MODE_PROXY.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_mode is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_BEARER_PLATFORM_SetScanResponseData()

fsp_err_t RM_MESH_BEARER_PLATFORM_SetScanResponseData (rm_mesh_bearer_platform_ctrl_t *const *p_ctrl*, uint8_t * *p_data*, uint8_t *len*)

Set scan response data in connectable and scannable undirected advertising event. API to Set Scan Response Data in Connectable and scannable undirected Advertising event. Scan Response Data can be used for indicating additional information such as << Complete Local Name>>.

Implements rm_mesh_bearer_platform_api_t::setScanResponseData.

Example:

```
 /* Set scan response data in connectable and scannable undirected advertising
event.. */
    err = RM_MESH_BEARER_PLATFORM_SetScanResponseData(&g_mesh_bearer_platform0_ctrl,
&data, length);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_data is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MESH_BEARER_PLATFORM_ScanGattBearer()

fsp_err_t RM_MESH_BEARER_PLATFORM_ScanGattBearer (rm_mesh_bearer_platform_ctrl_t *const *p_ctrl*, rm_mesh_bearer_platform_state_t *state*, rm_mesh_bearer_platform_gatt_mode_t *mode*)

Manage reporting connectable device having Mesh GATT service. API to manage reporting connectable device having Mesh GATT service.

Parameters

[in]	p_ctrl	rm_mesh_bearer_platform control block.
[in]	state	Notification configuration flag; enable if RM_MESH_BEARER_PLATFORM_STATE_ENABLE, or disable if RM_MESH_BEARER_PLATFORM_STATE_DISABLE.
[in]	mode	GATT interface mode, either RM_MESH_BEARER_PLATFORM_GATT_MODE_PROVISION or RM_MESH_BEARER_PLATFORM_GATT_MODE_PROXY.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_BEARER_PLATFORM_Connect()

fsp_err_t RM_MESH_BEARER_PLATFORM_Connect (rm_mesh_bearer_platform_ctrl_t *const *p_ctrl*, uint8_t * *p_remote_address*, uint8_t *address_type*, rm_mesh_bearer_platform_gatt_mode_t *mode*)

Request to create connection. API to request to Create Connection. Completion of the establishing a connection is notified by RM_BLE_MESH_BEARER_IFACE_UP. After establishing a connection, RM_MESH_BEARER_PLATFORM_DiscoverService() is invoked automatically.

Implements rm_mesh_bearer_platform_api_t::connect.

Example:

```
/* Request to create connection. */
   err = RM_MESH_BEARER_PLATFORM_Connect(&g_mesh_bearer_platform0_ctrl,
                                         &remote_address,
                                         bearer_address_type,
RM_MESH_BEARER_PLATFORM_GATT_MODE_PROVISION);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_remote_address is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MESH_BEARER_PLATFORM_DiscoverService()

fsp_err_t RM_MESH_BEARER_PLATFORM_DiscoverService (rm_mesh_bearer_platform_ctrl_t *const *p_ctrl*, uint16_t *handle*, rm_mesh_bearer_platform_gatt_mode_t *mode*)

Start service discovery for Mesh GATT service. API to start Service Discovery for Mesh GATT Service. If Mesh GATT Service specified by the "mode" argument, this routine enables Notification of the Mesh GATT Service by invoking RM_MESH_BEARER_PLATFORM_ConfigureNotification().

Implements rm_mesh_bearer_platform_api_t::discoverService.

Example:

```
/* Start service discovery for Mesh GATT service. */
   err = RM_MESH_BEARER_PLATFORM_DiscoverService(&g_mesh_bearer_platform0_ctrl,
                                                 handle,
RM_MESH_BEARER_PLATFORM_GATT_MODE_PROVISION);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MESH_BEARER_PLATFORM_ConfigureNotification()

fsp_err_t RM_MESH_BEARER_PLATFORM_ConfigureNotification (rm_mesh_bearer_platform_ctrl_t *const *p_ctrl*, uint16_t *handle*, rm_mesh_bearer_platform_state_t *state*, rm_mesh_bearer_platform_gatt_mode_t *mode*)

Configure GATT notification of Mesh GATT service. API to configure GATT Notification of Mesh GATT Service.

Implements rm_mesh_bearer_platform_api_t::configureNotification.

Example:

```
/* Configure GATT notification of Mesh GATT service. */
   err =
RM_MESH_BEARER_PLATFORM_ConfigureNotification(&g_mesh_bearer_platform0_ctrl,
                                              handle,
 RM_MESH_BEARER_PLATFORM_STATE_ENABLE,
 RM_MESH_BEARER_PLATFORM_GATT_MODE_PROVISION);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

◆ RM_MESH_BEARER_PLATFORM_Disconnect()

fsp_err_t RM_MESH_BEARER_PLATFORM_Disconnect (rm_mesh_bearer_platform_ctrl_t *const *p_ctrl*, uint16_t *handle*)

Terminate Connection. API to terminate connection.

Implements rm_mesh_bearer_platform_api_t::disconnect.

Example:

```
/* Terminate Connection. */
   err = RM_MESH_BEARER_PLATFORM_Disconnect(&g_mesh_bearer_platform0_ctrl, handle);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_NOT_OPEN	Module is not open.

Detailed Description

Overview

Data Structures

struct	rm_mesh_config_clt_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_config_clt_instance_ctrl_t

struct rm_mesh_config_clt_instance_ctrl_t
BLE mesh config instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_CONFIG_CLT_Open() is called.

Function Documentation

◆ RM_MESH_CONFIG_CLT_Open()

fsp_err_t RM_MESH_CONFIG_CLT_Open (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_config_client_cfg_t const *const *p_cfg*)

Open Configuration Client middleware. This is to initialize Configuration Client model and to register with Access layer.
 	
Implements rm_ble_mesh_config_client_api_t::open.
 	
Example:
`/* Open the module. */`
`err = RM_MESH_CONFIG_CLT_Open(&g_mesh_config_clt0_ctrl, &g_mesh_config_clt0_cfg);`
 	
Return values
FSP_SUCCESS — Model opened successfully.
FSP_ERR_ASSERTION — Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN — Model is already open.
FSP_ERR_NOT_FOUND — The number of models has exceeded the limit.
FSP_ERR_ABORTED — Model initialization is failed.

◆ RM_MESH_CONFIG_CLT_Close()

fsp_err_t RM_MESH_CONFIG_CLT_Close (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*)

Close Configuration Client middleware.

Implements rm_ble_mesh_config_client_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_CONFIG_CLT_Close(&g_mesh_config_clt0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_CONFIG_CLT_SetServer()

fsp_err_t RM_MESH_CONFIG_CLT_SetServer (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_network_address_t *server_addr*, uint8_t * *p_dev_key*)

This is to sets the information about server which is to be configured.

Implements rm_ble_mesh_config_client_api_t::setServer.

Example:

```
/* Sets the information about server which is to be configured. */
   err = RM_MESH_CONFIG_CLT_SetServer(&g_mesh_config_clt0_ctrl, server_addr,
&dev_key);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.

◆ RM_MESH_CONFIG_CLT_SendReliablePdu()

fsp_err_t RM_MESH_CONFIG_CLT_SendReliablePdu (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, uint32_t *req_opcode*, void const *const *p_parameter*, uint32_t *rsp_opcode*)

This is to initialize sending acknowledged commands.

Implements rm_ble_mesh_config_client_api_t::sendReliablePdu.

Example:

```
/* Initialize sending acknowledged commands. */
   err = RM_MESH_CONFIG_CLT_SendReliablePdu(&g_mesh_config_clt0_ctrl, req_opcode,
p_parameter, rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_BeaconGet()

fsp_err_t RM_MESH_CONFIG_CLT_BeaconGet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*)

The Config Beacon Get is an acknowledged message used to get the current Secure Network Beacon state of a node.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_BeaconSet()

fsp_err_t RM_MESH_CONFIG_CLT_BeaconSet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Beacon Set is an acknowledged message used to set the current Secure Network Beacon state of a node.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_beacon_set_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_CompositionDataGet()

fsp_err_t RM_MESH_CONFIG_CLT_CompositionDataGet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Composition Data Get is an acknowledged message used to read one page of the Composition Data.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_composition_data_get_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_DefaultTtlGet()

fsp_err_t RM_MESH_CONFIG_CLT_DefaultTtlGet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*)

Config Default TTL Get is an acknowledged message used to get the current Default TTL state of a node.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_DefaultTtlSet()

fsp_err_t RM_MESH_CONFIG_CLT_DefaultTtlSet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Default TTL Set is an acknowledged message used to set the Default TTL state of a node.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_default_ttl_set_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_GattProxyGet()

fsp_err_t RM_MESH_CONFIG_CLT_GattProxyGet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*)

The Config GATT Proxy Get is an acknowledged message used to get the GATT Proxy state of a node.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_GattProxySet()

fsp_err_t RM_MESH_CONFIG_CLT_GattProxySet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config GATT Proxy Set is an acknowledged message used to set the GATT Proxy state of a node.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_gatt_proxy_set_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_RelayGet()

fsp_err_t RM_MESH_CONFIG_CLT_RelayGet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*)

The Config Relay Get is an acknowledged message used to get the current Relay and Relay Retransmit states of a node.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_RelaySet()

fsp_err_t RM_MESH_CONFIG_CLT_RelaySet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Relay Set is an acknowledged message used to set the current Relay and Relay Retransmit states of a node.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_relay_set_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_ModelPublicationGet()

fsp_err_t RM_MESH_CONFIG_CLT_ModelPublicationGet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Model Publication Get is an acknowledged message used to get the publish address and parameters of an outgoing message that originates from a model.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_model_publication_get_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_ModelPublicationSet()

fsp_err_t RM_MESH_CONFIG_CLT_ModelPublicationSet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Model Publication Set is an acknowledged message used to set the Model Publication state of an outgoing message that originates from a model.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_model_publication_set_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_ModelPublicationVaddrSet()

fsp_err_t RM_MESH_CONFIG_CLT_ModelPublicationVaddrSet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Model Publication Set is an acknowledged message used to set the Model Publication state of an outgoing message that originates from a model.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_model_publication_virtual_address_set_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_ModelSubscriptionAdd()

fsp_err_t RM_MESH_CONFIG_CLT_ModelSubscriptionAdd (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Model Subscription Add is an acknowledged message used to add an address to a Subscription List of a model.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_model_subscription_add_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_ModelSubscriptionVaddrAdd()

fsp_err_t RM_MESH_CONFIG_CLT_ModelSubscriptionVaddrAdd (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Model Subscription Add is an acknowledged message used to add an address to a Subscription List of a model.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_model_subscription_virtual_address_add_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_ModelSubscriptionDelete()

fsp_err_t RM_MESH_CONFIG_CLT_ModelSubscriptionDelete (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Model Subscription Delete is an acknowledged message used to delete a subscription address from the Subscription List of a model.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_model_subscription_delete_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_ModelSubscriptionVaddrDelete()

fsp_err_t RM_MESH_CONFIG_CLT_ModelSubscriptionVaddrDelete (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Model Subscription Delete is an acknowledged message used to delete a subscription address from the Subscription List of a model.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_model_subscription_virtual_address_delete_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_ModelSubscriptionOverwrite()

fsp_err_t RM_MESH_CONFIG_CLT_ModelSubscriptionOverwrite (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Model Subscription Overwrite is an acknowledged message used to discard the Subscription List and add an address to the cleared Subscription List of a model.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_model_subscription_overwrite_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_ModelSubscriptionVaddrOverwrite()

fsp_err_t RM_MESH_CONFIG_CLT_ModelSubscriptionVaddrOverwrite (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Model Subscription Overwrite is an acknowledged message used to discard the Subscription List and add an address to the cleared Subscription List of a model.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_model_subscription_virtual_address_overwrite_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_ModelSubscriptionDeleteAll()

fsp_err_t RM_MESH_CONFIG_CLT_ModelSubscriptionDeleteAll (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Model Subscription Delete All is an acknowledged message used to discard the Subscription List of a model.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_model_subscription_delete_all_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_SigModelSubscriptionGet()

fsp_err_t RM_MESH_CONFIG_CLT_SigModelSubscriptionGet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config SIG Model Subscription Get is an acknowledged message used to get the list of subscription addresses of a model within the element. This message is only for SIG Models.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_sig_model_subscription_get_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_VendorModelSubscriptionGet()

fsp_err_t RM_MESH_CONFIG_CLT_VendorModelSubscriptionGet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config SIG Model Subscription Get is an acknowledged message used to get the list of subscription addresses of a model within the element. This message is only for Vendor Models.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_vendor_model_subscription_get_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_NetkeyAdd()

fsp_err_t RM_MESH_CONFIG_CLT_NetkeyAdd (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config NetKey Add is an acknowledged message used to add a NetKey to a NetKey List on a node. The added NetKey is then used by the node to authenticate and decrypt messages it receives, as well as authenticate and encrypt messages it sends.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_netkey_add_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_NetkeyUpdate()

fsp_err_t RM_MESH_CONFIG_CLT_NetkeyUpdate (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config NetKey Update is an acknowledged message used to update a NetKey on a node. The updated NetKey is then used by the node to authenticate and decrypt messages it receives, as well as authenticate and encrypt messages it sends, as defined by the Key Refresh procedure.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_netkey_update_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_NetkeyDelete()

fsp_err_t RM_MESH_CONFIG_CLT_NetkeyDelete (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config NetKey Delete is an acknowledged message used to delete a NetKey on a NetKey List from a node.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_netkey_delete_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_NetkeyGet()

fsp_err_t RM_MESH_CONFIG_CLT_NetkeyGet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*)

The Config NetKey Get is an acknowledged message used to report all NetKeys known to the node.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_AppkeyAdd()

fsp_err_t RM_MESH_CONFIG_CLT_AppkeyAdd (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config AppKey Add is an acknowledged message used to add an AppKey to the AppKey List on a node and bind it to the NetKey identified by NetKeyIndex. The added AppKey can be used by the node only as a pair with the specified NetKey. The AppKey is used to authenticate and decrypt messages it receives, as well as authenticate and encrypt messages it sends.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_appkey_add_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_AppkeyUpdate()

fsp_err_t RM_MESH_CONFIG_CLT_AppkeyUpdate (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config AppKey Update is an acknowledged message used to update an AppKey value on the AppKey List on a node. The updated AppKey is used by the node to authenticate and decrypt messages it receives, as well as authenticate and encrypt messages it sends, as defined by the Key Refresh procedure.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_appkey_update_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_AppkeyDelete()

fsp_err_t RM_MESH_CONFIG_CLT_AppkeyDelete (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config AppKey Delete is an acknowledged message used to delete an AppKey from the AppKey List on a node

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_appkey_delete_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_AppkeyGet()

fsp_err_t RM_MESH_CONFIG_CLT_AppkeyGet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The AppKey Get is an acknowledged message used to report all AppKeys bound to the NetKey.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_appkey_get_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_NodeIdentityGet()

fsp_err_t RM_MESH_CONFIG_CLT_NodeIdentityGet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Node Identity Get is an acknowledged message used to get the current Node Identity state for a subnet.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_node_id_get_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_NodeIdentitySet()

fsp_err_t RM_MESH_CONFIG_CLT_NodeIdentitySet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Node Identity Set is an acknowledged message used to set the current Node Identity state for a subnet.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_node_id_set_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_ModelAppBind()

fsp_err_t RM_MESH_CONFIG_CLT_ModelAppBind (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Model App Bind is an acknowledged message used to bind an AppKey to a model.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_model_app_bind_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_ModelAppUnbind()

fsp_err_t RM_MESH_CONFIG_CLT_ModelAppUnbind (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Model App Unbind is an acknowledged message used to remove the binding between an AppKey and a model.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_model_app_unbind_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_SigModelAppGet()

fsp_err_t RM_MESH_CONFIG_CLT_SigModelAppGet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config SIG Model App Get is an acknowledged message used to request report of all AppKeys bound to the SIG Model.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_sig_model_app_get_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_VendorModelAppGet()

fsp_err_t RM_MESH_CONFIG_CLT_VendorModelAppGet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Vendor Model App Get is an acknowledged message used to request report of all AppKeys bound to the Vendor Model.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_vendor_model_app_get_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_NodeReset()

fsp_err_t RM_MESH_CONFIG_CLT_NodeReset (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*)

The Config Node Reset is an acknowledged message used to reset a node (other than a Provisioner) and remove it from the network.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_FriendGet()

fsp_err_t RM_MESH_CONFIG_CLT_FriendGet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*)

The Config Friend Get is an acknowledged message used to get the current Friend state of a node.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_FriendSet()

fsp_err_t RM_MESH_CONFIG_CLT_FriendSet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Friend Set is an acknowledged message used to set the Friend state of a node.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_friend_set_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_KeyrefreshPhaseGet()

fsp_err_t RM_MESH_CONFIG_CLT_KeyrefreshPhaseGet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Key Refresh Phase Get is an acknowledged message used to get the current Key Refresh Phase state of the identified network key.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_key_refresh_phase_get_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_KeyrefreshPhaseSet()

fsp_err_t RM_MESH_CONFIG_CLT_KeyrefreshPhaseSet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Key Refresh Phase Set is an acknowledged message used to set the current Key Refresh Phase state of the identified network key.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_key_refresh_phase_set_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_HeartbeatPublicationGet()

fsp_err_t RM_MESH_CONFIG_CLT_HeartbeatPublicationGet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*)

The Config Heartbeat Publication Get is an acknowledged message used to get the current Heartbeat Publication state of an element.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_HeartbeatPublicationSet()

fsp_err_t RM_MESH_CONFIG_CLT_HeartbeatPublicationSet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Heartbeat Publication Set is an acknowledged message used to set the current Heartbeat Publication state of an element.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_heartbeat_publication_set_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_HeartbeatSubscriptionGet()

fsp_err_t RM_MESH_CONFIG_CLT_HeartbeatSubscriptionGet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*)

The Config Heartbeat Subscription Get is an acknowledged message used to get the current Heartbeat Subscription state of an element.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_HeartbeatSubscriptionSet()

fsp_err_t RM_MESH_CONFIG_CLT_HeartbeatSubscriptionSet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Heartbeat Publication Set is an acknowledged message used to set the current Heartbeat Subscription state of an element.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_heartbeat_subscription_set_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_LpnPolltimeoutGet()

fsp_err_t RM_MESH_CONFIG_CLT_LpnPolltimeoutGet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Low Power Node PollTimeout Get is an acknowledged message used to get the current value of PollTimeout timer of the Low Power node within a Friend node. The message is sent to a Friend node that has claimed to be handling messages by sending ACKs On Behalf Of (OBO) the indicated Low Power node. This message should only be sent to a node that has the Friend feature supported and enabled.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_low_power_node_polling_timeout_get_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_NetworkTransmitGet()

fsp_err_t RM_MESH_CONFIG_CLT_NetworkTransmitGet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*)

The Config Network Transmit Get is an acknowledged message used to get the current Network Transmit state of a node.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_CONFIG_CLT_NetworkTransmitSet()

fsp_err_t RM_MESH_CONFIG_CLT_NetworkTransmitSet (rm_ble_mesh_config_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Config Network Transmit Set is an acknowledged message used to set the current Network Transmit state of a node.

Parameters

[in]	p_ctrl	rm_mesh_config_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_config_clt_network_transmit_set_parameter_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

4.2.1.10 Bluetooth Low Energy Mesh Network Config Server (rm_mesh_config_srv)

Modules » Bluetooth Low Energy Mesh Network Modules

Functions

fsp_err_t	RM_MESH_CONFIG_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const p_ctrl, rm_ble_mesh_model_server_cfg_t const *const p_cfg)
fsp_err_t	RM_MESH_CONFIG_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const p_ctrl)

fsp_err_t	RM_MESH_CONFIG_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const p_ctrl, rm_ble_mesh_access_server_state_t const *const p_state)

Detailed Description

Overview

Data Structures

struct	rm_mesh_config_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_config_srv_instance_ctrl_t

struct rm_mesh_config_srv_instance_ctrl_t

BLE mesh config instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_CONFIG_SRV_Open() is called.

Function Documentation

◆ RM_MESH_CONFIG_SRV_Open()

fsp_err_t RM_MESH_CONFIG_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize configuration server model. This is to initialize configuration server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_CONFIG_SRV_Open(&g_mesh_config_srv0_ctrl, &g_mesh_config_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_CONFIG_SRV_Close()

fsp_err_t RM_MESH_CONFIG_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate configuration server model. This is to terminate configuration server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_CONFIG_SRV_Close(&g_mesh_config_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_CONFIG_SRV_StateUpdate()

fsp_err_t RM_MESH_CONFIG_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err = RM_MESH_CONFIG_SRV_StateUpdate(&g_mesh_config_srv0_ctrl, &state);
```

Return values

FSP_ERR_UNSUPPORTED	This function is unsupported.

4.2.1.11 Bluetooth Low Energy Mesh Network Generic Admin Property Server (rm_mesh_generic_admin_prop_srv)

Modules » Bluetooth Low Energy Mesh Network Modules

Functions

fsp_err_t RM_MESH_GENERIC_ADMIN_PROP_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const p_ctrl, rm_ble_mesh_model_server_cfg_t const *const p_cfg)

fsp_err_t	RM_MESH_GENERIC_ADMIN_PROP_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const p_ctrl)
fsp_err_t	RM_MESH_GENERIC_ADMIN_PROP_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const p_ctrl, rm_ble_mesh_access_server_state_t const *const p_state)

Detailed Description

Overview

Data Structures

struct	rm_mesh_generic_admin_prop_srv_info_t
struct	rm_mesh_generic_admin_prop_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_generic_admin_prop_srv_info_t

struct rm_mesh_generic_admin_prop_srv_info_t		
Generic Admin Property is a state representing a device property of an element that can be read or written		
Data Fields		
uint16_t	property_id	Admin Property ID field is a 2-octet Assigned Number value referencing a device property
uint8_t	user_access	Admin User Access field is an enumeration indicating whether the device property can be read or written as a Generic User Property
uint8_t *	property_value	Admin Property Value field is a conditional field
uint16_t	property_value_len	

◆ rm_mesh_generic_admin_prop_srv_instance_ctrl_t

struct rm_mesh_generic_admin_prop_srv_instance_ctrl_t
BLE mesh generic admin prop instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_GENERIC_ADMIN_PROP_SRV_Open() is called.

Function Documentation

◆ RM_MESH_GENERIC_ADMIN_PROP_SRV_Open()

fsp_err_t RM_MESH_GENERIC_ADMIN_PROP_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize Generic_Admin_Property Server model. This is to initialize Generic_Admin_Property Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */
   err =
RM_MESH_GENERIC_ADMIN_PROP_SRV_Open(&g_mesh_generic_admin_prop_srv0_ctrl,
&g_mesh_generic_admin_prop_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_GENERIC_ADMIN_PROP_SRV_Close()

fsp_err_t RM_MESH_GENERIC_ADMIN_PROP_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate Generic_Admin_Property Server model. This is to terminate Generic_Admin_Property Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_GENERIC_ADMIN_PROP_SRV_Close(&g_mesh_generic_admin_prop_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_ADMIN_PROP_SRV_StateUpdate()

fsp_err_t RM_MESH_GENERIC_ADMIN_PROP_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err =
RM_MESH_GENERIC_ADMIN_PROP_SRV_StateUpdate(&g_mesh_generic_admin_prop_srv0_ctrl,
&state);
```

Return values

FSP_SUCCESS	Updated server status successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

4.2.1.12 Bluetooth Low Energy Mesh Network Generic Battery Client (rm_mesh_generic_battery_clt)

Modules » Bluetooth Low Energy Mesh Network Modules

Functions

fsp_err_t	RM_MESH_GENERIC_BATTERY_CLT_Open (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, rm_ble_mesh_model_client_cfg_t const *const p_cfg)

fsp_err_t	RM_MESH_GENERIC_BATTERY_CLT_Close (rm_ble_mesh_model_client_ctrl_t *const p_ctrl)
fsp_err_t	RM_MESH_GENERIC_BATTERY_CLT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t *const model_handle)
fsp_err_t	RM_MESH_GENERIC_BATTERY_CLT_SetModelHandle (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle)
fsp_err_t	RM_MESH_GENERIC_BATTERY_CLT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, uint32_t req_opcode, void const *const parameter, uint32_t rsp_opcode)
fsp_err_t	RM_MESH_GENERIC_BATTERY_CLT_Get (rm_ble_mesh_model_client_ctrl_t *const p_ctrl)

Detailed Description

Overview

Data Structures

struct	rm_mesh_generic_battery_clt_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_generic_battery_clt_instance_ctrl_t

struct rm_mesh_generic_battery_clt_instance_ctrl_t
BLE mesh generic battery instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_GENERIC_BATTERY_CLT_Open() is called.

Function Documentation

◆ RM_MESH_GENERIC_BATTERY_CLT_Open()

fsp_err_t RM_MESH_GENERIC_BATTERY_CLT_Open (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_client_cfg_t const *const *p_cfg*)

Open Generic Battery Client middleware. This is to initialize Generic_Battery Client model and to register with Access layer.

Implements rm_ble_mesh_model_client_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_GENERIC_BATTERY_CLT_Open(&g_mesh_generic_battery_clt0_ctrl,
&g_mesh_generic_battery_clt0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_GENERIC_BATTERY_CLT_Close()

fsp_err_t RM_MESH_GENERIC_BATTERY_CLT_Close (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Close Generic Battery Client middleware.

Implements rm_ble_mesh_model_client_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_GENERIC_BATTERY_CLT_Close(&g_mesh_generic_battery_clt0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_BATTERY_CLT_GetModelHandle()

fsp_err_t RM_MESH_GENERIC_BATTERY_CLT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *const *p_model_handle*)

This is to get the handle of Generic_Battery client model.

Implements rm_ble_mesh_model_client_api_t::getModelHandle.

Example:

```
/* Get the handle of generic battery client model. */
   err =
RM_MESH_GENERIC_BATTERY_CLT_GetModelHandle(&g_mesh_generic_battery_clt0_ctrl,
&model_handle);
```

Return values

FSP_SUCCESS	Got model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.

◆ RM_MESH_GENERIC_BATTERY_CLT_SetModelHandle()

fsp_err_t RM_MESH_GENERIC_BATTERY_CLT_SetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*)

This is to set the handle of Generic_Battery client model.

Implements rm_ble_mesh_model_client_api_t::setModelHandle.

Example:

```
/* Set the handle of generic battery client model. */
   err =
RM_MESH_GENERIC_BATTERY_CLT_SetModelHandle(&g_mesh_generic_battery_clt0_ctrl,
model_handle);
```

Return values

FSP_SUCCESS	Changed model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_BATTERY_CLT_SendReliablePdu()

fsp_err_t RM_MESH_GENERIC_BATTERY_CLT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, uint32_t *req_opcode*, void const *const *p_parameter*, uint32_t *rsp_opcode*)

This is to initialize sending acknowledged commands.

Implements rm_ble_mesh_model_client_api_t::sendReliablePdu.

Example:

```
/* Initialize sending acknowledged commands. */
   err =
RM_MESH_GENERIC_BATTERY_CLT_SendReliablePdu(&g_mesh_generic_battery_clt0_ctrl,
                                                    req_opcode,
                                                    p_parameter,
                                                    rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_BATTERY_CLT_Get()

fsp_err_t RM_MESH_GENERIC_BATTERY_CLT_Get (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Generic Battery Get message is an acknowledged message used to get the Generic Battery state of an element. The response to the Generic Battery Get message is a Generic Battery Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_generic_battery_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

4.2.1.13 Bluetooth Low Energy Mesh Network Generic Battery Server (rm_mesh_generic_battery_srv)

Modules » Bluetooth Low Energy Mesh Network Modules

Functions

fsp_err_t	RM_MESH_GENERIC_BATTERY_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const p_ctrl, rm_ble_mesh_model_server_cfg_t const *const p_cfg)
fsp_err_t	RM_MESH_GENERIC_BATTERY_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const p_ctrl)
fsp_err_t	RM_MESH_GENERIC_BATTERY_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const p_ctrl,

	rm_ble_mesh_access_server_state_t const *const p_state)

Detailed Description

Overview

Data Structures

struct	rm_mesh_generic_battery_srv_info_t
struct	rm_mesh_generic_battery_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_generic_battery_srv_info_t

struct rm_mesh_generic_battery_srv_info_t		
Generic Battery state is a set of four values representing the state of a battery		
Data Fields		
uint8_t	generic_battery_level	Generic Battery Level state is a value ranging from 0 percent through 100 percent
uint32_t	generic_battery_time_to_discharge	Generic Battery Time to Discharge state is a 24-bit unsigned value ranging from 0 through 0xFFFFFF
uint32_t	generic_battery_time_to_charge	Generic Battery Time to Charge state is a 24-bit unsigned value ranging from 0 through 0xFFFFFF
uint8_t	generic_battery_flags	Generic Battery Flags state is a concatenation of four 2-bit bit fields: Presence, Indicator, Charging, and Serviceability

◆ rm_mesh_generic_battery_srv_instance_ctrl_t

struct rm_mesh_generic_battery_srv_instance_ctrl_t
BLE mesh generic_battery instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_GENERIC_BATTERY_SRV_Open() is called.

Function Documentation

◆ RM_MESH_GENERIC_BATTERY_SRV_Open()

fsp_err_t RM_MESH_GENERIC_BATTERY_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize Generic_Battery Server model. This is to initialize Generic_Battery Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_GENERIC_BATTERY_SRV_Open(&g_mesh_generic_battery_srv0_ctrl,
&g_mesh_generic_battery_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_GENERIC_BATTERY_SRV_Close()

fsp_err_t RM_MESH_GENERIC_BATTERY_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate Generic_Battery Server model. This is to terminate Generic_Battery Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_GENERIC_BATTERY_SRV_Close(&g_mesh_generic_battery_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_BATTERY_SRV_StateUpdate()

fsp_err_t RM_MESH_GENERIC_BATTERY_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err = RM_MESH_GENERIC_BATTERY_SRV_StateUpdate(&g_mesh_generic_battery_srv0_ctrl,
&state);
```

Return values

FSP_SUCCESS	Updated server status successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

Modules » Bluetooth Low Energy Mesh Network Modules

Functions

fsp_err_t	RM_MESH_GENERIC_CLIENT_PROP_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const p_ctrl, rm_ble_mesh_model_server_cfg_t const *const p_cfg)
fsp_err_t	RM_MESH_GENERIC_CLIENT_PROP_SRV_Close

	(rm_ble_mesh_model_server_ctrl_t *const p_ctrl)
fsp_err_t	RM_MESH_GENERIC_CLIENT_PROP_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const p_ctrl, rm_ble_mesh_access_server_state_t const *const p_state)

Detailed Description

Overview

Data Structures

struct	rm_mesh_generic_client_prop_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_generic_client_prop_srv_instance_ctrl_t

struct rm_mesh_generic_client_prop_srv_instance_ctrl_t
BLE mesh generic client prop instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_GENERIC_CLIENT_PROP_SRV_Open() is called.

Function Documentation

◆ RM_MESH_GENERIC_CLIENT_PROP_SRV_Open()

fsp_err_t RM_MESH_GENERIC_CLIENT_PROP_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize Generic_Client_Property Server model. This is to initialize Generic_Client_Property Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_GENERIC_CLIENT_PROP_SRV_Open(&g_mesh_generic_client_prop_srv0_ctrl,
                                              &g_mesh_generic_client_prop_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_GENERIC_CLIENT_PROP_SRV_Close()

fsp_err_t RM_MESH_GENERIC_CLIENT_PROP_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate Generic_Client_Property Server model. This is to terminate Generic_Client_Property Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err =
RM_MESH_GENERIC_CLIENT_PROP_SRV_Close(&g_mesh_generic_client_prop_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_CLIENT_PROP_SRV_StateUpdate()

fsp_err_t RM_MESH_GENERIC_CLIENT_PROP_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err =
RM_MESH_GENERIC_CLIENT_PROP_SRV_StateUpdate(&g_mesh_generic_client_prop_srv0_ctrl,
&state);
```

Return values

FSP_SUCCESS	Updated server status successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

fsp_err_t	RM_MESH_GENERIC_DTT_CLT_Set (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)
fsp_err_t	RM_MESH_GENERIC_DTT_CLT_SetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)

Detailed Description

Overview

Data Structures

struct	rm_mesh_generic_dtt_clt_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_generic_dtt_clt_instance_ctrl_t

struct rm_mesh_generic_dtt_clt_instance_ctrl_t
BLE mesh generic dtt instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_GENERIC_DTT_CLT_Open() is called.

Function Documentation

◆ RM_MESH_GENERIC_DTT_CLT_Open()

fsp_err_t RM_MESH_GENERIC_DTT_CLT_Open (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_client_cfg_t const *const *p_cfg*)

Open Generic Default Transition Time Client middleware. This is to initialize Generic_Default_Transition_Time Client model and to register with Access layer.

Implements rm_ble_mesh_model_client_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_GENERIC_DTT_CLT_Open(&g_mesh_generic_dtt_clt0_ctrl,
&g_mesh_generic_dtt_clt0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_GENERIC_DTT_CLT_Close()

fsp_err_t RM_MESH_GENERIC_DTT_CLT_Close (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Close Generic Default Transition Time Client middleware.

Implements rm_ble_mesh_model_client_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_GENERIC_DTT_CLT_Close(&g_mesh_generic_dtt_clt0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_DTT_CLT_GetModelHandle()

fsp_err_t RM_MESH_GENERIC_DTT_CLT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *const *p_model_handle*)

This is to get the handle of Generic_Default_Transition_Time client model.

Implements rm_ble_mesh_model_client_api_t::getModelHandle.

Example:

```
/* Get the handle of generic default transition time client model. */
   err = RM_MESH_GENERIC_DTT_CLT_GetModelHandle(&g_mesh_generic_dtt_clt0_ctrl,
&model_handle);
```

Return values

FSP_SUCCESS	Got model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.

◆ RM_MESH_GENERIC_DTT_CLT_SetModelHandle()

fsp_err_t RM_MESH_GENERIC_DTT_CLT_SetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*)

This is to set the handle of Generic_Default_Transition_Time client model.

Implements rm_ble_mesh_model_client_api_t::setModelHandle.

Example:

```
/* Set the handle of generic default transition time client model. */
   err = RM_MESH_GENERIC_DTT_CLT_SetModelHandle(&g_mesh_generic_dtt_clt0_ctrl,
model_handle);
```

Return values

FSP_SUCCESS	Changed model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_DTT_CLT_SendReliablePdu()

fsp_err_t RM_MESH_GENERIC_DTT_CLT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, uint32_t *req_opcode*, void const *const *p_parameter*, uint32_t *rsp_opcode*)

This is to initialize sending acknowledged commands.

Implements rm_ble_mesh_model_client_api_t::sendReliablePdu.

Example:

```
/* Initialize sending acknowledged commands */
   err = RM_MESH_GENERIC_DTT_CLT_SendReliablePdu(&g_mesh_generic_dtt_clt0_ctrl,
req_opcode, p_parameter, rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_DTT_CLT_Get()

fsp_err_t RM_MESH_GENERIC_DTT_CLT_Get (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Generic Default Transition Time Get is an acknowledged message used to get the Generic Default Transition Time state of an element. The response to the Generic Default Transition Time Get message is a Generic Default Transition Time Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_generic_dtt_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_DTT_CLT_Set()

fsp_err_t RM_MESH_GENERIC_DTT_CLT_Set (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Default Transition Time Set is an acknowledged message used to set the Generic Default Transition Time state of an element. The response to the Generic Default Transition Time Set message is a Generic Default Transition Time Status message.

Parameters

[in]	p_ctrl	rm_mesh_generic_dtt_clt control block.
[in]	p_parameter	Pointer to transition time.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_DTT_CLT_SetUnacknowledged()

fsp_err_t RM_MESH_GENERIC_DTT_CLT_SetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Default Transition Time Set Unacknowledged is an unacknowledged message used to set the Generic Default Transition Time state of an element.

Parameters

[in]	p_ctrl	rm_mesh_generic_dtt_clt control block.
[in]	p_parameter	Pointer to transition time.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

struct	rm_mesh_generic_dtt_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_generic_dtt_srv_instance_ctrl_t

struct rm_mesh_generic_dtt_srv_instance_ctrl_t

BLE mesh generic dtt instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_GENERIC_DTT_SRV_Open() is called.

Function Documentation

◆ RM_MESH_GENERIC_DTT_SRV_Open()

fsp_err_t RM_MESH_GENERIC_DTT_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize Generic_Default_Transition_Time Server model. This is to initialize Generic_Default_Transition_Time Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_GENERIC_DTT_SRV_Open(&g_mesh_generic_dtt_srv0_ctrl,
&g_mesh_generic_dtt_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_GENERIC_DTT_SRV_Close()

fsp_err_t RM_MESH_GENERIC_DTT_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate Generic_Default_Transition_Time Server model. This is to terminate Generic_Default_Transition_Time Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_GENERIC_DTT_SRV_Close(&g_mesh_generic_dtt_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_DTT_SRV_GetTime()

fsp_err_t RM_MESH_GENERIC_DTT_SRV_GetTime (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_mesh_generic_dtt_srv_transtion_time_info_t *const *p_info*)

API to get default transition time. This is to get default transition time.

Parameters

[in]	p_ctrl	rm_mesh_generic_dtt_srv control block.
[in]	p_info	rm_mesh_generic_dtt_srv status information.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.

fsp_err_t	RM_MESH_GENERIC_LEVEL_CLT_MoveSet (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)
fsp_err_t	RM_MESH_GENERIC_LEVEL_CLT_MoveSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)

Detailed Description

Overview

Data Structures

struct	rm_mesh_generic_level_clt_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_generic_level_clt_instance_ctrl_t

struct rm_mesh_generic_level_clt_instance_ctrl_t
BLE mesh generic level instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_GENERIC_LEVEL_CLT_Open() is called.

Function Documentation

◆ RM_MESH_GENERIC_LEVEL_CLT_Open()

fsp_err_t RM_MESH_GENERIC_LEVEL_CLT_Open (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_client_cfg_t const *const *p_cfg*)

Open Generic_Level Client middleware. This is to initialize Generic_Level Client model and to register with Access layer.

Implements rm_ble_mesh_model_client_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_GENERIC_LEVEL_CLT_Open(&g_mesh_generic_level_clt0_ctrl,
&g_mesh_generic_level_clt0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_GENERIC_LEVEL_CLT_Close()

fsp_err_t RM_MESH_GENERIC_LEVEL_CLT_Close (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Close Generic_Level Client middleware.

Implements rm_ble_mesh_model_client_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_GENERIC_LEVEL_CLT_Close(&g_mesh_generic_level_clt0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_LEVEL_CLT_GetModelHandle()

fsp_err_t RM_MESH_GENERIC_LEVEL_CLT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *const *p_model_handle*)

This is to get the handle of Generic_Level client model.

Implements rm_ble_mesh_model_client_api_t::getModelHandle().

Example:

```
/* Get the handle of generic level client model. */
   err = RM_MESH_GENERIC_LEVEL_CLT_GetModelHandle(&g_mesh_generic_level_clt0_ctrl,
&model_handle);
```

Return values

FSP_SUCCESS	Got model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.

◆ RM_MESH_GENERIC_LEVEL_CLT_SetModelHandle()

fsp_err_t RM_MESH_GENERIC_LEVEL_CLT_SetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*)

This is to set the handle of Generic_Level client model.

Implements rm_ble_mesh_model_client_api_t::setModelHandle.

Example:

```
/* Set the handle of generic level client model. */
   err = RM_MESH_GENERIC_LEVEL_CLT_SetModelHandle(&g_mesh_generic_level_clt0_ctrl,
model_handle);
```

Return values

FSP_SUCCESS	Changed model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_LEVEL_CLT_SendReliablePdu()

fsp_err_t RM_MESH_GENERIC_LEVEL_CLT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, uint32_t *req_opcode*, void const *const *p_parameter*, uint32_t *rsp_opcode*)

This is to initialize sending acknowledged commands.

Implements rm_ble_mesh_model_client_api_t::sendReliablePdu.

Example:

```
/* Initialize sending acknowledged commands. */
   err =
RM_MESH_GENERIC_LEVEL_CLT_SendReliablePdu(&g_mesh_generic_level_clt0_ctrl,
req_opcode, p_parameter, rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_LEVEL_CLT_Get()

fsp_err_t RM_MESH_GENERIC_LEVEL_CLT_Get (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Generic Level Get is an acknowledged message used to get the Generic Level state of an element. The response to the Generic Level Get message is a Generic Level Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_generic_level_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_LEVEL_CLT_Set()

fsp_err_t RM_MESH_GENERIC_LEVEL_CLT_Set (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Level Set is an acknowledged message used to set the Generic Level state of an element to a new absolute value. The response to the Generic Level Set message is a Generic Level Status message.

Parameters

[in]	p_ctrl	rm_mesh_generic_level_clt control block.
[in]	p_parameter	Pointer to Generic Level Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_LEVEL_CLT_SetUnacknowledged()

fsp_err_t RM_MESH_GENERIC_LEVEL_CLT_SetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Level Set Unacknowledged is an unacknowledged message used to set the Generic Level state of an element to a new absolute value.

Parameters

[in]	p_ctrl	rm_mesh_generic_level_clt control block.
[in]	p_parameter	Pointer to Generic Level Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_LEVEL_CLT_DeltaSet()

fsp_err_t RM_MESH_GENERIC_LEVEL_CLT_DeltaSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Delta Set is an acknowledged message used to set the Generic Level state of an element by a relative value. The message is transactional, it supports changing the state by a cumulative value with a sequence of messages that are part of a transaction. The response to the Generic Delta Set message is a Generic Level Status message.

Parameters

[in]	p_ctrl	rm_mesh_generic_level_clt control block.
[in]	p_parameter	Pointer to Generic Level Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_LEVEL_CLT_DeltaSetUnacknowledged()

fsp_err_t RM_MESH_GENERIC_LEVEL_CLT_DeltaSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Delta Set Unacknowledged is an unacknowledged message used to set the Generic Level state of an element by a relative value.

Parameters

[in]	p_ctrl	rm_mesh_generic_level_clt control block.
[in]	p_parameter	Pointer to Generic Level Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_LEVEL_CLT_MoveSet()

fsp_err_t RM_MESH_GENERIC_LEVEL_CLT_MoveSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Move Set is an acknowledged message used to start a process of changing the Generic Level state of an element with a defined transition speed. The response to the Generic Move Set message is a Generic Level Status message.

Parameters

[in]	p_ctrl	rm_mesh_generic_level_clt control block.
[in]	p_parameter	Pointer to Generic Level Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_LEVEL_CLT_MoveSetUnacknowledged()

fsp_err_t RM_MESH_GENERIC_LEVEL_CLT_MoveSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Move Set Unacknowledged is an unacknowledged message used to start a process of changing the Generic Level state of an element with a defined transition speed.

Parameters

[in]	p_ctrl	rm_mesh_generic_level_clt control block.
[in]	p_parameter	Pointer to Generic Level Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

fsp_err_t	RM_MESH_GENERIC_LEVEL_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const p_ctrl, rm_ble_mesh_access_server_state_t const *const p_state)

Detailed Description

Overview

Data Structures

struct	rm_mesh_generic_level_srv_info_t
struct	rm_mesh_generic_level_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_generic_level_srv_info_t

struct rm_mesh_generic_level_srv_info_t		
Generic Level state is a 16-bit signed integer (2-s complement) representing the state of an element		
Data Fields		
uint16_t	level	Generic Level
uint32_t	delta_level	Delta Level
uint16_t	move_level	Move Level
uint8_t	tid	
uint8_t	transition_time	
uint8_t	delay	
uint16_t	target_level	Target Level

◆ rm_mesh_generic_level_srv_instance_ctrl_t

struct rm_mesh_generic_level_srv_instance_ctrl_t
BLE mesh generic level instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_GENERIC_LEVEL_SRV_Open() is called.

Function Documentation

◆ RM_MESH_GENERIC_LEVEL_SRV_Open()

fsp_err_t RM_MESH_GENERIC_LEVEL_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize Generic_Level Server model. This is to initialize Generic_Level Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_GENERIC_LEVEL_SRV_Open(&g_mesh_generic_level_srv0_ctrl,
&g_mesh_generic_level_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_GENERIC_LEVEL_SRV_Close()

fsp_err_t RM_MESH_GENERIC_LEVEL_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate Generic_Level Server model. This is to terminate Generic_Level Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_GENERIC_LEVEL_SRV_Close(&g_mesh_generic_level_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_LEVEL_SRV_StateUpdate()

fsp_err_t RM_MESH_GENERIC_LEVEL_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err = RM_MESH_GENERIC_BATTERY_SRV_StateUpdate(&g_mesh_generic_battery_srv0_ctrl,
&state);
```

Return values

FSP_SUCCESS	Updated server status successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

fsp_err_t	RM_MESH_GENERIC_LOC_CLT_LocationGlobalSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const parameter)
fsp_err_t	RM_MESH_GENERIC_LOC_CLT_LocationLocalGet (rm_ble_mesh_model_client_ctrl_t *const p_ctrl)
fsp_err_t	RM_MESH_GENERIC_LOC_CLT_LocationLocalSet (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const parameter)
fsp_err_t	RM_MESH_GENERIC_LOC_CLT_LocationLocalSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const parameter)

Detailed Description

Overview

Data Structures

struct	rm_mesh_generic_loc_clt_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_generic_loc_clt_instance_ctrl_t

struct rm_mesh_generic_loc_clt_instance_ctrl_t

BLE mesh generic loc instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_GENERIC_LOC_CLT_Open() is called.

Function Documentation

◆ RM_MESH_GENERIC_LOC_CLT_Open()

fsp_err_t RM_MESH_GENERIC_LOC_CLT_Open (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_client_cfg_t const *const *p_cfg*)

Open Generic_Location Client middleware. This is to initialize Generic_Location Client model and to register with Access layer.

Implements rm_ble_mesh_model_client_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_GENERIC_LOC_CLT_Open(&g_mesh_generic_loc_clt0_ctrl,
&g_mesh_generic_loc_clt0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_GENERIC_LOC_CLT_Close()

fsp_err_t RM_MESH_GENERIC_LOC_CLT_Close (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Close Generic_Location Client middleware.

Implements rm_ble_mesh_model_client_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_GENERIC_LOC_CLT_Close(&g_mesh_generic_loc_clt0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_LOC_CLT_GetModelHandle()

fsp_err_t RM_MESH_GENERIC_LOC_CLT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *const *p_model_handle*)

This is to get the handle of Generic_Location client model.

Implements rm_ble_mesh_model_client_api_t::getModelHandle.

Example:

```
/* Get the handle of generic_location client model. */
   err = RM_MESH_GENERIC_LOC_CLT_GetModelHandle(&g_mesh_generic_loc_clt0_ctrl,
&model_handle);
```

Return values

FSP_SUCCESS	Got model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.

◆ RM_MESH_GENERIC_LOC_CLT_SetModelHandle()

fsp_err_t RM_MESH_GENERIC_LOC_CLT_SetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*)

This is to set the handle of Generic_Location client model.

Implements rm_ble_mesh_model_client_api_t::setModelHandle.

Example:

```
/* Set the handle of generic location client model. */
   err = RM_MESH_GENERIC_LOC_CLT_SetModelHandle(&g_mesh_generic_loc_clt0_ctrl,
model_handle);
```

Return values

FSP_SUCCESS	Changed model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_LOC_CLT_SendReliablePdu()

fsp_err_t RM_MESH_GENERIC_LOC_CLT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, uint32_t *req_opcode*, void const *const *p_parameter*, uint32_t *rsp_opcode*)

This is to initialize sending acknowledged commands.

Implements rm_ble_mesh_model_client_api_t::sendReliablePdu.

Example:

```
/* Initialize sending acknowledged commands */
   err = RM_MESH_GENERIC_LOC_CLT_SendReliablePdu(&g_mesh_generic_loc_clt0_ctrl,
req_opcode, p_parameter, rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_LOC_CLT_LocationGlobalGet()

fsp_err_t RM_MESH_GENERIC_LOC_CLT_LocationGlobalGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Generic Location Global Get message is an acknowledged message used to get the selected fields of the Generic Location state of an element. The response to the Generic Location Global Get message is a Generic Location Global Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_generic_loc_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_LOC_CLT_LocationGlobalSet()

fsp_err_t RM_MESH_GENERIC_LOC_CLT_LocationGlobalSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Location Global Set is an acknowledged message used to set the selected fields of the Generic Location state of an element. The response to the Generic Location Global Set message is a Generic Location Global Status message.

Parameters

[in]	p_ctrl	rm_mesh_generic_loc_clt control block.
[in]	p_parameter	Pointer to Generic Location Global Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_LOC_CLT_LocationGlobalSetUnacknowledged()

fsp_err_t RM_MESH_GENERIC_LOC_CLT_LocationGlobalSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Location Global Set Unacknowledged is an unacknowledged message used to set the selected fields of the Generic Location state of an element.

Parameters

[in]	p_ctrl	rm_mesh_generic_loc_clt control block.
[in]	p_parameter	Pointer to Generic Location Global Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_LOC_CLT_LocationLocalGet()

fsp_err_t RM_MESH_GENERIC_LOC_CLT_LocationLocalGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Generic Location Local Get message is an acknowledged message used to get the selected fields of the Generic Location state of an element. The response to the Generic Location Local Get message is a Generic Location Local Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_generic_loc_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_LOC_CLT_LocationLocalSet()

fsp_err_t RM_MESH_GENERIC_LOC_CLT_LocationLocalSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Location Local Set is an acknowledged message used to set the selected fields of the Generic Location state of an element. The response to the Generic Location Local Set message is a Generic Location Local Status message.

Parameters

[in]	p_ctrl	rm_mesh_generic_loc_clt control block.
[in]	p_parameter	Pointer to Generic Location Local Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_LOC_CLT_LocationLocalSetUnacknowledged()

fsp_err_t RM_MESH_GENERIC_LOC_CLT_LocationLocalSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Location Local Set Unacknowledged is an unacknowledged message used to set the selected fields of the Generic Location state of an element.

Parameters

[in]	p_ctrl	rm_mesh_generic_loc_clt control block.
[in]	p_parameter	Pointer to Generic Location Local Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

4.2.1.20 Bluetooth Low Energy Mesh Network Generic Location Server (rm_mesh_generic_loc_srv)

Modules » Bluetooth Low Energy Mesh Network Modules

Functions

fsp_err_t	RM_MESH_GENERIC_LOC_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const p_ctrl, rm_ble_mesh_model_server_cfg_t const *const p_cfg)
fsp_err_t	RM_MESH_GENERIC_LOC_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const p_ctrl)

Detailed Description

Overview

Data Structures

struct	rm_mesh_generic_loc_srv_global_info_t
struct	rm_mesh_generic_loc_srv_local_info_t
struct	rm_mesh_generic_loc_srv_state_info_t
struct	rm_mesh_generic_loc_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_generic_loc_srv_global_info_t

struct rm_mesh_generic_loc_srv_global_info_t		
Generic Global Location state defines location information of an element		
Data Fields		
uint32_t	global_latitude	Global Coordinates (Latitude)
uint32_t	global_longitude	Global Coordinates (Longitude)
uint16_t	global_altitude	Global Altitude

◆ rm_mesh_generic_loc_srv_local_info_t

struct rm_mesh_generic_loc_srv_local_info_t		
Generic Local Location state defines location information of an element		
Data Fields		
uint16_t	local_north	Local Coordinates (North)
uint16_t	local_east	Local Coordinates (East)
uint16_t	local_altitude	Local Altitude
uint8_t	floor_number	Floor Number
uint16_t	uncertainty	Uncertainty

◆ rm_mesh_generic_loc_srv_state_info_t

struct rm_mesh_generic_loc_srv_state_info_t		
Generic Location state is a composite state that includes a Generic Location Global state and a Generic Location Local state		
Data Fields		
rm_mesh_generic_loc_srv_global_info_t	global_location	Global Location
rm_mesh_generic_loc_srv_local_info_t	local_location	Local Location

◆ rm_mesh_generic_loc_srv_instance_ctrl_t

struct rm_mesh_generic_loc_srv_instance_ctrl_t
BLE mesh generic loc instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_GENERIC_LOC_SRV_Open() is called.

Function Documentation

◆ RM_MESH_GENERIC_LOC_SRV_Open()

fsp_err_t RM_MESH_GENERIC_LOC_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize Generic_Location Server model and to initialize Generic_Location_Setup Server model. This is to initialize Generic_Location Server model and to register with Access layer. And this is to initialize Generic_Location_Setup Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_GENERIC_LOC_SRV_Open(&g_mesh_generic_loc_srv0_ctrl,
&g_mesh_generic_loc_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_GENERIC_LOC_SRV_Close()

fsp_err_t RM_MESH_GENERIC_LOC_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate Generic_Location Server model. This is to terminate Generic_Location Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_GENERIC_LOC_SRV_Close(&g_mesh_generic_loc_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_LOC_SRV_StateUpdate()

fsp_err_t RM_MESH_GENERIC_LOC_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err = RM_MESH_GENERIC_LOC_SRV_StateUpdate(&g_mesh_generic_loc_srv0_ctrl, &state);
```

Return values

FSP_SUCCESS	Updated server status successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_LOC_SRV_SetupServerStateUpdate()

fsp_err_t RM_MESH_GENERIC_LOC_SRV_SetupServerStateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Parameters

[in]	p_ctrl	rm_mesh_generic_loc_srv control block.
[in]	p_state	To send reply for a request or to inform change in state.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

4.2.1.21 Bluetooth Low Energy Mesh Network Generic Manufacturer Property Server (rm_mesh_generic_mfr_prop_srv)

Modules » Bluetooth Low Energy Mesh Network Modules

Functions

fsp_err_t	RM_MESH_GENERIC_MFR_PROP_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const p_ctrl, rm_ble_mesh_model_server_cfg_t const *const p_cfg)
fsp_err_t	RM_MESH_GENERIC_MFR_PROP_SRV_Close

	(rm_ble_mesh_model_server_ctrl_t *const p_ctrl)
fsp_err_t	RM_MESH_GENERIC_MFR_PROP_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const p_ctrl, rm_ble_mesh_access_server_state_t const *const p_state)

Detailed Description

Overview

Data Structures

struct	rm_mesh_generic_mfr_prop_srv_info_t
struct	rm_mesh_generic_mfr_prop_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_generic_mfr_prop_srv_info_t

struct rm_mesh_generic_mfr_prop_srv_info_t

Generic Manufacturer Property is a state representing a device property of an element that is programmed by a manufacturer and can be read

Data Fields

uint16_t	property_id	Manufacturer Property ID field is a 2-octet Assigned Number value that references a device property
uint8_t	user_access	Manufacturer User Access field is an enumeration indicating whether or not the device property can be read as a Generic User Property
uint8_t *	property_value	Manufacturer Property Value field is a conditional field
uint16_t	property_value_len	

◆ rm_mesh_generic_mfr_prop_srv_instance_ctrl_t

struct rm_mesh_generic_mfr_prop_srv_instance_ctrl_t

BLE mesh generic mfr prop instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_GENERIC_MFR_PROP_SRV_Open() is called.

Function Documentation

◆ RM_MESH_GENERIC_MFR_PROP_SRV_Open()

fsp_err_t RM_MESH_GENERIC_MFR_PROP_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize Generic_Manufacturer_Property Server model. This is to initialize Generic_Manufacturer_Property Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_GENERIC_MFR_PROP_SRV_Open(&g_mesh_generic_mfr_prop_srv0_ctrl,
&g_mesh_generic_mfr_prop_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_GENERIC_MFR_PROP_SRV_Close()

fsp_err_t RM_MESH_GENERIC_MFR_PROP_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate Generic_Manufacturer_Property Server model. This is to terminate Generic_Manufacturer_Property Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_GENERIC_MFR_PROP_SRV_Close(&g_mesh_generic_mfr_prop_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_MFR_PROP_SRV_StateUpdate()

fsp_err_t RM_MESH_GENERIC_MFR_PROP_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err =
RM_MESH_GENERIC_MFR_PROP_SRV_StateUpdate(&g_mesh_generic_mfr_prop_srv0_ctrl, &state);
```

Return values

FSP_SUCCESS	Updated server status successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

	(rm_ble_mesh_model_client_ctrl_t *const p_ctrl)
fsp_err_t	RM_MESH_GENERIC_ON_OFF_CLT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t *const model_handle)
fsp_err_t	RM_MESH_GENERIC_ON_OFF_CLT_SetModelHandle (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, rm_ble_mesh_access_model_handle_t model_handle)
fsp_err_t	RM_MESH_GENERIC_ON_OFF_CLT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, uint32_t req_opcode, void const *const parameter, uint32_t rsp_opcode)
fsp_err_t	RM_MESH_GENERIC_ON_OFF_CLT_Get (rm_ble_mesh_model_client_ctrl_t *const p_ctrl)
fsp_err_t	RM_MESH_GENERIC_ON_OFF_CLT_Set (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)
fsp_err_t	RM_MESH_GENERIC_ON_OFF_CLT_SetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)

Detailed Description

Overview

Data Structures

struct	rm_mesh_generic_on_off_clt_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_generic_on_off_clt_instance_ctrl_t

struct rm_mesh_generic_on_off_clt_instance_ctrl_t
BLE mesh generic on off instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_GENERIC_ON_OFF_CLT_Open() is called.

Function Documentation

◆ RM_MESH_GENERIC_ON_OFF_CLT_Open()

fsp_err_t RM_MESH_GENERIC_ON_OFF_CLT_Open (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_client_cfg_t const *const *p_cfg*)

Open Generic_Onoff Client middleware. This is to initialize Generic_Onoff Client model and to register with Access layer.

Implements rm_ble_mesh_model_client_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_GENERIC_ON_OFF_CLT_Open(&g_mesh_generic_on_off_clt0_ctrl,
&g_mesh_generic_on_off_clt0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_GENERIC_ON_OFF_CLT_Close()

fsp_err_t RM_MESH_GENERIC_ON_OFF_CLT_Close (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Close Generic_Onoff Client middleware.

Implements rm_ble_mesh_model_client_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_GENERIC_ON_OFF_CLT_Close(&g_mesh_generic_on_off_clt0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_ON_OFF_CLT_GetModelHandle()

fsp_err_t RM_MESH_GENERIC_ON_OFF_CLT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *const *p_model_handle*)

This is to get the handle of Generic_Onoff client model.

Implements rm_ble_mesh_model_client_api_t::getModelHandle.

Example:

```
/* Get the handle of generic on_off client model. */
   err = RM_MESH_GENERIC_ON_OFF_CLT_GetModelHandle(&g_mesh_generic_on_off_clt0_ctrl,
&model_handle);
```

Return values

FSP_SUCCESS	Got model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.

◆ RM_MESH_GENERIC_ON_OFF_CLT_SetModelHandle()

fsp_err_t RM_MESH_GENERIC_ON_OFF_CLT_SetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*)

This is to set the handle of Generic_Onoff client model.

Implements rm_ble_mesh_model_client_api_t::setModelHandle.

Example:

```
/* Set the handle of generic on_off client model. */
   err = RM_MESH_GENERIC_ON_OFF_CLT_SetModelHandle(&g_mesh_generic_on_off_clt0_ctrl,
model_handle);
```

Return values

FSP_SUCCESS	Changed model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_ON_OFF_CLT_SendReliablePdu()

fsp_err_t RM_MESH_GENERIC_ON_OFF_CLT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, uint32_t *req_opcode*, void const *const *p_parameter*, uint32_t *rsp_opcode*)

This is to initialize sending acknowledged commands.

Implements rm_ble_mesh_model_client_api_t::sendReliablePdu.

Example:

```
/* Initialize sending acknowledged commands. */
   err =
RM_MESH_GENERIC_ON_OFF_CLT_SendReliablePdu(&g_mesh_generic_on_off_clt0_ctrl,
                                           req_opcode,
                                           p_parameter,
                                           rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_ON_OFF_CLT_Get()

fsp_err_t RM_MESH_GENERIC_ON_OFF_CLT_Get (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

The Generic OnOff Get is an acknowledged message used to get the Generic OnOff state of an element.

Parameters

[in]	p_ctrl	rm_mesh_generic_on_off_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_ON_OFF_CLT_Set()

fsp_err_t RM_MESH_GENERIC_ON_OFF_CLT_Set (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Generic OnOff Set is an acknowledged message used to get the Generic OnOff state of an element.

Parameters

[in]	p_ctrl	rm_mesh_generic_on_off_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_generic_on_off_set_info_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_ON_OFF_CLT_SetUnacknowledged()

fsp_err_t RM_MESH_GENERIC_ON_OFF_CLT_SetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Generic OnOff Set is an unacknowledged message used to get the Generic OnOff state of an element.

Parameters

[in]	p_ctrl	rm_mesh_generic_on_off_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_generic_on_off_set_info_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

4.2.1.23 Bluetooth Low Energy Mesh Network Generic On Off Server (rm_mesh_generic_on_off_srv)

Modules » Bluetooth Low Energy Mesh Network Modules

Functions

fsp_err_t	RM_MESH_GENERIC_ON_OFF_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const p_ctrl, rm_ble_mesh_model_server_cfg_t const *const p_cfg)

fsp_err_t	RM_MESH_GENERIC_ON_OFF_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const p_ctrl)
fsp_err_t	RM_MESH_GENERIC_ON_OFF_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const p_ctrl, rm_ble_mesh_access_server_state_t const *const p_state)

Detailed Description

Overview

Data Structures

struct	rm_mesh_generic_on_off_srv_info_t
struct	rm_mesh_generic_on_off_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_generic_on_off_srv_info_t

struct rm_mesh_generic_on_off_srv_info_t		
Generic OnOff state is a Boolean value that represents the state of an element		
Data Fields		
uint8_t	onoff	Generic On/Off
uint8_t	target_onoff	Target On/Off - Used in response path
uint8_t	last_onoff	Last On/Off
uint8_t	tid	TID - Used in request path
uint8_t	transition_time	Transition Time - Used in request path. Used as remaining time in response path.
uint8_t	delay	Delay - Used in request path
uint16_t	transition_time_handle	Transition Timer Handle

◆ rm_mesh_generic_on_off_srv_instance_ctrl_t

struct rm_mesh_generic_on_off_srv_instance_ctrl_t
BLE mesh generic on off instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_GENERIC_ON_OFF_SRV_Open() is called.

Function Documentation

◆ RM_MESH_GENERIC_ON_OFF_SRV_Open()

fsp_err_t RM_MESH_GENERIC_ON_OFF_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize Generic_Onoff Server model. This is to initialize Generic_Onoff Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_GENERIC_ON_OFF_SRV_Open(&g_mesh_generic_on_off_srv0_ctrl,
&g_mesh_generic_on_off_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_GENERIC_ON_OFF_SRV_Close()

fsp_err_t RM_MESH_GENERIC_ON_OFF_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate Generic_Onoff Server model. This is to terminate Generic_Onoff Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_GENERIC_ON_OFF_SRV_Close(&g_mesh_generic_on_off_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_ON_OFF_SRV_StateUpdate()

fsp_err_t RM_MESH_GENERIC_ON_OFF_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err = RM_MESH_GENERIC_ON_OFF_SRV_StateUpdate(&g_mesh_generic_on_off_srv0_ctrl,
&state);
```

Return values

FSP_SUCCESS	Updated server status successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

fsp_err_t	RM_MESH_GENERIC_PL_CLT_RangeSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)

Detailed Description

Overview

Data Structures

struct	rm_mesh_generic_pl_clt_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_generic_pl_clt_instance_ctrl_t

struct rm_mesh_generic_pl_clt_instance_ctrl_t
BLE mesh generic pl instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_GENERIC_PL_CLT_Open() is called.

Function Documentation

◆ RM_MESH_GENERIC_PL_CLT_Open()

fsp_err_t RM_MESH_GENERIC_PL_CLT_Open (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_client_cfg_t const *const *p_cfg*)

Open Generic_Power_Level Client middleware. This is to initialize Generic_Power_Level Client model and to register with Access layer.

Implements rm_ble_mesh_model_client_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_GENERIC_PL_CLT_Open(&g_mesh_generic_pl_clt0_ctrl,
&g_mesh_generic_pl_clt0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_GENERIC_PL_CLT_Close()

fsp_err_t RM_MESH_GENERIC_PL_CLT_Close (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Close Generic_Power_Level Client middleware.

Implements rm_ble_mesh_model_client_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_GENERIC_PL_CLT_Close(&g_mesh_generic_pl_clt0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_PL_CLT_GetModelHandle()

fsp_err_t RM_MESH_GENERIC_PL_CLT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *const *p_model_handle*)

This is to get the handle of Generic_Power_Level client model. Implements rm_ble_mesh_model_client_api_t::getModelHandle.

Example:

```
/* Get the handle of generic power level client model. */
   err = RM_MESH_GENERIC_PL_CLT_GetModelHandle(&g_mesh_generic_pl_clt0_ctrl,
&model_handle);
```

Return values

FSP_SUCCESS	Got model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.

◆ RM_MESH_GENERIC_PL_CLT_SetModelHandle()

fsp_err_t RM_MESH_GENERIC_PL_CLT_SetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*)

This is to set the handle of Generic_Power_Level client model.FIXME XXX.

Implements rm_ble_mesh_model_client_api_t::setModelHandle.

Example:

```
/* Set the handle of generic power level client model. */
   err = RM_MESH_GENERIC_PL_CLT_SetModelHandle(&g_mesh_generic_pl_clt0_ctrl,
model_handle);
```

Return values

FSP_SUCCESS	Changed model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_PL_CLT_SendReliablePdu()

fsp_err_t RM_MESH_GENERIC_PL_CLT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, uint32_t *req_opcode*, void const *const *p_parameter*, uint32_t *rsp_opcode*)

This is to initialize sending acknowledged commands. Implements rm_ble_mesh_model_client_api_t::sendReliablePdu.

Example:

```
/* Initialize sending acknowledged commands. */
   err = RM_MESH_GENERIC_PL_CLT_SendReliablePdu(&g_mesh_generic_pl_clt0_ctrl,
req_opcode, p_parameter, rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PL_CLT_LevelGet()

fsp_err_t RM_MESH_GENERIC_PL_CLT_LevelGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Generic Power Level Get message is an acknowledged message used to get the Generic Power Actual state of an element. The response to the Generic Power Level Get message is a Generic Power Level Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_generic_pl_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PL_CLT_LevelSet()

fsp_err_t RM_MESH_GENERIC_PL_CLT_LevelSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Power Level Set is an acknowledged message used to set the Generic Power Actual state of an element. The response to the Generic Power Level Set message is a Generic Power Level Status message.

Parameters

[in]	p_ctrl	rm_mesh_generic_pl_clt control block.
[in]	p_parameter	Pointer to Generic Power Level Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PL_CLT_LevelSetUnacknowledged()

fsp_err_t RM_MESH_GENERIC_PL_CLT_LevelSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Power Level Set Unacknowledged is an unacknowledged message used to set the Generic Power Actual state of an element.

Parameters

[in]	p_ctrl	rm_mesh_generic_pl_clt control block.
[in]	p_parameter	Pointer to Generic Power Level Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PL_CLT_LastGet()

fsp_err_t RM_MESH_GENERIC_PL_CLT_LastGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Generic Power Last Get is an acknowledged message used to get the Generic Power Last state of an element. The response to a Generic Power Last Get message is a Generic Power Last Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_generic_pl_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PL_CLT_DefaultGet()

fsp_err_t RM_MESH_GENERIC_PL_CLT_DefaultGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Generic Power Default Get is an acknowledged message used to get the Generic Power Default state of an element. The response to a Generic Power Default Get message is a Generic Power Default Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_generic_pl_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PL_CLT_DefaultSet()

fsp_err_t RM_MESH_GENERIC_PL_CLT_DefaultSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Power Default Set is an acknowledged message used to set the Generic Power Default state of an element. The response to the Generic Power Default Set message is a Generic Power Default Status message.

Parameters

[in]	p_ctrl	rm_mesh_generic_pl_clt control block.
[in]	p_parameter	Pointer to Generic Power Default Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PL_CLT_DefaultSetUnacknowledged()

fsp_err_t RM_MESH_GENERIC_PL_CLT_DefaultSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Power Default Set Unacknowledged is an unacknowledged message used to set the Generic Power Default state of an element.

Parameters

[in]	p_ctrl	rm_mesh_generic_pl_clt control block.
[in]	p_parameter	Pointer to Generic Power Default Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PL_CLT_RangeGet()

fsp_err_t RM_MESH_GENERIC_PL_CLT_RangeGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Generic Power Range Get is an acknowledged message used to get the Generic Power Range state of an element. The response to the Generic Power Range Get message is a Generic Power Range Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_generic_pl_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PL_CLT_RangeSet()

fsp_err_t RM_MESH_GENERIC_PL_CLT_RangeSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Power Range Set is an acknowledged message used to set the Generic Power Range state of an element. The response to the Generic Power Range Set message is a Generic Power Range Status message.

Parameters

[in]	p_ctrl	rm_mesh_generic_pl_clt control block.
[in]	p_parameter	Pointer to Generic Power Range Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PL_CLT_RangeSetUnacknowledged()

fsp_err_t RM_MESH_GENERIC_PL_CLT_RangeSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Power Range Set Unacknowledged is an unacknowledged message used to set the Generic Power Range state of an element.

Parameters

[in]	p_ctrl	rm_mesh_generic_pl_clt control block.
[in]	p_parameter	Pointer to Generic Power Range Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

struct	rm_mesh_generic_pl_srv_last_state_info_t
struct	rm_mesh_generic_pl_srv_default_state_info_t
struct	rm_mesh_generic_pl_srv_range_state_info_t
struct	rm_mesh_generic_pl_srv_state_info_t
struct	rm_mesh_generic_pl_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_generic_pl_srv_actual_state_info_t

struct rm_mesh_generic_pl_srv_actual_state_info_t

Generic Power Actual state determines the linear percentage of the maximum power level of an element, representing a range from 0 percent through 100 percent

Data Fields

uint16_t	power_actual	Generic Power Actual
uint8_t	tid	
uint16_t	power_target	Generic Power Target - Used only in response path
uint8_t	transition_time	Transition Time - Used in request path Used as Remaining Time in response path
uint8_t	delay	
uint16_t	transition_time_handle	Transition Timer Handle

◆ rm_mesh_generic_pl_srv_last_state_info_t

struct rm_mesh_generic_pl_srv_last_state_info_t		
Generic Power Last state is a 16-bit value representing a percentage ranging from (1/65535) percent to 100 percent		
Data Fields		
uint16_t	power_last	Generic Power Last

◆ rm_mesh_generic_pl_srv_default_state_info_t

struct rm_mesh_generic_pl_srv_default_state_info_t		
Generic Power Default state is a 16-bit value ranging from 0 through 65535		
Data Fields		
uint16_t	power_default	Generic Power Default

◆ rm_mesh_generic_pl_srv_range_state_info_t

struct rm_mesh_generic_pl_srv_range_state_info_t		
Generic Power Range state determines the minimum and maximum power levels of an element relative to the maximum power level an element can output		
Data Fields		
uint16_t	power_range_min	Generic Power Range - Minimum
uint16_t	power_range_max	Generic Power Range - Maximum
uint8_t	status	Status - Used only in the response path

◆ rm_mesh_generic_pl_srv_state_info_t

struct rm_mesh_generic_pl_srv_state_info_t		
Generic Power Level state is a composite state that includes a Generic Power Actual state, a Generic Power Last state, a Generic Power Default state, and a Generic Power Range state		
Data Fields		
rm_mesh_generic_pl_srv_actual_state_info_t	generic_power_actual	Generic Power Actual
rm_mesh_generic_pl_srv_last_state_info_t	generic_power_last	Generic Power Last
rm_mesh_generic_pl_srv_default_state_info_t	generic_power_default	Generic Power Default
rm_mesh_generic_pl_srv_range_state_info_t	generic_power_range	Generic Power Range

◆ rm_mesh_generic_pl_srv_instance_ctrl_t

struct rm_mesh_generic_pl_srv_instance_ctrl_t

BLE mesh generic pl instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_GENERIC_PL_SRV_Open() is called.

Function Documentation

◆ RM_MESH_GENERIC_PL_SRV_Open()

fsp_err_t RM_MESH_GENERIC_PL_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize Generic_Power_Level Server model and to initialize Generic_Power_Level_Setup Server model. This is to initialize Generic_Power_Level Server model and to register with Access layer. And this is to initialize Generic_Power_Level_Setup Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_GENERIC_PL_SRV_Open(&g_mesh_generic_pl_srv0_ctrl,
&g_mesh_generic_pl_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_GENERIC_PL_SRV_Close()

fsp_err_t RM_MESH_GENERIC_PL_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate Generic_Power_Level Server model. This is to terminate Generic_Power_Level Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_GENERIC_PL_SRV_Close(&g_mesh_generic_pl_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_PL_SRV_StateUpdate()

fsp_err_t RM_MESH_GENERIC_PL_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err = RM_MESH_GENERIC_PL_SRV_StateUpdate(&g_mesh_generic_pl_srv0_ctrl, &state);
```

Return values

FSP_SUCCESS	Updated server status successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PL_SRV_SetupServerStateUpdate()

fsp_err_t RM_MESH_GENERIC_PL_SRV_SetupServerStateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Parameters

[in]	p_ctrl	rm_mesh_generic_pl_srv control block.
[in]	p_state	To send reply for a request or to inform change in state.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

Detailed Description

Overview

Data Structures

struct	rm_mesh_generic_poo_clt_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_generic_poo_clt_instance_ctrl_t

struct rm_mesh_generic_poo_clt_instance_ctrl_t
BLE mesh generic poo instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_GENERIC_POO_CLT_Open() is called.

Function Documentation

◆ RM_MESH_GENERIC_POO_CLT_Open()

fsp_err_t RM_MESH_GENERIC_POO_CLT_Open (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_client_cfg_t const *const *p_cfg*)

Open Generic_Power_Onoff Client middleware. This is to initialize Generic_Power_Onoff Client model and to register with Access layer.

Implements rm_ble_mesh_model_client_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_GENERIC_POO_CLT_Open(&g_mesh_generic_poo_clt0_ctrl,
&g_mesh_generic_poo_clt0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_GENERIC_POO_CLT_Close()

fsp_err_t RM_MESH_GENERIC_POO_CLT_Close (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Close Generic_Power_Onoff Client middleware.

Implements rm_ble_mesh_model_client_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_GENERIC_POO_CLT_Close(&g_mesh_generic_poo_clt0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_POO_CLT_GetModelHandle()

fsp_err_t RM_MESH_GENERIC_POO_CLT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *const *p_model_handle*)

This is to get the handle of Generic_Power_Onoff client model.

Implements rm_ble_mesh_model_client_api_t::getModelHandle.

Example:

```
/* Get the handle of generic power on off client model. */
   err = RM_MESH_GENERIC_POO_CLT_GetModelHandle(&g_mesh_generic_poo_clt0_ctrl,
&model_handle);
```

Return values

FSP_SUCCESS	Got model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.

◆ RM_MESH_GENERIC_POO_CLT_SetModelHandle()

fsp_err_t RM_MESH_GENERIC_POO_CLT_SetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*)

This is to set the handle of Generic_Power_Onoff client model.

Implements rm_ble_mesh_model_client_api_t::setModelHandle.

Example:

```
/* Set the handle of generic power on off client model. */
   err = RM_MESH_GENERIC_POO_CLT_SetModelHandle(&g_mesh_generic_poo_clt0_ctrl,
model_handle);
```

Return values

FSP_SUCCESS	Changed model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_POO_CLT_SendReliablePdu()

fsp_err_t RM_MESH_GENERIC_POO_CLT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, uint32_t *req_opcode*, void const *const *p_parameter*, uint32_t *rsp_opcode*)

This is to initialize sending acknowledged commands.

Implements rm_ble_mesh_model_client_api_t::sendReliablePdu

Example:

```
/* Initialize sending acknowledged commands. */
   err = RM_MESH_GENERIC_POO_CLT_SendReliablePdu(&g_mesh_generic_poo_clt0_ctrl,
req_opcode, p_parameter, rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_POO_CLT_OnpowerupGet()

fsp_err_t RM_MESH_GENERIC_POO_CLT_OnpowerupGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Generic OnPowerUp Get is an acknowledged message used to get the Generic OnPowerUp state of an element. The response to the Generic OnPowerUp Get message is a Generic OnPowerUp Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_generic_poo_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_POO_CLT_OnpowerupSet()

fsp_err_t RM_MESH_GENERIC_POO_CLT_OnpowerupSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic OnPowerUp Set is an acknowledged message used to set the Generic OnPowerUp state of an element. The response to the Generic OnPowerUp Set message is a Generic OnPowerUp Status message.

Parameters

[in]	p_ctrl	rm_mesh_generic_poo_clt control block.
[in]	p_parameter	Pointer to Generic OnPowerUp Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_POO_CLT_OnpowerupSetUnacknowledged()

fsp_err_t RM_MESH_GENERIC_POO_CLT_OnpowerupSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic OnPowerUp Set Unacknowledged is an unacknowledged message used to set the Generic OnPowerUp state of an element.

Parameters

[in]	p_ctrl	rm_mesh_generic_poo_clt control block.
[in]	p_parameter	Pointer to Generic OnPowerUp Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

fsp_err_t	RM_MESH_GENERIC_POO_SRV_SetupServerStateUpdate (rm_ble_mesh_model_server_ctrl_t *const p_ctrl, rm_ble_mesh_access_server_state_t const *const p_state)

Detailed Description

Overview

Data Structures

struct	rm_mesh_generic_poo_srv_on_power_up_state_info_t
struct	rm_mesh_generic_poo_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_generic_poo_srv_on_power_up_state_info_t

struct rm_mesh_generic_poo_srv_on_power_up_state_info_t		
Generic OnPowerUp state is an enumeration representing the behavior of an element when powered up		
Data Fields		
uint8_t	onpowerup	Generic OnPowerUp

◆ rm_mesh_generic_poo_srv_instance_ctrl_t

struct rm_mesh_generic_poo_srv_instance_ctrl_t
BLE mesh generic poo instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_GENERIC_POO_SRV_Open() is called.

Function Documentation

◆ RM_MESH_GENERIC_POO_SRV_Open()

fsp_err_t RM_MESH_GENERIC_POO_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize Generic_Power_Onoff Server model and to initialize Generic_Power_Onoff_Setup Server model. This is to initialize Generic_Power_Onoff Server model and to register with Access layer. And this is to initialize Generic_Power_Onoff_Setup Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_GENERIC_POO_SRV_Open(&g_mesh_generic_poo_srv0_ctrl,
&g_mesh_generic_poo_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_GENERIC_POO_SRV_Close()

fsp_err_t RM_MESH_GENERIC_POO_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate Generic_Power_Onoff Server model. This is to terminate Generic_Power_Onoff Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_GENERIC_POO_SRV_Close(&g_mesh_generic_poo_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_POO_SRV_StateUpdate()

fsp_err_t RM_MESH_GENERIC_POO_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err = RM_MESH_GENERIC_POO_SRV_StateUpdate(&g_mesh_generic_poo_srv0_ctrl, &state);
```

Return values

FSP_SUCCESS	Updated server status successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_POO_SRV_SetupServerStateUpdate()

fsp_err_t RM_MESH_GENERIC_POO_SRV_SetupServerStateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Parameters

[in]	p_ctrl	rm_mesh_generic_poo_srv control block.
[in]	p_state	To send reply for a request or to inform change in state.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

fsp_err_t	RM_MESH_GENERIC_PROP_CLT_ClientPropertiesGet (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)

Detailed Description

Overview

Data Structures

struct	rm_mesh_generic_prop_clt_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_generic_prop_clt_instance_ctrl_t

struct rm_mesh_generic_prop_clt_instance_ctrl_t
BLE mesh generic prop instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_GENERIC_PROP_CLT_Open() is called.

Function Documentation

◆ RM_MESH_GENERIC_PROP_CLT_Open()

fsp_err_t RM_MESH_GENERIC_PROP_CLT_Open (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_client_cfg_t const *const *p_cfg*)

Open Generic_Property Client middleware. This is to initialize Generic_Property Client model and to register with Access layer.

Implements rm_ble_mesh_model_client_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_GENERIC_PROP_CLT_Open(&g_mesh_generic_prop_clt0_ctrl,
&g_mesh_generic_prop_clt0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_GENERIC_PROP_CLT_Close()

fsp_err_t RM_MESH_GENERIC_PROP_CLT_Close (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Close Generic_Property Client middleware. Example:

```
/* Close the module. */
   err = RM_MESH_GENERIC_PROP_CLT_Close(&g_mesh_generic_prop_clt0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_PROP_CLT_GetModelHandle()

fsp_err_t RM_MESH_GENERIC_PROP_CLT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *const *p_model_handle*)

This is to get the handle of Generic_Property client model.

Implements rm_ble_mesh_model_client_api_t::getModelHandle.

Example:

```
/* Get the handle of generic property client model. */
   err = RM_MESH_GENERIC_PROP_CLT_GetModelHandle(&g_mesh_generic_prop_clt0_ctrl,
&model_handle);
```

Return values

FSP_SUCCESS	Got model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.

◆ RM_MESH_GENERIC_PROP_CLT_SetModelHandle()

fsp_err_t RM_MESH_GENERIC_PROP_CLT_SetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*)

This is to set the handle of Generic_Property client model.

Implements rm_ble_mesh_model_client_api_t::setModelHandle.

Example:

```
/* Set the handle of generic property client model. */
   err = RM_MESH_GENERIC_PROP_CLT_SetModelHandle(&g_mesh_generic_prop_clt0_ctrl,
model_handle);
```

Return values

FSP_SUCCESS	Changed model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_PROP_CLT_SendReliablePdu()

fsp_err_t RM_MESH_GENERIC_PROP_CLT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, uint32_t *req_opcode*, void const *const *p_parameter*, uint32_t *rsp_opcode*)

This is to initialize sending acknowledged commands.

Implements rm_ble_mesh_model_client_api_t::sendReliablePdu.

Example:

```
/* Initialize sending acknowledged commands. */
   err = RM_MESH_GENERIC_PROP_CLT_SendReliablePdu(&g_mesh_generic_prop_clt0_ctrl,
req_opcode, p_parameter, rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PROP_CLT_UserPropertiesGet()

fsp_err_t RM_MESH_GENERIC_PROP_CLT_UserPropertiesGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Generic User Properties Get is an acknowledged message used to get the list of Generic User Property states of an element. The response to the Generic User Properties Get message is a Generic User Properties Status message. The message has no parameters.

Parameters

[in]	p_ctrl	rm_mesh_generic_prop_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PROP_CLT_UserPropertyGet()

fsp_err_t RM_MESH_GENERIC_PROP_CLT_UserPropertyGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic User Property Get is an acknowledged message used to get the Generic User Property state of an element. The response to the Generic User Property Get message is a Generic User Property Status message.

Parameters

[in]	p_ctrl	rm_mesh_generic_prop_clt control block.
[in]	p_parameter	Pointer to Generic User Property Get message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PROP_CLT_UserPropertySet()

fsp_err_t RM_MESH_GENERIC_PROP_CLT_UserPropertySet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic User Property Set is an acknowledged message used to set the Generic User Property state of an element. The response to the Generic User Property Set message is a Generic User Property Status message.

Parameters

[in]	p_ctrl	rm_mesh_generic_prop_clt control block.
[in]	p_parameter	Pointer to Generic User Property Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PROP_CLT_UserPropertySetUnacknowledged()

fsp_err_t RM_MESH_GENERIC_PROP_CLT_UserPropertySetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic User Property Set Unacknowledged is an unacknowledged message used to set the Generic User Property state of an element.

Parameters

[in]	p_ctrl	rm_mesh_generic_prop_clt control block.
[in]	p_parameter	Pointer to Generic User Property Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PROP_CLT_AdminPropertiesGet()

fsp_err_t RM_MESH_GENERIC_PROP_CLT_AdminPropertiesGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Generic Admin Properties Get is an acknowledged message used to get the list of Generic Admin Property states of an element. The response to the Generic Admin Properties Get message is a Generic Admin Properties Status message. The message has no parameters.

Parameters

[in]	p_ctrl	rm_mesh_generic_prop_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PROP_CLT_AdminPropertyGet()

fsp_err_t RM_MESH_GENERIC_PROP_CLT_AdminPropertyGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Admin Property Get is an acknowledged message used to get the Generic Admin Property state of an element. The response to the Generic Admin Property Get message is a Generic Admin Property Status message.

Parameters

[in]	p_ctrl	rm_mesh_generic_prop_clt control block.
[in]	p_parameter	Pointer to Generic Admin Property Get message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PROP_CLT_AdminPropertySet()

fsp_err_t RM_MESH_GENERIC_PROP_CLT_AdminPropertySet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Admin Property Set is an acknowledged message used to set the Generic Admin Property state of an element. The response to the Generic Admin Property Set message is a Generic Admin Property Status message.

Parameters

[in]	p_ctrl	rm_mesh_generic_prop_clt control block.
[in]	p_parameter	Pointer to Generic Admin Property Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PROP_CLT_AdminPropertySetUnacknowledged()

fsp_err_t RM_MESH_GENERIC_PROP_CLT_AdminPropertySetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Admin Property Set Unacknowledged is an unacknowledged message used to set the Generic Admin Property state of an element.

Parameters

[in]	p_ctrl	rm_mesh_generic_prop_clt control block.
[in]	p_parameter	Pointer to Generic Admin Property Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PROP_CLT_ManufacturerPropertiesGet()

fsp_err_t RM_MESH_GENERIC_PROP_CLT_ManufacturerPropertiesGet (
rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Generic Manufacturer Properties Get is an acknowledged message used to get the list of Generic Manufacturer Property states of an element. The response to the Generic Manufacturer Properties Get message is a Generic Manufacturer Properties Status message. The message has no parameters.

Parameters

[in]	p_ctrl	rm_mesh_generic_prop_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PROP_CLT_ManufacturerPropertyGet()

fsp_err_t RM_MESH_GENERIC_PROP_CLT_ManufacturerPropertyGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Manufacturer Property Get is an acknowledged message used to get the Generic Manufacturer Property state of an element. The response to the Generic Manufacturer Property Get message is a Generic Manufacturer Property Status message.

Parameters

[in]	p_ctrl	rm_mesh_generic_prop_clt control block.
[in]	p_parameter	Pointer to Generic Manufacturer Property Get message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PROP_CLT_ManufacturerPropertySet()

fsp_err_t RM_MESH_GENERIC_PROP_CLT_ManufacturerPropertySet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Manufacturer Property Set is an acknowledged message used to set the Generic Manufacturer Property User Access state of an element. The response to the Generic Manufacturer Property Set message is a Generic Manufacturer Property Status message.

Parameters

[in]	p_ctrl	rm_mesh_generic_prop_clt control block.
[in]	p_parameter	Pointer to Generic Manufacturer Property Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PROP_CLT_ManufacturerPropertySetUnacknowledged()

fsp_err_t RM_MESH_GENERIC_PROP_CLT_ManufacturerPropertySetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Generic Manufacturer Property Set Unacknowledged is an unacknowledged message used to set the Generic Manufacturer Property User Access state of an element.

Parameters

[in]	p_ctrl	rm_mesh_generic_prop_clt control block.
[in]	p_parameter	Pointer to Generic Manufacturer Property Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_GENERIC_PROP_CLT_ClientPropertiesGet()

fsp_err_t RM_MESH_GENERIC_PROP_CLT_ClientPropertiesGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Generic Client Properties Get is an acknowledged message used to get the list of Generic Client Property states of an element. The response to the Generic Client Properties Get message is a Generic Client Properties Status message.

Parameters

[in]	p_ctrl	rm_mesh_generic_prop_clt control block.
[in]	p_parameter	Pointer to Generic Client Properties Get message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

4.2.1.29 Bluetooth Low Energy Mesh Network Generic User Property Server (rm_mesh_generic_user_prop_srv)

Modules » Bluetooth Low Energy Mesh Network Modules

Functions

fsp_err_t	RM_MESH_GENERIC_USER_PROP_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const p_ctrl, rm_ble_mesh_model_server_cfg_t const *const p_cfg)
fsp_err_t	RM_MESH_GENERIC_USER_PROP_SRV_Close

	(rm_ble_mesh_model_server_ctrl_t *const p_ctrl)
fsp_err_t	RM_MESH_GENERIC_USER_PROP_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const p_ctrl, rm_ble_mesh_access_server_state_t const *const p_state)

Detailed Description

Overview

Data Structures

struct	rm_mesh_generic_user_prop_srv_info_t
struct	rm_mesh_generic_user_prop_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_generic_user_prop_srv_info_t

struct rm_mesh_generic_user_prop_srv_info_t		
Generic User Property is a state representing a device property of an element		
Data Fields		
uint16_t	property_id	User Property ID field is a 2-octet Assigned Number value referencing a device property
uint8_t	user_access	User Access field is an enumeration indicating whether the device property can be read or written as a Generic User Property
uint8_t *	property_value	User Property Value field is a conditional field
uint16_t	property_value_len	

◆ rm_mesh_generic_user_prop_srv_instance_ctrl_t

struct rm_mesh_generic_user_prop_srv_instance_ctrl_t
BLE mesh generic user prop instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_GENERIC_USER_PROP_SRV_Open() is called.

Function Documentation

◆ RM_MESH_GENERIC_USER_PROP_SRV_Open()

fsp_err_t RM_MESH_GENERIC_USER_PROP_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize Generic_User_Property Server model. This is to initialize Generic_User_Property Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_GENERIC_USER_PROP_SRV_Open(&g_mesh_generic_user_prop_srv0_ctrl,
&g_mesh_generic_user_prop_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_GENERIC_USER_PROP_SRV_Close()

fsp_err_t RM_MESH_GENERIC_USER_PROP_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate Generic_User_Property Server model. This is to terminate Generic_User_Property Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_GENERIC_USER_PROP_SRV_Close(&g_mesh_generic_user_prop_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_GENERIC_USER_PROP_SRV_StateUpdate()

fsp_err_t RM_MESH_GENERIC_USER_PROP_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err =
RM_MESH_GENERIC_USER_PROP_SRV_StateUpdate(&g_mesh_generic_user_prop_srv0_ctrl,
&state);
```

Return values

FSP_SUCCESS	Updated server status successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

fsp_err_t	RM_MESH_HEALTH_CLIENT_PeriodGet (rm_ble_mesh_model_client_ctrl_t *const p_ctrl)
fsp_err_t	RM_MESH_HEALTH_CLIENT_PeriodSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)
fsp_err_t	RM_MESH_HEALTH_CLIENT_PeriodSet (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)
fsp_err_t	RM_MESH_HEALTH_CLIENT_AttentionGet (rm_ble_mesh_model_client_ctrl_t *const p_ctrl)
fsp_err_t	RM_MESH_HEALTH_CLIENT_AttentionSet (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)
fsp_err_t	RM_MESH_HEALTH_CLIENT_AttentionSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)

Detailed Description

Overview

Data Structures

struct	rm_mesh_health_clt_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_health_clt_instance_ctrl_t

struct rm_mesh_health_clt_instance_ctrl_t
BLE mesh health client instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_HEALTH_CLIENT_Open() is called.

Function Documentation

◆ RM_MESH_HEALTH_CLIENT_Open()

fsp_err_t RM_MESH_HEALTH_CLIENT_Open (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_client_cfg_t const *const *p_cfg*)

Open Health Client middleware. This is to initialize Health Client model and to register with Access layer.

Implements rm_ble_mesh_model_client_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_HEALTH_CLIENT_Open(&g_mesh_health_clt0_ctrl,
&g_mesh_health_clt0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_HEALTH_CLIENT_Close()

fsp_err_t RM_MESH_HEALTH_CLIENT_Close (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Close Health Client middleware.

Implements rm_ble_mesh_model_client_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_HEALTH_CLIENT_Close(&g_mesh_health_clt0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_HEALTH_CLIENT_GetModelHandle()

fsp_err_t RM_MESH_HEALTH_CLIENT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *const *p_model_handle*)

This is to get the handle of Health client model.

Implements rm_ble_mesh_model_client_api_t::getModelHandle.

Example:

```
/* Get the handle of health client model. */
   err = RM_MESH_HEALTH_CLIENT_GetModelHandle(&g_mesh_health_clt0_ctrl,
&model_handle);
```

Return values

FSP_SUCCESS	Got model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.

◆ RM_MESH_HEALTH_CLIENT_SendReliablePdu()

fsp_err_t RM_MESH_HEALTH_CLIENT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, uint32_t *req_opcode*, void const *const *p_parameter*, uint32_t *rsp_opcode*)

This is to set the handle of Health client model.

Implements rm_ble_mesh_model_client_api_t::sendReliablePdu.

Example:

```
/* Initialize sending acknowledged commands. */
   err = RM_MESH_HEALTH_CLIENT_SendReliablePdu(&g_mesh_health_clt0_ctrl, req_opcode,
p_parameter, rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_HEALTH_CLIENT_FaultGet()

fsp_err_t RM_MESH_HEALTH_CLIENT_FaultGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Health Fault Get is an acknowledged message used to get the current Registered Fault state identified by Company ID of an element.

Parameters

[in]	p_ctrl	rm_mesh_health_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_health_clt_fault_get_clear_info_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_HEALTH_CLIENT_FaultClearUnacknowledged()

fsp_err_t RM_MESH_HEALTH_CLIENT_FaultClearUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Health Fault Clear Unacknowledged is an unacknowledged message used to clear the current Registered Fault state identified by Company ID of an element.

Parameters

[in]	p_ctrl	rm_mesh_health_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_health_clt_fault_get_clear_info_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_HEALTH_CLIENT_FaultClear()

fsp_err_t RM_MESH_HEALTH_CLIENT_FaultClear (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Health Fault Clear is an acknowledged message used to clear the current Registered Fault state identified by Company ID of an element.

Parameters

[in]	p_ctrl	rm_mesh_health_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_health_clt_fault_get_clear_info_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_HEALTH_CLIENT_FaultTest()

fsp_err_t RM_MESH_HEALTH_CLIENT_FaultTest (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Health Fault Test is an acknowledged message used to invoke a self-test procedure of an element. The procedure is implementation specific and may result in changing the Health Fault state of an element.

Parameters

[in]	p_ctrl	rm_mesh_health_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_health_clt_fault_test_info_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_HEALTH_CLIENT_FaultTestUnacknowledged()

fsp_err_t RM_MESH_HEALTH_CLIENT_FaultTestUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Health Fault Test Unacknowledged is an unacknowledged message used to invoke a self-test procedure of an element. The procedure is implementation specific and may result in changing the Health Fault state of an element.

Parameters

[in]	p_ctrl	rm_mesh_health_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_health_clt_fault_test_info_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_HEALTH_CLIENT_PeriodGet()

fsp_err_t RM_MESH_HEALTH_CLIENT_PeriodGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

The Health Period Get is an acknowledged message used to get the current Health Period state of an element.

Parameters

[in]	p_ctrl	rm_mesh_health_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_HEALTH_CLIENT_PeriodSetUnacknowledged()

fsp_err_t RM_MESH_HEALTH_CLIENT_PeriodSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Health Period Set Unacknowledged is an unacknowledged message used to set the current Health Period state of an element.

Parameters

[in]	p_ctrl	rm_mesh_health_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_health_clt_period_info_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_HEALTH_CLIENT_PeriodSet()

fsp_err_t RM_MESH_HEALTH_CLIENT_PeriodSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Health Period Set is an acknowledged message used to set the current Health Period state of an element.

Parameters

[in]	p_ctrl	rm_mesh_health_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_health_clt_period_info_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_HEALTH_CLIENT_AttentionGet()

fsp_err_t RM_MESH_HEALTH_CLIENT_AttentionGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

The Health Attention Get is an acknowledged message used to get the current Attention Timer state of an element.

Parameters

[in]	p_ctrl	rm_mesh_health_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_HEALTH_CLIENT_AttentionSet()

fsp_err_t RM_MESH_HEALTH_CLIENT_AttentionSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Health Attention Set is an acknowledged message used to set the Attention Timer state of an element.

Parameters

[in]	p_ctrl	rm_mesh_health_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_health_clt_attention_info_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_HEALTH_CLIENT_AttentionSetUnacknowledged()

fsp_err_t RM_MESH_HEALTH_CLIENT_AttentionSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Health Attention Set Unacknowledged is an unacknowledged message used to set the Attention Timer state of an element.

Parameters

[in]	p_ctrl	rm_mesh_health_clt control block.
[in]	p_parameter	Pointer to the structure populated as in rm_mesh_health_clt_attention_info_t.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

4.2.1.31 Bluetooth Low Energy Mesh Network Health Server (rm_mesh_health_srv)

Modules » Bluetooth Low Energy Mesh Network Modules

Functions

fsp_err_t	RM_MESH_HEALTH_SERVER_Open (rm_ble_mesh_health_server_ctrl_t *const p_ctrl, rm_ble_mesh_health_server_cfg_t const *const p_cfg)
fsp_err_t	RM_MESH_HEALTH_SERVER_Close (rm_ble_mesh_health_server_ctrl_t *const p_ctrl)

fsp_err_t	RM_MESH_HEALTH_SERVER_ReportFault (rm_ble_mesh_health_server_ctrl_t *const p_ctrl, const rm_ble_mesh_access_model_handle_t *const model_handle, uint8_t test_id, uint16_t company_id, uint8_t fault_code)
fsp_err_t	RM_MESH_HEALTH_SERVER_PublishCurrentStatus (rm_ble_mesh_health_server_ctrl_t *const p_ctrl, uint8_t *status, uint16_t length)

Detailed Description

Overview

Data Structures

struct	rm_mesh_health_server_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_health_server_instance_ctrl_t

struct rm_mesh_health_server_instance_ctrl_t
BLE mesh health server instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_HEALTH_SERVER_Open() is called.

Function Documentation

◆ RM_MESH_HEALTH_SERVER_Open()

fsp_err_t RM_MESH_HEALTH_SERVER_Open (rm_ble_mesh_health_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_health_server_cfg_t const *const *p_cfg*)

API to initialize Health Server model. This is to initialize Health Server model and to register with Access layer.

Implements rm_ble_mesh_health_server_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_HEALTH_SERVER_Open(&g_mesh_health_srv0_ctrl,
&g_mesh_health_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_HEALTH_SERVER_Close()

fsp_err_t RM_MESH_HEALTH_SERVER_Close (rm_ble_mesh_health_server_ctrl_t *const *p_ctrl*)

API to terminate Health Server model. This is to terminate Health Server model and to register with Access layer.

Implements rm_ble_mesh_health_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_HEALTH_SERVER_Close(&g_mesh_health_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_HEALTH_SERVER_ReportFault()

fsp_err_t RM_MESH_HEALTH_SERVER_ReportFault (rm_ble_mesh_health_server_ctrl_t *const *p_ctrl*, const rm_ble_mesh_access_model_handle_t *const *model_handle*, uint8_t *test_id*, uint16_t *company_id*, uint8_t *fault_code*)

API to report self-test fault. This is to report fault observed during self-test procedure.

Parameters

[in]	p_ctrl	rm_mesh_health_srv control block.
[in]	model_handle	Model Handle identifying the Health Server model instance.
[in]	test_id	Identifier of the self-test.
[in]	company_id	Company Identifier.
[in]	fault_code	Fault value indicating the error.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.

◆ RM_MESH_HEALTH_SERVER_PublishCurrentStatus()

fsp_err_t RM_MESH_HEALTH_SERVER_PublishCurrentStatus (rm_ble_mesh_health_server_ctrl_t *const *p_ctrl*, uint8_t * *status*, uint16_t *length*)

API to publish current status.

Parameters

[in]	p_ctrl	rm_mesh_health_srv control block.
[in]	status	Current status.
[in]	length	Length of status.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

fsp_err_t	RM_MESH_LIGHT_CTL_CLT_TemperatureRangeGet (rm_ble_mesh_model_client_ctrl_t *const p_ctrl)
fsp_err_t	RM_MESH_LIGHT_CTL_CLT_TemperatureRangeSet (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)
fsp_err_t	RM_MESH_LIGHT_CTL_CLT_TemperatureRangeSetUnacknowledged

	(rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)

Detailed Description

Overview

Data Structures

struct	rm_mesh_light_ctl_clt_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_light_ctl_clt_instance_ctrl_t

struct rm_mesh_light_ctl_clt_instance_ctrl_t
BLE mesh light ctl instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_LIGHT_CTL_CLT_Open() is called.

Function Documentation

◆ RM_MESH_LIGHT_CTL_CLT_Open()

fsp_err_t RM_MESH_LIGHT_CTL_CLT_Open (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_client_cfg_t const *const *p_cfg*)

Open Light_Ctl Client middleware. This is to initialize Light_Ctl Client model and to register with Access layer.
Implements rm_ble_mesh_model_client_api_t::open.
Example:
`/* Open the module. */`
`err = RM_MESH_LIGHT_CTL_CLT_Open(&g_mesh_light_ctl_clt0_ctrl, &g_mesh_light_ctl_clt0_cfg);`

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_LIGHT_CTL_CLT_Close()

fsp_err_t RM_MESH_LIGHT_CTL_CLT_Close (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Close Light_Ctl Client middleware.

Implements rm_ble_mesh_model_client_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_LIGHT_CTL_CLT_Close(&g_mesh_light_ctl_clt0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_LIGHT_CTL_CLT_GetModelHandle()

fsp_err_t RM_MESH_LIGHT_CTL_CLT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *const *p_model_handle*)

This is to get the handle of Light_Ctl client model.

Implements rm_ble_mesh_model_client_api_t::getModelHandle.

Example:

```
/* Get the handle of light ctl client model. */
   err = RM_MESH_LIGHT_CTL_CLT_GetModelHandle(&g_mesh_light_ctl_clt0_ctrl,
&model_handle);
```

Return values

FSP_SUCCESS	Got model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.

◆ RM_MESH_LIGHT_CTL_CLT_SetModelHandle()

fsp_err_t RM_MESH_LIGHT_CTL_CLT_SetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*)

This is to set the handle of Light_Ctl client model.

Implements rm_ble_mesh_model_client_api_t::setModelHandle.

Example:

```
/* Set the handle of light ctl client model. */
   err = RM_MESH_LIGHT_CTL_CLT_SetModelHandle(&g_mesh_light_ctl_clt0_ctrl,
model_handle);
```

Return values

FSP_SUCCESS	Changed model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_LIGHT_CTL_CLT_SendReliablePdu()

fsp_err_t RM_MESH_LIGHT_CTL_CLT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, uint32_t *req_opcode*, void const *const *p_parameter*, uint32_t *rsp_opcode*)

This is to initialize sending acknowledged commands.

Implements rm_ble_mesh_model_client_api_t::sendReliablePdu.

Example:

```
/* Initialize sending acknowledged commands. */
   err = RM_MESH_LIGHT_CTL_CLT_SendReliablePdu(&g_mesh_light_ctl_clt0_ctrl,
req_opcode, p_parameter, rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_CTL_CLT_Get()

fsp_err_t RM_MESH_LIGHT_CTL_CLT_Get (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Light CTL Get is an acknowledged message used to get the Light CTL state of an element. The response to the Light CTL Get message is a Light CTL Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_ctl_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_CTL_CLT_Set()

fsp_err_t RM_MESH_LIGHT_CTL_CLT_Set (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Light CTL Set is an acknowledged message used to set the Light CTL Lightness state, Light CTL Temperature state, and the Light CTL Delta UV state of an element. The response to the Light CTL Set message is a Light CTL Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_ctl_clt control block.
[in]	p_parameter	Pointer to Light CTL Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_CTL_CLT_SetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_CTL_CLT_SetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Light CTL Set Unacknowledged is an unacknowledged message used to set the Light CTL Lightness state, Light CTL Temperature state, and the Light CTL Delta UV state of an element

Parameters

[in]	p_ctrl	rm_mesh_light_ctl_clt control block.
[in]	p_parameter	Pointer to Light CTL Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_CTL_CLT_TemperatureGet()

fsp_err_t RM_MESH_LIGHT_CTL_CLT_TemperatureGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Light CTL Temperature Get is an acknowledged message used to get the Light CTL Temperature state of an element. The response to the Light CTL Temperature Get message is a Light CTL Temperature Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_ctl_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_CTL_CLT_TemperatureSet()

fsp_err_t RM_MESH_LIGHT_CTL_CLT_TemperatureSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light CTL Temperature Set is an acknowledged message used to set the Light CTL Temperature state and the Light CTL Delta UV state of an element. The response to the Light CTL Temperature Set message is a Light CTL Temperature Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_ctl_clt control block.
[in]	p_parameter	Pointer to Light CTL Temperature Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_CTL_CLT_TemperatureSetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_CTL_CLT_TemperatureSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light CTL Temperature Set Unacknowledged is an unacknowledged message used to set the Light CTL Temperature state and the Light CTL Delta UV state of an element

Parameters

[in]	p_ctrl	rm_mesh_light_ctl_clt control block.
[in]	p_parameter	Pointer to Light CTL Temperature Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_CTL_CLT_DefaultGet()

fsp_err_t RM_MESH_LIGHT_CTL_CLT_DefaultGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Light CTL Default Get is an acknowledged message used to get the Light CTL Temperature Default and Light CTL Delta UV Default states of an element. The response to the Light CTL Default Get message is a Light CTL Default Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_ctl_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_CTL_CLT_DefaultSet()

fsp_err_t RM_MESH_LIGHT_CTL_CLT_DefaultSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light CTL Default Set is an acknowledged message used to set the Light CTL Temperature Default state and the Light CTL Delta UV Default state of an element. The response to the Light CTL Set message is a Light CTL Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_ctl_clt control block.
[in]	p_parameter	Pointer to Light CTL Default Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_CTL_CLT_DefaultSetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_CTL_CLT_DefaultSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light CTL Default Set Unacknowledged is an unacknowledged message used to set the Light CTL Temperature Default state and the Light CTL Delta UV Default state of an element.

Parameters

[in]	p_ctrl	rm_mesh_light_ctl_clt control block.
[in]	p_parameter	Pointer to Light CTL Default Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_CTL_CLT_TemperatureRangeGet()

fsp_err_t RM_MESH_LIGHT_CTL_CLT_TemperatureRangeGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

The Light CTL Temperature Range Get is an acknowledged message used to get the Light CTL Temperature Range state of an element. The response to the Light CTL Temperature Range Get message is a Light CTL Temperature Range Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_ctl_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_CTL_CLT_TemperatureRangeSet()

fsp_err_t RM_MESH_LIGHT_CTL_CLT_TemperatureRangeSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Light CTL Temperature Range Set Unacknowledged is an unacknowledged message used to set the Light CTL Temperature Range state of an element.

Parameters

[in]	p_ctrl	rm_mesh_light_ctl_clt control block.
[in]	p_parameter	Pointer to Light CTL Temperature Range Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_CTL_CLT_TemperatureRangeSetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_CTL_CLT_TemperatureRangeSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Light CTL Temperature Range Set is an acknowledged message used to set the Light CTL Temperature Range state of an element. The response to the Light CTL Temperature Range Get message is a Light CTL Temperature Range Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_ctl_clt control block.
[in]	p_parameter	Pointer to Light CTL Temperature Range Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

struct	rm_mesh_light_ctl_srv_temperature_range_info_t
struct	rm_mesh_light_ctl_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_light_ctl_srv_info_t

struct rm_mesh_light_ctl_srv_info_t		
Light CTL state is a composite state that includes the Light CTL Lightness, the Light CTL Temperature and the Light CTL Delta UV states		
Data Fields		
uint16_t	ctl_lightness	Light CTL Lightness
uint16_t	target_ctl_lightness	Target Light CTL Lightness - Used in response path
uint16_t	ctl_temperature	Light CTL Temperature
uint16_t	target_ctl_temperature	Terget Light CTL Temperature - Used in response path
uint16_t	ctl_delta_uv	Light CTL Delta UV
uint8_t	tid	TID - Used in request path
uint8_t	transition_time	Transition Time - Used in request path. Used as remaining time in response

		path.
uint8_t	delay	Delay - Used in request path
uint16_t	transition_time_handle	Transition Timer Handle

◆ rm_mesh_light_ctl_srv_default_info_t

struct rm_mesh_light_ctl_srv_default_info_t		
Light CTL Default state is a composite state that includes the Light CTL Lightness, the Light CTL Temperature and the Light CTL Delta UV states		
Data Fields		
uint16_t	ctl_lightness	Light CTL Lightness
uint16_t	ctl_temperature	Light CTL Temperature
uint16_t	ctl_delta_uv	Light CTL Delta UV

◆ rm_mesh_light_ctl_srv_temperature_info_t

struct rm_mesh_light_ctl_srv_temperature_info_t		
Light CTL Temperature state is a composite state that includes the Light CTL Temperature and the Light CTL Delta UV states		
Data Fields		
uint16_t	ctl_temperature	Light CTL Temperature
uint16_t	target_ctl_temperature	Target Light CTL Temperature - Used in response path
uint16_t	ctl_delta_uv	Light CTL Delta UV
uint16_t	target_ctl_delta_uv	Target Light CTL Delta UV - Used in response path
uint8_t	tid	TID - Used in request path
uint8_t	transition_time	Transition Time - Used in request path. Used as remaining time in response path.
uint8_t	delay	Delay - Used in request path

◆ rm_mesh_light_ctl_srv_temperature_range_info_t

struct rm_mesh_light_ctl_srv_temperature_range_info_t		
Light CTL Temperature Range state determines the minimum and maximum color temperatures of tunable white light an element is capable of emitting		
Data Fields		
uint16_t	ctl_temperature_range_min	CTL Temperature Range Min
uint16_t	ctl_temperature_range_max	CTL Temperature Range Max
uint8_t	status	Status - Used in response path

◆ rm_mesh_light_ctl_srv_instance_ctrl_t

struct rm_mesh_light_ctl_srv_instance_ctrl_t
BLE mesh light ctl instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_LIGHT_CTL_SRV_Open() is called.

Function Documentation

◆ RM_MESH_LIGHT_CTL_SRV_Open()

fsp_err_t RM_MESH_LIGHT_CTL_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize Light_Ctl Server model and to initialize Light_Ctl_Temperature Server model. This is to initialize Light_Ctl Server model and to register with Access layer. And this is to initialize Light_Ctl_Temperature Server model and to register with Access layer. Implements rm_ble_mesh_model_server_api_t::open.
 	
Example:
`/* Open the module. */`
`err = RM_MESH_LIGHT_CTL_SRV_Open(&g_mesh_light_ctl_srv0_ctrl, &g_mesh_light_ctl_srv0_cfg);`

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_LIGHT_CTL_SRV_Close()

fsp_err_t RM_MESH_LIGHT_CTL_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate Light_Ctl Server model. This is to terminate Light_Ctl Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_LIGHT_CTL_SRV_Close(&g_mesh_light_ctl_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_LIGHT_CTL_SRV_StateUpdate()

fsp_err_t RM_MESH_LIGHT_CTL_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err = RM_MESH_LIGHT_CTL_SRV_StateUpdate(&g_mesh_light_ctl_srv0_ctrl, &state);
```

Return values

FSP_SUCCESS	Updated server status successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_CTL_SRV_TemperatureServerStateUpdate()

fsp_err_t RM_MESH_LIGHT_CTL_SRV_TemperatureServerStateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Parameters

[in]	p_ctrl	rm_mesh_light_ctl_srv control block.
[in]	p_state	To send reply for a request or to inform change in state.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

Detailed Description

Overview

Data Structures

struct	rm_mesh_light_hsl_clt_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_light_hsl_clt_instance_ctrl_t

struct rm_mesh_light_hsl_clt_instance_ctrl_t
BLE mesh light hsl instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_LIGHT_HSL_CLT_Open() is called.

Function Documentation

◆ RM_MESH_LIGHT_HSL_CLT_Open()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_Open (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_client_cfg_t const *const *p_cfg*)

Open Light_Hsl Client middleware. This is to initialize Light_Hsl Client model and to register with Access layer.

Implements rm_ble_mesh_model_client_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_LIGHT_HSL_CLT_Open(&g_mesh_light_hsl_clt0_ctrl,
&g_mesh_light_hsl_clt0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_LIGHT_HSL_CLT_Close()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_Close (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Close Light_Hsl Client middleware.

Implements rm_ble_mesh_model_client_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_LIGHT_HSL_CLT_Close(&g_mesh_light_hsl_clt0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_LIGHT_HSL_CLT_GetModelHandle()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *const *p_model_handle*)

This is to get the handle of Light_Hsl client model.

Implements rm_ble_mesh_model_client_api_t::getModelHandle.

Example:

```
/* Get the handle of light hsl client model. */
   err = RM_MESH_LIGHT_HSL_CLT_GetModelHandle(&g_mesh_light_hsl_clt0_ctrl,
&model_handle);
```

Return values

FSP_SUCCESS	Got model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.

◆ RM_MESH_LIGHT_HSL_CLT_SetModelHandle()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_SetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*)

This is to set the handle of Light_Hsl client model.

Implements rm_ble_mesh_model_client_api_t::setModelHandle.

Example:

```
/* Set the handle of light hsl client model. */
   err = RM_MESH_LIGHT_HSL_CLT_SetModelHandle(&g_mesh_light_hsl_clt0_ctrl,
model_handle);
```

Return values

FSP_SUCCESS	Changed model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_LIGHT_HSL_CLT_SendReliablePdu()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, uint32_t *req_opcode*, void const *const *p_parameter*, uint32_t *rsp_opcode*)

This is to initialize sending acknowledged commands.

Implements rm_ble_mesh_model_client_api_t::sendReliablePdu.

Example:

```
/* Initialize sending acknowledged commands. */
   err = RM_MESH_LIGHT_HSL_CLT_SendReliablePdu(&g_mesh_light_hsl_clt0_ctrl,
req_opcode, p_parameter, rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_HSL_CLT_Get()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_Get (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

The Light HSL Get is an acknowledged message used to get the Light HSL Lightness, Light HSL Hue, and Light HSL Saturation states of an element. The response to the Light HSL Get message is a Light HSL Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_hsl_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_HSL_CLT_Set()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_Set (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light HSL Set Unacknowledged is an unacknowledged message used to set the Light HSL Lightness state, Light HSL Hue state, and the Light HSL Saturation state of an element.

Parameters

[in]	p_ctrl	rm_mesh_light_hsl_clt control block.
[in]	p_parameter	Pointer to Light HSL Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_HSL_CLT_SetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_SetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light HSL Set is an acknowledged message used to set the Light HSL Lightness state, Light HSL Hue state, and the Light HSL Saturation state of an element. The response to the Light HSL Set message is a Light HSL Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_hsl_clt control block.
[in]	p_parameter	Pointer to Light HSL Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_HSL_CLT_TargetGet()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_TargetGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Light HSL Target Get is an acknowledged message used to get the target Light HSL Lightness, Light HSL Hue, and Light HSL Saturation states of an element. The response to the Light HSL Target Get message is a Light HSL Target Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_hsl_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_HSL_CLT_DefaultGet()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_DefaultGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Light HSL Default Get is an acknowledged message used to get the Light Lightness Default, the Light HSL Hue Default, and Light HSL Saturation Default states of an element. The response to the Light HSL Default Get message is a Light HSL Default Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_hsl_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_HSL_CLT_DefaultSet()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_DefaultSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Light HSL Default Set is an acknowledged message used to set the Light Lightness Default, the Light HSL Hue Default, and Light HSL Saturation Default states of an element. The response to the Light HSL Default Set message is a Light HSL Default Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_hsl_clt control block.
[in]	p_parameter	Pointer to Light HSL Default Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_HSL_CLT_DefaultSetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_DefaultSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Light HSL Default Set Unacknowledged is an unacknowledged message used to set the Light Lightness Default, the Light HSL Hue Default, and Light HSL Saturation Default states of an element.

Parameters

[in]	p_ctrl	rm_mesh_light_hsl_clt control block.
[in]	p_parameter	Pointer to Light HSL Default Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_HSL_CLT_RangeGet()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_RangeGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

The Light HSL Range Get is an acknowledged message used to get the Light HSL Hue Range and Light HSL Saturation Range states of an element. The response to the Light HSL Range Get message is a Light HSL Range Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_hsl_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_HSL_CLT_RangeSet()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_RangeSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Light HSL Range Set is an acknowledged message used to set the Light HSL Hue Range and Light HSL Saturation Range states of an element. The response to the Light HSL Range Set message is a Light HSL Range Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_hsl_clt control block.
[in]	p_parameter	Pointer to Light HSL Range Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_HSL_CLT_RangeSetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_RangeSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Light HSL Range Set Unacknowledged is an unacknowledged message used to set the Light HSL Hue Range and Light HSL Saturation Range states of an element.

Parameters

[in]	p_ctrl	rm_mesh_light_hsl_clt control block.
[in]	p_parameter	Pointer to Light HSL Range Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_HSL_CLT_HueGet()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_HueGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

The Light HSL Hue Get is an acknowledged message used to get the Light HSL Hue state of an element. The response to the Light HSL Hue Get message is a Light HSL Hue Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_hsl_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_HSL_CLT_HueSet()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_HueSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light HSL Hue Set is an acknowledged message used to set the target Light HSL Hue state of an element. The response to the Light HSL Hue Set message is a Light HSL Hue Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_hsl_clt control block.
[in]	p_parameter	Pointer to Light HSL Hue Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_HSL_CLT_HueSetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_HueSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light HSL Hue Set Unacknowledged is an unacknowledged message used to set the target Light HSL Hue state of an element.

Parameters

[in]	p_ctrl	rm_mesh_light_hsl_clt control block.
[in]	p_parameter	Pointer to Light HSL Hue Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_HSL_CLT_SaturationGet()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_SaturationGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

The Light HSL Saturation Get is an acknowledged message used to get the Light HSL Saturation state of an element. The response to the Light HSL Saturation Get message is a Light HSL Saturation Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_hsl_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_HSL_CLT_SaturationSet()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_SaturationSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light HSL Saturation Set is an acknowledged message used to set the target Light HSL Saturation state of an element. The response to the Light HSL Saturation Set message is a Light HSL Saturation Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_hsl_clt control block.
[in]	p_parameter	Pointer to Light HSL Saturation Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_HSL_CLT_SaturationSetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_HSL_CLT_SaturationSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light HSL Saturation Set Unacknowledged is an unacknowledged message used to set the target Light HSL Saturation state of an element.

Parameters

[in]	p_ctrl	rm_mesh_light_hsl_clt control block.
[in]	p_parameter	Pointer to Light HSL Saturation Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

Detailed Description

Overview

Data Structures

struct	rm_mesh_light_hsl_srv_info_t
struct	rm_mesh_light_hsl_srv_target_info_t
struct	rm_mesh_light_hsl_srv_default_info_t
struct	rm_mesh_light_hsl_srv_hue_info_t
struct	rm_mesh_light_hsl_srv_saturation_info_t
struct	rm_mesh_light_hsl_srv_range_info_t
struct	rm_mesh_light_hsl_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_light_hsl_srv_info_t

struct rm_mesh_light_hsl_srv_info_t		
Light HSL state is a composite state that includes the Light HSL Lighness, the Light HSL Hue and the Light HSL Saturation states		
Data Fields		
uint16_t	hsl_lightness	The perceived lightness of a light emitted by the element
uint16_t	target_hsl_lightness	Target Perceived lightness - used in the response path
uint16_t	hsl_hue	The 16-bit value representing the hue
uint16_t	target_hsl_hue	Target hue - used in the response path

uint16_t	hsl_saturation	The saturation of a color light
uint16_t	target_hsl_saturation	Target saturation - used in the response path
uint8_t	tid	TID - Used in request path
uint8_t	transition_time	Transition Time - Used in request path. Used as remaining time in response path.
uint8_t	delay	Delay - Used in request path
uint16_t	transition_time_handle	Transition Timer Handle

◆ rm_mesh_light_hsl_srv_target_info_t

struct rm_mesh_light_hsl_srv_target_info_t		
Light HSL Target state is a composite state that includes the Light HSL Lighness, the Light HSL Hue and the Light HSL Saturation states		
Data Fields		
uint16_t	hsl_lightness	The perceived lightness of a light emitted by the element
uint16_t	hsl_hue	The 16-bit value representing the hue
uint16_t	hsl_saturation	The saturation of a color light

◆ rm_mesh_light_hsl_srv_default_info_t

struct rm_mesh_light_hsl_srv_default_info_t		
Light HSL Default state is a composite state that includes the Light HSL Lighness, the Light HSL Hue and the Light HSL Saturation states		
Data Fields		
uint16_t	hsl_lightness	The perceived lightness of a light emitted by the element
uint16_t	hsl_hue	The 16-bit value representing the hue
uint16_t	hsl_saturation	The saturation of a color light

◆ rm_mesh_light_hsl_srv_hue_info_t

struct rm_mesh_light_hsl_srv_hue_info_t		
Light HSL Hue		
Data Fields		
uint16_t	hsl_hue	The 16-bit value representing the hue

◆ rm_mesh_light_hsl_srv_saturation_info_t

struct rm_mesh_light_hsl_srv_saturation_info_t		
Light HSL Saturation		
Data Fields		
uint16_t	hsl_saturation	The saturation of a color light

◆ rm_mesh_light_hsl_srv_range_info_t

struct rm_mesh_light_hsl_srv_range_info_t		
Light HSL Range state is a composite state that includes Minimum and Maximum of the Light HSL Hue and the Light HSL Saturation states		
Data Fields		
uint16_t	hue_range_min	The value of the Hue Range Min field of the Light HSL Hue Range state
uint16_t	hue_range_max	The value of the Hue Range Max field of the Light HSL Hue Range state
uint16_t	saturation_range_min	The value of the Saturation Range Min field of the Light HSL Saturation Range state
uint16_t	saturation_range_max	The value of the Saturation Range Max field of the Light HSL Saturation Range state
uint8_t	status	Status - Used only in response path

◆ rm_mesh_light_hsl_srv_instance_ctrl_t

struct rm_mesh_light_hsl_srv_instance_ctrl_t
BLE mesh light hsl instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_LIGHT_HSL_SRV_Open() is called.

Function Documentation

◆ RM_MESH_LIGHT_HSL_SRV_Open()

fsp_err_t RM_MESH_LIGHT_HSL_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize Light_Hsl Server/Light_Hsl_Hue Server/Light_Hsl_Saturation Server model.

1. This is to initialize Light_Hsl Server model and to register with Access layer.
2. This is to initialize Light_Hsl_Hue Server model and to register with Access layer.
3. This is to initialize Light_Hsl_Saturation Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_LIGHT_HSL_SRV_Open(&g_mesh_light_hsl_srv0_ctrl,
&g_mesh_light_hsl_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_LIGHT_HSL_SRV_Close()

fsp_err_t RM_MESH_LIGHT_HSL_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate Light_Hsl Server model. This is to terminate Light_Hsl Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_LIGHT_HSL_SRV_Close(&g_mesh_light_hsl_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_LIGHT_HSL_SRV_StateUpdate()

fsp_err_t RM_MESH_LIGHT_HSL_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err = RM_MESH_LIGHT_HSL_SRV_StateUpdate(&g_mesh_light_hsl_srv0_ctrl, &state);
```

Return values

FSP_SUCCESS	Updated server status successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_HSL_SRV_HueServerStateUpdate()

fsp_err_t RM_MESH_LIGHT_HSL_SRV_HueServerStateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Parameters

[in]	p_ctrl	rm_mesh_light_hsl_srv control block.
[in]	p_state	To send reply for a request or to inform change in state.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_HSL_SRV_SaturationServerStateUpdate()

fsp_err_t RM_MESH_LIGHT_HSL_SRV_SaturationServerStateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Parameters

[in]	p_ctrl	rm_mesh_light_hsl_srv control block.
[in]	p_state	To send reply for a request or to inform change in state.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

fsp_err_t	RM_MESH_LIGHT_LC_CLT_PropertySetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)

Detailed Description

Overview

Data Structures

struct	rm_mesh_light_lc_clt_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_light_lc_clt_instance_ctrl_t

struct rm_mesh_light_lc_clt_instance_ctrl_t
BLE mesh light lc instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_LIGHT_LC_CLT_Open() is called.

Function Documentation

◆ RM_MESH_LIGHT_LC_CLT_Open()

fsp_err_t RM_MESH_LIGHT_LC_CLT_Open (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_client_cfg_t const *const *p_cfg*)

Open Light_Lc Client middleware. This is to initialize Light_Lc Client model and to register with Access layer.

Implements rm_ble_mesh_model_client_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_LIGHT_LC_CLT_Open(&g_mesh_light_lc_clt0_ctrl,
&g_mesh_light_lc_clt0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_LIGHT_LC_CLT_Close()

fsp_err_t RM_MESH_LIGHT_LC_CLT_Close (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Close Light_Lc Client middleware.

Implements rm_ble_mesh_model_client_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_LIGHT_LC_CLT_Close(&g_mesh_light_lc_clt0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_LIGHT_LC_CLT_GetModelHandle()

fsp_err_t RM_MESH_LIGHT_LC_CLT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *const *p_model_handle*)

This is to get the handle of Light_Lc client model.

Implements rm_ble_mesh_model_client_api_t::getModelHandle.

Example:

```
/* Get the handle of light lc client model. */
   err = RM_MESH_LIGHT_LC_CLT_GetModelHandle(&g_mesh_light_lc_clt0_ctrl,
&model_handle);
```

Return values

FSP_SUCCESS	Got model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.

◆ RM_MESH_LIGHT_LC_CLT_SetModelHandle()

fsp_err_t RM_MESH_LIGHT_LC_CLT_SetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*)

This is to set the handle of Light_Lc client model.

Implements rm_ble_mesh_model_client_api_t::setModelHandle.

Example:

```
/* Set the handle of light lc client model. */
   err = RM_MESH_LIGHT_LC_CLT_SetModelHandle(&g_mesh_light_lc_clt0_ctrl,
model_handle);
```

Return values

FSP_SUCCESS	Changed model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_LIGHT_LC_CLT_SendReliablePdu()

fsp_err_t RM_MESH_LIGHT_LC_CLT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, uint32_t *req_opcode*, void const *const *p_parameter*, uint32_t *rsp_opcode*)

This is to initialize sending acknowledged commands.

Implements rm_ble_mesh_model_client_api_t::sendReliablePdu.

Example:

```
/* Initialize sending acknowledged commands. */
   err = RM_MESH_LIGHT_LC_CLT_SendReliablePdu(&g_mesh_light_lc_clt0_ctrl,
req_opcode, p_parameter, rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LC_CLT_ModeGet()

fsp_err_t RM_MESH_LIGHT_LC_CLT_ModeGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Light LC Mode Get is an acknowledged message used to get the Light LC Mode state of an element. The response to the Light LC Mode Get message is a Light LC Mode Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_lc_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LC_CLT_ModeSet()

fsp_err_t RM_MESH_LIGHT_LC_CLT_ModeSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light LC Mode Set is an acknowledged message used to set the Light LC Mode state of an element. The response to the Light LC Mode Set message is a Light LC Mode Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_lc_clt control block.
[in]	p_parameter	Pointer to Light LC Mode Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LC_CLT_ModeSetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_LC_CLT_ModeSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light LC Mode Set Unacknowledged is an unacknowledged message used to set the Light LC Mode state of an element.

Parameters

[in]	p_ctrl	rm_mesh_light_lc_clt control block.
[in]	p_parameter	Pointer to Light LC Mode Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LC_CLT_OmGet()

fsp_err_t RM_MESH_LIGHT_LC_CLT_OmGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Light LC OM Get is an acknowledged message used to get the Light LC Occupancy Mode state of an element. The response to the Light LC OM Get message is a Light LC OM Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_lc_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LC_CLT_OmSet()

fsp_err_t RM_MESH_LIGHT_LC_CLT_OmSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light LC OM Set is an acknowledged message used to set the Light LC Occupancy Mode state of an element. The response to the Light LC OM Set message is a Light LC OM Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_lc_clt control block.
[in]	p_parameter	Pointer to Light LC OM Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LC_CLT_OmSetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_LC_CLT_OmSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light LC OM Set Unacknowledged is an unacknowledged message used to set the Light LC Occupancy Mode state of an element.

Parameters

[in]	p_ctrl	rm_mesh_light_lc_clt control block.
[in]	p_parameter	Pointer to Light LC OM Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LC_CLT_LightOnOffGet()

fsp_err_t RM_MESH_LIGHT_LC_CLT_LightOnOffGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Light LC Light OnOff Get is an acknowledged message used to get the Light LC Light OnOff state of an element. The response to the Light LC Light OnOff Get message is a Light LC Light OnOff Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_lc_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LC_CLT_LightOnOffSet()

fsp_err_t RM_MESH_LIGHT_LC_CLT_LightOnOffSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light LC Light OnOff Set is an acknowledged message used to set the Light LC Light OnOff state of an element. The response to the Light LC Light OnOff Set message is a Light LC Light OnOff Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_lc_clt control block.
[in]	p_parameter	Pointer to Light LC Light OnOff Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LC_CLT_LightOnOffSetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_LC_CLT_LightOnOffSetUnacknowledged (
rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light LC Light OnOff Set Unacknowledged is an unacknowledged message used to set the Light LC Light OnOff state of an element.

Parameters

[in]	p_ctrl	rm_mesh_light_lc_clt control block.
[in]	p_parameter	Pointer to Light LC Light OnOff Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LC_CLT_PropertyGet()

fsp_err_t RM_MESH_LIGHT_LC_CLT_PropertyGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Light LC Property Get is an acknowledged message used to get the Light LC Property state of an element. The response to the Light LC Property Get message is a Light LC Property Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_lc_clt control block.
[in]	p_parameter	Pointer to Light LC Property Get message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LC_CLT_PropertySet()

fsp_err_t RM_MESH_LIGHT_LC_CLT_PropertySet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light LC Property Set is an acknowledged message used to set the Light LC Property state of an element. The response to the Light LC Property Set message is a Light LC Property Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_lc_clt control block.
[in]	p_parameter	Pointer to Light LC Property Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LC_CLT_PropertySetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_LC_CLT_PropertySetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light LC Property Set Unacknowledged is an unacknowledged message used to set the Light LC Property state of an element.

Parameters

[in]	p_ctrl	rm_mesh_light_lc_clt control block.
[in]	p_parameter	Pointer to Light LC Property Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

Light LC Mode state		
Data Fields		
uint8_t	present_mode	Light LC Mode state - present
uint8_t	target_mode	Light LC Mode state - target

◆ rm_mesh_light_lc_srv_om_info_t

struct rm_mesh_light_lc_srv_om_info_t		
Light LC Occupancy Mode state		
Data Fields		
uint8_t	present_mode	Light LC Occupancy Mode state - present
uint8_t	target_mode	Light LC Occupancy Mode state - target

◆ rm_mesh_light_lc_srv_light_onoff_info_t

struct rm_mesh_light_lc_srv_light_onoff_info_t
Light LC Light OnOff State

Data Fields		
uint8_t	present_light_onoff	Light LC Light OnOff State
uint8_t	target_light_onoff	Light LC Light OnOff State
uint8_t	tid	TID - Used in request path
uint8_t	transition_time	Transition Time - Used in request path. Used as remaining time in response path.
uint8_t	delay	Delay - Used in request path
uint16_t	transition_time_handle	Transition Timer Handle

◆ rm_mesh_light_lc_srv_property_id_info_t

struct rm_mesh_light_lc_srv_property_id_info_t		
Property ID identifying a Light LC Property		
Data Fields		
uint16_t	property_id	Property ID identifying a Light LC Property

◆ rm_mesh_light_lc_srv_property_info_t

struct rm_mesh_light_lc_srv_property_info_t		
Light LC Property state		
Data Fields		
uint16_t	property_id	Property ID identifying a Light LC Property
uint8_t *	property_value	Raw value for the Light LC Property
uint16_t	property_value_len	

◆ rm_mesh_light_lc_srv_instance_ctrl_t

struct rm_mesh_light_lc_srv_instance_ctrl_t
BLE mesh light lc instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_LIGHT_LC_SRV_Open() is called.

Function Documentation

◆ RM_MESH_LIGHT_LC_SRV_Open()

fsp_err_t RM_MESH_LIGHT_LC_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize Light_Lc Server model. This is to initialize Light_Lc Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_LIGHT_LC_SRV_Open(&g_mesh_light_lc_srv0_ctrl,
&g_mesh_light_lc_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_LIGHT_LC_SRV_Close()

fsp_err_t RM_MESH_LIGHT_LC_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate Light_Lc Server model. This is to terminate Light_Lc Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_LIGHT_LC_SRV_Close(&g_mesh_light_lc_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_LIGHT_LC_SRV_StateUpdate()

fsp_err_t RM_MESH_LIGHT_LC_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err = RM_MESH_LIGHT_LC_SRV_StateUpdate(&g_mesh_light_lc_srv0_ctrl, &state);
```

Return values

FSP_SUCCESS	Updated server status successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

4.2.1.38 Bluetooth Low Energy Mesh Network Light Lightness Client (rm_mesh_light_lightness_clt)

Modules » Bluetooth Low Energy Mesh Network Modules

Detailed Description

Overview

Data Structures

struct	rm_mesh_light_lightness_clt_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_light_lightness_clt_instance_ctrl_t

struct rm_mesh_light_lightness_clt_instance_ctrl_t
BLE mesh light lightness instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_LIGHT_LIGHTNESS_CLT_Open() is called.

Function Documentation

◆ RM_MESH_LIGHT_LIGHTNESS_CLT_Open()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_CLT_Open (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_client_cfg_t const *const *p_cfg*)

Open Light_Lightness Client middleware. This is to initialize Light_Lightness Client model and to register with Access layer.

Implements rm_ble_mesh_model_client_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_LIGHT_LIGHTNESS_CLT_Open(&g_mesh_light_lightness_clt0_ctrl,
&g_mesh_light_lightness_clt0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_LIGHT_LIGHTNESS_CLT_Close()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_CLT_Close (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Close Light_Lightness Client middleware.

Implements rm_ble_mesh_model_client_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_LIGHT_LIGHTNESS_CLT_Close(&g_mesh_light_lightness_clt0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_LIGHT_LIGHTNESS_CLT_GetModelHandle()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_CLT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *const *p_model_handle*)

This is to get the handle of Light_Lightness client model.

Implements rm_ble_mesh_model_client_api_t::getModelHandle.

Example:

```
/* Get the handle of light lightness client model. */
   err =
RM_MESH_LIGHT_LIGHTNESS_CLT_GetModelHandle(&g_mesh_light_lightness_clt0_ctrl,
&model_handle);
```

Return values

FSP_SUCCESS	Got model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.

◆ RM_MESH_LIGHT_LIGHTNESS_CLT_SetModelHandle()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_CLT_SetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*)

This is to set the handle of Light_Lightness client model.

Implements rm_ble_mesh_model_client_api_t::setModelHandle().

Example:

```
/* Set the handle of light lightness client model. */
   err =
RM_MESH_LIGHT_LIGHTNESS_CLT_SetModelHandle(&g_mesh_light_lightness_clt0_ctrl,
model_handle);
```

Return values

FSP_SUCCESS	Changed model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_LIGHT_LIGHTNESS_CLT_SendReliablePdu()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_CLT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, uint32_t *req_opcode*, void const *const *p_parameter*, uint32_t *rsp_opcode*)

This is to initialize sending acknowledged commands.

Implements rm_ble_mesh_model_client_api_t::sendReliablePdu.

Example:

```
/* Initialize sending acknowledged commands. */
   err =
RM_MESH_LIGHT_LIGHTNESS_CLT_SendReliablePdu(&g_mesh_light_lightness_clt0_ctrl,
                                                        req_opcode,
                                                        p_parameter,
                                                        rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LIGHTNESS_CLT_Get()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_CLT_Get (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Light Lightness Get is an acknowledged message used to get the Light Lightness Actual state of an element. The response to the Light Lightness Get message is a Light Lightn

Parameters

[in]	p_ctrl	rm_mesh_light_lightness_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LIGHTNESS_CLT_Set()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_CLT_Set (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light Lightness Set is an acknowledged message used to set the Light Lightness Actual state of an element. The response to the Light Lightness Set message is a Light Lightness Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_lightness_clt control block.
[in]	p_parameter	Pointer to Light Lightness Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LIGHTNESS_CLT_SetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_CLT_SetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light Lightness Set Unacknowledged is an unacknowledged message used to set the Light Lightness Actual state of an element.

Parameters

[in]	p_ctrl	rm_mesh_light_lightness_clt control block.
[in]	p_parameter	Pointer to Light Lightness Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LIGHTNESS_CLT_LinearGet()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_CLT_LinearGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Light Lightness Linear Get is an acknowledged message used to get the Light Lightness Linear state of an element. The response to the Light Lightness Linear Get message is a Light Lightness Linear Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_lightness_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LIGHTNESS_CLT_LinearSet()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_CLT_LinearSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light Lightness Linear Set is an acknowledged message used to set the Light Lightness Linear state of an element. The response to the Light Lightness Linear Set message is a Light Lightness Linear Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_lightness_clt control block.
[in]	p_parameter	Pointer to Light Lightness Linear Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LIGHTNESS_CLT_LinearSetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_CLT_LinearSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light Lightness Linear Set Unacknowledged is an unacknowledged message used to set the Light Lightness Linear state of an element.

Parameters

[in]	p_ctrl	rm_mesh_light_lightness_clt control block.
[in]	p_parameter	Pointer to Light Lightness Linear Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LIGHTNESS_CLT_LastGet()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_CLT_LastGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Light Lightness Last Get is an acknowledged message used to get the Light Lightness Last state of an element. The response to the Light Lightness Last Get message is a Light Lightness Last Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_lightness_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LIGHTNESS_CLT_DefaultGet()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_CLT_DefaultGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Light Lightness Default Get is an acknowledged message used to get the Light Lightness Default state of an element. The response to the Light Lightness Default Get message is a Light Lightness Default Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_lightness_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LIGHTNESS_CLT_DefaultSet()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_CLT_DefaultSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light Lightness Default Set is an acknowledged message used to set the Light Lightness Default state of an element. The response to the Light Lightness Default Set message is a Light Lightness Default Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_lightness_clt control block.
[in]	p_parameter	Pointer to Light Lightness Default Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LIGHTNESS_CLT_DefaultSetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_CLT_DefaultSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light Lightness Default Set Unacknowledged is an unacknowledged message used to set the Light Lightness Default state of an element.

Parameters

[in]	p_ctrl	rm_mesh_light_lightness_clt control block.
[in]	p_parameter	Pointer to Light Lightness Default Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LIGHTNESS_CLT_RangeGet()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_CLT_RangeGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

The Light Lightness Range Get is an acknowledged message used to get the Light Lightness Range state of an element. The response to the Light Lightness Range Get message is a Light Lightness Range Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_lightness_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LIGHTNESS_CLT_RangeSet()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_CLT_RangeSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Light Lightness Range Set is an acknowledged message used to set the Light Lightness Range state of an element. The response to the Light Lightness Range Get message is a Light Lightness Range Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_lightness_clt control block.
[in]	p_parameter	Pointer to Light Lightness Range Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LIGHTNESS_CLT_RangeSetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_CLT_RangeSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Light Lightness Range Set Unacknowledged is an unacknowledged message used to set the Light Lightness Range state of an element.

Parameters

[in]	p_ctrl	rm_mesh_light_lightness_clt control block.
[in]	p_parameter	Pointer to Light Lightness Range Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

Detailed Description

Overview

Data Structures

struct	rm_mesh_light_lightness_srv_linear_info_t
struct	rm_mesh_light_lightness_srv_actual_info_t
struct	rm_mesh_light_lightness_srv_last_info_t
struct	rm_mesh_light_lightness_srv_default_info_t
struct	rm_mesh_light_lightness_srv_range_info_t
struct	rm_mesh_light_lightness_srv_info_t
struct	rm_mesh_light_lightness_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_light_lightness_srv_linear_info_t

struct rm_mesh_light_lightness_srv_linear_info_t		
Light Lightness Linear state represents the lightness of a light on a linear scale		
Data Fields		
uint16_t	lightness_linear	Light Lightness Linear
uint16_t	lightness_target	Light Lightness Target - Used in response path.
uint8_t	tid	TID - Used in request path
uint8_t	transition_time	Transition Time - Used in request path. Used as remaining time in response path.
uint8_t	delay	Delay - Used in request path

◆ rm_mesh_light_lightness_srv_actual_info_t

struct rm_mesh_light_lightness_srv_actual_info_t		
Light Lightness Actual state represents the lightness of a light on a perceptually uniform lightness scale		
Data Fields		
uint16_t	lightness_actual	Light Lightness Actual
uint16_t	lightness_target	Light Lightness Target - Used in response path.
uint8_t	tid	TID - Used in request path
uint8_t	transition_time	Transition Time - Used in request path. Used as remaining time in response path.
uint8_t	delay	Delay - Used in request path
uint16_t	transition_time_handle	Transition Timer Handle

◆ rm_mesh_light_lightness_srv_last_info_t

struct rm_mesh_light_lightness_srv_last_info_t		
Light Lightness Last state represents the lightness of a light on a perceptually uniform lightness scale		
Data Fields		
uint16_t	lightness_last	Light Lightness Last

◆ rm_mesh_light_lightness_srv_default_info_t

struct rm_mesh_light_lightness_srv_default_info_t		
Light Lightness Default state is a value ranging from 0x0000 to 0xFFFF, representing a default lightness level for the Light Lightness Actual state		
Data Fields		
uint16_t	lightness_default	Light Lightness Default

◆ rm_mesh_light_lightness_srv_range_info_t

struct rm_mesh_light_lightness_srv_range_info_t		
Light Lightness Range state determines the minimum and maximum lightness of an element		
Data Fields		
uint16_t	lightness_range_min	Light Lightness Range Min
uint16_t	lightness_range_max	Light Lightness Range Max

◆ rm_mesh_light_lightness_srv_info_t

struct rm_mesh_light_lightness_srv_info_t

Light Lightness state is a composite state that includes the Light Lightness Linear, the Light Lightness Actual, the Light Lightness Last, and the Light Lightness Default states		
Data Fields		
rm_mesh_light_lightness_srv_linear_info_t	light_lightness_linear	Light Lightness Linear state represents the lightness of a light on a linear scale
rm_mesh_light_lightness_srv_actual_info_t	light_lightness_actual	Light Lightness Actual state represents the lightness of a light on a perceptually uniform lightness scale
rm_mesh_light_lightness_srv_last_info_t	light_lightness_last	Light Lightness Last state represents the lightness of a light on a perceptually uniform lightness scale
rm_mesh_light_lightness_srv_default_info_t	light_lightness_default	Light Lightness Default state is a value ranging from 0x0000 to 0xFFFF, representing a default lightness level for the Light Lightness Actual state
rm_mesh_light_lightness_srv_range_info_t	light_lightness_range	Light Lightness Range state.
uint8_t	range_status	Status field used only for the Range Status

◆ **rm_mesh_light_lightness_srv_instance_ctrl_t**

struct rm_mesh_light_lightness_srv_instance_ctrl_t
BLE mesh light lightness instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_LIGHT_LIGHTNESS_SRV_Open() is called.

Function Documentation

◆ RM_MESH_LIGHT_LIGHTNESS_SRV_Open()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize Light_Lightness Server model and to initialize Light_Lightness_Setup Server model. This is to initialize Light_Lightness Server model and to register with Access layer. And this is to initialize Light_Lightness_Setup Server model and to register with Access layer. Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_LIGHT_LIGHTNESS_SRV_Open(&g_mesh_light_lightness_srv0_ctrl,
&g_mesh_light_lightness_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_LIGHT_LIGHTNESS_SRV_Close()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate Light_Lightness Server model. This is to terminate Light_Lightness Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_LIGHT_LIGHTNESS_SRV_Close(&g_mesh_light_lightness_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_LIGHT_LIGHTNESS_SRV_StateUpdate()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err = RM_MESH_LIGHT_LIGHTNESS_SRV_StateUpdate(&g_mesh_light_lightness_srv0_ctrl,
&state);
```

Return values

FSP_SUCCESS	Updated server status successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_LIGHTNESS_SRV_SetupServerStateUpdate()

fsp_err_t RM_MESH_LIGHT_LIGHTNESS_SRV_SetupServerStateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Parameters

[in]	p_ctrl	rm_mesh_light_lightness_srv control block.
[in]	p_state	To send reply for a request or to inform change in state.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

fsp_err_t	RM_MESH_LIGHT_XYL_CLT_TargetGet (rm_ble_mesh_model_client_ctrl_t *const p_ctrl)
fsp_err_t	RM_MESH_LIGHT_XYL_CLT_DefaultGet (rm_ble_mesh_model_client_ctrl_t *const p_ctrl)
fsp_err_t	RM_MESH_LIGHT_XYL_CLT_DefaultSet (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)
fsp_err_t	RM_MESH_LIGHT_XYL_CLT_DefaultSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)
fsp_err_t	RM_MESH_LIGHT_XYL_CLT_RangeGet (rm_ble_mesh_model_client_ctrl_t *const p_ctrl)
fsp_err_t	RM_MESH_LIGHT_XYL_CLT_RangeSet (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)
fsp_err_t	RM_MESH_LIGHT_XYL_CLT_RangeSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)

Detailed Description

Overview

Data Structures

struct	rm_mesh_light_xyl_clt_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_light_xyl_clt_instance_ctrl_t

struct rm_mesh_light_xyl_clt_instance_ctrl_t

BLE mesh light xyl instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_LIGHT_XYL_CLT_Open() is called.

Function Documentation

◆ RM_MESH_LIGHT_XYL_CLT_Open()

fsp_err_t RM_MESH_LIGHT_XYL_CLT_Open (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_client_cfg_t const *const *p_cfg*)

Open Light_Xyl Client middleware. This is to initialize Light_Xyl Client model and to register with Access layer.

Implements rm_ble_mesh_model_client_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_LIGHT_XYL_CLT_Open(&g_mesh_light_xyl_clt0_ctrl,
&g_mesh_light_xyl_clt0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_LIGHT_XYL_CLT_Close()

fsp_err_t RM_MESH_LIGHT_XYL_CLT_Close (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Close Light_Xyl Client middleware.

Implements rm_ble_mesh_model_client_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_LIGHT_XYL_CLT_Close(&g_mesh_light_xyl_clt0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_LIGHT_XYL_CLT_GetModelHandle()

fsp_err_t RM_MESH_LIGHT_XYL_CLT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *const *p_model_handle*)

This is to get the handle of Light_Xyl client model.

Implements rm_ble_mesh_model_client_api_t::getModelHandle.

Example:

```
/* Get the handle of light xyl client model. */
   err = RM_MESH_LIGHT_XYL_CLT_GetModelHandle(&g_mesh_light_xyl_clt0_ctrl,
&model_handle);
```

Return values

FSP_SUCCESS	Got model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.

◆ RM_MESH_LIGHT_XYL_CLT_SetModelHandle()

fsp_err_t RM_MESH_LIGHT_XYL_CLT_SetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*)

This is to set the handle of Light_Xyl client model.

Implements rm_ble_mesh_model_client_api_t::setModelHandle.

Example:

```
/* Set the handle of generic battery client model. */
   err =
RM_MESH_GENERIC_BATTERY_CLT_SetModelHandle(&g_mesh_generic_battery_clt0_ctrl,
model_handle);
```

Return values

FSP_SUCCESS	Changed model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_LIGHT_XYL_CLT_SendReliablePdu()

fsp_err_t RM_MESH_LIGHT_XYL_CLT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, uint32_t *req_opcode*, void const *const *p_parameter*, uint32_t *rsp_opcode*)

This is to initialize sending acknowledged commands.

Implements rm_ble_mesh_model_client_api_t::sendReliablePdu.

Example:

```
/* Initialize sending acknowledged commands. */
   err = RM_MESH_LIGHT_XYL_CLT_SendReliablePdu(&g_mesh_light_xyl_clt0_ctrl,
req_opcode, p_parameter, rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_XYL_CLT_Get()

fsp_err_t RM_MESH_LIGHT_XYL_CLT_Get (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

The Light xyL Get is an acknowledged message used to get the Light xyL Lightness, Light xyL x, and Light xyL y states of an element. Upon receiving a Light xyL Get message, the element shall respond with a Light xyL Status message. The response to the Light xyL Get message is a Light xyL Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_xyl_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_XYL_CLT_Set()

fsp_err_t RM_MESH_LIGHT_XYL_CLT_Set (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light xyL Set is an acknowledged message used to set the Light xyL Lightness, Light xyL x state, and the Light xyL y states of an element. The response to the Light xyL Set message is a Light xyL Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_xyl_clt control block.
[in]	p_parameter	Pointer to Light xyL Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_XYL_CLT_SetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_XYL_CLT_SetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

The Light xyL Set Unacknowledged is an unacknowledged message used to set the Light xyL Lightness, Light xyL x, and the Light xyL y states of an element.

Parameters

[in]	p_ctrl	rm_mesh_light_xyl_clt control block.
[in]	p_parameter	Pointer to Light xyL Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_XYL_CLT_TargetGet()

fsp_err_t RM_MESH_LIGHT_XYL_CLT_TargetGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

The Light xyL Target Get is an acknowledged message used to get the target Light xyL Lightness, Light xyL x, and Light xyL y states of an element. The response to the Light xyL Target Get message is a Light xyL Target Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_xyl_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_XYL_CLT_DefaultGet()

fsp_err_t RM_MESH_LIGHT_XYL_CLT_DefaultGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Light xyL Default Get is an acknowledged message used to get the Light Lightness Default, the Light xyL x Default, and Light xyL y Default states of an element. The response to the Light xyL Default Get message is a Light xyL Default Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_xyl_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_XYL_CLT_DefaultSet()

fsp_err_t RM_MESH_LIGHT_XYL_CLT_DefaultSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Light xyL Default Set is an acknowledged message used to set the Light Lightness Default, the Light xyL x Default, and Light xyL y Default states of an element. The response to the Light xyL Default Set message is a Light xyL Default Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_xyl_clt control block.
[in]	p_parameter	Pointer to Light HSL Default Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_XYL_CLT_DefaultSetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_XYL_CLT_DefaultSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Light xyL Default Set Unacknowledged is an unacknowledged message used to set the Light Lightness Default, the Light xyL x Default, and Light xyL y Default states of an element.

Parameters

[in]	p_ctrl	rm_mesh_light_xyl_clt control block.
[in]	p_parameter	Pointer to Light HSL Default Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_XYL_CLT_RangeGet()

fsp_err_t RM_MESH_LIGHT_XYL_CLT_RangeGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

The Light xyL Range Get is an acknowledged message used to get the Light xyL x Range and Light xyL y Range states of an element. The response to the Light xyL Range Get message is a Light xyL Range Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_light_xyl_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_XYL_CLT_RangeSet()

fsp_err_t RM_MESH_LIGHT_XYL_CLT_RangeSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Light xyL Range Set is an acknowledged message used to set the Light xyL x Range and Light xyL y Range states of an element. The response to the Light xyL Range Set message is a Light xyL Range Status message.

Parameters

[in]	p_ctrl	rm_mesh_light_xyl_clt control block.
[in]	p_parameter	Pointer to Light xyL Range Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_LIGHT_XYL_CLT_RangeSetUnacknowledged()

fsp_err_t RM_MESH_LIGHT_XYL_CLT_RangeSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Light xyL Range Set Unacknowledged is an unacknowledged message used to set the Light xyL x Range and Light xyL y Range states of an element.

Parameters

[in]	p_ctrl	rm_mesh_light_xyl_clt control block.
[in]	p_parameter	Pointer to Light xyL Range Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

Overview

Data Structures

struct	rm_mesh_light_xyl_srv_info_t
struct	rm_mesh_light_xyl_srv_target_info_t
struct	rm_mesh_light_xyl_srv_default_info_t
struct	rm_mesh_light_xyl_srv_range_info_t
struct	rm_mesh_light_xyl_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_light_xyl_srv_info_t

struct rm_mesh_light_xyl_srv_info_t		
Light xyL state is a composite state that includes the xyL Lightness, the Light xyL x and the Light xyL y states		
Data Fields		
uint16_t	xyl_lightness	The perceived lightness of a light emitted by the element
uint16_t	target_xyl_lightness	Target perceived lightness - used in response path
uint16_t	xyl_x	The 16-bit value representing the x coordinate of a CIE1931 color light
uint16_t	target_xyl_x	Target x coordinate - used in response path
uint16_t	xyl_y	The 16-bit value representing the y coordinate of a CIE1931 color light
uint16_t	target_xyl_y	Target y coordinate - used in response path
uint8_t	tid	TID - Used in request path
uint8_t	transition_time	Transition Time - Used in request path. Used as remaining time in response

		path.
uint8_t	delay	Delay - Used in request path
uint16_t	transition_time_handle	Transition Timer Handle

◆ rm_mesh_light_xyl_srv_target_info_t

struct rm_mesh_light_xyl_srv_target_info_t		
Light xyL target state is a composite state that includes the xyL Lightness, the Light xyL x and the Light xyL y states		
Data Fields		
uint16_t	xyl_lightness	The perceived lightness of a light emitted by the element
uint16_t	xyl_x	The 16-bit value representing the x coordinate of a CIE1931 color light
uint16_t	xyl_y	The 16-bit value representing the y coordinate of a CIE1931 color light

◆ rm_mesh_light_xyl_srv_default_info_t

struct rm_mesh_light_xyl_srv_default_info_t		
Light xyL default state is a composite state that includes the xyL Lightness, the Light xyL x and the Light xyL y states		
Data Fields		
uint16_t	xyl_lightness	The perceived lightness of a light emitted by the element
uint16_t	xyl_x	The 16-bit value representing the x coordinate of a CIE1931 color light
uint16_t	xyl_y	The 16-bit value representing the y coordinate of a CIE1931 color light

◆ rm_mesh_light_xyl_srv_range_info_t

struct rm_mesh_light_xyl_srv_range_info_t		
Light xyL Range state determines the minimum and maximum values of the Light xyL x and syL y state of an element		
Data Fields		
uint16_t	xyl_x_range_min	The minimum value of a Light xyL x state of an element
uint16_t	xyl_x_range_max	The maximum value of a Light xyL x state of an element
uint16_t	xyl_y_range_min	The minimum value of a Light

		xyL y state of an element
uint16_t	xyl_y_range_max	The maximum value of a Light xyL y state of an element
uint8_t	status	Status - Used in the response path

◆ rm_mesh_light_xyl_srv_instance_ctrl_t

struct rm_mesh_light_xyl_srv_instance_ctrl_t
BLE mesh light xyl instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_LIGHT_XYL_SRV_Open() is called.

Function Documentation

◆ RM_MESH_LIGHT_XYL_SRV_Open()

fsp_err_t RM_MESH_LIGHT_XYL_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize Light_Xyl Server model. This is to initialize Light_Xyl Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_LIGHT_XYL_SRV_Open(&g_mesh_light_xyl_srv0_ctrl,
&g_mesh_light_xyl_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_LIGHT_XYL_SRV_Close()

fsp_err_t RM_MESH_LIGHT_XYL_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate Light_Xyl Server model. This is to terminate Light_Xyl Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_LIGHT_XYL_SRV_Close(&g_mesh_light_xyl_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_LIGHT_XYL_SRV_StateUpdate()

fsp_err_t RM_MESH_LIGHT_XYL_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err = RM_MESH_LIGHT_XYL_SRV_StateUpdate(&g_mesh_light_xyl_srv0_ctrl, &state);
```

Return values

FSP_SUCCESS	Updated server status successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

fsp_err_t	RM_MESH_SCENE_CLT_RegisterGet (rm_ble_mesh_model_client_ctrl_t *const p_ctrl)
fsp_err_t	RM_MESH_SCENE_CLT_Store (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)
fsp_err_t	RM_MESH_SCENE_CLT_StoreUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)
fsp_err_t	RM_MESH_SCENE_CLT_Delete (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)
fsp_err_t	RM_MESH_SCENE_CLT_DeleteUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)

Detailed Description

Overview

Data Structures

struct	rm_mesh_scene_clt_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_scene_clt_instance_ctrl_t

struct rm_mesh_scene_clt_instance_ctrl_t

BLE mesh scene instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_SCENE_CLT_Open() is called.

Function Documentation

◆ RM_MESH_SCENE_CLT_Open()

fsp_err_t RM_MESH_SCENE_CLT_Open (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_client_cfg_t const *const *p_cfg*)

open Scene Client middleware. This is to initialize Scene Client model and to register with Access layer.

Implements rm_ble_mesh_model_client_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_SCENE_CLT_Open(&g_mesh_scene_clt0_ctrl, &g_mesh_scene_clt0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_SCENE_CLT_Close()

fsp_err_t RM_MESH_SCENE_CLT_Close (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Close Scene Client middleware.

Implements rm_ble_mesh_model_client_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_SCENE_CLT_Close(&g_mesh_scene_clt0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_SCENE_CLT_GetModelHandle()

fsp_err_t RM_MESH_SCENE_CLT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *const *p_model_handle*)

This is to get the handle of Scene client model.

Implements rm_ble_mesh_model_client_api_t::getModelHandle.

Example:

```
/* Get the handle of scene client model. */
   err = RM_MESH_SCENE_CLT_GetModelHandle(&g_mesh_scene_clt0_ctrl, &model_handle);
```

Return values

FSP_SUCCESS	Got model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.

◆ RM_MESH_SCENE_CLT_SetModelHandle()

fsp_err_t RM_MESH_SCENE_CLT_SetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*)

This is to set the handle of Scene client model.

Implements rm_ble_mesh_model_client_api_t::setModelHandle.

Example:

```
/* Set the handle of scene client model. */
   err = RM_MESH_SCENE_CLT_SetModelHandle(&g_mesh_scene_clt0_ctrl, model_handle);
```

Return values

FSP_SUCCESS	Changed model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_SCENE_CLT_SendReliablePdu()

fsp_err_t RM_MESH_SCENE_CLT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, uint32_t *req_opcode*, void const *const *p_parameter*, uint32_t *rsp_opcode*)

This is to initialize sending acknowledged commands.

Implements rm_ble_mesh_model_client_api_t::sendReliablePdu.

Example:

```
/* Initialize sending acknowledged commands. */
   err = RM_MESH_SCENE_CLT_SendReliablePdu(&g_mesh_scene_clt0_ctrl, req_opcode,
p_parameter, rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SCENE_CLT_Get()

fsp_err_t RM_MESH_SCENE_CLT_Get (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Scene Get is an acknowledged message used to get the current status of a currently active scene of an element. The response to the Scene Get message is a Scene Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_scene_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SCENE_CLT_Recall()

fsp_err_t RM_MESH_SCENE_CLT_Recall (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Scene Recall is an acknowledged message that is used to recall the current state of an element from a previously stored scene. The response to the Scene Recall message is a Scene Status message.

Parameters

[in]	p_ctrl	rm_mesh_scene_clt control block.
[in]	p_parameter	Pointer to Scene Recall message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SCENE_CLT_RecallUnacknowledged()

fsp_err_t RM_MESH_SCENE_CLT_RecallUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Scene Recall Unacknowledged is an unacknowledged message used to recall the current state of an element from a previously stored Scene.

Parameters

[in]	p_ctrl	rm_mesh_scene_clt control block.
[in]	p_parameter	Pointer to Scene Recall message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SCENE_CLT_RegisterGet()

fsp_err_t RM_MESH_SCENE_CLT_RegisterGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Scene Register Get is an acknowledged message used to get the current status of the Scene Register of an element. The response to the Scene Register Get message is a Scene Register Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_scene_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SCENE_CLT_Store()

fsp_err_t RM_MESH_SCENE_CLT_Store (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Scene Store is an acknowledged message used to store the current state of an element as a Scene, which can be recalled later. The response to the Scene Store message is a Scene Register Status message.

Parameters

[in]	p_ctrl	rm_mesh_scene_clt control block.
[in]	p_parameter	Pointer to Scene Store message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SCENE_CLT_StoreUnacknowledged()

fsp_err_t RM_MESH_SCENE_CLT_StoreUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Scene Store Unacknowledged is an unacknowledged message used to store the current state of an element as a Scene, which can be recalled later.

Parameters

[in]	p_ctrl	rm_mesh_scene_clt control block.
[in]	p_parameter	Pointer to Scene Store message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SCENE_CLT_Delete()

fsp_err_t RM_MESH_SCENE_CLT_Delete (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Scene Delete is an acknowledged message used to delete a Scene from the Scene Register state of an element. The response to the Scene Delete message is a Scene Register Status message.

Parameters

[in]	p_ctrl	rm_mesh_scene_clt control block.
[in]	p_parameter	Pointer to Scene Delete parameter.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SCENE_CLT_DeleteUnacknowledged()

fsp_err_t RM_MESH_SCENE_CLT_DeleteUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Scene Delete Unacknowledged is an unacknowledged message used to delete a scene from the Scene Register state of an element.

Parameters

[in]	p_ctrl	rm_mesh_scene_clt control block.
[in]	p_parameter	Pointer to Scene Delete parameter.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

struct	rm_mesh_scene_srv_register_status_info_t
struct	rm_mesh_scene_srv_ext_tid_and_transition_info_t
struct	rm_mesh_scene_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_scene_srv_number_info_t

struct rm_mesh_scene_srv_number_info_t		
The state to identify a scene		
Data Fields		
uint16_t	number	The number to identify a scene

◆ rm_mesh_scene_srv_status_info_t

struct rm_mesh_scene_srv_status_info_t		
The current status of a currently active scene		
Data Fields		
uint8_t	status_code	Status Code
uint16_t	current_scene	Scene Number of a current scene.
uint16_t	target_scene	Scene Number of a target scene.
uint8_t	remaining_time	

◆ rm_mesh_scene_srv_register_status_info_t

struct rm_mesh_scene_srv_register_status_info_t
The current status of scene register
Data Fields

uint8_t	status_code	Status Code
uint16_t	current_scene	Scene Number of a current scene.
uint16_t *	scenes	A list of scenes stored within an element
uint16_t	scenes_count	

◆ rm_mesh_scene_srv_ext_tid_and_transition_info_t

struct rm_mesh_scene_srv_ext_tid_and_transition_info_t

TID and Transition is a structure which contains Transaction ID (TID) as mandatory field. Other two fields, Transition Time and Delay are optional.

TID field is a transaction identifier indicating whether the message is a new message or a retransmission of a previously sent message.

If present, the Transition Time field identifies the time that an element will take to transition to the target state from the present state.

The Delay field shall be present when the Transition Time field is present. It identifies the message execution delay, representing a time interval between receiving the message by a model and executing the associated model behaviors.

◆ rm_mesh_scene_srv_instance_ctrl_t

struct rm_mesh_scene_srv_instance_ctrl_t

BLE mesh scene instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_SCENE_SRV_Open() is called.

Function Documentation

◆ RM_MESH_SCENE_SRV_Open()

fsp_err_t RM_MESH_SCENE_SRV_Open (rm_ble_mesh_scene_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_scene_server_cfg_t const *const *p_cfg*)

API to initialize Scene Server model. This is to initialize Scene Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_SCENE_SRV_Open(&g_mesh_scene_srv0_ctrl, &g_mesh_scene_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_SCENE_SRV_Close()

fsp_err_t RM_MESH_SCENE_SRV_Close (rm_ble_mesh_scene_server_ctrl_t *const *p_ctrl*)

API to terminate Scene Server model. This is to terminate Scene Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_SCENE_SRV_Close(&g_mesh_scene_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_SCENE_SRV_StateUpdate()

fsp_err_t RM_MESH_SCENE_SRV_StateUpdate (rm_ble_mesh_scene_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err = RM_MESH_SCENE_SRV_StateUpdate(&g_mesh_scene_srv0_ctrl, &state);
```

Return values

FSP_SUCCESS	Updated server status successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

Detailed Description

Overview

Data Structures

struct	rm_mesh_scheduler_clt_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_scheduler_clt_instance_ctrl_t

struct rm_mesh_scheduler_clt_instance_ctrl_t
BLE mesh scheduler instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_SCHEDULER_CLT_Open() is called.

Function Documentation

◆ RM_MESH_SCHEDULER_CLT_Open()

fsp_err_t RM_MESH_SCHEDULER_CLT_Open (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_client_cfg_t const *const *p_cfg*)

Open Scheduler Client middleware. This is to initialize Scheduler Client model and to register with Access layer.

Implements rm_ble_mesh_model_client_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_SCHEDULER_CLT_Open(&g_mesh_scheduler_clt0_ctrl,
&g_mesh_scheduler_clt0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_SCHEDULER_CLT_Close()

fsp_err_t RM_MESH_SCHEDULER_CLT_Close (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Close Scheduler Client middleware.

Implements rm_ble_mesh_model_client_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_SCHEDULER_CLT_Close(&g_mesh_scheduler_clt0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_SCHEDULER_CLT_GetModelHandle()

fsp_err_t RM_MESH_SCHEDULER_CLT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *const *p_model_handle*)

This is to get the handle of Scheduler client model.

Implements rm_ble_mesh_model_client_api_t::getModelHandle.

Example:

```
/* Get the handle of scheduler client model. */
   err = RM_MESH_SCHEDULER_CLT_GetModelHandle(&g_mesh_scheduler_clt0_ctrl,
&model_handle);
```

Return values

FSP_SUCCESS	Got model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.

◆ RM_MESH_SCHEDULER_CLT_SetModelHandle()

fsp_err_t RM_MESH_SCHEDULER_CLT_SetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*)

This is to set the handle of Scheduler client model.

Implements rm_ble_mesh_model_client_api_t::setModelHandle.

Example:

```
/* Set the handle of scheduler client model. */
   err = RM_MESH_SCHEDULER_CLT_SetModelHandle(&g_mesh_scheduler_clt0_ctrl,
model_handle);
```

Return values

FSP_SUCCESS	Changed model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_SCHEDULER_CLT_SendReliablePdu()

fsp_err_t RM_MESH_SCHEDULER_CLT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, uint32_t *req_opcode*, void const *const *p_parameter*, uint32_t *rsp_opcode*)

This is to initialize sending acknowledged commands.

Implements rm_ble_mesh_model_client_api_t::sendReliablePdu.

Example:

```
/* Initialize sending acknowledged commands. */
   err = RM_MESH_SCHEDULER_CLT_SendReliablePdu(&g_mesh_scheduler_clt0_ctrl,
req_opcode, p_parameter, rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SCHEDULER_CLT_Get()

fsp_err_t RM_MESH_SCHEDULER_CLT_Get (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Scheduler Get is an acknowledged message used to get the current Schedule Register state of an element. The response to the Scheduler Get message is a Scheduler Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_scheduler_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SCHEDULER_CLT_ActionGet()

fsp_err_t RM_MESH_SCHEDULER_CLT_ActionGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Scheduler Action Get is an acknowledged message used to report the action defined by the entry of the Schedule Register state of an element, identified by the Index field. The response to the Scheduler Action Get message is a Scheduler Action Status message.

Parameters

[in]	p_ctrl	rm_mesh_scheduler_clt control block.
[in]	p_parameter	Pointer to Scheduler Action Get message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SCHEDULER_CLT_ActionSet()

fsp_err_t RM_MESH_SCHEDULER_CLT_ActionSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Scheduler Action Set is an acknowledged message used to set the entry of the Schedule Register state of an element, identified by the Index field. The response to the Scheduler Action Set message is a Scheduler Action Status message.

Parameters

[in]	p_ctrl	rm_mesh_scheduler_clt control block.
[in]	p_parameter	Pointer to Scheduler Action Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SCHEDULER_CLT_ActionSetUnacknowledged()

fsp_err_t RM_MESH_SCHEDULER_CLT_ActionSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Scheduler Action Set Unacknowledged is an unacknowledged message used to set the entry of the Schedule Register state of an element, identified by the Index field.

Parameters

[in]	p_ctrl	rm_mesh_scheduler_clt control block.
[in]	p_parameter	Pointer to Scheduler Action Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

fsp_err_t	RM_MESH_SCHEDULER_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const p_ctrl)
fsp_err_t	RM_MESH_SCHEDULER_SRV_StateUpdate

	(rm_ble_mesh_model_server_ctrl_t *const p_ctrl, rm_ble_mesh_access_server_state_t const *const p_state)

Detailed Description

Overview

Data Structures

struct	rm_mesh_scheduler_srv_schedules_info_t
struct	rm_mesh_scheduler_srv_entry_index_info_t
struct	rm_mesh_scheduler_srv_entry_info_t
struct	rm_mesh_scheduler_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_scheduler_srv_schedules_info_t

struct rm_mesh_scheduler_srv_schedules_info_t		
The current Schedule Register state of an element.		
Data Fields		
uint16_t	schedules	Bit field indicating defined Actions in the Schedule Register

◆ rm_mesh_scheduler_srv_entry_index_info_t

struct rm_mesh_scheduler_srv_entry_index_info_t		
The entry index of the Schedule Register state		
Data Fields		
uint8_t	index	Index of the Schedule Register entry

◆ rm_mesh_scheduler_srv_entry_info_t

struct rm_mesh_scheduler_srv_entry_info_t		
The entry of the Schedule Register state		
Data Fields		
uint8_t	index	Index of the Schedule Register entry
uint8_t	year	Scheduled year for the action
uint16_t	month	Scheduled month for the action

uint8_t	day	Scheduled day of the month for the action
uint8_t	hour	Scheduled hour for the action
uint8_t	minute	Scheduled minute for the action
uint8_t	second	Scheduled second for the action
uint8_t	dayofweek	Schedule days of the week for the action
uint8_t	action	Action to be performed at the scheduled time
uint8_t	transition_time	Transition time for this action
uint16_t	scene_number	Scene number to be used for some actions

◆ rm_mesh_scheduler_srv_instance_ctrl_t

struct rm_mesh_scheduler_srv_instance_ctrl_t
BLE mesh scheduler instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_SCHEDULER_SRV_Open() is called.

Function Documentation

◆ RM_MESH_SCHEDULER_SRV_Open()

fsp_err_t RM_MESH_SCHEDULER_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize Scheduler Server model. This is to initialize Scheduler Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_SCHEDULER_SRV_Open(&g_mesh_scheduler_srv0_ctrl,
&g_mesh_scheduler_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_SCHEDULER_SRV_Close()

fsp_err_t RM_MESH_SCHEDULER_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate Scheduler Server model. This is to terminate Scheduler Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_SCHEDULER_SRV_Close(&g_mesh_scheduler_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_SCHEDULER_SRV_StateUpdate()

fsp_err_t RM_MESH_SCHEDULER_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err = RM_MESH_SCHEDULER_SRV_StateUpdate(&g_mesh_scheduler_srv0_ctrl, &state);
```

Return values

FSP_SUCCESS	Updated server status successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

Detailed Description

Overview

Data Structures

struct	rm_mesh_sensor_clt_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_sensor_clt_instance_ctrl_t

struct rm_mesh_sensor_clt_instance_ctrl_t
BLE mesh sensor instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_SENSOR_CLT_Open() is called.

Function Documentation

◆ RM_MESH_SENSOR_CLT_Open()

fsp_err_t RM_MESH_SENSOR_CLT_Open (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_client_cfg_t const *const *p_cfg*)

Open Sensor Client middleware. This is to initialize Sensor Client model and to register with Access layer.
 	
Implements rm_ble_mesh_model_client_api_t::open.
 	
Example:
`/* Open the module. */`
`err = RM_MESH_SENSOR_CLT_Open(&g_mesh_sensor_clt0_ctrl, &g_mesh_sensor_clt0_cfg);`
 	
Return values
FSP_SUCCESS — Model opened successfully.
FSP_ERR_ASSERTION — Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN — Model is already open.
FSP_ERR_NOT_FOUND — The number of models has exceeded the limit.
FSP_ERR_ABORTED — Model initialization is failed.

◆ RM_MESH_SENSOR_CLT_Close()

fsp_err_t RM_MESH_SENSOR_CLT_Close (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Close Sensor Client middleware.

Implements rm_ble_mesh_model_client_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_SENSOR_CLT_Close(&g_mesh_sensor_clt0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_SENSOR_CLT_GetModelHandle()

fsp_err_t RM_MESH_SENSOR_CLT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *const *p_model_handle*)

This is to get the handle of Sensor client model.

Implements rm_ble_mesh_model_client_api_t::getModelHandle.

Example:

```
/* Get the handle of sensor client model. */
   err = RM_MESH_SENSOR_CLT_GetModelHandle(&g_mesh_sensor_clt0_ctrl, &model_handle);
```

Return values

FSP_SUCCESS	Got model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.

◆ RM_MESH_SENSOR_CLT_SetModelHandle()

fsp_err_t RM_MESH_SENSOR_CLT_SetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*)

This is to set the handle of Sensor client model.

Implements rm_ble_mesh_model_client_api_t::setModelHandle.

Example:

```
/* Set the handle of sensor client model. */
   err = RM_MESH_SENSOR_CLT_SetModelHandle(&g_mesh_sensor_clt0_ctrl, model_handle);
```

Return values

FSP_SUCCESS	Changed model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_SENSOR_CLT_SendReliablePdu()

fsp_err_t RM_MESH_SENSOR_CLT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, uint32_t *req_opcode*, void const *const *p_parameter*, uint32_t *rsp_opcode*)

This is to initialize sending acknowledged commands.

Implements rm_ble_mesh_model_client_api_t::sendReliablePdu.

Example:

```
/* Initialize sending acknowledged commands. */
   err = RM_MESH_SENSOR_CLT_SendReliablePdu(&g_mesh_sensor_clt0_ctrl, req_opcode,
p_parameter, rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SENSOR_CLT_DescriptorGet()

fsp_err_t RM_MESH_SENSOR_CLT_DescriptorGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Sensor Descriptor Get is an acknowledged message used to get the Sensor Descriptor state of all sensors within an element. The response to a Sensor Descriptor Get message is a Sensor Descriptor Status message.

Parameters

[in]	p_ctrl	rm_mesh_sensor_clt control block.
[in]	p_parameter	Pointer to Sensor Descriptor Get message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SENSOR_CLT_Get()

fsp_err_t RM_MESH_SENSOR_CLT_Get (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Sensor Get is an acknowledged message used to get the Sensor Data state. The response to the Sensor Get message is a Sensor Status message.

Parameters

[in]	p_ctrl	rm_mesh_sensor_clt control block.
[in]	p_parameter	Pointer to Sensor Get message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SENSOR_CLT_ColumnGet()

fsp_err_t RM_MESH_SENSOR_CLT_ColumnGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Sensor Column Get is an acknowledged message used to get the Sensor Series Column state. The response to the Sensor Column Get message is a Sensor Column Status message

Parameters

[in]	p_ctrl	rm_mesh_sensor_clt control block.
[in]	p_parameter	Pointer to Sensor Column Get message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SENSOR_CLT_SeriesGet()

fsp_err_t RM_MESH_SENSOR_CLT_SeriesGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Sensor Series Get is an acknowledged message used to get a sequence of the Sensor Series Column states. The response to the Sensor Series Get message is a Sensor Series Status message.

Parameters

[in]	p_ctrl	rm_mesh_sensor_clt control block.
[in]	p_parameter	Pointer to Sensor Series Get message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SENSOR_CLT_CadenceGet()

fsp_err_t RM_MESH_SENSOR_CLT_CadenceGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Sensor Cadence Get is an acknowledged message used to get the Sensor Cadence state of an element. The response to the Sensor Cadence Get message is a Sensor Cadence Status message.

Parameters

[in]	p_ctrl	rm_mesh_sensor_clt control block.
[in]	p_parameter	Pointer to Sensor Cadence Get message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SENSOR_CLT_CadenceSet()

fsp_err_t RM_MESH_SENSOR_CLT_CadenceSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Sensor Cadence Set is an acknowledged message used to set the Sensor Cadence state of an element. The response to the Sensor Cadence Set message is a Sensor Cadence Status message.

Parameters

[in]	p_ctrl	rm_mesh_sensor_clt control block.
[in]	p_parameter	Pointer to Sensor Cadence Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SENSOR_CLT_CadenceSetUnacknowledged()

fsp_err_t RM_MESH_SENSOR_CLT_CadenceSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Sensor Cadence Set Unacknowledged is an unacknowledged message used to set the Sensor Cadence state of an element.

Parameters

[in]	p_ctrl	rm_mesh_sensor_clt control block.
[in]	p_parameter	Pointer to Sensor Cadence Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SENSOR_CLT_SettingsGet()

fsp_err_t RM_MESH_SENSOR_CLT_SettingsGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Sensor Settings Get is an acknowledged message used to get the list of Sensor Setting states of an element. The response to the Sensor Settings Get message is a Sensor Settings Status message

Parameters

[in]	p_ctrl	rm_mesh_sensor_clt control block.
[in]	p_parameter	Pointer to Sensor Settings Get message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SENSOR_CLT_SettingGet()

fsp_err_t RM_MESH_SENSOR_CLT_SettingGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Sensor Setting Get is an acknowledged message used to get the Sensor Setting state of an element. The response to the Sensor Setting Get message is a Sensor Setting Status message.

Parameters

[in]	p_ctrl	rm_mesh_sensor_clt control block.
[in]	p_parameter	Pointer to Sensor Settings Get message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SENSOR_CLT_SettingSet()

fsp_err_t RM_MESH_SENSOR_CLT_SettingSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Sensor Setting Set is an acknowledged message used to set the Sensor Setting state of an element. The response to the Sensor Setting Set message is a Sensor Setting Status message.

Parameters

[in]	p_ctrl	rm_mesh_sensor_clt control block.
[in]	p_parameter	Pointer to Sensor Settings Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SENSOR_CLT_SettingSetUnacknowledged()

fsp_err_t RM_MESH_SENSOR_CLT_SettingSetUnacknowledged (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Sensor Setting Set Unacknowledged is an unacknowledged message used to set the Sensor Setting state of an element.

Parameters

[in]	p_ctrl	rm_mesh_sensor_clt control block.
[in]	p_parameter	Pointer to Sensor Settings Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

struct	rm_mesh_sensor_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_sensor_srv_descriptor_info_t

struct rm_mesh_sensor_srv_descriptor_info_t		
Sensor Descriptor state represents the attributes describing the sensor data		
Data Fields		
uint16_t	sensor_property_id	Sensor Property ID field is a 2-octet value referencing a device property that describes the meaning and the format of data reported by a sensor
uint16_t	sensor_positive_tolerance	Sensor Positive Tolerance field is a 12-bit value representing the magnitude of a possible positive error associated with the measurements that the sensor is reporting
uint16_t	sensor_negative_tolerance	Sensor Negative Tolerance field is a 12-bit value representing

		the magnitude of a possible negative error associated with the measurements that the sensor is reporting
uint8_t	sensor_sampling_function	Sensor Sampling Function field specifies the averaging operation or type of sampling function applied to the measured value
uint8_t	sensor_measurement_period	Sensor Measurement Period field specifies a uint8 value n that represents the averaging time span, accumulation time, or measurement period in seconds over which the measurement is taken
uint8_t	sensor_update_interval	measurement reported by a sensor is internally refreshed at the frequency indicated in the Sensor Update Interval field
uint8_t	status	Status - used in response to indicate if other fields to be included

◆ rm_mesh_sensor_srv_settings_info_t

struct rm_mesh_sensor_srv_settings_info_t		
Sensor Settings state controls parameters of a sensor		
Data Fields		
uint16_t	sensor_property_id	Property ID of a sensor
uint16_t *	setting_property_ids	Property ID of a setting within a sensor
uint16_t	setting_property_ids_count	

◆ rm_mesh_sensor_srv_setting_info_t

struct rm_mesh_sensor_srv_setting_info_t		
Sensor Setting state controls parameters of a sensor		
Data Fields		
uint16_t	sensor_property_id	Property ID of a sensor
uint16_t	sensor_setting_property_id	Property ID of a setting within a sensor
uint8_t	sensor_setting_access	Read/Write access rights for the setting
uint8_t *	sensor_setting_raw	Raw value of a setting within a sensor

uint16_t	sensor_setting_raw_len	
uint8_t	status	

◆ rm_mesh_sensor_srv_cadence_info_t

struct rm_mesh_sensor_srv_cadence_info_t		
Sensor Cadence state controls the cadence of sensor reports		
Data Fields		
uint16_t	sensor_property_id	Property ID of a sensor
uint8_t	fast_cadence_period_divisor	Divisor for the Publish Period
uint8_t	status_trigger_type	Defines the unit and format of the Status Trigger Delta fields
uint8_t *	status_trigger_delta_down	Delta down value that triggers a status message
uint16_t	status_trigger_delta_down_len	
uint8_t *	status_trigger_delta_up	Delta up value that triggers a status message
uint16_t	status_trigger_delta_up_len	
uint8_t	status_min_interval	Minimum interval between two consecutive Status messages APPLICATION NOTE: The Current Sensor Server Model implementation does not inherantly check for the time interval between two consecutive status messages. The application layer which manages the data for the Sensor Server Model holds the responsibility for interleaving consecutive status messages with the configured Minimum time interval for statuses.
uint8_t *	fast_cadence_low	Low value for the fast cadence range
uint16_t	fast_cadence_low_len	
uint8_t *	fast_cadence_high	High value for the fast cadence range
uint16_t	fast_cadence_high_len	
uint8_t	status	Status - used in response path

◆ rm_mesh_sensor_srv_data_info_t

struct rm_mesh_sensor_srv_data_info_t

The Sensor Data state is a sequence of one or more pairs of Sensor Property ID and Raw Value fields, with each Raw Value field size and representation defined by the characteristics referenced by the Sensor Property ID

Data Fields		
uint16_t	property_id_1	ID of the 1st device property of the sensor
uint8_t *	raw_value_1	Raw Value field with a size and representation defined by the 1st device property
uint16_t	raw_value_1_len	
uint16_t	property_id_2	ID of the 2nd device property of the sensor
uint8_t *	raw_value_2	Raw Value field with a size and representation defined by the 2nd device property
uint16_t	raw_value_2_len	
uint16_t	property_id_n	ID of the nth device property of the sensor
uint8_t *	raw_value_n	Raw Value field with a size and representation defined by the nth device property
uint16_t	raw_value_n_len	
uint8_t	status	Status - used in response path

◆ rm_mesh_sensor_srv_series_column_info_t

struct rm_mesh_sensor_srv_series_column_info_t

Values measured by sensors may be organized as arrays (and represented as series of columns, such as histograms

Data Fields		
uint16_t	sensor_property_id	Property describing the data series of the sensor
uint8_t *	sensor_raw_value_x	Raw value representing the left corner of a column on the X axis
uint16_t	sensor_raw_value_x_len	
uint8_t *	sensor_column_width	Raw value representing the width of the column
uint16_t	sensor_column_width_len	
uint8_t *	sensor_raw_value_y	Raw value representing the height of the column on the Y axis

uint16_t	sensor_raw_value_y_len	
uint8_t	status	Status - used in response path

◆ rm_mesh_sensor_srv_instance_ctrl_t

struct rm_mesh_sensor_srv_instance_ctrl_t
BLE mesh sensor instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_SENSOR_SRV_Open() is called.

Function Documentation

◆ RM_MESH_SENSOR_SRV_Open()

fsp_err_t RM_MESH_SENSOR_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize Sensor Server model and to initialize Sensor_Setup Server model. This is to initialize Sensor Server model and to register with Access layer. And this is to initialize Sensor_Setup Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */

   err = RM_MESH_SENSOR_SRV_Open(&g_mesh_sensor_srv0_ctrl, &g_mesh_sensor_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_SENSOR_SRV_Close()

fsp_err_t RM_MESH_SENSOR_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate Sensor Server model. This is to terminate Sensor Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_SENSOR_SRV_Close(&g_mesh_sensor_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_SENSOR_SRV_StateUpdate()

fsp_err_t RM_MESH_SENSOR_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err = RM_MESH_SENSOR_SRV_StateUpdate(&g_mesh_sensor_srv0_ctrl, &state);
```

Return values

FSP_SUCCESS	Updated server status successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_SENSOR_SRV_SetupServerStateUpdate()

fsp_err_t RM_MESH_SENSOR_SRV_SetupServerStateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Parameters

[in]	p_ctrl	rm_mesh_sensor_srv control block.
[in]	p_state	To send reply for a request or to inform change in state.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

fsp_err_t	RM_MESH_TIME_CLT_RoleGet (rm_ble_mesh_model_client_ctrl_t *const p_ctrl)
fsp_err_t	RM_MESH_TIME_CLT_RoleSet (rm_ble_mesh_model_client_ctrl_t *const p_ctrl, void const *const p_parameter)

Detailed Description

Overview

Data Structures

struct	rm_mesh_time_clt_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_time_clt_instance_ctrl_t

struct rm_mesh_time_clt_instance_ctrl_t

BLE mesh time instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_TIME_CLT_Open() is called.

Function Documentation

◆ RM_MESH_TIME_CLT_Open()

fsp_err_t RM_MESH_TIME_CLT_Open (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_client_cfg_t const *const *p_cfg*)

Open Time Client middleware. This is to initialize Time Client model and to register with Access layer.

Implements rm_ble_mesh_model_client_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_TIME_CLT_Open(&g_mesh_time_clt0_ctrl, &g_mesh_time_clt0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_TIME_CLT_Close()

fsp_err_t RM_MESH_TIME_CLT_Close (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Close Time Client middleware.

Implements rm_ble_mesh_model_client_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_TIME_CLT_Close(&g_mesh_time_clt0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_TIME_CLT_GetModelHandle()

fsp_err_t RM_MESH_TIME_CLT_GetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *const *p_model_handle*)

This is to get the handle of Time client model.

Implements rm_ble_mesh_model_client_api_t::getModelHandle.

Example:

```
/* Get the handle of time client model. */
   err = RM_MESH_TIME_CLT_GetModelHandle(&g_mesh_time_clt0_ctrl, &model_handle);
```

Return values

FSP_SUCCESS	Got model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.

◆ RM_MESH_TIME_CLT_SetModelHandle()

fsp_err_t RM_MESH_TIME_CLT_SetModelHandle (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_model_handle_t *model_handle*)

This is to set the handle of Time client model.

Implements rm_ble_mesh_model_client_api_t::setModelHandle.

Example:

```
/* Set the handle of time client model. */
   err = RM_MESH_TIME_CLT_SetModelHandle(&g_mesh_time_clt0_ctrl, model_handle);
```

Return values

FSP_SUCCESS	Changed model handle successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_TIME_CLT_SendReliablePdu()

fsp_err_t RM_MESH_TIME_CLT_SendReliablePdu (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, uint32_t *req_opcode*, void const *const *p_parameter*, uint32_t *rsp_opcode*)

This is to initialize sending acknowledged commands.

Implements rm_ble_mesh_model_client_api_t::sendReliablePdu.

Example:

```
/* Initialize sending acknowledged commands. */
   err = RM_MESH_TIME_CLT_SendReliablePdu(&g_mesh_time_clt0_ctrl, req_opcode,
p_parameter, rsp_opcode);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_TIME_CLT_Get()

fsp_err_t RM_MESH_TIME_CLT_Get (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Time Get is a message used to get the Time state of neighbor nodes. The response to the Time Get message is a Time Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_time_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_TIME_CLT_Set()

fsp_err_t RM_MESH_TIME_CLT_Set (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Time Set is an acknowledged message used to set the Time state of an element. The response to the Time Set message is a Time Status message.

Parameters

[in]	p_ctrl	rm_mesh_time_clt control block.
[in]	p_parameter	Pointer to Time Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_TIME_CLT_ZoneGet()

fsp_err_t RM_MESH_TIME_CLT_ZoneGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Time Zone Get is an acknowledged message used to get the Time Zone Offset Current state, the Time Zone Offset New state , and the TAI of Zone Change state. The response to the Time Zone Get message is a Time Zone Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_time_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_TIME_CLT_ZoneSet()

fsp_err_t RM_MESH_TIME_CLT_ZoneSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Time Zone Set is an acknowledged message used to set the Time Zone Offset New state and the TAI of Zone Change state.

Parameters

[in]	p_ctrl	rm_mesh_time_clt control block.
[in]	p_parameter	Pointer to Time Zone Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_TIME_CLT_TaiUtcDeltaGet()

fsp_err_t RM_MESH_TIME_CLT_TaiUtcDeltaGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

TAI-UTC Delta Get is an acknowledged message used to get the TAI-UTC Delta Current state, the TAI-UTC Delta New state, and the TAI of Delta Change state. The response to the TAI-UTC Delta Get message is a TAI-UTC Delta Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_time_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_TIME_CLT_TaiUtcDeltaSet()

fsp_err_t RM_MESH_TIME_CLT_TaiUtcDeltaSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

TAI-UTC Delta Set is an acknowledged message used to set the TAI-UTC Delta New state and the TAI of Delta Change state.

Parameters

[in]	p_ctrl	rm_mesh_time_clt control block.
[in]	p_parameter	Pointer to TAI-UTC Delta Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_TIME_CLT_RoleGet()

fsp_err_t RM_MESH_TIME_CLT_RoleGet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*)

Time Role Get is an acknowledged message used to get the Time Role state of an element. The response to the Time Role Get message is a Time Role Status message. There are no parameters for this message.

Parameters

[in]	p_ctrl	rm_mesh_time_clt control block.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

◆ RM_MESH_TIME_CLT_RoleSet()

fsp_err_t RM_MESH_TIME_CLT_RoleSet (rm_ble_mesh_model_client_ctrl_t *const *p_ctrl*, void const *const *p_parameter*)

Time Role Set is an acknowledged message used to set the Time Role state of an element. The response to the Time Role Set message is a Time Role Status message.

Parameters

[in]	p_ctrl	rm_mesh_time_clt control block.
[in]	p_parameter	Pointer to Time Role Set message.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_INVALID_POINTER	The parameter p_parameter is NULL.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

4.2.1.49 Bluetooth Low Energy Mesh Network Time Server (rm_mesh_time_srv)

Modules » Bluetooth Low Energy Mesh Network Modules

Detailed Description

Overview

Data Structures

struct	rm_mesh_time_srv_info_t
struct	rm_mesh_time_srv_zone_info_t
struct	rm_mesh_time_srv_tai_utc_delta_info_t
struct	rm_mesh_time_srv_role_info_t
struct	rm_mesh_time_srv_instance_ctrl_t

Data Structure Documentation

◆ rm_mesh_time_srv_info_t

struct rm_mesh_time_srv_info_t

Mesh defines times based on International Atomic Time (TAI). The base representation of times is the number of seconds after 00:00:00 TAI on 2000-01-01 (that is, 1999-12-31T23:59:28 UTC)

Data Fields

uint8_t	tai_seconds[5]	Current TAI time in seconds since the epoch.
uint8_t	subsecond	The sub-second time in units of 1/256s.
uint8_t	uncertainty	Estimated uncertainty in 10-millisecond steps.
uint8_t	time_authority	0 = No Time Authority. The element does not have a trusted OOB source of time, such as GPS or NTP. 1 = Time Authority. The element has a trusted OOB source of time, such as GPS or NTP or a battery-backed, properly initialized RTC.
uint16_t	tai_utc_delta	Current difference between TAI and UTC in seconds
uint8_t	time_zone_offset	The local time zone offset in 15-minute increments

◆ rm_mesh_time_srv_zone_info_t

struct rm_mesh_time_srv_zone_info_t		
Time Zone		
Data Fields		
uint8_t	time_zone_offset_current	Current local time zone offset. Meaningful only in 'Time Zone Status' response.
uint8_t	time_zone_offset_new	Upcoming local time zone offset.
uint8_t	tai_of_zone_change[5]	Absolute TAI time when the Time Zone Offset will change from Current to New.

◆ rm_mesh_time_srv_tai_utc_delta_info_t

struct rm_mesh_time_srv_tai_utc_delta_info_t		
TAI-UTC Delta		
Data Fields		
uint16_t	tai_utc_delta_current	Current difference between TAI and UTC in seconds. Meaningful only in 'TAI-UTC Delta Status' response.
uint16_t	tai_utc_delta_new	Upcoming difference between TAI and UTC in seconds.
uint8_t	padding	Always 0b0. Other values are Prohibited.
uint8_t	tai_of_delta_change[5]	TAI Seconds time of the upcoming TAI-UTC Delta change

◆ rm_mesh_time_srv_role_info_t

struct rm_mesh_time_srv_role_info_t		
The Time Role state of an element		
Data Fields		
uint8_t	role	Time Role

◆ rm_mesh_time_srv_instance_ctrl_t

struct rm_mesh_time_srv_instance_ctrl_t
BLE mesh time instance control block. DO NOT INITIALIZE. Initialization occurs when RM_MESH_TIME_SRV_Open() is called.

Function Documentation

◆ RM_MESH_TIME_SRV_Open()

fsp_err_t RM_MESH_TIME_SRV_Open (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_model_server_cfg_t const *const *p_cfg*)

API to initialize Time Server model. This is to initialize Time Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::open.

Example:

```
/* Open the module. */
   err = RM_MESH_TIME_SRV_Open(&g_mesh_time_srv0_ctrl, &g_mesh_time_srv0_cfg);
```

Return values

FSP_SUCCESS	Model opened successfully.
FSP_ERR_ASSERTION	Pointer to control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Model is already open.
FSP_ERR_NOT_FOUND	The number of models has exceeded the limit.
FSP_ERR_ABORTED	Model initialization is failed.

◆ RM_MESH_TIME_SRV_Close()

fsp_err_t RM_MESH_TIME_SRV_Close (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*)

API to terminate Time Server model. This is to terminate Time Server model and to register with Access layer.

Implements rm_ble_mesh_model_server_api_t::close.

Example:

```
/* Close the module. */
   err = RM_MESH_TIME_SRV_Close(&g_mesh_time_srv0_ctrl);
```

Return values

FSP_SUCCESS	Model successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Model is not open.

◆ RM_MESH_TIME_SRV_StateUpdate()

fsp_err_t RM_MESH_TIME_SRV_StateUpdate (rm_ble_mesh_model_server_ctrl_t *const *p_ctrl*, rm_ble_mesh_access_server_state_t const *const *p_state*)

API to send reply or to update state change. This is to send reply for a request or to inform change in state.

Implements rm_ble_mesh_model_server_api_t::stateUpdate.

Example:

```
/* Update server status. */
   err = RM_MESH_TIME_SRV_StateUpdate(&g_mesh_time_srv0_ctrl, &state);
```

Return values

FSP_SUCCESS	Updated server status successfully.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_INVALID_POINTER	The parameter p_state is NULL.
FSP_ERR_NOT_OPEN	Model is not open.
FSP_ERR_INVALID_ARGUMENT	Input parameter is invalid.
FSP_ERR_APPROXIMATION	Lower layer is invalid state.
FSP_ERR_NOT_FOUND	Input parameter is not found.
FSP_ERR_INVALID_ADDRESS	Invalid source address.
FSP_ERR_OUT_OF_MEMORY	Memory allocation is failed.
FSP_ERR_OVERFLOW	TX queue is full.
FSP_ERR_UNDERFLOW	TX queue is empty.
FSP_ERR_ABORTED	Operation is failed.

4.2.2 High-Speed Analog Comparator (r_acmphs)

Modules

Functions

fsp_err_t	R_ACMPHS_Open (comparator_ctrl_t *p_ctrl, comparator_cfg_t const *const p_cfg)
fsp_err_t	R_ACMPHS_OutputEnable (comparator_ctrl_t *const p_ctrl)
fsp_err_t	R_ACMPHS_InfoGet (comparator_ctrl_t *const p_ctrl, comparator_info_t *const p_info)

fsp_err_t	R_ACMPHS_StatusGet (comparator_ctrl_t *const p_ctrl, comparator_status_t *const p_status)
fsp_err_t	R_ACMPHS_Close (comparator_ctrl_t *const p_ctrl)

Detailed Description

Driver for the ACMPHS peripheral on RA MCUs. This module implements the Comparator Interface.

Overview

Features

The ACMPHS HAL module supports the following features:

- Callback on rising edge, falling edge or both
- Configurable debounce filter
- Option for comparator output on VCOUT, CMPOUTn[1], or CMPOUT012[1] pin
- ELC event output

Note

1. This output pin is not available on all MCUs.

Configuration

Build Time Configurations for r_acmphs

The following build time configurations are defined in fsp_cfg/r_acmphs_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Analog > Comparator, High-Speed (r_acmphs)

This module can be added to the Stacks tab via New Stack > Analog > Comparator, High-Speed (r_acmphs).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_comparator0	Module name.
Channel	Value must be a non-negative integer	0	Select the hardware channel.
Trigger Edge Selector	• Rising • Falling	Both Edge	The trigger specifies when a comparator

	• Both Edge		callback event should occur. Unused if the interrupt priority is disabled or the callback is NULL.
Noise Filter	• No Filter • 8 • 16 • 32	No Filter	Select the PCLK divisor for the hardware digital debounce filter. Larger divisors provide a longer debounce and take longer for the output to update.
Maximum status retries (CMPMON)	Must be a valid non-negative integer between 2 and 32-bit maximum value	1024	Maximum number of status retries.
Output Polarity	• Not Inverted • Inverted	Not Inverted	When enabled comparator output is inverted. This affects the output read from R_ACMPHS_StatusGet() , the pin output level, and the edge trigger.
Pin Output	• Disabled • Enabled	Disabled	Turn this on to enable the CMPOUTn signal for this channel. The CMPOUTn signal for each channel is OR'd together and the result is output to VCOUT. More pin output options are available on select MCUs.
Callback	Name must be a valid C symbol	NULL	Define this function in the application. It is called when the Trigger event occurs.
Comparator Interrupt Priority	MCU Specific Options		Select the interrupt priority for the comparator interrupt.
Analog Input Voltage Source (IVCMP)	MCU Specific Options		Select the Analog input voltage source. Channel mentioned in the options represents channel in ACMPHS
Reference Voltage Input Source (IVREF)	MCU Specific Options		Select the Analog reference voltage source. Channel mentioned in the options represents

channel in ACMPHS

Clock Configuration

The ACMPHS peripheral is clocked from PCLKB. You can set the PCLKB frequency using the **Clocks** tab of the RA Configuration editor or by using the CGC Interface at run-time.

Pin Configuration

Comparator output can be enabled or disabled on each channel individually. The VCOUT pin is a logical OR of all comparator outputs.

The IVCMPn pins are used as comparator inputs. The IVREFn pins are used as comparator reference values.

Usage Notes

Noise Filter

When the noise filter is enabled, the ACMPHP0/ACMPHP1 signal is sampled three times based on the sampling clock selected. The filter clock frequency is determined by PCLKB and the comparator_filter_t setting.

Output Polarity

If output polarity is configured as "Inverted" then the VCOUT signal will be inverted and the R_ACMPHS_StatusGet() will return an inverted status.

Limitations

- Once the analog comparator is configured, the program must wait for the stabilization time to elapse before using the comparator.
- When the noise filter is not enabled the hardware requires software debouncing of the output (two consecutive equal values). This is automatically managed in R_ACMPHS_StatusGet but may result in delay or an API error in rare edge cases.
- Constraints apply on the simultaneous use of ACMPHS analog input and ADC analog input. Refer to the "Usage Notes" section in your MCU's User's Manual for the ADC unit(s) for more details.
- To allow ACMPHS0 to cancel Software Standby mode or enter Snooze, set the CSTEN bit to 1 and the CDFS bits to 00 in the CMPCTL0 register.

Examples

Basic Example

The following is a basic example of using the ACMPHS to detect when the analog voltage input to IVCMP rises above the analog voltage input to IVREF. A GPIO output acts as the comparator input and is externally connected to the IVCMP input of the ACMPHS. An analog voltage input should also be supplied to the IVREF input pin.

```
#define ADC_PGA_BYPASS_VALUE (0x9999)

/* Connect this control pin to the IVCMP input of the comparator. This can be any
```

```
GPIO pin
 * that is not input only. */
#define ACMPHS_EXAMPLE_CONTROL_PIN (BSP_IO_PORT_05_PIN_03)
volatile uint32_t g_comparator_events = 0U;
/* This callback is called when a comparator event occurs. */
void acmphs_example_callback (comparator_callback_args_t * p_args)
{
 FSP_PARAMETER_NOT_USED(p_args);
    g_comparator_events++;
}
void acmphs_example ()
{
 fsp_err_t err = FSP_SUCCESS;
 /* Disable pin register write protection, if enabled */
 R_BSP_PinAccessEnable();
 /*
  * Start with the IVCMP pin low. This example assumes the comparator is configured
to trigger
  * when the voltage of the analog input to IVCMP rises above voltage of the analog
input to
  * IVREF.
  */
    (void) R_BSP_PinWrite(ACMPHS_EXAMPLE_CONTROL_PIN, BSP_IO_LEVEL_LOW);
 /* Initialize the ACMPHS module */
    err = R_ACMPHS_Open(&g_comparator_ctrl, &g_comparator_cfg);
    assert(FSP_SUCCESS == err);
 /*
  * If an ADC PGA exists for the analog input pin, then the PGA must be manually
configured in order for the pin to be used as
  * an IVCMP input. This procedure is slightly different depending on the MCU (See
below).
  */
#if BSP_MCU_GROUP_RA6M3
 /* The following applies for MCUs with the ADC peripheral:
```

```
  *
  * Bypass the PGA on ADC unit 0.
  * (See Table 50.2 "Input source configuration of the ACMPHS" in the RA6M3 User's
Manual (R01UH0886EJ0100)) */
 R_BSP_MODULE_START(FSP_IP_ADC, 0);
    R_ADC0->ADPGACR   = ADC_PGA_BYPASS_VALUE;
    R_ADC0->ADPGADCR0 = 0;
#elif BSP_MCU_GROUP_RA6T2
 /* The following applies for MCUs with the ADC_B peripheral:
  *
  * Configure PGA on ADC unit 0.
  * (See Table 36.11 "PGA Settings and Available Related Functions" in the RA6T2
User's Manual (R01UH0951EJ0100)) */
 R_BSP_MODULE_START(FSP_IP_ADC, 0);
    R_ADC_B->ADPGACR[0] = R_ADC_B0_ADPGACR_PGAGEN_Msk;
#endif
 /* Wait for the minimum stabilization wait time before enabling output. */
 comparator_info_t info;
 R_ACMPHS_InfoGet(&g_comparator_ctrl, &info);
 R_BSP_SoftwareDelay(info.min_stabilization_wait_us, BSP_DELAY_UNITS_MICROSECONDS);
 /* Enable the comparator output */
    (void) R_ACMPHS_OutputEnable(&g_comparator_ctrl);
 /* Set the IVCMP pin high. */
    (void) R_BSP_PinWrite(ACMPHS_EXAMPLE_CONTROL_PIN, BSP_IO_LEVEL_HIGH);
 while (0 == g_comparator_events)
    {
 /* Wait for interrupt. */
    }
 comparator_status_t status;
 /* Check status of comparator, Status will be COMPARATOR_STATE_OUTPUT_HIGH */
    (void) R_ACMPHS_StatusGet(&g_comparator_ctrl, &status);
}
```

Function Documentation

◆ R_ACMPHS_Open()

fsp_err_t R_ACMPHS_Open (comparator_ctrl_t *const *p_ctrl*, comparator_cfg_t const *const *p_cfg*)

Configures the comparator and starts operation. Callbacks and pin output are not active until outputEnable() is called. comparator_api_t::outputEnable() should be called after the output has stabilized. Implements comparator_api_t::open().

Comparator inputs must be configured in the application code prior to calling this function.

Return values

FSP_SUCCESS	Open successful.
FSP_ERR_ASSERTION	An input pointer is NULL
FSP_ERR_INVALID_ARGUMENT	An argument is invalid. Window mode (COMPARATOR_MODE_WINDOW) and filter of 1 (COMPARATOR_FILTER_1) are not supported in this implementation.
FSP_ERR_ALREADY_OPEN	The control block is already open or the hardware lock is taken.

◆ R_ACMPHS_OutputEnable()

fsp_err_t R_ACMPHS_OutputEnable (comparator_ctrl_t *const *p_ctrl*)

Enables the comparator output, which can be polled using comparator_api_t::statusGet(). Also enables pin output and interrupts as configured during comparator_api_t::open(). Implements comparator_api_t::outputEnable().

Return values

FSP_SUCCESS	Comparator output is enabled.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_NOT_OPEN	Instance control block is not open.

◆ R_ACMPHS_InfoGet()

fsp_err_t R_ACMPHS_InfoGet (comparator_ctrl_t *const *p_ctrl*, comparator_info_t *const *p_info*)

Provides the minimum stabilization wait time in microseconds. Implements comparator_api_t::infoGet().

Return values

FSP_SUCCESS	Information stored in p_info.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_NOT_OPEN	Instance control block is not open.

◆ R_ACMPHS_StatusGet()

fsp_err_t R_ACMPHS_StatusGet (comparator_ctrl_t *const *p_ctrl*, comparator_status_t *const *p_status*)

Provides the operating status of the comparator. Implements comparator_api_t::statusGet().

Return values

FSP_SUCCESS	Operating status of the comparator is provided in p_status.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_NOT_OPEN	Instance control block is not open.
FSP_ERR_TIMEOUT	The debounce filter is off and 2 consecutive matching values were not read within 1024 attempts.

◆ R_ACMPHS_Close()

fsp_err_t R_ACMPHS_Close (comparator_ctrl_t * *p_ctrl*)

Stops the comparator. Implements comparator_api_t::close().

Return values

FSP_SUCCESS	Instance control block closed successfully.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_NOT_OPEN	Instance control block is not open.

4.2.3 Low-Power Analog Comparator (r_acmplp)

Modules

Functions

fsp_err_t	R_ACMPLP_Open (comparator_ctrl_t *const p_ctrl, comparator_cfg_t const *const p_cfg)
fsp_err_t	R_ACMPLP_OutputEnable (comparator_ctrl_t *const p_ctrl)
fsp_err_t	R_ACMPLP_InfoGet (comparator_ctrl_t *const p_ctrl, comparator_info_t *const p_info)
fsp_err_t	R_ACMPLP_StatusGet (comparator_ctrl_t *const p_ctrl, comparator_status_t *const p_status)
fsp_err_t	R_ACMPLP_Close (comparator_ctrl_t *const p_ctrl)

Detailed Description

Driver for the ACMPLP peripheral on RA MCUs. This module implements the Comparator Interface.

Overview

Features

The ACMPLP HAL module supports the following features:

- Normal mode or window mode
- Callback on rising edge, falling edge or both
- Configurable debounce filter
- Option for comparator output on VCOUT pin
- ELC event output

Configuration

Build Time Configurations for r_acmplp

The following build time configurations are defined in fsp_cfg/r_acmplp_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Reference Voltage Selection for ACMPLP1	• IVREF0 • IVREF1	IVREF1	ACMPLP1 may optionally be

(Standard mode only)			configured to use IVREF0 as a reference input instead of IVREF1. Note that if IVREF0 is selected, ACMPLP0 and ACMPLP1 must use the same setting for IVREF.

Configurations for Analog > Comparator, Low-Power (r_acmplp)

This module can be added to the Stacks tab via New Stack > Analog > Comparator, Low-Power (r_acmplp).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_comparator0	Module name.
Channel	Value must be a non-negative integer	0	Select the hardware channel.
Mode	• Standard • Window	Standard	In standard mode, comparator output is high if VCMP > VREF. In window mode, comparator output is high if VCMP is outside the range of VREF0 to VREF1.
Trigger	• Rising • Falling • Both Edge	Both Edge	The trigger specifies when a comparator callback event should occur. Unused if the interrupt priority is disabled or the callback is NULL.
Filter	• No sampling (bypass) • Sampling at PCLKB • Sampling at PCLKB/8 • Sampling at PCLKB/32	No sampling (bypass)	Select the PCLK divisor for the hardware digital debounce filter. Larger divisors provide a longer debounce and take longer for the output to update.
Output Polarity	• Not Inverted • Inverted	Not Inverted	When enabled comparator output is inverted. This affects the output read from R_ACMPLP_StatusGet(), the pin output level, and the edge trigger.
Pin Output (VCOUT)	• Disabled	Disabled	Turn this on to include

	• Enabled		the output from this comparator on VCOUT. The comparator output on VCOUT is OR'd with output from all other ACMPHS and ACMPLP comparators.
Vref (Standard mode only)	• Enabled • Disabled	Disabled	If reference voltage selection is enabled then internal reference voltage is used as comparator input
Callback	Name must be a valid C symbol	NULL	Define this function in the application. It is called when the Trigger event occurs.
Comparator Interrupt Priority	MCU Specific Options		Select the interrupt priority for the comparator interrupt.
Analog Input Voltage Source (IVCMP)	MCU Specific Options		Select the comparator input source. Only options for the configured channel are valid.
Reference Voltage Input Source (IVREF)	MCU Specific Options		Select the comparator reference voltage source. If channel 1 is seleected and the 'Reference Voltage Selection (ACMPLP1)' config option is set to IVREF0, select one of the Channel 0 options. In all other cases, only options for the configured channel are valid.

Clock Configuration

The ACMPLP peripheral is clocked from PCLKB. You can set the PCLKB frequency using the **Clocks** tab of the RA Configuration editor or by using the CGC Interface at run-time.

Pin Configuration

Comparator output can be enabled or disabled on each channel individually. The VCOUT pin is a logical OR of all comparator outputs.

The CMPINn pins are used as comparator inputs. The CMPREFn pins are used as comparator reference values.

Usage Notes

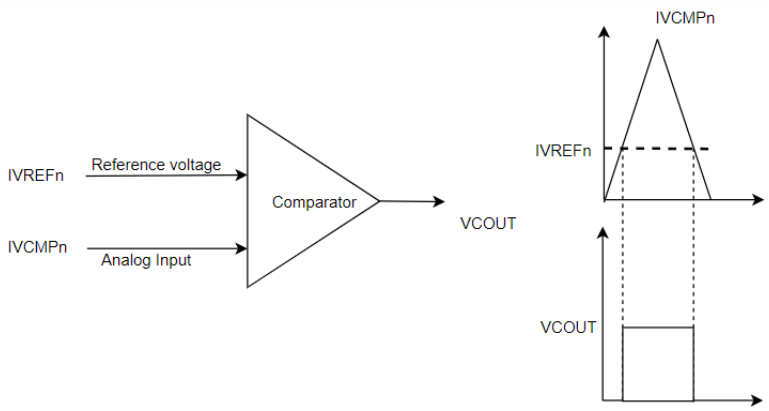

Figure 142: ACMPLP Standard Mode Operation

Noise Filter

When the noise filter is enabled, the ACMPLP0/ACMPLP1 signal is sampled three times based on the sampling clock selected. The filter clock frequency is determined by PCLKB and the comparator_filter_t setting.

Output Polarity

If output polarity is configured as "Inverted" then the VCOUT signal will be inverted and the R_ACMPLP_StatusGet() will return an inverted status.

Window Mode

In window mode, the comparator indicates if the analog input voltage falls within the window (low and high reference voltage) or is outside the window.

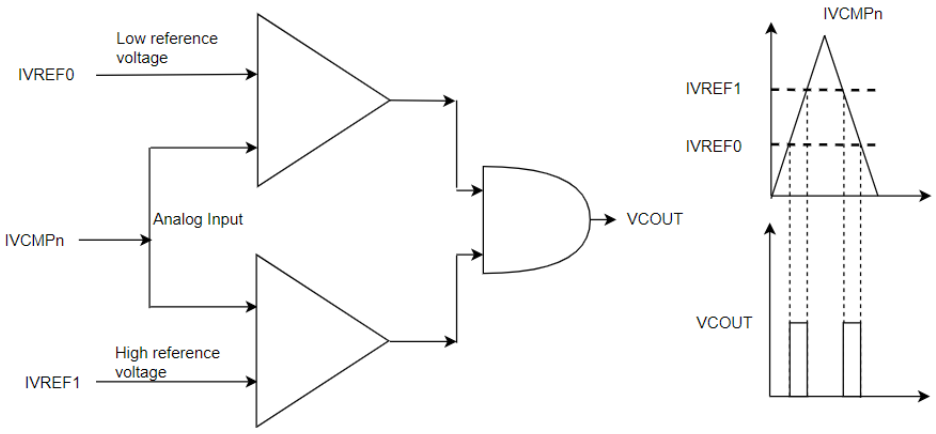

Figure 143: ACMPLP Window Mode Operation

Limitations

- Once the analog comparator is configured, the program must wait for the stabilization time to elapse before using the comparator.

- Low speed is not supported by the ACMPLP driver.

Examples

Basic Example

The following is a basic example of minimal use of the ACMPLP. The comparator is configured to trigger a callback when the input rises above the internal reference voltage (VREF). A GPIO output acts as the comparator input and is externally connected to the CMPIN input of the ACMPLP.

```
/* Connect this control pin to the VCMP input of the comparator. This can be any GPIO
pin
 * that is not input only. */
#define ACMPLP_EXAMPLE_CONTROL_PIN (BSP_IO_PORT_04_PIN_08)
volatile uint32_t g_comparator_events = 0U;
/* This callback is called when a comparator event occurs. */
void acmplp_example_callback (comparator_callback_args_t * p_args)
{
 FSP_PARAMETER_NOT_USED(p_args);
    g_comparator_events++;
}
void acmplp_example ()
{
 fsp_err_t err = FSP_SUCCESS;
 /* Disable pin register write protection, if enabled */
 R_BSP_PinAccessEnable();
 /* Start with the VCMP pin low. This example assumes the comparator is configured to
trigger
  * when VCMP rises above VREF. */
    (void) R_BSP_PinWrite(ACMPLP_EXAMPLE_CONTROL_PIN, BSP_IO_LEVEL_LOW);
 /* Initialize the ACMPLP module */
    err = R_ACMPLP_Open(&g_comparator_ctrl, &g_comparator_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Wait for the minimum stabilization wait time before enabling output. */
 comparator_info_t info;
 R_ACMPLP_InfoGet(&g_comparator_ctrl, &info);
 R_BSP_SoftwareDelay(info.min_stabilization_wait_us, BSP_DELAY_UNITS_MICROSECONDS);
```

```
/* Enable the comparator output */
   (void) R_ACMPLP_OutputEnable(&g_comparator_ctrl);
/* Set VCMP low. */
   (void) R_BSP_PinWrite(ACMPLP_EXAMPLE_CONTROL_PIN, BSP_IO_LEVEL_HIGH);
while (0 == g_comparator_events)
   {
/* Wait for interrupt. */
   }
comparator_status_t status;
/* Check status of comparator, Status will be COMPARATOR_STATE_OUTPUT_HIGH */
   (void) R_ACMPLP_StatusGet(&g_comparator_ctrl, &status);
}
```

Enumerations

enum	acmplp_input_t
enum	acmplp_reference_t

Enumeration Type Documentation

◆ acmplp_input_t

enum acmplp_input_t	
Enumerator	
ACMPLP_INPUT_AMPO	Not available on all MCUs.
ACMPLP_INPUT_CMPIN_1	Not available on all MCUs.

◆ acmplp_reference_t

enum acmplp_reference_t	
Enumerator	
ACMPLP_REFERENCE_CMPREF_1	Not available on all MCUs.

Function Documentation

◆ R_ACMPLP_Open()

fsp_err_t R_ACMPLP_Open (comparator_ctrl_t *const *p_ctrl*, comparator_cfg_t const *const *p_cfg*)

Configures the comparator and starts operation. Callbacks and pin output are not active until outputEnable() is called. comparator_api_t::outputEnable() should be called after the output has stabilized. Implements comparator_api_t::open().

Comparator inputs must be configured in the application code prior to calling this function.

Return values

FSP_SUCCESS	Open successful.
FSP_ERR_ASSERTION	An input pointer is NULL
FSP_ERR_INVALID_ARGUMENT	An argument is invalid. Window mode (COMPARATOR_MODE_WINDOW) and filter of 1 (COMPARATOR_FILTER_1) are not supported in this implementation. p_cfg->p_callback is not NULL, but ISR is not enabled. ISR must be enabled to use callback function.
FSP_ERR_ALREADY_OPEN	The control block is already open or the hardware lock is taken.
FSP_ERR_IN_USE	The channel is already in use.

◆ R_ACMPLP_OutputEnable()

fsp_err_t R_ACMPLP_OutputEnable (comparator_ctrl_t *const *p_ctrl*)

Enables the comparator output, which can be polled using comparator_api_t::statusGet(). Also enables pin output and interrupts as configured during comparator_api_t::open(). Implements comparator_api_t::outputEnable().

Return values

FSP_SUCCESS	Comparator output is enabled.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_NOT_OPEN	Instance control block is not open.

◆ R_ACMPLP_InfoGet()

fsp_err_t R_ACMPLP_InfoGet (comparator_ctrl_t *const *p_ctrl*, comparator_info_t *const *p_info*)
Provides the minimum stabilization wait time in microseconds. Implements comparator_api_t::infoGet().

Return values

FSP_SUCCESS	Information stored in p_info.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_NOT_OPEN	Instance control block is not open.

◆ R_ACMPLP_StatusGet()

fsp_err_t R_ACMPLP_StatusGet (comparator_ctrl_t *const *p_ctrl*, comparator_status_t *const *p_status*)
Provides the operating status of the comparator. Implements comparator_api_t::statusGet().

Return values

FSP_SUCCESS	Operating status of the comparator is provided in p_status.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_NOT_OPEN	Instance control block is not open.

◆ R_ACMPLP_Close()

fsp_err_t R_ACMPLP_Close (comparator_ctrl_t * *p_ctrl*)
Stops the comparator. Implements comparator_api_t::close().

Return values

FSP_SUCCESS	Instance control block closed successfully.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_NOT_OPEN	Instance control block is not open.

4.2.4 Analog to Digital Converter (r_adc)

fsp_err_t	R_ADC_Close (adc_ctrl_t *p_ctrl)
fsp_err_t	R_ADC_OffsetSet (adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, int32_t offset)
fsp_err_t	R_ADC_Calibrate (adc_ctrl_t *const p_ctrl, void const *p_extend)
fsp_err_t	R_ADC_CallbackSet (adc_ctrl_t *const p_api_ctrl, void(*p_callback)(adc_callback_args_t *), void const *const p_context, adc_callback_args_t *const p_callback_memory)

Detailed Description

Driver for the ADC12, ADC14, and ADC16 peripherals on RA MCUs. This module implements the ADC Interface.

Overview

Features

The ADC module supports the following features:

- 12, 14, or 16 bit maximum resolution depending on the MCU
- Configure scans to include:
  - Multiple analog channels
  - Temperature sensor channel
  - Voltage sensor channel
- Configurable scan start trigger:
  - Software scan triggers
  - Hardware scan triggers (timer expiration, for example)
  - External scan triggers from the ADTRGn port pins
- Configurable scan mode:
  - Single scan mode, where each trigger starts a single scan
  - Continuous scan mode, where all channels are scanned continuously
  - Group scan mode, where channels are grouped into group A and group B. The groups can be assigned different start triggers, and group A can be given priority over group B. When group A has priority over group B, a group A trigger suspends an ongoing group B scan.
- Supports adding and averaging converted samples
- Optional callback when scan completes
- Sample and hold support
- Double-trigger support
- Hardware comparator with interrupt and event output

Configuration

Build Time Configurations for r_adc

The following build time configurations are defined in fsp_cfg/r_adc_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Analog > ADC (r_adc)

This module can be added to the Stacks tab via New Stack > Analog > ADC (r_adc). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_adc0	Module name
General > Unit	Unit must be a non-negative integer	0	Specifies the ADC Unit to be used.
General > Resolution	MCU Specific Options		Specifies the conversion resolution for this unit.
General > Alignment	MCU Specific Options		Specifies the conversion result

			alignment.
General > Clear after read	• Off • On	On	Specifies if the result register will be automatically cleared after the conversion result is read.
General > Mode	• Single Scan • Continuous Scan • Group Scan	Single Scan	Specifies the mode that this ADC unit is used in.
General > Double-trigger	• Disabled • Enabled • Enabled (extended mode)	Disabled	When enabled, the scan-end interrupt for Group A is only thrown on every second scan. Extended double-trigger mode (single-scan only) triggers on both ELC events, allowing (for example) a scan on two different timer compare match values. In group mode Group B is unaffected.
Input > Sample and Hold > Sample and Hold Channels (Available only on selected MCUs)	• Channel 0 • Channel 1 • Channel 2		Specifies if this channel is included in the Sample and Hold Mask.
Input > Sample and Hold > Sample Hold States (Applies only to channels 0, 1, 2)	Must be a valid non-negative integer with configurable value 4 to 255	24	Specifies the updated sample-and-hold count for the channel dedicated sample-and-hold circuit
Input > Window Compare > Window A > Enable	• Disabled • Enabled	Disabled	Enable or disable comparison with Window A.
Input > Window Compare > Window A > Channels to compare (channel availability varies by MCU and unit)	Refer to the RA Configuration tool for available options.		Select channels to be compared to Window A.
Input > Window Compare > Window A > Channel comparison mode (channel	Refer to the RA Configuration tool for available options.		Checking a box sets the comparison mode for that channel to Greater Than or Inside

availability varies by MCU and unit)			Window depending on whether Window Mode is disabled or enabled (respectively). If left unchecked the comparison mode will likewise be Less Than or Outside Window (respectively).
Input > Window Compare > Window A > Lower Reference	Must be a positive 16-bit integer.	0	Set the lower comparison value.
Input > Window Compare > Window A > Upper Reference	Must be a positive 16-bit integer.	0	Set the upper comparison value.
Input > Window Compare > Window B > Enable	• Disabled • Enabled	Disabled	Enable or disable comparison with Window B.
Input > Window Compare > Window B > Channel to compare (channel availability varies by MCU and unit)	Refer to the RA Configuration tool for available options.	Channel 0	Select a channel to be compared to Window B.
Input > Window Compare > Window B > Comparison mode	• Less Than or Outside Window • Greater Than or Inside Window	module.driver.adc.compare.window_b.mode	Select the comparison mode for Window B. For each option, the first condition applies when Window Mode is disabled and the second option applies when Window Mode is enabled.
Input > Window Compare > Window B > Lower Reference	Must be a positive 16-bit integer.	0	Set the lower comparison value.
Input > Window Compare > Window B > Upper Reference	Must be a positive 16-bit integer.	0	Set the upper comparison value.
Input > Window Compare > Window Mode	• Disabled • Enabled	Disabled	When disabled, ADC values will be compared only with the lower reference on each comparator. When enabled, both the lower and upper reference values will be used to create a comparison window.

Input > Window Compare > Event Output	• OR • XOR • AND	OR	Select how comparison results should be composited for event output.
Input > Channel Scan Mask (channel availability varies by MCU)	Refer to the RA Configuration tool for available options.		In Normal mode of operation, this bitmask field specifies the channels that are enabled in that ADC unit. In group mode, this field specifies which channels belong to group A.
Input > Group B Scan Mask (channel availability varies by MCU)	Refer to the RA Configuration tool for available options.		In group mode, this field specifies which channels belong to group B.
Input > Add/Average Count	MCU Specific Options		Specifies if addition or averaging needs to be done for any of the channels in this unit.
Input > Reference Voltage control	MCU Specific Options		Specify VREFH/VREFADC output voltage control.
Input > Addition/Averaging Mask (channel availability varies by MCU and unit)	Refer to the RA Configuration tool for available options.		Select channels to include in the Addition/Averaging Mask
Interrupts > Normal/Group A Trigger	MCU Specific Options		Specifies the trigger type to be used for this unit.
Interrupts > Group B Trigger	MCU Specific Options		Specifies the trigger for Group B scanning in group scanning mode. This event is also used to trigger Group A in extended double-trigger mode.
Interrupts > Group Priority (Valid only in Group Scan Mode)	• Group A cannot interrupt Group B • Group A can interrupt Group B; Group B scan restarts at next trigger • Group A can interrupt Group B; Group B scan	Group A cannot interrupt Group B	Determines whether an ongoing group B scan can be interrupted by a group A trigger, whether it should abort on a group A trigger, or if it should pause to allow group A scan and restart immediately after group A scan is complete.

	restarts immediately • Group A can interrupt Group B; Group B scan restarts immediately and scans continuously		
Interrupts > Callback	Name must be a valid C symbol	NULL	A user callback function. If this callback function is provided, it is called from the interrupt service routine (ISR) each time the ADC scan completes.
Interrupts > Scan End Interrupt Priority	MCU Specific Options		Select scan end interrupt priority.
Interrupts > Scan End Group B Interrupt Priority	MCU Specific Options		Select group B scan end interrupt priority.
Interrupts > Window Compare A Interrupt Priority	MCU Specific Options		Select Window Compare A interrupt priority.
Interrupts > Window Compare B Interrupt Priority	MCU Specific Options		Select Window Compare B interrupt priority.
Extra > ADC Ring Buffer	MCU Specific Options		ADC Ring Buffer to be used only with DMAC transfers, keep this property disabled for normal ADC operations. When enabled, ADC converted data is stored in ADBUF registers in place of ADDR registers. The read API will not read from this location for normal ADC operations.

Clock Configuration

The ADC clock is PCLKC if the MCU has PCLKC, or PCLKD otherwise.

The clock for this module is derived from the following peripheral clock for each MCU group:

MCU Group	Peripheral Clock

RA2A1	PCLKD
RA2E1	PCLKD
RA2E2	PCLKD
RA2L1	PCLKD
RA4E1	PCLKC
RA4M1	PCLKC
RA4M2	PCLKC
RA4M3	PCLKC
RA4W1	PCLKC
RA6E1	PCLKC
RA6M1	PCLKC
RA6M2	PCLKC
RA6M3	PCLKC
RA6M4	PCLKC
RA6M5	PCLKC
RA6T1	PCLKC

The ADC clock must be at least 1 MHz when the ADC is used. Many MCUs also have PCLK ratio restrictions when the ADC is used. For details on PCLK ratio restrictions, reference the footnotes in the second table of the Clock Generation Circuit chapter of the MCU User's Manual (for example, Table 9.2 "Specifications of the clock generation circuit for the internal clocks" in the RA6M3 manual R01UH0886EJ0100).

Pin Configuration

The ANxxx pins are analog input channels that can be used with the ADC.

ADTRG0 and ADTRG1 can be used to start scans with an external trigger for unit 0 and 1 respectively. When external triggers are used, ADC scans begin on the falling edge of the ADTRG pin.

Usage Notes

Sample Hold

Enabling the sample and hold functionality reduces the maximum scan frequency because the sample and hold time is added to each scan. Refer to the hardware manual for details on the sample and hold time.

ADC Operational Modes

The driver supports three operation modes: single-scan, continuous-scan, and group-scan modes. In each mode, analog channels are converted in ascending order of channel number, followed by scans of the temperature sensor and voltage sensor if they are included in the mask of channels to scan.

Single-scan Mode

In single scan mode, one or more specified channels are scanned once per trigger.

Continuous-scan Mode

In continuous scan mode, a single trigger is required to start the scan. Scans continue until R_ADC_ScanStop() is called.

Group-scan Mode

Group-scan mode allows the application to allocate channels to one of two groups (A and B). Conversion begins when the specified ELC start trigger for that group is received.

With the priority configuration parameter, you can optionally give group A priority over group B. If group A has priority over group B, a group B scan is interrupted when a group A scan trigger occurs. The following options exist for group B when group A has priority:

- To restart the interrupted group B scan after the group A scan completes.
- To wait for another group B trigger and forget the interrupted scan.
- To continuously scan group B and suspend scanning group B only when a group A trigger is received.
  Note
  If this option is selected, group B scanning begins immediately after R_ADC_ScanCfg(). Group A scan triggers must be enabled by R_ADC_ScanStart() and can be disabled by R_ADC_ScanStop(). Group B scans can only be disabled by reconfiguring the group A priority to a different mode.

Double-triggering

When double-triggering is enabled a single channel is selected to be scanned twice before an interrupt is thrown. The first scan result when using double-triggering is always saved to the selected channel's data register. The second result is saved to the data duplexing register (ADC_CHANNEL_DUPLEX).

Double-triggering uses Group A; only one channel can be selected when enabled. No other scanning is possible on Group A while double-trigger mode is selected. In addition, any special ADC channels (such as temperature sensors or voltage references) are not valid double-trigger channels.

When extended double-triggering is enabled both ADC input events are routed to Group A. The interrupt is still thrown after every two scans regardless of the triggering event(s). While the first and second scan are saved to the selected ADC data register and the ADC duplexing register as before, scans associated with event A and B are additionally copied into duplexing register A and B, respectively (ADC_CHANNEL_DUPLEX_A and ADC_CHANNEL_DUPLEX_B).

When Interrupts Are Not Enabled

If interrupts are not enabled, the R_ADC_StatusGet API can be used to poll the ADC to determine when the scan has completed. The read API function is used to access the converted ADC result. This applies to both normal scans and calibration scans for MCUs that support calibration.

Window Compare Function

The ADC contains comparators that allow scan data to be compared to user-provided reference values. When a value meets the configured condition an interrupt and/or an ELC event can be

produced.

Each unit has two configurable comparison units, Window A and Window B. Window A allows for configuring multiple simultaneous channels to compare while Window B only allows one channel at a time.

The window compare function can be configured both through the RA Configuration tool and at runtime by providing a pointer to an adc_window_cfg_t struct to adc_channel_cfg_t::p_window_cfg when calling R_ADC_ScanCfg. The available comparison modes are shown below:

Window setting	Channel mode 0	Channel mode 1
Disabled	Scan < Low Ref	Scan > Low Ref
Enabled	(Scan < Low Ref) OR (Scan > High Ref)	Low Ref < Scan < High Ref

Note

The window setting applies to all channels configured on a unit.

Sample-State Count Setting

The application program can modify the setting of the sample-state count for analog channels by calling the R_ADC_SampleStateCountSet() API function. The application program only needs to modify the sample-state count settings from their default values to increase the sampling time. This can be either because the impedance of the input signal is too high to secure sufficient sampling time under the default setting or if the ADCLK is too slow. To modify the sample-state count for a given channel, set the channel number and the number of states when calling the R_ADC_SampleStateCountSet() API function. Valid sample state counts are 7-255.

Note

Although the hardware supports a minimum number of sample states of 5, some MCUs require 7 states, so the minimum is set to 7. At the lowest supported ADC conversion clock rate (1 MHz), these extra states will lead to, at worst case, a 2 microsecond increase in conversion time. At 60 MHz the extra states will add 33.4 ns to the conversion time.

If the sample state count needs to be changed for multiple channels, the application program must call the R_ADC_SampleStateCountSet() API function repeatedly, with appropriately modified arguments for each channel.

If the ADCLK frequency changes, the sample states may need to be updated.

Sample States for Temperature Sensor and Internal Voltage Reference

Sample states for the temperature sensor and the internal reference voltage are calculated during R_ADC_ScanCfg() based on the ADCLK frequency at the time. The sample states for the temperature sensor and internal voltage reference cannot be updated with R_ADC_SampleStateCountSet(). If the ADCLK frequency changes, call R_ADC_ScanCfg() before using the temperature sensor or internal reference voltage again to ensure the sampling time for the temperature sensor and internal voltage reference is optimal.

Selecting Reference Voltage

The ADC high-potential and low-potential reference voltages may be configured for selected MCU's. Please refer to the RA Configuration editor in e2 studio for further details.

Note

When using VREFADC, a stabilization time of 1500us is required after call for R_ADC_Open(). Consult Section 32.6 "Selecting Reference Voltage" in the RA2A1 User's Manual (R01UH0888EJ0100) for details.
When the internal reference voltage is selected as the high-potential reference voltage, the Low-power A/D Conversion mode will automatically be selected. Consult Section 29.6 "Selecting Reference Voltage" in the RA2E1 User's Manual (R01UH0852EJ0110) for details.

Using the Temperature Sensor with the ADC

The ADC HAL module supports reading the data from the on-chip temperature sensor. The value returned from the sensor can be converted into degrees Celsius or Fahrenheit in the application program using the following formula, T = (Vs - V1)/slope + T1, where:

- T: Measured temperature (degrees C)
- Vs: Voltage output by the temperature sensor at the time of temperature measurement (Volts)
- T1: Temperature experimentally measured at one point (degrees C)
- V1: Voltage output by the temperature sensor at the time of measurement of T1 (Volts)
- T2: Temperature at the experimental measurement of another point (degrees C)
- V2: Voltage output by the temperature sensor at the time of measurement of T2 (Volts)
- Slope: Temperature gradient of the temperature sensor (V/degrees C); slope = (V2 - V1)/(T2 - T1)

Note

The slope value can be obtained from the hardware manual for each device in the Electrical Characteristics Chapter - TSN Characteristics Table, Temperature slope entry.

Reading CTSU TSCAP with ADC

Some MCUs support reading CTSU TSCAP with ADC. CTSU TSCAP is connected to ADC0 channel 16. Use existing enums for channel 16 to set sample states for the sensor connected to CTSU TSCAP, enable scanning of CTSU TSCAP, and read results for CTSU TSCAP.

Usage Notes for ADC16

Calibration

Calibration is required to use the ADC16 peripheral. When using this driver on an MCU that has ADC16, call R_ADC_Calibrate() after open, and prior to any other function.

Range of ADC16 Results

The range of the ADC16 is from 0 (lowest) to 0x7FFF (highest) when used in single-ended mode. This driver only supports single ended mode.

Limitations

Developers should be aware of the following limitations when using the ADC:

- When using the Window Compare function:
  - Only Single Scan mode may be configured when match or mismatch ELC events are used.
  - When one compare window is configured to check the temperature sensor or voltage reference the other window cannot be used.
  - Both windows cannot reference the same channel.

Examples

Basic Example

This is a basic example of minimal use of the ADC in an application.

```
/* A channel configuration is generated by the RA Configuration editor based on the
options selected. If additional
 * configurations are desired additional adc_channel_cfg_t elements can be defined
and passed to R_ADC_ScanCfg. */
const adc_channel_cfg_t g_adc0_channel_cfg =
{
    .scan_mask          = ADC_MASK_CHANNEL_0 | ADC_MASK_CHANNEL_1,
    .scan_mask_group_b = 0,
    .priority_group_a   = (adc_group_a_t) 0,
    .add_mask          = 0,
    .sample_hold_mask   = 0,
    .sample_hold_states = 0,
};
void adc_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = R_ADC_Open(&g_adc0_ctrl, &g_adc0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Enable channels. */
    err = R_ADC_ScanCfg(&g_adc0_ctrl, &g_adc0_channel_cfg);
    assert(FSP_SUCCESS == err);
 /* In software trigger mode, start a scan by calling R_ADC_ScanStart(). In other
modes, enable external
  * triggers by calling R_ADC_ScanStart(). */
    (void) R_ADC_ScanStart(&g_adc0_ctrl);
 /* Wait for conversion to complete. */
 adc_status_t status;
    status.state = ADC_STATE_SCAN_IN_PROGRESS;
```

```
 while (ADC_STATE_SCAN_IN_PROGRESS == status.state)
    {
       (void) R_ADC_StatusGet(&g_adc0_ctrl, &status);
    }
 /* Read converted data. */
    uint16_t channel1_conversion_result;
    err = R_ADC_Read(&g_adc0_ctrl, ADC_CHANNEL_1, &channel1_conversion_result);
    assert(FSP_SUCCESS == err);
}
```

Temperature Sensor Example

This example shows how to calculate the MCU temperature using the ADC and the temperature sensor.

```
#define ADC_EXAMPLE_CALIBRATION_DATA_RA6M1 (0x7D5)
#define ADC_EXAMPLE_VCC_MICROVOLT (3300000)
#define ADC_EXAMPLE_TEMPERATURE_RESOLUTION (12U)
#define ADC_EXAMPLE_REFERENCE_CALIBRATION_TEMPERATURE (127)
void adc_temperature_example (void)
{
 /* The following example calculates the temperature on an RA6M1 device using the
data provided in the section

  *
```

```
  * In this MCU, the TSCDR register stores the temperature value (CAL127) of the
temperature sensor measured
  * under the condition Ta = Tj = 127 C and AVCC0 = 3.3 V. By using this value as the
sample measurement result
  * at the first point, preparation before using the temperature sensor can be
omitted.
  *
  * If V1 is calculated from CAL127,
  * V1 = 3.3 * CAL127 / 4096 [V]
  *
  * Using this, the measured temperature can be calculated according to the following
formula.
  *
  * T = (Vs - V1) / Slope + 127 [C]
  * T: Measured temperature (C)
  * Vs: Voltage output by the temperature sensor when the temperature is measured (V)
  * V1: Voltage output by the temperature sensor when Ta = Tj = 127 C and AVCC0 = 3.3
V (V)
  * Slope: Temperature slope given in Table 52.38 / 1000 (V/C)
  */

Double-Trigger Example

This example demonstrates reading data from a double-trigger scan. A flag is used to wait for a callback event. Two scans must occur before the callback is called. These results are read via R_ADC_Read using the selected channel enum value as well as ADC_CHANNEL_DUPLEX.

```
volatile bool scan_complete_flag = false;
void adc_callback (adc_callback_args_t * p_args)
{
 FSP_PARAMETER_NOT_USED(p_args);
    scan_complete_flag = true;
}
void adc_double_trigger_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initialize the module. */
    err = R_ADC_Open(&g_adc0_ctrl, &g_adc0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Enable double-trigger channel. */
    err = R_ADC_ScanCfg(&g_adc0_ctrl, &g_adc0_channel_cfg);
    assert(FSP_SUCCESS == err);
 /* Enable scan triggering from ELC events. */
    (void) R_ADC_ScanStart(&g_adc0_ctrl);
 /* Wait for conversion to complete. Two scans must be triggered before a callback
occurs. */
    scan_complete_flag = false;
 while (!scan_complete_flag)
    {
 /* Wait for callback to set flag. */
    }
 /* Read converted data from both scans. */
    uint16_t channel1_conversion_result_0;
    uint16_t channel1_conversion_result_1;
```

```
    err = R_ADC_Read(&g_adc0_ctrl, ADC_CHANNEL_1, &channel1_conversion_result_0);
    assert(FSP_SUCCESS == err);
    err = R_ADC_Read(&g_adc0_ctrl, ADC_CHANNEL_DUPLEX,
&channel1_conversion_result_1);
    assert(FSP_SUCCESS == err);
}
```

ADC-DMAC Repeat-Block Transfer Example

This example demonstrates writing multiple data from DAC peripheral to ADC channels and storing the data in memory through DMAC using Repeat-Block Transfer mode. It creates single block to multiple ring buffer type of transfer topology. Ping-Pong mechanism is used to read the data from memory in between the transfers. This example is valid only for MCUs that have ADBUF.

```
 #define ADC_DMAC_EXAMPLE_DATA_LOW (0U)
 #define ADC_DMAC_EXAMPLE_DATA_HIGH (0x000FU)
 #define ADC_DMAC_EXAMPLE_DELAY_1000_MS (1000U)
 #define ADC_DMAC_EXAMPLE_NUM_PING_PONG_BUFFERS (2)
static uint16_t g_adc_dmac_example_buffer[ADC_DMAC_EXAMPLE_NUM_PING_PONG_BUFFERS][
    ADC_DMAC_EXAMPLE_ADC_CHANNELS_PER_BLOCK][ADC_DMAC_EXAMPLE_SAMPLES_PER_CHANNEL];
// Destination buffer for DMAC transfers
static volatile uint16_t g_adc_dmac_example_ping_pong_index = 0U;
static volatile void * gp_read_data;
/* DMAC callback */
void adc_dmac_callback (dmac_callback_args_t * p_args)
{
    (void) p_args;
 /* Store the pointer to the last buffer that was written
  * An array of data for the first enabled channel is at
&g_adc_dmac_example_buffer[g_adc_dmac_example_ping_pong_index][0][0],
  * an array of data for the next channel is at
&g_adc_dmac_example_buffer[g_adc_dmac_example_ping_pong_index][1][0], etc.
  */
    gp_read_data =
&g_adc_dmac_example_buffer[g_adc_dmac_example_ping_pong_index][0][0];
 /* Select the other ping-pong buffer which is free for writing */
```

Data Structure Documentation

◆ adc_sample_state_t

struct adc_sample_state_t		
ADC sample state configuration		
Data Fields		
adc_sample_state_reg_t	reg_id	Sample state register ID.
uint8_t	num_states	Number of sampling states for conversion. Ch16-20/21 use the same value.

◆ adc_window_cfg_t

struct adc_window_cfg_t		
ADC Window Compare configuration		
Data Fields		
uint32_t	compare_mask	Channel mask to compare with Window A.
uint32_t	compare_mode_mask	Per-channel condition mask for Window A.
adc_compare_cfg_t	compare_cfg	Window Compare configuration.
uint16_t	compare_ref_low	Window A lower reference value.
uint16_t	compare_ref_high	Window A upper reference value.

uint16_t	compare_b_ref_low	Window B lower reference value.
uint16_t	compare_b_ref_high	Window A upper reference value.
adc_window_b_channel_t	compare_b_channel	Window B channel.
adc_window_b_mode_t	compare_b_mode	Window B condition setting.

◆ adc_extended_cfg_t

struct adc_extended_cfg_t		
Extended configuration structure for ADC.		
Data Fields		
adc_add_t	add_average_count	Add or average samples.
adc_clear_t	clearing	Clear after read.
adc_trigger_t	trigger_group_b	Group B trigger source; valid only for group mode.
adc_double_trigger_t	double_trigger_mode	Double-trigger mode setting.
adc_vref_control_t	adc_vref_control	VREFADC output voltage control.
uint8_t	enable_adbuf	Enable ADC Ring Buffer, Valid only to use along with DMAC transfer.
IRQn_Type	window_a_irq	IRQ number for Window Compare A interrupts.
IRQn_Type	window_b_irq	IRQ number for Window Compare B interrupts.
uint8_t	window_a_ipl	Priority for Window Compare A interrupts.
uint8_t	window_b_ipl	Priority for Window Compare B interrupts.

◆ adc_channel_cfg_t

struct adc_channel_cfg_t		
ADC channel(s) configuration		
Data Fields		
uint32_t	scan_mask	Channels/bits: bit 0 is ch0; bit 15 is ch15.
uint32_t	scan_mask_group_b	Valid for group modes.
uint32_t	add_mask	Valid if add enabled in Open().
adc_window_cfg_t *	p_window_cfg	Pointer to Window Compare configuration.

adc_group_a_t	priority_group_a	Valid for group modes.
uint8_t	sample_hold_mask	Channels/bits 0-2.
uint8_t	sample_hold_states	Number of states to be used for sample and hold. Affects channels 0-2.

◆ adc_instance_ctrl_t

struct adc_instance_ctrl_t
ADC instance control block. DO NOT INITIALIZE. Initialized in adc_api_t::open().

Enumeration Type Documentation

◆ adc_mask_t

enum adc_mask_t	
For ADC Scan configuration adc_channel_cfg_t::scan_mask, adc_channel_cfg_t::scan_mask_group_b, adc_channel_cfg_t::add_mask and adc_channel_cfg_t::sample_hold_mask. Use bitwise OR to combine these masks for desired channels and sensors.	
Enumerator	
ADC_MASK_OFF	No channels selected.
ADC_MASK_CHANNEL_0	Channel 0 mask.
ADC_MASK_CHANNEL_1	Channel 1 mask.
ADC_MASK_CHANNEL_2	Channel 2 mask.
ADC_MASK_CHANNEL_3	Channel 3 mask.
ADC_MASK_CHANNEL_4	Channel 4 mask.
ADC_MASK_CHANNEL_5	Channel 5 mask.
ADC_MASK_CHANNEL_6	Channel 6 mask.
ADC_MASK_CHANNEL_7	Channel 7 mask.
ADC_MASK_CHANNEL_8	Channel 8 mask.
ADC_MASK_CHANNEL_9	Channel 9 mask.
ADC_MASK_CHANNEL_10	Channel 10 mask.
ADC_MASK_CHANNEL_11	Channel 11 mask.

ADC_MASK_CHANNEL_12	Channel 12 mask.
ADC_MASK_CHANNEL_13	Channel 13 mask.
ADC_MASK_CHANNEL_14	Channel 14 mask.
ADC_MASK_CHANNEL_15	Channel 15 mask.
ADC_MASK_CHANNEL_16	Channel 16 mask.
ADC_MASK_CHANNEL_17	Channel 17 mask.
ADC_MASK_CHANNEL_18	Channel 18 mask.
ADC_MASK_CHANNEL_19	Channel 19 mask.
ADC_MASK_CHANNEL_20	Channel 20 mask.
ADC_MASK_CHANNEL_21	Channel 21 mask.
ADC_MASK_CHANNEL_22	Channel 22 mask.
ADC_MASK_CHANNEL_23	Channel 23 mask.
ADC_MASK_CHANNEL_24	Channel 24 mask.
ADC_MASK_CHANNEL_25	Channel 25 mask.
ADC_MASK_CHANNEL_26	Channel 26 mask.
ADC_MASK_CHANNEL_27	Channel 27 mask.
ADC_MASK_TEMPERATURE	Temperature sensor channel mask.
ADC_MASK_VOLT	Voltage reference channel mask.
ADC_MASK_SENSORS	All sensor channel mask.

◆ adc_add_t

enum adc_add_t	
ADC data sample addition and averaging options	
Enumerator	
ADC_ADD_OFF	Addition turned off for channels/sensors.
ADC_ADD_TWO	Add two samples.
ADC_ADD_THREE	Add three samples.
ADC_ADD_FOUR	Add four samples.
ADC_ADD_SIXTEEN	Add sixteen samples.
ADC_ADD_AVERAGE_TWO	Average two samples.
ADC_ADD_AVERAGE_FOUR	Average four samples.
ADC_ADD_AVERAGE_EIGHT	Average eight samples.
ADC_ADD_AVERAGE_SIXTEEN	Add sixteen samples.

◆ adc_clear_t

enum adc_clear_t	
ADC clear after read definitions	
Enumerator	
ADC_CLEAR_AFTER_READ_OFF	Clear after read off.
ADC_CLEAR_AFTER_READ_ON	Clear after read on.

◆ adc_vref_control_t

enum adc_vref_control_t	
Enumerator	
ADC_VREF_CONTROL_VREFH	VREFAMPCNT reset value. VREFADC Output voltage is Hi-Z.
ADC_VREF_CONTROL_1_5V_OUTPUT	BGR turn ON. VREFADC Output voltage is 1.5 V.
ADC_VREF_CONTROL_2_0V_OUTPUT	BGR turn ON. VREFADC Output voltage is 2.0 V.
ADC_VREF_CONTROL_2_5V_OUTPUT	BGR turn ON. VREFADC Output voltage is 2.5 V.
ADC_VREF_CONTROL_AVCC0_AVSS0	High potential is AVCC0, low potential is AVSS0.
ADC_VREF_CONTROL_VREFH0_AVSS0	High potential is VREFH0, low potential is AVSS0.
ADC_VREF_CONTROL_IVREF_AVSS0	High potential is internal reference voltage, low potential is AVSS0. When the high potential is set to the internal reference voltage, wait 5 us after R_ADC_Open() to start an ADC measurement.
ADC_VREF_CONTROL_AVCC0_VREFL0	High potential is AVCC0, low potential is VREFL0.
ADC_VREF_CONTROL_VREFH0_VREFL0	High potential is VREFH0, low potential is VREFL0.
ADC_VREF_CONTROL_IVREF_VREFL0	High potential is internal reference voltage, low potential is VREFL0. When the high potential is set to the internal reference voltage, wait 5 us after R_ADC_Open() to start an ADC measurement.

◆ adc_sample_state_reg_t

enum adc_sample_state_reg_t	
ADC sample state registers	
Enumerator	
ADC_SAMPLE_STATE_CHANNEL_0	Sample state register channel 0.
ADC_SAMPLE_STATE_CHANNEL_1	Sample state register channel 1.
ADC_SAMPLE_STATE_CHANNEL_2	Sample state register channel 2.
ADC_SAMPLE_STATE_CHANNEL_3	Sample state register channel 3.
ADC_SAMPLE_STATE_CHANNEL_4	Sample state register channel 4.
ADC_SAMPLE_STATE_CHANNEL_5	Sample state register channel 5.
ADC_SAMPLE_STATE_CHANNEL_6	Sample state register channel 6.
ADC_SAMPLE_STATE_CHANNEL_7	Sample state register channel 7.
ADC_SAMPLE_STATE_CHANNEL_8	Sample state register channel 8.
ADC_SAMPLE_STATE_CHANNEL_9	Sample state register channel 9.
ADC_SAMPLE_STATE_CHANNEL_10	Sample state register channel 10.
ADC_SAMPLE_STATE_CHANNEL_11	Sample state register channel 11.
ADC_SAMPLE_STATE_CHANNEL_12	Sample state register channel 12.
ADC_SAMPLE_STATE_CHANNEL_13	Sample state register channel 13.
ADC_SAMPLE_STATE_CHANNEL_14	Sample state register channel 14.
ADC_SAMPLE_STATE_CHANNEL_15	Sample state register channel 15.
ADC_SAMPLE_STATE_CHANNEL_16_TO_31	Sample state register channel 16 to 31.

◆ adc_compare_cfg_t

enum adc_compare_cfg_t
ADC comparison settings

◆ adc_window_b_channel_t

enum adc_window_b_channel_t
ADC Window B channel

◆ adc_window_b_mode_t

enum adc_window_b_mode_t
ADC Window B comparison mode

◆ adc_group_a_t

enum adc_group_a_t	
ADC action for group A interrupts group B scan. This enumeration is used to specify the priority between Group A and B in group mode.	
Enumerator	
ADC_GROUP_A_PRIORITY_OFF	Group A ignored and does not interrupt ongoing group B scan.
ADC_GROUP_A_GROUP_B_WAIT_FOR_TRIGGER	Group A interrupts Group B(single scan) which restarts at next Group B trigger.
ADC_GROUP_A_GROUP_B_RESTART_SCAN	Group A interrupts Group B(single scan) which restarts immediately after Group A scan is complete.
ADC_GROUP_A_GROUP_B_CONTINUOUS_SCAN	Group A interrupts Group B(continuous scan) which continues scanning without a new Group B trigger.

◆ adc_double_trigger_t

enum adc_double_trigger_t	
ADC double-trigger mode definitions	
Enumerator	
ADC_DOUBLE_TRIGGER_DISABLED	Double-triggering disabled.
ADC_DOUBLE_TRIGGER_ENABLED	Double-triggering enabled.
ADC_DOUBLE_TRIGGER_ENABLED_EXTENDED	Double-triggering enabled on both ADC ELC events.

Function Documentation

◆ R_ADC_Open()

fsp_err_t R_ADC_Open (adc_ctrl_t * *p_ctrl*, adc_cfg_t const *const *p_cfg*)

Sets the operational mode, trigger sources, interrupt priority, and configurations for the peripheral as a whole. If interrupt is enabled, the function registers a callback function pointer for notifying the user whenever a scan has completed.

Return values

FSP_SUCCESS	Module is ready for use.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_ALREADY_OPEN	The instance control structure has already been opened.
FSP_ERR_IRQ_BSP_DISABLED	A callback is provided, but the interrupt is not enabled.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	The requested unit does not exist on this MCU.
FSP_ERR_INVALID_HW_CONDITION	The ADC clock must be at least 1 MHz

◆ R_ADC_ScanCfg()

fsp_err_t R_ADC_ScanCfg (adc_ctrl_t * *p_ctrl*, void const *const *p_channel_cfg*)

Configures the ADC scan parameters. Channel specific settings are set in this function. Pass a pointer to adc_channel_cfg_t to p_channel_cfg.

Note

This starts group B scans if adc_channel_cfg_t::priority_group_a is set to ADC_GROUP_A_GROUP_B_CONTINUOUS_SCAN.

Return values

FSP_SUCCESS	Channel specific settings applied.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.

◆ R_ADC_InfoGet()

fsp_err_t R_ADC_InfoGet (adc_ctrl_t * *p_ctrl*, adc_info_t * *p_adc_info*)

Returns the address of the lowest number configured channel and the total number of bytes to be read in order to read the results of the configured channels and return the ELC Event name. If no channels are configured, then a length of 0 is returned.

Also provides the temperature sensor slope and the calibration data for the sensor if available on this MCU. Otherwise, invalid calibration data of 0xFFFFFFFF will be returned.

Note

In group mode, information is returned for group A only. Calculating information for group B is not currently supported.

Return values

FSP_SUCCESS	Information stored in p_adc_info.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.

◆ R_ADC_ScanStart()

fsp_err_t R_ADC_ScanStart (adc_ctrl_t * *p_ctrl*)

Starts a software scan or enables the hardware trigger for a scan depending on how the triggers were configured in the R_ADC_Open call. If the unit was configured for ELC or external hardware triggering, then this function allows the trigger signal to get to the ADC unit. The function is not able to control the generation of the trigger itself. If the unit was configured for software triggering, then this function starts the software triggered scan.

Precondition

Call R_ADC_ScanCfg after R_ADC_Open before starting a scan.
On MCUs that support calibration, call R_ADC_Calibrate and wait for calibration to complete before starting a scan.

Return values

FSP_SUCCESS	Scan started (software trigger) or hardware triggers enabled.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.
FSP_ERR_NOT_INITIALIZED	Unit is not initialized.
FSP_ERR_IN_USE	Another scan is still in progress (software trigger).

◆ R_ADC_ScanGroupStart()

fsp_err_t R_ADC_ScanGroupStart (adc_ctrl_t * *p_ctrl*, adc_group_mask_t *group_id*)

adc_api_t::scanStart is not supported on the ADCH. Use scanStart instead.

Return values

FSP_ERR_UNSUPPORTED	Function not supported in this implementation.

◆ R_ADC_ScanStop()

fsp_err_t R_ADC_ScanStop (adc_ctrl_t * *p_ctrl*)

Stops the software scan or disables the unit from being triggered by the hardware trigger (ELC or external) based on what type of trigger the unit was configured for in the R_ADC_Open function. Stopping a hardware triggered scan via this function does not abort an ongoing scan, but prevents the next scan from occurring. Stopping a software triggered scan aborts an ongoing scan.

Return values

FSP_SUCCESS	Scan stopped (software trigger) or hardware triggers disabled.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.
FSP_ERR_NOT_INITIALIZED	Unit is not initialized.

◆ R_ADC_StatusGet()

fsp_err_t R_ADC_StatusGet (adc_ctrl_t * *p_ctrl*, adc_status_t * *p_status*)

Provides the status of any scan process that was started, including scans started by ELC or external triggers and calibration scans on MCUs that support calibration.

Return values

FSP_SUCCESS	Module status stored in the provided pointer p_status
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.

◆ R_ADC_Read()

fsp_err_t R_ADC_Read (adc_ctrl_t * *p_ctrl*, adc_channel_t const *reg_id*, uint16_t *const *p_data*)

Reads conversion results from a single channel or sensor.

Return values

FSP_SUCCESS	Data read into provided p_data.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.
FSP_ERR_NOT_INITIALIZED	Unit is not initialized.

◆ R_ADC_Read32()

fsp_err_t R_ADC_Read32 (adc_ctrl_t * *p_ctrl*, adc_channel_t const *reg_id*, uint32_t *const *p_data*)

Reads conversion results from a single channel or sensor register into a 32-bit result.

Return values

FSP_SUCCESS	Data read into provided p_data.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.
FSP_ERR_NOT_INITIALIZED	Unit is not initialized.

◆ R_ADC_SampleStateCountSet()

fsp_err_t R_ADC_SampleStateCountSet (adc_ctrl_t * *p_ctrl*, adc_sample_state_t * *p_sample*)

Sets the sample state count for individual channels. This only needs to be set for special use cases. Normally, use the default values out of reset.

Note

The sample states for the temperature and voltage sensor are set in R_ADC_ScanCfg.

Return values

FSP_SUCCESS	Sample state count updated.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_INITIALIZED	Unit is not initialized.
FSP_ERR_NOT_OPEN	Unit is not open.

◆ R_ADC_Close()

fsp_err_t R_ADC_Close (adc_ctrl_t * *p_ctrl*)

This function ends any scan in progress, disables interrupts, and removes power to the A/D peripheral.

Return values

FSP_SUCCESS	Module closed.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.

◆ R_ADC_OffsetSet()

fsp_err_t R_ADC_OffsetSet (adc_ctrl_t *const *p_ctrl*, adc_channel_t const *reg_id*, int32_t *offset*)

adc_api_t::offsetSet is not supported on the ADC.

Return values

FSP_ERR_UNSUPPORTED	Function not supported in this implementation.

◆ R_ADC_Calibrate()

fsp_err_t R_ADC_Calibrate (adc_ctrl_t *const *p_ctrl*, void const * *p_extend*)

Initiates calibration of the ADC on MCUs that require calibration. This function must be called before starting a scan on MCUs that require calibration.

Calibration is complete when the callback is called with ADC_EVENT_CALIBRATION_COMPLETE or when R_ADC_StatusGet returns ADC_STATUS_IDLE. Reference Figure 32.35 "Software flow and operation example of calibration operation." in the RA2A1 manual R01UH0888EJ0100.

ADC calibration time: 12 PCLKB + 774,930 ADCLK. (Reference Table 32.16 "Required calibration time (shown as the number of ADCLK and PCLKB cycles)" in the RA2A1 manual R01UH0888EJ0100. The lowest supported ADCLK is 1MHz.

Calibration will take a minimum of 24 milliseconds at 32 MHz PCLKB and ADCLK. This wait could take up to 780 milliseconds for a 1 MHz PCLKD (ADCLK).

Parameters

[in]	p_ctrl	Pointer to the instance control structure
[in]	p_extend	Unused argument. Pass NULL.

Return values

FSP_SUCCESS	Calibration successfully initiated.
FSP_ERR_INVALID_HW_CONDITION	A scan is in progress or hardware triggers are enabled.
FSP_ERR_UNSUPPORTED	Calibration not supported on this MCU.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.

◆ R_ADC_CallbackSet()

fsp_err_t R_ADC_CallbackSet (adc_ctrl_t *const *p_api_ctrl*, void(*)(adc_callback_args_t *) *p_callback*, void const *const *p_context*, adc_callback_args_t *const *p_callback_memory*)
Updates the user callback and has option of providing memory for callback structure. Implements adc_api_t::callbackSet **Return values** FSP_SUCCESS — Callback updated successfully. FSP_ERR_ASSERTION — A required pointer is NULL. FSP_ERR_NOT_OPEN — The control block has not been opened. FSP_ERR_NO_CALLBACK_MEMORY — p_callback is non-secure and p_callback_memory is either secure or NULL.

4.2.5 Analog to Digital Converter (r_adc_b)

fsp_err_t	R_ADC_B_Read32 (adc_ctrl_t *p_ctrl, adc_channel_t const channel_id, uint32_t *const p_data)
fsp_err_t	R_ADC_B_FifoRead (adc_ctrl_t *p_ctrl, adc_group_mask_t const group_mask, adc_b_fifo_read_t *const p_data)

fsp_err_t	R_ADC_B_Close (adc_ctrl_t *p_ctrl)
fsp_err_t	R_ADC_B_OffsetSet (adc_ctrl_t *const p_ctrl, adc_channel_t const reg_id, int32_t offset)
fsp_err_t	R_ADC_B_Calibrate (adc_ctrl_t *const p_ctrl, void const *p_extend)
fsp_err_t	R_ADC_B_CallbackSet (adc_ctrl_t *const p_api_ctrl, void(*p_callback)(adc_callback_args_t *), void const *const p_context, adc_callback_args_t *const p_callback_memory)

Detailed Description

Driver for the ADC_B peripheral on RA MCUs. This module implements the ADC Interface.

Overview

Features

The ADC_B module supports the following features:

- 12 bit resolution
- Configure scans to include:
  - Multiple analog channels
  - Temperature sensor channel
  - Reference Voltage sensor channel
  - Self-Diagnostic channel
- Configurable scan start trigger:
  - Software scan triggers
  - Hardware scan triggers (timer expiration, for example)
  - External scan triggers from the ADTRGn port pins
- Configurable scan modes:
  - Single scan mode, where each trigger starts a single scan
  - Continuous scan mode, where all channels are scanned continuously
  - Synchronous scan mode, where A/D converters operate synchronously
- Variable sampling time
- Self-calibration
- Channel-dedicated sample-and-hold circuits
- Supports adding and averaging converted samples
- Selectable data format (16, 14, 12, and 10-bit)
- Limiter clip function
- User offset adjustment function
- User gain adjustment function
- Built-in FIFO
- Channel-dedicated programable gain amplifier (PGA):
  - Support single-ended or pseudo-differential input
  - 2.5x to 13.33x gain (1.5x to 5.56x for pseudo-differential inputs)
- Optional callback when scan completes, FIFO data is ready, an error occurrs, or other conditions are triggered.

Configuration

Virtual Channels and Scan Groups

A virtual channel is a group of registers that stores the A/D conversion configuration for a single analog pin. Each virtual channel has a number of options including the channel for conversion, settings for conversion, data processing method and so on.

To perform A/D conversion of an analog pin, the channel associated with the pin must first be assigned to a virtual channel. That virtual channel is then assigned to a scan group, which brings together one or more virtual channels to be converted in sequence with a specified conversion unit.

Note

Analog channels may be assigned to more than one virtual channel. However, a virtual channel can be assigned to only one scan group. When performing A/D conversion on one analog channel in different scan groups or when converting a channel several times within the same scan group, assign several virtual channels to one analog channel.
To avoid data being overwritten, when converting a channel multiple times within the same scan group use R_ADC_B_FifoRead() instead of R_ADC_B_Read().

Configuring a Scan

To perform A/D conversion of a scan group the following should be configured:

- Assign the analog channel for conversion to a virtual channel.
- Assign the virtual channel to a scan group.
- Assign the scan group to an A/D Converter.

Note

Up to 8 virtual channels can be assigned to a scan group. If more than 8 are assigned only the lowest 8 will be targeted for A/D conversion.

Build Time Configurations for r_adc_b

The following build time configurations are defined in fsp_cfg/r_adc_b_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	bsp	If selected, code for parameter checking is included in the build.

Note

The instance configurations available in this driver are too numerous to list here. Please refer to the RA Configuration editor in e2 studio for further details.

Clock Configuration

The ADC_B conversion clock source may be configured to use PCLKC, PCLKA, or GPT with a selectable division ratio. The ADC_B clock may operate between 25 MHz at a minimum and 60 MHz at a maximum.

Pin Configuration

The ANxxx pins are analog input channels that can be used with the ADC_B.

ADTRG0 and ADTRG1 can be used to start scans with an external trigger. When external triggers are used, ADC_B scans begin on the falling edge of the ADTRG pin.

Usage Notes

Self-Calibration

Calibration is required to use this peripheral; call R_ADC_B_Calibrate() after open, and prior to any other function. Self-Calibration should be performed any time ADC operating characteristics are modified, including after reset, releasing module-stop, when returning from software standby or deep software standby mode, or each time the ADC open function is called.

Note

Self-calibration is a non-blocking operation. The application should wait for an ADC_EVENT_CALIBRATION_COMPLETE callback before using other ADC_B functionality.

ADC_B Operational Modes

The driver supports two primary operational modes, single-scan and continuous-scan. In single scan mode, one or more groups are scanned once per trigger. In continuous scan mode, one or more groups are started with a single trigger. Scans continue until R_ADC_B_ScanStop() is called. In each mode, analog groups and virtual channels are converted in ascending order.

Synchronous-Scan Mode

When synchronous operation is enabled all A/D conversions are guaranteed to begin and end based on a user-configured period. When both conversion units are selected for synchronous scan they run from the same period, allowing for consistent timing of simultaneous conversions.

Sample and Hold

Enabling sample and hold on one or more channels instructs the ADC to perform sampling on all channels as soon as a group scan is started. Internal circuitry holds the sampled voltages until the conversion unit is ready.

Note

Each sample and hold unit is connected to two analog channels (0/1, 2/3 etc). When this function is enabled on both members of a pair only one of the two may be scanned at a time.
Enabling sample and hold functionality reduces maximum scan frequency because the sample hold time is added to each scan. Refer to the hardware manual for details on the sample and hold time.

Self-Diagnosis

ADC_B has a built-in self-diagnosis function that can be used to confirm the unit is working correctly. One of three self-diagnosis voltages can be converted and compared to reference values as shown below:

Self-diagnosis mode	Expected reference data	Error condition
Self-diagnosis mode 1	0x0000	Greater or less than reference data (16-bit signed)
Self-diagnosis mode 1	0x8000	Greater than reference data
Self-diagnosis mode 1	0x7FFF	Less than reference data

Add/Average Funtion

The ADC can be configured to automatically add or average a number of conversions into a single result. When enabled only the result of the operation is returned.

Note

When the A/D-converted value addition/average function is used, overflow of conversion data may occur. However, in certain conditions overflow may not be detected. See the A/D Conversion Overflow section below for details.

Data Format

The A/D converter in this peripheral has a resolution of 12 bits. When 16-bit or 14-bit data format is selected, the lower 2 or 4 bits (respectively) of the A/D conversion result are extended bits for data processing, error calibration (Self-Calibration), gain/offset adjustment and the averaging function. For 10-bit data length, the upper 6 bits (bit 15 to bit 10) are always 0.

Limiter Clip

The limit clipping function allows for setting upper and lower bounds on converted data. When the A/D conversion data exceeds the specified upper limit value, it is clipped to the upper limit value. If the A/D conversion data falls below the specified lower limit, it is clipped to the lower limit value.

The upper and lower limits are set in one of eight table entries. To perform limit clip functionality, each virtual channel may (optionally) have one of these entries assigned. Interrupts may be enabled for when limiter clip conditions are triggered.

Note

When 14-/12-/10-bit is selected as the data length of the A/D conversion data, the lower bits are cut based on the data-format selection. When 16-bit format is selected, the data length is not rounded.

Using the Temperature Sensor with the ADC_B

The ADC_B HAL module supports reading the data from the on-chip temperature sensor. The value returned from the sensor can be converted into degrees Celsius or Fahrenheit in the application program using the following formula:

T = (Vs - V1)/slope + T1

- T: Measured temperature (degrees C)
- Vs: Voltage output by the temperature sensor at the time of measurement (Volts)
- T1: Temperature experimentally measured at one point (degrees C)
- V1: Voltage output by the temperature sensor at the time of measurement of T1 (Volts)
- slope: Temperature gradient of the temperature sensor (V/degrees C), given as (V2 - V1) / (T2 - T1)
    - T2: Temperature at the experimental measurement of another point (degrees C)
    - V2: Voltage output by the temperature sensor at the time of measurement of T2 (Volts)

Note

The slope value can be obtained from the hardware manual for each device in the Electrical Characteristics Chapter - TSN Characteristics Table, Temperature slope entry.

User Offset and Gain

The user offset adjustment function adds or subtracts a constant value to or from the A/D conversion data. Virtual channels select an offset from a table of values specified by the user.

The user gain adjustment function multiplies the A/D conversion data by an arbitrary coefficient value. As with offset adjustment, virtual channels may select a gain value from a table specified by the user.

Note

When the offset or gain adjusting functions are used overflow of A/D conversion data may occur. See the A/D Conversion Overflow section below for details.
When 14-/12-/10-bit is selected as the data length of converted data the lower bits of offset values are cut based on the data-format selection.

FIFO

The FIFOs consist of 8 stages and can hold up to 8 A/D conversion data. One FIFO is implemented for each scan group. Each FIFO acts as a ring buffer and data will be lost if the FIFO is not read as needed. Interrupts may be enabled for a specific data storage threshold and on overrun.

Programmable Gain Amplifier

ADC has built-in Programmable Gain Amplifier (PGA). The PGA amplifies an external analog input signal and outputs it to A/D converter, Channel-dedicated sample-and-hold circuit, and High-Speed Analog Comparator (ACMPHS). PGA units are channel specific and utilize two analog input pins per unit. Please refer to the RA Configuration editor in e2 studio or the hardware manual for further details.

Note

When PGA is used, the analog input pin assigned to PGAVSS pin cannot be input to A/D conversion or Channel-dedicated sample-and-hold circuit.

Single-ended input

In single-ended input mode, PGA amplifies the input from PGAIN pin with the specified gain, between ×2.000 to ×13.333. When operating the PGA in single-ended input mode, PGAIN should be connected to the signal source and PGAVSS should be connected to the analog ground (AVSS0). The input voltage to PGAIN must not exceed the range specified in the Electrical Characteristics.

Pseudo-differential input

In pseudo differential input mode, PGA amplifies the difference between PGAIN pin and PGAVSS pin with the specified gain and output the voltage obtained by adding the offset of 0.5 * AVcc. Settable gains are ×1.500, ×2.333, ×4.000, and ×5.667.

When operating the PGA in Pseudo Differential Input Mode, PGAIN should be connected to the signal source, and PGAVSS should be connected to the reference ground of the signal source. The inputs to PGAIN and PGAVSS pins must not exceed the range specified in the Electrical Characteristics.

When Interrupts Are Not Enabled

Interrupts are enabled by default. If scan-complete interrupts are disabled, R_ADC_B_StatusGet() can be used to poll the ADC_B driver to determine when the scan has completed. R_ADC_B_Read() is used to access the converted ADC_B result.

A/D Conversion Overflow

A/D conversion overflow is detected when converted data exceeds the range that can be handled in the specified data format. When overflow occurs, data is restricted to the upper or lower limit value of the specified data format. Overflow is detected in the following cases:

- When the input to the A/D converter exceeds VREFH0 or falls below VREFL0
- When overflow occurs by the internal processing (calculation) for the A/D conversion data due to the following: – Gain Error and Offset Error Calibration – User Gain/Offset adjustment function – When using A/D-Converted Value Addition/Averaging Function – Data Formatting Process

Examples

Basic Example

This is a basic example of minimal use of the ADC_B in an application.

```
/* A channel configuration is generated by the RA Configuration editor based on the
options selected. If additional
 * configurations are desired additional adc_channel_cfg_t elements can be defined
and passed to R_ADC_B_ScanCfg. */
extern const adc_b_scan_cfg_t g_adc_b0_scan_cfg;
void adc_b_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = R_ADC_B_Open(&g_adc_b0_ctrl, &g_adc_b0_cfg);
    assert(FSP_SUCCESS == err);
    err = R_ADC_B_Calibrate(&g_adc_b0_ctrl, NULL);
    assert(FSP_SUCCESS == err);
 /* Wait for calibration to complete */
 adc_status_t status = {.state = ADC_STATE_SCAN_IN_PROGRESS};
 while ((ADC_STATE_SCAN_IN_PROGRESS == status.state) &&
          (FSP_SUCCESS == err))
    {
 R_BSP_SoftwareDelay(1, BSP_DELAY_UNITS_MILLISECONDS);
       err = R_ADC_B_StatusGet(&g_adc_b0_ctrl, &status);
    }
    assert(FSP_SUCCESS == err);
 /* Enable channels. */
    err = R_ADC_B_ScanCfg(&g_adc_b0_ctrl, &g_adc_b0_scan_cfg);
```

```
    assert(FSP_SUCCESS == err);
 /* Start one or more scan groups by calling R_ADC_B_ScanGroupStart(). Alternatively,
all scan groups may be started
  * by calling R_ADC_B_ScanCfg(). */
    (void) R_ADC_B_ScanGroupStart(&g_adc_b0_ctrl, ADC_GROUP_MASK_0);
 /* Wait for conversion to complete. */
    status.state = ADC_STATE_SCAN_IN_PROGRESS;
 while (ADC_STATE_SCAN_IN_PROGRESS == status.state)
    {
       (void) R_ADC_B_StatusGet(&g_adc_b0_ctrl, &status);
    }
 /* Read converted data. */
    uint16_t channel_0_conversion_result;
    err = R_ADC_B_Read(&g_adc_b0_ctrl, ADC_CHANNEL_0, &channel_0_conversion_result);
    assert(FSP_SUCCESS == err);
}
```

uint32_t	limiter_clip_tables[8]	Limiter clip Table register data.

◆ adc_b_instance_ctrl_t

struct adc_b_instance_ctrl_t
ADC instance control block. DO NOT INITIALIZE. Initialized in adc_api_t::open().

Enumeration Type Documentation

◆ adc_b_clock_source_t

enum adc_b_clock_source_t	
ADC Clock source selection	
Enumerator	
ADC_B_CLOCK_SOURCE_PCLKC	ADC Clock Source PCLKC.
ADC_B_CLOCK_SOURCE_GPT	ADC Clock Source GPT.
ADC_B_CLOCK_SOURCE_PCLKA	ADC Clock Source PCLKA.

◆ adc_b_clock_divider_t

enum adc_b_clock_divider_t	
ADC clock divider selection	
Enumerator	
ADC_B_CLOCK_DIV_1	ADC Clock Division 1/1.
ADC_B_CLOCK_DIV_2	ADC Clock Division 1/2.
ADC_B_CLOCK_DIV_3	ADC Clock Division 1/3.
ADC_B_CLOCK_DIV_4	ADC Clock Division 1/4.
ADC_B_CLOCK_DIV_5	ADC Clock Division 1/5.
ADC_B_CLOCK_DIV_6	ADC Clock Division 1/6.
ADC_B_CLOCK_DIV_7	ADC Clock Division 1/7.
ADC_B_CLOCK_DIV_8	ADC Clock Division 1/8.

◆ adc_b_resolution_t

enum adc_b_resolution_t	
ADC_B data resolution definitions	
Enumerator	
ADC_B_RESOLUTION_16_BIT	16 bit adc_b resolution
ADC_B_RESOLUTION_14_BIT	14 bit adc_b resolution
ADC_B_RESOLUTION_12_BIT	12 bit adc_b resolution
ADC_B_RESOLUTION_10_BIT	10 bit adc_b resolution

◆ adc_b_virtual_channel_t

enum adc_b_virtual_channel_t	
ADC channels	
Enumerator	
ADC_B_VIRTUAL_CHANNEL_0	ADC B virtual channel 0.
ADC_B_VIRTUAL_CHANNEL_1	ADC B virtual channel 1.
ADC_B_VIRTUAL_CHANNEL_2	ADC B virtual channel 2.
ADC_B_VIRTUAL_CHANNEL_3	ADC B virtual channel 3.
ADC_B_VIRTUAL_CHANNEL_4	ADC B virtual channel 4.
ADC_B_VIRTUAL_CHANNEL_5	ADC B virtual channel 5.
ADC_B_VIRTUAL_CHANNEL_6	ADC B virtual channel 6.
ADC_B_VIRTUAL_CHANNEL_7	ADC B virtual channel 7.
ADC_B_VIRTUAL_CHANNEL_8	ADC B virtual channel 8.
ADC_B_VIRTUAL_CHANNEL_9	ADC B virtual channel 9.
ADC_B_VIRTUAL_CHANNEL_10	ADC B virtual channel 10.
ADC_B_VIRTUAL_CHANNEL_11	ADC B virtual channel 11.
ADC_B_VIRTUAL_CHANNEL_12	ADC B virtual channel 12.

ADC_B_VIRTUAL_CHANNEL_13	ADC B virtual channel 13.
ADC_B_VIRTUAL_CHANNEL_14	ADC B virtual channel 14.
ADC_B_VIRTUAL_CHANNEL_15	ADC B virtual channel 15.
ADC_B_VIRTUAL_CHANNEL_16	ADC B virtual channel 16.
ADC_B_VIRTUAL_CHANNEL_17	ADC B virtual channel 17.
ADC_B_VIRTUAL_CHANNEL_18	ADC B virtual channel 18.
ADC_B_VIRTUAL_CHANNEL_19	ADC B virtual channel 19.
ADC_B_VIRTUAL_CHANNEL_20	ADC B virtual channel 20.
ADC_B_VIRTUAL_CHANNEL_21	ADC B virtual channel 21.
ADC_B_VIRTUAL_CHANNEL_22	ADC B virtual channel 22.
ADC_B_VIRTUAL_CHANNEL_23	ADC B virtual channel 23.
ADC_B_VIRTUAL_CHANNEL_24	ADC B virtual channel 24.
ADC_B_VIRTUAL_CHANNEL_25	ADC B virtual channel 25.
ADC_B_VIRTUAL_CHANNEL_26	ADC B virtual channel 26.
ADC_B_VIRTUAL_CHANNEL_27	ADC B virtual channel 27.
ADC_B_VIRTUAL_CHANNEL_28	ADC B virtual channel 28.
ADC_B_VIRTUAL_CHANNEL_29	ADC B virtual channel 29.
ADC_B_VIRTUAL_CHANNEL_30	ADC B virtual channel 30.
ADC_B_VIRTUAL_CHANNEL_31	ADC B virtual channel 31.
ADC_B_VIRTUAL_CHANNEL_32	ADC B virtual channel 32.
ADC_B_VIRTUAL_CHANNEL_33	ADC B virtual channel 33.
ADC_B_VIRTUAL_CHANNEL_34	ADC B virtual channel 34.
ADC_B_VIRTUAL_CHANNEL_35	ADC B virtual channel 35.
ADC_B_VIRTUAL_CHANNEL_36	ADC B virtual channel 36.

◆ adc_b_channel_mask_t

enum adc_b_channel_mask_t	
ADC channel mask	
Enumerator	
ADC_B_CHANNEL_MASK_0	Channel 0.
ADC_B_CHANNEL_MASK_1	Channel 1.
ADC_B_CHANNEL_MASK_2	Channel 2.
ADC_B_CHANNEL_MASK_3	Channel 3.
ADC_B_CHANNEL_MASK_4	Channel 4.
ADC_B_CHANNEL_MASK_5	Channel 5.
ADC_B_CHANNEL_MASK_6	Channel 6.
ADC_B_CHANNEL_MASK_7	Channel 7.
ADC_B_CHANNEL_MASK_8	Channel 8.
ADC_B_CHANNEL_MASK_9	Channel 9.
ADC_B_CHANNEL_MASK_10	Channel 10.
ADC_B_CHANNEL_MASK_11	Channel 11.
ADC_B_CHANNEL_MASK_12	Channel 12.
ADC_B_CHANNEL_MASK_13	Channel 13.
ADC_B_CHANNEL_MASK_14	Channel 14.
ADC_B_CHANNEL_MASK_15	Channel 15.
ADC_B_CHANNEL_MASK_16	Channel 16.
ADC_B_CHANNEL_MASK_17	Channel 17.
ADC_B_CHANNEL_MASK_18	Channel 18.
ADC_B_CHANNEL_MASK_19	Channel 19.
ADC_B_CHANNEL_MASK_20	Channel 20.

ADC_B_CHANNEL_MASK_21	Channel 21.
ADC_B_CHANNEL_MASK_22	Channel 22.
ADC_B_CHANNEL_MASK_23	Channel 23.
ADC_B_CHANNEL_MASK_24	Channel 24.
ADC_B_CHANNEL_MASK_25	Channel 25.
ADC_B_CHANNEL_MASK_26	Channel 26.
ADC_B_CHANNEL_MASK_27	Channel 27.
ADC_B_CHANNEL_MASK_28	Channel 28.
ADC_B_CHANNEL_MASK_DIAGNOSIS	Self-Diagnosis Channel.
ADC_B_CHANNEL_MASK_TEMPERATURE	Temperature sensor channel.
ADC_B_CHANNEL_MASK_VOLT	Voltage Reference channel.
ADC_B_CHANNEL_MASK_DAC0	DAC 0 Channel.
ADC_B_CHANNEL_MASK_DAC1	DAC 1 Channel.
ADC_B_CHANNEL_MASK_DAC2	DAC 2 Channel.
ADC_B_CHANNEL_MASK_DAC3	DAC 3 Channel.

◆ adc_b_limit_clip_table_id_t

enum adc_b_limit_clip_table_id_t	
ADC limiter clipping table id selection options	
Enumerator	
ADC_B_LIMIT_CLIP_TABLE_SELECTION_NONE	Limiter Clip Disabled.
ADC_B_LIMIT_CLIP_TABLE_SELECTION_0	Limiter Clip Table 0.
ADC_B_LIMIT_CLIP_TABLE_SELECTION_1	Limiter Clip Table 1.
ADC_B_LIMIT_CLIP_TABLE_SELECTION_2	Limiter Clip Table 2.
ADC_B_LIMIT_CLIP_TABLE_SELECTION_3	Limiter Clip Table 3.
ADC_B_LIMIT_CLIP_TABLE_SELECTION_4	Limiter Clip Table 4.
ADC_B_LIMIT_CLIP_TABLE_SELECTION_5	Limiter Clip Table 5.
ADC_B_LIMIT_CLIP_TABLE_SELECTION_6	Limiter Clip Table 6.
ADC_B_LIMIT_CLIP_TABLE_SELECTION_7	Limiter Clip Table 7.

◆ adc_b_unit_id_t

enum adc_b_unit_id_t	
ADC unit selection options	
Enumerator	
ADC_B_UNIT_ID_0	ADC Unit ID 0.
ADC_B_UNIT_ID_1	ADC Unit ID 1.

◆ adc_b_unit_mask_t

enum adc_b_unit_mask_t	
ADC unit selection options	
Enumerator	
ADC_B_UNIT_MASK_0	ADC Unit Mask 0.
ADC_B_UNIT_MASK_1	ADC Unit Mask 1.
ADC_B_UNIT_MASK_UNDEFINED	ADC Unit Mask Unknown.

◆ adc_b_add_avg_mode_t

enum adc_b_add_avg_mode_t	
ADC data sample addition and averaging options	
Enumerator	
ADC_B_ADD_AVERAGE_OFF	Add/Average turned off for channels/sensors.
ADC_B_ADD_AVERAGE_ADDITION_ENABLE	Addition Mode Enabled.
ADC_B_ADD_AVERAGE_AVERAGE_ENABLE	Average Mode Enabled.

◆ adc_b_add_avg_count_t

enum adc_b_add_avg_count_t	
ADC data sample addition and averaging options	
Enumerator	
ADC_B_ADD_AVERAGE_1	Addition turned off for channels/sensors.
ADC_B_ADD_AVERAGE_2	Add/Average 2 samples.
ADC_B_ADD_AVERAGE_4	Add/Average 4 samples.
ADC_B_ADD_AVERAGE_8	Add/Average 8 samples.
ADC_B_ADD_AVERAGE_16	Add/Average 16 samples.
ADC_B_ADD_AVERAGE_32	Add/Average 32 samples.
ADC_B_ADD_AVERAGE_64	Add/Average 64 samples.
ADC_B_ADD_AVERAGE_128	Add/Average 128 samples.
ADC_B_ADD_AVERAGE_256	Add/Average 256 samples.
ADC_B_ADD_AVERAGE_512	Add/Average 512 samples.
ADC_B_ADD_AVERAGE_1024	Add/Average 1024 samples.

◆ adc_b_gpt_trigger_t

enum adc_b_gpt_trigger_t	
ADC GPT Trigger options	
Enumerator	
ADC_B_GPT_TRIGGER_NONE	GPT Trigger Disabled.
ADC_B_GPT_TRIGGER_A0	GPT Trigger A0.
ADC_B_GPT_TRIGGER_A1	GPT Trigger A1.
ADC_B_GPT_TRIGGER_A2	GPT Trigger A2.
ADC_B_GPT_TRIGGER_A3	GPT Trigger A3.
ADC_B_GPT_TRIGGER_A4	GPT Trigger A4.

ADC_B_GPT_TRIGGER_A5	GPT Trigger A5.
ADC_B_GPT_TRIGGER_A6	GPT Trigger A6.
ADC_B_GPT_TRIGGER_A7	GPT Trigger A7.
ADC_B_GPT_TRIGGER_A8	GPT Trigger A8.
ADC_B_GPT_TRIGGER_A9	GPT Trigger A9.
ADC_B_GPT_TRIGGER_B0	GPT Trigger B0.
ADC_B_GPT_TRIGGER_B1	GPT Trigger B1.
ADC_B_GPT_TRIGGER_B2	GPT Trigger B2.
ADC_B_GPT_TRIGGER_B3	GPT Trigger B3.
ADC_B_GPT_TRIGGER_B4	GPT Trigger B4.
ADC_B_GPT_TRIGGER_B5	GPT Trigger B5.
ADC_B_GPT_TRIGGER_B6	GPT Trigger B6.
ADC_B_GPT_TRIGGER_B7	GPT Trigger B7.
ADC_B_GPT_TRIGGER_B8	GPT Trigger B8.
ADC_B_GPT_TRIGGER_B9	GPT Trigger B9.

◆ adc_b_external_trigger_t

enum adc_b_external_trigger_t	
ADC External Trigger options	
Enumerator	
ADC_B_EXTERNAL_TRIGGER_NONE	External Trigger Disabled.
ADC_B_EXTERNAL_TRIGGER_ADTRG0	External Trigger ADTRG0 Selection.
ADC_B_EXTERNAL_TRIGGER_ADTRG1	External Trigger ADTRG1 Selection.

◆ adc_b_self_diagnosis_mode_t

enum adc_b_self_diagnosis_mode_t	
ADC Self-Diagnosis mode options	
Enumerator	
ADC_B_SELF_DIAGNOSIS_DISABLED	Self-Diagnosis Disabled.
ADC_B_SELF_DIAGNOSIS_MODE_1	Self-Diagnosis Mode 1.
ADC_B_SELF_DIAGNOSIS_MODE_2	Self-Diagnosis Mode 2.
ADC_B_SELF_DIAGNOSIS_MODE_3	Self-Diagnosis Mode 3.

◆ adc_b_sample_and_hold_mask_t

enum adc_b_sample_and_hold_mask_t	
ADC Sample-and-Hold unit enable mask	
Enumerator	
ADC_B_SAMPLE_AND_HOLD_MASK_NONE	Sample-and-Hold Disabled.
ADC_B_SAMPLE_AND_HOLD_MASK_UNIT_0	Sample-and-Hold Unit 0.
ADC_B_SAMPLE_AND_HOLD_MASK_UNIT_1	Sample-and-Hold Unit 1.
ADC_B_SAMPLE_AND_HOLD_MASK_UNIT_2	Sample-and-Hold Unit 2.
ADC_B_SAMPLE_AND_HOLD_MASK_UNIT_4	Sample-and-Hold Unit 3.
ADC_B_SAMPLE_AND_HOLD_MASK_UNIT_5	Sample-and-Hold Unit 4.
ADC_B_SAMPLE_AND_HOLD_MASK_UNIT_6	Sample-and-Hold Unit 5.

◆ adc_b_pga_gain_t

enum adc_b_pga_gain_t	
ADC PGA Gain	
Enumerator	
ADC_B_PGA_GAIN_DISABLED	PGA Gain Disabled.
ADC_B_PGA_GAIN_DIFFERENTIAL_1_500	PGA Gain Setting 1.500.
ADC_B_PGA_GAIN_DIFFERENTIAL_2_333	PGA Gain Setting 2.333.
ADC_B_PGA_GAIN_DIFFERENTIAL_4_000	PGA Gain Setting 4.000.
ADC_B_PGA_GAIN_DIFFERENTIAL_5_667	PGA Gain Setting 5.667.
ADC_B_PGA_GAIN_SINGLE_ENDED_2_500	PGA Gain Setting 2.500.
ADC_B_PGA_GAIN_SINGLE_ENDED_2_667	PGA Gain Setting 2.667.
ADC_B_PGA_GAIN_SINGLE_ENDED_2_857	PGA Gain Setting 2.857.
ADC_B_PGA_GAIN_SINGLE_ENDED_3_077	PGA Gain Setting 3.077.
ADC_B_PGA_GAIN_SINGLE_ENDED_3_333	PGA Gain Setting 3.333.
ADC_B_PGA_GAIN_SINGLE_ENDED_3_636	PGA Gain Setting 3.636.
ADC_B_PGA_GAIN_SINGLE_ENDED_4_000	PGA Gain Setting 4.000.
ADC_B_PGA_GAIN_SINGLE_ENDED_4_444	PGA Gain Setting 4.444.
ADC_B_PGA_GAIN_SINGLE_ENDED_5_000	PGA Gain Setting 5.000.
ADC_B_PGA_GAIN_SINGLE_ENDED_5_714	PGA Gain Setting 5.714.
ADC_B_PGA_GAIN_SINGLE_ENDED_6_667	PGA Gain Setting 6.667.
ADC_B_PGA_GAIN_SINGLE_ENDED_8_000	PGA Gain Setting 8.000.
ADC_B_PGA_GAIN_SINGLE_ENDED_10_000	PGA Gain Setting 10.000.
ADC_B_PGA_GAIN_SINGLE_ENDED_13_333	PGA Gain Setting 13.333.

◆ adc_b_sampling_state_table_id_t

enum adc_b_sampling_state_table_id_t	
ADC Sampling State table selection options	
Enumerator	
ADC_B_SAMPLING_STATE_TABLE_0	Sampling State Table 0.
ADC_B_SAMPLING_STATE_TABLE_1	Sampling State Table 1.
ADC_B_SAMPLING_STATE_TABLE_2	Sampling State Table 2.
ADC_B_SAMPLING_STATE_TABLE_3	Sampling State Table 3.
ADC_B_SAMPLING_STATE_TABLE_4	Sampling State Table 4.
ADC_B_SAMPLING_STATE_TABLE_5	Sampling State Table 5.
ADC_B_SAMPLING_STATE_TABLE_6	Sampling State Table 6.
ADC_B_SAMPLING_STATE_TABLE_7	Sampling State Table 7.
ADC_B_SAMPLING_STATE_TABLE_8	Sampling State Table 8.
ADC_B_SAMPLING_STATE_TABLE_9	Sampling State Table 9.
ADC_B_SAMPLING_STATE_TABLE_10	Sampling State Table 10.
ADC_B_SAMPLING_STATE_TABLE_11	Sampling State Table 12.
ADC_B_SAMPLING_STATE_TABLE_12	Sampling State Table 13.
ADC_B_SAMPLING_STATE_TABLE_13	Sampling State Table 14.
ADC_B_SAMPLING_STATE_TABLE_14	Sampling State Table 15.
ADC_B_SAMPLING_STATE_TABLE_15	Sampling State Table 16.

◆ adc_b_user_gain_table_id_t

enum adc_b_user_gain_table_id_t	
ADC User Gain table options	
Enumerator	
ADC_B_USER_GAIN_TABLE_SELECTION_DISABLED	User Gain disabled.
ADC_B_USER_GAIN_TABLE_SELECTION_0	User Gain table 0.
ADC_B_USER_GAIN_TABLE_SELECTION_1	User Gain table 1.
ADC_B_USER_GAIN_TABLE_SELECTION_2	User Gain table 2.
ADC_B_USER_GAIN_TABLE_SELECTION_3	User Gain table 3.
ADC_B_USER_GAIN_TABLE_SELECTION_4	User Gain table 4.
ADC_B_USER_GAIN_TABLE_SELECTION_5	User Gain table 5.
ADC_B_USER_GAIN_TABLE_SELECTION_6	User Gain table 6.
ADC_B_USER_GAIN_TABLE_SELECTION_7	User Gain table 7.

◆ adc_b_user_offset_table_selection_id_t

enum adc_b_user_offset_table_selection_id_t	
ADC User Offset table options	
Enumerator	
ADC_B_USER_OFFSET_TABLE_SELECTION_DISABLED	User Offset disabled.
ADC_B_USER_OFFSET_TABLE_SELECTION_0	User Offset table 0.
ADC_B_USER_OFFSET_TABLE_SELECTION_1	User Offset table 1.
ADC_B_USER_OFFSET_TABLE_SELECTION_2	User Offset table 2.
ADC_B_USER_OFFSET_TABLE_SELECTION_3	User Offset table 3.
ADC_B_USER_OFFSET_TABLE_SELECTION_4	User Offset table 4.
ADC_B_USER_OFFSET_TABLE_SELECTION_5	User Offset table 5.
ADC_B_USER_OFFSET_TABLE_SELECTION_6	User Offset table 6.
ADC_B_USER_OFFSET_TABLE_SELECTION_7	User Offset table 7.

Function Documentation

◆ R_ADC_B_Open()

fsp_err_t R_ADC_B_Open (adc_ctrl_t * *p_ctrl*, adc_cfg_t const *const *p_cfg*)

Sets the operational mode, trigger sources, interrupt priority, and configurations for the peripheral as a whole. If provided, the function registers a callback function pointer for notifying the user whenever a scan has completed, error has occurred, FIFO read request is generated, or other ADC interrupt event occurrs. Implements adc_api_t::open.

Return values

FSP_SUCCESS	Module is ready for use.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_ALREADY_OPEN	The instance control structure has already been opened.

◆ R_ADC_B_ScanCfg()

fsp_err_t R_ADC_B_ScanCfg (adc_ctrl_t * *p_ctrl*, void const *const *p_scan_cfg*)

Configures the ADC_B scan parameters. Channel specific settings are set in this function. Pass a pointer to adc_b_scan_cfg_t to p_channel_cfg. Implements adc_api_t::scanCfg.

Note

This starts group B scans if adc_b_scan_cfg_t::priority_group_a is set to ADC_B_GROUP_A_GROUP_B_CONTINUOUS_SCAN.

Return values

FSP_SUCCESS	Channel specific settings applied.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.
FSP_ERR_INVALID_STATE	Invalid Scan Configuration.
FSP_ERR_INVALID_CHANNEL	Invalid configured channel for group converter id.

◆ R_ADC_B_InfoGet()

fsp_err_t R_ADC_B_InfoGet (adc_ctrl_t * *p_ctrl*, adc_info_t * *p_adc_info*)

Provides the temperature sensor slope and the calibration data for the sensor if available on this MCU. Otherwise, invalid calibration data of 0xFFFFFFFF will be returned.

Return values

FSP_SUCCESS	Info is read into p_adc_info.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.
FSP_ERR_NOT_INITIALIZED	Unit not initialized.

◆ R_ADC_B_ScanStart()

fsp_err_t R_ADC_B_ScanStart (adc_ctrl_t * *p_ctrl*)

Enables the hardware trigger for a scan depending on how the triggers were configured in the R_ADC_B_ScanCfg call. If the unit was configured for ELC, GPT, or external hardware triggering, then this function allows the trigger signal to get to the ADC unit. The function is not able to control the generation of the trigger itself. If the unit was configured for software triggering, This function was added to this ADC version for compatability with r_adc driver. For additional flexibility, it is recommended R_ADC_B_GroupScanStart.

Precondition

Call R_ADC_B_ScanCfg after R_ADC_B_Open before starting a scan.
Call R_ADC_B_Calibrate and wait for calibration to complete before starting a scan.

Return values

FSP_SUCCESS	Scan started (software trigger) or hardware triggers enabled.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_INVALID_ARGUMENT	No hardware triggers configured for groups.
FSP_ERR_NOT_OPEN	Unit is not open.
FSP_ERR_NOT_INITIALIZED	Unit not initialized.

◆ R_ADC_B_ScanGroupStart()

fsp_err_t R_ADC_B_ScanGroupStart (adc_ctrl_t * *p_ctrl*, adc_group_mask_t *group_mask*)

Starts a software scan or enables the hardware trigger for a scan depending on how triggers were configured. If the group was configured for ELC, GPT, or external hardware triggering then this function allows the trigger signal to get to the ADC unit. The function itself is not able to control the generation of peripheral triggers. If the unit was configured for software triggering, then this function starts the software triggered scan.

Precondition

Call R_ADC_B_ScanCfg after R_ADC_B_Open before starting a scan.
Call R_ADC_B_Calibrate and wait for calibration to complete before starting a scan.

Return values

FSP_SUCCESS	Scan started (software trigger) or hardware triggers enabled.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_INVALID_ARGUMENT	An invalid group has been provided.
FSP_ERR_NOT_OPEN	Unit is not open.
FSP_ERR_NOT_INITIALIZED	Unit not initialized.
FSP_ERR_IN_USE	Another scan is still in progress (software trigger).

◆ R_ADC_B_ScanStop()

fsp_err_t R_ADC_B_ScanStop (adc_ctrl_t * *p_ctrl*)

Disables the hardware trigger for a scan and immediately stops all active converters. This function will abortall active conversions.

Return values

FSP_SUCCESS	All scans stopped.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_INVALID_ARGUMENT	No hardware triggers configured for groups.
FSP_ERR_NOT_OPEN	Unit is not open.
FSP_ERR_NOT_INITIALIZED	Unit not initialized.

◆ R_ADC_B_StatusGet()

fsp_err_t R_ADC_B_StatusGet (adc_ctrl_t * *p_ctrl*, adc_status_t * *p_status*)

Provides the status of any scan process that was started, including scans started by ELC or external triggers and calibration scans on MCUs that support calibration.

Return values

FSP_SUCCESS	Module status stored in the provided pointer p_status
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.

◆ R_ADC_B_Read()

fsp_err_t R_ADC_B_Read (adc_ctrl_t * *p_ctrl*, adc_channel_t const *channel_id*, uint16_t *const *p_data*)

Reads conversion results from a single channel or sensor.

Return values

FSP_SUCCESS	Data read into provided p_data.
FSP_ERR_INVALID_DATA	Accuracy of data cannot be guaranteed.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.
FSP_ERR_NOT_INITIALIZED	Unit not initialized.
FSP_ERR_INVALID_CHANNEL	Invalid channel provided.

◆ R_ADC_B_Read32()

fsp_err_t R_ADC_B_Read32 (adc_ctrl_t * *p_ctrl*, adc_channel_t const *channel_id*, uint32_t *const *p_data*)

Reads conversion results from a single channel or sensor register into a 32-bit result.

Return values

FSP_SUCCESS	Data read into provided p_data.
FSP_ERR_INVALID_DATA	Accuracy of data cannot be guaranteed.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.
FSP_ERR_NOT_INITIALIZED	Unit not initialized.
FSP_ERR_INVALID_CHANNEL	Invalid channel provided.

Returns

See Common Error Codes or functions called by this function for other possible return codes. This function calls:

- adc_api_t::read

◆ R_ADC_B_FifoRead()

fsp_err_t R_ADC_B_FifoRead (adc_ctrl_t * *p_ctrl*, adc_group_mask_t const *group_mask*, adc_b_fifo_read_t *const *p_data*)

Reads conversion results from FIFO for the given group mask.

Return values

FSP_SUCCESS	Data read into provided p_data.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.
FSP_ERR_NOT_INITIALIZED	Unit not initialized.
FSP_ERR_INVALID_ARGUMENT	Invalid group provided.
FSP_ERR_UNDERFLOW	FIFO empty.

◆ R_ADC_B_Close()

fsp_err_t R_ADC_B_Close (adc_ctrl_t * *p_ctrl*)

This function ends any scan in progress, disables interrupts, and removes power to the A/D peripheral.

Return values

FSP_SUCCESS	Module closed.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	Unit is not open.

◆ R_ADC_B_OffsetSet()

fsp_err_t R_ADC_B_OffsetSet (adc_ctrl_t *const *p_ctrl*, adc_channel_t const *reg_id*, int32_t *offset*)

adc_api_t::offsetSet is not supported on the ADC_B.

Return values

FSP_ERR_UNSUPPORTED	Function not supported in this implementation.

◆ R_ADC_B_Calibrate()

fsp_err_t R_ADC_B_Calibrate (adc_ctrl_t *const *p_ctrl*, void const * *p_extend*)

Initiates calibration of the ADC_B. This function must be called before starting a scan and again whenever ADC_B configuration or state is changed.

Parameters

[in]	p_ctrl	Pointer to the instance control structure
[in]	p_extend	Unused argument.

Return values

FSP_SUCCESS	Calibration successfully initiated.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_INVALID_HW_CONDITION	Error occurred during calibration.
FSP_ERR_NOT_OPEN	Unit is not open.

◆ R_ADC_B_CallbackSet()

fsp_err_t R_ADC_B_CallbackSet (adc_ctrl_t *const *p_api_ctrl*, void(*)(adc_callback_args_t *) *p_callback*, void const *const *p_context*, adc_callback_args_t *const *p_callback_memory*)
Updates the user callback and has option of providing memory for callback structure. Implements adc_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

Detailed Description

Driver for the AGT peripheral on RA MCUs. This module implements the Timer Interface.

Overview

Features

The AGT module has the following features:

- Supports periodic mode, one-shot mode, and PWM mode.
- Signal can be output to a pin.
- Configurable period (counts per timer cycle).
- Configurable duty cycle in PWM mode.
- Configurable clock source, including PCLKB, LOCO, SUBCLK, and external sources input to AGTIO.
- Supports runtime reconfiguration of period.
- Supports runtime reconfiguration of duty cycle in PWM mode.
- Supports counting based on an external clock input to AGTIO.
- Supports debounce filter on AGTIO pins.
- Supports measuring pulse width or pulse period.
- APIs are provided to start, stop, and reset the counter.
- APIs are provided to get the current period, source clock frequency, and count direction.
- APIs are provided to get the current timer status and counter value.

Selecting a Timer

RA MCUs have two timer peripherals: the General PWM Timer (GPT) and the Asynchronous General Purpose Timer (AGT). When selecting between them, consider these factors:

	GPT	AGT
Low Power Modes	The GPT can operate in sleep mode.	The AGT can operate in all low power modes (when count source is LOCO or subclock).
Available Channels	The number of GPT channels is device specific. All currently supported MCUs have at least 7 GPT channels.	All MCUs have 2 AGT channels.
Timer Resolution	All MCUs have at least one 32-bit GPT timer.	The AGT timers are 16-bit timers.
Clock Source	The GPT runs off PCLKD with a configurable divider up to 1024. It can also be configured to	The AGT runs off PCLKB, LOCO, or subclock with a configurable divider up to 8 for PCLKB or up

count ELC events or external pulses.	to 128 for LOCO or subclock.

Configuration

Build Time Configurations for r_agt

The following build time configurations are defined in fsp_cfg/r_agt_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Pin Output Support	• Disabled • Enabled	Disabled	If selected code for outputting a waveform to a pin is included in the build.
Pin Input Support	• Disabled • Enabled	Disabled	Enable input support to use pulse width measurement mode, pulse period measurement mode, or input from P402, P402, or AGTIO.

Configurations for Timers > Timer, Low-Power (r_agt)

This module can be added to the Stacks tab via New Stack > Timers > Timer, Low-Power (r_agt). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_timer0	Module name.
General > Channel	Channel number does not exist	0	Physical hardware channel.
General > Mode	• Periodic • One-Shot • PWM	Periodic	Mode selection. Note: One-shot mode is implemented in software. ISR's must be enabled for one shot even if callback is unused.
General > Period	Value must be non-negative	0x10000	Specify the timer period based on the selected unit. When the unit is set to

			'Raw Counts', setting the period to 0x10000 results in the maximum period at the lowest divisor (fastest timer tick). Set the period to 0x10000 for a free running timer, pulse width measurement or pulse period measurement. Setting the period higher will automatically select a higher divider; the period can be set up to 0x80000 when counting from PCLKB or 0x800000 when counting from LOCO/subclock, which will use a divider of 8 or 128 respectively with the maximum period. If the requested period cannot be achieved, the settings with the largest possible period that is less than or equal to the requested period are used. The theoretical calculated period is printed in a comment in the timer_cfg_t structure.
General > Period Unit	• Raw Counts • Nanoseconds • Microseconds • Milliseconds • Seconds • Hertz • Kilohertz	Raw Counts	Unit of the period specified above
General > Count Source	• PCLKB • LOCO • SUBCLOCK • AGT Underflow • P402 Input • P403 Input • AGTIO Input	PCLKB	AGT counter clock source. NOTE: The divisor is calculated automatically based on the selected period. See agt_count_source_t documentation for details.
Output > Duty Cycle Percent (only	Value must be between 0 and 100	50	Specify the timer duty cycle percent. Only

applicable in PWM mode)			used in PWM mode.
Output > AGTOA Output	• Disabled • Start Level Low • Start Level High	Disabled	Configure AGTOA output.
Output > AGTOB Output	• Disabled • Start Level Low • Start Level High	Disabled	Configure AGTOB output.
Output > AGTO Output	• Disabled • Start Level Low • Start Level High	Disabled	Configure AGTO output.
Input > Measurement Mode	• Measure Disabled • Measure Low Level Pulse Width • Measure High Level Pulse Width • Measure Pulse Period	Measure Disabled	Select if the AGT should be used to measure pulse width or pulse period. In high level pulse width measurement mode, the AGT counts when AGTIO is high and starts counting immediately in the middle of a pulse if AGTIO is high when R_AGT_Start() is called. In low level pulse width measurement mode, the AGT counts when AGTIO is low and could start counting in the middle of a pulse if AGTIO is low when R_AGT_Start() is called.
Input > Input Filter	• No Filter • Filter sampled at PCLKB • Filter sampled at PCLKB / 8 • Filter sampled at PCLKB / 32	No Filter	Input filter, applies AGTIO in pulse period measurement, pulse width measurement, or event counter mode. The filter requires the signal to be at the same level for 3 successive reads at the specified filter frequency.
Input > Enable Pin	• Enable Pin Not Used • Enable Pin Active Low • Enable Pin Active High	Enable Pin Not Used	Select active edge for the AGTEE pin if used. Only applies if the count source is P402, P403 or AGTIO.
Input > Trigger Edge	• Trigger Edge Rising	Trigger Edge Rising	Select the trigger edge. Applies if measurement

	• Trigger Edge Falling • Trigger Edge Both		mode is pulse period, or if the count source is P402, P403, or AGTIO. Do not select Trigger Edge Both with pulse period measurement.
Interrupts > Callback	Name must be a valid C symbol	NULL	A user callback function. If this callback function is provided, it is called from the interrupt service routine (ISR) each time the timer period elapses.
Interrupts > Underflow Interrupt Priority	MCU Specific Options		Timer interrupt priority.

Clock Configuration

The AGT clock is based on the PCLKB, LOCO, or Subclock frequency. You can set the clock frequency using the **Clocks** tab of the RA Configuration editor or by using the CGC Interface at run-time.

Pin Configuration

This module can use the AGTOA and AGTOB pins as output pins for periodic, one-shot, or PWM signals.

For input capture, the input signal must be applied to the AGTIOn pin.

For event counting, the AGTEEn enable pin is optional.

Timer Period

The RA Configuration editor will automatically calculate the period count value and source clock divider based on the selected period time, units, and clock speed.

When the selected unit is "Raw counts", the maximum allowed period setting varies depending on the selected clock source:

Clock source	Maximum period (counts)
LOCO/Subclock	0x800000
PCLKB	0x80000
All other sources	0x10000

Note

Though the AGT is a 16-bit timer, because the period interrupt occurs when the counter underflows, setting the period register to 0 results in an effective period of 1 count. For this reason all user-provided raw count values reflect the actual number of period counts (not the raw register values).

Usage Notes

Starting and Stopping the AGT

After starting or stopping the timer, AGT registers cannot be accessed until the AGT state is updated after 3 AGTCLK cycles. If another AGT function is called before the 3 AGTCLK period elapses, the function spins waiting for the AGT state to update. The required wait time after starting or stopping the timer can be determined using the frequency of AGTCLK, which is derived from timer_cfg_t::source_div and agt_extended_cfg_t::count_source.

The application is responsible for ensuring required clocks are started and stable before accessing MCU peripheral registers.

Warning

The subclock can take seconds to stabilize. The RA startup code does not wait for subclock stabilization unless the subclock is the main clock source. When running AGT or RTC off the subclock, the application must ensure the subclock is stable before starting operation.

Low Power Modes

The AGT1 (channel 1 only) can be used to enter snooze mode or to wake the MCU from snooze, software standby, or deep software standby modes when a counter underflow occurs. The compare match A and B events can also be used to wake from software standby or snooze modes.

One-Shot Mode

The AGT timer does not support one-shot mode natively. One-shot mode is achieved by stopping the timer in the interrupt service routine before the callback is called. If the interrupt is not serviced before the timer period expires again, the timer generates more than one event. The callback is only called once in this case, but multiple events may be generated if the timer is linked to the Data Transfer Controller (r_dtc).

One-Shot Mode Output

The output waveform in one-shot mode is one AGT clock cycle less than the configured period. The configured period must be at least 2 counts to generate an output pulse.

Examples of one-shot signals that can be generated by this module are shown below:

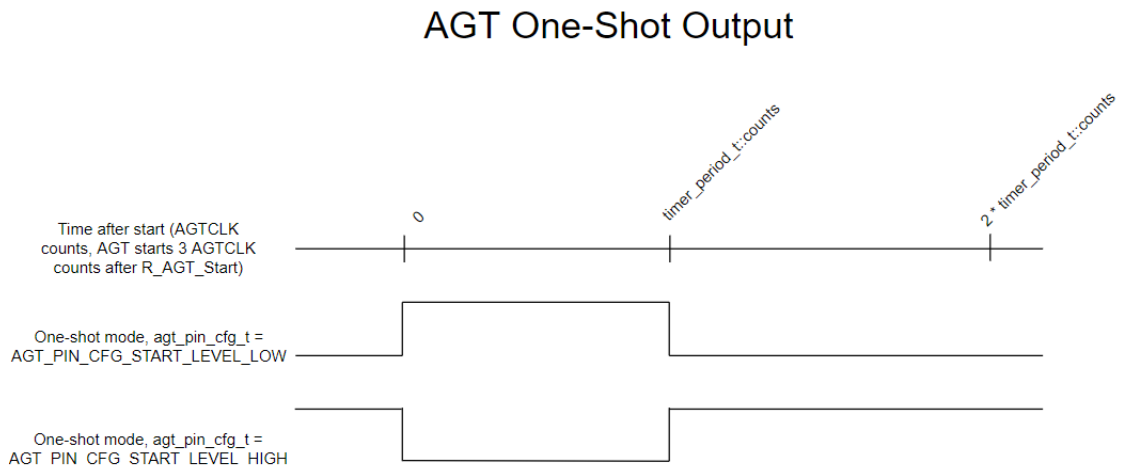

Figure 144: AGT One-Shot Output

Periodic Output

The AGTOA or AGTOB pin toggles twice each time the timer expires in periodic mode. This is achieved by defining a PWM wave at a 50 percent duty cycle so that the period of the resulting square (from rising edge to rising edge) matches the period of the AGT timer. Since the periodic output is actually a PWM output, the time at the stop level is one cycle shorter than the time opposite the stop level for odd period values.

Examples of periodic signals that can be generated by this module are shown below:

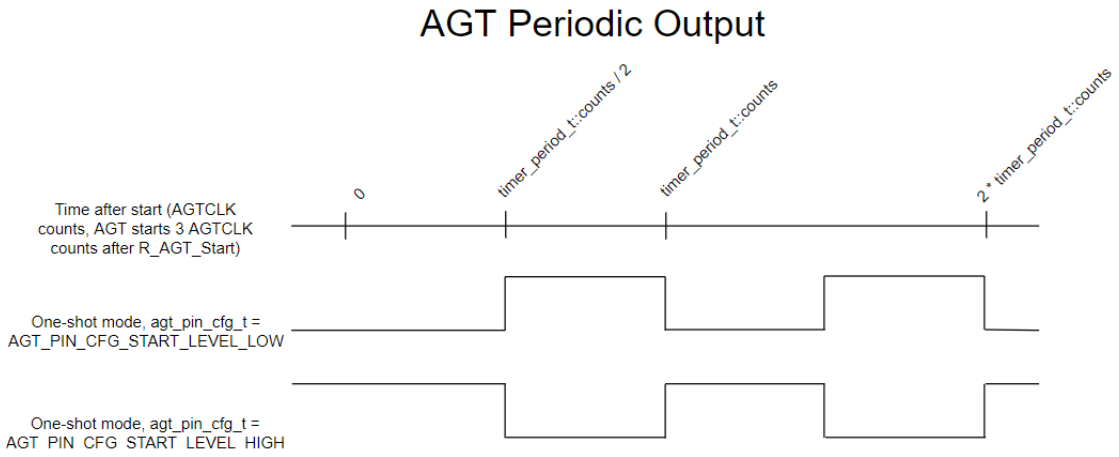

Figure 145: AGT Periodic Output

PWM Output

This module does not support in phase PWM output. The PWM output signal is low at the beginning of the cycle and high at the end of the cycle.

Examples of PWM signals that can be generated by this module are shown below:

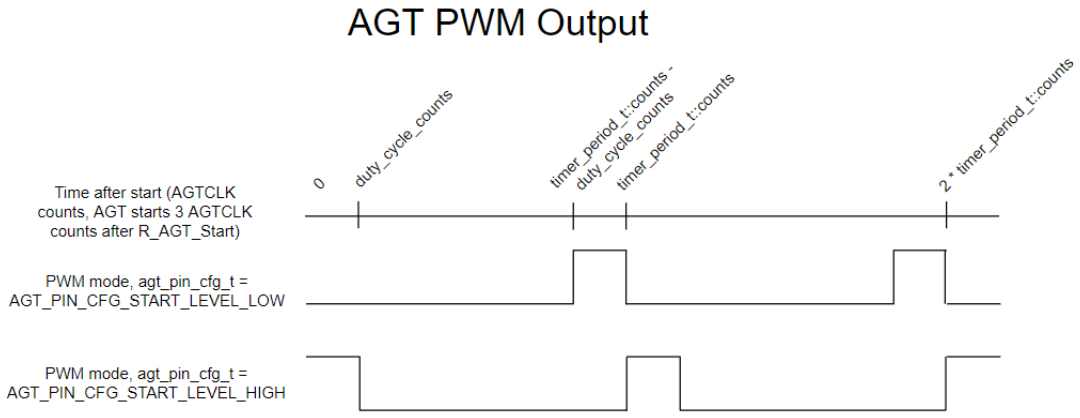

Figure 146: AGT PWM Output

Triggering ELC Events with AGT

The AGT timer can trigger the start of other peripherals. The Event Link Controller (r_elc) guide provides a list of all available peripherals.

Examples

AGT Basic Example

This is a basic example of minimal use of the AGT in an application.

```
void agt_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = R_AGT_Open(&g_timer0_ctrl, &g_timer0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Start the timer. */
    (void) R_AGT_Start(&g_timer0_ctrl);
}
```

AGT Callback Example

This is an example of a timer callback.

```
/* Example callback called when timer expires. */
void timer_callback (timer_callback_args_t * p_args)
{
 if (TIMER_EVENT_CYCLE_END == p_args->event)
    {
 /* Add application code to be called periodically here. */
    }
}
```

AGT Free Running Counter Example

To use the AGT as a free running counter, select periodic mode and set the the Period to 0xFFFF.

```
void agt_counter_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
```

```
 /* Initializes the module. */
    err = R_AGT_Open(&g_timer0_ctrl, &g_timer0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Start the timer. */
    (void) R_AGT_Start(&g_timer0_ctrl);
 /* (Optional) Stop the timer. */
    (void) R_AGT_Stop(&g_timer0_ctrl);
 /* Read the current counter value. Counter value is in status.counter. */
 timer_status_t status;
    (void) R_AGT_StatusGet(&g_timer0_ctrl, &status);
}
```

AGT Input Capture Example

This is an example of using the AGT to capture pulse width or pulse period measurements.

```
/* Example callback called when a capture occurs. */
uint64_t g_captured_time    = 0U;
uint32_t g_capture_overflows = 0U;
void timer_capture_callback (timer_callback_args_t * p_args)
{
 if (TIMER_EVENT_CAPTURE_A == p_args->event)
    {
 /* (Optional) Get the current period if not known. */
 timer_info_t info;
       (void) R_AGT_InfoGet(&g_timer0_ctrl, &info);
       uint32_t period = info.period_counts;
 /* Process capture from AGTIO. */
       g_captured_time    = ((uint64_t) period * g_capture_overflows) +
p_args->capture;
       g_capture_overflows = 0U;
    }
 if (TIMER_EVENT_CYCLE_END == p_args->event)
    {
```

```
 /* An overflow occurred during capture. This must be accounted for at the
application layer. */
       g_capture_overflows++;
    }
}
void agt_capture_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = R_AGT_Open(&g_timer0_ctrl, &g_timer0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Enable captures. Captured values arrive in the interrupt. */
    (void) R_AGT_Enable(&g_timer0_ctrl);
 /* (Optional) Disable captures. */
    (void) R_AGT_Disable(&g_timer0_ctrl);
}
```

AGT Period Update Example

This an example of updating the period.

```
#define AGT_EXAMPLE_MSEC_PER_SEC (1000)
#define AGT_EXAMPLE_DESIRED_PERIOD_MSEC (20)
/* This example shows how to calculate a new period value at runtime. */
void agt_period_calculation_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = R_AGT_Open(&g_timer0_ctrl, &g_timer0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Start the timer. */
    (void) R_AGT_Start(&g_timer0_ctrl);
 /* Get the source clock frequency (in Hz). There are several ways to do this in FSP:
```

```
  * - If LOCO or subclock is chosen in agt_extended_cfg_t::clock_source
  * - The source clock frequency is BSP_LOCO_HZ >> timer_cfg_t::source_div
  * - If PCLKB is chosen in agt_extended_cfg_t::clock_source and the PCLKB frequency
has not changed since reset,
  * - The source clock frequency is BSP_STARTUP_PCLKB_HZ >> timer_cfg_t::source_div
  * - Use the R_AGT_InfoGet function (it accounts for the clock source and divider).
  * - Calculate the current PCLKB frequency using
R_FSP_SystemClockHzGet(FSP_PRIV_CLOCK_PCLKB) and right shift
  * by timer_cfg_t::source_div.
  *
  * This example uses the last option (R_FSP_SystemClockHzGet).
  */
    uint32_t timer_freq_hz = R_FSP_SystemClockHzGet(FSP_PRIV_CLOCK_PCLKB) >>
g_timer0_cfg.source_div;
 /* Calculate the desired period based on the current clock. Note that this
calculation could overflow if the
  * desired period is larger than UINT32_MAX / pclkb_freq_hz. A cast to uint64_t is
used to prevent this. */
    uint32_t period_counts =
       (uint32_t) (((uint64_t) timer_freq_hz * AGT_EXAMPLE_DESIRED_PERIOD_MSEC) /
AGT_EXAMPLE_MSEC_PER_SEC);
 /* Set the calculated period. This will return an error if parameter checking is
enabled and the calculated
  * period is larger than UINT16_MAX. */
    err = R_AGT_PeriodSet(&g_timer0_ctrl, period_counts);
    assert(FSP_SUCCESS == err);
}
```

AGT Duty Cycle Update Example

This an example of updating the duty cycle.

```
#define AGT_EXAMPLE_DESIRED_DUTY_CYCLE_PERCENT (25)
#define AGT_EXAMPLE_MAX_PERCENT (100)
/* This example shows how to calculate a new duty cycle value at runtime. */
```

```
void agt_duty_cycle_calculation_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = R_AGT_Open(&g_timer0_ctrl, &g_timer0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Start the timer. */
    (void) R_AGT_Start(&g_timer0_ctrl);
 /* Get the current period setting. */
 timer_info_t info;
    (void) R_AGT_InfoGet(&g_timer0_ctrl, &info);
    uint32_t current_period_counts = info.period_counts;
 /* Calculate the desired duty cycle based on the current period. */
    uint32_t duty_cycle_counts = (current_period_counts *
AGT_EXAMPLE_DESIRED_DUTY_CYCLE_PERCENT) /
                                 AGT_EXAMPLE_MAX_PERCENT;
 /* Set the calculated duty cycle. */
    err = R_AGT_DutyCycleSet(&g_timer0_ctrl, duty_cycle_counts, AGT_OUTPUT_PIN_AGTOA
);
    assert(FSP_SUCCESS == err);
}
```

AGT Cascaded Timers Example

This an example of using underflow from an even AGT channel as the count source for the next channel (in this case, AGT0 and AGT1).

```
/* This example shows how use cascaded timers. The count source for AGT channel 1 is
set to AGT0 underflow. */
void agt_cascaded_timers_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initialize the timers in any order. */
    err = R_AGT_Open(&g_timer_channel0_ctrl, &g_timer_channel0_cfg);
```

```
    assert(FSP_SUCCESS == err);
    err = R_AGT_Open(&g_timer_channel1_ctrl, &g_timer_channel1_cfg);
    assert(FSP_SUCCESS == err);
/* Start AGT channel 1 first. */
    (void) R_AGT_Start(&g_timer_channel1_ctrl);
    (void) R_AGT_Start(&g_timer_channel0_ctrl);
/* (Optional) Stop AGT channel 0 first. */
    (void) R_AGT_Stop(&g_timer_channel0_ctrl);
    (void) R_AGT_Stop(&g_timer_channel1_ctrl);
/* Read the current counter value. Counter value is in status.counter. */
timer_status_t status;
    (void) R_AGT_StatusGet(&g_timer_channel1_ctrl, &status);
}
```

Data Structures

struct	agt_instance_ctrl_t
struct	agt_extended_cfg_t

Enumerations

enum	agt_clock_t
enum	agt_measure_t
enum	agt_agtio_filter_t
enum	agt_enable_pin_t
enum	agt_trigger_edge_t
enum	agt_output_pin_t
enum	agt_pin_cfg_t

Data Structure Documentation

◆ agt_instance_ctrl_t

struct agt_instance_ctrl_t
Channel control block. DO NOT INITIALIZE. Initialization occurs when timer_api_t::open is called.

◆ agt_extended_cfg_t

struct agt_extended_cfg_t		
Optional AGT extension data structure.		
Data Fields		
agt_clock_t	count_source	AGT channel clock source. Valid values are: AGT_CLOCK_PCLKB, AGT_CLOCK_LOCO, AGT_CLOCK_FSUB.
union agt_extended_cfg_t	__unnamed__	
agt_pin_cfg_t	agto: 3	Configure AGTO pin. *Note* *AGTIO polarity is opposite AGTO*
agt_measure_t	measurement_mode	Measurement mode.
agt_agtio_filter_t	agtio_filter	Input filter for AGTIO.
agt_enable_pin_t	enable_pin	Enable pin (event counting only)
agt_trigger_edge_t	trigger_edge	Trigger edge to start pulse period measurement or count external event.

Enumeration Type Documentation

◆ agt_clock_t

enum agt_clock_t	
Count source	
Enumerator	
AGT_CLOCK_PCLKB	PCLKB count source, division by 1, 2, or 8 allowed.
AGT_CLOCK_LOCO	LOCO count source, division by 1, 2, 4, 8, 16, 32, 64, or 128 allowed.
AGT_CLOCK_AGT_UNDERFLOW	Underflow event signal from next lowest AGT channel, division must be 1.
AGT_CLOCK_SUBCLOCK	Subclock count source, division by 1, 2, 4, 8, 16, 32, 64, or 128 allowed.
AGT_CLOCK_P402	Counts events on P402, events are counted in deep software standby mode.
AGT_CLOCK_P403	Counts events on P403, events are counted in deep software standby mode.
AGT_CLOCK_AGTIO	Counts events on AGTIOn, events are not counted in software standby modes.

◆ agt_measure_t

enum agt_measure_t	
Enable pin for event counting mode.	
Enumerator	
AGT_MEASURE_DISABLED	AGT used as a counter.
AGT_MEASURE_PULSE_WIDTH_LOW_LEVEL	AGT used to measure low level pulse width.
AGT_MEASURE_PULSE_WIDTH_HIGH_LEVEL	AGT used to measure high level pulse width.
AGT_MEASURE_PULSE_PERIOD	AGT used to measure pulse period.

◆ agt_agtio_filter_t

enum agt_agtio_filter_t	
Input filter, applies AGTIO in pulse period measurement, pulse width measurement, or event counter mode. The filter requires the signal to be at the same level for 3 successive reads at the specified filter frequency.	
Enumerator	
AGT_AGTIO_FILTER_NONE	No filter.
AGT_AGTIO_FILTER_PCLKB	Filter at PCLKB.
AGT_AGTIO_FILTER_PCLKB_DIV_8	Filter at PCLKB / 8.
AGT_AGTIO_FILTER_PCLKB_DIV_32	Filter at PCLKB / 32.

◆ agt_enable_pin_t

enum agt_enable_pin_t	
Enable pin for event counting mode.	
Enumerator	
AGT_ENABLE_PIN_NOT_USED	AGTEE/AGTWEE is not used.
AGT_ENABLE_PIN_ACTIVE_LOW	Events are only counted when AGTEE/AGTWEE is low.
AGT_ENABLE_PIN_ACTIVE_HIGH	Events are only counted when AGTEE/AGTWEE is high.

◆ agt_trigger_edge_t

enum agt_trigger_edge_t	
Trigger edge for pulse period measurement mode and event counting mode.	
Enumerator	
AGT_TRIGGER_EDGE_RISING	Measurement starts or events are counted on rising edge.
AGT_TRIGGER_EDGE_FALLING	Measurement starts or events are counted on falling edge.
AGT_TRIGGER_EDGE_BOTH	Events are counted on both edges (n/a for pulse period mode)

◆ agt_output_pin_t

enum agt_output_pin_t	
Output pins, used to select which duty cycle to update in R_AGT_DutyCycleSet().	
Enumerator	
AGT_OUTPUT_PIN_AGTOA	AGTOA.
AGT_OUTPUT_PIN_AGTOB	AGTOB.

◆ agt_pin_cfg_t

enum agt_pin_cfg_t	
Level of AGT pin	
Enumerator	
AGT_PIN_CFG_DISABLED	Not used as output pin.
AGT_PIN_CFG_START_LEVEL_LOW	Pin level low.
AGT_PIN_CFG_START_LEVEL_HIGH	Pin level high.

Function Documentation

◆ R_AGT_Close()

fsp_err_t R_AGT_Close (timer_ctrl_t *const *p_ctrl*)

Stops counter, disables interrupts, disables output pins, and clears internal driver data. Implements timer_api_t::close.

Return values

FSP_SUCCESS	Timer closed.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	The instance control structure is not opened.

◆ R_AGT_PeriodSet()

fsp_err_t R_AGT_PeriodSet (timer_ctrl_t *const *p_ctrl*, uint32_t const *period_counts*)

Updates period. The new period is updated immediately and the counter is reset to the maximum value. Implements timer_api_t::periodSet.

Warning

If periodic output is used, the duty cycle buffer registers are updated after the period buffer register. If this function is called while the timer is running and an AGT underflow occurs during processing, the duty cycle will not be the desired 50% duty cycle until the counter underflow after processing completes.
Stop the timer before calling this function if one-shot output is used.

Example:

```
 /* Get the source clock frequency (in Hz). There are several ways to do this in FSP:
  * - If LOCO or subclock is chosen in agt_extended_cfg_t::clock_source
  * - The source clock frequency is BSP_LOCO_HZ >> timer_cfg_t::source_div
  * - If PCLKB is chosen in agt_extended_cfg_t::clock_source and the PCLKB frequency
has not changed since reset,
  * - The source clock frequency is BSP_STARTUP_PCLKB_HZ >> timer_cfg_t::source_div
  * - Use the R_AGT_InfoGet function (it accounts for the clock source and divider).
  * - Calculate the current PCLKB frequency using
R_FSP_SystemClockHzGet(FSP_PRIV_CLOCK_PCLKB) and right shift
  * by timer_cfg_t::source_div.
  *
  * This example uses the last option (R_FSP_SystemClockHzGet).
  */
    uint32_t timer_freq_hz = R_FSP_SystemClockHzGet(FSP_PRIV_CLOCK_PCLKB) >>
```

```
g_timer0_cfg.source_div;
 /* Calculate the desired period based on the current clock. Note that this
calculation could overflow if the
  * desired period is larger than UINT32_MAX / pclkb_freq_hz. A cast to uint64_t is
used to prevent this. */
    uint32_t period_counts =
       (uint32_t) (((uint64_t) timer_freq_hz * AGT_EXAMPLE_DESIRED_PERIOD_MSEC) /
AGT_EXAMPLE_MSEC_PER_SEC);
 /* Set the calculated period. This will return an error if parameter checking is
enabled and the calculated
  * period is larger than UINT16_MAX. */
    err = R_AGT_PeriodSet(&g_timer0_ctrl, period_counts);
    assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Period value updated.
FSP_ERR_ASSERTION	A required pointer was NULL, or the period was not in the valid range of 1 to 0xFFFF.
FSP_ERR_NOT_OPEN	The instance control structure is not opened.

◆ R_AGT_DutyCycleSet()

fsp_err_t R_AGT_DutyCycleSet (timer_ctrl_t *const *p_ctrl*, uint32_t const *duty_cycle_counts*, uint32_t const *pin*)

Updates duty cycle. If the timer is counting, the new duty cycle is reflected after the next counter underflow. Implements timer_api_t::dutyCycleSet.

Example:

```
/* Get the current period setting. */
timer_info_t info;
   (void) R_AGT_InfoGet(&g_timer0_ctrl, &info);
   uint32_t current_period_counts = info.period_counts;
/* Calculate the desired duty cycle based on the current period. */
   uint32_t duty_cycle_counts = (current_period_counts *
AGT_EXAMPLE_DESIRED_DUTY_CYCLE_PERCENT) /
                                AGT_EXAMPLE_MAX_PERCENT;
/* Set the calculated duty cycle. */
   err = R_AGT_DutyCycleSet(&g_timer0_ctrl, duty_cycle_counts, AGT_OUTPUT_PIN_AGTOA
);
   assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Duty cycle updated.
FSP_ERR_ASSERTION	A required pointer was NULL, or the pin was not AGT_AGTO_AGTOA or AGT_AGTO_AGTOB.
FSP_ERR_INVALID_ARGUMENT	Duty cycle was not in the valid range of 0 to period (counts) - 1
FSP_ERR_NOT_OPEN	The instance control structure is not opened.
FSP_ERR_UNSUPPORTED	AGT_CFG_OUTPUT_SUPPORT_ENABLE is 0.

◆ R_AGT_Reset()

fsp_err_t R_AGT_Reset (timer_ctrl_t *const *p_ctrl*)

Resets the counter value to the period minus one. Implements timer_api_t::reset.

Return values

FSP_SUCCESS	Counter reset.
FSP_ERR_ASSERTION	p_ctrl is NULL
FSP_ERR_NOT_OPEN	The instance control structure is not opened.

◆ R_AGT_Start()

fsp_err_t R_AGT_Start (timer_ctrl_t *const *p_ctrl*)

Starts timer. Implements timer_api_t::start.

Example:

```
/* Start the timer. */
   (void) R_AGT_Start(&g_timer0_ctrl);
```

Return values

FSP_SUCCESS	Timer started.
FSP_ERR_ASSERTION	p_ctrl is null.
FSP_ERR_NOT_OPEN	The instance control structure is not opened.

◆ R_AGT_Enable()

fsp_err_t R_AGT_Enable (timer_ctrl_t *const *p_ctrl*)

Enables external event triggers that start, stop, clear, or capture the counter. Implements timer_api_t::enable.

Example:

```
/* Enable captures. Captured values arrive in the interrupt. */
   (void) R_AGT_Enable(&g_timer0_ctrl);
```

Return values

FSP_SUCCESS	External events successfully enabled.
FSP_ERR_ASSERTION	p_ctrl was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

◆ R_AGT_Disable()

fsp_err_t R_AGT_Disable (timer_ctrl_t *const *p_ctrl*)

Disables external event triggers that start, stop, clear, or capture the counter. Implements timer_api_t::disable.

Example:

```
/* (Optional) Disable captures. */
   (void) R_AGT_Disable(&g_timer0_ctrl);
```

Return values

FSP_SUCCESS	External events successfully disabled.
FSP_ERR_ASSERTION	p_ctrl was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

◆ R_AGT_InfoGet()

fsp_err_t R_AGT_InfoGet (timer_ctrl_t *const *p_ctrl*, timer_info_t *const *p_info*)

Gets timer information and store it in provided pointer p_info. Implements timer_api_t::infoGet.

Example:

```
/* (Optional) Get the current period if not known. */
timer_info_t info;
      (void) R_AGT_InfoGet(&g_timer0_ctrl, &info);
      uint32_t period = info.period_counts;
```

Return values

FSP_SUCCESS	Period, count direction, and frequency stored in p_info.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The instance control structure is not opened.

◆ R_AGT_StatusGet()

fsp_err_t R_AGT_StatusGet (timer_ctrl_t *const *p_ctrl*, timer_status_t *const *p_status*)

Retrieves the current state and counter value stores them in p_status. Implements timer_api_t::statusGet.

Example:

```
/* Read the current counter value. Counter value is in status.counter. */
timer_status_t status;
   (void) R_AGT_StatusGet(&g_timer0_ctrl, &status);
```

Return values

FSP_SUCCESS	Current status and counter value provided in p_status.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The instance control structure is not opened.

◆ R_AGT_Stop()

fsp_err_t R_AGT_Stop (timer_ctrl_t *const *p_ctrl*)

Stops the timer. Implements timer_api_t::stop.

Example:

```
/* (Optional) Stop the timer. */
   (void) R_AGT_Stop(&g_timer0_ctrl);
```

Return values

FSP_SUCCESS	Timer stopped.
FSP_ERR_ASSERTION	p_ctrl was NULL.
FSP_ERR_NOT_OPEN	The instance control structure is not opened.

◆ R_AGT_Open()

fsp_err_t R_AGT_Open (timer_ctrl_t *const *p_ctrl*, timer_cfg_t const *const *p_cfg*)

Initializes the AGT module instance. Implements timer_api_t::open.

The AGT hardware does not support one-shot functionality natively. The one-shot feature is therefore implemented in the AGT HAL layer. For a timer configured as a one-shot timer, the timer is stopped upon the first timer expiration.

The AGT implementation of the general timer can accept an optional agt_extended_cfg_t extension parameter. For AGT, the extension specifies the clock to be used as timer source and the output pin configurations. If the extension parameter is not specified (NULL), the default clock PCLKB is used and the output pins are disabled.

Example:

```
/* Initializes the module. */
   err = R_AGT_Open(&g_timer0_ctrl, &g_timer0_cfg);
```

Return values

FSP_SUCCESS	Initialization was successful and timer has started.
FSP_ERR_ASSERTION	A required input pointer is NULL or the period is not in the valid range of 1 to 0xFFFF.
FSP_ERR_ALREADY_OPEN	R_AGT_Open has already been called for this p_ctrl.
FSP_ERR_IRQ_BSP_DISABLED	A required interrupt has not been enabled in the vector table.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	Requested channel number is not available on AGT.

◆ R_AGT_CallbackSet()

fsp_err_t R_AGT_CallbackSet (timer_ctrl_t *const *p_api_ctrl*, void(*)(timer_callback_args_t *) *p_callback*, void const *const *p_context*, timer_callback_args_t *const *p_callback_memory*)
Updates the user callback with the option to provide memory for the callback argument structure. Implements timer_api_t::callbackSet. **Return values** FSP_SUCCESS — Callback updated successfully. FSP_ERR_ASSERTION — A required pointer is NULL. FSP_ERR_NOT_OPEN — The control block has not been opened. FSP_ERR_NO_CALLBACK_MEMORY — p_callback is non-secure and p_callback_memory is either secure or NULL.

4.2.7 Bluetooth Low Energy Library of Balance Configuration (r_ble)

Modules

Driver for the Radio peripheral on RA MCUs. This module implements the BLE Interface.

Overview

The bluetooth low energy library of balance configuration (r_ble) provides an API to control the Radio peripheral. This module is configured via the QE for BLE. QE for BLE provides standard services defined by standardization organization and custom services defined by user. Bluetooth LE Profile API Document User's Manual describes the APIs for standard services.

Features

- Common
  - Open/Close the BLE protocol stack.
  - Execute the BLE job.
  - Add an event in the BLE protocol stack internal queue.
- GAP
  - Initialization of the Host stack.
  - Start/Stop Advertising.
  - Start/Stop Scan.
  - Connect/Disconnect a link.
  - Initiate/Respond a pairing request.
- GATT Common
  - Get MTU size.
- GATT Server
  - Initialization of GATT Server.

    - Notification/Indication.
- GATT Client
    - Discovery services, characteristics.
    - Read/Write characteristic.
- Vendor Specific
    - DTM.
    - Set/Get transmit power.
    - Set/Get BD_ADDR.

Supported functions

The supported functions are listed in the table below. Choose the configuration that best suits the functions that target system requires.

BLE library feature	Extended	Balance	Compact
Common API	Supported	**Supported**	Supported
GAP API	Supported	***1 Limited**	*1 *2 Limited
GATT Common API	Supported	**Supported**	Supported
GATT Client API	Supported	**Supported**	Supported
GATT Client API	Supported	**Supported**	Supported
L2CAP API	Supported	**Not Supported**	Not supported
Vendor Specific API	Supported	**Supported**	Supported

Note

1. This configuration dose not support LE Advertising Extensions functionality APIs.
2. This configuration dose not support Central and Observer functionality APIs.

Target Devices

The Renesas Bluetooth Low Energy Library supports the following devices.

- RA4W1

Configuration

Clock Configuration

Note

System clock (ICLK): 8 MHz or more
Peripheral module clock A (PCLKA): 8MHz or more
The BLE Protocol Stack is optimized for ICLK and PCLKA frequencies of 32 MHz.
It is recommended that the clock be set so that the ICLK and PCLKA frequencies are 32MHz in order to get the best performance from the BLE.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Figure shows the software structure of the BLE FSP module.

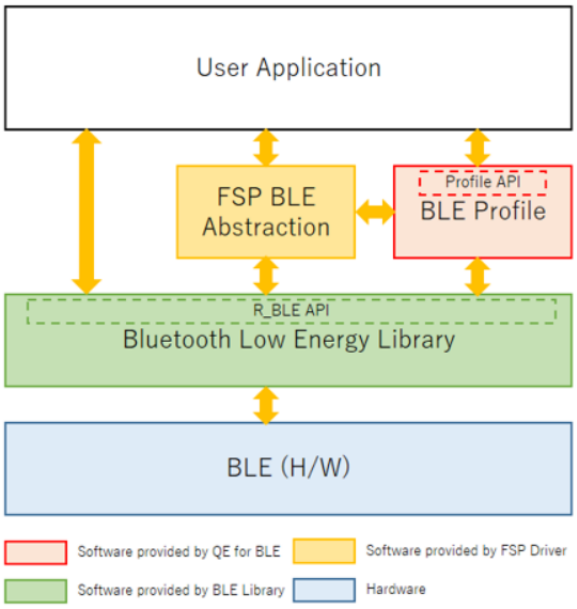

Figure 147: BLE software structure

The BLE FSP module consists of the BLE library.
The BLE Application uses the BLE functions via the R_BLE API provided by the BLE Library.
The QE for BLE generates the source codes (BLE base skeleton program) as a base for the BLE Application and the BLE Profile codes including the Profile API.

Limitations

Developers should be aware of the following limitations when using the ble:

- This configuration not supports LE Advertising Extensions functionality APIs. If those functionality needs your system, select Bluetooth Low Energy Library of Extended Configuration (r_ble) configration.
- This configuration dose not supports L2CAP functionality APIs. If those functionality needs your system, select Bluetooth Low Energy Library of Extended Configuration (r_ble) configration.

4.2.8 Bluetooth Low Energy Library of Compact Configuration (r_ble)

Modules

Driver for the Radio peripheral on RA MCUs. This module implements the BLE Interface.

Overview

The bluetooth low energy library of compact configuration (r_ble) provides an API to control the

Radio peripheral. This module is configured via the QE for BLE. QE for BLE provides standard services defined by standardization organization and custom services defined by user. Bluetooth LE Profile API Document User's Manual describes the APIs for standard services.

Features

- Common
  - Open/Close the BLE protocol stack.
  - Execute the BLE job.
  - Add an event in the BLE protocol stack internal queue.
- GAP
  - Initialization of the Host stack.
  - Start/Stop Advertising.
  - Initiate/Respond a pairing request.
- GATT Common
  - Get MTU size.
- GATT Server
  - Initialization of GATT Server.
  - Notification/Indication.
- GATT Client
  - Discovery services, characteristics.
  - Read/Write characteristic.
- Vendor Specific
  - DTM.
  - Set/Get transmit power.
  - Set/Get BD_ADDR.

Supported functions

The supported functions are listed in the table below. Choose the configuration that best suits the functions that target system requires.

BLE library feature	Extended	Balance	Compact
Common API	Supported	Supported	**Supported**
GATT Common API	Supported	*1 Limited	***1 *2 Limited**
GATT Common API	Supported	Supported	**Supported**
GATT Server API	Supported	Supported	**Supported**
GATT Client API	Supported	Supported	**Supported**
L2CAP API	Supported	Not supported	**Not supported**
Vendor Specific API	Supported	Supported	**Supported**

Note

1. *This configuration dose not support LE Advertising Extensions functionality APIs.*
2. *This configuration dose not support Central and Observer functionality APIs.*

Target Devices

The Renesas Bluetooth Low Energy Library supports the following devices.

- RA4W1

Configuration

Clock Configuration

Note

System clock (ICLK): 8 MHz or more
Peripheral module clock A (PCLKA): 8MHz or more
The BLE Protocol Stack is optimized for ICLK and PCLKA frequencies of 32 MHz.
It is recommended that the clock be set so that the ICLK and PCLKA frequencies are 32MHz in order to get the best performance from the BLE.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Figure shows the software structure of the BLE FSP module.

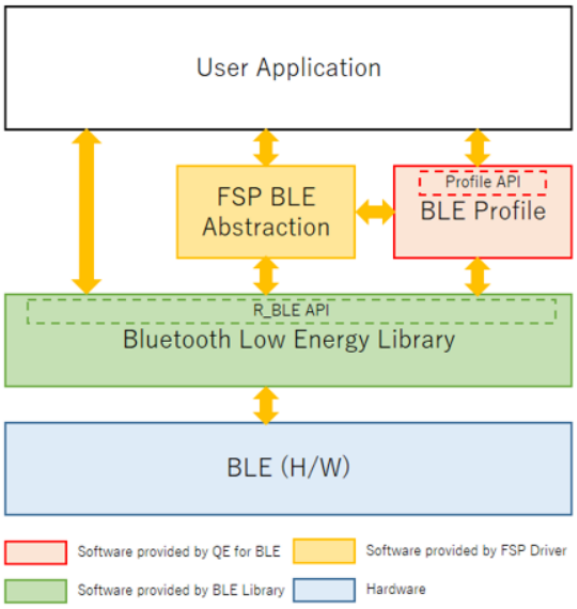

Figure 148: BLE software structure

The BLE FSP module consists of the BLE library.
The BLE Application uses the BLE functions via the R_BLE API provided by the BLE Library.
The QE for BLE generates the source codes (BLE base skeleton program) as a base for the BLE Application and the BLE Profile codes including the Profile API.

Limitations

Developers should be aware of the following limitations when using the ble:

- This configuration dose not supports LE Advertising Extensions functionality APIs. If those functionality needs your system, select Bluetooth Low Energy Library of Extended Configuration (r_ble) configration.

- This configuration dose not supports Central and Observer functionality APIs. If those functionality needs your system, select Bluetooth Low Energy Library of Extended Configuration (r_ble) or Bluetooth Low Energy Library of Balance Configuration (r_ble) configration.
- This configuration dose not supports L2CAP functionality APIs. If those functionality needs your system, select Bluetooth Low Energy Library of Extended Configuration (r_ble) configration.

4.2.9 Bluetooth Low Energy Library of Extended Configuration (r_ble)

Modules

Driver for the Radio peripheral on RA MCUs. This module implements the BLE Interface.

Overview

The bluetooth low energy library of extended configuration (r_ble) provides an API to control the Radio peripheral. This module is configured via the QE for BLE. QE for BLE provides standard services defined by standardization organization and custom services defined by user. Bluetooth LE Profile API Document User's Manual describes the APIs for standard services.

Features

- Common
  - Open/Close the BLE protocol stack.
  - Execute the BLE job.
  - Add an event in the BLE protocol stack internal queue.
- GAP
  - Initialization of the Host stack.
  - Start/Stop Advertising (Support LE Advertising Extensions).
  - Start/Stop Scan.
  - Connect/Disconnect a link.
  - Initiate/Respond a pairing request.
- GATT Common
  - Get MTU size.
- GATT Server
  - Initialization of GATT Server.
  - Notification/Indication.
- GATT Client
  - Discovery services, characteristics.
  - Read/Write characteristic.
- L2CAP
  - Credit-based flow control transaction.
- Vendor Specific
  - DTM.
  - Set/Get transmit power.
  - Set/Get BD_ADDR.

Supported functions

The supported functions are listed in the table below. Choose the configuration that best suits the functions that target system requires.

BLE library feature	Extended	Balance	Compact
Common API	**Supported**	Supported	Supported
GAP API	**Supported**	*1 Limited	*1 *2 Limited
GATT Common API	**Supported**	Supported	Supported
GATT Server API	**Supported**	Supported	Supported
GATT Client API	**Supported**	Supported	Supported
L2CAP API	**Supported**	Not supported	Not supported
Vendor Specific API	**Supported**	Supported	Supported

Note

1. This configuration dose not support LE Advertising Extensions functionality APIs.
2. This configuration dose not support Central and Observer functionality APIs.

Target Devices

The Renesas Bluetooth Low Energy Library supports the following devices.

- RA4W1

Configuration

Clock Configuration

Note

System clock (ICLK): 8 MHz or more
Peripheral module clock A (PCLKA): 8MHz or more
The BLE Protocol Stack is optimized for ICLK and PCLKA frequencies of 32 MHz.
It is recommended that the clock be set so that the ICLK and PCLKA frequencies are 32MHz in order to get the best performance from the BLE.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Figure shows the software structure of the BLE FSP module.

The BLE FSP module consists of the BLE library.
The BLE Application uses the BLE functions via the R_BLE API provided by the BLE Library.
The QE for BLE generates the source codes (BLE base skeleton program) as a base for the BLE Application and the BLE Profile codes including the Profile API.

Limitations

Developers should be aware of the following limitations when using the ble:

4.2.10 Clock Frequency Accuracy Measurement Circuit (r_cac)

Modules

Functions

fsp_err_t	R_CAC_Open (cac_ctrl_t *const p_ctrl, cac_cfg_t const *const p_cfg)
fsp_err_t	R_CAC_StartMeasurement (cac_ctrl_t *const p_ctrl)
fsp_err_t	R_CAC_StopMeasurement (cac_ctrl_t *const p_ctrl)
fsp_err_t	R_CAC_Read (cac_ctrl_t *const p_ctrl, uint16_t *const p_counter)
fsp_err_t	R_CAC_Close (cac_ctrl_t *const p_ctrl)
fsp_err_t	R_CAC_CallbackSet (cac_ctrl_t *const p_ctrl, void(*p_callback)(cac_callback_args_t *), void const *const p_context, cac_callback_args_t *const p_callback_memory)

Detailed Description

Driver for the CAC peripheral on RA MCUs. This module implements the CAC Interface.

Overview

The interface for the clock frequency accuracy measurement circuit (CAC) peripheral is used to check a system clock frequency with a reference clock signal by counting the number of measurement clock edges that occur between two edges of the reference clock.

Features

- Supports clock frequency-measurement and monitoring based on a reference signal input
- Reference can be either an externally supplied clock source or an internal clock source
- An interrupt request may optionally be generated by a completed measurement, a detected frequency error, or a counter overflow.
- A digital filter is available for an externally supplied reference clock, and dividers are available for both internally supplied measurement and reference clocks.
- Edge-detection options for the reference clock are configurable as rising, falling, or both.

Configuration

Build Time Configurations for r_cac

The following build time configurations are defined in fsp_cfg/r_cac_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Monitoring > Clock Accuracy Circuit (r_cac)

This module can be added to the Stacks tab via New Stack > Monitoring > Clock Accuracy Circuit (r_cac). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_cac0	Module name.
Reference clock divider	• 32 • 128 • 1024 • 8192	32	Reference clock divider.
Reference clock source	• Main Oscillator • Sub-clock • HOCO	Main Oscillator	Reference clock source.

	• MOCO • LOCO • PCLKB • IWDT • External		
Reference clock digital filter	• Disabled • Sampling clock =Measuring freq • Sampling clock =Measuring freq/4 • Sampling clock =Measuring freq/16	Disabled	Reference clock digital filter.
Reference clock edge detect	• Rising • Falling • Both	Rising	Reference clock edge detection.
Measurement clock divider	• 1 • 4 • 8 • 32	1	Measurement clock divider.
Measurement clock source	• Main Oscillator • Sub-clock • HOCO • MOCO • LOCO • PCLKB • IWDT	HOCO	Measurement clock source.
Upper Limit Threshold	Value must be a non-negative integer, between 0 to 65535	0	Top end of allowable range for measurement completion.
Lower Limit Threshold	Value must be a non-negative integer, between 0 to 65535	0	Bottom end of allowable range for measurement completion.
Frequency Error Interrupt Priority	MCU Specific Options		CAC frequency error interrupt priority.
Measurement End Interrupt Priority	MCU Specific Options		CAC measurement end interrupt priority.
Overflow Interrupt Priority	MCU Specific Options		CAC overflow interrupt priority.
Callback	Name must be a valid C symbol	NULL	Function name for callback

Clock Configuration

The CAC measurement clock source can be configured as the following:

1. MAIN_OSC
2. SUBCLOCK
3. HOCO
4. MOCO
5. LOCO
6. PCLKB
7. IWDT

The CAC reference clock source can be configured as the following:

1. MAIN_OSC
2. SUBCLOCK
3. HOCO
4. MOCO
5. LOCO
6. PCLKB
7. IWDT
8. External Clock Source (CACREF)

Pin Configuration

The CACREF pin can be configured to provide the reference clock for CAC measurements.

Usage Notes

Measurement Accuracy

The clock measurement result may be off by up to one pulse depending on the phase difference between the edge detection circuit, digital filter, and CACREF pin signal, if applicable.

Frequency Error Interrupt

The frequency error interrupt is only triggered at the end of a CAC measurement. This means that there will be a measurement complete interrupt in addition to the frequency error interrupt.

Examples

Basic Example

This is a basic example of minimal use of the CAC in an application.

```
volatile uint32_t g_callback_complete;
void cac_basic_example ()
{
    g_callback_complete = 0;
 fsp_err_t err = R_CAC_Open(&g_cac_ctrl, &g_cac_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    (void) R_CAC_StartMeasurement(&g_cac_ctrl);
```

```
 /* Wait for measurement to complete. */
 while (0 == g_callback_complete)
    {
    }
    uint16_t value;
 /* Read the CAC measurement. */
    (void) R_CAC_Read(&g_cac_ctrl, &value);
}
/* Called when measurement is completed. */
static void r_cac_callback (cac_callback_args_t * p_args)
{
 if (CAC_EVENT_MEASUREMENT_COMPLETE == p_args->event)
    {
       g_callback_complete = 1U;
    }
}
```

Data Structures

struct	cac_instance_ctrl_t

Data Structure Documentation

◆ cac_instance_ctrl_t

struct cac_instance_ctrl_t
CAC instance control block. DO NOT INITIALIZE.

Function Documentation

◆ R_CAC_Open()

fsp_err_t R_CAC_Open (cac_ctrl_t *const *p_ctrl*, cac_cfg_t const *const *p_cfg*)

The Open function configures the CAC based on the provided user configuration settings.

Return values

FSP_SUCCESS	CAC is available and available for measurement(s).
FSP_ERR_ASSERTION	An argument is invalid.
FSP_ERR_ALREADY_OPEN	The CAC has already been opened.

Note

There is only a single CAC peripheral.

◆ R_CAC_StartMeasurement()

fsp_err_t R_CAC_StartMeasurement (cac_ctrl_t *const *p_ctrl*)

Start the CAC measurement process.

Return values

FSP_SUCCESS	CAC measurement started.
FSP_ERR_ASSERTION	NULL provided for p_instance_ctrl or p_cfg.
FSP_ERR_NOT_OPEN	R_CAC_Open() has not been successfully called.

◆ R_CAC_StopMeasurement()

fsp_err_t R_CAC_StopMeasurement (cac_ctrl_t *const *p_ctrl*)

Stop the CAC measurement process.

Return values

FSP_SUCCESS	CAC measuring has been stopped.
FSP_ERR_ASSERTION	NULL provided for p_instance_ctrl or p_cfg.
FSP_ERR_NOT_OPEN	R_CAC_Open() has not been successfully called.

◆ R_CAC_Read()

fsp_err_t R_CAC_Read (cac_ctrl_t *const *p_ctrl*, uint16_t *const *p_counter*)

Read and return the CAC status and counter registers.

Return values

FSP_SUCCESS	CAC read successful.
FSP_ERR_ASSERTION	An argument is NULL.
FSP_ERR_NOT_OPEN	R_CAC_Open() has not been successfully called.

◆ R_CAC_Close()

fsp_err_t R_CAC_Close (cac_ctrl_t *const *p_ctrl*)

Release any resources that were allocated by the Open() or any subsequent CAC operations.

Return values

FSP_SUCCESS	Successful close.
FSP_ERR_ASSERTION	NULL provided for p_instance_ctrl or p_cfg.
FSP_ERR_NOT_OPEN	R_CAC_Open() has not been successfully called.

◆ R_CAC_CallbackSet()

fsp_err_t R_CAC_CallbackSet (cac_ctrl_t *const *p_ctrl*, void(*)(cac_callback_args_t *) *p_callback*, void const *const *p_context*, cac_callback_args_t *const *p_callback_memory*)

Updates the user callback with the option to provide memory for the callback argument structure. Implements cac_api_t::callbackSet.

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

4.2.11 Controller Area Network (r_can)

Modules

Functions

fsp_err_t	R_CAN_Open (can_ctrl_t *const p_api_ctrl, can_cfg_t const *const p_cfg)
fsp_err_t	R_CAN_Close (can_ctrl_t *const p_api_ctrl)
fsp_err_t	R_CAN_Write (can_ctrl_t *const p_api_ctrl, uint32_t const mailbox, can_frame_t *const p_frame)
fsp_err_t	R_CAN_Read (can_ctrl_t *const p_api_ctrl, uint32_t mailbox, can_frame_t *const p_frame)
fsp_err_t	R_CAN_ModeTransition (can_ctrl_t *const p_api_ctrl, can_operation_mode_t operation_mode, can_test_mode_t test_mode)
fsp_err_t	R_CAN_InfoGet (can_ctrl_t *const p_api_ctrl, can_info_t *const p_info)
fsp_err_t	R_CAN_CallbackSet (can_ctrl_t *const p_api_ctrl, void(*p_callback)(can_callback_args_t *), void const *const p_context, can_callback_args_t *const p_callback_memory)

Detailed Description

Driver for the CAN peripheral on RA MCUs. This module implements the CAN Interface.

Overview

The Controller Area network (CAN) HAL module provides a high-level API for CAN applications and supports the CAN peripherals available on RA microcontroller hardware. A user-callback function must be defined that the driver will invoke when transmit, receive or error interrupts are received. The callback is passed a parameter which indicates the channel, mailbox and event as well as the received data (if available).

Features

- Supports both standard (11-bit) and extended (29-bit) messaging formats
- Supports speeds upto 1 Mbps
- Support for bit timing configuration as defined in the CAN specification
- Supports up to 32 transmit or receive mailboxes with standard or extended ID frames
- Optional support for a 4-stage transmit and receive FIFO
- Receive mailboxes can be configured to capture either data or remote CAN Frames
- Receive mailboxes can be configured to receive a range of IDs using mailbox masks
- Mailboxes can be configured with Overwrite or Overrun mode
- Supports a user-callback function when transmit, receive, or error interrupts are received

Configuration

Build Time Configurations for r_can

The following build time configurations are defined in fsp_cfg/r_can_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
FIFO Support	• Disabled • Enabled	Disabled	When FIFOs are enabled, a transmit FIFO replaces mailboxes 24-27 and a receive FIFO replaces mailboxes 28-31.

Configurations for Connectivity > CAN (r_can)

This module can be added to the Stacks tab via New Stack > Connectivity > CAN (r_can). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_can0	Module name.
General > Channel	Channel should be 0 or 1	0	Specify the CAN channel to use.
General > Clock Source	MCU Specific Options		Select the CAN clock source.
General > Overwrite/Overrrun Mode	• Overwrite Mode • Overrrun Mode	Overwrite Mode	Select whether receive mailbox will be overwritten or overrun if data is not read in time.
General > Global ID Mode	• Standard ID Mode • Extended ID Mode • Mixed ID Mode	Standard ID Mode	Select whether the driver will use CAN Standard IDs, Extended IDs or a mix of both.
General > Number of Mailboxes	• 4 Mailboxes • 8 Mailboxes • 16 Mailboxes • 24 Mailboxes • 32 Mailboxes	32 Mailboxes	Select 4, 8, 16, 24 or 32 mailboxes. In FIFO mailbox mode up to 24 mailboxes are available.
Baud Rate Settings > Auto-generated Settings > Sample-	Must be a valid integer between 0 and 100. Ignore when Override	75	Sample-Point = (TSEG1 + 1) / (TSEG1 + TSEG2 + 1).

Point (%)	Baud Settings is Enabled.		
Baud Rate Settings > Auto-generated Settings > CAN Baud Rate (Hz)	Must be a valid integer configurable upto maximum 1MHz. Ignore when Override Baud Settings is Enabled.	500000	Specify baud rate in Hz. If the requested baud rate cannot be achieved, the settings with the largest possible baud rate that is less than or equal to the requested baud rate is used. If multiple combinations would result in the best baud rate, the combination with the least absolute error for the ratio is chosen. The theoretical calculated baud rate and ratio are printed in a comment in the generated can_bit_timing_cfg_t structure.
Baud Rate Settings > Override Auto-generated Settings > Override Baud Settings	• Enabled • Disabled	Disabled	Override calculated baudrate parameters and instead use the ones specified below. This option ignores the parameters specified under Sample-Point (%) and CAN Baud Rate (Hz)
Baud Rate Settings > Override Auto-generated Settings > Baud Rate Prescaler	Value must be a non-negative integer between 1 and 1024.	1	Specify division value of baud rate prescaler (baud rate prescalar + 1).
Baud Rate Settings > Override Auto-generated Settings > Time Segment 1	Refer to the RA Configuration tool for available options.	4 Time Quanta	Select the time segment 1 value. (4-16). Check module usage notes for how to calculate this value.
Baud Rate Settings > Override Auto-generated Settings > Time Segment 2	• 2 Time Quanta • 3 Time Quanta • 4 Time Quanta • 5 Time Quanta • 6 Time Quanta • 7 Time Quanta • 8 Time Quanta	2 Time Quanta	Select the time segment 2 value (2-8). Check module usage notes for how to calculate this value.
Baud Rate Settings >	• 1 Time Quanta	1 Time Quanta	Select the

Override Auto-generated Settings > Synchronization Jump Width	• 2 Time Quanta • 3 Time Quanta • 4 Time Quanta		Synchronization Jump Width value (1-4). Check module usage notes for how to calculate this value.
Interrupts > Callback	Name must be a valid C symbol	can_callback	A user callback function. If this callback function is provided, it is called from the interrupt service routine (ISR) each time any interrupt occurs.
Interrupts > Interrupt Priority Level	MCU Specific Options		Transmit/Receive/Error interrupt priority.
Interrupts > Transmit FIFO Interrupt Mode	• Every Message • Empty	Every Message	Select whether the receive FIFO should throw an interrupt on every received message or when it becomes empty.
Input > Receive FIFO > Receive ID 1 > ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	0	Select the first ID for the receive FIFO, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs.
Input > Receive FIFO > Receive ID 1 > ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the receive FIFO is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Receive FIFO > Receive ID 1 > Frame Type	• Data Mailbox • Remote Mailbox	Remote Mailbox	Select whether the receive FIFO is used to capture data frames or remote frames.
Input > Receive FIFO > Receive ID 1 > Mask	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	0x1FFFFFFF	Select the Mask for the receive FIFO. In Mixed ID Mode the Standard ID mask is the upper 11 bits of the full 29-bit mask value.
Input > Receive FIFO > Receive ID 2 > ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	0	Select the second ID for the receive FIFO, between 0 and 0x7ff when using standard IDs, between 0 and

			0x1FFFFFFF when using extended IDs.
Input > Receive FIFO > Receive ID 2 > ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the receive FIFO is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Receive FIFO > Receive ID 2 > Frame Type	• Data Mailbox • Remote Mailbox	Remote Mailbox	Select whether the receive FIFO is used to capture data frames or remote frames.
Input > Receive FIFO > Receive ID 2 > Mask	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	0x1FFFFFFF	Select the Mask for the receive FIFO. In Mixed ID Mode the Standard ID mask is the upper 11 bits of the full 29-bit mask value.
Input > Mailbox 0-3 Group > Mailbox ID > Mailbox 0 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	0	Select the receive ID for mailbox 0, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 0-3 Group > Mailbox ID > Mailbox 1 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	1	Select the receive ID for mailbox 1, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 0-3 Group > Mailbox ID > Mailbox 2 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	2	Select the receive ID for mailbox 2, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 0-3 Group > Mailbox ID > Mailbox 3 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	3	Select the receive ID for mailbox 3, between 0 and 0x7ff when using standard IDs, between

			0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 0-3 Group > Mailbox ID Mode > Mailbox 0 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 0-3 Group > Mailbox ID Mode > Mailbox 1 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 0-3 Group > Mailbox ID Mode > Mailbox 2 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 0-3 Group > Mailbox ID Mode > Mailbox 3 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 0-3 Group > Mailbox Type > Mailbox 0 Type	• Receive Mailbox • Transmit Mailbox	Transmit Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 0-3 Group > Mailbox Type > Mailbox 1 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 0-3 Group > Mailbox Type > Mailbox 2 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 0-3	• Receive	Receive Mailbox	Select whether the

Group > Mailbox Type > Mailbox 3 Type	Mailbox • Transmit Mailbox		mailbox is used for receive or transmit.
Input > Mailbox 0-3 Group > Mailbox Frame Type > Mailbox 0 Frame Type	• Data Mailbox • Remote Mailbox	Remote Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 0-3 Group > Mailbox Frame Type > Mailbox 1 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 0-3 Group > Mailbox Frame Type > Mailbox 2 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 0-3 Group > Mailbox Frame Type > Mailbox 3 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 0-3 Group > Mailbox 0-3 Group Mask	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	0x1FFFFFFF	Select the Mask for mailboxes 0-3. In Mixed ID Mode the Standard ID mask is the upper 11 bits of the full 29-bit mask value.
Input > Mailbox 4-7 Group > Mailbox ID > Mailbox 4 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	4	Select the receive ID for mailbox 4, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 4-7 Group > Mailbox ID > Mailbox 5 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	5	Select the receive ID for mailbox 5, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.

Input > Mailbox 4-7 Group > Mailbox ID > Mailbox 6 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	6	Select the receive ID for mailbox 6, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 4-7 Group > Mailbox ID > Mailbox 7 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	7	Select the receive ID for mailbox 7, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 4-7 Group > Mailbox ID Mode > Mailbox 4 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 4-7 Group > Mailbox ID Mode > Mailbox 5 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 4-7 Group > Mailbox ID Mode > Mailbox 6 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 4-7 Group > Mailbox ID Mode > Mailbox 7 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 4-7	• Receive	Receive Mailbox	Select whether the

Group > Mailbox Type > Mailbox 4 Type	• Mailbox • Transmit Mailbox		mailbox is used for receive or transmit.
Input > Mailbox 4-7 Group > Mailbox Type > Mailbox 5 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 4-7 Group > Mailbox Type > Mailbox 6 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 4-7 Group > Mailbox Type > Mailbox 7 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 4-7 Group > Mailbox Frame Type > Mailbox 4 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 4-7 Group > Mailbox Frame Type > Mailbox 5 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 4-7 Group > Mailbox Frame Type > Mailbox 6 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 4-7 Group > Mailbox Frame Type > Mailbox 7 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 4-7 Group > Mailbox 4-7 Group Mask	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	0x1FFFFFFF	>Select the Mask for mailboxes 4-7. In Mixed ID Mode the Standard ID mask is the upper 11 bits of the full 29-bit mask value.
Input > Mailbox 8-11 Group > Mailbox ID > Mailbox 8 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	8	Select the receive ID for mailbox 8, between 0 and 0x7ff when using standard IDs, between

			0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 8-11 Group > Mailbox ID > Mailbox 9 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	9	Select the receive ID for mailbox 9, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 8-11 Group > Mailbox ID > Mailbox 10 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	10	Select the receive ID for mailbox 10, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 8-11 Group > Mailbox ID > Mailbox 11 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	11	Select the receive ID for mailbox 11, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 8-11 Group > Mailbox ID Mode > Mailbox 8 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 8-11 Group > Mailbox ID Mode > Mailbox 9 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 8-11	• Standard ID	Standard ID	Select whether the

Group > Mailbox ID Mode > Mailbox 10 ID Mode	• Extended ID		mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 8-11 Group > Mailbox ID Mode > Mailbox 11 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 8-11 Group > Mailbox Type > Mailbox 8 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 8-11 Group > Mailbox Type > Mailbox 9 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 8-11 Group > Mailbox Type > Mailbox 10 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 8-11 Group > Mailbox Type > Mailbox 11 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 8-11 Group > Mailbox Frame Type > Mailbox 8 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 8-11 Group > Mailbox Frame Type > Mailbox 9 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 8-11 Group > Mailbox Frame Type > Mailbox 10 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).

Input > Mailbox 8-11 Group > Mailbox Frame Type > Mailbox 11 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 8-11 Group > Mailbox 8-11 Group Mask	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	0x1FFFFFFF	Select the Mask for mailboxes 8-11. In Mixed ID Mode the Standard ID mask is the upper 11 bits of the full 29-bit mask value.
Input > Mailbox 12-15 Group > Mailbox ID > Mailbox 12 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	12	Select the receive ID for mailbox 12, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 12-15 Group > Mailbox ID > Mailbox 13 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	13	Select the receive ID for mailbox 13, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 12-15 Group > Mailbox ID > Mailbox 14 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	14	Select the receive ID for mailbox 14, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 12-15 Group > Mailbox ID > Mailbox 15 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	15	Select the receive ID for mailbox 15, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.

Input > Mailbox 12-15 Group > Mailbox ID Mode > Mailbox 12 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 12-15 Group > Mailbox ID Mode > Mailbox 13 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 12-15 Group > Mailbox ID Mode > Mailbox 14 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 12-15 Group > Mailbox ID Mode > Mailbox 15 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 12-15 Group > Mailbox Type > Mailbox 12 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 12-15 Group > Mailbox Type > Mailbox 13 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 12-15 Group > Mailbox Type > Mailbox 14 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 12-15 Group > Mailbox Type > Mailbox 15 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 12-15 Group > Mailbox Frame	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to

Type > Mailbox 12 Frame Type			capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 12-15 Group > Mailbox Frame Type > Mailbox 13 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 12-15 Group > Mailbox Frame Type > Mailbox 14 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 12-15 Group > Mailbox Frame Type > Mailbox 15 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 12-15 Group > Mailbox 12-15 Group Mask	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	0x1FFFFFFF	Select the Mask for mailboxes 12-15. In Mixed ID Mode the Standard ID mask is the upper 11 bits of the full 29-bit mask value.
Input > Mailbox 16-19 Group > Mailbox ID > Mailbox 16 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	16	Select the receive ID for mailbox 16, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 16-19 Group > Mailbox ID > Mailbox 17 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	17	Select the receive ID for mailbox 17, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 16-19 Group > Mailbox ID > Mailbox 18 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	18	Select the receive ID for mailbox 18, between 0 and 0x7ff

			when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 16-19 Group > Mailbox ID > Mailbox 19 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	19	Select the receive ID for mailbox 19, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 16-19 Group > Mailbox ID Mode > Mailbox 16 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 16-19 Group > Mailbox ID Mode > Mailbox 17 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 16-19 Group > Mailbox ID Mode > Mailbox 18 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 16-19 Group > Mailbox ID Mode > Mailbox 19 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 16-19 Group > Mailbox Type	• Receive Mailbox	Receive Mailbox	Select whether the mailbox is used for

> Mailbox 16 Type	• Transmit Mailbox		receive or transmit.
Input > Mailbox 16-19 Group > Mailbox Type > Mailbox 17 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 16-19 Group > Mailbox Type > Mailbox 18 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 16-19 Group > Mailbox Type > Mailbox 19 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 16-19 Group > Mailbox Frame Type > Mailbox 16 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 16-19 Group > Mailbox Frame Type > Mailbox 17 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 16-19 Group > Mailbox Frame Type > Mailbox 18 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 16-19 Group > Mailbox Frame Type > Mailbox 19 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 16-19 Group > Mailbox 16-19 Group Mask	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	0x1FFFFFFF	Select the Mask for mailboxes 16-19. In Mixed ID Mode the Standard ID mask is the upper 11 bits of the full 29-bit mask value.
Input > Mailbox 20-23 Group > Mailbox ID > Mailbox 20 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	20	Select the receive ID for mailbox 20, between 0 and 0x7ff when using standard IDs, between 0 and

			0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 20-23 Group > Mailbox ID > Mailbox 21 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	21	Select the receive ID for mailbox 21, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 20-23 Group > Mailbox ID > Mailbox 22 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	22	Select the receive ID for mailbox 22, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 20-23 Group > Mailbox ID > Mailbox 23 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	23	Select the receive ID for mailbox 23, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 20-23 Group > Mailbox ID Mode > Mailbox 20 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 20-23 Group > Mailbox ID Mode > Mailbox 21 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.

Input > Mailbox 20-23 Group > Mailbox ID Mode > Mailbox 22 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 20-23 Group > Mailbox ID Mode > Mailbox 23 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 20-23 Group > Mailbox Type > Mailbox 20 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 20-23 Group > Mailbox Type > Mailbox 21 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 20-23 Group > Mailbox Type > Mailbox 22 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 20-23 Group > Mailbox Type > Mailbox 23 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 20-23 Group > Mailbox Frame Type > Mailbox 20 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 20-23 Group > Mailbox Frame Type > Mailbox 21 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 20-23 Group > Mailbox Frame Type > Mailbox 22 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).

Input > Mailbox 20-23 Group > Mailbox Frame Type > Mailbox 23 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 20-23 Group > Mailbox 20-23 Group Mask	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	0x1FFFFFFF	Select the Mask for mailboxes 20-23. In Mixed ID Mode the Standard ID mask is the upper 11 bits of the full 29-bit mask value.
Input > Mailbox 24-27 Group > Mailbox ID > Mailbox 24 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	24	Select the receive ID for mailbox 24, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 24-27 Group > Mailbox ID > Mailbox 25 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	25	Select the receive ID for mailbox 25, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 24-27 Group > Mailbox ID > Mailbox 26 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	26	Select the receive ID for mailbox 26, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 24-27 Group > Mailbox ID > Mailbox 27 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	27	Select the receive ID for mailbox 27, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.

Input > Mailbox 24-27 Group > Mailbox ID Mode > Mailbox 24 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 24-27 Group > Mailbox ID Mode > Mailbox 25 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 24-27 Group > Mailbox ID Mode > Mailbox 26 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 24-27 Group > Mailbox ID Mode > Mailbox 27 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 24-27 Group > Mailbox Type > Mailbox 24 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 24-27 Group > Mailbox Type > Mailbox 25 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 24-27 Group > Mailbox Type > Mailbox 26 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 24-27 Group > Mailbox Type > Mailbox 27 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 24-27 Group > Mailbox Frame	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to

Type > Mailbox 24 Frame Type			capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 24-27 Group > Mailbox Frame Type > Mailbox 25 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 24-27 Group > Mailbox Frame Type > Mailbox 26 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 24-27 Group > Mailbox Frame Type > Mailbox 27 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 24-27 Group > Mailbox 24-27 Group Mask	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	0x1FFFFFFF	Select the Mask for mailboxes 24-27. In Mixed ID Mode the Standard ID mask is the upper 11 bits of the full 29-bit mask value.
Input > Mailbox 28-31 Group > Mailbox ID > Mailbox 28 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	28	Select the receive ID for mailbox 28, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 28-31 Group > Mailbox ID > Mailbox 29 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	29	Select the receive ID for mailbox 29, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 28-31 Group > Mailbox ID > Mailbox 30 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	30	Select the receive ID for mailbox 30, between 0 and 0x7ff

			when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 28-31 Group > Mailbox ID > Mailbox 31 ID	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	31	Select the receive ID for mailbox 31, between 0 and 0x7ff when using standard IDs, between 0 and 0x1FFFFFFF when using extended IDs. Value is not used when the mailbox is set as transmit type.
Input > Mailbox 28-31 Group > Mailbox ID Mode > Mailbox 28 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 28-31 Group > Mailbox ID Mode > Mailbox 29 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 28-31 Group > Mailbox ID Mode > Mailbox 30 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 28-31 Group > Mailbox ID Mode > Mailbox 31 ID Mode	• Standard ID • Extended ID	Standard ID	Select whether the mailbox is used to receive Standard or Extended ID messages. This setting is only valid when Global ID Mode is set to 'Mixed ID Mode'.
Input > Mailbox 28-31 Group > Mailbox Type	• Receive Mailbox	Receive Mailbox	Select whether the mailbox is used for

> Mailbox 28 Type	• Transmit Mailbox		receive or transmit.
Input > Mailbox 28-31 Group > Mailbox Type > Mailbox 29 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 28-31 Group > Mailbox Type > Mailbox 30 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 28-31 Group > Mailbox Type > Mailbox 31 Type	• Receive Mailbox • Transmit Mailbox	Receive Mailbox	Select whether the mailbox is used for receive or transmit.
Input > Mailbox 28-31 Group > Mailbox Frame Type > Mailbox 28 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 28-31 Group > Mailbox Frame Type > Mailbox 29 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 28-31 Group > Mailbox Frame Type > Mailbox 30 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 28-31 Group > Mailbox Frame Type > Mailbox 31 Frame Type	• Data Mailbox • Remote Mailbox	Data Mailbox	Select whether the mailbox is used to capture data frames or remote frames (ignored for transmit mailboxes).
Input > Mailbox 28-31 Group > Mailbox 28-31 Group Mask	Value must be decimal or HEX integer of 0x1FFFFFFF or less.	0x1FFFFFFF	Select the Mask for mailboxes 28-31. In Mixed ID Mode the Standard ID mask is the upper 11 bits of the full 29-bit mask value.

Clock Configuration

The CAN peripheral uses the CANMCLK (main-clock oscillator) or PCLKB as its clock source (fCAN, CAN System Clock.) The default CAN configuration will provide a CAN bit rate of 500 Kbit using CANMCLK as the clock source. To set the PCLKB frequency, use the **Clocks** tab of the RA

Configuration editor. To change the clock frequency at run-time, use the CGC Interface. Refer to the CGC module guide for more information on configuring clocks.

Clock Limitations

The following clock limitations apply when using the CAN peripheral:

- When using the main oscillator (CANMCLK) as the clock source:
  - fPCLKB >= fCANCLK (fCANCLK = XTAL / Baud Rate Prescaler)
  - The user application must start the main-clock oscillator (XTAL) at run-time using the CGC Interface if it has not already started (for example, if it is not used as the MCU clock source.)
- When using PCLKB as the clock source:
  - For RA6 and RA4 MCUs, the source of the peripheral module clocks must be PLL for the CAN HAL module.
- For RA4M1 and RA4W1 MCUs, the clock frequency ratio of PCLKA and PCLKB must be 2:1 when using the CAN HAL module. Operation is not guaranteed for other settings.
- For RA2 MCUs only CANMCLK (XTAL) may be used as a clock source. The clock frequency ratio of ICLK and PCLKB must be 2:1 when using the CAN HAL module. Operation is not guaranteed for other settings.

  Note

  When using CANMCLK (XTAL) as the CAN clock source while running at a reduced main clock speed (under 2x XTAL) be sure to confirm that the XTAL frequency divided by the baud rate prescaler is equal to or less than PCLKB.

Pin Configuration

The CAN peripheral module uses pins on the MCU to communicate to external devices. I/O pins must be selected and configured as required by the external device. A CAN channel would consist of two pins - CRX and CTX for data transmission/reception.

Usage Notes

Bit Rate Calculation

For convenience, the baudrate of the CAN peripheral is automatically set through the RA Configuration editor using a best effort approach. If the auto-generated baud settings cause deviation that is not tolerable by the application, the user can override the auto-generated settings and put in manually calculated values through RA Configuration editor. For more details on how the baudrate is set refer to section 37.4 "Data Transfer Rate Configuration" of the RA6M3 User's Manual (R01UH0886EJ0100).

FIFO Support

When FIFO Support is enabled, mailboxes 24-27 form a 4-stage transmit FIFO and mailboxes 28-31 form a 4-stage receive FIFO. The receive FIFO supports two independent ID/mask settings for acceptance filtering.

Note

Only the base mailbox of each FIFO may be accessed. When writing to the TX FIFO it is recommended to use CAN_MAILBOX_ID_TX_FIFO.

Limitations

Developers should be aware of the following limitations when using CAN:

- The can_frame_t::id_mode field is only used when Global ID Mode is set to Mixed ID. It is ignored in all other modes.

Examples

Basic Example

This is a basic example of minimal use of the CAN in an application.

```
can_frame_t g_can_tx_frame;
can_frame_t g_can_rx_frame;
volatile bool     g_rx_flag = false;
volatile bool     g_tx_flag = false;
volatile bool     g_err_flag = false;
volatile uint32_t g_rx_id;
void can_callback (can_callback_args_t * p_args)
{
 switch (p_args->event)
    {
 case CAN_EVENT_RX_COMPLETE:    /* Receive complete event. */
     {
           g_rx_flag = true;
           g_rx_id   = p_args->frame.id;
 /* Read received frame */
           g_can_rx_frame = p_args->frame;
 break;
      }
 case CAN_EVENT_TX_COMPLETE:    /* Transmit complete event. */
     {
           g_tx_flag = true;
 break;
      }
 case CAN_EVENT_ERR_BUS_OFF:          /* Bus error event. (bus off) */
 case CAN_EVENT_ERR_PASSIVE:          /* Bus error event. (error passive) */
 case CAN_EVENT_ERR_WARNING:          /* Bus error event. (error warning) */
 case CAN_EVENT_BUS_RECOVERY:         /* Bus error event. (bus recovery) */
```

```
 case CAN_EVENT_MAILBOX_MESSAGE_LOST: /* Overwrite/overrun error */
      {
 /* Set error flag */
            g_err_flag = true;
 break;
       }
 default:
      {
 break;
       }
    }
}
void basic_example (void)
{
 fsp_err_t err;
    uint32_t i;
    uint32_t timeout_ms = CAN_BUSY_DELAY;
 /* Initialize the CAN module */
    err = R_CAN_Open(&g_can0_ctrl, &g_can0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    g_can_tx_frame.id              = CAN_DESTINATION_DEVICE_MAILBOX_NUMBER; /* CAN
Destination Device ID */
    g_can_tx_frame.type            = CAN_FRAME_TYPE_DATA;
    g_can_tx_frame.data_length_code = CAN_FRAME_TRANSMIT_DATA_BYTES;
 /* Write some data to the transmit frame */
 for (i = 0; i < sizeof(g_can_tx_frame.data); i++)
    {
       g_can_tx_frame.data[i] = (uint8_t) i;
    }
 /* Send data on the bus */
    g_tx_flag = false;
    g_err_flag = false;
    err = R_CAN_Write(&g_can0_ctrl, CAN_MAILBOX_NUMBER_31, &g_can_tx_frame);
```

```
    assert(FSP_SUCCESS == err);
 /* Since there is nothing else to do, block until Callback triggers*/
 while ((true != g_tx_flag) && timeout_ms)
    {
 R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
       timeout_ms--;
    }
 if (true == g_err_flag)
    {
       __BKPT(0);
    }
}
```

External Loop-back Test

This example requires the CTX and CRX pins to be connected. If a CAN tranciever is onboard a 120 Ohm resistor should be connected across CANH and CANL instead. The mailbox numbers are arbitrarily chosen.

```
void can_external_loopback_example (void)
{
 fsp_err_t            err;
    uint32_t             timeout_ms    = CAN_BUSY_DELAY;
 can_operation_mode_t operation_mode = CAN_OPERATION_MODE_NORMAL;
 can_test_mode_t      test_mode      = CAN_TEST_MODE_LOOPBACK_EXTERNAL;
 int      diff = 0;
    uint32_t i    = 0;
    err = R_CAN_Open(&g_can0_ctrl, &g_can0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    err = R_CAN_ModeTransition(&g_can0_ctrl, operation_mode, test_mode);
    assert(FSP_SUCCESS == err);
 /* Clear the data part of receive frame */
    memset(g_can_rx_frame.data, 0, CAN_FRAME_TRANSMIT_DATA_BYTES);
 /* CAN Destination Device ID, in this case it is the same device with another
mailbox */
```

```
    g_can_tx_frame.id               = CAN_MAILBOX_NUMBER_4;
    g_can_tx_frame.type             = CAN_FRAME_TYPE_DATA;
    g_can_tx_frame.data_length_code = CAN_FRAME_TRANSMIT_DATA_BYTES;
 /* Write some data to the transmit frame */
 for (i = 0; i < sizeof(g_can_tx_frame.data); i++)
    {
       g_can_tx_frame.data[i] = (uint8_t) i;
    }
 /* Send data on the bus */
    g_rx_flag = false;
    g_err_flag = false;
    err = R_CAN_Write(&g_can0_ctrl, CAN_MAILBOX_NUMBER_31, &g_can_tx_frame);
    assert(FSP_SUCCESS == err);
 /* Since there is nothing else to do, block until Callback triggers*/
 while ((true != g_rx_flag) && timeout_ms)
    {
 R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
       timeout_ms--;
    }
 if (true == g_err_flag)
    {
       __BKPT(0);
    }
 /* Verify received data */
    diff = memcmp(&g_can_rx_frame.data[0], &g_can_tx_frame.data[0],
CAN_FRAME_TRANSMIT_DATA_BYTES);
 if (0 != diff)
    {
       __BKPT(0);
    }
}
```

Data Structure Documentation

◆ can_mailbox_t

struct can_mailbox_t		
CAN Mailbox		
Data Fields		
uint32_t	mailbox_id	Mailbox ID.
can_id_mode_t	id_mode	Standard or Extended ID. Only used in Mixed ID mode.
can_frame_type_t	frame_type	Frame type for receive mailbox.
can_mailbox_send_receive_t	mailbox_type	Receive or Transmit mailbox type.

◆ can_fifo_interrupt_cfg_t

struct can_fifo_interrupt_cfg_t		
CAN FIFO interrupt configuration		
Data Fields		
can_fifo_interrupt_mode_t	fifo_int_mode	FIFO interrupts mode (RX and TX combined).
IRQn_Type	tx_fifo_irq	TX FIFO IRQ.

IRQn_Type	rx_fifo_irq	RX FIFO IRQ.

◆ can_rx_fifo_cfg_t

struct can_rx_fifo_cfg_t		
CAN RX FIFO configuration		
Data Fields		
uint32_t	rx_fifo_mask1	RX FIFO acceptance filter mask 1.
uint32_t	rx_fifo_mask2	RX FIFO acceptance filter mask 1.
can_mailbox_t	rx_fifo_id1	RX FIFO acceptance filter ID 1.
can_mailbox_t	rx_fifo_id2	RX FIFO acceptance filter ID 2.

◆ can_extended_cfg_t

struct can_extended_cfg_t		
CAN extended configuration		
Data Fields		
can_clock_source_t	clock_source	Source of the CAN clock.
uint32_t *	p_mailbox_mask	Mailbox mask, one for every 4 mailboxes.
can_mailbox_t *	p_mailbox	Pointer to mailboxes.
can_global_id_mode_t	global_id_mode	Standard or Extended ID mode.
uint32_t	mailbox_count	Number of mailboxes.
can_message_mode_t	message_mode	Overwrite message or overrun.
can_fifo_interrupt_cfg_t const *	p_fifo_int_cfg	Pointer to FIFO interrupt configuration.
can_rx_fifo_cfg_t *	p_rx_fifo_cfg	Pointer to RX FIFO configuration.

Enumeration Type Documentation

◆ can_status_t

enum can_status_t	
CAN Status	
Enumerator	
CAN_STATUS_NEW_DATA	New Data status flag.
CAN_STATUS_SENT_DATA	Sent Data status flag.
CAN_STATUS_RECEIVE_FIFO	Receive FIFO status flag.
CAN_STATUS_TRANSMIT_FIFO	Transmit FIFO status flag.
CAN_STATUS_NORMAL_MBOX_MESSAGE_LOST	Normal mailbox message lost status flag.
CAN_STATUS_FIFO_MBOX_MESSAGE_LOST	FIFO mailbox message lost status flag.
CAN_STATUS_TRANSMISSION_ABORT	Transmission abort status flag.
CAN_STATUS_ERROR	Error status flag.
CAN_STATUS_RESET_MODE	Reset mode status flag.
CAN_STATUS_HALT_MODE	Halt mode status flag.
CAN_STATUS_SLEEP_MODE	Sleep mode status flag.
CAN_STATUS_ERROR_PASSIVE	Error-passive status flag.
CAN_STATUS_BUS_OFF	Bus-off status flag.

◆ can_error_t

enum can_error_t	
CAN Error Code	
Enumerator	
CAN_ERROR_STUFF	Stuff Error.
CAN_ERROR_FORM	Form Error.
CAN_ERROR_ACK	ACK Error.
CAN_ERROR_CRC	CRC Error.
CAN_ERROR_BIT_RECESSIVE	Bit Error (recessive) Error.
CAN_ERROR_BIT_DOMINANT	Bit Error (dominant) Error.
CAN_ERROR_ACK_DELIMITER	ACK Delimiter Error.

◆ can_mailbox_number_t

enum can_mailbox_number_t
CAN Mailbox IDs (MB + FIFO)

◆ can_mailbox_send_receive_t

enum can_mailbox_send_receive_t	
CAN Mailbox type	
Enumerator	
CAN_MAILBOX_RECEIVE	Mailbox is for receiving.
CAN_MAILBOX_TRANSMIT	Mailbox is for sending.

◆ can_global_id_mode_t

enum can_global_id_mode_t	
Global CAN ID mode settings	
Enumerator	
CAN_GLOBAL_ID_MODE_STANDARD	Standard IDs of 11 bits used.
CAN_GLOBAL_ID_MODE_EXTENDED	Extended IDs of 29 bits used.
CAN_GLOBAL_ID_MODE_MIXED	Both Standard and Extended IDs used.

◆ can_message_mode_t

enum can_message_mode_t	
CAN Message Modes	
Enumerator	
CAN_MESSAGE_MODE_OVERWRITE	Receive data will be overwritten if not read before the next frame.
CAN_MESSAGE_MODE_OVERRUN	Receive data will be retained until it is read.

◆ can_clock_source_t

enum can_clock_source_t	
CAN Source Clock	
Enumerator	
CAN_CLOCK_SOURCE_PCLKB	PCLKB is the source of the CAN Clock.
CAN_CLOCK_SOURCE_CANMCLK	CANMCLK is the source of the CAN Clock.

◆ can_fifo_interrupt_mode_t

enum can_fifo_interrupt_mode_t
CAN FIFO Interrupt Modes

Function Documentation

◆ R_CAN_Open()

fsp_err_t R_CAN_Open (can_ctrl_t *const *p_api_ctrl*, can_cfg_t const *const *p_cfg*)

Open and configure the CAN channel for operation.

Example:

```
/* Initialize the CAN module */
   err = R_CAN_Open(&g_can0_ctrl, &g_can0_cfg);
```

Return values

FSP_SUCCESS	Channel opened successfully
FSP_ERR_ALREADY_OPEN	Driver already open.
FSP_ERR_CAN_INIT_FAILED	Channel failed to initialize.
FSP_ERR_ASSERTION	Null pointer presented.

◆ R_CAN_Close()

fsp_err_t R_CAN_Close (can_ctrl_t *const *p_api_ctrl*)

Close the CAN channel.

Return values

FSP_SUCCESS	Channel closed successfully.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_ASSERTION	Null pointer presented.

◆ R_CAN_Write()

fsp_err_t R_CAN_Write (can_ctrl_t *const *p_api_ctrl*, uint32_t *mailbox*, can_frame_t *const *p_frame*)

Write data to the CAN channel. Write up to eight bytes to the channel mailbox.

Example:

```
err = R_CAN_Write(&g_can0_ctrl, CAN_MAILBOX_NUMBER_31, &g_can_tx_frame);
assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_CAN_TRANSMIT_NOT_READY	Transmit in progress, cannot write data at this time.
FSP_ERR_CAN_TRANSMIT_FIFO_FULL	Transmit FIFO is full.
FSP_ERR_CAN_RECEIVE_MAILBOX	Mailbox is setup for receive and cannot send.
FSP_ERR_INVALID_ARGUMENT	Data length or frame type invalid.
FSP_ERR_ASSERTION	Null pointer presented

◆ R_CAN_Read()

fsp_err_t R_CAN_Read (can_ctrl_t *const *p_api_ctrl*, uint32_t *mailbox*, can_frame_t *const *p_frame*)

Read data from a mailbox or FIFO.

Note

This function is not supported.

Return values

FSP_ERR_UNSUPPORTED	Function not supported.

◆ R_CAN_ModeTransition()

fsp_err_t R_CAN_ModeTransition (can_ctrl_t *const *p_api_ctrl*, can_operation_mode_t *operation_mode*, can_test_mode_t *test_mode*)

CAN Mode Transition is used to change CAN driver state.

Example:

```
err = R_CAN_ModeTransition(&g_can0_ctrl, operation_mode, test_mode);
assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_ASSERTION	Null pointer presented

◆ R_CAN_InfoGet()

fsp_err_t R_CAN_InfoGet (can_ctrl_t *const *p_api_ctrl*, can_info_t *const *p_info*)

Get CAN state and status information for the channel.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_ASSERTION	Null pointer presented

◆ R_CAN_CallbackSet()

fsp_err_t R_CAN_CallbackSet (can_ctrl_t *const *p_api_ctrl*, void(*)(can_callback_args_t *) *p_callback*, void const *const *p_context*, can_callback_args_t *const *p_callback_memory*)
Updates the user callback with the option to provide memory for the callback argument structure. Implements can_api_t::callbackSet.

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

4.2.12 Controller Area Network - Flexible Data (r_canfd)

fsp_err_t	R_CANFD_Write (can_ctrl_t *const p_api_ctrl, uint32_t const buffer, can_frame_t *const p_frame)
fsp_err_t	R_CANFD_Read (can_ctrl_t *const p_api_ctrl, uint32_t const buffer, can_frame_t *const p_frame)
fsp_err_t	R_CANFD_ModeTransition (can_ctrl_t *const p_api_ctrl, can_operation_mode_t operation_mode, can_test_mode_t test_mode)
fsp_err_t	R_CANFD_InfoGet (can_ctrl_t *const p_api_ctrl, can_info_t *const p_info)
fsp_err_t	R_CANFD_CallbackSet (can_ctrl_t *const p_api_ctrl, void(*p_callback)(can_callback_args_t *), void const *const p_context, can_callback_args_t *const p_callback_memory)

Detailed Description

Driver for the CANFD peripheral on RA MCUs. This module implements the CAN Interface.

Overview

The CANFD module can be used to communicate over CAN networks, optionally using Flexible Data (CAN-FD) to accelerate the data phase. A variety of message filtering and buffer options are available.

Features

Common Features

- Compatibility
  - Send and receive CAN 2.0 and CAN-FD frames on the same channel
  - Bitrate up to 1 Mbps with FD data phase speeds up to 5-8 Mbps
  - Supports both ISO 11898-1
- Buffers
  - 32 global receive Message Buffers (RX MBs)
  - 2-8 global receive FIFOs (RX FIFOs)
  - 4-16 transmit Message Buffers (TX MBs) per channel
- Filtering
  - Each filter rule can be individually configured to accept messages based on:
    - ID
    - Standard or Extended ID (IDE bit)
    - Data or Remote Frame (RTR bit)
    - ID/IDE/RTR mask
    - Minimum DLC (data length) value
- Interrupts
  - Configurable Global RX FIFO Interrupt
    - Configurable per FIFO
    - Interrupt at a certain depth or on every received message
  - Channel TX Interrupt
  - Global Error
    - DLC Check
    - Message Lost
    - FD Payload Overflow
  - Channel Error
    - Bus Error
    - Error Warning
    - Error Passive
    - Bus-Off Entry
    - Bus-Off Recovery
    - Overload
    - Bus Lock
    - Arbitration Loss
    - Transmission Aborted

Per-MCU Specifications

	RA6M5	RA6T2
Channels	2	1
Max nominal bitrate	1 Mbps	1 Mbps
Max data bitrate	8 Mbps	5 Mbps

Filter rules	128	32
TX message buffers	16/ch	4
RX message buffers	32	32
RX FIFOs	8	2
RX Buffer RAM	4864 bytes	1216 bytes
Standards	ISO or Bosch	ISO

Note

Each message buffer comprises 12 header bytes plus data length (8-64 bytes). The above buffer RAM values therefore correspond to the following capacities:

	RA6M5	*RA6T2*
Max 64-byte storage	*64 messages*	*16 messages*
Max 8-byte storage	*243 messages*	*60 messages*

Configuration

Build Time Configurations for r_canfd

The following build time configurations are defined in fsp_cfg/r_canfd_cfg.h:

Configuration	Options	Default	Description
Global Error Interrupt > Priority	MCU Specific Options		This interrupt is fired for each of the error sources selected below.
Global Error Interrupt > Sources	• DLC Check • Message Lost • FD Payload Overflow	0U	Select which errors should trigger an interrupt.
Global Error Interrupt > Callback Channel	• Channel 0 • Channel 1	Channel 0	Specify which channel callback should be called to handle global errors. When starting the driver this channel must be opened first.
Flexible Data (FD) > FD Frame Format	MCU Specific Options		Select whether to use the FD frame standard provided by ISO or Bosch.
Flexible Data (FD) > Protocol Exceptions	• Enabled (ISO 11898-1) • Disabled	Enabled (ISO 11898-1)	Select whether to enter the protocol exception handling state when a RES bit is sampled recessive as defined in

			ISO 11898-1.
Flexible Data (FD) > Payload Overflow	• Reject • Truncate	Reject	Configure whether received messages larger than the destination buffer should be truncated or rejected.
Reception > Message Buffers > Number of Buffers	RX Message Buffer number must be an integer between 0 and 32.	0	Number of message buffers available for reception. As there is no interrupt for message buffer reception it is recommended to use RX FIFOs instead. Set this value to 0 to disable RX Message Buffers.
Reception > Message Buffers > Payload Size	• 8 bytes • 12 bytes • 16 bytes • 20 bytes • 24 bytes • 32 bytes • 48 bytes • 64 bytes	8 bytes	Payload size for all RX Message Buffers.
Reception > FIFOs > FIFO 0 > Enable	• Enabled • Disabled	Enabled	Enable or disable RX FIFO 0.
Reception > FIFOs > FIFO 0 > Interrupt Mode	MCU Specific Options		Set the interrupt mode for RX FIFO 0. Threshold mode will only fire an interrupt each time an incoming message crosses the threshold value set below.
Reception > FIFOs > FIFO 0 > Interrupt Threshold	MCU Specific Options		Set the interrupt threshold value for RX FIFO 0. This setting is only applicable when the Interrupt Mode is set to 'At Threshold Value'.
Reception > FIFOs > FIFO 0 > Payload Size	MCU Specific Options		Select the message payload size for RX FIFO 0.
Reception > FIFOs > FIFO 0 > Depth	MCU Specific Options		Select the number of stages for RX FIFO 0.

Reception > FIFOs > FIFO 1 > Enable	• Enabled • Disabled	Disabled	Enable or disable RX FIFO 1.
Reception > FIFOs > FIFO 1 > Interrupt Mode	MCU Specific Options		Set the interrupt mode for RX FIFO 1. Threshold mode will only fire an interrupt each time an incoming message crosses the threshold value set below.
Reception > FIFOs > FIFO 1 > Interrupt Threshold	MCU Specific Options		Set the interrupt threshold value for RX FIFO 1. This setting is only applicable when the Interrupt Mode is set to 'At Threshold Value'.
Reception > FIFOs > FIFO 1 > Payload Size	MCU Specific Options		Select the message payload size for RX FIFO 1.
Reception > FIFOs > FIFO 1 > Depth	MCU Specific Options		Select the number of stages for RX FIFO 1.
Reception > FIFOs > FIFO 2 > Enable	• Enabled • Disabled	Disabled	Enable or disable RX FIFO 2.
Reception > FIFOs > FIFO 2 > Interrupt Mode	MCU Specific Options		Set the interrupt mode for RX FIFO 2. Threshold mode will only fire an interrupt each time an incoming message crosses the threshold value set below.
Reception > FIFOs > FIFO 2 > Interrupt Threshold	MCU Specific Options		Set the interrupt threshold value for RX FIFO 2. This setting is only applicable when the Interrupt Mode is set to 'At Threshold Value'.
Reception > FIFOs > FIFO 2 > Payload Size	MCU Specific Options		Select the message payload size for RX FIFO 2.
Reception > FIFOs > FIFO 2 > Depth	MCU Specific Options		Select the number of stages for RX FIFO 2.
Reception > FIFOs > FIFO 3 > Enable	• Enabled • Disabled	Disabled	Enable or disable RX FIFO 3.
Reception > FIFOs > FIFO 3 > Interrupt	MCU Specific Options		Set the interrupt mode for RX FIFO 3.

Mode			Threshold mode will only fire an interrupt each time an incoming message crosses the threshold value set below.
Reception > FIFOs > FIFO 3 > Interrupt Threshold	MCU Specific Options		Set the interrupt threshold value for RX FIFO 3. This setting is only applicable when the Interrupt Mode is set to 'At Threshold Value'.
Reception > FIFOs > FIFO 3 > Payload Size	MCU Specific Options		Select the message payload size for RX FIFO 3.
Reception > FIFOs > FIFO 3 > Depth	MCU Specific Options		Select the number of stages for RX FIFO 3.
Reception > FIFOs > FIFO 4 > Enable	• Enabled • Disabled	Disabled	Enable or disable RX FIFO 4.
Reception > FIFOs > FIFO 4 > Interrupt Mode	MCU Specific Options		Set the interrupt mode for RX FIFO 4. Threshold mode will only fire an interrupt each time an incoming message crosses the threshold value set below.
Reception > FIFOs > FIFO 4 > Interrupt Threshold	MCU Specific Options		Set the interrupt threshold value for RX FIFO 4. This setting is only applicable when the Interrupt Mode is set to 'At Threshold Value'.
Reception > FIFOs > FIFO 4 > Payload Size	MCU Specific Options		Select the message payload size for RX FIFO 4.
Reception > FIFOs > FIFO 4 > Depth	MCU Specific Options		Select the number of stages for RX FIFO 4.
Reception > FIFOs > FIFO 5 > Enable	• Enabled • Disabled	Disabled	Enable or disable RX FIFO 5.
Reception > FIFOs > FIFO 5 > Interrupt Mode	MCU Specific Options		Set the interrupt mode for RX FIFO 5. Threshold mode will only fire an interrupt each time an incoming message crosses the threshold value set

			below.
Reception > FIFOs > FIFO 5 > Interrupt Threshold	MCU Specific Options		Set the interrupt threshold value for RX FIFO 5. This setting is only applicable when the Interrupt Mode is set to 'At Threshold Value'.
Reception > FIFOs > FIFO 5 > Payload Size	MCU Specific Options		Select the message payload size for RX FIFO 5.
Reception > FIFOs > FIFO 5 > Depth	MCU Specific Options		Select the number of stages for RX FIFO 5.
Reception > FIFOs > FIFO 6 > Enable	• Enabled • Disabled	Disabled	Enable or disable RX FIFO 6.
Reception > FIFOs > FIFO 6 > Interrupt Mode	MCU Specific Options		Set the interrupt mode for RX FIFO 6. Threshold mode will only fire an interrupt each time an incoming message crosses the threshold value set below.
Reception > FIFOs > FIFO 6 > Interrupt Threshold	MCU Specific Options		Set the interrupt threshold value for RX FIFO 6. This setting is only applicable when the Interrupt Mode is set to 'At Threshold Value'.
Reception > FIFOs > FIFO 6 > Payload Size	MCU Specific Options		Select the message payload size for RX FIFO 6.
Reception > FIFOs > FIFO 6 > Depth	MCU Specific Options		Select the number of stages for RX FIFO 6.
Reception > FIFOs > FIFO 7 > Enable	• Enabled • Disabled	Disabled	Enable or disable RX FIFO 7.
Reception > FIFOs > FIFO 7 > Interrupt Mode	MCU Specific Options		Set the interrupt mode for RX FIFO 7. Threshold mode will only fire an interrupt each time an incoming message crosses the threshold value set below.
Reception > FIFOs > FIFO 7 > Interrupt Threshold	MCU Specific Options		Set the interrupt threshold value for RX FIFO 7. This setting is

			only applicable when the Interrupt Mode is set to 'At Threshold Value'.
Reception > FIFOs > FIFO 7 > Payload Size	MCU Specific Options		Select the message payload size for RX FIFO 7.
Reception > FIFOs > FIFO 7 > Depth	MCU Specific Options		Select the number of stages for RX FIFO 7.
Reception > FIFOs > Interrupt Priority	MCU Specific Options		This priority level will apply to all FIFO interrupts globally.
Reception > Acceptance Filtering > Channel 0 Rule Count	The number of AFL rules must be an integer between 0 and 128.	32	Number of acceptance filter list rules dedicated to Channel 0.
Reception > Acceptance Filtering > Channel 1 Rule Count	The number of AFL rules must be an integer between 0 and 128.	0	Number of acceptance filter list rules dedicated to Channel 1.
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Transmission Priority	• Message ID • Buffer Number	Buffer Number	Select how messages should be prioritized for transmission. In either case, lower numbers indicate higher priority.
DLC Check	• Disabled • Enabled • Enabled w/truncate	config.driver.canfd.dlc_check.disabled	When enabled received messages will be rejected if their DLC field is less than the value configured in the associated AFL rule. If 'Enabled w/truncate' is selected and a message passes the DLC check the DLC field is set to the value in the associated AFL rule and any excess data is discarded.

Configurations for Connectivity > CAN FD (r_canfd)

This module can be added to the Stacks tab via New Stack > Connectivity > CAN FD (r_canfd). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_canfd0	Module name.
General > Channel	Channel should be 0 or 1	0	Specify the CAN channel to use.
Bitrate > Automatic > Nominal Rate (bps)	Must be a valid integer with a maximum of 1MHz.	500000	Specify nominal bitrate in bits per second.
Bitrate > Automatic > Data Rate (bps)	Must be a valid integer greater than 0.	2000000	Specify data bitrate in bits per second.
Bitrate > Automatic > Sample Point (%)	Must be a valid integer between 60 and 99.	75	Specify desired sample point.
Bitrate > Manual > Nominal > Prescaler (divisor)	Value must be a non-negative integer between 1 and 1024.	1	Specify clock divisor for nominal bitrate.
Bitrate > Manual > Nominal > Time Segment 1 (Tq)	Value must be a non-negative integer between 2 and 256.	29	Select the Time Segment 1 value. Check module usage notes for how to calculate this value.
Bitrate > Manual > Nominal > Time Segment 2 (Tq)	Value must be a non-negative integer between 2 and 128.	10	Select the Time Segment 2 value. Check module usage notes for how to calculate this value.
Bitrate > Manual > Nominal > Sync Jump Width (Tq)	Value must be a non-negative integer between 1 and 128.	4	Select the Synchronization Jump Width value. Check module usage notes for how to calculate this value.
Bitrate > Manual > Data > Prescaler (divisor)	Value must be a non-negative integer between 1 and 1024.	1	Specify clock divisor for data bitrate.
Bitrate > Manual > Data > Time Segment 1 (Tq)	Value must be a non-negative integer between 2 and 256.	5	Select the Time Segment 1 value. Check module usage notes for how to calculate this value.
Bitrate > Manual > Data > Time Segment 2 (Tq)	Value must be a non-negative integer between 2 and 128.	2	Select the Time Segment 2 value. Check module usage notes for how to calculate this value.
Bitrate > Manual > Data > Sync Jump Width (Tq)	Value must be a non-negative integer between 1 and 128.	1	Select the Synchronization Jump Width value. Check

			module usage notes for how to calculate this value.
Bitrate > Manual > Use manual settings	• Yes • No	No	Select whether or not to override automatic baudrate generation and instead use the values specified here.
Bitrate > Delay Compensation	• Enable • Disable	Enable	When enabled the CANFD module will automatically compensate for any transceiver or bus delay between transmitted and received bits. When manually supplying bit timing values with delay compensation enabled be sure the data prescaler is 2 or smaller for correct operation.
Interrupts > Callback	Name must be a valid C symbol	canfd0_callback	A user callback function. If this callback function is provided, it is called from the interrupt service routine (ISR) each time any interrupt occurs.
Interrupts > Channel Interrupt Priority Level	MCU Specific Options		Channel Error/Transmit interrupt priority.
Transmit Interrupts	MCU Specific Options		Select which TX Message Buffers should trigger an interrupt when transmission is complete.
Channel Error Interrupts	• Error Warning • Error Passive • Bus-Off Entry • Bus-Off Recovery • Overload	0U	Select which channel error interrupt sources to enable.
Filter List Array	Name must be a valid C symbol	p_canfd0_afl	Acceptance Filter List (AFL) rule array symbol name.

Clock Configuration

The CANFD peripheral uses either PLL, PLL2 or the main oscillator as its clock source. The RA Configuration editor will attempt to get as close as possible to the supplied bitrate with the

configured clock source. To achieve an exact bitrate the CANFD source clock or divisor may need to be adjusted to meet the criteria in the formula below:

```
bitrate = canfd_clock_hz / ((time_segment_1 + time_segment_2 + 1) * prescalar)
```

For CANFD, the possible values for each element are as follows:

Element	Min	Max (Nominal)	Max (Data)
Bitrate	-	1 Mbps	5-8 Mbps*
Time Segment 1	2 Tq	256 Tq	32 Tq
Time Segment 2	2 Tq	128 Tq	16 Tq
Sync Jump Width	1 Tq	Time Segment 2	Time Segment 2
Prescalar	1	1024	256

- RA6M5 supports up to 8 Mbps; RA6T2 supports up to 5 Mbps.

Use the **Clocks** tab of the RA Configuration editor to configure the CANFD clock source/divisor as well as to set the frequency of PLL or PLL2. To change the clock frequency at run-time, use the CGC Interface. Refer to the CGC module guide for more information on configuring clocks.

Pin Configuration

CANFD channels each control two pins: CRX (receive) and CTX (transmit).

Usage Notes

Buffers

The CANFD driver provides three types of buffers: Transmit Message Buffers (TX MBs), Receive Message Buffers (RX MBs) and Receive FIFOs (RX FIFOs).

TX Message Buffers

TX MBs are used for transmission only. Refer to the hardware manual for your device for information on which TX MBs are available.

Note

The CANFD peripheral continually scans TX MBs for new data. Depending on the provided clock it may be possible to write to multiple TX MBs before transmission begins. In this case, messages will be sent in the priority specified by the Transmission Priority option in the RA Configuration editor.

RX Message Buffers

RX MBs are for reception only and may only hold one message at a time. 32 total RX MBs are available and are shared across all channels.

No interrupts are provided for RX MBs. Use R_CANFD_InfoGet and R_CANFD_Read to poll and read them, respectively.

RX FIFOs

RX FIFOs provide interrupt-driven queue functionality for receiving messages and are shared across all channels. All FIFOs have the following capabilities:

- Up to 64 byte payloads
- Up to 48 (RA6T2) or 128 (RA6M5) message capacity
- Interrupt events:
  - On every received frame OR when filled to a specified fraction of its capacity
  - When a message is overwritten (message received on full FIFO)

Once an interrupt is fired it will continue to fire until the FIFO is emptied and all messages have been passed to user code via the callback. When using the threshold interrupt mode a FIFO can be checked for data and read between interrupts by calling R_CANFD_InfoGet and R_CANFD_Read, respectively.

RX Buffer Pool

The CANFD peripheral has a limited amount of buffer pool RAM available for allocating RX MBs and FIFO stages. The RA Configuration editor will provide a warning when the limit is exceeded.

The number of bytes used by RX MBs and individual FIFOs can be calculated as follows:

```
Total RX MB bytes used = (number of RX MBs enabled) * (RX MB payload size + 12 header bytes)
RX FIFO bytes used = (number of FIFO stages) * (FIFO payload size + 12 header bytes)
```

Message Filtering (Acceptance Filter List)

To filter messages to the desired message buffer or FIFO the CANFD peripheral uses an Acceptance Filter List (AFL). Each entry in the AFL provides a rule to check a message against along with destination and other filtering information. When a message is received the CANFD peripheral internally checks against every configured AFL rule for the channel. If a match is found the message is transferred to the destination(s) specified in the rule. The default template with one entry is shown below:

```
static const canfd_afl_entry_t p_canfd0_afl[CANFD_CFG_AFL_CH0_RULE_NUM] =
{
    {
       .id =
      {
 /* Specify the ID, ID type and frame type to accept. */
            .id         = 0x00000000,
            .frame_type = CAN_FRAME_TYPE_DATA,
            .id_mode    = CAN_ID_MODE_EXTENDED,
       },
```

```
       .mask =
      {
 /* These values mask which ID/mode bits to compare when filtering messages. */
            .mask_id         = 0x1FFFFFFF,
            .mask_frame_type = 1,
            .mask_id_mode    = 1,
       },
       .destination =
      {
 /* If DLC checking is enabled any messages shorter than the below setting will be
rejected. */
            .minimum_dlc = CANFD_MINIMUM_DLC_0,
 /* Optionally specify a Receive Message Buffer (RX MB) to store accepted frames. RX
MBs do not have an
  * interrupt or overwrite protection and must be checked with R_CANFD_InfoGet and
R_CANFD_Read. */
            .rx_buffer   = CANFD_RX_MB_NONE,
 /* Specify which FIFO(s) to send filtered messages to. Multiple FIFOs can be OR'd
together. */
            .fifo_select_flags = CANFD_RX_FIFO_0,
       }
    }
};
```

AFL templates can be easily added to a project using the Developer Assistance feature in e2 studio. Once the CANFD module is added to a project, drag and drop the elements circled below to build a filter list:

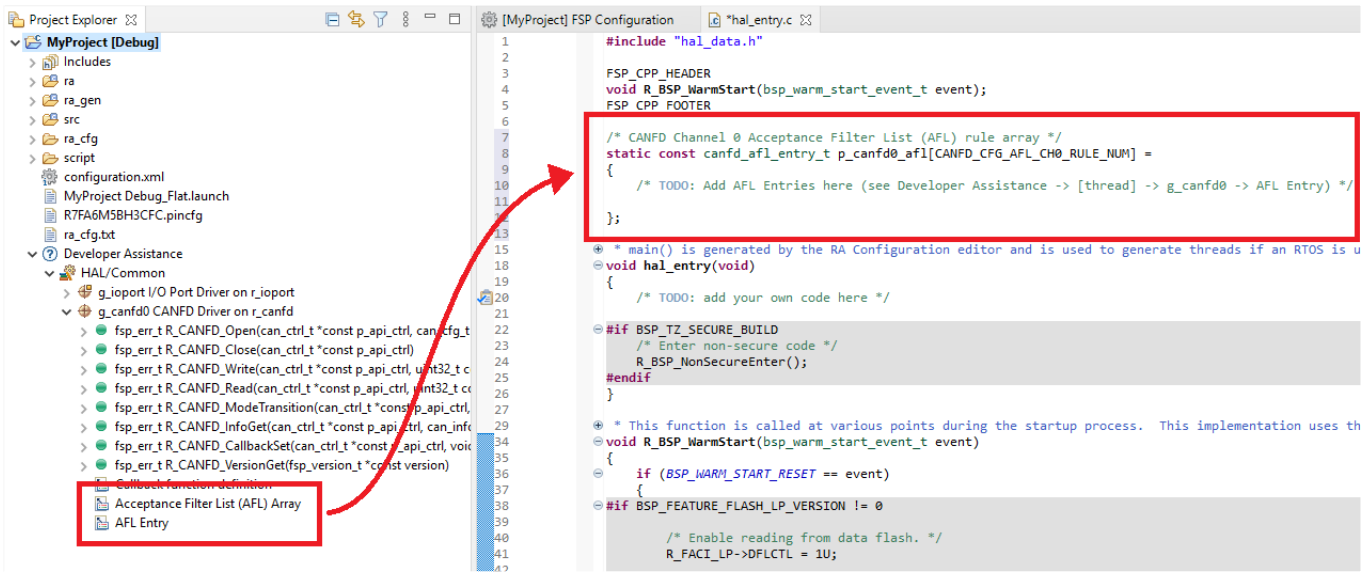

Figure 150: CANFD Developer Assistance AFL Templates

For an example configuration refer to the AFL Example below.

Flexible Data (FD)

Flexible Data is an extension of the CAN protocol allowing for messages up to 64 bytes and higher data bitrates, among other features. The CANFD driver supports the following:

- Sending and receiving FD messages
- Bitrate switching for data phase
- Manual and automatic setting of the error state (ESI) bit

To specify one or more of these options when transmitting set can_frame_t::options with combined values from canfd_frame_options_t. Received messages will automatically have this field filled, if applicable.

```
/* Configure a frame to write 64 bytes with bitrate switching (BRS) enabled */
   g_can_tx_frame.id              = CAN_EXAMPLE_ID;
   g_can_tx_frame.id_mode         = CAN_ID_MODE_STANDARD;
   g_can_tx_frame.type            = CAN_FRAME_TYPE_DATA;
   g_can_tx_frame.data_length_code = CAN_EXAMPLE_64_BYTES;
   g_can_tx_frame.options         = CANFD_FRAME_OPTION_FD | CANFD_FRAME_OPTION_BRS;
```

Note

When using bitrate switching be sure to configure the Data Bitrate as desired in the RA Configuration editor.

Bit Rate Calculation

For convenience, the baudrate of the CAN peripheral is automatically set through the RA

Configuration editor using a best effort approach. To increase compliance and reliability two extra options are provided: Link Prescalers and Delay Compensation.

When Link Prescalers is enabled the prescalers for Nominal and Data bitrates will be kept the same, improving clock tolerance in networks using FD frames. This option somewhat limits the available options for bitrate settings, so be sure to check that the automatically generated values are acceptable.

Enabling Delay Compensation instructs the CANFD peripheral to measure TX to RX tranceiver delay and automatically adjust for it, improving the reliability of high-speed FD messages. This option may severely limit available bitrate settings depending on the source clock; it is highly recommended to check the generated values when enabled.

If the auto-generated baud settings cause deviation that is not tolerable by the application the user can override the auto-generated settings and put in manually calculated values through the RA Configuration editor. For more details on how the bitrate is calculated refer to the Clock Configuration section above.

Sync Jump Width

The Sync Jump Width option specifies the maximum number of time quanta that the sample point may be delayed by to account for differences in oscillators on the bus. It should be set to a value between 1 and the configured Time Segment 2 value depending on the maximum permissible clock error.

Error Handling

The CANFD peripheral provides two types of error interrupts: Channel and Global. As the names imply, each channel has its own Channel Error interrupt but there is only one Global Error interrupt. Only the configured channel will receive callbacks for Global Errors.

Error interrupt callbacks will pass either CAN_EVENT_ERR_CHANNEL or CAN_EVENT_ERR_GLOBAL in the can_callback_args_t::event field. A second field, can_callback_args_t::error, provides the actual error code as canfd_error_t. Cast to this enum to retrieve the error condition. See the callback in the Basic Example below for a demonstration.

DLC Checking

When DLC Checking is enabled messages are checked against the destination.minimum_dlc value of each AFL rule. If the data length of a message is less than this value the message will be rejected. When DLC checking is set to "Enabled w/truncate" in the RA Configuration editor any data in excess of the minimum DLC setting will be truncated and the DLC value for the frame will be set to match.

FD Payload Overflow

When an FD message is received with a DLC larger than the destination buffer an FD Payload Overflow interrupt is thrown (if configured). When Payload Overflow is set to "Truncate" the message will still be accepted but only data up to the buffer capacity will be preserved. The DLC value is unchanged in this case; any data beyond this value in the can_frame_t::data array should not be used.

Test Modes

The CANFD peripheral provides three basic test modes: Listen Only, Internal Loopback and External Loopback. Use R_CANFD_ModeTransition to switch to a test mode.

On some MCUs an additional "Internal Bus" test mode is available that allows connecting both CANFD channels together on an internal bus, effectively creating an internal CAN network. See the Internal Bus example below for details.

Limitations

Developers should be aware of the following limitations when using CANFD:

- On RA6M5, RX Message Buffers do not have an associated interrupt. To use them in an application one of the following is recommended:
  - Use R_CANFD_InfoGet to determine if any RX MBs have received data, then use R_CANFD_Read to obtain it
  - Select an RX FIFO as an additional destination for the relevant filter rules and configure the FIFO interrupt/callback as desired
- The CANFD peripheral has a limited amount of buffer pool RAM available for allocating RX MBs and FIFO stages. See the RX Buffer Pool section above for more information.
- When switching modes with R_CANFD_ModeTransition a delay of up to several CAN frames may be incurred. Consult Section 32.3.4.2 "Timing of Channel Mode Change" in the RA6M5 User's Manual (R01UH0891EJ0100) for details.
- Only one channel will receive callbacks for Global Errors. If a different channel is opened first these error interrupts will be suppressed until the specified handler channel is opened.

Examples

AFL Example

The below is an example Acceptance Filter List (AFL) declaration with two rules.

```
const canfd_afl_entry_t p_canfd0_afl[CANFD_CFG_AFL_CH1_RULE_NUM] =
{
 /* Store all data frames with at least 4 bytes from Standard IDs 0x40-0x4F in RX
FIFO 0 and RX FIFO 1 */
    {
       .id =
      {
            .id         = 0x40,
            .frame_type = CAN_FRAME_TYPE_DATA,
            .id_mode    = CAN_ID_MODE_STANDARD
       },
       .mask =
      {
            .mask_id         = 0x7F0,
            .mask_frame_type = 1,
            .mask_id_mode    = 1
```

```
      },
      .destination =
     {
           .minimum_dlc       = CANFD_MINIMUM_DLC_4,
           .rx_buffer         = CANFD_RX_MB_NONE,
           .fifo_select_flags = (canfd_rx_fifo_t) (CANFD_RX_FIFO_0 |
CANFD_RX_FIFO_1)
      }
   },
 /* Store all frames from Extended ID 0x1100 in RX FIFO 2 and RX MB 0 */
   {
      .id =
     {
           .id         = 0x1100,
           .frame_type = CAN_FRAME_TYPE_DATA, // This setting is ignored by the mask
           .id_mode    = CAN_ID_MODE_EXTENDED
      },
      .mask =
     {
           .mask_id         = 0x1FFFFFFF,
           .mask_frame_type = 0,
           .mask_id_mode    = 1
      },
      .destination =
     {
           .minimum_dlc       = CANFD_MINIMUM_DLC_0,
           .rx_buffer         = CANFD_RX_MB_0,
           .fifo_select_flags = CANFD_RX_FIFO_2
      }
   }
};
```

Basic Example

This is a basic example of minimal use of the CANFD module in an application.

Note

On RA6M5 it is recommended to use RX FIFOs for reception as there are no interrupts for RX message buffers.

```
#define CAN_EXAMPLE_ID (0x20)
can_frame_t g_can_tx_frame;
can_frame_t g_can_rx_frame;
volatile canfd_error_t g_err_status = (canfd_error_t) 0;
void canfd_callback (can_callback_args_t * p_args)
{
 switch (p_args->event)
    {
 case CAN_EVENT_RX_COMPLETE:    /* Receive complete event. */
     {
 /* Read received frame */
           memcpy(&g_can_rx_frame, p_args->p_frame, sizeof(can_frame_t));
 /* Handle event */
 break;
      }
 case CAN_EVENT_TX_COMPLETE:    /* Transmit complete event. */
     {
 /* Handle event */
 break;
      }
 case CAN_EVENT_ERR_GLOBAL:                      /* Global error. */
 case CAN_EVENT_ERR_CHANNEL:                    /* Channel error. */
     {
 /* Get error status */
           g_err_status = (canfd_error_t) p_args->error; /* Check error code with
canfd_error_t. */
 /* Handle event */
 break;
      }
 default:
     {
 break;
```

```
      }
   }
}
void canfd_basic_example (void)
{
 fsp_err_t err;
 /* Initialize the CAN module */
   err = R_CANFD_Open(&g_canfd0_ctrl, &g_canfd0_cfg);
 /* Handle any errors. This function should be defined by the user. */
   assert(FSP_SUCCESS == err);
 /* Setup frame to write to CAN ID 0x20 */
   g_can_tx_frame.id              = CAN_EXAMPLE_ID;
   g_can_tx_frame.id_mode         = CAN_ID_MODE_STANDARD;
   g_can_tx_frame.type            = CAN_FRAME_TYPE_DATA;
   g_can_tx_frame.data_length_code = 8;
   g_can_tx_frame.options         = 0;
 /* Write some data to the transmit frame */
 for (uint32_t i = 0; i < 8; i++)
   {
      g_can_tx_frame.data[i] = (uint8_t) i;
   }
 /* Send data on the bus */
   err = R_CANFD_Write(&g_canfd0_ctrl, CANFD_TX_MB_0, &g_can_tx_frame);
   assert(FSP_SUCCESS == err);
 /* Wait for a transmit callback event */
}
```

Flexible Data

This example demonstrates sending an FD message with bitrate switching over external loopback. The CTX and CRX pins must be connected when using external loopback, though if a CAN tranciever is onboard a 120 Ohm resistor should be connected across CANH and CANL instead.

```
#define CAN_EXAMPLE_64_BYTES 64
void canfd_fd_loopback_example (void)
{
```

```
fsp_err_t err;
   err = R_CANFD_Open(&g_canfd0_ctrl, &g_canfd0_cfg);
/* Handle any errors. This function should be defined by the user. */
   assert(FSP_SUCCESS == err);
/* Switch to external loopback mode */
   err = R_CANFD_ModeTransition(&g_canfd0_ctrl, CAN_OPERATION_MODE_NORMAL,
CAN_TEST_MODE_LOOPBACK_EXTERNAL);
   assert(FSP_SUCCESS == err);
/* Configure a frame to write 64 bytes with bitrate switching (BRS) enabled */
   g_can_tx_frame.id              = CAN_EXAMPLE_ID;
   g_can_tx_frame.id_mode         = CAN_ID_MODE_STANDARD;
   g_can_tx_frame.type            = CAN_FRAME_TYPE_DATA;
   g_can_tx_frame.data_length_code = CAN_EXAMPLE_64_BYTES;
   g_can_tx_frame.options         = CANFD_FRAME_OPTION_FD | CANFD_FRAME_OPTION_BRS;
/* Write some data to the transmit frame */
for (uint32_t i = 0; i < CAN_DATA_BUFFER_LENGTH; i++)
   {
      g_can_tx_frame.data[i] = (uint8_t) i;
   }
/* Send data on the bus */
   err = R_CANFD_Write(&g_canfd0_ctrl, CANFD_TX_MB_0, &g_can_tx_frame);
   assert(FSP_SUCCESS == err);
/* Wait for a transmit and/or receive callback event */
}
```

Internal Bus

In this example two CANFD channels are connected to the Internal Bus test mode. API error checking has been omitted for clarity.

Note

Internal Bus mode is only available on MCUs with more than one CANFD channel. In addition, use of Global Modes for any other purpose is not recommended without consulting the device User's Manual.

Data Structure Documentation

◆ canfd_afl_entry_t

struct canfd_afl_entry_t
AFL Entry (based on R_CANFD_CFDGAFL_Type in renesas.h)

◆ canfd_global_cfg_t

struct canfd_global_cfg_t		
CANFD Global Configuration		
Data Fields		
uint32_t	global_interrupts	Global control options (CFDGCTR register setting)
uint32_t	global_config	Global configuration options (CFDGCFG register setting)
uint32_t	rx_fifo_config[8]	RX FIFO configuration (CFDRFCCn register settings)
uint32_t	rx_mb_config	Number and size of RX Message Buffers (CFDRMNB register setting)
uint8_t	global_err_ipl	Global Error interrupt priority.
uint8_t	rx_fifo_ipl	RX FIFO interrupt priority.

◆ canfd_extended_cfg_t

struct canfd_extended_cfg_t		
CANFD Extended Configuration		
Data Fields		
canfd_afl_entry_t const *	p_afl	AFL rules list.
uint64_t	txmb_txi_enable	Array of TX Message Buffer enable bits.
uint32_t	error_interrupts	Error interrupt enable bits.
can_bit_timing_cfg_t *	p_data_timing	FD Data Rate (when bitrate switching is used)
uint8_t	delay_compensation	FD Transceiver Delay Compensation (enable or disable)
canfd_global_cfg_t *	p_global_cfg	Global configuration (global error callback channel only)

Enumeration Type Documentation

◆ canfd_status_t

enum canfd_status_t	
CANFD Status	
Enumerator	
CANFD_STATUS_RESET_MODE	Channel in Reset mode.
CANFD_STATUS_HALT_MODE	Channel in Halt mode.
CANFD_STATUS_SLEEP_MODE	Channel in Sleep mode.
CANFD_STATUS_ERROR_PASSIVE	Channel in error-passive state.
CANFD_STATUS_BUS_OFF	Channel in bus-off state.
CANFD_STATUS_TRANSMITTING	Channel is transmitting.
CANFD_STATUS_RECEIVING	Channel is receiving.
CANFD_STATUS_READY	Channel is ready for communication.
CANFD_STATUS_ESI	At least one CAN-FD message was received with the ESI flag set.

◆ canfd_error_t

enum canfd_error_t	
CANFD Error Code	
Enumerator	
CANFD_ERROR_CHANNEL_BUS	Bus Error.
CANFD_ERROR_CHANNEL_WARNING	Error Warning (TX/RX error count over 0x5F)
CANFD_ERROR_CHANNEL_PASSIVE	Error Passive (TX/RX error count over 0x7F)
CANFD_ERROR_CHANNEL_BUS_OFF_ENTRY	Bus-Off State Entry.
CANFD_ERROR_CHANNEL_BUS_OFF_RECOVERY	Recovery from Bus-Off State.
CANFD_ERROR_CHANNEL_OVERLOAD	Overload.
CANFD_ERROR_CHANNEL_BUS_LOCK	Bus Locked.
CANFD_ERROR_CHANNEL_ARBITRATION_LOSS	Arbitration Lost.
CANFD_ERROR_CHANNEL_STUFF	Stuff Error.
CANFD_ERROR_CHANNEL_FORM	Form Error.
CANFD_ERROR_CHANNEL_ACK	ACK Error.
CANFD_ERROR_CHANNEL_CRC	CRC Error.
CANFD_ERROR_CHANNEL_BIT_RECESSIVE	Bit Error (recessive) Error.
CANFD_ERROR_CHANNEL_BIT_DOMINANT	Bit Error (dominant) Error.
CANFD_ERROR_CHANNEL_ACK_DELIMITER	ACK Delimiter Error.
CANFD_ERROR_GLOBAL_DLC	DLC Error.
CANFD_ERROR_GLOBAL_MESSAGE_LOST	Message Lost.
CANFD_ERROR_GLOBAL_PAYLOAD_OVERFLOW	FD Payload Overflow.
CANFD_ERROR_GLOBAL_TXQ_OVERWRITE	TX Queue Message Overwrite.
CANFD_ERROR_GLOBAL_TXQ_MESSAGE_LOST	TX Queue Message Lost.
CANFD_ERROR_GLOBAL_CH0_SCAN_FAIL	Channel 0 RX Scan Failure.

CANFD_ERROR_GLOBAL_CH1_SCAN_FAIL	Channel 1 RX Scan Failure.
CANFD_ERROR_GLOBAL_CH0_ECC	Channel 0 ECC Error.
CANFD_ERROR_GLOBAL_CH1_ECC	Channel 1 ECC Error.

◆ canfd_tx_mb_t

enum canfd_tx_mb_t
CANFD Transmit Message Buffer (TX MB)

◆ canfd_rx_buffer_t

enum canfd_rx_buffer_t
CANFD Receive Buffer (MB + FIFO)

◆ canfd_rx_mb_t

enum canfd_rx_mb_t
CANFD Receive Message Buffer (RX MB)

◆ canfd_rx_fifo_t

enum canfd_rx_fifo_t
CANFD Receive FIFO (RX FIFO)

◆ canfd_minimum_dlc_t

enum canfd_minimum_dlc_t
CANFD AFL Minimum DLC settings

◆ canfd_frame_options_t

enum canfd_frame_options_t	
CANFD Frame Options	
Enumerator	
CANFD_FRAME_OPTION_ERROR	Error state set (ESI).
CANFD_FRAME_OPTION_BRS	Bit Rate Switching (BRS) enabled.
CANFD_FRAME_OPTION_FD	Flexible Data frame (FDF).

Function Documentation

◆ R_CANFD_Open()

fsp_err_t R_CANFD_Open (can_ctrl_t *const *p_api_ctrl*, can_cfg_t const *const *p_cfg*)

Open and configure the CANFD channel for operation.

Example:

```
/* Initialize the CAN module */
   err = R_CANFD_Open(&g_canfd0_ctrl, &g_canfd0_cfg);
```

Return values

FSP_SUCCESS	Channel opened successfully.
FSP_ERR_ALREADY_OPEN	Driver already open.
FSP_ERR_IN_USE	Channel is already in use.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	Channel does not exist on this MCU.
FSP_ERR_ASSERTION	A required pointer was NULL.
FSP_ERR_CAN_INIT_FAILED	The provided nominal or data bitrate is invalid.
FSP_ERR_CLOCK_INACTIVE	CANFD source clock is disabled (PLL or PLL2).

◆ R_CANFD_Close()

fsp_err_t R_CANFD_Close (can_ctrl_t *const *p_api_ctrl*)

Close the CANFD channel.

Return values

FSP_SUCCESS	Channel closed successfully.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_ASSERTION	Null pointer presented.

◆ R_CANFD_Write()

fsp_err_t R_CANFD_Write (can_ctrl_t *const *p_api_ctrl*, uint32_t *buffer*, can_frame_t *const *p_frame*)

Write data to the CANFD channel.

Example:

```
/* Send data on the bus */
   err = R_CANFD_Write(&g_canfd0_ctrl, CANFD_TX_MB_0, &g_can_tx_frame);
   assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_CAN_TRANSMIT_NOT_READY	Transmit in progress, cannot write data at this time.
FSP_ERR_INVALID_ARGUMENT	Data length or buffer number invalid.
FSP_ERR_INVALID_MODE	An FD option was set on a non-FD frame.
FSP_ERR_ASSERTION	Null pointer presented

◆ R_CANFD_Read()

fsp_err_t R_CANFD_Read (can_ctrl_t *const *p_api_ctrl*, uint32_t *buffer*, can_frame_t *const *p_frame*)

Read data from a CANFD Message Buffer or FIFO.

Example: snippet r_canfd_example.c R_CANFD_Read

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_INVALID_ARGUMENT	Buffer number invalid.
FSP_ERR_ASSERTION	p_api_ctrl or p_frame is NULL.
FSP_ERR_BUFFER_EMPTY	Buffer or FIFO is empty.

◆ R_CANFD_ModeTransition()

fsp_err_t R_CANFD_ModeTransition (can_ctrl_t *const *p_api_ctrl*, can_operation_mode_t *operation_mode*, can_test_mode_t *test_mode*)

Switch to a different channel, global or test mode.

Example:

```
/* Switch to external loopback mode */
   err = R_CANFD_ModeTransition(&g_canfd0_ctrl, CAN_OPERATION_MODE_NORMAL,
CAN_TEST_MODE_LOOPBACK_EXTERNAL);
   assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_ASSERTION	Null pointer presented
FSP_ERR_INVALID_MODE	Cannot change to the requested mode from the current global mode.

◆ R_CANFD_InfoGet()

fsp_err_t R_CANFD_InfoGet (can_ctrl_t *const *p_api_ctrl*, can_info_t *const *p_info*)

Get CANFD state and status information for the channel.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_ASSERTION	Null pointer presented

◆ R_CANFD_CallbackSet()

fsp_err_t R_CANFD_CallbackSet (can_ctrl_t *const *p_api_ctrl*, void(*)(can_callback_args_t *) *p_callback*, void const *const *p_context*, can_callback_args_t *const *p_callback_memory*)

Updates the user callback with the option to provide memory for the callback argument structure. Implements can_api_t::callbackSet.

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

Detailed Description

Driver for the CEC peripheral on RA MCUs. This module implements the CEC Interface.

Overview

The HDMI CEC HAL module provides a high-level API for CEC applications and supports the CEC peripheral available on RA microcontroller hardware. A user-callback function must be defined that the driver will invoke when data received, transmission complete, or error interrupts are received. The callback is passed a parameter which indicates the event as well as received data (if available).

Features

- Conforms to High Definition Multimedia Interface (HDMI) Consumer Electronics Control (CEC) standard Ver. 1.4b.
- Full range of local address settings (TV, Recording Device, Playback Device, etc.)
- Data filtering based on matching destination address and local address.
- Supports a user-callback function (required), invoked when transmit, receive, or error interrupts are received.

Configuration

Build Time Configurations for r_cec

The following build time configurations are defined in fsp_cfg/r_cec_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
CEC Message Max Data Size	Manual Entry	14	Maximum Data Size for CEC Message Transmission/Reception.

Configurations for Connectivity > CEC (r_cec)

This module can be added to the Stacks tab via New Stack > Connectivity > CEC (r_cec). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
General > Name	Name must be a valid	g_cec0	Module name

		C symbol	
General > Callback Function	Manual Entry	g_rm_cec0_callback	Callback function
Control Configuration > Clock Select	• PCLKB / 32 • PCLKB / 64 • PCLKB / 128 • PCLKB / 256 • PCLKB / 512 • PCLKB / 1024	PCLKB / 1024	CEC Clock Select Configuration
Control Configuration > Ack Bit Timing Error Enable	• Disabled • Enabled	Enabled	CEC Ack Bit Timing Error Enable
Control Configuration > Signal-Free Time Bit Width	• 3-data bit width • 5-data bit width • 7-data bit width • Does not detect signal-free time.	7-data bit width	Signal-Free Time Data Bit Width Select
Control Configuration > Start Bit Error Detection Enable	• Disabled • Enabled	Enabled	Enable to detect timing errors during start bit reception.
Control Configuration > Bus Lock Detection Enable	• Disabled • Enabled	Enabled	Enable to detect sticking of receive data to high or low.
Control Configuration > Digital Filter Enable	• Disabled • Enabled	Enabled	Enable to use a digital filter.
Control Configuration > Long Bit Width Error Pulse Output Enable	• Disabled • Enabled	Disabled	Enable to output an error handling pulse when a long bit width error is detected.
Control Configuration > Start Detection Reception Restart Enable	• Disabled • Enabled	Enabled	Enable to restart reception after a start bit error is detected.
Bit Width Timing > Transmit > Start Bit Low Time	CEC transmission start bit low width setting must be a positive integer.	180	CEC transmission start bit low width setting (CEC Clock Cycles).
Bit Width Timing > Transmit > Start Bit High Time	CEC transmission start bit high width setting must be a positive integer.	220	CEC transmission start bit high width setting (CEC Clock Cycles).
Bit Width Timing > Transmit > Logical Zero Low Time	CEC transmission logical zero low width setting must be a positive integer.	73	CEC transmission logical zero low width setting (CEC Clock Cycles).
Bit Width Timing >	CEC transmission	29	CEC transmission

Transmit > Logical One Low Time	logical one low width setting must be a positive integer.		logical one low width setting (CEC Clock Cycles).
Bit Width Timing > Transmit > Overall Bit Width Time	CEC transmission overall data bit width time setting must be a positive integer.	117	CEC transmission overall data bit width time setting (CEC Clock Cycles).
Bit Width Timing > Receive > Data Sample Time	CEC reception data sampling time must be a positive integer.	49	CEC reception data sampling time setting (CEC Clock Cycles).
Bit Width Timing > Receive > Data Bit Reference Width	CEC reception data sampling time must be a positive integer.	117	CEC data bit reference width setting (CEC Clock Cycles).
Bit Width Timing > Receive > Start Bit Low Min Time	CEC reception start bit minimum low width setting must be a positive integer.	171	CEC reception start bit minimum low width setting (CEC Clock Cycles). Not used when Start Bit Error Detection and restart Rx on Error are not enabled.
Bit Width Timing > Receive > Start Bit Low Max Time	CEC reception start bit maximum low width setting must be a positive integer.	190	CEC reception start bit maximum low width setting (CEC Clock Cycles). Not used when Start Bit Error Detection and restart Rx on Error are not enabled.
Bit Width Timing > Receive > Start Bit Min Time	CEC start bit minimum time setting must be a positive integer.	210	CEC start bit minimum time setting (CEC Clock Cycles). Not used when Start Bit Error Detection and restart Rx on Error are not enabled.
Bit Width Timing > Receive > Start Bit Max Time	CEC reception start bit maximum time setting must be a positive integer.	229	CEC start bit maximum time setting (CEC Clock Cycles). Not used when Start Bit Error Detection and restart Rx on Error are not enabled.
Bit Width Timing > Receive > Logical Zero Low Min Time	CEC reception logical zero minimum low width setting must be a positive integer.	64	CEC reception logical zero minimum low width setting (CEC Clock Cycles).
Bit Width Timing > Receive > Logical Zero	CEC reception locical zero maximum low	83	CEC reception logical zero maximum low

Low Max Time	width setting must be a positive integer.		width setting (CEC Clock Cycles).
Bit Width Timing > Receive > Logical One Low Min Time	CEC reception logical one minimum low width setting must be a positive integer.	20	CEC reception logical one minimum low width setting (CEC Clock Cycles).
Bit Width Timing > Receive > Logical One Low Max Time	CEC reception logical one maximum low width setting must be a positive integer.	39	CEC reception logical one maximum low width (CEC Clock Cycles).
Bit Width Timing > Receive > Overall Bit Width Min Time	CEC reception overall minimum bit width setting must be a positive integer.	100	CEC reception overall minimum bit width setting (CEC Clock Cycles).
Bit Width Timing > Receive > Overall Bit Width Max Time	CEC reception overall maximum bit width setting must be a positive integer.	134	CEC reception overall maximum bit width setting (CEC Clock Cycles).
Interrupts > Interrupt Priority Level	MCU Specific Options		Error/Data/Message interrupt priority level.
Interrupts > Communication Complete Interrupt Timing	• After Last Frame and Signal Free Time • After Last Frame • After Signal Free Time	After Last Frame and Signal Free Time	Communication Complete Interrupt (INTCE) Generation Timing Select
Interrupts > Address Mismatch Interrupt Enable	• Disabled • Enabled	Disabled	Enable to generate an interrupt when the addresses do not match.
Interrupts > Data Interrupt Timing Selection	• EOM timing (9th bit of data) • ACK Timing (10th bit of data)	EOM timing (9th bit of data)	INTDA reception interrupt timing selection (EOM or ACK).

Clock Configuration

The CEC peripheral uses the CECCLK or PCLKB as its clock source. To set the PCLKB frequency, use the Clocks tab of the RA Configuration editor.

Note

The selected clock and configured divider must be configured in the range of 23.4375 to 78.125 kHz.

Pin Configuration

A CEC channel uses one data pin - CECIO for data transmission and reception.

The output type for each pin should be set to **n-ch open drain** for most hardware designs. This can be configured in **Pins** tab of the RA Configuration editor by selecting the pin under Pin Selection->Ports.

Usage Notes

CEC Device Addresses

The CEC standard provides 13 device addresses that may be requested based on a device's primary function. Use R_CEC_MediaInit to request a specific address before starting communication with other devices.

Note

Address 0 is always the primary display (TV). Do not attempt to allocate this address unless your device is intended to function as a display.

Limitations

Developers should be aware of the following limitations when using the CEC module:

- R_CEC_MediaInit may return FSP_ERR_IN_USE for up to 45 milliseconds after R_CEC_Open while the hardware initializes.
- The CECIO pin must be set to n-ch open drain mode.

Examples

Basic Example

This is a basic example of minimal use of the CEC in an application.

```
/**********************************************************************************
*********************************
 * Application defined callback
 * - May be assigned at compile-time via the e2 Studio configuration tool or set at
run-time via R_CEC_CallbackSet()
 **********************************************************************************
*********************************/
void cec_callback (cec_callback_args_t * p_args)
{
 switch (p_args->event)
    {
 case CEC_EVENT_READY:
      {
 /* Application processing for address allocation success. */
 break;
```

```
      }
 case CEC_EVENT_TX_COMPLETE:
     {
 /* Any required processing after transmission has completed. */
 break;
      }
 case CEC_EVENT_ERR:
     {
 /* Error processing. See cec_error_t for possible errors. */
 break;
      }
 case CEC_EVENT_RX_DATA:
     {
 /* Application to store and process received data bytes. */
 break;
      }
 case CEC_EVENT_RX_COMPLETE:
     {
 /* Application processing for message reception complete. */
      }
   }
}
/***********************************************************************************
*********************************
 * Basic example
 ***********************************************************************************
*********************************/
#define CEC_TIMEOUT_MS (50)
#define CEC_MSG_STANDBY (0X36)  /* See CEC Specification for message definitions */
void basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Open the CEC module */
    err = R_CEC_Open(&g_cec0_ctrl, &g_cec0_cfg);
```

```
    assert(FSP_SUCCESS == err);
 /* Initialize the CEC module and allocate an address */
    uint32_t timeout_ms = CEC_TIMEOUT_MS;
 do
    {
 /* R_CEC_MediaInit may return FSP_ERR_IN_USE for up to 45 milliseconds after calling
R_CEC_Open */
       err = R_CEC_MediaInit(&g_cec0_ctrl, CEC_ADDR_TV);
 R_BSP_SoftwareDelay(1, BSP_DELAY_UNITS_MILLISECONDS);
    } while ((FSP_ERR_IN_USE == err) && --timeout_ms);
    assert(timeout_ms);
    assert(FSP_SUCCESS == err);
 /* Wait for local address allocation and CEC bus to be free */
    cec_status_t status;
    err = R_CEC_StatusGet(&g_cec0_ctrl, &status);
 while ((FSP_SUCCESS == err) && (CEC_STATE_READY != status.state))
    {
      err = R_CEC_StatusGet(&g_cec0_ctrl, &status);
      assert(FSP_SUCCESS == err);
    }
 cec_message_t cec_msg;
    uint8_t       total_transmit_size;
    cec_msg.destination = CEC_ADDR_BROADCAST;       /* For this example, send message
to all devices on the bus */
    cec_msg.opcode      = CEC_MSG_STANDBY;          /* Send Standby Request */
    memset(cec_msg.data, 0U, sizeof(cec_msg.data)); /* See CEC Specification for
other message data structures */
    total_transmit_size = 2U;                      /* Total message size, including
header, opcode, and data */
 /* Send asynchronous message.
  * - Application will then be free for other processing while message is being sent.
  * - Do not modify the message buffer until transmission has completed. */
    err = R_CEC_Write(&g_cec0_ctrl, &cec_msg, total_transmit_size);
    assert(FSP_SUCCESS == err);
```

```
}
```

Function Documentation

◆ R_CEC_Open()

fsp_err_t R_CEC_Open (cec_ctrl_t *const *p_ctrl*, cec_cfg_t const *const *p_cfg*)

Open and configure the CEC module for operation.
Example:
`/* Open the CEC module */`
`err = R_CEC_Open(&g_cec0_ctrl, &g_cec0_cfg);`
`assert(FSP_SUCCESS == err);`
Return values
FSP_SUCCESS — CEC Module opened successfully.
FSP_ERR_ALREADY_OPEN — Driver already open.
FSP_ERR_ASSERTION — An input argument is invalid.
FSP_ERR_IRQ_BSP_DISABLED — Interrupts are not enabled.

◆ R_CEC_MediaInit()

fsp_err_t R_CEC_MediaInit (cec_ctrl_t *const *p_ctrl*, cec_addr_t *local_address*)

Allocate provided CEC Local Address and Initialize the CEC module for operation.

Note

After calling R_CEC_Open this function may return FSP_ERR_IN_USE for up to 45 milliseconds.

Example:

```
/* Initialize the CEC module and allocate an address */
   uint32_t timeout_ms = CEC_TIMEOUT_MS;
do
   {
/* R_CEC_MediaInit may return FSP_ERR_IN_USE for up to 45 milliseconds after calling
R_CEC_Open */
      err = R_CEC_MediaInit(&g_cec0_ctrl, CEC_ADDR_TV);
R_BSP_SoftwareDelay(1, BSP_DELAY_UNITS_MILLISECONDS);
   } while ((FSP_ERR_IN_USE == err) && --timeout_ms);
   assert(timeout_ms);
   assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	CEC Module Initialized successfully.
FSP_ERR_ASSERTION	An input argument is invalid or callback has not been set.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_IN_USE	HDMI CEC Bus is currently in use. Try again later.

◆ R_CEC_Close()

fsp_err_t R_CEC_Close (cec_ctrl_t *const *p_ctrl*)

Close the CEC module.

Return values

FSP_SUCCESS	CEC Module closed successfully.
FSP_ERR_ASSERTION	An input argument is invalid.

◆ R_CEC_Write()

fsp_err_t R_CEC_Write (cec_ctrl_t *const *p_ctrl*, cec_message_t const *const *p_message*, uint32_t *message_size*)

Write data to the CEC bus. Data transmission is asynchronous. Provided message buffer should not be modified until transmission is complete.

Data Transmission follows the pattern defined be the HDMI CEC Specification:

Data	Description	Size
Start Bit	Managed by Hardware, per config	N/A
Header Block	Source/Destination Identifier	1 Byte
Data Block 1	Opcode Value (Optional)	1 Byte
Data Block 2	Operands (Optional)	Variable (0-14 Bytes Typical)

Example:

```
cec_message_t cec_msg;
    uint8_t       total_transmit_size;
    cec_msg.destination = CEC_ADDR_BROADCAST;       /* For this example, send message
to all devices on the bus */
    cec_msg.opcode      = CEC_MSG_STANDBY;          /* Send Standby Request */
    memset(cec_msg.data, 0U, sizeof(cec_msg.data)); /* See CEC Specification for
other message data structures */
    total_transmit_size = 2U;                      /* Total message size, including
header, opcode, and data */
 /* Send asynchronous message.
  * - Application will then be free for other processing while message is being sent.
  * - Do not modify the message buffer until transmission has completed. */
    err = R_CEC_Write(&g_cec0_ctrl, &cec_msg, total_transmit_size);
    assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_NOT_INITIALIZED	Module has not been successfully initialized.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_INVALID_SIZE	Invalid message size.
FSP_ERR_IN_USE	HDMI CEC Bus is currently in use. Try again

	later.

◆ R_CEC_StatusGet()

fsp_err_t R_CEC_StatusGet (cec_ctrl_t *const *p_ctrl*, cec_status_t *const *p_status*)

Provides the state and status information according to the provided CEC control instance.

Return values

FSP_SUCCESS	Operation succeeded.
FSP_ERR_NOT_OPEN	Control block not open.
FSP_ERR_ASSERTION	An input argument is invalid.

◆ R_CEC_CallbackSet()

fsp_err_t R_CEC_CallbackSet (cec_ctrl_t *const *p_ctrl*, void(*)(cec_callback_args_t *) *p_callback*, void const *const *p_context*, cec_callback_args_t *const *p_callback_memory*)

Updates the user callback with the option to provide memory for the callback argument structure. Implements cec_api_t::callbackSet.

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	An input argument is invalid.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

Detailed Description

Driver for the CGC peripheral on RA MCUs. This module implements the CGC Interface.

Note

This module is not required for the initial clock configuration. Initial clock settings are configurable on the **Clocks** tab of the RA Configuration editor. The initial clock settings are applied by the BSP during the startup process before main.

Overview

Features

The CGC module supports runtime modifications of clock settings. Key features include the following:

- Supports changing the system clock source to any of the following options (provided they are supported on the MCU):
  - High-speed on-chip oscillator (HOCO)
  - Middle-speed on-chip oscillator (MOCO)
  - Low-speed on-chip oscillator (LOCO)
  - Main oscillator (external resonator or external clock input frequency)
  - Sub-clock oscillator (external resonator)
  - PLL/PLL2 (not available on all MCUs)
- When the system core clock frequency changes, the following things are updated:
  - The CMSIS standard global variable SystemCoreClock is updated to reflect the new clock frequency.

    - Wait states for ROM and RAM are adjusted to the minimum supported value for the new clock frequency.
    - The operating power control mode is updated to the minimum supported value for the new clock settings.
- Supports starting or stopping any of the system clock sources
- Supports changing dividers for the internal clocks
- Supports the oscillation stop detection feature

Internal Clocks

The RA microcontrollers have up to seven internal clocks. Not all internal clocks exist on all MCUs. Each clock domain has its own divider that can be updated in R_CGC_SystemClockSet(). The dividers are subject to constraints described in the footnote of the table "Specifications of the Clock Generation Circuit for the internal clocks" in the hardware manual.

The internal clocks include:

- System clock (ICLK): core clock used for CPU, flash, internal SRAM, DTC, and DMAC
- PCLKA/PCLKB/PCLKC/PCLKD: Peripheral clocks, refer to the table "Specifications of the Clock Generation Circuit for the internal clocks" in the hardware manual to see which peripherals are controlled by which clocks.
- FCLK: Clock source for reading data flash and for programming/erasure of both code and data flash.
- BCLK: External bus clock

Configuration

Note

*The initial clock settings are configurable on the **Clocks** tab of the RA Configuration editor.*
There is a configuration to enable the HOCO on reset in the OFS1 settings on the BSP tab.
The following clock related settings are configurable in the RA Common section on the BSP tab:

- *Main Oscillator Wait Time*
- *Main Oscillator Clock Source (external oscillator or crystal/resonator)*
- *Subclock Populated*
- *Subclock Drive*
- *Subclock Stabilization Time (ms)*

The default stabilization times are determined based on development boards provided by Renesas, but are generally valid for most designs. Depending on the target board hardware configuration and requirements these values may need to be adjusted for reliability or startup speed.

Build Time Configurations for r_cgc

The following build time configurations are defined in fsp_cfg/r_cgc_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for System > Clock Generation Circuit (r_cgc)

This module can be added to the Stacks tab via New Stack > System > Clock Generation Circuit (r_cgc). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_cgc0	Module name.
NMI Callback	Name must be a valid C symbol	NULL	A user callback function must be provided if oscillation stop detection is used. If this callback function is provided, it is called from the NMI handler if the main oscillator stops.

Clock Configuration

This module is used to configure the system clocks. There are no module specific clock configurations required to use it.

Pin Configuration

The CGC module controls the output of the CLOCKOUT signal.

If an external oscillator is used the XTAL and EXTAL pins must be configured accordingly. When running from an on chip oscillator there is no requirement for the main clock external oscillator. In this case, the XTAL and EXTAL pins can be set to a different function in the RA Configuration editor.

The functionality of the subclock external oscillator pins XCIN and XCOUT is fixed.

Usage Notes

NMI Interrupt

The CGC timer uses the NMI for oscillation stop detection of the main oscillator after R_CGC_OscStopDetectEnable is called. The NMI is enabled by default. No special configuration is required. When the NMI is triggered, the callback function registered during R_CGC_Open() is called.

Starting or Stopping the Subclock

If the Subclock Populated property is set to Populated on the BSP configuration tab, then the subclock is started in the BSP startup routine. Otherwise, it is stopped in the BSP startup routine. Starting and stopping the subclock at runtime is not recommended since the stabilization requirements typically negate the negligible power savings.

The application is responsible for ensuring required clocks are started and stable before accessing MCU peripheral registers.

Warning

The subclock can take up to several seconds to stabilize. RA startup code does not wait for subclock stabilization unless the subclock is the main clock source. In this case the default wait time is 1000ms (1 second). When running AGT or RTC off the subclock, the application must ensure the subclock is stable before starting operation. Because there is no hardware stabilization status bit for the subclock R_CGC_ClockCheck cannot be used to optimize this wait.

Changing the subclock state during R_CGC_ClocksCfg() is not supported.

Low Power Operation

If "Use Low Voltage Mode" is enabled in the BSP MCU specific properties (not available on all MCUs), the MCU is always in low voltage mode and no other power modes are considered. The following conditions must be met for the MCU to run in low voltage mode:

- Requires HOCO to be running, so HOCO cannot be stopped in low voltage mode
- Requires PLL to be stopped, so PLL APIs are not available in low voltage mode
- Requires ICLK <= 4 MHz
- If oscillation stop detection is used, dividers of 1 or 2 cannot be used for any clock

If "Use Low Voltage Mode" is not enabled, the MCU applies the lowest power mode by searching through the following list in order and applying the first power mode that is supported under the current conditions:

- Subosc-speed mode (lowest power)
  - Requires system clock to be LOCO or subclock
  - Requires MOCO, HOCO, main oscillator, and PLL (if present) to be stopped
  - Requires ICLK and FCLK dividers to be 1
- Low-speed mode
  - Requires PLL to be stopped
  - Requires ICLK <= 1 MHz
  - If oscillation stop detection is used, dividers of 1, 2, 4, or 8 cannot be used for any clock
- Middle-speed mode (not supported on all MCUs)
  - Requires ICLK <= 8 MHz
- High-speed mode
  - Default mode if no other operating mode is supported

Refer to the section "Function for Lower Operating Power Consumption" in the "Low Power Modes" chapter of the hardware manual for MCU specific information about operating power control modes.

Note

The DCDC regulator (if present) is only available in Middle- and High-speed modes. The BSP will automatically switch between DCDC and LDO when switching between compatible and incompatible modes if the DCDC regulator is in use. Switching to the LDO incurs a 60 microsecond critical section wherein all interrupts AND peripherals are stopped. Switching back to DCDC from the LDO incurs an additional 22 microsecond critical section (peripherals running).

When low voltage mode is not used, the following functions adjust the operating power control mode to ensure it remains within the hardware specification and to ensure the MCU is running at the optimal operating power control mode:

- R_CGC_ClockStart()
- R_CGC_ClockStop()
- R_CGC_SystemClockSet()
- R_CGC_OscStopDetectEnable()
- R_CGC_OscStopDetectDisable()

Note

FSP APIs, including these APIs, are not thread safe. These APIs and any other user code that modifies the operating power control mode must not be allowed to interrupt each other. Proper care must be taken during application design if these APIs are used in threads or interrupts to ensure this constraint is met.

No action is required by the user of these APIs. This section is provided for informational purposes only.

Examples

Basic Example

This is a basic example of minimal use of the CGC in an application.

```
void cgc_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the CGC module. */
    err = R_CGC_Open(&g_cgc0_ctrl, &g_cgc0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Change the system clock to LOCO for power saving. */
 /* Start the LOCO. */
    err = R_CGC_ClockStart(&g_cgc0_ctrl, CGC_CLOCK_LOCO, NULL);
    assert(FSP_SUCCESS == err);
 /* Wait for the LOCO stabilization wait time.
  *
  * NOTE: The MOCO, LOCO and subclock do not have stabilization status bits, so any
stabilization time must be
  * performed via a software wait when starting these oscillators. For all other
oscillators, R_CGC_ClockCheck can
  * be used to verify stabilization status.
  */
 R_BSP_SoftwareDelay(BSP_FEATURE_CGC_LOCO_STABILIZATION_MAX_US,
BSP_DELAY_UNITS_MICROSECONDS);
 /* Set divisors. Divisors for clocks that don't exist on the MCU are ignored. */
 cgc_divider_cfg_t dividers =
    {
 /* PCLKB is not used in this application, so select the maximum divisor for lowest
power. */
       .sckdivcr_b.pclkb_div = CGC_SYS_CLOCK_DIV_64,
 /* PCLKD is not used in this application, so select the maximum divisor for lowest
```

```
power. */
       .sckdivcr_b.pclkd_div = CGC_SYS_CLOCK_DIV_64,
 /* ICLK is the MCU clock, allow it to run as fast as the LOCO is capable. */
       .sckdivcr_b.iclk_div = CGC_SYS_CLOCK_DIV_1,
 /* These clocks do not exist on some devices. If any clocks don't exist, set the
divider to 1. */
       .sckdivcr_b.pclka_div = CGC_SYS_CLOCK_DIV_1,
       .sckdivcr_b.pclkc_div = CGC_SYS_CLOCK_DIV_1,
       .sckdivcr_b.fclk_div = CGC_SYS_CLOCK_DIV_1,
       .sckdivcr_b.bclk_div = CGC_SYS_CLOCK_DIV_1,
    };
 /* Switch the system clock to LOCO. */
    err = R_CGC_SystemClockSet(&g_cgc0_ctrl, CGC_CLOCK_LOCO, &dividers);
    assert(FSP_SUCCESS == err);
}
```

Configuring Multiple Clocks

This example demonstrates switching to a new source clock and stopping the previous source clock in a single function call using R_CGC_ClocksCfg().

```
void cgc_clocks_cfg_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the CGC module. */
    err = R_CGC_Open(&g_cgc0_ctrl, &g_cgc0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Change the system clock to PLL running from the main oscillator. */
 /* Assuming the system clock is MOCO, switch to HOCO. */
 cgc_clocks_cfg_t clocks_cfg;
    clocks_cfg.system_clock                    = CGC_CLOCK_PLL;
    clocks_cfg.pll_state                       = CGC_CLOCK_CHANGE_NONE;
    clocks_cfg.pll_cfg.source_clock            = CGC_CLOCK_MAIN_OSC; // unused
    clocks_cfg.pll_cfg.multiplier              = CGC_PLL_MUL_10_0;   // unused
```

```
    clocks_cfg.pll_cfg.divider                  = CGC_PLL_DIV_2;      // unused
    clocks_cfg.divider_cfg.sckdivcr_b.iclk_div = CGC_SYS_CLOCK_DIV_1;
    clocks_cfg.divider_cfg.sckdivcr_b.pclka_div = CGC_SYS_CLOCK_DIV_4;
    clocks_cfg.divider_cfg.sckdivcr_b.pclkb_div = CGC_SYS_CLOCK_DIV_4;
    clocks_cfg.divider_cfg.sckdivcr_b.pclkc_div = CGC_SYS_CLOCK_DIV_4;
    clocks_cfg.divider_cfg.sckdivcr_b.pclkd_div = CGC_SYS_CLOCK_DIV_4;
    clocks_cfg.divider_cfg.sckdivcr_b.bclk_div = CGC_SYS_CLOCK_DIV_4;
    clocks_cfg.divider_cfg.sckdivcr_b.fclk_div = CGC_SYS_CLOCK_DIV_4;
    clocks_cfg.mainosc_state                    = CGC_CLOCK_CHANGE_NONE;
    clocks_cfg.hoco_state                       = CGC_CLOCK_CHANGE_START;
    clocks_cfg.moco_state                       = CGC_CLOCK_CHANGE_STOP;
    clocks_cfg.loco_state                       = CGC_CLOCK_CHANGE_NONE;
    err = R_CGC_ClocksCfg(&g_cgc0_ctrl, &clocks_cfg);
    assert(FSP_SUCCESS == err);
#if BSP_FEATURE_CGC_HAS_PLL
 /* Assuming the system clock is HOCO, switch to PLL running from main oscillator and
stop MOCO. */
    clocks_cfg.system_clock                     = CGC_CLOCK_PLL;
    clocks_cfg.pll_state                        = CGC_CLOCK_CHANGE_START;
    clocks_cfg.pll_cfg.source_clock             = CGC_CLOCK_MAIN_OSC;
    clocks_cfg.pll_cfg.multiplier               = (cgc_pll_mul_t) BSP_CFG_PLL_MUL;
    clocks_cfg.pll_cfg.divider                  = (cgc_pll_div_t) BSP_CFG_PLL_DIV;
    clocks_cfg.divider_cfg.sckdivcr_b.iclk_div = CGC_SYS_CLOCK_DIV_1;
    clocks_cfg.divider_cfg.sckdivcr_b.pclka_div = CGC_SYS_CLOCK_DIV_4;
    clocks_cfg.divider_cfg.sckdivcr_b.pclkb_div = CGC_SYS_CLOCK_DIV_4;
    clocks_cfg.divider_cfg.sckdivcr_b.pclkc_div = CGC_SYS_CLOCK_DIV_4;
    clocks_cfg.divider_cfg.sckdivcr_b.pclkd_div = CGC_SYS_CLOCK_DIV_4;
    clocks_cfg.divider_cfg.sckdivcr_b.bclk_div = CGC_SYS_CLOCK_DIV_4;
    clocks_cfg.divider_cfg.sckdivcr_b.fclk_div = CGC_SYS_CLOCK_DIV_4;
    clocks_cfg.mainosc_state                    = CGC_CLOCK_CHANGE_START;
    clocks_cfg.hoco_state                       = CGC_CLOCK_CHANGE_STOP;
    clocks_cfg.moco_state                       = CGC_CLOCK_CHANGE_NONE;
    clocks_cfg.loco_state                       = CGC_CLOCK_CHANGE_NONE;
    err = R_CGC_ClocksCfg(&g_cgc0_ctrl, &clocks_cfg);
```

```
    assert(FSP_SUCCESS == err);
#endif
}
```

Oscillation Stop Detection

This example demonstrates registering a callback for oscillation stop detection of the main oscillator.

```
/* Example callback called when oscillation stop is detected. */
void oscillation_stop_callback (cgc_callback_args_t * p_args)
{
 FSP_PARAMETER_NOT_USED(p_args);
 fsp_err_t err = FSP_SUCCESS;
 /* (Optional) If the MCU was running on the main oscillator, the MCU is now running
on MOCO. Switch clocks if
  * desired. This example shows switching to HOCO. */
    err = R_CGC_ClockStart(&g_cgc0_ctrl, CGC_CLOCK_HOCO, NULL);
    assert(FSP_SUCCESS == err);
 do
    {
 /* Wait for HOCO to stabilize. */
       err = R_CGC_ClockCheck(&g_cgc0_ctrl, CGC_CLOCK_HOCO);
    } while (FSP_SUCCESS != err);
 cgc_divider_cfg_t dividers =
    {
       .sckdivcr_b.pclkb_div = CGC_SYS_CLOCK_DIV_4,
       .sckdivcr_b.pclkd_div = CGC_SYS_CLOCK_DIV_4,
       .sckdivcr_b.iclk_div = CGC_SYS_CLOCK_DIV_1,
       .sckdivcr_b.pclka_div = CGC_SYS_CLOCK_DIV_4,
       .sckdivcr_b.pclkc_div = CGC_SYS_CLOCK_DIV_4,
       .sckdivcr_b.fclk_div = CGC_SYS_CLOCK_DIV_4,
       .sckdivcr_b.bclk_div = CGC_SYS_CLOCK_DIV_4,
    };
    err = R_CGC_SystemClockSet(&g_cgc0_ctrl, CGC_CLOCK_HOCO, &dividers);
    assert(FSP_SUCCESS == err);
```

```
#if BSP_FEATURE_CGC_HAS_PLL
 /* (Optional) If the MCU was running on the PLL, the PLL is now in free-running
mode. Switch clocks if
  * desired. This example shows switching to the PLL running on HOCO. */
    err = R_CGC_ClockStart(&g_cgc0_ctrl, CGC_CLOCK_HOCO, NULL);
    assert(FSP_SUCCESS == err);
 do
    {
 /* Wait for HOCO to stabilize. */
       err = R_CGC_ClockCheck(&g_cgc0_ctrl, CGC_CLOCK_HOCO);
    } while (FSP_SUCCESS != err);
 cgc_pll_cfg_t pll_cfg =
    {
       .source_clock = CGC_CLOCK_HOCO,
       .multiplier   = (cgc_pll_mul_t) BSP_CFG_PLL_MUL,
       .divider      = (cgc_pll_div_t) BSP_CFG_PLL_DIV,
    };
    err = R_CGC_ClockStart(&g_cgc0_ctrl, CGC_CLOCK_PLL, &pll_cfg);
    assert(FSP_SUCCESS == err);
 do
    {
 /* Wait for PLL to stabilize. */
       err = R_CGC_ClockCheck(&g_cgc0_ctrl, CGC_CLOCK_PLL);
    } while (FSP_SUCCESS != err);
 cgc_divider_cfg_t pll_dividers =
    {
       .sckdivcr_b.pclkb_div = CGC_SYS_CLOCK_DIV_4,
       .sckdivcr_b.pclkd_div = CGC_SYS_CLOCK_DIV_4,
       .sckdivcr_b.iclk_div = CGC_SYS_CLOCK_DIV_1,
       .sckdivcr_b.pclka_div = CGC_SYS_CLOCK_DIV_4,
       .sckdivcr_b.pclkc_div = CGC_SYS_CLOCK_DIV_4,
       .sckdivcr_b.fclk_div = CGC_SYS_CLOCK_DIV_4,
       .sckdivcr_b.bclk_div = CGC_SYS_CLOCK_DIV_4,
    };
```

```
    err = R_CGC_SystemClockSet(&g_cgc0_ctrl, CGC_CLOCK_PLL, &pll_dividers);
    assert(FSP_SUCCESS == err);
#endif
 /* (Optional) Clear the error flag. Only clear this flag after switching the MCU
clock source away from the main
  * oscillator and if the main oscillator is stable again. */
    err = R_CGC_OscStopStatusClear(&g_cgc0_ctrl);
    assert(FSP_SUCCESS == err);
}
void cgc_osc_stop_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Open the module. */
    err = R_CGC_Open(&g_cgc0_ctrl, &g_cgc0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Enable oscillation stop detection. The main oscillator must be running at this
point. */
    err = R_CGC_OscStopDetectEnable(&g_cgc0_ctrl);
    assert(FSP_SUCCESS == err);
 /* (Optional) Oscillation stop detection must be disabled before entering any low
power mode. */
    err = R_CGC_OscStopDetectDisable(&g_cgc0_ctrl);
    assert(FSP_SUCCESS == err);
    __WFI();
 /* (Optional) Reenable oscillation stop detection after waking from low power mode.
*/
    err = R_CGC_OscStopDetectEnable(&g_cgc0_ctrl);
    assert(FSP_SUCCESS == err);
}
```

Data Structures

struct	cgc_instance_ctrl_t

Data Structure Documentation

◆ cgc_instance_ctrl_t

struct cgc_instance_ctrl_t	
CGC private control block. DO NOT MODIFY. Initialization occurs when R_CGC_Open() is called.	
Data Fields	
void const *	p_context

Field Documentation

◆ p_context

void const* cgc_instance_ctrl_t::p_context

Placeholder for user data. Passed to the user callback in cgc_callback_args_t.

Function Documentation

◆ R_CGC_Open()

fsp_err_t R_CGC_Open (cgc_ctrl_t *const *p_ctrl*, cgc_cfg_t const *const *p_cfg*)

Initialize the CGC API. Implements cgc_api_t::open.

Example:

```
/* Initializes the CGC module. */
   err = R_CGC_Open(&g_cgc0_ctrl, &g_cgc0_cfg);
```

Return values

FSP_SUCCESS	CGC successfully initialized.
FSP_ERR_ASSERTION	Invalid input argument.
FSP_ERR_ALREADY_OPEN	Module is already open.

◆ R_CGC_ClocksCfg()

fsp_err_t R_CGC_ClocksCfg (cgc_ctrl_t *const *p_ctrl*, cgc_clocks_cfg_t const *const *p_clock_cfg*)

Reconfigures all main system clocks. This API can be used for any of the following purposes:

- start or stop clocks
- change the system clock source
- configure the PLL/PLL2 multiplication and division ratios when starting the PLL
- change the system dividers

If the requested system clock source has a stabilization flag, this function blocks waiting for the stabilization flag of the requested system clock source to be set. If the requested system clock source was just started and it has no stabilization flag, this function blocks for the stabilization time required by the requested system clock source according to the Electrical Characteristics section of the hardware manual. If the requested system clock source has no stabilization flag and it is already running, it is assumed to be stable and this function will not block. If the requested system clock is the subclock, the subclock must be stable prior to calling this function.

The internal dividers (cgc_clocks_cfg_t::divider_cfg) are subject to constraints described in footnotes of the hardware manual table detailing specifications for the clock generation circuit for the internal clocks for the MCU. For example:

- RA6M3: see footnotes of Table 9.2 "Specifications of the clock generation circuit for the internal clocks" in the RA6M3 manual R01UH0886EJ0100
- RA2A1: see footnotes of Table 9.2 "Clock generation circuit specifications for the internal clocks" in the RA2A1 manual R01UH0888EJ0100

Do not attempt to stop the requested clock source or the source of a PLL if the PLL will be running after this operation completes.

Implements cgc_api_t::clocksCfg.

Example:

```
/* Assuming the system clock is MOCO, switch to HOCO. */
cgc_clocks_cfg_t clocks_cfg;
   clocks_cfg.system_clock                     = CGC_CLOCK_PLL;
   clocks_cfg.pll_state                        = CGC_CLOCK_CHANGE_NONE;
   clocks_cfg.pll_cfg.source_clock             = CGC_CLOCK_MAIN_OSC; // unused
   clocks_cfg.pll_cfg.multiplier               = CGC_PLL_MUL_10_0;   // unused
   clocks_cfg.pll_cfg.divider                  = CGC_PLL_DIV_2;      // unused
   clocks_cfg.divider_cfg.sckdivcr_b.iclk_div = CGC_SYS_CLOCK_DIV_1;
   clocks_cfg.divider_cfg.sckdivcr_b.pclka_div = CGC_SYS_CLOCK_DIV_4;
   clocks_cfg.divider_cfg.sckdivcr_b.pclkb_div = CGC_SYS_CLOCK_DIV_4;
   clocks_cfg.divider_cfg.sckdivcr_b.pclkc_div = CGC_SYS_CLOCK_DIV_4;
   clocks_cfg.divider_cfg.sckdivcr_b.pclkd_div = CGC_SYS_CLOCK_DIV_4;
   clocks_cfg.divider_cfg.sckdivcr_b.bclk_div = CGC_SYS_CLOCK_DIV_4;
```

```
clocks_cfg.divider_cfg.sckdivcr_b.fclk_div = CGC_SYS_CLOCK_DIV_4;
clocks_cfg.mainosc_state                   = CGC_CLOCK_CHANGE_NONE;
clocks_cfg.hoco_state                      = CGC_CLOCK_CHANGE_START;
clocks_cfg.moco_state                      = CGC_CLOCK_CHANGE_STOP;
clocks_cfg.loco_state                      = CGC_CLOCK_CHANGE_NONE;
err = R_CGC_ClocksCfg(&g_cgc0_ctrl, &clocks_cfg);
assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Clock configuration applied successfully.
FSP_ERR_ASSERTION	Invalid input argument.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_IN_USE	Attempt to stop the current system clock or the PLL source clock.
FSP_ERR_CLOCK_ACTIVE	PLL configuration cannot be changed while PLL is running.
FSP_ERR_OSC_STOP_DET_ENABLED	PLL multiplier must be less than 20 if oscillation stop detect is enabled and the input frequency is less than 12.5 MHz.
FSP_ERR_NOT_STABILIZED	PLL clock source is not stable.
FSP_ERR_PLL_SRC_INACTIVE	PLL clock source is not running.
FSP_ERR_INVALID_STATE	The subclock must be running before activating HOCO with FLL.

◆ R_CGC_ClockStart()

fsp_err_t R_CGC_ClockStart (cgc_ctrl_t *const *p_ctrl*, cgc_clock_t *clock_source*, cgc_pll_cfg_t const *const *p_pll_cfg*)

Start the specified clock if it is not currently active. The PLL configuration cannot be changed while the PLL is running. Implements cgc_api_t::clockStart.

The PLL source clock must be operating and stable prior to starting the PLL.

Example:

```
/* Start the LOCO. */
   err = R_CGC_ClockStart(&g_cgc0_ctrl, CGC_CLOCK_LOCO, NULL);
   assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Clock initialized successfully.
FSP_ERR_ASSERTION	Invalid input argument.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_STABILIZED	The clock source is not stabilized after being turned off or PLL clock source is not stable.
FSP_ERR_PLL_SRC_INACTIVE	PLL clock source is not running.
FSP_ERR_CLOCK_ACTIVE	PLL configuration cannot be changed while PLL is running.
FSP_ERR_OSC_STOP_DET_ENABLED	PLL multiplier must be less than 20 if oscillation stop detect is enabled and the input frequency is less than 12.5 MHz.
FSP_ERR_INVALID_STATE	The subclock must be running before activating HOCO with FLL.

◆ R_CGC_ClockStop()

fsp_err_t R_CGC_ClockStop (cgc_ctrl_t *const *p_ctrl*, cgc_clock_t *clock_source*)

Stop the specified clock if it is active. Implements cgc_api_t::clockStop.

Do not attempt to stop the current system clock source. Do not attempt to stop the source clock of a PLL if the PLL is running.

Return values

FSP_SUCCESS	Clock stopped successfully.
FSP_ERR_ASSERTION	Invalid input argument.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_IN_USE	Attempt to stop the current system clock or the PLL source clock.
FSP_ERR_OSC_STOP_DET_ENABLED	Attempt to stop MOCO when Oscillation stop is enabled.
FSP_ERR_NOT_STABILIZED	Clock not stabilized after starting.

◆ R_CGC_ClockCheck()

fsp_err_t R_CGC_ClockCheck (cgc_ctrl_t *const *p_ctrl*, cgc_clock_t *clock_source*)

Check the specified clock for stability. Implements cgc_api_t::clockCheck.

Return values

FSP_SUCCESS	Clock is running and stable.
FSP_ERR_ASSERTION	Invalid input argument.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_NOT_STABILIZED	Clock not stabilized.
FSP_ERR_CLOCK_INACTIVE	Clock not turned on.

◆ R_CGC_SystemClockSet()

fsp_err_t R_CGC_SystemClockSet (cgc_ctrl_t *const *p_ctrl*, cgc_clock_t *clock_source*, cgc_divider_cfg_t const *const *p_divider_cfg*)

Set the specified clock as the system clock and configure the internal dividers for ICLK, PCLKA, PCLKB, PCLKC, PCLKD, BCLK, and FCLK. Implements cgc_api_t::systemClockSet.

The requested clock source must be running and stable prior to calling this function. The internal dividers are subject to constraints described in the hardware manual table "Specifications of the Clock Generation Circuit for the internal clocks".

The internal dividers (p_divider_cfg) are subject to constraints described in footnotes of the hardware manual table detailing specifications for the clock generation circuit for the internal clocks for the MCU. For example:

- RA6M3: see footnotes of Table 9.2 "Specifications of the clock generation circuit for the internal clocks" in the RA6M3 manual R01UH0886EJ0100
- RA2A1: see footnotes of Table 9.2 "Clock generation circuit specifications for the internal clocks" in the RA2A1 manual R01UH0888EJ0100

This function also updates the RAM and ROM wait states, the operating power control mode, and the SystemCoreClock CMSIS global variable.

Example:

```
/* Set divisors. Divisors for clocks that don't exist on the MCU are ignored. */
cgc_divider_cfg_t dividers =
   {
/* PCLKB is not used in this application, so select the maximum divisor for lowest power. */
      .sckdivcr_b.pclkb_div = CGC_SYS_CLOCK_DIV_64,
/* PCLKD is not used in this application, so select the maximum divisor for lowest power. */
      .sckdivcr_b.pclkd_div = CGC_SYS_CLOCK_DIV_64,
/* ICLK is the MCU clock, allow it to run as fast as the LOCO is capable. */
      .sckdivcr_b.iclk_div = CGC_SYS_CLOCK_DIV_1,
/* These clocks do not exist on some devices. If any clocks don't exist, set the divider to 1. */
      .sckdivcr_b.pclka_div = CGC_SYS_CLOCK_DIV_1,
      .sckdivcr_b.pclkc_div = CGC_SYS_CLOCK_DIV_1,
      .sckdivcr_b.fclk_div = CGC_SYS_CLOCK_DIV_1,
      .sckdivcr_b.bclk_div = CGC_SYS_CLOCK_DIV_1,
   };
/* Switch the system clock to LOCO. */
```

```
err = R_CGC_SystemClockSet(&g_cgc0_ctrl, CGC_CLOCK_LOCO, &dividers);
assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Operation performed successfully.
FSP_ERR_ASSERTION	Invalid input argument.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_CLOCK_INACTIVE	The specified clock source is inactive.
FSP_ERR_NOT_STABILIZED	The clock source has not stabilized

◆ R_CGC_SystemClockGet()

fsp_err_t R_CGC_SystemClockGet (cgc_ctrl_t *const *p_ctrl*, cgc_clock_t *const *p_clock_source*, cgc_divider_cfg_t *const *p_divider_cfg*)

Return the current system clock source and configuration. Implements cgc_api_t::systemClockGet.

Return values

FSP_SUCCESS	Parameters returned successfully.
FSP_ERR_ASSERTION	Invalid input argument.
FSP_ERR_NOT_OPEN	Module is not open.

◆ R_CGC_OscStopDetectEnable()

fsp_err_t R_CGC_OscStopDetectEnable (cgc_ctrl_t *const *p_ctrl*)

Enable the oscillation stop detection for the main clock. Implements cgc_api_t::oscStopDetectEnable.

The MCU will automatically switch the system clock to MOCO when a stop is detected if Main Clock is the system clock. If the system clock is the PLL, then the clock source will not be changed and the PLL free running frequency will be the system clock frequency.

Example:

```
/* Enable oscillation stop detection. The main oscillator must be running at this
point. */
    err = R_CGC_OscStopDetectEnable(&g_cgc0_ctrl);
    assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Operation performed successfully.
FSP_ERR_ASSERTION	Invalid input argument.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_LOW_VOLTAGE_MODE	Settings not allowed in low voltage mode.

◆ R_CGC_OscStopDetectDisable()

fsp_err_t R_CGC_OscStopDetectDisable (cgc_ctrl_t *const *p_ctrl*)

Disable the oscillation stop detection for the main clock. Implements cgc_api_t::oscStopDetectDisable.

Example:

```
/* (Optional) Oscillation stop detection must be disabled before entering any low
power mode. */
    err = R_CGC_OscStopDetectDisable(&g_cgc0_ctrl);
    assert(FSP_SUCCESS == err);
    __WFI();
```

Return values

FSP_SUCCESS	Operation performed successfully.
FSP_ERR_ASSERTION	Invalid input argument.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_OSC_STOP_DETECTED	The Oscillation stop detect status flag is set. Under this condition it is not possible to disable the Oscillation stop detection function.

◆ R_CGC_OscStopStatusClear()

fsp_err_t R_CGC_OscStopStatusClear (cgc_ctrl_t *const *p_ctrl*)

Clear the Oscillation Stop Detection Status register. This register is not cleared automatically if the stopped clock is restarted. Implements cgc_api_t::oscStopStatusClear.

After clearing the status, oscillation stop detection is no longer enabled.

This register cannot be cleared while the main oscillator is the system clock or the PLL source clock.

Example:

```
 /* (Optional) Clear the error flag. Only clear this flag after switching the MCU
clock source away from the main
  * oscillator and if the main oscillator is stable again. */
    err = R_CGC_OscStopStatusClear(&g_cgc0_ctrl);
    assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Operation performed successfully.
FSP_ERR_ASSERTION	Invalid input argument.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_CLOCK_INACTIVE	Main oscillator must be running to clear the oscillation stop detection flag.
FSP_ERR_OSC_STOP_CLOCK_ACTIVE	The Oscillation Detect Status flag cannot be cleared if the Main Osc or PLL is set as the system clock. Change the system clock before attempting to clear this bit.
FSP_ERR_INVALID_HW_CONDITION	Oscillation stop status was not cleared. Check preconditions and try again.

◆ R_CGC_CallbackSet()

fsp_err_t R_CGC_CallbackSet (cgc_ctrl_t *const *p_api_ctrl*, void(*)(cgc_callback_args_t *) *p_callback*, void const *const *p_context*, cgc_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements cgc_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

◆ R_CGC_Close()

fsp_err_t R_CGC_Close (cgc_ctrl_t *const *p_ctrl*)

Closes the CGC module. Implements cgc_api_t::close.

Return values

FSP_SUCCESS	The module is successfully closed.
FSP_ERR_ASSERTION	Invalid input argument.
FSP_ERR_NOT_OPEN	Module is not open.

4.2.15 Cyclic Redundancy Check (CRC) Calculator (r_crc)

Modules

Functions

fsp_err_t	R_CRC_Open (crc_ctrl_t *const p_ctrl, crc_cfg_t const *const p_cfg)
fsp_err_t	R_CRC_Close (crc_ctrl_t *const p_ctrl)
fsp_err_t	R_CRC_Calculate (crc_ctrl_t *const p_ctrl, crc_input_t *const p_crc_input, uint32_t *calculatedValue)
fsp_err_t	R_CRC_CalculatedValueGet (crc_ctrl_t *const p_ctrl, uint32_t *calculatedValue)

fsp_err_t	R_CRC_SnoopEnable (crc_ctrl_t *const p_ctrl, uint32_t crc_seed)
fsp_err_t	R_CRC_SnoopDisable (crc_ctrl_t *const p_ctrl)

Detailed Description

Driver for the CRC peripheral on RA MCUs. This module implements the CRC Interface.

Overview

The CRC module provides a API to calculate 8, 16 and 32-bit CRC values on a block of data in memory or a stream of data over a Serial Communication Interface (SCI) channel using industry-standard polynomials.

Features

- CRC module supports the following 8 and 16 bit CRC polynomials which operates on 8-bit data in parallel
  - X^8+X^2+X+1 (CRC-8)
  - X^16+X^15+X^2+1 (CRC-16)
  - X^16+X^12+X^5+1 (CRC-CCITT)
- CRC module supports the following 32 bit CRC polynomials which operates on 32-bit data in parallel
  - X^32+X^26+X^23+X^22+X^16+X^12+X^11+X^10+X^8+X^7+X^5+X^4+X^2+X+ 1 (CRC-32)
  - X^32+ X^28+ X^27+ X^26+ X^25+ X^23+ X^22+ X^20+ X^19+ X^18+X^14+X^13+X^11+X^10+X^9+X^8+X^6+1 (CRC-32C)
- CRC module can calculate CRC with LSB first or MSB first bit order.

Configuration

Build Time Configurations for r_crc

The following build time configurations are defined in fsp_cfg/r_crc_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Monitoring > CRC (r_crc)

This module can be added to the Stacks tab via New Stack > Monitoring > CRC (r_crc). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description

Name	Name must be a valid C symbol	g_crc0	Module name.
CRC Polynomial	• CRC-8 • CRC-16 • CRC-CCITT • CRC-32 • CRC-32C	CRC-32C	Select the CRC polynomial.
Bit Order	• LSB • MSB	MSB	Select the CRC bit order.
Snoop Address	Refer to the RA Configuration tool for available options.	NONE	Select the SCI register address CRC snoop

Clock Configuration

There is no clock configuration for the CRC module.

Pin Configuration

This module does not use I/O pins.

Usage Notes

CRC Snoop

The CRC snoop function monitors reads from and writes to a specified I/O register address and performs CRC calculation on the data read from and written to the register address automatically. Instead of calling R_CRC_Calculate on a block of data, R_CRC_SnoopEnable is called to start monitoring reads/writes and R_CRC_CalculatedValueGet is used to obtain the current CRC.

Note

Snoop mode is available for transmit/receive operations on SCI only.

Limitations

When using CRC32 polynomial functions the CRC module produces the same results as popular online CRC32 calculators, but it is important to remember a few important points.

- Online CRC32 calculators allow the input to be any number of bytes. The FSP CRC32 API function uses 32-bit words. This means the online calculations must be 'padded' to end on a 32-bit boundary.
- Online CRC32 calculators usually invert the output prior to presenting it as a result. It is up to the application program to include this step if needed.
- The seed value of 0xFFFFFFFF needs to be used by both the online calculator and the R_CRC module API (CRC32 polynomials)
- Make sure the bit orientation of the R_CRC CRC32 is set for LSB and that you have CRC32 selected and not CRC32C.
- Some online CRC tools XOR the final result with 0xFFFFFFFF.

Examples

Basic Example

This is a basic example of minimal use of the CRC module in an application.

```
void crc_example ()
{
    uint32_t length;
    uint32_t uint8_calculated_value;
    length = sizeof(g_data_8bit) / sizeof(g_data_8bit[0]);
 crc_input_t example_input =
    {
       .p_input_buffer = g_data_8bit,
       .num_bytes      = length,
       .crc_seed       = 0,
    };
 /* Open CRC module with 8 bit polynomial */
 R_CRC_Open(&crc_ctrl, &g_crc_test_cfg);
 /* 8-bit CRC calculation */
 R_CRC_Calculate(&crc_ctrl, &example_input, &uint8_calculated_value);
}
```

Snoop Example

This example demonstrates CRC snoop operation.

```
void crc_snoop_example ()
{
 /* Open CRC module with 8 bit polynomial */
 R_CRC_Open(&crc_ctrl, &g_crc_test_cfg);
 /* Open SCI Driver */
 /* Configure Snoop address and enable snoop mode */
 R_CRC_SnoopEnable(&crc_ctrl, 0);
 /* Perfrom SCI read/Write operation depending on the SCI snoop address configure */
 /* Read CRC value */
 R_CRC_CalculatedValueGet(&crc_ctrl, &g_crc_buff);
}
```

Data Structures

struct	crc_instance_ctrl_t

Data Structure Documentation

◆ crc_instance_ctrl_t

struct crc_instance_ctrl_t
Driver instance control structure.

Function Documentation

◆ R_CRC_Open()

fsp_err_t R_CRC_Open (crc_ctrl_t *const *p_ctrl*, crc_cfg_t const *const *p_cfg*)

Open the CRC driver module

Implements crc_api_t::open

Open the CRC driver module and initialize the driver control block according to the passed-in configuration structure.

Return values

FSP_SUCCESS	Configuration was successful.
FSP_ERR_ASSERTION	p_ctrl or p_cfg is NULL.
FSP_ERR_ALREADY_OPEN	Module already open

◆ R_CRC_Close()

fsp_err_t R_CRC_Close (crc_ctrl_t *const *p_ctrl*)

Close the CRC module driver.

Implements crc_api_t::close

Return values

FSP_SUCCESS	Configuration was successful.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	The driver is not opened.

◆ R_CRC_Calculate()

fsp_err_t R_CRC_Calculate (crc_ctrl_t *const *p_ctrl*, crc_input_t *const *p_crc_input*, uint32_t * *calculatedValue*)

Perform a CRC calculation on a block of 8-bit/32-bit (for 32-bit polynomial) data.

Implements crc_api_t::calculate

This function performs a CRC calculation on an array of 8-bit/32-bit (for 32-bit polynomial) values and returns an 8-bit/32-bit (for 32-bit polynomial) calculated value

Return values

FSP_SUCCESS	Calculation successful.
FSP_ERR_ASSERTION	Either p_ctrl, inputBuffer, or calculatedValue is NULL.
FSP_ERR_INVALID_ARGUMENT	length value is NULL.
FSP_ERR_NOT_OPEN	The driver is not opened.

◆ R_CRC_CalculatedValueGet()

fsp_err_t R_CRC_CalculatedValueGet (crc_ctrl_t *const *p_ctrl*, uint32_t * *calculatedValue*)

Return the current calculated value.

Implements crc_api_t::crcResultGet

CRC calculation operates on a running value. This function returns the current calculated value.

Return values

FSP_SUCCESS	Return of calculated value successful.
FSP_ERR_ASSERTION	Either p_ctrl or calculatedValue is NULL.
FSP_ERR_NOT_OPEN	The driver is not opened.

◆ R_CRC_SnoopEnable()

fsp_err_t R_CRC_SnoopEnable (crc_ctrl_t *const *p_ctrl*, uint32_t *crc_seed*)

Configure the snoop channel and set the CRC seed.

Implements crc_api_t::snoopEnable

The CRC calculator can operate on reads and writes over any of the first ten SCI channels. For example, if set to channel 0, transmit, every byte written out SCI channel 0 is also sent to the CRC calculator as if the value was explicitly written directly to the CRC calculator.

Return values

FSP_SUCCESS	Snoop configured successfully.
FSP_ERR_ASSERTION	Pointer to control stucture is NULL
FSP_ERR_NOT_OPEN	The driver is not opened.

◆ R_CRC_SnoopDisable()

fsp_err_t R_CRC_SnoopDisable (crc_ctrl_t *const *p_ctrl*)

Disable snooping.

Implements crc_api_t::snoopDisable

Return values

FSP_SUCCESS	Snoop disabled.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	The driver is not opened.

4.2.16 Capacitive Touch Sensing Unit (r_ctsu)

Modules

Functions

fsp_err_t	R_CTSU_Open (ctsu_ctrl_t *const p_ctrl, ctsu_cfg_t const *const p_cfg) Opens and configures the CTSU driver module. Implements ctsu_api_t::open. More...
fsp_err_t	R_CTSU_ScanStart (ctsu_ctrl_t *const p_ctrl)

	This function should be called each time a periodic timer expires. If initial offset tuning is enabled, The first several calls are used to tuning for the sensors. Before starting the next scan, first get the data with R_CTSU_DataGet(). If a different control block scan should be run, check the scan is complete before executing. Implements ctsu_api_t::scanStart. More...
fsp_err_t	R_CTSU_DataGet (ctsu_ctrl_t *const p_ctrl, uint16_t *p_data) This function gets the sensor values as scanned by the CTSU. If initial offset tuning is enabled, The first several calls are used to tuning for the sensors. Implements ctsu_api_t::dataGet. More...

fsp_err_t	R_CTSU_Close (ctsu_ctrl_t *const p_ctrl) Disables specified CTSU control block. Implements ctsu_api_t::close. More...
fsp_err_t	R_CTSU_SpecificDataGet (ctsu_ctrl_t *const p_ctrl, uint16_t *p_specific_data, ctsu_specific_data_type_t specific_data_type) This function gets the sensor specific data values as scanned by the CTSU. Call this function after calling the R_CTSU_DataGet() function. More...
fsp_err_t	R_CTSU_DataInsert (ctsu_ctrl_t *const p_ctrl, uint16_t *p_insert_data) This function inserts the value of the second argument as the measurement result value. Call this function after calling the R_CTSU_DataInsert() function. Implements ctsu_api_t::dataInsert. More...

Detailed Description

This HAL driver supports the Capacitive Touch Sensing Unit (CTSU). It implements the CTSU Interface .

Overview

The capacitive touch sensing unit HAL driver (r_ctsu) provides an API to control the CTSU peripheral. This module performs capacitance measurement based on various settings defined by the configuration. This module is configured via the QE for Capacitive Touch.

Features

- Supports multiple scan modes
  - Self-capacitance multi scan mode (CTSU2 support active shield)
  - Mutual-capacitance full scan mode
  - Mutual-capacitance parallel scan mode (CTSU2)
  - Current Measurement mode (CTSU2)
  - Diagnosis scan mode
- Scans may be started by software or an external trigger
- Returns measured capacitance data on scan completion
- Support DTC transfer of scanned data
- Supports TrustZone
- Corrects accuracy for temperature drift (CTSU2)

Configuration

Note

This module is configured via the QE for Capacitive Touch. For information on how to use the QE tool, once the tool is installed click Help -> Help Contents in e2 studio and search for "QE".

Build Time Configurations for r_ctsu

The following build time configurations are defined in fsp_cfg/r_ctsu_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Support for using DTC	• Enabled • Disabled	Disabled	Enable DTC support for the CTSU module.
Interrupt priority level	MCU Specific Options		Priority level of all CTSU interrupt (CSTU_WR,CTSU_RD,CTSU_FN)

Configurations for CapTouch > CTSU (r_ctsu)

This module can be added to the Stacks tab via New Stack > CapTouch > CTSU (r_ctsu). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description

Scan Start Trigger	MCU Specific Options	CTSU Scan Start Trigger Select

Interrupt Configuration

The first R_CTSU_Open function call sets CTSU peripheral interrupts. The user should provide a callback function to be invoked at the end of the CTSU scan sequence. The callback argument will contain information about the scan status.

Clock Configuration

The CTSU peripheral module uses PCLKB as its clock source. You can set the PCLKB frequency using the **Clocks** tab of the RA Configuration editor or by using the CGC Interface at run-time.

Note

The CTSU Drive pulse will be calculated and set by the tooling depending on the selected transfer rate.

Pin Configuration

The TSn pins are sensor pins for the CTSU.

The TSCAP pin is used for an internal low-pass filter and must be connected to an external decoupling capacitor.

Usage Notes

The CTSU module is a CTSU driver for the Touch module. The CTSU module assumes the access from the Touch middleware layer, and it is also accessible from an user application.
CTSU and CTSU2 are functionally different, so CTSU and CTSU2 are described in this application note as below.
Common description for CTSU and CTSU2 -> CTSU
Description only for CTSU -> CTSU1
Description only for CTSU2 -> CTSU2
Without mention, it means the common description for CTSU and CTSU2.

Functions

The CTSU module supports the following functions.

Measurements and Obtaining Data

Measurements can be started by a software trigger or by an external event triggered by the Event Link Controller (ELC).
As the measurement process is carried out by the CTSU2 peripheral, it does not use up main processor processing time.
The CTSU module processes INTCTSUWR and INTCTSURD if generated during a measurement. The data transfer controller (DTC) can also be used for these processes.
When the measurement complete interrupt (INTCTSUFN) process is complete, the application is notified in a callback function. Make sure you obtain the measurement results before the next measurement is started as internal processes are also executed when a measurement is completed.
Start the measurement with API function R_CTSU_ScanStart().
Obtain the measurement results with API function R_CTSU_DataGet().

Sensor ICO Correction function

The CTSU2 peripheral has a built-in correction circuit to handle the potential microvariations related to the manufacturing process of the sensor ICO MCU.
The module temporarily transitions to the correction process during initialization after power is turned on. In the correction process, the correction circuit is used to generate a correction coefficient (factor) to ensure accurate sensor measurement values.
When temperature correction is enabled, an external resistor connected to a TS terminal is used to periodically update the correction coefficient. By using an external resistor that is not dependent on temperature, you can even correct the temperature drift of the sensor ICO.

Initial Offset Adjustment

The CTSU2 peripheral was designed with a built-in offset current circuit in consideration of the amount of change in current due to touch. The offset current circuit cancels enough of the parasitic capacitance for it to fit within the sensor ICO dynamic range.
This module automatically adjusts the offset current setting. As the adjustment uses the normal measurement process, R_CTSU_ScanStart() and R_CTSU_DataGet() must be repeated several times after startup. Because the ctsu_element_cfg_t member "so" is the starting point for adjustments, you can set the appropriate value for "so" in order to reduce the number of times the two functions must be run to complete the adjustment. Normally, the value used for "so" is a value adjusted by QE for Capacitive Touch.

Mode	Default target value
Self-capacitance	15360 (37.5%)
Self-capacitance using active shield	6144 (15%)
Mutual-capacitance	10240 (20%)

The percentage is for the CCO's input limit. 100% is the measured value 40960.
The default target value is based on 526us(CTSU1) or 256us(CTSU2).
When the measurement time is changed, the target value is adjusted by the ratio with the base time.

Example of target value in combination of CTSUSNUM and CTSUSDPA.
CTSU1 (CTSU clock = 32MHz, Self-capacitance mode)

Target value	CTSUSNUM	CTSUSDPA	Measurement time
15360	0x3	0x7	526usec
30720	0x7	0x7	1052usec
30720	0x3	0xF	1052usec
7680	0x1	0x7	263usec
7680	0x3	0x3	263usec

The measurement time changes depending on the combination of CTSUSNUM and CTSUSDPA.
In the above table, CTSUPRRTIO is the recommended value of 3, and CSTUPRMODE is the recommended value of 2.
When changing CTSUPRRATIO and CTSUPRMODE from the recommended values, follow the Hardware Manual for the measurement time.

CTSU2 (Self-capacitance mode)

Target value	Target value (multi frequency)	CTSUSNUM	Measurement time
7680	15360 (128us + 128us)	0x7	128usec
15360	30720 (256us + 256us)	0xF	256usec
3840	7680 (64us + 64us)	0x3	64usec

The measurement time changes depending on CTSUSNUM.
If STCLK cannot be set to 0.5MHz, it will not support the table above.
When setting STCLK to other than 0.5MHz because the CTSU clock is not an integer, follow the hardware manual for the measurement time.

Random Pulse Frequency Measurement (CTSU1)

The CTSU1 peripheral measures at one drive frequency.
The drive frequency determines the amperage to the electrode and generally uses the value tuned with QE for Capacitive Touch.
The drive frequency is calculated as below.
It is determined by PCLK frequency input to CTSU, CTSU Count Source Select bit(CTSUCLK), and CTSU Sensor Drive pulse Division Control bit(CTSUSDPA). For example, If it is set PCLK =32MHz, CTSUCLK = PLCK/2, and CTSUSDPA = 1/16, then drive frequency is 0.5MHz. CTSUSDPA can change for each TS port.

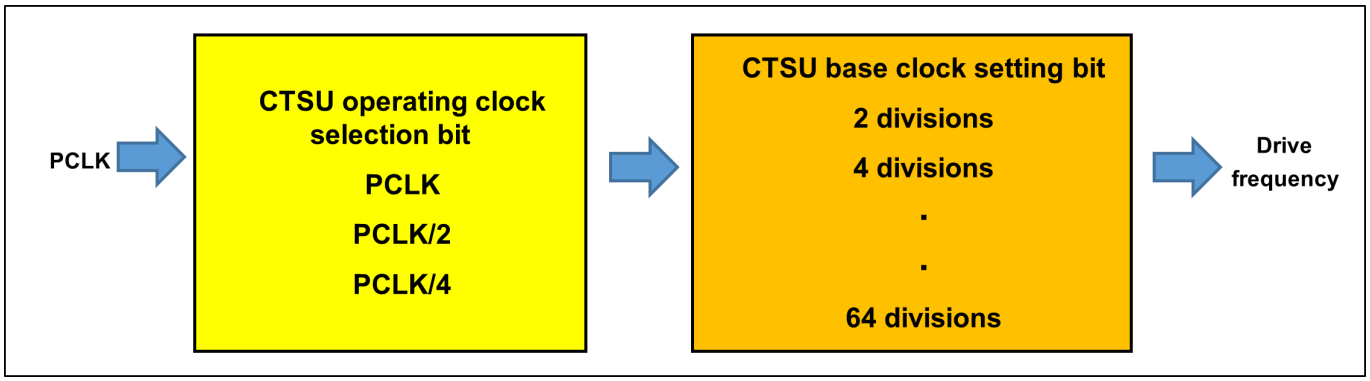

Figure 151: Drive Frequency Settings

The actual drive pulse is phase-shifted and frequency-spread with respect to the clock based on the drive frequency as a measure against external environmental noise. This module is fixed at initialization and sets the following.
CTSUSOFF = 0,CTSUSSMOD = 0,CTSUSSCNT = 3

Multi-frequency Measurements (CTSU2)

The CTSU2 peripheral can measure in one of four drive frequencies to avoid synchronous noise. With the default settings, the module takes measurements at three different frequencies. After standardizing the results obtained at the three frequencies in accordance with the first frequency reference value, the measured value is determined based on majority in a process referred to as "normalization."
The three values standardized to the first frequency reference value are called correction data.

You can get the three correction data with R_CTSU_SpecificDataGet().

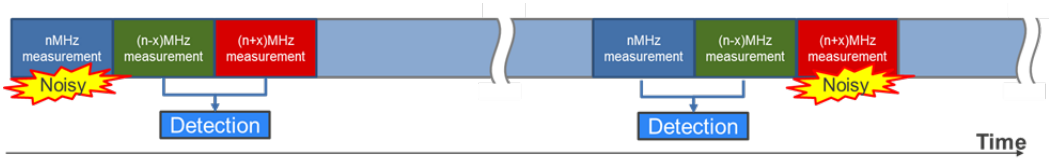

Figure 152: Multi-frequency Measurements

Drive frequency is determined based on the config settings. The module sets registers according to the config settings, and sets the three drive frequencies.
Drive frequency is calculated in the following equation:
(PCLKB frequency / CLK / STCLK) x SUMULTIn / 2 / SDPA : n = 0, 1, 2
The figure below shows the settings for generating a 2MHz drive frequency when the PCLKB frequency is 32 MHz. SDPA can be set for each touch interface configuration.

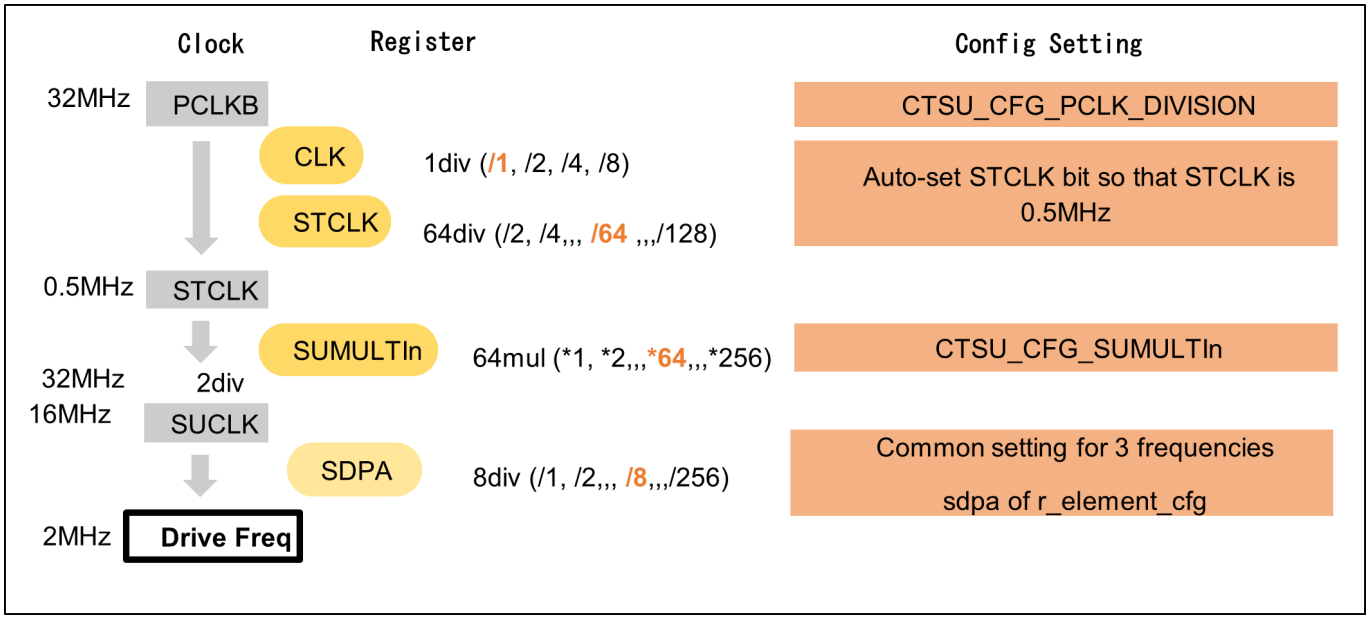

Figure 153: Drive Frequency Settings

Shield Function(CTSU2)

The CTSU2 peripheral has a built-in function that outputs a shield signal in phase with the drive pulse from the shield terminal and the non-measurement terminal in order to shield against external influences while suppressing any increase in parasitic capacitance. This function can only be used during self-capacitance measurements.
This module allows the user to set a shield for each touch interface configuration.
For example, for the electrode configuration shown in , the members of ctsu_cfg_t should be set as follows. Other members have been omitted for the example.
.txvsel = CTSU_TXVSEL_INTERNAL_POWER,
.txvsel2 = CTSU_TXVSEL_MODE,
.md = CTSU_MODE_SELF_MULTI_SCAN,
.posel = CTSU_POSEL_SAME_PULSE,
.ctsuchac0 = 0x0F,
.ctsuchtrc0 = 0x08,

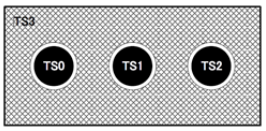

Figure 154: Example of Shield Electrode Structure

Measurement Error Message

When the CTSU2 peripheral detects an abnormal measurement, it sets the status register bit to 1. In the measurement complete interrupt process, the module reads ICOMP1, ICOMP0, and SENSOVF of the status register and notifies the results in the callback function. The status register is reset after the contents are read. For more details on abnormal measurements, refer to "member event" in the ctsu_callback_args_t callback function argument.

Moving Average

This function calculates the moving average of the measured results.
Set the number of times the moving average should be calculated in the config settings.

Diagnosis Function

The CTSU peripheral has a built-in function that diagnoses its own inner circuit. This diagnosis function provides the API for diagnosing the inner circuit.
The diagnostic requirements are different for CTSU1 and CTSU2 providing 5 types of diagnosis for CTSU1 and 9 types for CTSU2.
The diagnosis function is executed by calling the API function. This is executed independently from the other measurements and does not affect them.
To enable the diagnosis function, set CTSU_CFG_DIAG_SUPPORT_ENABLE to 1.
For CTSU1, a 27pF condenser should be connected externally.
For CTSU2, use Analog to Digital Converter (r_adc).

Measurement Mode

This module supports all three modes offered by the CTSU2 peripheral: self-capacitance, mutual-capacitance, and current measurement modes. The temperature correction mode is also offered as a mode for updating the correction coefficient.

Self-capacitance Mode

The self-capacitance mode is used to measure the capacitance of each terminal (TS).
The CTSU2 peripheral measures the terminals in ascending order according to the TS numbers, then stores the data. For example, even if you want to use TS5, TS8, TS2, TS3 and TS6 in your application in that order, they will still be measured and stored in the order of TS2, TS3, TS5, TS6, and TS8. Therefore, you will need to reference buffer indexes [2], [4], [0], [1], and [3].

[CTSU1]
In default settings, the measurement period for each TS is wait-time plus approximately 526us.

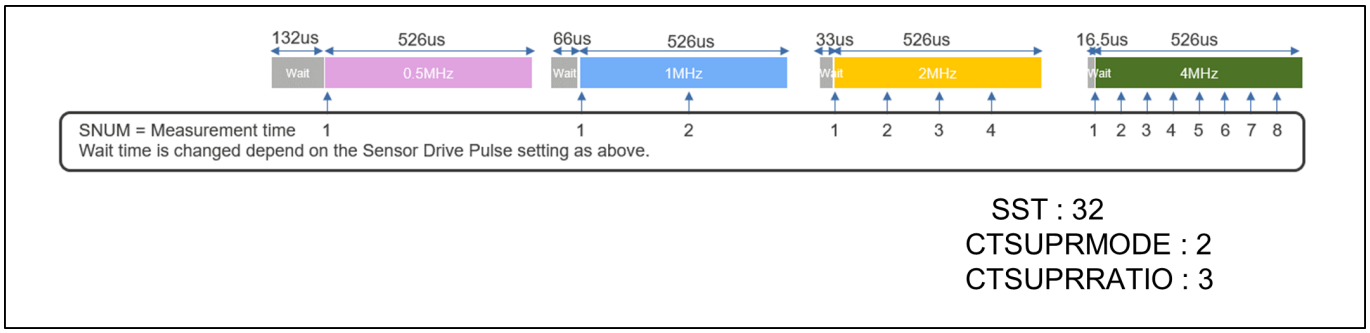

Figure 155: Self-capacitance Measurement Period (CTSU1)

[CTSU2]
In default settings, the measurement period for each TS is approximately 576us.

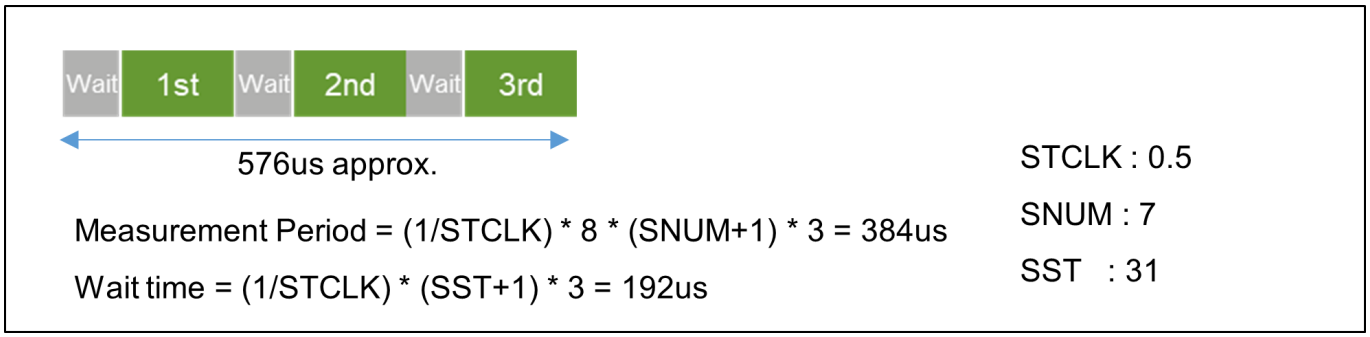

Figure 156: Self-capacitance Measurement Period (CTSU2)

Mutual-Capacitance Mode

The mutual-capacitance mode is used to measure the capacitance generated between the receive TS (Rx) and transmit TS (Tx), and therefore requires at least two terminals.
The CTSU2 peripheral measures all specified combinations of Rx and Tx. For example, when Rx is TS1 and TS3, and Tx is TS2, TS7 and TS4, the combinations are measured in the following order and the data is stored.
TS3-TS2, TS3-TS4, TS3-TS7, TS10-TS2, TS10-TS4, TS10-TS7
To measure the mutual-capacitance generated between electrodes, the CTSU2 peripheral performs the measurement process on the same electrode twice.
The mutual-capacitance is obtained by inverting the phase relationship of the pulse output and switched capacitor in the primary and secondary measurements, and calculating the difference between the two measurements. This module does not calculate the difference, but outputs the secondary measured result.
[CTSU1]
In default settings, the measurement period for each TS is twice of wait-time plus approximately 526us.
[CTSU2]
In default settings, the measurement period for each TS is approximately 1152us.

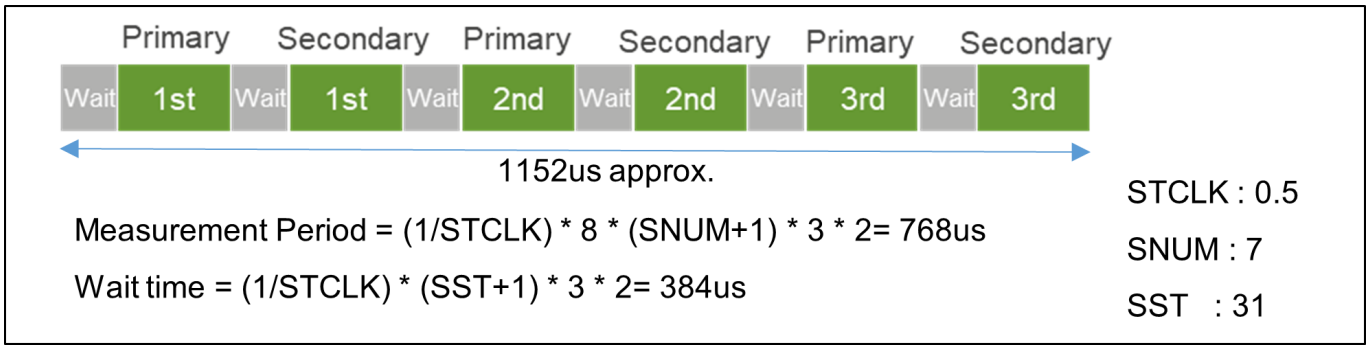

Figure 157: Mutual-capacitance Measurement Period

Mutual-capacitance parallel scan mode(CTSU2)

This mode provides fast measurement time by parallel scanning the RX lines with a CFC circuit. Operation is otherwise identical to normal CTSU mutual scanning.

- Scan Order
  - The hardware scans all RX pins simultaneously for each TX pin.
  - For example, if sensors TS10, TS11, and TS03 are specified as RX sensors, and sensors TS02, TS07, and TS04 are specified as TX sensors, the hardware will scan them in the following sensor-pair order:
    TS02-(TS03, TS10, TS11), TS04-(TS03, TS10, TS11), TS07-(TS03, TS10, TS11)
- Element
  - An element refers to the index of a sensor-pair within the scan order. Using the previous example, TS07-TS10 is element 7.
- Scan Time
  - Because the RX lines are scanned in parallel, CFC mutual-capacitance scan is the same amount of times faster than a basic mutual matrix scan as the number of RX lines. In other words, on a matrix with N receive lines, CFC mutual scanning is N times faster than basic mutual scanning. Set CTSU_MODE_MUTUAL_CFC_SCAN to "md" of ctsu_cfg_t.
    Also, add the number of matrix used for this measurement to CTSU_CFG_NUM_MUTUAL_ELEMENTS. In addition, set the number of CTSU_CFG_NUM_CFC and CTSU_CFG_NUM_CFC_TX.
    For details, refer to the configuration and sample application output by QE for Capacitive Touch.

Current Measurement Mode(CTSU2)

The current measurement mode is used to measure the minute current input to the TS terminal. The order of measurement and data storage is the same as that of the self-capacitance mode. As this does not involve the switched capacitor operation, the measurement is only performed once. The measurement period for one TS under default settings is approximately 256us. The current measurement mode requires a longer stable wait time than the other modes, so the SST is set to 63.

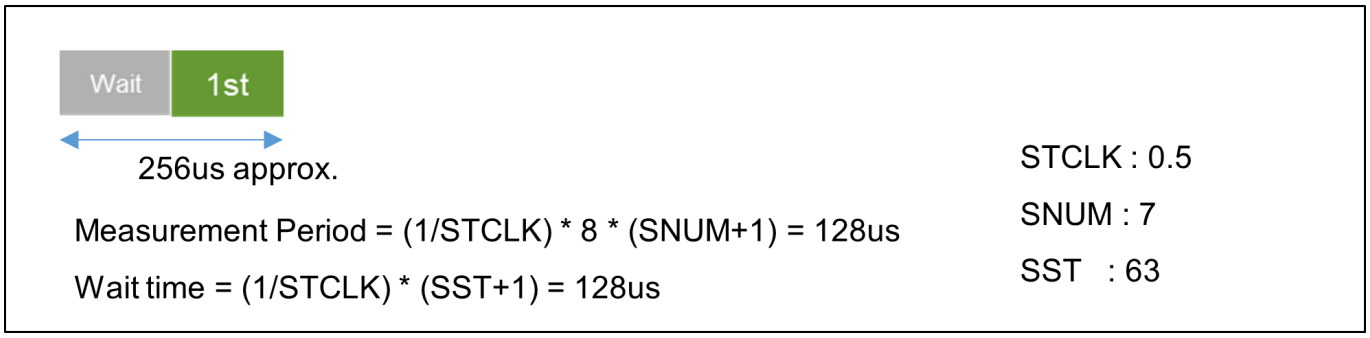

Figure 158: Current Measurement Period

Temperature Correction Mode(CTSU2)

The temperature correction mode is used to periodically update the correction coefficient using an external resistor connected to a TS terminal. This involves three processes as described below. Also refer to the timing chart in Figure of Temperature Correction Measurement Timing Chart.

1. Measure the correction circuit. One set comprises twelve measurements.

2. Measure the current when TSCAP voltage is applied to the external resistor to create a correction coefficient based on an external resistor that does not depend on temperature. Execute the next measurement after the previous measurement set is completed (as described in step 1).
3. Flow offset current to the external resistor and measure the voltage with the ADC. This will adjust the RTRIM register and handle the temperature drift of the internal reference resistor. In the config settings, set the number of times step 2 should be executed before carrying out this measurement.

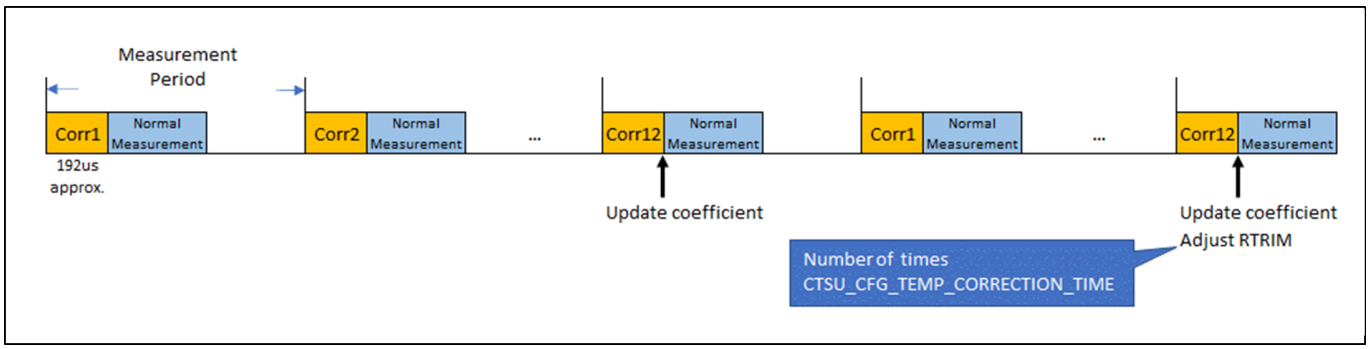

Figure 159: Temperature Correction Measurement Timing Chart

Diagnosis Mode

The diagnosis mode is a mode in which various internal measurement values are scanned by using this diagnosis function R_CTSU_Diagnosis().

Measurement Timing

Measurements are initiated by a software trigger or an external event which is triggered by the Event Link Controller (ELC).

The most common method is using a timer to carry out periodic measurements. Make sure to set the timer interval to allow the measurement and internal value update processes to complete before the next measurement period. The measurement period differs according to touch interface configuration and measurement mode.
The execution timing of software triggers and external triggers differ slightly.
Since a software trigger sets the start flag after setting the touch interface configuration with R_CTSU_ScanStart(), there is a slight delay after the timer event occurrence. However, as the delay is much smaller than the measurement period, a software trigger is recommended for most instances as it is easy to set.
An external trigger is recommended for applications in which this slight delay is not acceptable or that require low-power consumption operations. When using an external trigger with multiple touch interface configurations, use R_CTSU_ScanStart() to set another touch interface configuration after one measurement is completed.

TrustZone Support

In r_ctsu and rm_touch module, Non-Secure Callable Guard Functions are only generated from QE for Capacitive Touch. QE can be used for tuning in secure or flat project, but not in non-secure project. If you want to use in non-secure project, copy the output file from secure or flat project. Refer to QE Help for more information.

Data flow

The flow of storing data in RAM is as follows.

(CTSU1)

1. Read registers and stored in RAM as raw data.
2. ICO correction calculation of raw data and stored in RAM as correction data.
3. The correction data is calculated by moving average and stored in RAM as measurement results.

(CTSU2)

1. Reads a register and stores raw data measured at three different frequencies in RAM.
2. Three raw data is ICO-corrected, standardized to the fitst frequency reference value, and stored in RAM as three correction data.
3. Three correction data are calculated by majority decision and moving average, and stored in RAM as measurement results.

Add user's filter

There are two ways to add the user's filter.

1. Instead of filter calculation of R_CTSU_DataGet(), perform user filter calculation and use R_CTSU_DataInsert() to input user filter calculation result.
2. Using the correction data obtained by R_CTSU_SpecificDataGet(), instead of majority decision calculation and filter calculation of R_CTSU_DataGet(), perform user majority decision calculation & filter calculation and use R_CTSU_DataInsert() to input user majority decision calculation & filter calculation result.

Please check example.

User's filter additional Example

Examples

Basic Example

This is a basic example of minimal use of the CTSU in an application.

```
volatile bool g_scan_flag = false;
void ctsu_callback (ctsu_callback_args_t * p_args)
{
 if (CTSU_EVENT_SCAN_COMPLETE == p_args->event)
    {
       g_scan_flag = true;
    }
}
void ctsu_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
    uint16_t data[CTSU_CFG_NUM_SELF_ELEMENTS];
    err = R_CTSU_Open(&g_ctsu_ctrl, &g_ctsu_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 while (true)
    {
       err = R_CTSU_ScanStart(&g_ctsu_ctrl);
      assert(FSP_SUCCESS == err);
 while (!g_scan_flag)
     {
 /* Wait for scan end callback */
     }
       g_scan_flag = false;
       err = R_CTSU_DataGet(&g_ctsu_ctrl, data);
 if (FSP_SUCCESS == err)
     {
 /* Application specific data processing. */
     }
```

```
    }
}
```

Multi-configuration Example

This is a optional example of using both Self-capacitance and Mutual-capacitance configurations in the same project.

```
void ctsu_optional_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
    uint16_t data[CTSU_CFG_NUM_SELF_ELEMENTS + (CTSU_CFG_NUM_MUTUAL_ELEMENTS * 2)];
    err = R_CTSU_Open(&g_ctsu_ctrl, &g_ctsu_cfg);
    assert(FSP_SUCCESS == err);
    err = R_CTSU_Open(&g_ctsu_ctrl_mutual, &g_ctsu_cfg_mutual);
    assert(FSP_SUCCESS == err);
 while (true)
    {
 R_CTSU_ScanStart(&g_ctsu_ctrl);
 while (!g_scan_flag)
     {
 /* Wait for scan end callback */
     }
      g_scan_flag = false;
 R_CTSU_ScanStart(&g_ctsu_ctrl_mutual);
 while (!g_scan_flag)
     {
 /* Wait for scan end callback */
     }
      g_scan_flag = false;
      err = R_CTSU_DataGet(&g_ctsu_ctrl, data);
     assert(FSP_SUCCESS == err);
 if (FSP_SUCCESS == err)
     {
 /* Application specific data processing. */
```

```
     }
      err = R_CTSU_DataGet(&g_ctsu_ctrl_mutual, data);
     assert(FSP_SUCCESS == err);
 if (FSP_SUCCESS == err)
     {
 /* Application specific data processing. */
     }
   }
}
```

Diagnosis function Example

This is a Diagnosis function example of using the configuration in the basic example.

```
void ctsu_diag_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
   uint16_t data[CTSU_CFG_NUM_SELF_ELEMENTS];
   uint16_t dummy;
 R_CTSU_Open(&g_ctsu_ctrl, &g_ctsu_cfg);
   assert(FSP_SUCCESS == err);
 R_CTSU_Open(&g_ctsu_ctrl_diagnosis, &g_ctsu_cfg_diagnosis);
   assert(FSP_SUCCESS == err);
 while (true)
   {
 R_CTSU_ScanStart(&g_ctsu_ctrl);
 while (!g_scan_flag)
     {
 /* Wait for scan end callback */
     }
      g_scan_flag = false;
      err = R_CTSU_DataGet(&g_ctsu_ctrl, data);
     assert(FSP_SUCCESS == err);
 R_CTSU_ScanStart(&g_ctsu_ctrl_diagnosis);
 while (!g_scan_flag)
```

```
     {
 /* Wait for scan end callback */
     }
      g_scan_flag = false;
      err = R_CTSU_DataGet(&g_ctsu_ctrl_diagnosis, &dummy);
     assert(FSP_SUCCESS == err);
 if (FSP_SUCCESS == err)
     {
           err = R_CTSU_Diagnosis(&g_ctsu_ctrl_diagnosis);
     assert(FSP_SUCCESS == err);
 if (FSP_SUCCESS == err)
     {
 break;
     }
     }
   }
}
```

User's filter additional Example

This is a user's filter additiional example of using the configuration in the basic example.
To perform user's filter calculation, change the num_moving_average of the element in the target ctsu_cfg_t to 1.

Perform user filter calculation and use R_CTSU_DataInsert() to input user filter calculation result.

```
void ctsu_user_filter_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
    uint16_t data[CTSU_CFG_NUM_SELF_ELEMENTS];
    uint16_t filter_data[CTSU_CFG_NUM_SELF_ELEMENTS];
 /* If you want to make a touch judgment, call RM_TOUCH_Open()instead of the
following. */
    err = R_CTSU_Open(&g_ctsu_ctrl, &g_ctsu_cfg);
```

```
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 while (true)
    {
 /* If you want to make a touch judgment, call RM_TOUCH_ScanStart()instead of the
following. */
       err = R_CTSU_ScanStart(&g_ctsu_ctrl);
      assert(FSP_SUCCESS == err);
 while (!g_scan_flag)
      {
 /* Wait for scan end callback */
      }
       g_scan_flag = false;
       err = R_CTSU_DataGet(&g_ctsu_ctrl, data);
 if (FSP_SUCCESS == err)
      {
 /* User original function. */
            ctsu_user_filter(data, filter_data);
            err = R_CTSU_DataInsert(&g_ctsu_ctrl, filter_data);
      assert(FSP_SUCCESS == err);
 /* Call RM_TOUCH_DataGet() to make a touch decision. */
      }
    }
}
```

Using the correction data obtained by R_CTSU_SpecificDataGet(). Perform user majority decision calculation & filter calculation and use R_CTSU_DataInsert() to input user majority decision calculation & filter calculation result.

```
void ctsu_user_majority_decition_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
    uint16_t data[CTSU_CFG_NUM_SELF_ELEMENTS];
    uint16_t corr_data[CTSU_CFG_NUM_SELF_ELEMENTS * CTSU_CFG_NUM_SUMULTI];
    uint16_t filter_data[CTSU_CFG_NUM_SELF_ELEMENTS];
```

```
 /* If you want to make a touch judgment, call RM_TOUCH_Open()instead of the
following. */
    err = R_CTSU_Open(&g_ctsu_ctrl, &g_ctsu_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 while (true)
    {
 /* If you want to make a touch judgment, call RM_TOUCH_ScanStart()instead of the
following. */
       err = R_CTSU_ScanStart(&g_ctsu_ctrl);
      assert(FSP_SUCCESS == err);
 while (!g_scan_flag)
      {
 /* Wait for scan end callback */
      }
       g_scan_flag = false;
       err = R_CTSU_DataGet(&g_ctsu_ctrl, data);
 if (FSP_SUCCESS == err)
      {
            err = R_CTSU_SpecificDataGet(&g_ctsu_ctrl, corr_data,
CTSU_SPECIFIC_CORRECTION_DATA);
      assert(FSP_SUCCESS == err);
 /* User original function */
            ctsu_user_filter(corr_data, filter_data);
            err = R_CTSU_DataInsert(&g_ctsu_ctrl, filter_data);
      assert(FSP_SUCCESS == err);
 /* Call RM_TOUCH_DataGet() to make a touch decision. */
      }
    }
}
```

◆ ctsu_instance_ctrl_t

struct ctsu_instance_ctrl_t	
CTSU private control block. DO NOT MODIFY. Initialization occurs when R_CTSU_Open() is called.	
Data Fields	
uint32_t	open
	Whether or not driver is open.
volatile ctsu_state_t	state
	CTSU run state.
ctsu_cap_t	cap
	CTSU Scan Start Trigger Select.
ctsu_md_t	md
	CTSU Measurement Mode Select(copy to cfg)

ctsu_tuning_t	tuning
	CTSU Initial offset tuning status.
uint16_t	num_elements
	Number of elements to scan.
uint16_t	wr_index
	Word index into ctsuwr register array.
uint16_t	rd_index
	Word index into scan data buffer.
uint8_t *	p_tuning_count
	Pointer to tuning count of each element. g_ctsu_tuning_count[] is set by Open API.
int32_t *	p_tuning_diff
	Pointer to difference from base value of each element. g_ctsu_tuning_diff[] is set by Open API.
uint16_t	average
	CTSU Moving average counter.
uint16_t	num_moving_average
	Copy from config by Open API.
uint8_t	ctsucr1
	Copy from (atune1 << 3, md << 6) by Open API. CLK, ATUNE0, CSW, and PON is set by HAL driver.

ctsu_ctsuwr_t *	p_ctsuwr
	CTSUWR write register value. g_ctsu_ctsuwr[] is set by Open API.
ctsu_self_buf_t *	p_self_raw
	Pointer to Self raw data. g_ctsu_self_raw[] is set by Open API.
uint16_t *	p_self_corr
	Pointer to Self correction data. g_ctsu_self_corr[] is set by Open API.
uint16_t *	p_self_data
	Pointer to Self moving average data. g_ctsu_self_data[] is set by Open API.
ctsu_mutual_buf_t *	p_mutual_raw
	Pointer to Mutual raw data. g_ctsu_mutual_raw[] is set by Open API.
uint16_t *	p_mutual_pri_corr
	Pointer to Mutual primary correction data. g_ctsu_self_corr[] is set by Open API.
uint16_t *	p_mutual_snd_corr
	Pointer to Mutual secondary correction data. g_ctsu_self_corr[] is set by Open API.
uint16_t *	p_mutual_pri_data
	Pointer to Mutual primary moving average data. g_ctsu_mutual_pri_data[] is set by Open API.
uint16_t *	p_mutual_snd_data

	Pointer to Mutual secondary moving average data. g_ctsu_mutual_snd_data[] is set by Open API.
ctsu_correction_info_t *	p_correction_info
	Pointer to correction info.
ctsu_txvsel_t	txvsel
	CTSU Transmission Power Supply Select.
ctsu_txvsel2_t	txvsel2
	CTSU Transmission Power Supply Select 2 (CTSU2 Only)
uint8_t	ctsuchac0
	TS00-TS07 enable mask.
uint8_t	ctsuchac1
	TS08-TS15 enable mask.
uint8_t	ctsuchac2
	TS16-TS23 enable mask.
uint8_t	ctsuchac3
	TS24-TS31 enable mask.
uint8_t	ctsuchac4
	TS32-TS39 enable mask.
uint8_t	ctsuchtrc0

	TS00-TS07 mutual-tx mask.
uint8_t	ctsuchtrc1
	TS08-TS15 mutual-tx mask.
uint8_t	ctsuchtrc2
	TS16-TS23 mutual-tx mask.
uint8_t	ctsuchtrc3
	TS24-TS31 mutual-tx mask.
uint8_t	ctsuchtrc4
	TS32-TS39 mutual-tx mask.
uint16_t	self_elem_index
	self element index number for Current instance.
uint16_t	mutual_elem_index
	mutual element index number for Current instance.
uint16_t	ctsu_elem_index
	CTSU element index number for Current instance.
ctsu_cfg_t const *	p_ctsu_cfg
	Pointer to initial configurations.
IRQn_Type	write_irq
	Copy from config by Open API. CTSU_CTSUWR interrupt vector.

IRQn_Type	read_irq
	Copy from config by Open API. CTSU_CTSURD interrupt vector.
IRQn_Type	end_irq
	Copy from config by Open API. CTSU_CTSUFN interrupt vector.
void(*	p_callback)(ctsu_callback_args_t *)
	Callback provided when a CTSUFN occurs.
uint8_t	interrupt_reverse_flag
	Flag in which read interrupt and end interrupt are reversed.
ctsu_event_t	error_status
	error status variable to send to QE for serial tuning.
ctsu_callback_args_t *	p_callback_memory
	Pointer to non-secure memory that can be used to pass arguments to a callback in non-secure memory.
void const *	p_context
	Placeholder for user data.
bool	serial_tuning_enable
	Flag of serial tuning status.
uint16_t	serial_tuning_mutual_cnt
	Word index into ctsuwr register array.

uint16_t	tuning_self_target_value
	Target self value for initial offset tuning.
uint16_t	tuning_mutual_target_value
	Target mutual value for initial offset tuning.

Enumeration Type Documentation

◆ ctsu_state_t

enum ctsu_state_t	
CTSU run state	
Enumerator	
CTSU_STATE_INIT	Not open.
CTSU_STATE_IDLE	Opened.
CTSU_STATE_SCANNING	Scanning now.
CTSU_STATE_SCANNED	Scan end.

enum ctsu_tuning_t	
CTSU Initial offset tuning status	
Enumerator	
CTSU_TUNING_INCOMPLETE	Initial offset tuning incomplete.
CTSU_TUNING_COMPLETE	Initial offset tuning complete.

◆ ctsu_correction_status_t

enum ctsu_correction_status_t	
CTSU Correction status	
Enumerator	
CTSU_CORRECTION_INIT	Correction initial status.
CTSU_CORRECTION_RUN	Correction scan running.
CTSU_CORRECTION_COMPLETE	Correction complete.
CTSU_CORRECTION_ERROR	Correction error.

◆ ctsu_range_t

enum ctsu_range_t	
CTSU range definition	
Enumerator	
CTSU_RANGE_20UA	20uA mode
CTSU_RANGE_40UA	40uA mode
CTSU_RANGE_80UA	80uA mode
CTSU_RANGE_160UA	160uA mode
CTSU_RANGE_NUM	number of range

Function Documentation

◆ R_CTSU_Open()

fsp_err_t R_CTSU_Open (ctsu_ctrl_t *const *p_ctrl*, ctsu_cfg_t const *const *p_cfg*)

Opens and configures the CTSU driver module. Implements ctsu_api_t::open.

Example:

```
err = R_CTSU_Open(&g_ctsu_ctrl, &g_ctsu_cfg);
```

Return values

FSP_SUCCESS	CTSU successfully configured.
FSP_ERR_ASSERTION	Null pointer, or one or more configuration options is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_ARGUMENT	Configuration parameter error.

Note

In the first Open, measurement for correction works, and it takes several tens of milliseconds.

◆ R_CTSU_ScanStart()

fsp_err_t R_CTSU_ScanStart (ctsu_ctrl_t *const *p_ctrl*)

This function should be called each time a periodic timer expires. If initial offset tuning is enabled, The first several calls are used to tuning for the sensors. Before starting the next scan, first get the data with R_CTSU_DataGet(). If a different control block scan should be run, check the scan is complete before executing. Implements ctsu_api_t::scanStart.

Example:

```
while (true)
   {
      err = R_CTSU_ScanStart(&g_ctsu_ctrl);
     assert(FSP_SUCCESS == err);
while (!g_scan_flag)
     {
/* Wait for scan end callback */
     }
      g_scan_flag = false;
      err = R_CTSU_DataGet(&g_ctsu_ctrl, data);
if (FSP_SUCCESS == err)
     {
/* Application specific data processing. */
     }
   }
```

Return values

FSP_SUCCESS	CTSU successfully configured.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_CTSU_SCANNING	Scanning this instance or other.
FSP_ERR_CTSU_NOT_GET_DATA	The previous data has not been retrieved by DataGet.

◆ R_CTSU_DataGet()

fsp_err_t R_CTSU_DataGet (ctsu_ctrl_t *const *p_ctrl*, uint16_t * *p_data*)

This function gets the sensor values as scanned by the CTSU. If initial offset tuning is enabled, The first several calls are used to tuning for the sensors. Implements ctsu_api_t::dataGet.

Example:

```
while (true)
   {
      err = R_CTSU_ScanStart(&g_ctsu_ctrl);
     assert(FSP_SUCCESS == err);
while (!g_scan_flag)
     {
/* Wait for scan end callback */
     }
      g_scan_flag = false;
      err = R_CTSU_DataGet(&g_ctsu_ctrl, data);
if (FSP_SUCCESS == err)
     {
/* Application specific data processing. */
     }
   }
```

Return values

FSP_SUCCESS	CTSU successfully configured.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_CTSU_SCANNING	Scanning this instance.
FSP_ERR_CTSU_INCOMPLETE_TUNING	Incomplete initial offset tuning.
FSP_ERR_CTSU_DIAG_NOT_YET	Diagnosis of data collected no yet.

◆ R_CTSU_ScanStop()

fsp_err_t R_CTSU_ScanStop (ctsu_ctrl_t *const *p_ctrl*)

This function scan stops the sensor as scanning by the CTSU. Implements ctsu_api_t::scanStop.

Return values

FSP_SUCCESS	CTSU successfully scan stop.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ R_CTSU_CallbackSet()

fsp_err_t R_CTSU_CallbackSet (ctsu_ctrl_t *const *p_api_ctrl*, void(*)(ctsu_callback_args_t *) *p_callback*, void const *const *p_context*, ctsu_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements ctsu_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

◆ R_CTSU_Diagnosis()

fsp_err_t R_CTSU_Diagnosis (ctsu_ctrl_t *const *p_ctrl*)

Diagnosis the CTSU peripheral. Implements ctsu_api_t::diagnosis.

Example:

```
            err = R_CTSU_Diagnosis(&g_ctsu_ctrl_diagnosis);
        assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	CTSU successfully configured.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_CTSU_NOT_GET_DATA	The previous data has not been retrieved by DataGet.
FSP_ERR_CTSU_DIAG_LDO_OVER_VOLTAGE	Diagnosis of LDO over voltage failed.
FSP_ERR_CTSU_DIAG_CCO_HIGH	Diagnosis of CCO into 19.2uA failed.
FSP_ERR_CTSU_DIAG_CCO_LOW	Diagnosis of CCO into 2.4uA failed.
FSP_ERR_CTSU_DIAG_SSCG	Diagnosis of SSCG frequency failed.
FSP_ERR_CTSU_DIAG_DAC	Diagnosis of non-touch count value failed.
FSP_ERR_CTSU_DIAG_OUTPUT_VOLTAGE	Diagnosis of LDO output voltage failed.
FSP_ERR_CTSU_DIAG_OVER_VOLTAGE	Diagnosis of over voltage detection circuit failed.
FSP_ERR_CTSU_DIAG_OVER_CURRENT	Diagnosis of over current detection circuit failed.
FSP_ERR_CTSU_DIAG_LOAD_RESISTANCE	Diagnosis of LDO internal resistance value failed.
FSP_ERR_CTSU_DIAG_CURRENT_SOURCE	Diagnosis of LDO internal resistance value failed.
FSP_ERR_CTSU_DIAG_SENSCLK_GAIN	Diagnosis of SENSCLK frequency gain failed.
FSP_ERR_CTSU_DIAG_SUCLK_GAIN	Diagnosis of SUCLK frequency gain failed.
FSP_ERR_CTSU_DIAG_CLOCK_RECOVERY	Diagnosis of SUCLK clock recovery function failed.
FSP_ERR_CTSU_DIAG_CFC_GAIN	Diagnosis of CFC oscillator gain failed.

◆ R_CTSU_Close()

fsp_err_t R_CTSU_Close (ctsu_ctrl_t *const *p_ctrl*)

Disables specified CTSU control block. Implements ctsu_api_t::close.

Return values

FSP_SUCCESS	CTSU successfully configured.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.

◆ R_CTSU_SpecificDataGet()

fsp_err_t R_CTSU_SpecificDataGet (ctsu_ctrl_t *const *p_ctrl*, uint16_t * *p_specific_data*, ctsu_specific_data_type_t *specific_data_type*)

This function gets the sensor specific data values as scanned by the CTSU. Call this function after calling the R_CTSU_DataGet() function.

By setting the third argument to CTSU_SPECIFIC_RAW_DATA, RAW data can be output from the second argument.

By setting the third argument to CTSU_SPECIFIC_CORRECTION_DATA, the corrected data can be output from the second argument.

By setting the third argument to CTSU_SPECIFIC_SELECTED_DATA, Get bitmap of the frequency values used in majority decision from the second argument. The bitch map is shown as follows.
||2bit | 1bit | 0bit || ||3rd frequency value | 2nd frequency value | 1st frequency value ||

Implements ctsu_api_t::specificDataGet.

Example:

```
            err = R_CTSU_SpecificDataGet(&g_ctsu_ctrl, corr_data,
CTSU_SPECIFIC_CORRECTION_DATA);
```

Return values

FSP_SUCCESS	CTSU successfully configured.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_CTSU_SCANNING	Scanning this instance.
FSP_ERR_CTSU_INCOMPLETE_TUNING	Incomplete initial offset tuning.
FSP_ERR_NOT_ENABLED	CTSU_SPECIFIC_SELECTED_FREQ is not enabled in CTSU1.(CTSU2 Only)

◆ R_CTSU_DataInsert()

fsp_err_t R_CTSU_DataInsert (ctsu_ctrl_t *const *p_ctrl*, uint16_t * *p_insert_data*)

This function inserts the value of the second argument as the measurement result value. Call this function after calling the R_CTSU_DataInsert() function. Implements ctsu_api_t::dataInsert.

Example:

```
err = R_CTSU_DataInsert(&g_ctsu_ctrl, filter_data);
```

Return values

FSP_SUCCESS	CTSU successfully configured.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_CTSU_SCANNING	Scanning this instance.
FSP_ERR_CTSU_INCOMPLETE_TUNING	Incomplete initial offset tuning.

4.2.17 Digital to Analog Converter (r_dac)

Modules

Functions

fsp_err_t	R_DAC_Open (dac_ctrl_t *p_api_ctrl, dac_cfg_t const *const p_cfg)
fsp_err_t	R_DAC_Write (dac_ctrl_t *p_api_ctrl, uint16_t value)
fsp_err_t	R_DAC_Start (dac_ctrl_t *p_api_ctrl)
fsp_err_t	R_DAC_Stop (dac_ctrl_t *p_api_ctrl)
fsp_err_t	R_DAC_Close (dac_ctrl_t *p_api_ctrl)

Detailed Description

Driver for the DAC12 peripheral on RA MCUs. This module implements the DAC Interface.

Overview

Features

The DAC module outputs one of 4096 voltage levels between the positive and negative reference voltages.

- Supports setting left-justified or right-justified 12-bit value format for the 16-bit input data registers
- Supports output amplifiers on selected MCUs
- Supports charge pump on selected MCUs
- Supports synchronization with the Analog-to-Digital Converter (ADC) module

Configuration

Note

For MCUs supporting more than one channel, the following configuration options are shared by all the DAC channels:

- *Synchronize with ADC*
- *Data Format*
- *Charge Pump*

Build Time Configurations for r_dac

The following build time configurations are defined in fsp_cfg/r_dac_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Analog > DAC (r_dac)

This module can be added to the Stacks tab via New Stack > Analog > DAC (r_dac). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_dac0	Module name.
Channel	Value must be an integer greater than or equal to 0	0	Specify the hardware channel.
Synchronize with ADC	MCU Specific Options		Enable DA/AD synchronization.
Data Format	• Right Justified • Left Justified	Right Justified	Specify the DAC data format.
Output Amplifier	MCU Specific Options		Enable the DAC output amplifier.
Charge Pump (Requires MOCO active)	MCU Specific Options		Enable the DAC charge pump.
Internal Output	MCU Specific Options		Enable DAC output to internal modules.
ELC Trigger Source	MCU Specific Options		ELC event source that will trigger the DAC to

start a conversion.

Clock Configuration

The DAC peripheral module uses PCLKB as its clock source.

Pin Configuration

The DAn pins are used as analog outputs. Each DAC channel has one output pin.

The AVCC0 and AVSS0 pins are power and ground supply pins for the DAC and ADC.

The VREFH and VREFL pins are top and ground voltage reference pins for the DAC and ADC.

Usage Notes

Charge Pump

The charge pump must be enabled when using DAC pin output while operating at AV_{CC} < 2.7V.

Note

The MOCO must be running to use the charge pump.
If the DAC output is to be routed to an internal signal, do not enable the charge pump.

Output to Internal Modules

The DAC output can be used as an analog input to other peripherals on the MCU (eg. ACMPHS, ADC) without outputting the voltage to an external pin.

On some MCUs this functionality must be enabled during configuration using dac_extended_cfg_t::internal_output_enabled. When internal output is enabled, the DAC output will be routed to internal modules. If the DAC output amplifier is enabled or when internal output is disabled, the output will be routed to the DAC output pin (DAn).

Synchronization with ADC

When ADC synchronization is enabled and an ADC conversion is in progress, if a DAC conversion is started it will automatically be delayed until after the ADC conversion is complete.

Limitations

- For MCUs supporting ADC unit 1:
    - Once synchronization between DAC and ADC unit 1 is turned on during R_DAC_Open synchronization cannot be turned off by the driver. In order to desynchronize DAC with ADC unit 1, manually clear DAADSCR.DAADST to 0 when the ADCSR.ADST bit is 0 and ADC unit 1 is halted.
    - The DAC module can only be synchronized with ADC unit 1.
    - For MCUs having more than 1 DAC channel, both channels are synchronized with ADC unit 1 if synchronization is enabled.
- Pin configuration does not support setting ASEL and PSEL bit fields for the same pin. In order to set the PSEL when DAC pin is enabled, maually update the setting of the DAC pin to .pin_cfg = ((uint32_t)IOPORT_CFG_ANALOG_ENABLE | IOPORT_CFG_PERIPHERAL_PIN | IOPORT_PERIPHERAL_CAC_AD)}.

Examples

Basic Example

This is a basic example of minimal use of the R_DAC in an application. This example shows how this driver can be used for basic Digital to Analog Conversion operations.

```
void basic_example (void)
{
 fsp_err_t err;
    uint16_t value;
 /* Pin configuration: Output enable DA0 as Analog. */
 /* Initialize the DAC channel */
    err = R_DAC_Open(&g_dac_ctrl, &g_dac_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    value = (uint16_t) DAC_EXAMPLE_VALUE_ABC;
    err = R_DAC_Write(&g_dac_ctrl, value);
    assert(FSP_SUCCESS == err);
    err = R_DAC_Start(&g_dac_ctrl);
    assert(FSP_SUCCESS == err);
}
```

Data Structures

struct	dac_instance_ctrl_t
struct	dac_extended_cfg_t

Data Structure Documentation

◆ dac_instance_ctrl_t

struct dac_instance_ctrl_t
DAC instance control block.

◆ dac_extended_cfg_t

struct dac_extended_cfg_t		
DAC extended configuration		
Data Fields		
bool	enable_charge_pump	Enable DAC charge pump

		available on selected MCUs.
bool	output_amplifier_enabled	Output amplifier enable available on selected MCUs.
bool	internal_output_enabled	Internal output enable available on selected MCUs.
dac_data_format_t	data_format	Data format.

Function Documentation

◆ R_DAC_Open()

fsp_err_t R_DAC_Open (dac_ctrl_t * *p_api_ctrl*, dac_cfg_t const *const *p_cfg*)

Perform required initialization described in hardware manual. Implements dac_api_t::open. Configures a single DAC channel, starts the channel, and provides a handle for use with the DAC API Write and Close functions. Must be called once prior to calling any other DAC API functions. After a channel is opened, Open should not be called again for the same channel without calling Close first.

Return values

FSP_SUCCESS	The channel was successfully opened.
FSP_ERR_ASSERTION	Parameter check failure due to one or more reasons below: 1. One or both of the following parameters may be NULL: p_api_ctrl or p_cfg 2. data_format value in p_cfg is out of range. 3. Extended configuration structure is set to NULL for MCU supporting charge pump.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	Channel ID requested in p_cfg may not available on the devices.
FSP_ERR_ALREADY_OPEN	The control structure is already opened.

◆ R_DAC_Write()

fsp_err_t R_DAC_Write (dac_ctrl_t * *p_api_ctrl*, uint16_t *value*)

Write data to the D/A converter and enable the output if it has not been enabled.

Return values

FSP_SUCCESS	Data is successfully written to the D/A Converter.
FSP_ERR_ASSERTION	p_api_ctrl is NULL.
FSP_ERR_NOT_OPEN	Channel associated with p_ctrl has not been opened.

◆ R_DAC_Start()

fsp_err_t R_DAC_Start (dac_ctrl_t * *p_api_ctrl*)

Start the D/A conversion output if it has not been started.

Return values

FSP_SUCCESS	The channel is started successfully.
FSP_ERR_ASSERTION	p_api_ctrl is NULL.
FSP_ERR_IN_USE	Attempt to re-start a channel.
FSP_ERR_NOT_OPEN	Channel associated with p_ctrl has not been opened.

◆ R_DAC_Stop()

fsp_err_t R_DAC_Stop (dac_ctrl_t * *p_api_ctrl*)

Stop the D/A conversion and disable the output signal.

Return values

FSP_SUCCESS	The control is successfully stopped.
FSP_ERR_ASSERTION	p_api_ctrl is NULL.
FSP_ERR_NOT_OPEN	Channel associated with p_ctrl has not been opened.

◆ R_DAC_Close()

fsp_err_t R_DAC_Close (dac_ctrl_t * *p_api_ctrl*)
Stop the D/A conversion, stop output, and close the DAC channel. **Return values** FSP_SUCCESS — The channel is successfully closed. FSP_ERR_ASSERTION — p_api_ctrl is NULL. FSP_ERR_NOT_OPEN — Channel associated with p_ctrl has not been opened.

4.2.18 Digital to Analog Converter (r_dac8)

Modules

Functions

fsp_err_t	R_DAC8_Open (dac_ctrl_t *const p_ctrl, dac_cfg_t const *const p_cfg)
fsp_err_t	R_DAC8_Close (dac_ctrl_t *const p_ctrl)
fsp_err_t	R_DAC8_Write (dac_ctrl_t *const p_ctrl, uint16_t value)
fsp_err_t	R_DAC8_Start (dac_ctrl_t *const p_ctrl)
fsp_err_t	R_DAC8_Stop (dac_ctrl_t *const p_ctrl)

Detailed Description

Driver for the DAC8 peripheral on RA MCUs. This module implements the DAC Interface.

Overview

Features

The DAC8 module outputs one of 256 voltage levels between the positive and negative reference voltages. DAC8 on selected MCUs have below features

- Charge pump control
- Synchronization with the Analog-to-Digital Converter (ADC) module
- Multiple Operation Modes
  - Normal
  - Real-Time (Event Link)

Configuration

Note

For MCUs supporting more than one channel, the following configuration options are shared by all the DAC8 channels:

- *Synchronize with ADC*
- *Charge Pump*

Build Time Configurations for r_dac8

The following build time configurations are defined in fsp_cfg/r_dac8_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Analog > DAC8 (r_dac8)

This module can be added to the Stacks tab via New Stack > Analog > DAC8 (r_dac8).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_dac8_0	Module name.
Channel	Value must be an integer greater than or equal to 0	0	Specify the hardware channel.
D/A A/D Synchronous Conversion	MCU Specific Options		Synchronize the DAC8 update with the ADC to reduce interference with A/D conversions.
DAC Mode	MCU Specific Options		Select the DAC operating mode
Real-time Trigger Event	MCU Specific Options		Specify the event used to trigger conversion in Real-time mode. This setting is only valid when Real-time mode is enabled.
Charge Pump (Requires MOCO active)	MCU Specific Options		Enable the DAC charge pump.

Clock Configuration

The DAC8 peripheral module uses the PCLKB as its clock source.

Pin Configuration

The DA8_n pins are used as analog outputs. Each DAC8 channel has one output pin.

The AVCC0 and AVSS0 pins are power and ground supply and reference pins for the DAC8.

Usage Notes

Charge Pump

The charge pump must be enabled when using DAC8 pin output while operating at AV_{CC} < 2.7V.

Note

The MOCO must be running to use the charge pump.
If DAC8 output is to be routed to an internal signal, do not enable the charge pump.

Synchronization with ADC

When ADC synchronization is enabled and an ADC conversion is in progress, if a DAC8 conversion is started it will automatically be delayed until after the ADC conversion is complete.

Real-time Mode

When Real-time mode is selected, the DAC8 will perform a conversion each time the selected ELC event is received.

Limitations

- Synchronization between DAC8 and ADC is activated when calling R_DAC8_Open. At this point synchronization cannot be deactivated by the driver. In order to desynchronize DAC8 with ADC, manually clear DACADSCR.DACADST to 0 while the ADCSR.ADST bit is 0 and the ADC is halted.
- For MCUs having more than 1 DAC8 channel, both channels are synchronized with ADC if synchronization is enabled.
- Pin configuration does not support setting ASEL and PSEL bit fields for the same pin. In order to set the PSEL when DAC pin is enabled, maually update the setting of the DAC pin to .pin_cfg = ((uint32_t)IOPORT_CFG_ANALOG_ENABLE | IOPORT_CFG_PERIPHERAL_PIN | IOPORT_PERIPHERAL_CAC_AD)).

Examples

Basic Example

This is a basic example of minimal use of the R_DAC8 in an application. This example shows how this driver can be used for basic 8 bit Digital to Analog Conversion operations.

```
dac8_instance_ctrl_t g_dac8_ctrl;
dac_cfg_t g_dac8_cfg =
{
    .channel            = 0U,
    .ad_da_synchronized = false,
    .p_extend           = &g_dac8_cfg_extend
```

```
};
void basic_example (void)
{
 fsp_err_t err;
    uint16_t value;
 /* Pin configuration: Output enable DA8_0(RA2A1) as Analog. */
 /* Initialize the DAC8 channel */
    err = R_DAC8_Open(&g_dac8_ctrl, &g_dac8_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    value = (uint8_t) DAC8_EXAMPLE_VALUE_ABC;
 /* Write value to DAC module */
    err = R_DAC8_Write(&g_dac8_ctrl, value);
    assert(FSP_SUCCESS == err);
 /* Start DAC8 conversion */
    err = R_DAC8_Start(&g_dac8_ctrl);
    assert(FSP_SUCCESS == err);
}
```

Data Structures

struct	dac8_instance_ctrl_t
struct	dac8_extended_cfg_t

Enumerations

enum	dac8_mode_t

Data Structure Documentation

◆ dac8_instance_ctrl_t

struct dac8_instance_ctrl_t
DAC8 instance control block. DO NOT INITIALIZE.

◆ dac8_extended_cfg_t

struct dac8_extended_cfg_t
DAC8 extended configuration
Data Fields

bool	enable_charge_pump	Enable DAC charge pump.
dac8_mode_t	dac_mode	DAC mode.

Enumeration Type Documentation

◆ dac8_mode_t

enum dac8_mode_t	
Enumerator	
DAC8_MODE_NORMAL	DAC Normal mode.
DAC8_MODE_REAL_TIME	DAC Real-time (event link) mode.

Function Documentation

◆ R_DAC8_Open()

fsp_err_t R_DAC8_Open (dac_ctrl_t *const *p_ctrl*, dac_cfg_t const *const *p_cfg*)

Perform required initialization described in hardware manual.

Implements dac_api_t::open.

Configures a single DAC channel. Must be called once prior to calling any other DAC API functions. After a channel is opened, Open should not be called again for the same channel without calling Close first.

Return values

FSP_SUCCESS	The channel was successfully opened.
FSP_ERR_ASSERTION	One or both of the following parameters may be NULL: p_ctrl or p_cfg
FSP_ERR_ALREADY_OPEN	The instance control structure has already been opened.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	An invalid channel was requested.
FSP_ERR_NOT_ENABLED	Setting DACADSCR is not enabled when ADCSR.ADST = 0.

Note

This function is reentrant for different channels. It is not reentrant for the same channel.

◆ R_DAC8_Close()

fsp_err_t R_DAC8_Close (dac_ctrl_t *const *p_ctrl*)

Stop the D/A conversion, stop output, and close the DAC channel.

Return values

FSP_SUCCESS	The channel is successfully closed.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Channel associated with p_instance_ctrl has not been opened.

◆ R_DAC8_Write()

fsp_err_t R_DAC8_Write (dac_ctrl_t *const *p_ctrl*, uint16_t *value*)

Write data to the D/A converter.

Return values

FSP_SUCCESS	Data is successfully written to the D/A Converter.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Channel associated with p_instance_ctrl has not been opened.
FSP_ERR_OVERFLOW	Data overflow when data value exceeds 8-bit limit.

◆ R_DAC8_Start()

fsp_err_t R_DAC8_Start (dac_ctrl_t *const *p_ctrl*)

Start the D/A conversion output.

Return values

FSP_SUCCESS	The channel is started successfully.
FSP_ERR_ASSERTION	p_ctrl is NULL.
FSP_ERR_NOT_OPEN	Channel associated with p_instance_ctrl has not been opened.
FSP_ERR_IN_USE	Attempt to re-start a channel.

◆ R_DAC8_Stop()

fsp_err_t R_DAC8_Stop (dac_ctrl_t *const *p_ctrl*)
Stop the D/A conversion and disable the output signal. **Return values** FSP_SUCCESS — The control is successfully stopped. FSP_ERR_ASSERTION — p_ctrl is NULL. FSP_ERR_NOT_OPEN — Channel associated with p_instance_ctrl has not been opened.

fsp_err_t	R_DMAC_Close (transfer_ctrl_t *const p_api_ctrl)

Detailed Description

Driver for the DMAC peripheral on RA MCUs. This module implements the Transfer Interface.

Overview

The Direct Memory Access Controller (DMAC) transfers data from one memory location to another without using the CPU.

Features

- Supports multiple transfer modes
  - Normal transfer
  - Repeat transfer
  - Block transfer
  - Repeat-Block transfer (Not available on all MCUs)
- Address increment, decrement, fixed, or offset modes
- Triggered by ELC events
  - Some exceptions apply, see the Event table in the Event Numbers section of the Interrupt Controller Unit chapter of the hardware manual
- Supports 1, 2, and 4 byte data units

Configuration

Build Time Configurations for r_dmac

The following build time configurations are defined in fsp_cfg/r_dmac_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Transfer > Transfer (r_dmac)

This module can be added to the Stacks tab via New Stack > Transfer > Transfer (r_dmac).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_transfer0	Module name.
Channel	Value must be a non-negative integer	0	Specify the hardware channel.
Mode	• Normal • Repeat • Block • Repeat-Block	Normal	Select the transfer mode. Normal: One transfer per activation, transfer ends after Number of Transfers; Repeat: One transfer per activation, Repeat Area address reset after Number of Transfers, transfer ends after Number of

			Blocks; Block: Number of Blocks per activation, Repeat Area address reset after Number of Transfers, transfer ends after Number of Blocks.
Transfer Size	• 1 Byte • 2 Bytes • 4 Bytes	2 Bytes	Select the transfer size.
Destination Address Mode	• Fixed • Offset addition • Incremented • Decremented	Fixed	Select the address mode for the destination.
Source Address Mode	• Fixed • Offset addition • Incremented • Decremented	Fixed	Select the address mode for the source.
Repeat Area (Unused in Normal Mode)	• Destination • Source	Source	Select the repeat area. Either the source or destination address resets to its initial value after completing Number of Transfers in Repeat or Block mode.
Destination Pointer	Manual Entry	NULL	Specify the transfer destination pointer.
Source Pointer	Manual Entry	NULL	Specify the transfer source pointer.
Number of Transfers	Value must be a non-negative integer	1	Specify the number of transfers for repeat and normal mode or block size for repeat-block transfer mode.
Number of Blocks (Valid only in Repeat,Block or Repeat-Block Mode)	Value must be a non-negative integer	0	Specify the number of blocks to transfer in Repeat,Block or Repeat-Block mode.
Activation Source	MCU Specific Options		Select the DMAC transfer start event. If no ELC event is chosen then software start can be used.
Callback	Name must be a valid C symbol	NULL	A user callback that is called at the end of the transfer.
Context	Manual Entry	NULL	Pointer to the context structure passed

			through the callback argument.
Transfer End Interrupt Priority	MCU Specific Options		Select the transfer end interrupt priority.
Interrupt Frequency	• Interrupt after all transfers have completed • Interrupt after each block, or repeat size is transfered	Interrupt after all transfers have completed	Select to have interrupt after each transfer or after last transfer.
Offset value (Valid only when address mode is \'Offset\')	Value must be a 24 bit signed integer.	1	Offset value is added to the address after each transfer.
Source Buffer Size	Value must be a non-negative integer	1	Specify the size of whole source buffer (valid only for Repeat-Block transfer mode with source address update mode other than offset addition).

Clock Configuration

The DMAC peripheral module uses ICLK as the clock source. The ICLK frequency is set by using the **Clocks** tab of the RA Configuration editor prior to a build, or by using the CGC module at run-time.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Transfer Modes

The DMAC Module supports three modes of operation.

- **Normal Mode** - In normal mode, a single data unit is transfered every time the configured ELC event is received by the DMAC channel. A data unit can be 1-byte, 2-bytes, or 4-bytes. The source and destination addresses can be fixed, increment, decrement, or add an offset to the next data unit after each transfer. A 16-bit counter decrements after each transfer. When the counter reaches 0, transfers will no longer be triggered by the ELC event and the CPU can be interrupted to signal that all transfers have finished.
- **Repeat Mode** - Repeat mode works the same way as normal mode, however the length is limited to an integer in the range[1,1024]. When the transfer counter reaches 0, the counter is reset to its configured value, the repeat area (source or destination address) resets to its starting address and the block count remaining will decrement by 1. When the block count reaches 0, transfers will no longer be triggered by the ELC event and the CPU may be interrupted to signal that all transfers have finished.
- **Block Mode** - In block mode, the amount of data units transfered by each interrupt can be set to an integer in the range [1,1024]. The number of blocks to transfer can also be configured to a 16-bit number. After each block transfer the repeat area (source or

destination address) will reset to the original address and the other address will be incremented or decremented to the next block.

- **Repeat-Block Mode** - In repeat-block mode, the amount of data units transfered by each interrupt can be set to an integer in the range [1,1024]. The number of blocks to transfer can be configured to a 16 bit number. If the destination address mode is offset mode, maximum configurable number of blocks is 0xFFFF for block size(length) of one with data transfer size as byte,0x7FFF for block size of one with data transfer size as half word and 0x3FFF for block size of one with data size as word. After each block transfer the source address and the destination address will be incremented or decremented to the next block address. In case of offset address mode for source address, the source address size is the total size of source buffer after which the source area is rolled over, block size can be smaller than the source buffer size.For source address mode as offset mode, the maximum configurable source buffer size is 0xFFFF for transfer data size of a byte,0x7FFF for transfer data size of half word and 0x3FFF for transfer data size of word. Repeat-block mode can be used to implement single ring buffer to multiple ring buffer transfer type design.

Selecting the DTC or DMAC

The Transfer API is implemented by both DTC and the DMAC so that applications can switch between the DTC and the DMAC. When selecting between them, consider these factors:

	DTC	DMAC
Repeat Mode	• Repeats forever • Max repeat size is 256 x 4 bytes	• Configurable number of repeats • Max repeat size is 1024 x 4 bytes
Block Mode	• Max block size is 256 x 4 bytes	• Max block size is 1024 x 4 bytes
Channels	• One instance per interrupt	• MCU specific (8 channels or less)
Chained Transfers	• Supported	• Not Supported
Software Trigger	• Must use the software ELC event	• Has support for software trigger without using software ELC event • Supports TRANSFER_START_MODE_SINGLE and TRANSFER_START_MODE_REPEAT
Offset Address Mode	• Not supported	• Supported

Interrupts

The DTC and DMAC interrupts behave differently. The DTC uses the configured IELSR event IRQ as the interrupt source whereas each DMAC channel has its own IRQ.

The transfer_info_t::irq setting also behaves a little differently depending on which mode is selected.

Normal Mode

	DTC	DMAC

TRANSFER_IRQ_EACH	Interrupt after each transfer	N/A
TRANSFER_IRQ_END	Interrupt after last transfer	Interrupt after last transfer

Repeat Mode

	DTC	DMAC
TRANSFER_IRQ_EACH	Interrupt after each transfer	Interrupt after each repeat
TRANSFER_IRQ_END	Interrupt after each repeat	Interrupt after last transfer

Block Mode

	DTC	DMAC
TRANSFER_IRQ_EACH	Interrupt after each block	Interrupt after each block
TRANSFER_IRQ_END	Interrupt after last block	Interrupt after last block

Additional Considerations

- The DTC requires a moderate amount of RAM (one transfer_info_t struct per open instance + DTC_VECTOR_TABLE_SIZE).
- The DTC stores transfer information in RAM and writes back to RAM after each transfer whereas the DMAC stores all transfer information in registers.
- When transfers are configured for more than one activation source, the DTC must fetch the transfer info from RAM on each interrupt. This can cause a higher latency between transfers.

Offset Address Mode

When the source or destination mode is configured to offset mode, a configurable offset is added to the source or destination pointer after each transfer. The offset is a signed 24 bit number.

Examples

Basic Example

This is a basic example of minimal use of the DMAC in an application. In this case, one or more events have been routed to the DMAC for handling so it only needs to be enabled to start accepting transfers.

```
void dmac_minimal_example (void)
{
 /* Open the transfer instance with initial configuration. */
 fsp_err_t err = R_DMAC_Open(&g_transfer_ctrl, &g_transfer_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Enable the DMAC so that it responds to transfer requests. */
    err = R_DMAC_Enable(&g_transfer_ctrl);
```

```
    assert(FSP_SUCCESS == err);
}
```

CRC32 Example

In this example the DMAC is used to feed the CRC peripheral to perform a CRC32 operation.

```
volatile bool g_transfer_complete = false;
void dmac_callback (dmac_callback_args_t * cb_data)
{
 FSP_PARAMETER_NOT_USED(cb_data);
    g_transfer_complete = true;
}
void dmac_crc_example (void)
{
    uint8_t p_src[TRANSFER_LENGTH];
 /* Initialize p_src to [ABC..OP] */
 for (uint32_t i = 0; i < TRANSFER_LENGTH; i++)
    {
       p_src[i] = (uint8_t) ('A' + (i % 26));
    }
 /* Set transfer source address to p_src */
    g_transfer_cfg.p_info->p_src = (void *) p_src;
 /* Set transfer destination address to the CRC data input register */
    g_transfer_cfg.p_info->p_dest = (void *) &R_CRC->CRCDIR;
 /* Open the transfer instance with initial configuration. */
 fsp_err_t err = R_DMAC_Open(&g_transfer_ctrl, &g_transfer_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Enable DMAC transfers. */
    (void) R_DMAC_Enable(&g_transfer_ctrl);
 /* Open the CRC module. */
    err = R_CRC_Open(&g_crc_ctrl, &g_crc_cfg);
    assert(FSP_SUCCESS == err);
 /* Clear the transfer complete flag. */
```

```
    g_transfer_complete = false;
/* Trigger the transfer using software. */
    err = R_DMAC_SoftwareStart(&g_transfer_ctrl, TRANSFER_START_MODE_SINGLE);
    assert(FSP_SUCCESS == err);
while (!g_transfer_complete)
    {
/* Wait for transfer complete interrupt */
    }
/* Get CRC result and perform final XOR. */
    uint32_t crc32;
    (void) R_CRC_CalculatedValueGet(&g_crc_ctrl, &crc32);
    crc32 ^= CRC32_FINAL_XOR_VALUE;
/* Verify that the CRC32 is calculated correctly. */
/* CRC32("ABCD...NOP") = 0xE0E8FF4D. */
const uint32_t expected_crc32 = 0xE0E8FF4D;
if (expected_crc32 != crc32)
    {
/* Handle any CRC errors. This function should be defined by the user. */
       handle_crc_error();
    }
}
```

Data Structures

struct	dmac_instance_ctrl_t
struct	dmac_callback_args_t
struct	dmac_extended_cfg_t

Macros

#define	DMAC_MAX_NORMAL_TRANSFER_LENGTH
#define	DMAC_MAX_REPEAT_TRANSFER_LENGTH
#define	DMAC_MAX_BLOCK_TRANSFER_LENGTH
#define	DMAC_MAX_REPEAT_COUNT
#define	DMAC_MAX_BLOCK_COUNT

Data Structure Documentation

◆ dmac_instance_ctrl_t

struct dmac_instance_ctrl_t
Control block used by driver. DO NOT INITIALIZE - this structure will be initialized in transfer_api_t::open.

◆ dmac_callback_args_t

struct dmac_callback_args_t		
Callback function parameter data.		
Data Fields		
void const *	p_context	Placeholder for user data. Set in r_transfer_t::open function in transfer_cfg_t.

◆ dmac_extended_cfg_t

struct dmac_extended_cfg_t	
DMAC transfer configuration extension. This extension is required.	
Data Fields	
uint8_t	channel
	Channel number, does not apply to all HAL drivers.
IRQn_Type	irq
	DMAC interrupt number.
uint8_t	ipl
	DMAC interrupt priority.
int32_t	offset
	Offset value used with transfer_addr_mode_t::TRANSFER_ADDR_MODE_OFFSET.
uint16_t	src_buffer_size

elc_event_t	activation_source
void(*	p_callback)(dmac_callback_args_t *cb_data)
void const *	p_context

Field Documentation

◆ src_buffer_size

uint16_t dmac_extended_cfg_t::src_buffer_size

Source ring buffer size for TRANSFER_MODE_REPEAT_BLOCK.

◆ activation_source

elc_event_t dmac_extended_cfg_t::activation_source

Select which event will trigger the transfer.

Note

Select ELC_EVENT_NONE for software activation in order to use softwareStart and softwareStart to trigger transfers.

◆ p_callback

void(* dmac_extended_cfg_t::p_callback) (dmac_callback_args_t *cb_data)

Callback for transfer end interrupt.

◆ p_context

void const* dmac_extended_cfg_t::p_context

Placeholder for user data. Passed to the user p_callback in dmac_callback_args_t.

Macro Definition Documentation

◆ DMAC_MAX_NORMAL_TRANSFER_LENGTH

#define DMAC_MAX_NORMAL_TRANSFER_LENGTH

Max configurable number of transfers in TRANSFER_MODE_NORMAL.

◆ DMAC_MAX_REPEAT_TRANSFER_LENGTH

#define DMAC_MAX_REPEAT_TRANSFER_LENGTH

Max number of transfers per repeat for TRANSFER_MODE_REPEAT.

◆ DMAC_MAX_BLOCK_TRANSFER_LENGTH

#define DMAC_MAX_BLOCK_TRANSFER_LENGTH
Max number of transfers per block in TRANSFER_MODE_BLOCK

◆ DMAC_MAX_REPEAT_COUNT

#define DMAC_MAX_REPEAT_COUNT
Max configurable number of repeats to trasnfer in TRANSFER_MODE_REPEAT

◆ DMAC_MAX_BLOCK_COUNT

#define DMAC_MAX_BLOCK_COUNT
Max configurable number of blocks to transfer in TRANSFER_MODE_BLOCK

Function Documentation

◆ R_DMAC_Open()

fsp_err_t R_DMAC_Open (transfer_ctrl_t *const *p_api_ctrl*, transfer_cfg_t const *const *p_cfg*)

Configure a DMAC channel.

Return values

FSP_SUCCESS	Successful open.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	The configured channel is invalid.
FSP_ERR_IRQ_BSP_DISABLED	The IRQ associated with the activation source is not enabled in the BSP.
FSP_ERR_ALREADY_OPEN	The control structure is already opened.

◆ R_DMAC_Reconfigure()

fsp_err_t R_DMAC_Reconfigure (transfer_ctrl_t *const *p_api_ctrl*, transfer_info_t * *p_info*)

Reconfigure the transfer with new transfer info.

Return values

FSP_SUCCESS	Transfer is configured and will start when trigger occurs.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_ENABLED	DMAC is not enabled. The current configuration must not be valid.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_DMAC_Open to initialize the control block.

◆ R_DMAC_Reset()

fsp_err_t R_DMAC_Reset (transfer_ctrl_t *const *p_api_ctrl*, void const *volatile *p_src*, void *volatile *p_dest*, uint16_t const *num_transfers*)

Reset transfer source, destination, and number of transfers.

Return values

FSP_SUCCESS	Transfer reset successfully.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_ENABLED	DMAC is not enabled. The current configuration must not be valid.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_DMAC_Open to initialize the control block.

◆ R_DMAC_SoftwareStart()

fsp_err_t R_DMAC_SoftwareStart (transfer_ctrl_t *const *p_api_ctrl*, transfer_start_mode_t *mode*)

If the mode is TRANSFER_START_MODE_SINGLE initiate a single transfer with software. If the mode is TRANSFER_START_MODE_REPEAT continue triggering transfers until all of the transfers are completed.

Return values

FSP_SUCCESS	Transfer started written successfully.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_DMAC_Open to initialize the control block.
FSP_ERR_UNSUPPORTED	Handle was not configured for software activation.

◆ R_DMAC_SoftwareStop()

fsp_err_t R_DMAC_SoftwareStop (transfer_ctrl_t *const *p_api_ctrl*)

Stop software transfers if they were started with TRANSFER_START_MODE_REPEAT.

Return values

FSP_SUCCESS	Transfer stopped written successfully.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_DMAC_Open to initialize the control block.

◆ R_DMAC_Enable()

fsp_err_t R_DMAC_Enable (transfer_ctrl_t *const *p_api_ctrl*)

Enable transfers for the configured activation source.

Return values

FSP_SUCCESS	Counter value written successfully.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_DMAC_Open to initialize the control block.

◆ R_DMAC_Disable()

fsp_err_t R_DMAC_Disable (transfer_ctrl_t *const *p_api_ctrl*)

Disable transfers so that they are no longer triggered by the activation source.

Return values

FSP_SUCCESS	Counter value written successfully.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_DMAC_Open to initialize the control block.

◆ R_DMAC_InfoGet()

fsp_err_t R_DMAC_InfoGet (transfer_ctrl_t *const *p_api_ctrl*, transfer_properties_t *const *p_info*)

Set driver specific information in provided pointer.

Return values

FSP_SUCCESS	Information has been written to p_info.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_DMAC_Open to initialize the control block.
FSP_ERR_ASSERTION	An input parameter is invalid.

◆ R_DMAC_Close()

fsp_err_t R_DMAC_Close (transfer_ctrl_t *const *p_api_ctrl*)

Disable transfer and clean up internal data. Implements transfer_api_t::close.

Return values

FSP_SUCCESS	Successful close.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_DMAC_Open to initialize the control block.

4.2.20 Data Operation Circuit (r_doc)

Modules

Functions

fsp_err_t	R_DOC_Open (doc_ctrl_t *const p_api_ctrl, doc_cfg_t const *const p_cfg)
fsp_err_t	R_DOC_Close (doc_ctrl_t *const p_api_ctrl)
fsp_err_t	R_DOC_StatusGet (doc_ctrl_t *const p_api_ctrl, doc_status_t *const p_status)
fsp_err_t	R_DOC_Read (doc_ctrl_t *const p_api_ctrl, uint32_t *p_result)
fsp_err_t	R_DOC_Write (doc_ctrl_t *const p_api_ctrl, uint32_t data)
fsp_err_t	R_DOC_CallbackSet (doc_ctrl_t *const p_api_ctrl, void(*p_callback)(doc_callback_args_t *), void const *const p_context, doc_callback_args_t *const p_callback_memory)

Detailed Description

Driver for the DOC peripheral on RA MCUs. This module implements the DOC Interface.

Overview

Features

The DOC HAL module peripheral is used to compare, add or subtract 16-bit or 32-bit[1] data and can detect the following events:

- Comparison Mode
  - Data is equal to the configured reference data setting.
  - Data is not equal to the configured reference data setting.
  - Data is less than the configured reference data setting[2].
  - Data is greater than the configured reference data setting[2].
  - Data is inside of a configurable pair of reference data settings[2].
  - Data is outside of a configurable pair of reference data settings[2].
- Addition Mode - Overflow of an addition operation
- Subtraction Mode - Underflow of a subtraction operation

A user-defined callback can be created to inform the CPU when any of above events occur.

Note

1. *Operating on 32-bit data is not supported on all MCUs.*
2. *This comparison mode is not supported on all MCUs.*

Configuration

Build Time Configurations for r_doc

The following build time configurations are defined in fsp_cfg/r_doc_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Monitoring > Data Operation Circuit (r_doc)

This module can be added to the Stacks tab via New Stack > Monitoring > Data Operation Circuit (r_doc). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_doc0	Module name.
Event	MCU Specific Options		Select the event that will trigger the DOC interrupt.
Bit Width	MCU Specific Options		The bit width for DOC operations.
Reference/Initial Data	Value must be an integer greater than or equal to 0.	0	Enter Initial Value for Addition/Subtraction or enter reference value for comparison.
Additional Reference Data	Value must be an integer greater than or equal to 0.	0	Additional reference data used for Window Compare modes.
Callback	Name must be a valid C symbol	NULL	A user callback function must be provided. This will be called from the interrupt service routine (ISR) when the configured DOC event occurs.
DOC Interrupt Priority	MCU Specific Options		Select the DOC interrupt priority.

Clock Configuration

The DOC HAL module does not require a specific clock configuration.

Pin Configuration

The DOC HAL module does not require and specific pin configurations.

Usage Notes

DMAC/DTC Integration

DOC can be used with Direct Memory Access Controller (r_dmac) or Data Transfer Controller (r_dtc) to write to the input register without CPU intervention. DMAC is more useful for most DOC applications because it can be started directly from software. To write DOC input data with DTC/DMAC, set transfer_info_t::p_dest to R_DOC->DODIR.

Examples

Basic Example

This is a basic example of minimal use of the R_DOC in an application. This example shows how this driver can be used for continuous 16 bit addition operation while reading the result at every overflow event.

```
#define DOC_EXAMPLE_VALUE 0xF000
uint32_t g_callback_event_counter = 0;
/* This callback is called when DOC overflow event occurs. It is registered in
doc_cfg_t when R_DOC_Open is
 * called. */
void doc_callback (doc_callback_args_t * p_args)
{
 FSP_PARAMETER_NOT_USED(p_args);
    g_callback_event_counter++;
}
void basic_example (void)
{
 fsp_err_t err;
 /* Initialize the DOC module for addition with initial value specified in
doc_cfg_t::doc_data. */
    err = R_DOC_Open(&g_doc_ctrl, &g_doc_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Write data to the DOC Data Input Register and read the result of addition from
status register when an
  * interrupt occurs. */
 for (int i = 0; i < 5; i++)
    {
       err = R_DOC_Write(&g_doc_ctrl, DOC_EXAMPLE_VALUE);
```

```
     assert(FSP_SUCCESS == err);
 if (g_callback_event_counter >= 1)
     {
           uint32_t result;
 /* Read the result of the operation */
           err = R_DOC_Read(&g_doc_ctrl, &result);
     assert(FSP_SUCCESS == err);
      }
   }
}
```

Function Documentation

◆ R_DOC_Open()

fsp_err_t R_DOC_Open (doc_ctrl_t *const *p_api_ctrl*, doc_cfg_t const *const *p_cfg*)

Opens and configures the Data Operation Circuit (DOC) in comparison, addition or subtraction mode and sets initial data for addition or subtraction, or reference data for comparison.

Example:

```
 /* Initialize the DOC module for addition with initial value specified in
doc_cfg_t::doc_data. */
   err = R_DOC_Open(&g_doc_ctrl, &g_doc_cfg);
```

Return values

FSP_SUCCESS	DOC successfully configured.
FSP_ERR_ALREADY_OPEN	Module already open.
FSP_ERR_ASSERTION	One or more pointers point to NULL or callback is NULL or the interrupt vector is invalid.

◆ R_DOC_Close()

fsp_err_t R_DOC_Close (doc_ctrl_t *const *p_api_ctrl*)

Closes the module driver. Enables module stop mode.

Return values

FSP_SUCCESS	Module successfully closed.
FSP_ERR_NOT_OPEN	Driver not open.
FSP_ERR_ASSERTION	Pointer pointing to NULL.

Note

This function will disable the DOC interrupt in the NVIC.

◆ R_DOC_StatusGet()

fsp_err_t R_DOC_StatusGet (doc_ctrl_t *const *p_api_ctrl*, doc_status_t *const *p_status*)

DEPRECATED - Returns the result of addition/subtraction.

Return values

FSP_SUCCESS	Status successfully read.
FSP_ERR_NOT_OPEN	Driver not open.
FSP_ERR_ASSERTION	One or more pointers point to NULL.

◆ R_DOC_Read()

fsp_err_t R_DOC_Read (doc_ctrl_t *const *p_api_ctrl*, uint32_t * *p_result*)

Returns the result of addition/subtraction.

Example:

```
            uint32_t result;
/* Read the result of the operation */
            err = R_DOC_Read(&g_doc_ctrl, &result);
     assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Status successfully read.
FSP_ERR_NOT_OPEN	Driver not open.
FSP_ERR_ASSERTION	One or more pointers point to NULL.

◆ R_DOC_Write()

fsp_err_t R_DOC_Write (doc_ctrl_t *const *p_api_ctrl*, uint32_t *data*)

Writes to the DODIR - DOC Input Register.

Example:

```
err = R_DOC_Write(&g_doc_ctrl, DOC_EXAMPLE_VALUE);
assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Values successfully written to the registers.
FSP_ERR_NOT_OPEN	Driver not open.
FSP_ERR_ASSERTION	One or more pointers point to NULL.

◆ R_DOC_CallbackSet()

fsp_err_t R_DOC_CallbackSet (doc_ctrl_t *const *p_api_ctrl*, void(*)(doc_callback_args_t *) *p_callback*, void const *const *p_context*, doc_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements doc_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

4.2.21 D/AVE 2D Port Interface (r_drw)

Modules

Driver for the DRW peripheral on RA MCUs. This module is a port of D/AVE 2D.

Overview

Note

The D/AVE 2D Port Interface (D1 layer) is a HAL layer for the D/AVE D2 layer API and does not provide any interfaces to the user. Consult the TES Dave2D Driver Documentation for further information on using the D2 API.
For cross-platform compatibility purposes the D1 and D2 APIs are not bound by the FSP coding guidelines for function names and general module functionality.

Configuration

Build Time Configurations for r_drw

The following build time configurations are defined in fsp_cfg/r_drw_cfg.h:

Configuration	Options	Default	Description
Allow Indirect Mode	• Enabled • Disabled	Enabled	Enable indirect mode to allow no-copy mode for d2_adddlist (see the TES Dave2D Driver Documentation for details).
Memory Allocation	• Default • Custom	Default	Set Memory Allocation to Default to use built-in dynamic memory allocation for the D2 heap. This will use an RTOS heap if configured; otherwise, standard C malloc and free will be used. Set to Custom to define your own allocation scheme for the D2 heap. In this case, the developer will need to define the following functions: void * d1_malloc(size_t size) void d1_free(void * ptr)

Configurations for Graphics > D/AVE 2D Port Interface (r_drw)

This module can be added to the Stacks tab via New Stack > Graphics > D/AVE 2D Port Interface (r_drw).

Configuration	Options	Default	Description
D2 Device Handle Name	Name must be a valid C symbol	d2_handle0	Set the name for the d2_device handle used when calling D2 layer functions.

DRW Interrupt Priority	MCU Specific Options	Select the DRW_INT (display list completion) interrupt priority.

Heap Size

The D1 port layer allows the D2 driver to allocate memory as needed. There are three ways the driver can accomplish this:

1. Allocate memory using the main heap
2. Allocate memory using a heap provided by an RTOS
3. Allocate memory via user-provided functions

When the "Memory Allocation" configuration option is set to "Default" the driver will use an RTOS implementation if available and the main heap otherwise. Setting the option to "Custom" allows the user to define their own scheme using the following prototypes:

```
void * d1_malloc(size_t size);

void d1_free(void * ptr);
```

Warning

If there is no RTOS-based allocation scheme the main heap will be used. Be sure that it is enabled by setting the "Heap size (bytes)" property under RA Common on the **BSP** tab of the RA Configuration editor.

Note

It is recommended to add 32KB of additional heap space for the D2 driver until the actual usage can be determined in your application.

Interrupt

The D1 port includes one interrupt to handle various events like display list completion or bus error. This interrupt is managed internally by the D2 driver and no callback function is available.

Usage Notes

Limitations

Developers should be aware of the following limitations when using the DRW engine:

- The DRW module supports two additional interrupt types - bus error and render complete. These interrupts are not needed for D2 layer operation and thus are not supported.
- If the DRW module is stopped during rendering the render will continue once the module is started again. If this behavior is undesirable in your application it is recommended to call d2_flushframe before stopping the peripheral.

4.2.22 Data Transfer Controller (r_dtc)

Modules

Functions

fsp_err_t	R_DTC_Open (transfer_ctrl_t *const p_api_ctrl, transfer_cfg_t const *const p_cfg)
fsp_err_t	R_DTC_Reconfigure (transfer_ctrl_t *const p_api_ctrl, transfer_info_t *p_info)

Detailed Description

Driver for the DTC peripheral on RA MCUs. This module implements the Transfer Interface.

Overview

The Data Transfer Controller (DTC) transfers data from one memory location to another without using the CPU.

The DTC uses a RAM based vector table. Each entry in the vector table corresponds to an entry in the ISR vector table. When the DTC is triggered by an interrupt, it reads the DTC vector table, fetches the transfer information, and then executes the transfer. After the transfer is executed, the DTC writes the updated transfer info back to the location pointed to by the DTC vector table.

Features

- Supports multiple transfer modes
  - Normal transfer
  - Repeat transfer
  - Block transfer
- Chain transfers
- Address increment, decrement or fixed modes
- Can be triggered by any event that has reserved a slot in the interrupt vector table.
  - Some exceptions apply, see the Event table in the Event Numbers section of the

Interrupt Controller Unit chapter of the hardware manual
- Supports 1, 2, and 4 byte data units

Configuration

Build Time Configurations for r_dtc

The following build time configurations are defined in fsp_cfg/r_dtc_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Linker section to keep DTC vector table	Manual Entry	.fsp_dtc_vector_table	Section to place the DTC vector table.

Configurations for Transfer > Transfer (r_dtc)

This module can be added to the Stacks tab via New Stack > Transfer > Transfer (r_dtc).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_transfer0	Module name.
Mode	• Normal • Repeat • Block	Normal	Select the transfer mode. Select the transfer mode. Normal: One transfer per activation, transfer ends after Number of Transfers; Repeat: One transfer per activation, Repeat Area address reset after Number of Transfers, transfer repeats until stopped; Block: Number of Blocks per activation, Repeat Area address reset after Number of Transfers, transfer ends after Number of Blocks.
Transfer Size	• 1 Byte • 2 Bytes • 4 Bytes	2 Bytes	Select the transfer size.
Destination Address Mode	• Fixed • Incremented • Decremented	Fixed	Select the address mode for the destination.

Source Address Mode	• Fixed • Incremented • Decremented	Fixed	Select the address mode for the source.
Repeat Area (Unused in Normal Mode)	• Destination • Source	Source	Select the repeat area. Either the source or destination address resets to its initial value after completing Number of Transfers in Repeat or Block mode.
Destination Pointer	Manual Entry	NULL	Specify the transfer destination pointer.
Source Pointer	Manual Entry	NULL	Specify the transfer source pointer.
Interrupt Frequency	• After all transfers have completed • After each transfer	After all transfers have completed	Select to have interrupt after each transfer or after last transfer.
Number of Transfers	Value must be a non-negative integer	0	Specify the number of transfers.
Number of Blocks (Valid only in Block Mode)	Must be a valid non-negative integer with a maximum configurable value of 65536. Applicable only in Block Mode.	0	Specify the number of blocks to transfer in Block mode.
Activation Source	MCU Specific Options		Select the DTC transfer start event.

Clock Configuration

The DTC peripheral module uses ICLK as the clock source. The ICLK frequency is set by using the **Clocks** tab of the RA Configuration editor prior to a build or by using the CGC module at runtime.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Transfer Modes

The DTC Module supports three modes of operation.

- **Normal Mode** - In normal mode, a single data unit is transfered every time an interrupt is received by the DTC. A data unit can be 1-byte, 2-bytes, or 4-bytes. The source and destination addresses can be fixed, increment or decrement to the next data unit after each transfer. A 16-bit counter (length) decrements after each transfer. When the counter reaches 0, transfers will no longer be triggered by the interrupt source and the CPU can be

interrupted to signal that all transfers have finished.

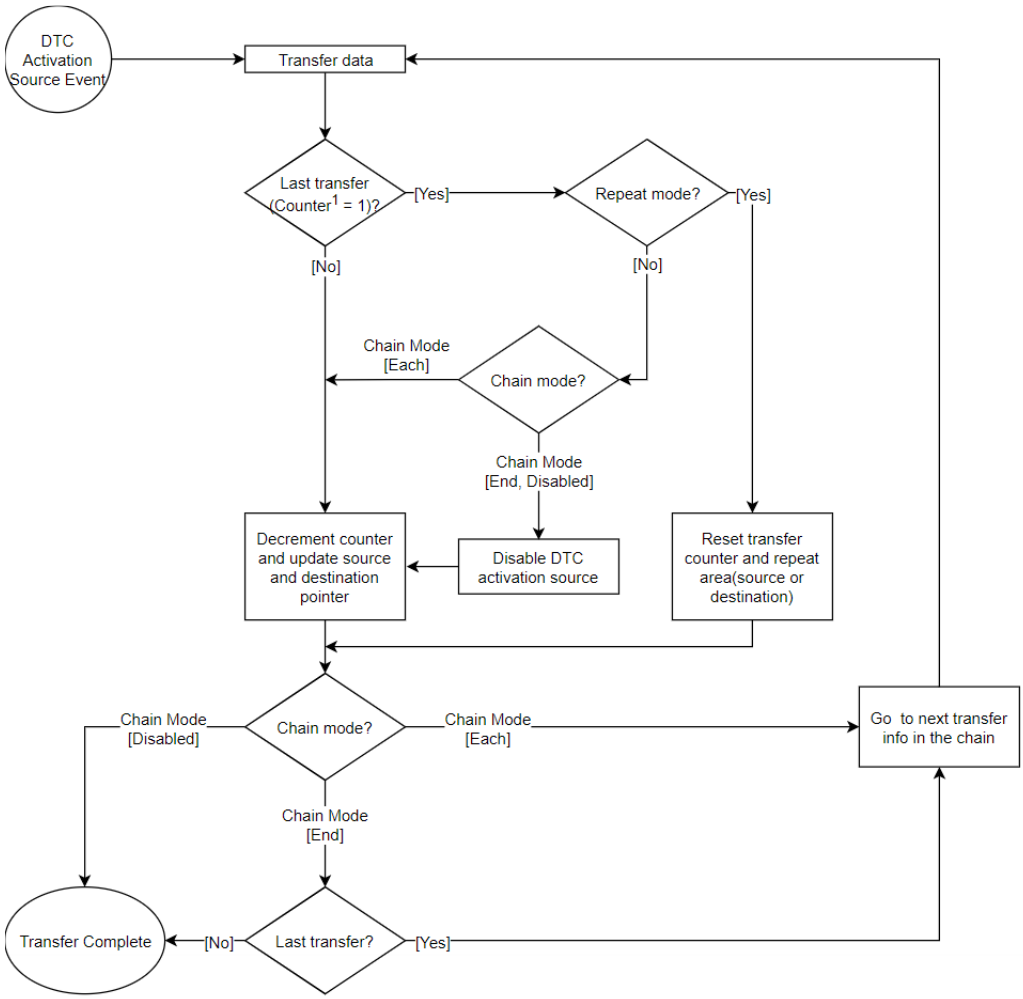
- **Repeat Mode** - Repeat mode works the same way as normal mode, however the length is limited to an integer in the range[1,256]. When the tranfer counter reaches 0, the counter is reset to its configured value and the repeat area (source or destination address) resets to its starting address and transfers will still be triggered by the interrupt.
- **Block Mode** - In block mode, the amount of data units transfered by each interrupt can be set to an integer in the range [1,256]. The number of blocks to transfer can also be configured to a 16-bit number. After each block transfer the repeat area (source or destination address) will reset to the original address and the other address will be incremented or decremented to the next block.

Note

1. The source and destination address of the transfer must be aligned to the configured data unit.
2. In normal mode the length can be set to [0,65535]. When the length is set to 0, than the transaction will execute 65536 transfers not 0.
3. In block mode, num_blocks can be set to [0,65535]. When the length is set to 0, than the transaction will execute 65536 transfers not 0.

Chaining Transfers

Multiple transfers can be configured for the same interrupt source by specifying an array of transfer_info_t structs instead of just passing a pointer to one. In this configuration, every transfer_info_t struct must be configured for a chain mode except for the last one. There are two types of chain mode; CHAIN_MODE_EACH and CHAIN_MODE_END. If a transfer is configured in CHAIN_MODE_EACH then it triggers the next transfer in the chain after it completes each transfer. If a transfer is configured in CHAIN_MODE_END then it triggers the next transfer in the chain after it completes its last transfer.



1. **Counter** refers to transfer_info_t::**length** in normal and repeat mode and transfer_info_t::**num_blocks** in block mode.

Figure 160: DTC Transfer Flowchart

Selecting the DTC or DMAC

The Transfer API is implemented by both DTC and the DMAC so that applications can switch between the DTC and the DMAC. When selecting between them, consider these factors:

	DTC	DMAC
Repeat Mode	• Repeats forever • Max repeat size is 256 x 4 bytes	• Configurable number of repeats • Max repeat size is 1024 x 4 bytes
Block Mode	• Max block size is 256 x 4 bytes	• Max block size is 1024 x 4 bytes
Channels	• One instance per interrupt	• MCU specific (8 channels or less)
Chained Transfers	• Supported	• Not Supported
Software Trigger	• Must use the software ELC event	• Has support for software trigger without using

		software ELC event • Supports TRANSFER_START_MODE_SINGLE and TRANSFER_START_MODE_REPEAT
Offset Address Mode	• Not supported	• Supported

Additional Considerations

- The DTC requires a moderate amount of RAM (one transfer_info_t struct per open instance + DTC_VECTOR_TABLE_SIZE).
- The DTC stores transfer information in RAM and writes back to RAM after each transfer whereas the DMAC stores all transfer information in registers.
- When transfers are configured for more than one activation source, the DTC must fetch the transfer info from RAM on each interrupt. This can cause a higher latency between transfers.
- The DTC interrupts the CPU using the activation source's IRQ. Each DMAC channel has its own IRQ.

Interrupts

The DTC and DMAC interrupts behave differently. The DTC uses the configured IELSR event IRQ as the interrupt source whereas each DMAC channel has its own IRQ.

The transfer_info_t::irq setting also behaves a little differently depending on which mode is selected.

Normal Mode

	DTC	DMAC
TRANSFER_IRQ_EACH	Interrupt after each transfer	N/A
TRANSFER_IRQ_END	Interrupt after last transfer	Interrupt after last transfer

Repeat Mode

	DTC	DMAC
TRANSFER_IRQ_EACH	Interrupt after each transfer	Interrupt after each repeat
TRANSFER_IRQ_END	Interrupt after each repeat	Interrupt after last transfer

Block Mode

	DTC	DMAC
TRANSFER_IRQ_EACH	Interrupt after each block	Interrupt after each block
TRANSFER_IRQ_END	Interrupt after last block	Interrupt after last block

Note

DTC_VECTOR_TABLE_SIZE = (ICU_NVIC_IRQ_SOURCES x 4) Bytes

Peripheral Interrupts and DTC

When an interrupt is configured to trigger DTC transfers, the peripheral ISR will trigger on the

following conditions:

- Each transfer completed (transfer_info_t::irq = TRANSFER_IRQ_EACH)
- Last transfer completed (transfer_info_t::irq = TRANSFER_IRQ_END)

For example, if SCI1_RXI is configured to trigger DTC transfers and a SCI1_RXI event occurs, the interrupt will not fire until the DTC transfer is completed. If the DTC transfer_info_t::irq is configured to only interrupt on the last transfer, than no RXI interrupts will occur until the last transfer is completed.

Note

1. The DTC activation source must be enabled in the NVIC in order to trigger DTC transfers (Modules that are designed to integrate the R_DTC module will automatically handle this).
2. The DTC prioritizes activation sources by granting the smaller interrupt vector numbers higher priority. The priority of interrupts to the CPU is determined by the NVIC priority.

Low Power Modes

DTCST must be set to 0 before transitioning to any of the following:

- Module-stop state
- Software Standby mode without Snooze mode transition
- Deep Software Standby mode

Note

1. R_LPM Module stops the DTC before entering deep software standby mode and software standby without snooze mode transition.
2. For more information see 18.9 and 18.10 in the RA6M3 manual R01UH0886EJ0100.

Limitations

Developers should be aware of the following limitations when using the DTC:

- If the DTC is configured to service many different activation sources, the system could run in to performance issues due to memory contention. To address this issue, it is reccomended that the DTC vector table and transfer information be moved to their own dedicated memory area (Ex: SRAM0, SRAM1, SRAMHS). This allows memory accesses from different BUS Masters (CPU, DTC, DMAC, EDMAC and Graphics IPs) to occur in parallel.

Examples

Basic Example

This is a basic example of minimal use of the DTC in an application.

```
void dtc_minimal_example (void)
{
 /* Open the transfer instance with initial configuration. */
 fsp_err_t err = R_DTC_Open(&g_transfer_ctrl, &g_transfer_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
```

```
/* Enable the DTC to handle incoming transfer requests. */
    err = R_DTC_Enable(&g_transfer_ctrl);
    assert(FSP_SUCCESS == err);
}
```

Data Structures

struct	dtc_extended_cfg_t
struct	dtc_instance_ctrl_t

Macros

#define	DTC_MAX_NORMAL_TRANSFER_LENGTH
#define	DTC_MAX_REPEAT_TRANSFER_LENGTH
#define	DTC_MAX_BLOCK_TRANSFER_LENGTH
#define	DTC_MAX_BLOCK_COUNT

Data Structure Documentation

◆ dtc_extended_cfg_t

struct dtc_extended_cfg_t		
DTC transfer configuration extension. This extension is required.		
Data Fields		
IRQn_Type	activation_source	Select which IRQ will trigger the transfer.

◆ dtc_instance_ctrl_t

struct dtc_instance_ctrl_t
Control block used by driver. DO NOT INITIALIZE - this structure will be initialized in transfer_api_t::open.

Macro Definition Documentation

◆ DTC_MAX_NORMAL_TRANSFER_LENGTH

#define DTC_MAX_NORMAL_TRANSFER_LENGTH
Max configurable number of transfers in NORMAL MODE

◆ DTC_MAX_REPEAT_TRANSFER_LENGTH

#define DTC_MAX_REPEAT_TRANSFER_LENGTH
Max number of transfers per repeat for REPEAT MODE

◆ DTC_MAX_BLOCK_TRANSFER_LENGTH

#define DTC_MAX_BLOCK_TRANSFER_LENGTH
Max number of transfers per block in BLOCK MODE

◆ DTC_MAX_BLOCK_COUNT

#define DTC_MAX_BLOCK_COUNT
Max configurable number of blocks to transfer in BLOCK MODE

Function Documentation

◆ R_DTC_Open()

fsp_err_t R_DTC_Open (transfer_ctrl_t *const *p_api_ctrl*, transfer_cfg_t const *const *p_cfg*)

Configure the vector table if it hasn't been configured, enable the Module and copy the pointer to the transfer info into the DTC vector table. Implements transfer_api_t::open.

Example:

```
/* Open the transfer instance with initial configuration. */
fsp_err_t err = R_DTC_Open(&g_transfer_ctrl, &g_transfer_cfg);
```

Return values

FSP_SUCCESS	Successful open. Transfer transfer info pointer copied to DTC Vector table. Module started. DTC vector table configured.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_UNSUPPORTED	Address Mode Offset is selected.
FSP_ERR_ALREADY_OPEN	The control structure is already opened.
FSP_ERR_IN_USE	The index for this IRQ in the DTC vector table is already configured.
FSP_ERR_IRQ_BSP_DISABLED	The IRQ associated with the activation source is not enabled in the BSP.

◆ R_DTC_Reconfigure()

fsp_err_t R_DTC_Reconfigure (transfer_ctrl_t *const *p_api_ctrl*, transfer_info_t * *p_info*)

Copy pointer to transfer info into the DTC vector table and enable transfer in ICU. Implements transfer_api_t::reconfigure.

Return values

FSP_SUCCESS	Transfer is configured and will start when trigger occurs.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_DTC_Open to initialize the control block.
FSP_ERR_NOT_ENABLED	Transfer source address is NULL or is not aligned corrrectly. Transfer destination address is NULL or is not aligned corrrectly.

Note

p_info must persist until all transfers are completed.

◆ R_DTC_Reset()

fsp_err_t R_DTC_Reset (transfer_ctrl_t *const *p_api_ctrl*, void const *volatile *p_src*, void *volatile *p_dest*, uint16_t const *num_transfers*)

Reset transfer source, destination, and number of transfers. Implements transfer_api_t::reset.

Return values

FSP_SUCCESS	Transfer reset successfully (transfers are enabled).
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_DTC_Open to initialize the control block.
FSP_ERR_NOT_ENABLED	Transfer source address is NULL or is not aligned corrrectly. Transfer destination address is NULL or is not aligned corrrectly.

◆ R_DTC_SoftwareStart()

fsp_err_t R_DTC_SoftwareStart (transfer_ctrl_t *const *p_api_ctrl*, transfer_start_mode_t *mode*)

Placeholder for unsupported softwareStart function. Implements transfer_api_t::softwareStart.

Return values

FSP_ERR_UNSUPPORTED	DTC software start is not supported.

◆ R_DTC_SoftwareStop()

fsp_err_t R_DTC_SoftwareStop (transfer_ctrl_t *const *p_api_ctrl*)

Placeholder for unsupported softwareStop function. Implements transfer_api_t::softwareStop.

Return values

FSP_ERR_UNSUPPORTED	DTC software stop is not supported.

◆ R_DTC_Enable()

fsp_err_t R_DTC_Enable (transfer_ctrl_t *const *p_api_ctrl*)

Enable transfers on this activation source. Implements transfer_api_t::enable.

Example:

```
/* Enable the DTC to handle incoming transfer requests. */
   err = R_DTC_Enable(&g_transfer_ctrl);
   assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Transfers will be triggered by the activation source
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_UNSUPPORTED	Address Mode Offset is selected.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_DTC_Open to initialize the control block.

◆ R_DTC_Disable()

fsp_err_t R_DTC_Disable (transfer_ctrl_t *const *p_api_ctrl*)

Disable transfer on this activation source. Implements transfer_api_t::disable.

Return values

FSP_SUCCESS	Transfers will not occur on activation events.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_DTC_Open to initialize the control block.
FSP_ERR_ASSERTION	An input parameter is invalid.

◆ R_DTC_InfoGet()

fsp_err_t R_DTC_InfoGet (transfer_ctrl_t *const *p_api_ctrl*, transfer_properties_t *const *p_properties*)

Provides information about this transfer. Implements transfer_api_t::infoGet.

Return values

FSP_SUCCESS	p_info updated with current instance information.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_DTC_Open to initialize the control block.
FSP_ERR_ASSERTION	An input parameter is invalid.

◆ R_DTC_Close()

fsp_err_t R_DTC_Close (transfer_ctrl_t *const *p_api_ctrl*)

Disables DTC activation in the ICU, then clears transfer data from the DTC vector table. Implements transfer_api_t::close.

Return values

FSP_SUCCESS	Successful close.
FSP_ERR_ASSERTION	An input parameter is invalid.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_DTC_Open to initialize the control block.

4.2.23 Event Link Controller (r_elc)

Modules

Functions

fsp_err_t	R_ELC_Open (elc_ctrl_t *const p_ctrl, elc_cfg_t const *const p_cfg)

fsp_err_t	R_ELC_SoftwareEventGenerate (elc_ctrl_t *const p_ctrl, elc_software_event_t event_number)
fsp_err_t	R_ELC_LinkSet (elc_ctrl_t *const p_ctrl, elc_peripheral_t peripheral, elc_event_t signal)
fsp_err_t	R_ELC_LinkBreak (elc_ctrl_t *const p_ctrl, elc_peripheral_t peripheral)
fsp_err_t	R_ELC_Enable (elc_ctrl_t *const p_ctrl)
fsp_err_t	R_ELC_Disable (elc_ctrl_t *const p_ctrl)

Detailed Description

Driver for the ELC peripheral on RA MCUs. This module implements the ELC Interface.

Overview

The event link controller (ELC) uses the event requests generated by various peripheral modules as source signals to connect (link) them to different modules, allowing direct cooperation between the modules without central processing unit (CPU) intervention. The conceptual diagram below illustrates a potential setup where a pin interrupt triggers a timer which later triggers an ADC conversion and CTSU scan, while at the same time a serial communication interrupt automatically starts a data transfer. These tasks would be automatically handled without the need for polling or interrupt management.

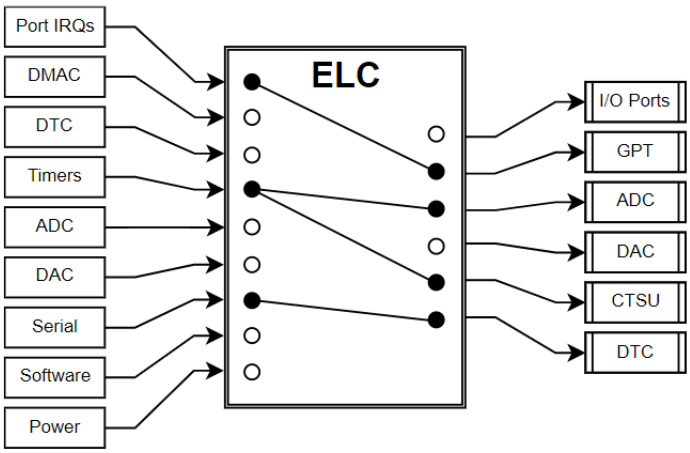

Figure 161: Event Link Controller Conceptual Diagram

In essence, the ELC is an array of multiplexers to route a wide variety of interrupt signals to a subset of peripheral functions. Events are linked by setting the multiplexer for the desired function to the desired signal (through R_ELC_LinkSet). The diagram below illustrates one peripheral output of the ELC. In this example, a conversion start is triggered for ADC0 Group A when the GPT0 counter overflows:

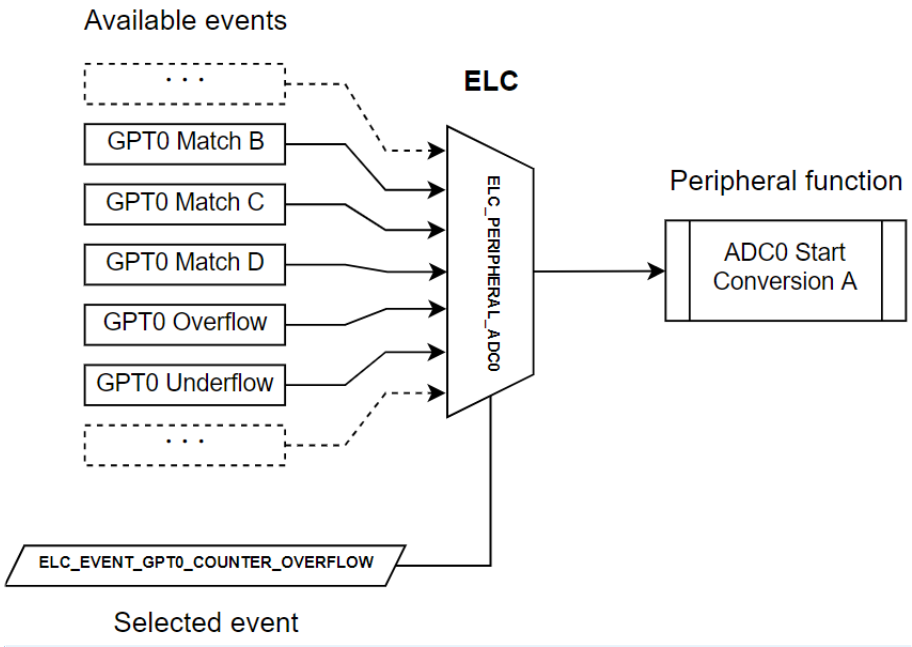

Figure 162: ELC Example

Features

The ELC HAL module can perform the following functions:

- Initialize the ELC to a pre-defined set of links
- Create an event link between two blocks
- Break an event link between two blocks
- Generate one of two software events that interrupt the CPU
- Globally enable or disable event links

A variety of functions can be activated via events, including:

- General-purpose timer (GPT) control
- ADC and DAC conversion start
- Synchronized I/O port output (ports 1-4 only)
- Capacitive touch unit (CTSU) measurement activation

Note

The available sources and peripherals may differ between devices. A full list of selectable peripherals and events is available in the User's Manual for your device.
Some peripherals have specific settings related to ELC event generation and/or reception. Details on how to enable event functionality for each peripheral are located in the usage notes for the related module(s) as well as in the User's Manual for your device.

Configuration

Note

Event links will be automatically generated based on the selections made in module properties. To view the currently linked events check the Event Links tab in the RA Configuration editor.
Calling R_ELC_Open followed by R_ELC_Enable will automatically link all events shown in the Event Links tab.

To manually link an event to a peripheral at runtime perform the following steps:

1. Configure the operation of the destination peripheral (including any configuration necessary to receive events)
2. Use R_ELC_LinkSet to set the desired event link to the peripheral
3. Use R_ELC_Enable to enable transmission of event signals
4. Configure the signaling module to output the desired event (typically an interrupt)

To disable the event, either use R_ELC_LinkBreak to clear the link for a specific event or R_ELC_Disable to globally disable event linking.

Note

The ELC module needs no pin, clocking or interrupt configuration; it is merely a mechanism to connect signals between peripherals. However, when linking I/O Ports via the ELC the relevant I/O pins need to be configured as inputs or outputs.

Build Time Configurations for r_elc

The following build time configurations are defined in fsp_cfg/r_elc_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for System > Event Link Controller (r_elc)

This module can be added to the Stacks tab via New Stack > System > Event Link Controller (r_elc). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	ELC instance name must be g_elc to match elc_cfg_t data structure created in elc_data.c	g_elc	Module name. Fixed to g_elc.

Usage Notes

Limitations

Developers should be aware of the following limitations when using the ELC:

- To link events it is necessary for the ELC and the related modules to be enabled. The ELC cannot operate if the related modules are in the module stop state or the MCU is in a low

power consumption mode for which the module is stopped.
- If two modules are linked across clock domains there may be a 1 to 2 cycle delay between event signaling and reception. The delay timing is based on the frequency of the slowest clock.

Examples

Basic Example

Below is a basic example of minimal use of event linking in an application.

```
/* This struct is automatically generated based on the events configured by
peripherals in the RA Configuration editor. */
static const elc_cfg_t g_elc_cfg =
{
    .link[ELC_PERIPHERAL_GPT_A]   = ELC_EVENT_ICU_IRQ0,
    .link[ELC_PERIPHERAL_IOPORT1] = ELC_EVENT_GPT4_COUNTER_OVERFLOW
};
void elc_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the software and sets the links defined in the control structure. */
    err = R_ELC_Open(&g_elc_ctrl, &g_elc_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Create or modify a link between a peripheral function and an event source. */
    err = R_ELC_LinkSet(&g_elc_ctrl, ELC_PERIPHERAL_ADC0,
ELC_EVENT_GPT4_COUNTER_OVERFLOW);
    assert(FSP_SUCCESS == err);
 /* Globally enable event linking in the ELC. */
    err = R_ELC_Enable(&g_elc_ctrl);
    assert(FSP_SUCCESS == err);
}
```

Software-Generated Events

This example demonstrates how to use a software-generated event to signal a peripheral. This can be useful when the desired event source is not supported by the ELC hardware.

```
```

```
/* Interrupt handler for peripheral event not supported by the ELC */
void peripheral_isr (void)
{
 fsp_err_t err;
 /* Generate an event signal through software to the linked peripheral. */
    err = R_ELC_SoftwareEventGenerate(&g_elc_ctrl, ELC_SOFTWARE_EVENT_0);
    assert(FSP_SUCCESS == err);
}
void elc_software_event (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Open the module. */
    err = R_ELC_Open(&g_elc_ctrl, &g_elc_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Link ADC0 conversion start to software event 0. */
    err = R_ELC_LinkSet(&g_elc_ctrl, ELC_PERIPHERAL_ADC0,
ELC_EVENT_ELC_SOFTWARE_EVENT_0);
    assert(FSP_SUCCESS == err);
 while (true)
    {
 /* Application code here. */
    }
}
```

Data Structures

struct	elc_instance_ctrl_t

Data Structure Documentation

◆ elc_instance_ctrl_t

struct elc_instance_ctrl_t
ELC private control block. DO NOT MODIFY. Initialization occurs when R_ELC_Open() is called.

Function Documentation

◆ R_ELC_Open()

fsp_err_t R_ELC_Open (elc_ctrl_t *const *p_ctrl*, elc_cfg_t const *const *p_cfg*)

Initialize all the links in the Event Link Controller. Implements elc_api_t::open

The configuration structure passed in to this function includes links for every event source included in the ELC and sets them all at once. To set or clear an individual link use R_ELC_LinkSet and R_ELC_LinkBreak respectively.

Example:

```
/* Initializes the software and sets the links defined in the control structure. */
   err = R_ELC_Open(&g_elc_ctrl, &g_elc_cfg);
```

Return values

FSP_SUCCESS	Initialization was successful
FSP_ERR_ASSERTION	p_ctrl or p_cfg was NULL
FSP_ERR_ALREADY_OPEN	The module is currently open

◆ R_ELC_Close()

fsp_err_t R_ELC_Close (elc_ctrl_t *const *p_ctrl*)

Globally disable ELC linking. Implements elc_api_t::close

Return values

FSP_SUCCESS	The ELC was successfully disabled
FSP_ERR_ASSERTION	p_ctrl was NULL
FSP_ERR_NOT_OPEN	The module has not been opened

◆ R_ELC_SoftwareEventGenerate()

fsp_err_t R_ELC_SoftwareEventGenerate (elc_ctrl_t *const *p_ctrl*, elc_software_event_t *event_number*)

Generate a software event in the Event Link Controller. Implements elc_api_t::softwareEventGenerate

Example:

```
/* Generate an event signal through software to the linked peripheral. */
   err = R_ELC_SoftwareEventGenerate(&g_elc_ctrl, ELC_SOFTWARE_EVENT_0);
   assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Initialization was successful
FSP_ERR_ASSERTION	Invalid event number or p_ctrl was NULL
FSP_ERR_NOT_OPEN	The module has not been opened

◆ R_ELC_LinkSet()

fsp_err_t R_ELC_LinkSet (elc_ctrl_t *const *p_ctrl*, elc_peripheral_t *peripheral*, elc_event_t *signal*)

Create a single event link. Implements elc_api_t::linkSet

Example:

```
/* Create or modify a link between a peripheral function and an event source. */
   err = R_ELC_LinkSet(&g_elc_ctrl, ELC_PERIPHERAL_ADC0,
ELC_EVENT_GPT4_COUNTER_OVERFLOW);
   assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Initialization was successful
FSP_ERR_ASSERTION	p_ctrl was NULL
FSP_ERR_NOT_OPEN	The module has not been opened

◆ R_ELC_LinkBreak()

fsp_err_t R_ELC_LinkBreak (elc_ctrl_t *const *p_ctrl*, elc_peripheral_t *peripheral*)

Break an event link. Implements elc_api_t::linkBreak

Return values

FSP_SUCCESS	Event link broken
FSP_ERR_ASSERTION	p_ctrl was NULL
FSP_ERR_NOT_OPEN	The module has not been opened

◆ R_ELC_Enable()

fsp_err_t R_ELC_Enable (elc_ctrl_t *const *p_ctrl*)

Enable the operation of the Event Link Controller. Implements elc_api_t::enable

Return values

FSP_SUCCESS	ELC enabled.
FSP_ERR_ASSERTION	p_ctrl was NULL
FSP_ERR_NOT_OPEN	The module has not been opened

◆ R_ELC_Disable()

fsp_err_t R_ELC_Disable (elc_ctrl_t *const *p_ctrl*)

Disable the operation of the Event Link Controller. Implements elc_api_t::disable

Return values

FSP_SUCCESS	ELC disabled.
FSP_ERR_ASSERTION	p_ctrl was NULL
FSP_ERR_NOT_OPEN	The module has not been opened

4.2.24 Ethernet (r_ether)

Modules

Functions

fsp_err_t	R_ETHER_Open (ether_ctrl_t *const p_ctrl, ether_cfg_t const *const

	p_cfg) After ETHERC, EDMAC and PHY-LSI are reset in software, an auto negotiation of PHY-LSI is begun. Afterwards, the link signal change interrupt is permitted. Implements ether_api_t::open. More...
fsp_err_t	R_ETHER_Close (ether_ctrl_t *const p_ctrl) Disables interrupts. Removes power and releases hardware lock. Implements ether_api_t::close. More...
fsp_err_t	R_ETHER_Read (ether_ctrl_t *const p_ctrl, void *const p_buffer, uint32_t *const length_bytes) Receive Ethernet frame. Receives data to the location specified by the pointer to the receive buffer. In zero copy mode, the address of the receive buffer is returned. In non zero copy mode, the received data in the internal buffer is copied to the pointer passed by the argument. Implements ether_api_t::read. More...
fsp_err_t	R_ETHER_BufferRelease (ether_ctrl_t *const p_ctrl) Move to the next buffer in the circular receive buffer list. Implements ether_api_t::bufferRelease. More...
fsp_err_t	R_ETHER_RxBufferUpdate (ether_ctrl_t *const p_ctrl, void *const p_buffer) Change the buffer pointer of the current rx buffer descriptor. Implements ether_api_t::rxBufferUpdate. More...
fsp_err_t	R_ETHER_Write (ether_ctrl_t *const p_ctrl, void *const p_buffer, uint32_t const frame_length) Transmit Ethernet frame. Transmits data from the location specified by the pointer to the transmit buffer, with the data size equal to the specified frame length. In the non zero copy mode, transmits data after being copied to the internal buffer. Implements ether_api_t::write. More...
fsp_err_t	R_ETHER_LinkProcess (ether_ctrl_t *const p_ctrl) The Link up processing, the Link down processing, and the magic packet detection processing are executed. Implements ether_api_t::linkProcess. More...
fsp_err_t	R_ETHER_WakeOnLANEnable (ether_ctrl_t *const p_ctrl) The setting of ETHERC is changed from normal sending and

	receiving mode to magic packet detection mode. Implements ether_api_t::wakeOnLANEnable. More...
fsp_err_t	R_ETHER_TxStatusGet (ether_ctrl_t *const p_ctrl, void *const p_buffer_address)

Detailed Description

Driver for the Ethernet peripheral on RA MCUs. This module implements the Ethernet Interface.

Overview

This module performs Ethernet frame transmission and reception using an Ethernet controller and an Ethernet DMA controller.

Features

The Ethernet module supports the following features:

- Transmit/receive processing
- Optional zero-copy buffering
- Callback function with returned event code
- Magic packet detection mode support
- Auto negotiation support
- Flow control support
- Multicast filtering support
- Broadcast filtering support
- Promiscuous mode support

Configuration

Build Time Configurations for r_ether

The following build time configurations are defined in fsp_cfg/r_ether_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
ET0_LINKSTA Pin Status Flag	• Fall -> Rise • Rise -> Fall	Fall -> Rise	Specify the polarity of the link signal output by the PHY-LSI. When 0 is specified, link-up and link-down correspond respectively to the fall and rise of the LINKSTA signal. When 1 is specified, link-up and link-down correspond respectively to the rise

			and fall of the LINKSTA signal.
Link Signal Change Flag	• Unused • Used	Unused	Use LINKSTA signal for detect link status changes 0 = unused (use PHY-LSI status register) 1 = use (use LINKSTA signal)

Configurations for Networking > Ethernet (r_ether)

This module can be added to the Stacks tab via New Stack > Networking > Ethernet (r_ether).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_ether0	Module name.
General > Channel	0	0	Select the ether channel number.
General > MAC address	Must be a valid MAC address	00:11:22:33:44:55	MAC address of this channel.
General > Zero-copy Mode	• Disable • Enable	Disable	Enable or disable zero-copy mode.
General > Flow control functionality	• Disable • Enable	Disable	Enable or disable flow control.
Filters > Multicast Mode	• Disable • Enable	Enable	Enable or disable multicast frame reception.
Filters > Promiscuous Mode	• Disable • Enable	Disable	Enable this option to receive packets addressed to other NICs.
Filters > Broadcast filter	Must be a valid non-negative integer with maximum configurable value of 65535.	0	Limit of the number of broadcast frames received continuously
Buffers > Number of TX buffer	Must be an integer from 1 to 8	1	Number of transmit buffers
Buffers > Number of RX buffer	Must be an integer from 1 to 8	1	Number of receive buffers
Buffers > Allocate RX buffer	• Disable • Enable	Enable	Allocates the RX buffer when generating the configuration structure
Buffers > Buffer size	Must be at least 1514 which is the maximum Ethernet frame size.	1514	Size of Ethernet buffer
Buffers > Padding size	• Disable	Disable	The padding size that

	• 1 Byte • 2 Bytes • 3 Bytes		is automatically inserted into the received packets
Buffers > Padding offset	Must be less than 64 bytes.	0	The offset into a receive buffer to insert padding bytes.
Interrupts > Interrupt priority	MCU Specific Options		Select the EDMAC interrupt priority.
Interrupts > Callback	Name must be a valid C symbol	NULL	Callback provided when an ISR occurs

Interrupt Configuration

The first R_ETHER_Open function call sets EINT interrupts. The user could provide callback function which would be invoked when EINT interrupt handler has been completed. The callback arguments will contain information about a channel number, the ETHERC and EDMAC status, the event code, and a pointer to the user defined context.

Callback Configuration

The user could provide callback function which would be invoked when either a magic packet or a link signal change is detected. When the callback function is called, a variable in which the channel number for which the detection occurred and a constant shown in Table 2.4 are stored is passed as an argument. If the value of this argument is to be used outside the callback function, its value should be copied into, for example, a global variable.

Clock Configuration

The clock for this module is derived from the following peripheral clock for each MCU group:

MCU Group	Peripheral Clock
RA6E1	PCLKA
RA6M2	PCLKA
RA6M3	PCLKA
RA6M4	PCLKA
RA6M5	PCLKA

Note

1. *When using ETHERC, the PCLKA frequency is in the range 12.5 MHz <= PCLKA <= 120 MHz.*
2. *When using ETHERC, PCLKA = ICLK.*

Pin Configuration

To use the Ethernet module, input/output signals of the peripheral function have to be allocated to pins with the multi-function pin controller (MPC). Please perform the pin setting before calling the R_ETHER_Open function.

Usage Notes

Ethernet Frame Format

The Ethernet module supports the Ethernet II/IEEE 802.3 frame format.

Frame Format for Data Transmission and Reception

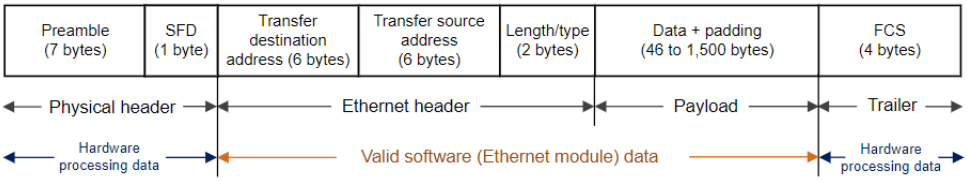

Figure 163: Frame Format Image

The preamble and SFD signal the start of an Ethernet frame. The FCS contains the CRC of the Ethernet frame and is calculated on the transmitting side. When data is received the CRC value of the frame is calculated in hardware, and the Ethernet frame is discarded if the values do not match. When the hardware determines that the data is normal, the valid range of receive data is: (transmission destination address) + (transmission source address) + (length/type) + (data).

PAUSE Frame Format

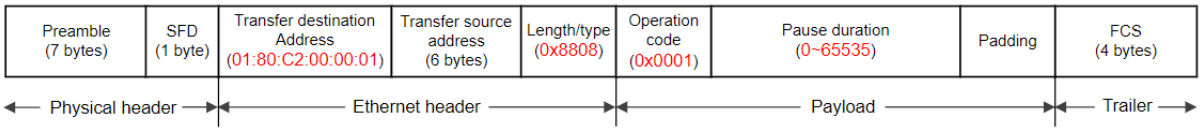

Figure 164: Pause Frame Format Image

The transmission destination address is specified as 01:80:C2:00:00:01 (a multicast address reserved for PAUSE frames). At the start of the payload the length/type is specified as 0x8808 and the operation code as 0x0001. The pause duration in the payload is specified by the value of the automatic PAUSE (AP) bits in the automatic PAUSE frame setting register (APR), or the manual PAUSE time setting (MP) bits in the manual PAUSE frame setting register (MPR).

Magic Packet Frame Format

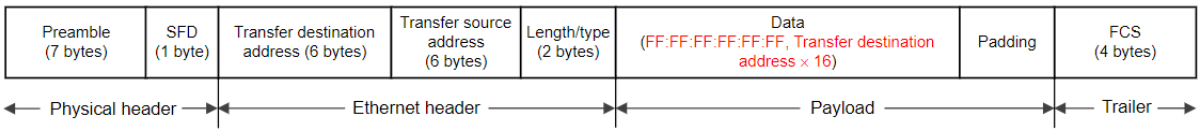

Figure 165: Magic Packet Frame Format Image

In a Magic Packet, the value FF:FF:FF:FF:FF:FF followed by the transmission destination address repeated 16 times is inserted somewhere in the Ethernet frame data.

Limitations

Memory alignment limitation for Ethernet buffer

The Ethernet Driver has several alignment constraints:

- 16-byte alignment for the descriptor
- 32-byte aligned read buffer for R_ETHER_RxBufferUpdate when zero copy mode is enabled

Functional limitations in TrustZone Security Extensions

The Ethernet Driver has several security constraints:

MCU	Has Security Extension	Support Flat project	Support TZ project	
			Secure	Non-Secure
RA6M2	-	x	-	-
RA6M3	-	x	-	-
RA6M4	- *1	x	-	x
RA6M5	- *1	x	-	x

Note

1. ETHERC/EDMAC is always Non-secure peripheral in this MCU.

Examples

ETHER Basic Example

This is a basic example of minimal use of the ETHER in an application.

Note

In this example zero-copy mode is disabled and there are no restrictions on buffer alignment.

◆ R_ETHER_Open()

fsp_err_t R_ETHER_Open (ether_ctrl_t *const *p_ctrl*, ether_cfg_t const *const *p_cfg*)

After ETHERC, EDMAC and PHY-LSI are reset in software, an auto negotiation of PHY-LSI is begun. Afterwards, the link signal change interrupt is permitted. Implements ether_api_t::open.

Return values

FSP_SUCCESS	Channel opened successfully.
FSP_ERR_ASSERTION	Pointer to ETHER control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Control block has already been opened or channel is being used by another instance. Call close() then open() to reconfigure.
FSP_ERR_ETHER_ERROR_PHY_COMMUNICATION	Initialization of PHY-LSI failed.
FSP_ERR_INVALID_CHANNEL	Invalid channel number is given.
FSP_ERR_INVALID_POINTER	Pointer to MAC address is NULL.
FSP_ERR_INVALID_ARGUMENT	Interrupt is not enabled.
FSP_ERR_ETHER_PHY_ERROR_LINK	Initialization of PHY-LSI failed.

◆ R_ETHER_Close()

fsp_err_t R_ETHER_Close (ether_ctrl_t *const *p_ctrl*)

Disables interrupts. Removes power and releases hardware lock. Implements ether_api_t::close.

Return values

FSP_SUCCESS	Channel successfully closed.
FSP_ERR_ASSERTION	Pointer to ETHER control block is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened

◆ R_ETHER_Read()

fsp_err_t R_ETHER_Read (ether_ctrl_t *const *p_ctrl*, void *const *p_buffer*, uint32_t *const *length_bytes*)

Receive Ethernet frame. Receives data to the location specified by the pointer to the receive buffer. In zero copy mode, the address of the receive buffer is returned. In non zero copy mode, the received data in the internal buffer is copied to the pointer passed by the argument. Implements ether_api_t::read.

Return values

FSP_SUCCESS	Processing completed successfully.
FSP_ERR_ASSERTION	Pointer to ETHER control block is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_ETHER_ERROR_NO_DATA	There is no data in receive buffer.
FSP_ERR_ETHER_ERROR_LINK	Auto-negotiation is not completed, and reception is not enabled.
FSP_ERR_ETHER_ERROR_MAGIC_PACKET_MODE	As a Magic Packet is being detected, transmission and reception is not enabled.
FSP_ERR_ETHER_ERROR_FILTERING	Multicast Frame filter is enable, and Multicast Address Frame is received.
FSP_ERR_INVALID_POINTER	Value of the pointer is NULL.

◆ R_ETHER_BufferRelease()

fsp_err_t R_ETHER_BufferRelease (ether_ctrl_t *const *p_ctrl*)

Move to the next buffer in the circular receive buffer list. Implements ether_api_t::bufferRelease.

Return values

FSP_SUCCESS	Processing completed successfully.
FSP_ERR_ASSERTION	Pointer to ETHER control block is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened
FSP_ERR_ETHER_ERROR_LINK	Auto-negotiation is not completed, and reception is not enabled.
FSP_ERR_ETHER_ERROR_MAGIC_PACKET_MODE	As a Magic Packet is being detected, transmission and reception is not enabled.

◆ R_ETHER_RxBufferUpdate()

fsp_err_t R_ETHER_RxBufferUpdate (ether_ctrl_t *const *p_ctrl*, void *const *p_buffer*)

Change the buffer pointer of the current rx buffer descriptor. Implements ether_api_t::rxBufferUpdate.

Return values

FSP_SUCCESS	Processing completed successfully.
FSP_ERR_ASSERTION	A pointer argument is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_INVALID_POINTER	The pointer of buffer is NULL or not aligned on a 32-bit boundary.
FSP_ERR_INVALID_MODE	Driver is configured to non zero copy mode.
FSP_ERR_ETHER_RECEIVE_BUFFER_ACTIVE	All descriptor is active.

◆ R_ETHER_Write()

fsp_err_t R_ETHER_Write (ether_ctrl_t *const *p_ctrl*, void *const *p_buffer*, uint32_t const *frame_length*)

Transmit Ethernet frame. Transmits data from the location specified by the pointer to the transmit buffer, with the data size equal to the specified frame length. In the non zero copy mode, transmits data after being copied to the internal buffer. Implements ether_api_t::write.

Return values

FSP_SUCCESS	Processing completed successfully.
FSP_ERR_ASSERTION	Pointer to ETHER control block is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_ETHER_ERROR_LINK	Auto-negotiation is not completed, and reception is not enabled.
FSP_ERR_ETHER_ERROR_MAGIC_PACKET_MODE	As a Magic Packet is being detected, transmission and reception is not enabled.
FSP_ERR_ETHER_ERROR_TRANSMIT_BUFFER_FULL	Transmit buffer is not empty.
FSP_ERR_INVALID_POINTER	Value of the pointer is NULL.
FSP_ERR_INVALID_ARGUMENT	Value of the send frame size is out of range.

◆ R_ETHER_LinkProcess()

fsp_err_t R_ETHER_LinkProcess (ether_ctrl_t *const *p_ctrl*)

The Link up processing, the Link down processing, and the magic packet detection processing are executed. Implements ether_api_t::linkProcess.

Return values

FSP_SUCCESS	Link is up.
FSP_ERR_ASSERTION	Pointer to ETHER control block is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_ETHER_ERROR_LINK	Link is down.
FSP_ERR_ETHER_ERROR_PHY_COMMUNICATION	When reopening the PHY interface initialization of the PHY-LSI failed.
FSP_ERR_ALREADY_OPEN	When reopening the PHY interface it was already opened.
FSP_ERR_INVALID_CHANNEL	When reopening the PHY interface an invalid channel was passed.
FSP_ERR_INVALID_POINTER	When reopening the PHY interface the MAC address pointer was NULL.
FSP_ERR_INVALID_ARGUMENT	When reopening the PHY interface the interrupt was not enabled.
FSP_ERR_ETHER_PHY_ERROR_LINK	Initialization of the PHY-LSI failed.

◆ R_ETHER_WakeOnLANEnable()

fsp_err_t R_ETHER_WakeOnLANEnable (ether_ctrl_t *const *p_ctrl*)

The setting of ETHERC is changed from normal sending and receiving mode to magic packet detection mode. Implements ether_api_t::wakeOnLANEnable.

Return values

FSP_SUCCESS	Processing completed successfully.
FSP_ERR_ASSERTION	Pointer to ETHER control block is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_ETHER_ERROR_LINK	Auto-negotiation is not completed, and reception is not enabled.
FSP_ERR_ETHER_PHY_ERROR_LINK	Initialization of PHY-LSI failed.

◆ R_ETHER_TxStatusGet()

fsp_err_t R_ETHER_TxStatusGet (ether_ctrl_t *const *p_ctrl*, void *const *p_buffer_address*)
Provides status of Ethernet driver in the user provided pointer. Implements ether_api_t::txStatusGet. **Return values** FSP_SUCCESS — Transmit buffer address is stored in provided p_buffer_address. FSP_ERR_ASSERTION — Pointer to ETHER control block is NULL. FSP_ERR_NOT_OPEN — The control block has not been opened. FSP_ERR_INVALID_POINTER — p_status is NULL. FSP_ERR_NOT_FOUND — Transmit buffer address has been overwritten in transmit descriptor.

fsp_err_t	R_ETHER_PHY_LinkStatusGet (ether_phy_ctrl_t *const p_ctrl) Returns the status of the physical link. Implements ether_phy_api_t::linkStatusGet. More...

Detailed Description

The Ethernet PHY module (r_ether_phy) provides an API for standard Ethernet PHY communications applications that use the ETHERC peripheral. It implements the Ethernet PHY Interface.

Overview

The Ethernet PHY module is used to setup and manage an external Ethernet PHY device for use with the on-chip Ethernet Controller (ETHERC) peripheral. It performs auto-negotiation to determine the optimal connection parameters between link partners. Once initialized the connection between the external PHY and the onboard controller is automatically managed in hardware.

Features

The Ethernet PHY module supports the following features:

- Auto negotiation support
- Flow control support
- Link status check support

Configuration

Build Time Configurations for r_ether_phy

The following build time configurations are defined in fsp_cfg/r_ether_phy_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Select PHY	• Default • Other • KSZ8091RNB • KSZ8041 • DP83620	Default	Select PHY chip to use. Selecting 'Default' will automatically choose the correct option when using a Renesas development board.
Reference Clock	• Default • Enabled • Disabled	Default	Select whether to use the RMII reference clock. Selecting 'Default' will automatically choose the correct option when using a Renesas development board.

Configurations for Networking > Ethernet (r_ether_phy)

This module can be added to the Stacks tab via New Stack > Networking > Ethernet (r_ether_phy).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_ether_phy0	Module name.
Channel	• 0 • 1	0	Select the Ethernet controller channel number.
PHY-LSI Address	Specify a value between 0 and 31.	0	Specify the address of the PHY-LSI used.
PHY-LSI Reset Completion Timeout	Specify a value between 0x1 and 0xFFFFFFFF.	0x00020000	Specify the number of times to read the PHY-LSI control register while waiting for reset completion. This value should be adjusted experimentally based on the PHY-LSI used.
Select MII type	• MII • RMII	RMII	Specify whether to use MII or RMII.
MII/RMII Register Access Wait-time	Specify a value between 0x1 and 0x7FFFFFFF.	8	Specify the bit timing for MII/RMII register accesses during PHY initialization. This value should be adjusted experimentally based on the PHY-LSI used.
Flow Control	• Disable • Enable	Disable	Select whether to enable or disable flow control.

Usage Notes

Note

See the example below for details on how to initialize the Ethernet PHY module.

Accessing the MII and RMII Registers

Use the PIR register to access the MII and RMII registers in the PHY-LSI. Serial data in the MII and RMII management frame format is transmitted and received through the ET0_MDC and ET0_MDIO pins controlled by software.

MII and RMII management frame format

The below table lists the MII and RMII management frame formats.

Access type		MII and RMII management frame							
	Item	PRE	ST	OP	PHYAD	REGAD	TA	DATA	IDLE
	Number of bits	32	2	2	5	5	2	16	1
Read		1...1	01	10	00001	RRRRR	Z0	DDDDDDDDDDDDDDDD	Z
Write		1...1	01	01	00001	RRRRR	10	DDDDDDDDDDDDDDDD	Z

Note

- PRE (preamble): Send 32 consecutive 1s.
- ST (start of frame): Send 01b.
- OP (operation code): Send 10b for read or 01b for write.
- PHYAD (PHY address): Up to 32 PHY-LSIs can be connected to one MAC. PHY-LSIs are selected with these 5 bits. When the PHY-LSI address is 1, send 00001b.
- REGAD (register address): One register is selected from up to 32 registers in the PHY-LSI. When the register address is 1, send 00001b.
- TA (turnaround): Use 2-bit turnaround time to avoid contention between the register address and data during a read operation.
Send 10b during a write operation. Release the bus for 1 bit during a read operation (Z is output).
(This is indicated as Z0 because 0 is output from the PHY-LSI on the next clock cycle.)
- DATA (data): 16-bit data. Sequentially send or receive starting from the MSB.
- IDLE (IDLE condition): Wait time before inputting the next MII or RMII management format. Release the bus during a write
operation (Z is output). No control is required, because a bus was already released during a read operation.

Limitations

- The r_ether_phy module may need to be customized for PHY devices other than the ones currently supported (KSZ8091RNB, KSZ8041 and DP83620). Use the existing code as a starting point for creating a custom implementation.

Examples

ETHER PHY Basic Example

This is a basic example of minimal use of the ETHER PHY in an application.

```
void ether_phy_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
    g_ether_phy0_ctrl.open   = 0U;
    g_ether_phy0_cfg.channel = 0;
 /* Initializes the module. */
```

```
    err = R_ETHER_PHY_Open(&g_ether_phy0_ctrl, &g_ether_phy0_cfg);
/* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
/* Start auto negotiation. */
    err = R_ETHER_PHY_StartAutoNegotiate(&g_ether_phy0_ctrl);
    assert(FSP_SUCCESS == err);
/* Polling until link is established. */
while (FSP_SUCCESS != R_ETHER_PHY_LinkStatusGet(&g_ether_phy0_ctrl))
    {
/* Do nothing */
    }
/* Get link partner ability from phy interface. */
    err = R_ETHER_PHY_LinkPartnerAbilityGet(&g_ether_phy0_ctrl,
                                            &g_ether_phy0_line_speed_duplex,
                                            &g_ether_phy0_local_pause,
                                            &g_ether_phy0_partner_pause);
    assert(FSP_SUCCESS == err);
/* Check current link status. */
    err = R_ETHER_PHY_LinkStatusGet(&g_ether_phy0_ctrl);
    assert(FSP_SUCCESS == err);
}
```

Data Structures

struct	ether_phy_instance_ctrl_t

Data Structure Documentation

◆ ether_phy_instance_ctrl_t

struct ether_phy_instance_ctrl_t		
ETHER PHY control block. DO NOT INITIALIZE. Initialization occurs when ether_phy_api_t::open is called.		
Data Fields		
uint32_t	open	Used to determine if the channel is configured.
ether_phy_cfg_t const *	p_ether_phy_cfg	Pointer to initial configurations.
volatile uint32_t *	p_reg_pir	Pointer to ETHERC peripheral registers.

uint32_t	local_advertise	Capabilities bitmap for local advertising.

Function Documentation

◆ R_ETHER_PHY_Open()

fsp_err_t R_ETHER_PHY_Open (ether_phy_ctrl_t *const *p_ctrl*, ether_phy_cfg_t const *const *p_cfg*)

Resets Ethernet PHY device. Implements ether_phy_api_t::open.

Return values

FSP_SUCCESS	Channel opened successfully.
FSP_ERR_ASSERTION	Pointer to ETHER_PHY control block or configuration structure is NULL.
FSP_ERR_ALREADY_OPEN	Control block has already been opened or channel is being used by another instance. Call close() then open() to reconfigure.
FSP_ERR_INVALID_CHANNEL	Invalid channel number is given.
FSP_ERR_INVALID_POINTER	Pointer to p_cfg is NULL.
FSP_ERR_TIMEOUT	PHY-LSI Reset wait timeout.

◆ R_ETHER_PHY_Close()

fsp_err_t R_ETHER_PHY_Close (ether_phy_ctrl_t *const *p_ctrl*)

Close Ethernet PHY device. Implements ether_phy_api_t::close.

Return values

FSP_SUCCESS	Channel successfully closed.
FSP_ERR_ASSERTION	Pointer to ETHER_PHY control block is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened

◆ R_ETHER_PHY_StartAutoNegotiate()

fsp_err_t R_ETHER_PHY_StartAutoNegotiate (ether_phy_ctrl_t *const *p_ctrl*)

Starts auto-negotiate. Implements ether_phy_api_t::startAutoNegotiate.

Return values

FSP_SUCCESS	ETHER_PHY successfully starts auto-negotiate.
FSP_ERR_ASSERTION	Pointer to ETHER_PHY control block is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened

◆ R_ETHER_PHY_LinkPartnerAbilityGet()

fsp_err_t R_ETHER_PHY_LinkPartnerAbilityGet (ether_phy_ctrl_t *const *p_ctrl*, uint32_t *const *p_line_speed_duplex*, uint32_t *const *p_local_pause*, uint32_t *const *p_partner_pause*)

Reports the other side's physical capability. Implements ether_phy_api_t::linkPartnerAbilityGet.

Return values

FSP_SUCCESS	ETHER_PHY successfully get link partner ability.
FSP_ERR_ASSERTION	Pointer to ETHER_PHY control block is NULL.
FSP_ERR_INVALID_POINTER	Pointer to arguments are NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened
FSP_ERR_ETHER_PHY_ERROR_LINK	PHY-LSI is not link up.
FSP_ERR_ETHER_PHY_NOT_READY	The auto-negotiation isn't completed

◆ R_ETHER_PHY_LinkStatusGet()

fsp_err_t R_ETHER_PHY_LinkStatusGet (ether_phy_ctrl_t *const *p_ctrl*)

Returns the status of the physical link. Implements ether_phy_api_t::linkStatusGet.

Return values

FSP_SUCCESS	ETHER_PHY successfully get link partner ability.
FSP_ERR_ASSERTION	Pointer to ETHER_PHY control block is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened
FSP_ERR_ETHER_PHY_ERROR_LINK	PHY-LSI is not link up.

4.2.26 High-Performance Flash Driver (r_flash_hp)

Modules

Functions

fsp_err_t	R_FLASH_HP_Open (flash_ctrl_t *const p_api_ctrl, flash_cfg_t const *const p_cfg)
fsp_err_t	R_FLASH_HP_Write (flash_ctrl_t *const p_api_ctrl, uint32_t const src_address, uint32_t flash_address, uint32_t const num_bytes)
fsp_err_t	R_FLASH_HP_Erase (flash_ctrl_t *const p_api_ctrl, uint32_t const address, uint32_t const num_blocks)
fsp_err_t	R_FLASH_HP_BlankCheck (flash_ctrl_t *const p_api_ctrl, uint32_t const address, uint32_t num_bytes, flash_result_t *blank_check_result)
fsp_err_t	R_FLASH_HP_Close (flash_ctrl_t *const p_api_ctrl)
fsp_err_t	R_FLASH_HP_StatusGet (flash_ctrl_t *const p_api_ctrl, flash_status_t *const p_status)
fsp_err_t	R_FLASH_HP_AccessWindowSet (flash_ctrl_t *const p_api_ctrl, uint32_t const start_addr, uint32_t const end_addr)
fsp_err_t	R_FLASH_HP_AccessWindowClear (flash_ctrl_t *const p_api_ctrl)
fsp_err_t	R_FLASH_HP_IdCodeSet (flash_ctrl_t *const p_api_ctrl, uint8_t const *const p_id_code, flash_id_code_mode_t mode)
fsp_err_t	R_FLASH_HP_Reset (flash_ctrl_t *const p_api_ctrl)
fsp_err_t	R_FLASH_HP_UpdateFlashClockFreq (flash_ctrl_t *const p_api_ctrl)
fsp_err_t	R_FLASH_HP_StartUpAreaSelect (flash_ctrl_t *const p_api_ctrl, flash_startup_area_swap_t swap_type, bool is_temporary)
fsp_err_t	R_FLASH_HP_CallbackSet (flash_ctrl_t *const p_api_ctrl, void(*p_callback)(flash_callback_args_t *), void const *const p_context, flash_callback_args_t *const p_callback_memory)
fsp_err_t	R_FLASH_HP_BankSwap (flash_ctrl_t *const p_api_ctrl)
fsp_err_t	R_FLASH_HP_InfoGet (flash_ctrl_t *const p_api_ctrl, flash_info_t *const p_info)

Detailed Description

Driver for the flash memory on RA high-performance MCUs. This module implements the Flash Interface.

Overview

The Flash HAL module APIs allow an application to write, erase and blank check both the data and ROM flash areas that reside within the MCU. The amount of flash memory available varies across MCU parts.

Features

The R_FLASH_HP module has the following key features:

- Blocking and non-blocking erasing, writing and blank-checking of data flash.
- Blocking erasing, writing and blank-checking of code flash.
- Callback functions for completion of non-blocking data flash operations.
- Access window (write protection) for ROM Flash, allowing only specified areas of code flash to be erased or written.
- Boot block-swapping.
- ID code programming support.

Configuration

Build Time Configurations for r_flash_hp

The following build time configurations are defined in fsp_cfg/r_flash_hp_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Code Flash Programming Enable	• Enabled • Disabled	Disabled	Controls whether or not code-flash programming is enabled. Disabling reduces the amount of ROM and RAM used by the API.
Data Flash Programming Enable	• Enabled • Disabled	Enabled	Controls whether or not data-flash programming is enabled. Disabling reduces the amount of ROM used by the API.

Configurations for Storage > Flash (r_flash_hp)

This module can be added to the Stacks tab via New Stack > Storage > Flash (r_flash_hp). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_flash0	Module name.
Data Flash Background Operation	• Enabled • Disabled	Enabled	Enabling allows Flash API calls that reference data-flash to return immediately, with the operation continuing in the background.
Callback	Name must be a valid C symbol	NULL	A user callback function can be specified. Callback function called when a Data Flash Background Operation completes or errors.
Flash Ready Interrupt Priority	MCU Specific Options		Select the flash ready interrupt priority.
Flash Error Interrupt Priority	MCU Specific Options		Select the flash error interrupt priority.

Clock Configuration

Flash uses FCLK as the clock source depending on the MCU. When writing and erasing the clock source must be at least 4 MHz.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Warning

It is highly recommended that the developer reviews sections 5 and 6 of the Flash Memory section of the target MCUs Hardware User's Manual prior to using the r_flash_hp module. In particular, understanding ID Code and Access Window functionality can help avoid unrecoverable flash scenarios.

Data Flash Background Operation (BGO) Precautions

When using the data flash BGO (Background Operation) mode, you can still access the user ROM, RAM and external memory. You must ensure that the data flash is not accessed during a data flash operation. This includes interrupts that may access the data flash.

Code Flash Precautions

Code flash cannot be accessed while writing, erasing or blank checking code flash. Code flash cannot be accessed while modifying the access window, selecting the startup area or setting the ID code. In order to support modifying code flash all supporting code must reside in RAM. This is only done when code flash programming is enabled. BGO mode is not supported for code flash, so a code flash operation will not return before the operation has completed. By default, the vector table resides in

the code flash. If an interrupt occurs during the code flash operation, then code flash will be accessed to fetch the interrupt's starting address and an error will occur. The simplest work-around is to disable interrupts during code flash operations. Another option is to copy the vector table to RAM, update the VTOR (Vector Table Offset Register) accordingly and ensure that any interrupt service routines execute out of RAM. Similarly, you must insure that if in a multi-threaded environment, threads running from code flash cannot become active while a code flash operation is in progress.

Flash Clock (FCLK)

The flash clock source is the clock used by the Flash peripheral in performing all Flash operations. As part of the flash_api_t::open function the Flash clock source is checked will return FSP_ERR_FCLK if it is invalid. Once the Flash API has been opened, if the flash clock source frequency is changed, the flash_api_t::updateFlashClockFreq API function must be called to inform the API of the change. Failure to do so could result in flash operation failures and possibly damage the part.

Interrupts

Enable the flash ready interrupt only if you plan to use the data flash BGO. In this mode, the application can initiate a data flash operation and then be asynchronously notified of its completion, or an error, using a user supplied-callback function. The callback function is passed a structure containing event information that indicates the source of the callback event (for example, flash_api_t::FLASH_EVENT_ERASE_COMPLETE) When the FLASH FRDYI interrupt is enabled, the corresponding ISR will be defined in the flash driver. The ISR will call a user-callback function if one was registered with the flash_api_t::open API.

Note

The Flash HP supports an additional flash-error interrupt and if the BGO mode is enabled for the FLASH HP then both the Flash Ready Interrupt and Flash Error Interrupts must be enabled (assigned a priority).

Limitations

- Write operations must be aligned on page boundaries and must be a multiple of the page boundary size.
- Erase operations will erase the entire block the provided address resides in.
- Data flash is better suited for storing data as it can be erased and written to while code is still executing from code flash. Data flash is also guaranteed for a larger number of reprogramming/erasure cycles than code flash.
- Read values of erased data flash blocks are not guaranteed to be 0xFF. Blank check should be used to determine if memory has been erased but not yet programmed.

Examples

High-Performance Flash Basic Example

This is a basic example of erasing and writing to data flash and code flash.

```
#define FLASH_DF_BLOCK_0 0x40100000U /* 64 B: 0x40100000 - 0x4010003F */
#define FLASH_CF_BLOCK_8 0x00010000  /* 32 KB: 0x00010000 - 0x00017FFF */
#define FLASH_DATA_BLOCK_SIZE (1024)
#define FLASH_HP_EXAMPLE_WRITE_SIZE 32
```

```
uint8_t       g_dest[TRANSFER_LENGTH];
uint8_t       g_src[TRANSFER_LENGTH];
flash_result_t blank_check_result;
void r_flash_hp_basic_example (void)
{
 /* Initialize p_src to known data */
 for (uint32_t i = 0; i < TRANSFER_LENGTH; i++)
    {
       g_src[i] = (uint8_t) ('A' + (i % 26));
    }
 /* Open the flash hp instance. */
 fsp_err_t err = R_FLASH_HP_Open(&g_flash_ctrl, &g_flash_cfg);
    assert(FSP_SUCCESS == err);
 /* Erase 1 block of data flash starting at block 0. */
    err = R_FLASH_HP_Erase(&g_flash_ctrl, FLASH_DF_BLOCK_0, 1);
    assert(FSP_SUCCESS == err);
 /* Check if block 0 is erased. */
    err = R_FLASH_HP_BlankCheck(&g_flash_ctrl, FLASH_DF_BLOCK_0,
FLASH_DATA_BLOCK_SIZE, &blank_check_result);
    assert(FSP_SUCCESS == err);
 /* Verify the previously erased area is blank */
    assert(FLASH_RESULT_BLANK == blank_check_result);
 /* Write 32 bytes to the first block of data flash. */
    err = R_FLASH_HP_Write(&g_flash_ctrl, (uint32_t) g_src, FLASH_DF_BLOCK_0,
FLASH_HP_EXAMPLE_WRITE_SIZE);
    assert(FSP_SUCCESS == err);
    assert(0 == memcmp(g_src, (uint8_t *) FLASH_DF_BLOCK_0,
FLASH_HP_EXAMPLE_WRITE_SIZE));
 /* Disable interrupts to prevent vector table access while code flash is in P/E
mode. */
    __disable_irq();
 /* Erase 1 block of code flash starting at block 10. */
    err = R_FLASH_HP_Erase(&g_flash_ctrl, FLASH_CF_BLOCK_8, 1);
    assert(FSP_SUCCESS == err);
```

```
 /* Write 32 bytes to the first block of data flash. */
    err = R_FLASH_HP_Write(&g_flash_ctrl, (uint32_t) g_src, FLASH_CF_BLOCK_8,
FLASH_HP_EXAMPLE_WRITE_SIZE);
    assert(FSP_SUCCESS == err);
 /* Enable interrupts after code flash operations are complete. */
    __enable_irq();
    assert(0 == memcmp(g_src, (uint8_t *) FLASH_CF_BLOCK_8,
FLASH_HP_EXAMPLE_WRITE_SIZE));
}
```

High-Performance Flash Advanced Example

This example demonstrates using BGO to do non-blocking operations on the data flash.

```
bool interrupt_called;
flash_event_t flash_event;
static flash_cfg_t g_flash_bgo_example_cfg =
{
    .p_callback    = flash_callback,
    .p_context      = 0,
    .p_extend       = NULL,
    .data_flash_bgo = true,
    .ipl            = 5,
    .irq            = BSP_VECTOR_FLASH_HP_FRDYI_ISR,
};
void r_flash_hp_bgo_example (void)
{
 /* Initialize p_src to known data */
 for (uint32_t i = 0; i < TRANSFER_LENGTH; i++)
    {
       g_src[i] = (uint8_t) ('A' + (i % 26));
    }
 /* Open the flash hp instance. */
 fsp_err_t err = R_FLASH_HP_Open(&g_flash_ctrl, &g_flash_bgo_example_cfg);
 /* Handle any errors. */
```

```
    assert(FSP_SUCCESS == err);
    interrupt_called = false;
 /* Erase 1 block of data flash starting at block 0. */
    err = R_FLASH_HP_Erase(&g_flash_ctrl, FLASH_DF_BLOCK_0, 1);
    assert(FSP_SUCCESS == err);
 while (!interrupt_called)
    {
       ;
    }
    assert(FLASH_EVENT_ERASE_COMPLETE == flash_event);
    interrupt_called = false;
 /* Write 32 bytes to the first block of data flash. */
    err = R_FLASH_HP_Write(&g_flash_ctrl, (uint32_t) g_src, FLASH_DF_BLOCK_0,
FLASH_HP_EXAMPLE_WRITE_SIZE);
    assert(FSP_SUCCESS == err);
 flash_status_t status;
 /* Wait until the current flash operation completes. */
 do
    {
       err = R_FLASH_HP_StatusGet(&g_flash_ctrl, &status);
    } while ((FSP_SUCCESS == err) && (FLASH_STATUS_BUSY == status));
 /* If the interrupt wasn't called process the error. */
    assert(interrupt_called);
 /* If the event wasn't a write complete process the error. */
    assert(FLASH_EVENT_WRITE_COMPLETE == flash_event);
 /* Verify the data was written correctly. */
    assert(0 == memcmp(g_src, (uint8_t *) FLASH_DF_BLOCK_0,
FLASH_HP_EXAMPLE_WRITE_SIZE));
}
void flash_callback (flash_callback_args_t * p_args)
{
    interrupt_called = true;
    flash_event      = p_args->event;
}
```

High-Performance Flash Bank Swap Example

This example demonstrates swapping which flash bank is located at address 0. This feature is only on select MCUs.

```
void r_flash_hp_bankswap_example (void)
{
 /* Open the flash hp instance. */
 fsp_err_t err = R_FLASH_HP_Open(&g_flash_ctrl, &g_flash_cfg);
 /* Handle any errors. */
    assert(FSP_SUCCESS == err);
 /* Write the new application starting at 0x00200000. */
 /* Swap the block at address 0 with the one at 0x00200000 after the next restart.
  * The application at 0x00200000 must be written there by application code. */
    err = R_FLASH_HP_BankSwap(&g_flash_ctrl);
 /* Handle any errors. */
    assert(FSP_SUCCESS == err);
 /* Handle any pre-reset operations here */
 /* Reset the MCU to swap to the other bank */
    __NVIC_SystemReset();
}
```

Data Structures

struct	flash_hp_instance_ctrl_t

Enumerations

enum	flash_bgo_operation_t

Data Structure Documentation

◆ flash_hp_instance_ctrl_t

struct flash_hp_instance_ctrl_t	
Flash HP instance control block. DO NOT INITIALIZE.	
Data Fields	
uint32_t	opened
	To check whether api has been opened or not.

flash_bgo_operation_t	current_operation
	Operation in progress, for example, FLASH_OPERATION_CF_ERASE.

Enumeration Type Documentation

◆ flash_bgo_operation_t

enum flash_bgo_operation_t

Possible Flash operation states

Function Documentation

◆ R_FLASH_HP_Open()

fsp_err_t R_FLASH_HP_Open (flash_ctrl_t *const *p_api_ctrl*, flash_cfg_t const *const *p_cfg*)

Initializes the high performance flash peripheral. Implements flash_api_t::open.

The Open function initializes the Flash.

Example:

```
/* Open the flash hp instance. */
fsp_err_t err = R_FLASH_HP_Open(&g_flash_ctrl, &g_flash_cfg);
```

Return values

FSP_SUCCESS	Initialization was successful and timer has started.
FSP_ERR_ALREADY_OPEN	The flash control block is already open.
FSP_ERR_ASSERTION	NULL provided for p_ctrl or p_cfg.
FSP_ERR_IRQ_BSP_DISABLED	Caller is requesting BGO but the Flash interrupts are not enabled.
FSP_ERR_FCLK	FCLK must be a minimum of 4 MHz for Flash operations.

◆ R_FLASH_HP_Write()

fsp_err_t R_FLASH_HP_Write (flash_ctrl_t *const *p_api_ctrl*, uint32_t const *src_address*, uint32_t *flash_address*, uint32_t const *num_bytes*)

Writes to the specified Code or Data Flash memory area. Implements flash_api_t::write.

Example:

```
/* Write 32 bytes to the first block of data flash. */
   err = R_FLASH_HP_Write(&g_flash_ctrl, (uint32_t) g_src, FLASH_DF_BLOCK_0,
FLASH_HP_EXAMPLE_WRITE_SIZE);
```

Return values

FSP_SUCCESS	Operation successful. If BGO is enabled this means the operation was started successfully.
FSP_ERR_IN_USE	The Flash peripheral is busy with a prior on-going transaction.
FSP_ERR_NOT_OPEN	The Flash API is not Open.
FSP_ERR_CMD_LOCKED	FCU is in locked state, typically as a result of attempting to Write an area that is protected by an Access Window.
FSP_ERR_WRITE_FAILED	Status is indicating a Programming error for the requested operation. This may be returned if the requested Flash area is not blank.
FSP_ERR_TIMEOUT	Timed out waiting for FCU operation to complete.
FSP_ERR_INVALID_SIZE	Number of bytes provided was not a multiple of the programming size or exceeded the maximum range.
FSP_ERR_INVALID_ADDRESS	Invalid address was input or address not on programming boundary.
FSP_ERR_ASSERTION	NULL provided for p_ctrl.
FSP_ERR_PE_FAILURE	Failed to enter or exit P/E mode.

◆ R_FLASH_HP_Erase()

fsp_err_t R_FLASH_HP_Erase (flash_ctrl_t *const *p_api_ctrl*, uint32_t const *address*, uint32_t const *num_blocks*)

Erases the specified Code or Data Flash blocks. Implements flash_api_t::erase by the block_erase_address.

Note

Code flash may contain blocks of different sizes. When erasing code flash it is important to take this into consideration to prevent erasing a larger address space than desired.

Example:

```
/* Erase 1 block of data flash starting at block 0. */
   err = R_FLASH_HP_Erase(&g_flash_ctrl, FLASH_DF_BLOCK_0, 1);
```

Return values

FSP_SUCCESS	Successful open.
FSP_ERR_INVALID_BLOCKS	Invalid number of blocks specified
FSP_ERR_INVALID_ADDRESS	Invalid address specified. If the address is in code flash then code flash programming must be enabled.
FSP_ERR_IN_USE	Other flash operation in progress, or API not initialized
FSP_ERR_CMD_LOCKED	FCU is in locked state, typically as a result of attempting to Erase an area that is protected by an Access Window.
FSP_ERR_ASSERTION	NULL provided for p_ctrl
FSP_ERR_NOT_OPEN	The Flash API is not Open.
FSP_ERR_ERASE_FAILED	Status is indicating a Erase error.
FSP_ERR_TIMEOUT	Timed out waiting for the FCU to become ready.
FSP_ERR_PE_FAILURE	Failed to enter or exit P/E mode.

◆ R_FLASH_HP_BlankCheck()

fsp_err_t R_FLASH_HP_BlankCheck (flash_ctrl_t *const *p_api_ctrl*, uint32_t const *address*, uint32_t *num_bytes*, flash_result_t * *p_blank_check_result*)

Performs a blank check on the specified address area. Implements flash_api_t::blankCheck.

Example:

```
/* Check if block 0 is erased. */
   err = R_FLASH_HP_BlankCheck(&g_flash_ctrl, FLASH_DF_BLOCK_0,
FLASH_DATA_BLOCK_SIZE, &blank_check_result);
   assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Blank check operation completed with result in p_blank_check_result, or blank check started and in-progess (BGO mode).
FSP_ERR_INVALID_ADDRESS	Invalid data flash address was input.
FSP_ERR_INVALID_SIZE	'num_bytes' was either too large or not aligned for the CF/DF boundary size.
FSP_ERR_IN_USE	Other flash operation in progress or API not initialized.
FSP_ERR_ASSERTION	NULL provided for p_ctrl.
FSP_ERR_CMD_LOCKED	FCU is in locked state, typically as a result of attempting to Erase an area that is protected by an Access Window.
FSP_ERR_NOT_OPEN	The Flash API is not Open.
FSP_ERR_TIMEOUT	Timed out waiting for the FCU to become ready.
FSP_ERR_PE_FAILURE	Failed to enter or exit P/E mode.
FSP_ERR_BLANK_CHECK_FAILED	Blank check operation failed.

◆ R_FLASH_HP_Close()

fsp_err_t R_FLASH_HP_Close (flash_ctrl_t *const *p_api_ctrl*)

Releases any resources that were allocated by the Open() or any subsequent Flash operations. Implements flash_api_t::close.

Return values

FSP_SUCCESS	Successful close.
FSP_ERR_NOT_OPEN	The control block is not open.
FSP_ERR_ASSERTION	NULL provided for p_ctrl or p_cfg.

◆ R_FLASH_HP_StatusGet()

fsp_err_t R_FLASH_HP_StatusGet (flash_ctrl_t *const *p_api_ctrl*, flash_status_t *const *p_status*)

Query the FLASH peripheral for its status. Implements flash_api_t::statusGet.

Example:

```
flash_status_t status;
/* Wait until the current flash operation completes. */
do
   {
      err = R_FLASH_HP_StatusGet(&g_flash_ctrl, &status);
   } while ((FSP_SUCCESS == err) && (FLASH_STATUS_BUSY == status));
```

Return values

FSP_SUCCESS	FLASH peripheral is ready to use.
FSP_ERR_ASSERTION	NULL provided for p_ctrl.
FSP_ERR_NOT_OPEN	The Flash API is not Open.

◆ R_FLASH_HP_AccessWindowSet()

fsp_err_t R_FLASH_HP_AccessWindowSet (flash_ctrl_t *const *p_api_ctrl*, uint32_t const *start_addr*, uint32_t const *end_addr*)

Configure an access window for the Code Flash memory using the provided start and end address. An access window defines a contiguous area in Code Flash for which programming/erase is enabled. This area is on block boundaries. The block containing start_addr is the first block. The block containing end_addr is the last block. The access window then becomes first block –> last block inclusive. Anything outside this range of Code Flash is then write protected.

Note

If the start address and end address are set to the same value, then the access window is effectively removed. This accomplishes the same functionality as R_FLASH_HP_AccessWindowClear().

Implements flash_api_t::accessWindowSet.

Return values

FSP_SUCCESS	Access window successfully configured.
FSP_ERR_INVALID_ADDRESS	Invalid settings for start_addr and/or end_addr.
FSP_ERR_IN_USE	FLASH peripheral is busy with a prior operation.
FSP_ERR_ASSERTION	NULL provided for p_ctrl.
FSP_ERR_UNSUPPORTED	Code Flash Programming is not enabled.
FSP_ERR_NOT_OPEN	Flash API has not yet been opened.
FSP_ERR_PE_FAILURE	Failed to enter or exit Code Flash P/E mode.
FSP_ERR_TIMEOUT	Timed out waiting for the FCU to become ready.
FSP_ERR_WRITE_FAILED	Status is indicating a Programming error for the requested operation.
FSP_ERR_CMD_LOCKED	FCU is in locked state, typically as a result of having received an illegal command.

◆ R_FLASH_HP_AccessWindowClear()

fsp_err_t R_FLASH_HP_AccessWindowClear (flash_ctrl_t *const *p_api_ctrl*)

Remove any access window that is currently configured in the Code Flash. Subsequent to this call all Code Flash is writable. Implements flash_api_t::accessWindowClear.

Return values

FSP_SUCCESS	Access window successfully removed.
FSP_ERR_IN_USE	FLASH peripheral is busy with a prior operation.
FSP_ERR_ASSERTION	NULL provided for p_ctrl.
FSP_ERR_UNSUPPORTED	Code Flash Programming is not enabled.
FSP_ERR_NOT_OPEN	Flash API has not yet been opened.
FSP_ERR_PE_FAILURE	Failed to enter or exit Code Flash P/E mode.
FSP_ERR_TIMEOUT	Timed out waiting for the FCU to become ready.
FSP_ERR_WRITE_FAILED	Status is indicating a Programming error for the requested operation.
FSP_ERR_CMD_LOCKED	FCU is in locked state, typically as a result of having received an illegal command.

◆ R_FLASH_HP_IdCodeSet()

fsp_err_t R_FLASH_HP_IdCodeSet (flash_ctrl_t *const *p_api_ctrl*, uint8_t const *const *p_id_code*, flash_id_code_mode_t *mode*)

Implements flash_api_t::idCodeSet.

Return values

FSP_SUCCESS	ID Code successfully configured.
FSP_ERR_IN_USE	FLASH peripheral is busy with a prior operation.
FSP_ERR_ASSERTION	NULL provided for p_ctrl.
FSP_ERR_UNSUPPORTED	Code Flash Programming is not enabled.
FSP_ERR_NOT_OPEN	Flash API has not yet been opened.
FSP_ERR_PE_FAILURE	Failed to enter or exit Code Flash P/E mode.
FSP_ERR_TIMEOUT	Timed out waiting for the FCU to become ready.
FSP_ERR_WRITE_FAILED	Status is indicating a Programming error for the requested operation.
FSP_ERR_CMD_LOCKED	FCU is in locked state, typically as a result of having received an illegal command.

◆ R_FLASH_HP_Reset()

fsp_err_t R_FLASH_HP_Reset (flash_ctrl_t *const *p_api_ctrl*)

Reset the FLASH peripheral. Implements flash_api_t::reset.

No attempt is made to check if the flash is busy before executing the reset since the assumption is that a reset will terminate any existing operation.

Return values

FSP_SUCCESS	Flash circuit successfully reset.
FSP_ERR_ASSERTION	NULL provided for p_ctrl.
FSP_ERR_NOT_OPEN	The control block is not open.
FSP_ERR_PE_FAILURE	Failed to enter or exit P/E mode.
FSP_ERR_TIMEOUT	Timed out waiting for the FCU to become ready.
FSP_ERR_CMD_LOCKED	FCU is in locked state, typically as a result of having received an illegal command.

◆ R_FLASH_HP_UpdateFlashClockFreq()

fsp_err_t R_FLASH_HP_UpdateFlashClockFreq (flash_ctrl_t *const *p_api_ctrl*)

Indicate to the already open Flash API that the FCLK has changed. Implements flash_api_t::updateFlashClockFreq.

This could be the case if the application has changed the system clock, and therefore the FCLK. Failure to call this function subsequent to changing the FCLK could result in damage to the flash macro.

Return values

FSP_SUCCESS	Start-up area successfully toggled.
FSP_ERR_IN_USE	Flash is busy with an on-going operation.
FSP_ERR_ASSERTION	NULL provided for p_ctrl
FSP_ERR_NOT_OPEN	Flash API has not yet been opened.
FSP_ERR_FCLK	FCLK is not within the acceptable range.

◆ R_FLASH_HP_StartUpAreaSelect()

fsp_err_t R_FLASH_HP_StartUpAreaSelect (flash_ctrl_t *const *p_api_ctrl*, flash_startup_area_swap_t *swap_type*, bool *is_temporary*)

Selects which block, Default (Block 0) or Alternate (Block 1), is used as the startup area block. The provided parameters determine which block will become the active startup block and whether that action will be immediate (but temporary), or permanent subsequent to the next reset. Doing a temporary switch might appear to have limited usefulness. If there is an access window in place such that Block 0 is write protected, then one could do a temporary switch, update the block and switch them back without having to touch the access window. Implements flash_api_t::startupAreaSelect.

Return values

FSP_SUCCESS	Start-up area successfully toggled.
FSP_ERR_IN_USE	FLASH peripheral is busy with a prior operation.
FSP_ERR_ASSERTION	NULL provided for p_ctrl.
FSP_ERR_NOT_OPEN	The control block is not open.
FSP_ERR_UNSUPPORTED	Code Flash Programming is not enabled.
FSP_ERR_PE_FAILURE	Failed to enter or exit Code Flash P/E mode.
FSP_ERR_TIMEOUT	Timed out waiting for the FCU to become ready.
FSP_ERR_WRITE_FAILED	Status is indicating a Programming error for the requested operation.
FSP_ERR_CMD_LOCKED	FCU is in locked state, typically as a result of having received an illegal command.

◆ R_FLASH_HP_CallbackSet()

fsp_err_t R_FLASH_HP_CallbackSet (flash_ctrl_t *const *p_api_ctrl*, void(*)(flash_callback_args_t *) *p_callback*, void const *const *p_context*, flash_callback_args_t *const *p_callback_memory*)

Updates the user callback with the option to provide memory for the callback argument structure. Implements flash_api_t::callbackSet.

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

◆ R_FLASH_HP_BankSwap()

fsp_err_t R_FLASH_HP_BankSwap (flash_ctrl_t *const *p_api_ctrl*)

Swaps the flash bank located at address 0x00000000 and address 0x00200000. This can only be done when in dual bank mode. Dual bank mode can be enabled in the FSP Configuration Tool under BSP Properties. After a bank swap is done the MCU will need to be reset for the changes to take place. flash_api_t::bankSwap.

Return values

FSP_SUCCESS	Start-up area successfully toggled.
FSP_ERR_IN_USE	FLASH peripheral is busy with a prior operation.
FSP_ERR_ASSERTION	NULL provided for p_ctrl.
FSP_ERR_NOT_OPEN	The control block is not open.
FSP_ERR_UNSUPPORTED	Code Flash Programming is not enabled.
FSP_ERR_PE_FAILURE	Failed to enter or exit Code Flash P/E mode.
FSP_ERR_TIMEOUT	Timed out waiting for the FCU to become ready.
FSP_ERR_INVALID_MODE	Cannot switch banks while flash is in Linear mode.
FSP_ERR_WRITE_FAILED	Flash write operation failed.
FSP_ERR_CMD_LOCKED	FCU is in locked state, typically as a result of having received an illegal command.

◆ R_FLASH_HP_InfoGet()

fsp_err_t R_FLASH_HP_InfoGet (flash_ctrl_t *const *p_api_ctrl*, flash_info_t *const *p_info*)
Returns the information about the flash regions. Implements flash_api_t::infoGet. **Return values** FSP_SUCCESS — Successful retrieved the request information. FSP_ERR_NOT_OPEN — The control block is not open. FSP_ERR_ASSERTION — NULL provided for p_ctrl or p_info.

4.2.27 Low-Power Flash Driver (r_flash_lp)

Modules

Functions

fsp_err_t	R_FLASH_LP_Open (flash_ctrl_t *const p_api_ctrl, flash_cfg_t const *const p_cfg)

fsp_err_t	R_FLASH_LP_StartUpAreaSelect (flash_ctrl_t *const p_api_ctrl, flash_startup_area_swap_t swap_type, bool is_temporary)
fsp_err_t	R_FLASH_LP_CallbackSet (flash_ctrl_t *const p_api_ctrl, void(*p_callback)(flash_callback_args_t *), void const *const p_context, flash_callback_args_t *const p_callback_memory)
fsp_err_t	R_FLASH_LP_BankSwap (flash_ctrl_t *const p_api_ctrl)
fsp_err_t	R_FLASH_LP_UpdateFlashClockFreq (flash_ctrl_t *const p_api_ctrl)
fsp_err_t	R_FLASH_LP_InfoGet (flash_ctrl_t *const p_api_ctrl, flash_info_t *const p_info)

Detailed Description

Driver for the flash memory on RA low-power MCUs. This module implements the Flash Interface.

Overview

The Flash HAL module APIs allow an application to write, erase and blank check both the data and code flash areas that reside within the MCU. The amount of flash memory available varies across MCU parts.

Features

The Low-Power Flash HAL module has the following key features:

- Blocking and non-blocking erasing, writing and blank-checking of data flash.
- Blocking erasing, writing and blank checking of code flash.
- Callback functions for completion of non-blocking data flash operations.
- Access window (write protection) for code flash, allowing only specified areas of code flash to be erased or written.
- Boot block-swapping.
- ID code programming support.

Configuration

Build Time Configurations for r_flash_lp

The following build time configurations are defined in fsp_cfg/r_flash_lp_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Code Flash Programming	• Enabled • Disabled	Disabled	Controls whether or not code-flash programming is

			enabled. Disabling reduces the amount of ROM and RAM used by the API.
Data Flash Programming	• Enabled • Disabled	Enabled	Controls whether or not data-flash programming is enabled. Disabling reduces the amount of ROM used by the API.

Configurations for Storage > Flash (r_flash_lp)

This module can be added to the Stacks tab via New Stack > Storage > Flash (r_flash_lp).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_flash0	Module name.
Data Flash Background Operation	• Enabled • Disabled	Enabled	Enabling allows Flash API calls that reference data-flash to return immediately, with the operation continuing in the background.
Callback	Name must be a valid C symbol	NULL	A user callback function can be specified. Callback function called when a Data Flash Background Operation completes or errors.
Flash Ready Interrupt Priority	MCU Specific Options		Select the flash ready interrupt priority.

Clock Configuration

Flash either uses FCLK or ICLK as the clock source depending on the MCU. When writing and erasing the clock source must be at least 4 MHz.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Warning

It is highly recommended that the developer reviews sections 5 and 6 of the Flash Memory section of the target MCUs Hardware User's Manual prior to using the r_flash_lp module. In particular, understanding ID Code and Access Window functionality can help avoid unrecoverable flash scenarios.

Data Flash Background Operation (BGO) Precautions

When using the data flash BGO, the code flash, RAM and external memory can still be accessed. You must ensure that the data flash is not accessed during a data flash operation. This includes interrupts that may access the data flash.

Code Flash Precautions

Code flash cannot be accessed while writing, erasing or blank checking code flash. Code flash cannot be accessed while modifying the access window, selecting the startup area or setting the ID code. In order to support modifying code flash all supporting code must reside in RAM. This is only done when code flash programming is enabled. BGO mode is not supported for code flash, so a code flash operation will not return before the operation has completed. By default, the vector table resides in the code flash. If an interrupt occurs during the code flash operation, then code flash will be accessed to fetch the interrupt's starting address and an error will occur. The simplest work-around is to disable interrupts during code flash operations. Another option is to copy the vector table to RAM, update the VTOR (Vector Table Offset Register) accordingly and ensure that any interrupt service routines execute out of RAM. Similarly, you must insure that if in a multi-threaded environment, threads running from code flash cannot become active while a code flash operation is in progress.

Flash Clock Source

The flash clock source is the clock used by the Flash peripheral in performing all Flash operations. As part of the flash_api_t::open function the Flash clock source is checked will return FSP_ERR_FCLK if it is invalid. Once the Flash API has been opened, if the flash clock source frequency is changed, the flash_api_t::updateFlashClockFreq API function must be called to inform the API of the change. Failure to do so could result in flash operation failures and possibly damage the part.

Interrupts

Enable the flash ready interrupt only if you plan to use the data flash BGO. In this mode, the application can initiate a data flash operation and then be asynchronously notified of its completion, or an error, using a user supplied-callback function. The callback function is passed a structure containing event information that indicates the source of the callback event (for example, flash_api_t::FLASH_EVENT_ERASE_COMPLETE) When the FLASH FRDYI interrupt is enabled, the corresponding ISR will be defined in the flash driver. The ISR will call a user-callback function if one was registered with the flash_api_t::open API.

Note

The Flash HP supports an additional flash-error interrupt and if the BGO mode is enabled for the FLASH HP then both the Flash Ready Interrupt and Flash Error Interrupts must be enabled (assigned a priority).

Limitations

- Write operations must be aligned on page boundaries and must be a multiple of the page boundary size.
- Erase operations will erase the entire block the provided address resides in.
- Data flash is better suited for storing data as it can be erased and written to while code is still executing from code flash. Data flash is also guaranteed for a larger number of reprogramming/erasure cycles than code flash.
- Read values of erased blocks are not guaranteed to be 0xFF. Blank check should be used to determine if memory has been erased but not yet programmed.

Examples

Low-Power Flash Basic Example

This is a basic example of erasing and writing to data flash and code flash.

```
#define FLASH_DF_BLOCK_0 0x40100000U /* 1 KB: 0x40100000 - 0x401003FF */
#define FLASH_CF_BLOCK_10 0x00005000  /* 2 KB: 0x00005000 - 0x000057FF */
#define FLASH_DATA_BLOCK_SIZE (1024)
#define FLASH_LP_EXAMPLE_WRITE_SIZE 32
uint8_t       g_dest[TRANSFER_LENGTH];
uint8_t       g_src[TRANSFER_LENGTH];
flash_result_t blank_check_result;
void R_FLASH_LP_basic_example (void)
{
 /* Initialize p_src to known data */
 for (uint32_t i = 0; i < TRANSFER_LENGTH; i++)
    {
       g_src[i] = (uint8_t) ('A' + (i % 26));
    }
 /* Open the flash lp instance. */
 fsp_err_t err = R_FLASH_LP_Open(&g_flash_ctrl, &g_flash_cfg);
    assert(FSP_SUCCESS == err);
 /* Erase 1 block of data flash starting at block 0. */
    err = R_FLASH_LP_Erase(&g_flash_ctrl, FLASH_DF_BLOCK_0, 1);
    assert(FSP_SUCCESS == err);
 /* Check if block 0 is erased. */
    err = R_FLASH_LP_BlankCheck(&g_flash_ctrl, FLASH_DF_BLOCK_0,
FLASH_DATA_BLOCK_SIZE, &blank_check_result);
    assert(FSP_SUCCESS == err);
 /* Verify the previously erased area is blank */
    assert(FLASH_RESULT_BLANK == blank_check_result);
 /* Write 32 bytes to the first block of data flash. */
    err = R_FLASH_LP_Write(&g_flash_ctrl, (uint32_t) g_src, FLASH_DF_BLOCK_0,
FLASH_LP_EXAMPLE_WRITE_SIZE);
    assert(FSP_SUCCESS == err);
```

```
    assert(0 == memcmp(g_src, (uint8_t *) FLASH_DF_BLOCK_0,
FLASH_LP_EXAMPLE_WRITE_SIZE));
 /* Disable interrupts to prevent vector table access while code flash is in P/E
mode. */
    __disable_irq();
 /* Erase 1 block of code flash starting at block 10. */
    err = R_FLASH_LP_Erase(&g_flash_ctrl, FLASH_CF_BLOCK_10, 1);
    assert(FSP_SUCCESS == err);
 /* Write 32 bytes to the first block of data flash. */
    err = R_FLASH_LP_Write(&g_flash_ctrl, (uint32_t) g_src, FLASH_CF_BLOCK_10,
FLASH_LP_EXAMPLE_WRITE_SIZE);
    assert(FSP_SUCCESS == err);
 /* Enable interrupts after code flash operations are complete. */
    __enable_irq();
    assert(0 == memcmp(g_src, (uint8_t *) FLASH_CF_BLOCK_10,
FLASH_LP_EXAMPLE_WRITE_SIZE));
}
```

Low-Power Flash Advanced Example

This example demonstrates using BGO to do non-blocking operations on the data flash.

```
bool interrupt_called;
flash_event_t flash_event;
static flash_cfg_t g_flash_bgo_example_cfg =
{
    .p_callback    = flash_callback,
    .p_context      = 0,
    .p_extend       = NULL,
    .data_flash_bgo = true,
    .ipl            = 5,
    .irq            = BSP_VECTOR_FLASH_LP_FRDYI_ISR,
};
void R_FLASH_LP_bgo_example (void)
{
```

```
/* Initialize p_src to known data */
for (uint32_t i = 0; i < TRANSFER_LENGTH; i++)
   {
      g_src[i] = (uint8_t) ('A' + (i % 26));
   }
/* Open the flash lp instance. */
fsp_err_t err = R_FLASH_LP_Open(&g_flash_ctrl, &g_flash_bgo_example_cfg);
/* Handle any errors. This function should be defined by the user. */
   assert(FSP_SUCCESS == err);
   interrupt_called = false;
/* Erase 1 block of data flash starting at block 0. */
   err = R_FLASH_LP_Erase(&g_flash_ctrl, FLASH_DF_BLOCK_0, 1);
   assert(FSP_SUCCESS == err);
while (!interrupt_called)
   {
      ;
   }
   assert(FLASH_EVENT_ERASE_COMPLETE == flash_event);
   interrupt_called = false;
/* Write 32 bytes to the first block of data flash. */
   err = R_FLASH_LP_Write(&g_flash_ctrl, (uint32_t) g_src, FLASH_DF_BLOCK_0,
FLASH_LP_EXAMPLE_WRITE_SIZE);
   assert(FSP_SUCCESS == err);
flash_status_t status;
/* Wait until the current flash operation completes. */
do
   {
      err = R_FLASH_LP_StatusGet(&g_flash_ctrl, &status);
   } while ((FSP_SUCCESS == err) && (FLASH_STATUS_BUSY == status));
/* If the interrupt wasn't called process the error. */
   assert(interrupt_called);
/* If the event wasn't a write complete process the error. */
   assert(FLASH_EVENT_WRITE_COMPLETE == flash_event);
/* Verify the data was written correctly. */
```

```
    assert(0 == memcmp(g_src, (uint8_t *) FLASH_DF_BLOCK_0,
FLASH_LP_EXAMPLE_WRITE_SIZE));
}
void flash_callback (flash_callback_args_t * p_args)
{
    interrupt_called = true;
    flash_event      = p_args->event;
}
```

Data Structures

struct	flash_lp_instance_ctrl_t

Data Structure Documentation

◆ flash_lp_instance_ctrl_t

struct flash_lp_instance_ctrl_t
Flash instance control block. DO NOT INITIALIZE. Initialization occurs when R_FLASH_LP_Open() is called.

Function Documentation

◆ R_FLASH_LP_Open()

fsp_err_t R_FLASH_LP_Open (flash_ctrl_t *const *p_api_ctrl*, flash_cfg_t const *const *p_cfg*)

Initialize the Low Power flash peripheral. Implements flash_api_t::open.

The Open function initializes the Flash.

This function must be called once prior to calling any other FLASH API functions. If a user supplied callback function is supplied, then the Flash Ready interrupt will be configured to call the users callback routine with an Event type describing the source of the interrupt for Data Flash operations.

Example:

```
/* Open the flash lp instance. */
fsp_err_t err = R_FLASH_LP_Open(&g_flash_ctrl, &g_flash_cfg);
```

Note

Providing a callback function in the supplied p_cfg->callback field automatically configures the Flash for Data Flash to operate in non-blocking background operation (BGO) mode.

Return values

FSP_SUCCESS	Initialization was successful and timer has started.
FSP_ERR_ASSERTION	NULL provided for p_ctrl, p_cfg or p_callback if BGO is enabled.
FSP_ERR_IRQ_BSP_DISABLED	Caller is requesting BGO but the Flash interrupts are not enabled.
FSP_ERR_FCLK	FCLK must be a minimum of 4 MHz for Flash operations.
FSP_ERR_ALREADY_OPEN	Flash Open() has already been called.
FSP_ERR_TIMEOUT	Failed to exit P/E mode after configuring flash.
FSP_ERR_INVALID_STATE	The system is not running from the required clock.

◆ R_FLASH_LP_Write()

fsp_err_t R_FLASH_LP_Write (flash_ctrl_t *const *p_api_ctrl*, uint32_t const *src_address*, uint32_t *flash_address*, uint32_t const *num_bytes*)

Write to the specified Code or Data Flash memory area. Implements flash_api_t::write.

Example:

```
/* Write 32 bytes to the first block of data flash. */
   err = R_FLASH_LP_Write(&g_flash_ctrl, (uint32_t) g_src, FLASH_DF_BLOCK_0,
FLASH_LP_EXAMPLE_WRITE_SIZE);
```

Return values

FSP_SUCCESS	Operation successful. If BGO is enabled this means the operation was started successfully.
FSP_ERR_IN_USE	The Flash peripheral is busy with a prior on-going transaction.
FSP_ERR_NOT_OPEN	The Flash API is not Open.
FSP_ERR_WRITE_FAILED	Status is indicating a Programming error for the requested operation. This may be returned if the requested Flash area is not blank.
FSP_ERR_TIMEOUT	Timed out waiting for FCU operation to complete.
FSP_ERR_INVALID_SIZE	Number of bytes provided was not a multiple of the programming size or exceeded the maximum range.
FSP_ERR_INVALID_ADDRESS	Invalid address was input or address not on programming boundary.
FSP_ERR_ASSERTION	NULL provided for p_ctrl.

◆ R_FLASH_LP_Erase()

fsp_err_t R_FLASH_LP_Erase (flash_ctrl_t *const *p_api_ctrl*, uint32_t const *address*, uint32_t const *num_blocks*)

Erase the specified Code or Data Flash blocks. Implements flash_api_t::erase.

Example:

```
/* Erase 1 block of data flash starting at block 0. */
   err = R_FLASH_LP_Erase(&g_flash_ctrl, FLASH_DF_BLOCK_0, 1);
```

Return values

FSP_SUCCESS	Successful open.
FSP_ERR_INVALID_BLOCKS	Invalid number of blocks specified
FSP_ERR_INVALID_ADDRESS	Invalid address specified
FSP_ERR_IN_USE	Other flash operation in progress, or API not initialized
FSP_ERR_ASSERTION	NULL provided for p_ctrl
FSP_ERR_NOT_OPEN	The Flash API is not Open.
FSP_ERR_TIMEOUT	Timed out waiting for FCU to be ready.
FSP_ERR_ERASE_FAILED	Status is indicating a Erase error.

◆ R_FLASH_LP_BlankCheck()

fsp_err_t R_FLASH_LP_BlankCheck (flash_ctrl_t *const *p_api_ctrl*, uint32_t const *address*, uint32_t *num_bytes*, flash_result_t * *p_blank_check_result*)

Perform a blank check on the specified address area. Implements flash_api_t::blankCheck.

Example:

```
/* Check if block 0 is erased. */
   err = R_FLASH_LP_BlankCheck(&g_flash_ctrl, FLASH_DF_BLOCK_0,
FLASH_DATA_BLOCK_SIZE, &blank_check_result);
   assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Blankcheck operation completed with result in p_blank_check_result, or blankcheck started and in-progess (BGO mode).
FSP_ERR_INVALID_ADDRESS	Invalid data flash address was input
FSP_ERR_INVALID_SIZE	'num_bytes' was either too large or not aligned for the CF/DF boundary size.
FSP_ERR_IN_USE	Flash is busy with an on-going operation.
FSP_ERR_ASSERTION	NULL provided for p_ctrl
FSP_ERR_NOT_OPEN	Flash API has not yet been opened.
FSP_ERR_TIMEOUT	Timed out waiting for the FCU to become ready.
FSP_ERR_BLANK_CHECK_FAILED	An error occurred during blank checking.

◆ R_FLASH_LP_Close()

fsp_err_t R_FLASH_LP_Close (flash_ctrl_t *const *p_api_ctrl*)

Release any resources that were allocated by the Flash API. Implements flash_api_t::close.

Return values

FSP_SUCCESS	Successful close.
FSP_ERR_ASSERTION	NULL provided for p_ctrl or p_cfg.
FSP_ERR_NOT_OPEN	Flash API has not yet been opened.
FSP_ERR_IN_USE	The flash is currently in P/E mode.

◆ R_FLASH_LP_StatusGet()

fsp_err_t R_FLASH_LP_StatusGet (flash_ctrl_t *const *p_api_ctrl*, flash_status_t *const *p_status*)

Query the FLASH for its status. Implements flash_api_t::statusGet.

Example:

```
flash_status_t status;
/* Wait until the current flash operation completes. */
do
   {
      err = R_FLASH_LP_StatusGet(&g_flash_ctrl, &status);
   } while ((FSP_SUCCESS == err) && (FLASH_STATUS_BUSY == status));
```

Return values

FSP_SUCCESS	Flash is ready and available to accept commands.
FSP_ERR_ASSERTION	NULL provided for p_ctrl
FSP_ERR_NOT_OPEN	Flash API has not yet been opened.

◆ R_FLASH_LP_AccessWindowSet()

fsp_err_t R_FLASH_LP_AccessWindowSet (flash_ctrl_t *const *p_api_ctrl*, uint32_t const *start_addr*, uint32_t const *end_addr*)

Configure an access window for the Code Flash memory. Implements flash_api_t::accessWindowSet .

An access window defines a contiguous area in Code Flash for which programming/erase is enabled. This area is on block boundaries. The block containing start_addr is the first block. The block containing end_addr is the last block. The access window then becomes first block (inclusive) –> last block (exclusive). Anything outside this range of Code Flash is then write protected. As an example, if you wanted to place an accesswindow on Code Flash Blocks 0 and 1, such that only those two blocks were writable, you would need to specify (address in block 0, address in block 2) as the respective start and end address.

Note

If the start address and end address are set to the same value, then the access window is effectively removed. This accomplishes the same functionality as R_FLASH_LP_AccessWindowClear().

The invalid address and programming boundaries supported and enforced by this function are dependent on the MCU in use as well as the part package size. Please see the User manual and/or requirements document for additional information.

Parameters

	p_api_ctrl	The p api control
[in]	start_addr	The start address
[in]	end_addr	The end address

Return values

FSP_SUCCESS	Access window successfully configured.
FSP_ERR_INVALID_ADDRESS	Invalid settings for start_addr and/or end_addr.
FSP_ERR_IN_USE	FLASH peripheral is busy with a prior operation.
FSP_ERR_ASSERTION	NULL provided for p_ctrl.
FSP_ERR_UNSUPPORTED	Code Flash Programming is not enabled.
FSP_ERR_NOT_OPEN	Flash API has not yet been opened.
FSP_ERR_TIMEOUT	Timed out waiting for the FCU to become ready.
FSP_ERR_WRITE_FAILED	Status is indicating a Programming error for the requested operation.

◆ R_FLASH_LP_AccessWindowClear()

fsp_err_t R_FLASH_LP_AccessWindowClear (flash_ctrl_t *const *p_api_ctrl*)

Remove any access window that is configured in the Code Flash. Implements flash_api_t::accessWindowClear. On successful return from this call all Code Flash is writable.

Return values

FSP_SUCCESS	Access window successfully removed.
FSP_ERR_IN_USE	FLASH peripheral is busy with a prior operation.
FSP_ERR_ASSERTION	NULL provided for p_ctrl.
FSP_ERR_UNSUPPORTED	Code Flash Programming is not enabled.
FSP_ERR_NOT_OPEN	Flash API has not yet been opened.
FSP_ERR_TIMEOUT	Timed out waiting for the FCU to become ready.
FSP_ERR_WRITE_FAILED	Status is indicating a Programming error for the requested operation.

◆ R_FLASH_LP_IdCodeSet()

fsp_err_t R_FLASH_LP_IdCodeSet (flash_ctrl_t *const *p_api_ctrl*, uint8_t const *const *p_id_code*, flash_id_code_mode_t *mode*)

Write the ID code provided to the id code registers. Implements flash_api_t::idCodeSet.

Return values

FSP_SUCCESS	ID code successfully configured.
FSP_ERR_IN_USE	FLASH peripheral is busy with a prior operation.
FSP_ERR_ASSERTION	NULL provided for p_ctrl.
FSP_ERR_UNSUPPORTED	Code Flash Programming is not enabled.
FSP_ERR_NOT_OPEN	Flash API has not yet been opened.
FSP_ERR_TIMEOUT	Timed out waiting for completion of extra command.
FSP_ERR_WRITE_FAILED	Status is indicating a Programming error for the requested operation.

◆ R_FLASH_LP_Reset()

fsp_err_t R_FLASH_LP_Reset (flash_ctrl_t *const *p_api_ctrl*)

Reset the FLASH peripheral. Implements flash_api_t::reset.

No attempt is made to check if the flash is busy before executing the reset since the assumption is that a reset will terminate any existing operation.

Return values

FSP_SUCCESS	Flash circuit successfully reset.
FSP_ERR_ASSERTION	NULL provided for p_ctrl
FSP_ERR_NOT_OPEN	Flash API has not yet been opened.

◆ R_FLASH_LP_StartUpAreaSelect()

fsp_err_t R_FLASH_LP_StartUpAreaSelect (flash_ctrl_t *const *p_api_ctrl*, flash_startup_area_swap_t *swap_type*, bool *is_temporary*)

Select which block is used as the startup area block. Implements flash_api_t::startupAreaSelect.

Selects which block - Default (Block 0) or Alternate (Block 1) is used as the startup area block. The provided parameters determine which block will become the active startup block and whether that action will be immediate (but temporary), or permanent subsequent to the next reset. Doing a temporary switch might appear to have limited usefulness. If there is an access window in place such that Block 0 is write protected, then one could do a temporary switch, update the block and switch them back without having to touch the access window.

Return values

FSP_SUCCESS	Start-up area successfully toggled.
FSP_ERR_IN_USE	Flash is busy with an on-going operation.
FSP_ERR_ASSERTION	NULL provided for p_ctrl
FSP_ERR_NOT_OPEN	Flash API has not yet been opened.
FSP_ERR_WRITE_FAILED	Status is indicating a Programming error for the requested operation.
FSP_ERR_TIMEOUT	Timed out waiting for the FCU to become ready.
FSP_ERR_UNSUPPORTED	Code Flash Programming is not enabled. Cannot set FLASH_STARTUP_AREA_BTFLG when the temporary flag is false.

◆ R_FLASH_LP_CallbackSet()

fsp_err_t R_FLASH_LP_CallbackSet (flash_ctrl_t *const *p_api_ctrl*, void(*)(flash_callback_args_t *) *p_callback*, void const *const *p_context*, flash_callback_args_t *const *p_callback_memory*)

Stub function Implements flash_api_t::callbackSet.

Return values

FSP_ERR_UNSUPPORTED	Function has not been implemented.

◆ R_FLASH_LP_BankSwap()

fsp_err_t R_FLASH_LP_BankSwap (flash_ctrl_t *const *p_api_ctrl*)

Unsupported flash_api_t::bankSwap.

Return values

FSP_ERR_UNSUPPORTED	Module does not support Bank Swap.

◆ R_FLASH_LP_UpdateFlashClockFreq()

fsp_err_t R_FLASH_LP_UpdateFlashClockFreq (flash_ctrl_t *const *p_api_ctrl*)

Indicate to the already open Flash API that the FCLK has changed. Implements flash_api_t::updateFlashClockFreq.

This could be the case if the application has changed the system clock, and therefore the FCLK. Failure to call this function subsequent to changing the FCLK could result in damage to the flash macro.

Return values

FSP_SUCCESS	Start-up area successfully toggled.
FSP_ERR_IN_USE	Flash is busy with an on-going operation.
FSP_ERR_FCLK	Invalid flash clock source frequency.
FSP_ERR_ASSERTION	NULL provided for p_ctrl
FSP_ERR_NOT_OPEN	Flash API has not yet been opened.
FSP_ERR_TIMEOUT	Timed out waiting for the FCU to become ready.

◆ R_FLASH_LP_InfoGet()

fsp_err_t R_FLASH_LP_InfoGet (flash_ctrl_t *const *p_api_ctrl*, flash_info_t *const *p_info*)
Returns the information about the flash regions. Implements flash_api_t::infoGet. **Return values** FSP_SUCCESS — Successful retrieved the request information. FSP_ERR_ASSERTION — NULL provided for p_ctrl or p_info. FSP_ERR_NOT_OPEN — The flash is not open.

4.2.28 Graphics LCD Controller (r_glcdc)

Modules

Functions

fsp_err_t	R_GLCDC_Open (display_ctrl_t *const p_api_ctrl, display_cfg_t const *const p_cfg)
fsp_err_t	R_GLCDC_Close (display_ctrl_t *const p_api_ctrl)
fsp_err_t	R_GLCDC_Start (display_ctrl_t *const p_api_ctrl)
fsp_err_t	R_GLCDC_Stop (display_ctrl_t *const p_api_ctrl)
fsp_err_t	R_GLCDC_LayerChange (display_ctrl_t const *const p_api_ctrl, display_runtime_cfg_t const *const p_cfg, display_frame_layer_t layer)
fsp_err_t	R_GLCDC_BufferChange (display_ctrl_t const *const p_api_ctrl, uint8_t *const framebuffer, display_frame_layer_t layer)
fsp_err_t	R_GLCDC_ColorCorrection (display_ctrl_t const *const p_api_ctrl, display_correction_t const *const p_correction)
fsp_err_t	R_GLCDC_ClutUpdate (display_ctrl_t const *const p_api_ctrl, display_clut_cfg_t const *const p_clut_cfg, display_frame_layer_t layer)
fsp_err_t	R_GLCDC_ClutEdit (display_ctrl_t const *const p_api_ctrl, display_frame_layer_t layer, uint8_t index, uint32_t color)
fsp_err_t	R_GLCDC_StatusGet (display_ctrl_t const *const p_api_ctrl, display_status_t *const status)

Detailed Description

Driver for the GLCDC peripheral on RA MCUs. This module implements the Display Interface.

Overview

The GLCDC is a multi-stage graphics output peripheral designed to automatically generate timing and data signals for LCD panels. As part of its internal pipeline the two internal graphics layers can be repositioned, alpha blended, color corrected, dithered and converted to and from a wide variety of pixel formats.

Features

The following features are available:

Feature	Options
Input color formats	ARGB8888, ARGB4444, ARGB1555, RGB888 (32-bit), RGB565, CLUT 8bpp, CLUT 4bpp, CLUT 1bpp
Output color formats	RGB888, RGB666, RGB565, Serial RGB888 (8-bit parallel)
Correction processes	Alpha blending, positioning, brightness and contrast, gamma correction, dithering
Timing signals	Dot clock, Vsync, Hsync, Vertical and horizontal data enable (DE)
Maximum resolution	Up to 1016 x 1020 pixels (dependent on sync signal width)
Maximum dot clock	60MHz for serial RGB mode, 54MHz otherwise
Internal clock divisors	1-9, 12, 16, 24, 32
Interrupts	Vsync (line detect), Layer 1 underflow, Layer 2 underflow
Other functions	Byte-order and endianness control, line repeat function

Configuration

Build Time Configurations for r_glcdc

The following build time configurations are defined in fsp_cfg/r_glcdc_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP)	Default (BSP)	If selected, code for

	• Enabled • Disabled		parameter checking is included in the build.
Color Correction	• On • Off	Off	If selected, code to adjust brightness, contrast and gamma settings is included in the build. When disabled all color correction configuration options are ignored.

Configurations for Graphics > Graphics LCD (r_glcdc)

This module can be added to the Stacks tab via New Stack > Graphics > Graphics LCD (r_glcdc).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_display0	Module name.
Interrupts > Callback Function	Name must be a valid C symbol	NULL	A user callback function can be defined here.
Interrupts > Line Detect Interrupt Priority	MCU Specific Options		Select the line detect (Vsync) interrupt priority.
Interrupts > Underflow 1 Interrupt Priority	MCU Specific Options		Select the underflow interrupt priority for layer 1.
Interrupts > Underflow 2 Interrupt Priority	MCU Specific Options		Select the underflow interrupt priority for layer 2.
Input > Graphics Layer 1 > General > Enabled	• Yes • No	Yes	Specify Used if the graphics layer 1 is used. If so a framebuffer will be automatically generated based on the specified height and horizontal stride.
Input > Graphics Layer 1 > General > Horizontal size	Value must be between 16 and 1016	480	Specify the number of horizontal pixels.
Input > Graphics Layer 1 > General > Vertical size	Value must be between 16 and 1020	272	Specify the number of vertical pixels.
Input > Graphics Layer 1 > General > Horizontal position	Must be a valid non-negative integer with a maximum configurable	0	Specify the horizontal offset in pixels of the graphics layer from the

	value of 4091		background layer.
Input > Graphics Layer 1 > General > Vertical position	Must be a valid non-negative integer with a maximum configurable value of 4094	0	Specify the vertical offset in pixels of the graphics layer from the background layer.
Input > Graphics Layer 1 > General > Color format	• ARGB8888 (32-bit) • RGB888 (32-bit) • RGB565 (16-bit) • ARGB1555 (16-bit) • ARGB4444 (16-bit) • CLUT8 (8-bit) • CLUT4 (4-bit) • CLUT1 (1-bit)	RGB565 (16-bit)	Specify the graphics layer Input format. If selecting CLUT formats, you must write the CLUT table data before starting output.
Input > Graphics Layer 1 > General > Line descending mode	• Enabled • Disabled	Disabled	Select Used if the framebuffer starts from the bottom of the line.
Input > Graphics Layer 1 > Background Color > Alpha	Value must be between 0 and 255	255	Based on the alpha value, either the graphics Layer 2 (foreground graphics layer) is blended into the graphics Layer 1 (background graphics layer) or the graphics Layer 1 is blended into the monochrome background layer.
Input > Graphics Layer 1 > Background Color > Red	Value must be between 0 and 255	255	Red component of the background color for layer 1.
Input > Graphics Layer 1 > Background Color > Green	Value must be between 0 and 255	255	Green component of the background color for layer 1.
Input > Graphics Layer 1 > Background Color > Blue	Value must be between 0 and 255	255	Blue component of the background color for layer 1.
Input > Graphics Layer 1 > Framebuffer > Framebuffer name	This property must be a valid C symbol	fb_background	Specify the name for the framebuffer for Layer 1.
Input > Graphics Layer 1 > Framebuffer > Number of framebuffers	Must be a valid non-negative integer with a maximum configurable value of 65535	2	Number of framebuffers allocated for Graphics Layer 1.
Input > Graphics Layer 1 > Framebuffer > Section for framebuffer	Manual Entry	.bss	Specify the section in which to allocate the framebuffer. When Arm

allocation			Compiler 6 is used to place this memory in on-chip SRAM, the section name must be .bss or start with .bss. to avoid consuming unnecessary ROM space.
Input > Graphics Layer 1 > Line Repeat > Enable	• On • Off	Off	Select On if the display will be repeated from a smaller section of the framebuffer.
Input > Graphics Layer 1 > Line Repeat > Repeat count	Must be a valid non-negative integer with a maximum configurable value of 65535 i.e (vertical size) x (lines repeat times) must be equal to the panel vertical size	0	Specify the number of times the image is repeated.
Input > Graphics Layer 1 > Fading > Mode	• None • Fade-in • Fade-out	None	Select the fade method.
Input > Graphics Layer 1 > Fading > Speed	Value must be between 0 and 255	0	Specify the number of frames for the fading transition to complete.
Input > Graphics Layer 2 > General > Enabled	• Yes • No	No	Specify Used if the graphics layer 2 is used. If so a framebuffer will be automatically generated based on the specified height and horizontal stride.
Input > Graphics Layer 2 > General > Horizontal size	Value must be between 16 and 1016	480	Specify the number of horizontal pixels.
Input > Graphics Layer 2 > General > Vertical size	Value must be between 16 and 1020	272	Specify the number of vertical pixels.
Input > Graphics Layer 2 > General > Horizontal position	Must be a valid non-negative integer with a maximum configurable value of 4091	0	Specify the horizontal offset in pixels of the graphics layer from the background layer.
Input > Graphics Layer 2 > General > Vertical position	Must be a valid non-negative integer with a maximum configurable value of 4094	0	Specify the vertical offset in pixels of the graphics layer from the background layer.
Input > Graphics Layer	• ARGB8888	RGB565 (16-bit)	Specify the graphics

2 > General > Color format	(32-bit) • RGB888 (32-bit) • RGB565 (16-bit) • ARGB1555 (16-bit) • ARGB4444 (16-bit) • CLUT8 (8-bit) • CLUT4 (4-bit) • CLUT1 (1-bit)		layer Input format. If selecting CLUT formats, you must write the CLUT table data before starting output.
Input > Graphics Layer 2 > General > Line descending mode	• Enabled • Disabled	Disabled	Select Used if the framebuffer starts from the bottom of the line.
Input > Graphics Layer 2 > Background Color > Alpha	Value must be between 0 and 255	255	Based on the alpha value, either the graphics Layer 2 (foreground graphics layer) is blended into the graphics Layer 1 (background graphics layer) or the graphics Layer 1 is blended into the monochrome background layer.
Input > Graphics Layer 2 > Background Color > Red	Value must be between 0 and 255	255	Red component of the background color for layer 2.
Input > Graphics Layer 2 > Background Color > Green	Value must be between 0 and 255	255	Green component of the background color for layer 2.
Input > Graphics Layer 2 > Background Color > Blue	Value must be between 0 and 255	255	Blue component of the background color for layer 2.
Input > Graphics Layer 2 > Framebuffer > Framebuffer name	This property must be a valid C symbol	fb_foreground	Specify the name for the framebuffer for Layer 2.
Input > Graphics Layer 2 > Framebuffer > Number of framebuffers	Must be a valid non-negative integer with a maximum configurable value of 65535	2	Number of framebuffers allocated for Graphics Layer 2.
Input > Graphics Layer 2 > Framebuffer > Section for framebuffer allocation	Manual Entry	.bss	Specify the section in which to allocate the framebuffer. When Arm Compiler 6 is used to place this memory in on-chip SRAM, the section name must be .bss or start with .bss. to avoid consuming unnecessary ROM

			space.
Input > Graphics Layer 2 > Line Repeat > Enable	• On • Off	Off	Select On if the display will be repeated from a smaller section of the framebuffer.
Input > Graphics Layer 2 > Line Repeat > Repeat count	Must be a valid non-negative integer with a maximum configurable value of 65535 i.e (vertical size) x (lines repeat times) must be equal to the panel vertical size	0	Specify the number of times the image is repeated.
Input > Graphics Layer 2 > Fading > Mode	• None • Fade-in • Fade-out	None	Select the fade method.
Input > Graphics Layer 2 > Fading > Speed	Value must be between 0 and 255	0	Specify the number of frames for the fading transition to complete.
Output > Timing > Horizontal total cycles	Value must be between 24 and 1024	525	Specify the total cycles in a horizontal line. Set to the number of cycles defined in the data sheet of LCD panel sheet in your system
Output > Timing > Horizontal active video cycles	Value must be between 16 and 1016	480	Specify the number of active video cycles in a horizontal line (including front and back porch). Set to the number of cycles defined in the data sheet of LCD panel sheet in your system.
Output > Timing > Horizontal back porch cycles	Value must be between 6 and 1006	40	Specify the number of back porch cycles in a horizontal line. Back porch starts from the beginning of Hsync cycles, which means back porch cycles contain Hsync cycles. Set to the number of cycles defined in the data sheet of LCD panel sheet in your system.
Output > Timing > Horizontal sync signal cycles	Value must be between 0 and 1023	1	Specify the number of Hsync signal assertion cycles. Set to the

			number of cycles defined in the data sheet of LCD panel sheet in your system.
Output > Timing > Horizontal sync signal polarity	• Low active • High active	Low active	Select the polarity of Hsync signal to match your system.
Output > Timing > Vertical total lines	Value must be between 20 and 1024	316	Specify number of total lines in a frame (including front and back porch).
Output > Timing > Vertical active video lines	Value must be between 16 and 1020	272	Specify the number of active video lines in a frame.
Output > Timing > Vertical back porch lines	Value must be between 3 and 1007	8	Specify the number of back porch lines in a frame. Back porch starts from the beginning of Vsync lines, which means back porch lines contain Vsync lines.
Output > Timing > Vertical sync signal lines	Value must be between 0 and 1023	1	Specify the Vsync signal assertion lines in a frame.
Output > Timing > Vertical sync signal polarity	• Low active • High active	Low active	Select the polarity of Vsync signal to match to your system.
Output > Timing > Data Enable Signal Polarity	• Low active • High active	High active	Select the polarity of Data Enable signal to match to your system.
Output > Timing > Sync edge	• Rising edge • Falling edge	Rising edge	Select the polarity of Sync signals to match to your system.
Output > Format > Color format	• 24bits RGB888 • 18bits RGB666 • 16bits RGB565 • 8bits serial	16bits RGB565	Specify the graphics layer output format to match to your LCD panel.
Output > Format > Color order	• RGB • BGR	RGB	Select data order for output signal to LCD panel.
Output > Format > Endian	• Little endian • Big endian	Little endian	Select data endianness for output signal to LCD panel.
Output > Background > Alpha	Value must be between 0 and 255	255	Alpha component of the background color.
Output > Background	Value must be between	0	Red component of the

> Red	0 and 255		background color.
Output > Background > Green	Value must be between 0 and 255	0	Green component of the background color.
Output > Background > Blue	Value must be between 0 and 255	0	Blue component of the background color.
CLUT > Enabled	• Yes • No	No	Specify Used if selecting CLUT formats for a graphics layer input format. If used, a buffer (CLUT_buffer) will be automatically generated based on the selected pixel width.
CLUT > Size	Must be a valid non-negative integer with a maximum configurable value of 256	256	Specify the number of entries for the CLUT source data buffer. Each entry consumes 4 bytes (1 word).
TCON > Hsync pin select	• Not used • LCD_TCON0 • LCD_TCON1 • LCD_TCON2 • LCD_TCON3	LCD_TCON0	Select the TCON pin used for the Hsync signal to match to your system.
TCON > Vsync pin select	• Not used • LCD_TCON0 • LCD_TCON1 • LCD_TCON2 • LCD_TCON3	LCD_TCON1	Select TCON pin used for Vsync signal to match to your system.
TCON > Data enable (DE) pin select	• Not used • LCD_TCON0 • LCD_TCON1 • LCD_TCON2 • LCD_TCON3	LCD_TCON2	Select TCON pin used for DataEnable signal to match to your system.
TCON > Panel clock source	• Internal clock (GLCDCLK) • External clock (LCD_EXTCLK)	Internal clock (GLCDCLK)	Choose between an internal GLCDCLK generated from PCLKA or an external clock provided to the LCD_EXTCLK pin.
TCON > Panel clock division ratio	Refer to the RA Configuration tool for available options.	1/24	Select the clock source divider value.
Color Correction > Brightness > Enabled	• Yes • No	No	Enable brightness color correction.
Color Correction > Brightness > Red channel	Value must be between 0 and 1023	512	Red component of the brightness calibration. This value is divided by

			512 to determine gain.
Color Correction > Brightness > Green channel	Value must be between 0 and 1023	512	Green component of the brightness calibration. This value is divided by 512 to determine gain.
Color Correction > Brightness > Blue channel	Value must be between 0 and 1023	512	Blue component of the brightness calibration. This value is divided by 512 to determine gain.
Color Correction > Contrast > Enabled	• Yes • No	No	Enable contrast color correction.
Color Correction > Contrast > Red channel gain	Value must be between 0 and 255	128	Red component of the contrast calibration. This value is divided by 128 to determine gain.
Color Correction > Contrast > Green channel gain	Value must be between 0 and 255	128	Green component of the contrast calibration. This value is divided by 128 to determine gain.
Color Correction > Contrast > Blue channel gain	Value must be between 0 and 255	128	Blue component of the contrast calibration. This value is divided by 128 to determine gain.
Color Correction > Gamma > Tables > Red > Gain > 0	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Red > Gain > 1	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Red > Gain > 2	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Red > Gain > 3	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Red > Gain > 4	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain

			of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Red > Gain > 5	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Red > Gain > 6	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Red > Gain > 7	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Red > Gain > 8	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Red > Gain > 9	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Red > Gain > 10	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Red > Gain > 11	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Red > Gain > 12	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Red > Gain > 13	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables >	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047

Red > Gain > 14			(corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Red > Gain > 15	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Red > Threshold > 1	Value must be between 0 and 1023	64	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Red > Threshold > 2	Value must be between 0 and 1023	128	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Red > Threshold > 3	Value must be between 0 and 1023	192	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Red > Threshold > 4	Value must be between 0 and 1023	256	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Red > Threshold > 5	Value must be between 0 and 1023	320	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Red > Threshold > 6	Value must be between 0 and 1023	384	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Red > Threshold > 7	Value must be between 0 and 1023	448	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Red > Threshold > 8	Value must be between 0 and 1023	512	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Red > Threshold > 9	Value must be between 0 and 1023	576	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Red > Threshold > 10	Value must be between 0 and 1023	640	Enter a threshold value between the surrounding values less than 1023.

Color Correction > Gamma > Tables > Red > Threshold > 11	Value must be between 0 and 1023	704	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Red > Threshold > 12	Value must be between 0 and 1023	768	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Red > Threshold > 13	Value must be between 0 and 1023	832	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Red > Threshold > 14	Value must be between 0 and 1023	896	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Red > Threshold > 15	Value must be between 0 and 1023	960	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Green > Gain > 0	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Green > Gain > 1	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Green > Gain > 2	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Green > Gain > 3	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Green > Gain > 4	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Green > Gain > 5	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999,

			respectively).
Color Correction > Gamma > Tables > Green > Gain > 6	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Green > Gain > 7	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Green > Gain > 8	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Green > Gain > 9	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Green > Gain > 10	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Green > Gain > 11	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Green > Gain > 12	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Green > Gain > 13	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Green > Gain > 14	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Green > Gain > 15	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain

			of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Green > Threshold > 1	Value must be between 0 and 1023	64	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Green > Threshold > 2	Value must be between 0 and 1023	128	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Green > Threshold > 3	Value must be between 0 and 1023	192	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Green > Threshold > 4	Value must be between 0 and 1023	256	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Green > Threshold > 5	Value must be between 0 and 1023	320	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Green > Threshold > 6	Value must be between 0 and 1023	384	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Green > Threshold > 7	Value must be between 0 and 1023	448	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Green > Threshold > 8	Value must be between 0 and 1023	512	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Green > Threshold > 9	Value must be between 0 and 1023	576	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Green > Threshold > 10	Value must be between 0 and 1023	640	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Green > Threshold > 11	Value must be between 0 and 1023	704	Enter a threshold value between the surrounding values less than 1023.
Color Correction >	Value must be between	768	Enter a threshold value

Gamma > Tables > Green > Threshold > 12	0 and 1023		between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Green > Threshold > 13	Value must be between 0 and 1023	832	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Green > Threshold > 14	Value must be between 0 and 1023	896	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Green > Threshold > 15	Value must be between 0 and 1023	960	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Blue > Gain > 0	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Blue > Gain > 1	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Blue > Gain > 2	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Blue > Gain > 3	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Blue > Gain > 4	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Blue > Gain > 5	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Blue > Gain > 6	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999,

			respectively).
Color Correction > Gamma > Tables > Blue > Gain > 7	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Blue > Gain > 8	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Blue > Gain > 9	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Blue > Gain > 10	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Blue > Gain > 11	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Blue > Gain > 12	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Blue > Gain > 13	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Blue > Gain > 14	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).
Color Correction > Gamma > Tables > Blue > Gain > 15	Value must be between 0 and 2047	1024	Enter a gain value between 0 and 2047 (corresponding to gain of 0 and 1.999, respectively).

Color Correction > Gamma > Tables > Blue > Threshold > 6	Value must be between 0 and 1023	384	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Blue > Threshold > 7	Value must be between 0 and 1023	448	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Blue > Threshold > 8	Value must be between 0 and 1023	512	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Blue > Threshold > 9	Value must be between 0 and 1023	576	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Blue > Threshold > 10	Value must be between 0 and 1023	640	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Blue > Threshold > 11	Value must be between 0 and 1023	704	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Blue > Threshold > 12	Value must be between 0 and 1023	768	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables >	Value must be between 0 and 1023	832	Enter a threshold value between the

Blue > Threshold > 13			surrounding values less than 1023.
Color Correction > Gamma > Tables > Blue > Threshold > 14	Value must be between 0 and 1023	896	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Tables > Blue > Threshold > 15	Value must be between 0 and 1023	960	Enter a threshold value between the surrounding values less than 1023.
Color Correction > Gamma > Red	• On • Off	Off	Enable gamma color correction for the red channel.
Color Correction > Gamma > Green	• On • Off	Off	Enable gamma color correction for the green channel.
Color Correction > Gamma > Blue	• On • Off	Off	Enable gamma color correction for the blue channel.
Color Correction > Gamma > Table Mode	• Constant • Variable	Variable	Set to Constant to override the automatically-generated RAM gamma tables with a constant declaration using the provided values.
Color Correction > Process order	• Brightness/contrast first • Gamma first	Brightness/contrast first	Select the color correction processing order.
Dithering > Enabled	• Yes • No	No	Enable dithering to reduce the effect of color banding.
Dithering > Mode	• Truncate • Round off • 2x2 Pattern	Truncate	Select the dithering mode.
Dithering > Pattern A	• Pattern 00 • Pattern 01 • Pattern 10 • Pattern 11	Pattern 11	Select the dithering pattern.
Dithering > Pattern B	• Pattern 00 • Pattern 01 • Pattern 10 • Pattern 11	Pattern 11	Select the dithering pattern.
Dithering > Pattern C	• Pattern 00 • Pattern 01 • Pattern 10 • Pattern 11	Pattern 11	Select the dithering pattern.

Dithering > Pattern D	• Pattern 00 • Pattern 01 • Pattern 10 • Pattern 11	Pattern 11	Select the dithering pattern.

Clock Configuration

The peripheral clock for this module is PCLKA.

The dot clock is typically generated from the PLL with a maximum output frequency of 54 MHz in most pixel formats (60 MHz for serial RGB). Optionally, a clock signal can be provided to the LCD_EXTCLK pin for finer framerate control (60 MHz maximum input). With either clock source dividers of 1-9, 12, 16, 24 and 32 may be used. Clocks must be initialized and settled prior to starting this module.

Pin Configuration

This module controls a variety of pins necessary for LCD data and timing signal output:

Pin Name	Function	Notes
LCD_EXTCLK	External clock signal input	The maximum input clock frequency is 60MHz.
LCD_CLK	Dot clock output	The maximum output frequency is 54MHz (60MHz in serial RGB mode).
LCD_DATAn	Pixel data output lines	Pin assignment and color order is based on the output block configuration. See the RA6M3 User's Manual (R01UH0886EJ0100) section 58.1.4 "Output Control for Data Format" for details.
LCD_TCONn	Panel timing signal output	These pins can be configured to output vertical and horizontal synchronization and data valid signals.

Note

There are two banks of pins listed for the GLCDC in the RA6M3 User's Manual (_A and _B). In most cases the _B bank will be used as _A conflicts with SDRAM pins. In either case, it is generally recommended to only use pins from only one bank at a time as this allows for superior signal routing both inside and outside the package. If _A and _B pins must be mixed be sure to note the timing precision penalty detailed in Table 60.33 in in the RA6M3 User's Manual.

Usage Notes

Overview

The GLCDC peripheral is a combination of several sub-peripherals that form a pixel data processing pipeline. Each block passes pixel data to the next but otherwise they are disconnected from one another - in other words, changing timing block parameters does not affect the output generation

block configuration and vice versa.

Initial Configuration

During R_GLCDC_Open all configured parameters are set in the GLCDC peripheral fully preparing it for operation. Once opened, calling R_GLCDC_Start is typically all that is needed for basic operation. Background generation, timing and output parameters are not configurable at runtime, though layer control and color correction options can be altered.

Framebuffer Allocation

The framebuffer should be allocated in the highest-speed region available (excluding SRAMHS) without displacing the stack, heap and other program-critical structures. While the RA6M3 does contain a relatively large 640K of on-chip SRAM, for many screen sizes and color depths SDRAM will be required. Regardless of the placement two rules must be followed to ensure correct operation of the GLCDC:

- The framebuffer must be aligned on a 64-byte boundary
- The horizontal stride of the buffer must be a multiple of 64 bytes

Note

Framebuffers allocated through the RA Configuraton tool automatically follow the alignment and size requirements.

If your framebuffer will be placed into internal SRAM please note the following best practices:

- The framebuffer should ideally not be placed in the SRAMHS block of SRAM as there is no speed advantage for doing so. In particular, it is important to ensure the framebuffer does not push the stack or any heaps outside of SRAMHS to preserve CPU performance.
- It is recommended to not cross the boundary between SRAM0 and SRAM1 with a single framebuffer for performance reasons.
- If double-buffering is desired (and possible within SRAM), place one framebuffer in SRAM0 and the other in SRAM1.

If you are using SRAM for the framebuffer, to ensure correct placement you will need to edit the linker script to add new sections. Below is an example of the required edits in the GCC and IAR formats:

GCC Linker

```
/*
  Linker File for RA6M3 MCU
*/
/* Linker script to configure memory regions. */

IAR Linker

Note

The IAR linker does not place items correctly when sections overlap. As a result, it is advised to place your framebuffer(s) as high as possible in the SRAM region in the linker script to maximize the RAM available for everything else. The below is a general case that should be used unedited only if RAM usage (excluding framebuffers) is less than 128K.

```
/* ... */
/*-Memory Regions-*/
define symbol region_VECT_start    = 0x00000000;
define symbol region_VECT_end      = 0x000003FF;
define symbol region_ROMREG_start = 0x00000400;
define symbol region_ROMREG_end    = 0x000004FF;
define symbol region_FLASH_start   = 0x00000500;
define symbol region_FLASH_end    = 0x001FFFFF;
define symbol region_RAM_start    = 0x1FFE0000;
define symbol region_RAM_end       = 0x1FFFFFFF; /* RAM limited to SRAMHS */
define symbol region_FB0_start    = 0x20000000;
define symbol region_FB0_end       = 0x2003FFFF; /* SRAM0 dedicated to framebuffer 0
*/
define symbol region_FB1_start    = 0x20040000;

```

Graphics Layers and Timing Parameters

The GLCDC synthesizes graphics data through two configurable graphics layers onto a background layer. The background is used as a solid-color canvas upon which to composite data from the graphics layers. The two graphics layers are blended on top of each other (Layer 2 above Layer 1) and overlaid on the background layer based on their individual configuration. The placement of the

layers (as well as LCD timing parameters) are detailed in Figure 1. The colors of the dimensions indicate which element of the display_cfg_t struct is being referenced - for example, the width of the background layer would be [display_cfg].output.htiming.display_cyc as shown in the figure below.

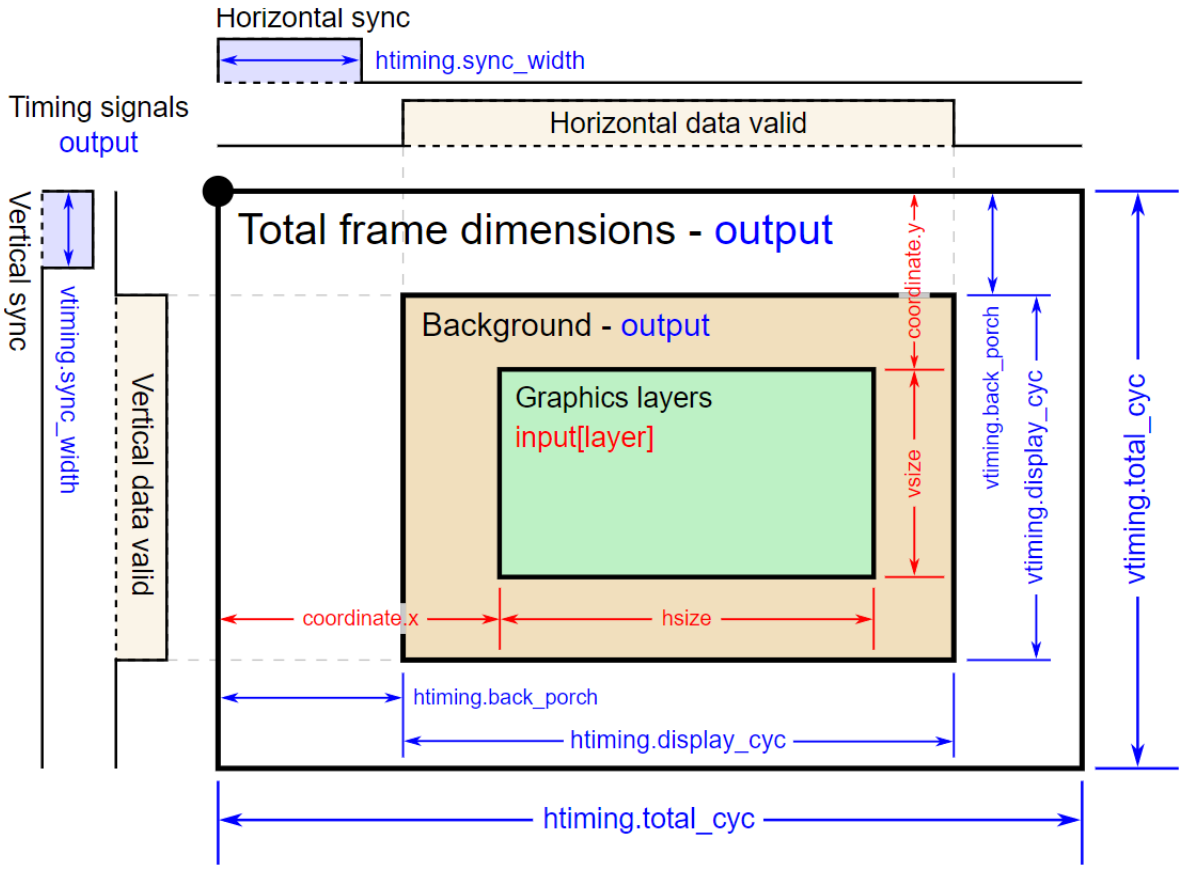

Figure 166: GLCDC layers and timing

Note

The data enable signal (if configured) is the logical AND of the horizontal and vertical data valid signals. In the GLCDC layers and timing figure, only one graphics layer is shown for simplicity. Additionally, in most applications the graphics layer(s) will be the same dimensions as the background layer.

Runtime Configuration Options

Note

All runtime configurations detailed below are also automatically configured during R_GLCDC_Open based on the options selected in the RA Configuration editor.

Blend processing

Control of layer positioning, alpha blending and fading is possible at runtime via R_GLCDC_LayerChange. This function takes a display_runtime_cfg_t parameter which contains the same input and layer elements as the display_cfg_t control block. Refer to the documentation for display_runtime_cfg_t as well as the Examples below to see what options are configurable.

Brightness and contrast

Brightness and contrast correction can be controlled through R_GLCDC_ColorCorrection. The display_correction_t parameter is used to control enabling, disabling and gain values for both corrections as shown below:

```
display_correction_t correction;
/* Brightness values are 0-1023 with +512 offset being neutral */
   correction.brightness.r = 512;
   correction.brightness.g = 512;
   correction.brightness.b = 512;
/* Contrast values are 0-255 representing gain of 0-2 (128 is gain of 1) */
   correction.contrast.r = 128;
   correction.contrast.g = 128;
   correction.contrast.b = 128;
/* Brightness and contrast correction can be enabled or disabled independent of one
another */
   correction.brightness.enable = true;
   correction.contrast.enable   = true;
/* Enable correction */
R_GLCDC_ColorCorrection(&g_disp_ctrl, &correction);
```

Color Look-Up Table (CLUT) Modes

The GLCDC supports 1-, 4- and 8-bit color look-up table (CLUT) formats for input pixel data. By using these modes the framebuffer size in memory can be reduced significantly, allowing even high-resolution displays to be buffered in on-chip SRAM. To enable CLUT modes for a layer the color format must be set to a CLUT mode (either at startup or through R_GLCDC_LayerChange) in addition to filling the CLUT as appropriate via R_GLCDC_ClutUpdate as shown below:

```
/* Basic 4-bit (16-color) CLUT definition */
   uint32_t clut_4[16] =
   {
      0xFF000000,                  // Black
      0xFFFFFFFF,                  // White
      0xFF0000FF,                  // Blue
      0xFF0080FF,                  // Turquoise
      0xFF00FFFF,                  // Cyan
      0xFF00FF80,                  // Mint Green
      0xFF00FF00,                  // Green
```

```
      0xFF80FF00,                    // Lime Green
      0xFFFFFF00,                    // Yellow
      0xFFFF8000,                    // Orange
      0xFFFF0000,                    // Red
      0xFFFF0080,                    // Pink
      0xFFFF00FF,                    // Magenta
      0xFF8000FF,                    // Purple
      0xFF808080,                    // Gray
      0x00000000                      // Transparent
   };
/* Define the CLUT configuration */
display_clut_cfg_t clut_cfg =
   {
      .start = 0,
      .size   = 16,
      .p_base = clut_4
   };
/* Update the CLUT in the GLCDC */
R_GLCDC_ClutUpdate(&g_disp_ctrl, &clut_cfg, DISPLAY_FRAME_LAYER_1);
```

Note

If individual elements of the CLUT must be changed or if elements must be changed one at a time (for instance, when using emWin) it is recommended to use R_GLCDC_ClutEdit to avoid repeated memcpy operations.

Other Configuration Options

Gamma correction

Gamma correction is performed based on a gain curved defined in the RA Configuration editor. Each point on the curve is defined by a threshold and a gain value - each gain value represents a multiplier from 0x-2x (set as 0-2047) that sets the Y-value of the slope of the gain curve, while each threshold interval sets the X-value respectively. For a more detailed explanation refer to the RA6M3 User's Manual (R01UH0886EJ0100) Figure 58.12 "Calculation of gamma correction value" and the related description above it.

When setting threshold values three rules must be followed:

- Each threshold value must be greater than the previous value
- Threshold values must be greater than zero and less than 1024
- Threshold values can equal the previous value only if they are 1023 (maximum)

Note

Gamma correction can only be applied via R_GLCDC_Open.

Dithering

Dithering is a method of pixel blending that allows for smoother transitions between colors when using a limited palette. A full description of dithering is outside the scope of this document. For more information on the pattern settings and how to configure them refer to the RA6M3 User's Manual (R01UH0886EJ0100) Figure 58.13 "Configuration of dither correction block" and Figure 58.14 "Addition value selection method for 2x2 pattern dither".

Bus Utilization

Note

The data provided in this section consists of estimates only. Experimentation is necessary to obtain real-world performance data on any platform.

While the GLCDC is very flexible in size and color depth of displays there are considerations to be made in the tradeoff between color depth, framerate and bus utilization. Below is a table showing estimates of the load at various resolutions, framerates and color depths based on a PLL frequency of 120MHz (default) and an effective SDRAM throughput of 60 MB/sec. Bus utilization percentages are provided for the following use cases:

- Static image display (**GLCDC only**): One read
- Redrawing one framebuffer every display frame (**minimal redraw**): One write, one read
- Blitting one buffer to another then redrawing the entire buffer every display frame (**worst case**): Two writes, three reads

Name	Width	Height	Input color depth (bits)	Framerate (FPS)	Buffer size (bytes)	SRAM use	SRAM bus (GLCDC only)	SDRAM bus (GLCDC only)	SRAM bus (minimal redraw)	SDRAM bus (minimal redraw)	SRAM bus (worst case)	SDRAM bus (worst case)
HQVGA	240	160	8	60	38400	6%	1%	4%	2%	8%	5%	19%
HQVGA	240	160	16	60	76800	12%	2%	8%	4%	15%	10%	38%
QVGA	320	240	16	60	153600	23%	4%	15%	8%	31%	19%	77%
WQVGA	400	240	8	60	96000	15%	2%	10%	5%	19%	12%	48%
WQVGA	400	240	16	60	192000	29%	5%	19%	10%	38%	24%	96%
HVGA	480	320	16	60	307200	47%	8%	31%	15%	61%	38%	154%
VGA	640	480	16	30	614400	—	—	31%	—	61%	—	154%
WVGA	800	480	8	60	384000	59%	10%	38%	19%	77%	48%	192%

WVGA	800	480	16	30	768000	—	—	38%	—	77%	—	192%
WVGA	800	480	32	15	1536000	—	—	38%	—	77%	—	192%
FWVGA	960	480	8	30	460800	70%	6%	23%	12%	46%	29%	115%
FWVGA	960	480	16	30	921600	—	—	46%	—	92%	—	230%
qHD	960	540	8	30	518400	79%	6%	26%	13%	52%	32%	130%

Note

Bus utilization values over 100% indicate that the bandwidth for that bus is exceeded in that scenario and GLCDC underflow and/or dropped frames may result depending on the bus priority setting. ***It is recommended to avoid these scenarios if at all possible by reducing the buffer drawing rate, number of draw/copy operations or the input color depth.*** *Relaxing vertical timing (increasing total line count) or increasing the clock divider are the easiest ways to increase the time per frame.*

Limitations

Developers should be aware of the following limitations when using the GLCDC API:

- Due to a limitation of the GLCDC hardware, if the horizontal back porch is less than the number of pixels in a graphics burst read (64 bytes) for a layer and the layer is positioned at a negative X-value then the layer X-position will be locked to the nearest 64-byte boundary, rounded toward zero.
- The GLCDC peripheral offers a chroma-key function that can be used to perform a green-screen-like color replacement. This functionality is not exposed through the GLCDC API. See the descriptions for GRn.AB7 through .AB9 in the RA6M3 User's Manual for further details.
- Use of R_GLCDC_ClutUpdate and R_GLCDC_ClutEdit may not be mixed on the same frame.

Examples

Basic Example

This is a basic example showing the minimum code required to initialize and start the GLCDC module. If the entire display can be drawn within the vertical blanking period no further code may be necessary.

```
void glcdc_init (void)
{
 fsp_err_t err;
 // Open the GLCDC driver
    err = R_GLCDC_Open(&g_disp_ctrl, &g_disp_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 // Start display output
```

```
    err = R_GLCDC_Start(&g_disp_ctrl);
    assert(FSP_SUCCESS == err);
}
```

Layer Transitions

This example demonstrates how to set up and execute both a sliding and fading layer transition. This is most useful in static image transition scenarios as switching between two actively-drawing graphics layers may require up to four framebuffers to eliminate tearing.

```
volatile uint32_t g_vsync_count = 0;
/* Callback function for GLCDC interrupts */
static void glcdc_callback (display_callback_args_t * p_args)
{
 if (p_args->event == DISPLAY_EVENT_LINE_DETECTION)
    {
       g_vsync_count++;
    }
}
/* Simple wait that returns 1 if no Vsync happened within the timeout period */
uint8_t vsync_wait (void)
{
    uint32_t timeout_timer = GLCDC_VSYNC_TIMEOUT;
    g_vsync_count = 0;
 while (!g_vsync_count && --timeout_timer)
    {
 /* Spin here until DISPLAY_EVENT_LINE_DETECTION callback or timeout */
    }
 return timeout_timer ? 0 : 1;
}
/* Initiate a fade on Layer 2
 *
 * Parameters:
 * direction True for fade in, false for fade out
 * speed number of frames over which to fade
 */
```

```
void glcdc_layer_transition_fade (display_runtime_cfg_t * disp_rt_cfg, bool
direction, uint16_t speed)
{
 fsp_err_t err;
 if (direction)
    {
 /* Set the runtime struct to the desired buffer */
       disp_rt_cfg->input.p_base       = (uint32_t *) g_framebuffer_1;
       disp_rt_cfg->layer.fade_control = DISPLAY_FADE_CONTROL_FADEIN;
    }
 else
    {
       disp_rt_cfg->layer.fade_control = DISPLAY_FADE_CONTROL_FADEOUT;
    }
 /* Ensure speed is at least 1 frame */
 if (!speed)
    {
       speed = 1;
    }
 /* Set the fade speed to the desired change in alpha per frame */
    disp_rt_cfg->layer.fade_speed = UINT8_MAX / speed;
 /* Initiate the fade (will start on the next Vsync) */
    err = R_GLCDC_LayerChange(&g_disp_ctrl, disp_rt_cfg, DISPLAY_FRAME_LAYER_2);
    assert(FSP_SUCCESS == err);
}
/* Slide Layer 1 out to the left while sliding Layer 2 in from the right */
void glcdc_layer_transition_sliding (display_runtime_cfg_t * disp_rt_cfg_in,
display_runtime_cfg_t * disp_rt_cfg_out)
{
 fsp_err_t err;
 /* Set the config for the incoming layer to be just out of bounds on the right side
*/
    disp_rt_cfg_in->input.p_base       = (uint32_t *) g_framebuffer_1;
    disp_rt_cfg_in->layer.coordinate.x = DISPLAY_WIDTH;
```

```
 /* Move layer 1 out and layer 2 in at a fixed rate of 4 pixels per frame */
 for (int32_t x = disp_rt_cfg_in->layer.coordinate.x; x >= 0; x -= 4)
    {
 /* Wait for a Vsync before starting */
       vsync_wait();
 /* Set the X-coordinate of both layers then update them */
       disp_rt_cfg_out->layer.coordinate.x = (int16_t) (x - DISPLAY_WIDTH);
       disp_rt_cfg_in->layer.coordinate.x = (int16_t) x;
       err = R_GLCDC_LayerChange(&g_disp_ctrl, disp_rt_cfg_out, DISPLAY_FRAME_LAYER_1
);
      assert(FSP_SUCCESS == err);
       err = R_GLCDC_LayerChange(&g_disp_ctrl, disp_rt_cfg_in, DISPLAY_FRAME_LAYER_2
);
      assert(FSP_SUCCESS == err);
    }
}
```

Double-Buffering

Using a double-buffer allows one to be output to the LCD while the other is being drawn to memory, eliminating tearing and in some cases reducing bus load. The following is a basic example showing integration of the line detect (Vsync) interrupt to set the timing for buffer swapping and drawing.

```
/* User-defined function to draw the current display to a framebuffer */
void display_draw (uint8_t * framebuffer)
{
 FSP_PARAMETER_NOT_USED(framebuffer);
 /* Draw buffer here */
}
/* This function is an example of a basic double-buffered display thread */
void display_thread (void)
{
    uint8_t * p_framebuffer = NULL;
 fsp_err_t err;
 /* Initialize and start the R_GLCDC module */
    glcdc_init();
```

```
 while (1)
    {
 /* Swap the active framebuffer */
       p_framebuffer = (p_framebuffer == g_framebuffer_0) ? g_framebuffer_1 :
g_framebuffer_0;
 /* Draw the new framebuffer now */
       display_draw(p_framebuffer);
 /* Now that the framebuffer is ready, update the GLCDC buffer pointer on the next
Vsync */
       err = R_GLCDC_BufferChange(&g_disp_ctrl, p_framebuffer, DISPLAY_FRAME_LAYER_1
);
      assert(FSP_SUCCESS == err);
 /* Wait for a Vsync event */
       vsync_wait();
    }
}
```

GLCDC_DITHERING_OUTPUT_FORMAT_RGB565	Dithering output format RGB565.

Function Documentation

◆ R_GLCDC_Open()

fsp_err_t R_GLCDC_Open (display_ctrl_t *const *p_api_ctrl*, display_cfg_t const *const *p_cfg*)

Open GLCDC module. Implements display_api_t::open.

Return values

FSP_SUCCESS	Device was opened successfully.
FSP_ERR_ALREADY_OPEN	Device was already open.
FSP_ERR_ASSERTION	Pointer to the control block or the configuration structure is NULL.
FSP_ERR_CLOCK_GENERATION	Dot clock cannot be generated from clock source.
FSP_ERR_INVALID_TIMING_SETTING	Invalid panel timing parameter.
FSP_ERR_INVALID_LAYER_SETTING	Invalid layer setting found.
FSP_ERR_INVALID_ALIGNMENT	Input buffer alignment invalid.
FSP_ERR_INVALID_GAMMA_SETTING	Invalid gamma correction setting found
FSP_ERR_INVALID_BRIGHTNESS_SETTING	Invalid brightness correction setting found

Note

PCLKA must be supplied to Graphics LCD Controller (GLCDC) and GLCDC pins must be set in IOPORT before calling this API.

◆ R_GLCDC_Close()

fsp_err_t R_GLCDC_Close (display_ctrl_t *const *p_api_ctrl*)

Close GLCDC module. Implements display_api_t::close.

Return values

FSP_SUCCESS	Device was closed successfully.
FSP_ERR_ASSERTION	Pointer to the control block is NULL.
FSP_ERR_NOT_OPEN	The function call is performed when the driver state is not equal to DISPLAY_STATE_CLOSED.
FSP_ERR_INVALID_UPDATE_TIMING	A function call is performed when the GLCDC is updating register values internally.

Note

This API can be called when the driver is not in DISPLAY_STATE_CLOSED state. It returns an error if the register update operation for the background screen generation block is being held.

◆ R_GLCDC_Start()

fsp_err_t R_GLCDC_Start (display_ctrl_t *const *p_api_ctrl*)

Start GLCDC module. Implements display_api_t::start.

Return values

FSP_SUCCESS	Device was started successfully.
FSP_ERR_NOT_OPEN	GLCDC module has not been opened.
FSP_ERR_ASSERTION	Pointer to the control block is NULL.

Note

This API can be called when the driver is not in DISPLAY_STATE_OPENED status.

◆ R_GLCDC_Stop()

fsp_err_t R_GLCDC_Stop (display_ctrl_t *const *p_api_ctrl*)

Stop GLCDC module. Implements display_api_t::stop.

Return values

FSP_SUCCESS	Device was stopped successfully
FSP_ERR_ASSERTION	Pointer to the control block is NULL
FSP_ERR_INVALID_MODE	Function call is performed when the driver state is not DISPLAY_STATE_DISPLAYING.
FSP_ERR_INVALID_UPDATE_TIMING	The function call is performed while the GLCDC is updating register values internally.

Note

This API can be called when the driver is in the DISPLAY_STATE_DISPLAYING state. It returns an error if the register update operation for the background screen generation blocks, the graphics data I/F blocks, or the output control block is being held.

◆ R_GLCDC_LayerChange()

fsp_err_t R_GLCDC_LayerChange (display_ctrl_t const *const *p_api_ctrl*, display_runtime_cfg_t const *const *p_cfg*, display_frame_layer_t *layer*)

Change layer parameters of GLCDC module at runtime. Implements display_api_t::layerChange.

Return values

FSP_SUCCESS	Changed layer parameters of GLCDC module successfully.
FSP_ERR_ASSERTION	Pointer to the control block or the configuration structure is NULL.
FSP_ERR_INVALID_MODE	A function call is performed when the driver state is not DISPLAY_STATE_DISPLAYING.
FSP_ERR_INVALID_UPDATE_TIMING	A function call is performed while the GLCDC is updating register values internally.

Note

This API can be called when the driver is in DISPLAY_STATE_DISPLAYING state. It returns an error if the register update operation for the background screen generation blocks or the graphics data I/F block is being held.

◆ R_GLCDC_BufferChange()

fsp_err_t R_GLCDC_BufferChange (display_ctrl_t const *const *p_api_ctrl*, uint8_t *const *framebuffer*, display_frame_layer_t *layer*)

Change the framebuffer pointer for a layer. Implements display_api_t::bufferChange.

Return values

FSP_SUCCESS	Changed layer parameters of GLCDC module successfully.
FSP_ERR_ASSERTION	Pointer to the control block is NULL.
FSP_ERR_INVALID_MODE	A function call is performed when the driver state is not DISPLAY_STATE_DISPLAYING.
FSP_ERR_INVALID_ALIGNMENT	The framebuffer pointer is not 64-byte aligned.
FSP_ERR_INVALID_UPDATE_TIMING	A function call is performed while the GLCDC is updating register values internally.

Note

This API can be called when the driver is in DISPLAY_STATE_OPENED state or higher. It returns an error if the register update operation for the background screen generation blocks or the graphics data I/F block is being held.

◆ R_GLCDC_ColorCorrection()

fsp_err_t R_GLCDC_ColorCorrection (display_ctrl_t const *const *p_api_ctrl*, display_correction_t const *const *p_correction*)

Perform color correction through the GLCDC module. Implements display_api_t::correction.

Return values

FSP_SUCCESS	Color correction by GLCDC module was performed successfully.
FSP_ERR_ASSERTION	Pointer to the control block or the display correction structure is NULL.
FSP_ERR_INVALID_MODE	Function call is performed when the driver state is not DISPLAY_STATE_DISPLAYING.
FSP_ERR_INVALID_UPDATE_TIMING	A function call is performed while the GLCDC is updating registers internally.
FSP_ERR_INVALID_BRIGHTNESS_SETTING	Invalid brightness correction setting found

Note

This API can be called when the driver is in the DISPLAY_STATE_DISPLAYING state. It returns an error if the register update operation for the background screen generation blocks or the output control block is being held.

◆ R_GLCDC_ClutUpdate()

fsp_err_t R_GLCDC_ClutUpdate (display_ctrl_t const *const *p_api_ctrl*, display_clut_cfg_t const *const *p_clut_cfg*, display_frame_layer_t *layer*)

Write an entire color look-up table (CLUT) in the GLCDC module. Implements display_api_t::clut.

Return values

FSP_SUCCESS	CLUT written successfully.
FSP_ERR_ASSERTION	Pointer to the control block or CLUT source data is NULL.
FSP_ERR_INVALID_UPDATE_TIMING	R_GLCDC_ClutEdit was already used to edit the specified CLUT this frame.
FSP_ERR_INVALID_CLUT_ACCESS	Illegal CLUT entry or size is specified.

Note

This API can be called any time. The written data will be used after the next vertical sync event.

◆ R_GLCDC_ClutEdit()

fsp_err_t R_GLCDC_ClutEdit (display_ctrl_t const *const *p_api_ctrl*, display_frame_layer_t *layer*, uint8_t *index*, uint32_t *color*)

Update an element of a color look-up table (CLUT) in the GLCDC module. Implements display_api_t::clutEdit.

Return values

FSP_SUCCESS	CLUT element updated successfully.
FSP_ERR_ASSERTION	Pointer to the control block is NULL.

Note

This API can be called any time. The written data will be used after the next vertical sync event.

◆ R_GLCDC_StatusGet()

fsp_err_t R_GLCDC_StatusGet (display_ctrl_t const *const *p_api_ctrl*, display_status_t *const *p_status*)

Get status of GLCDC module. Implements display_api_t::statusGet.

Return values

FSP_SUCCESS	Got status successfully.
FSP_ERR_ASSERTION	Pointer to the control block or the status structure is NULL.

Note

The GLCDC hardware starts the fading processing at the first Vsync after the previous LayerChange() call is held. Due to this behavior of the hardware, this API may not return DISPLAY_FADE_STATUS_FADING_UNDERWAY as the fading status, if it is called before the first Vsync after LayerChange() is called. In this case, the API returns DISPLAY_FADE_STATUS_PENDING, instead of DISPLAY_FADE_STATUS_NOT_UNDERWAY.

4.2.29 General PWM Timer (r_gpt)

fsp_err_t	R_GPT_PwmOutputDelayInitialize ()

Detailed Description

Driver for the GPT32 and GPT16 peripherals on RA MCUs. This module implements the Timer Interface.

Overview

The GPT module can be used to count events, measure external input signals, generate a periodic interrupt, or output a periodic or PWM signal to a GTIOC pin.

This module supports the GPT peripherals GPT32EH, GPT32E, GPT32, and GPT16. GPT16 is a 16-bit timer. The other peripherals (GPT32EH, GPT32E, and GPT32) are 32-bit timers. The 32-bit timers are all treated the same in this module from the API perspective.

Features

The GPT module has the following features:

- Supports periodic mode, one-shot mode, and PWM mode.
- Supports count source of PCLK, GTETRG pins, GTIOC pins, or ELC events.
- Supports debounce filter on GTIOC pins.
- Signal can be output to a pin.
- Configurable period (counts per timer cycle).
- Configurable duty cycle in PWM mode.
- Supports runtime reconfiguration of period.
- Supports runtime reconfiguration of duty cycle in PWM mode.
- APIs are provided to start, stop, and reset the counter.
- APIs are provided to get the current period, source clock frequency, and count direction.
- APIs are provided to get the current timer status and counter value.
- Supports start, stop, clear, count up, count down, and capture by external sources from GTETRG pins, GTIOC pins, or ELC events.
- Supports symmetric and asymmetric PWM waveform generation.
- Supports automatic addition of dead time.
- Supports generating ELC events to start an ADC scan at a compare match value (see Event Link Controller (r_elc)) and updating the compare match value.
- Supports linking with a POEG channel to automatically disable GPT output when an error condition is detected.
- Supports setting the counter value while the timer is stopped.
- Supports enabling and disabling output pins.
- Supports skipping up to seven overflow/underflow (crest/trough) interrupts at a time
- Supports generating custom PWM waveforms by configuring the pin's output level at each compare match and cycle end.

Selecting a Timer

RA MCUs have two timer peripherals: the General PWM Timer (GPT) and the Asynchronous General Purpose Timer (AGT). When selecting between them, consider these factors:

	GPT	AGT
Low Power Modes	The GPT can operate in sleep mode.	The AGT can operate in all low power modes.
Available Channels	The number of GPT channels is device specific. All currently supported MCUs have at least 7 GPT channels.	All MCUs have 2 AGT channels.
Timer Resolution	All MCUs have at least one 32-bit GPT timer.	The AGT timers are 16-bit timers.
Clock Source	The GPT runs off PCLKD with a configurable divider up to 1024. It can also be configured to count ELC events or external pulses.	The AGT runs off PCLKB, LOCO, or subclock.

Configuration

Build Time Configurations for r_gpt

The following build time configurations are defined in fsp_cfg/r_gpt_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Pin Output Support	• Disabled • Enabled • Enabled with Extra Features	Disabled	Enables or disables support for outputting PWM waveforms on GTIOCx pins. The "Enabled with Extra Features" option enables support for Triangle wave modes and also enables the features located in the "Extra Features" section of each module instance.
Write Protect Enable	• Enabled • Disabled	Disabled	If selected write protection is applied to all GPT channels.
Clock Source	MCU Specific Options		Select either the synchronous clock (PCLKD) or asynchronous clock (GPTCLK) as the source for the GPT core clock and PWM delay circuit.

Configurations for Timers > Timer, General PWM (r_gpt)

This module can be added to the Stacks tab via New Stack > Timers > Timer, General PWM (r_gpt). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_timer0	Module name.
General > Channel	Channel number must exist on this MCU	0	Specify the hardware channel.
General > Mode	• Periodic • One-Shot	Periodic	Mode selection. Periodic: Generates

	• PWM • Triangle-Wave Symmetric PWM • Triangle-Wave Asymmetric PWM • Triangle-Wave Asymmetric PWM (Mode 3)		periodic interrupts or square waves. One-shot: Generate a single interrupt or a pulse wave. Note: One-shot mode is implemented in software. ISRs must be enabled for one-shot even if callback is unused. PWM: Generates basic PWM waveforms. Triangle-Wave Symmetric PWM: Generates symmetric PWM waveforms with duty cycle determined by compare match set during a crest interrupt and updated at the next trough. Triangle-Wave Asymmetric PWM: Generates asymmetric PWM waveforms with duty cycle determined by compare match set during a crest/trough interrupt and updated at the next trough/crest.
General > Period	Value must be a non-negative integer less than or equal to 0x40000000000	0x100000000	Specify the timer period in units selected below. Setting the period to 0x100000000 raw counts results in the maximum period. Set the period to 0x100000000 raw counts for a free running timer or an input capture configuration. The period can be set up to 0x40000000000, which will use a divider of 1024 with the maximum period. If the requested period cannot be achieved, the settings with the largest possible period

			that is less than or equal to the requested period are used. The theoretical calculated period is printed in a comment in the generated timer_cfg_t structure.
General > Period Unit	• Raw Counts • Nanoseconds • Microseconds • Milliseconds • Seconds • Hertz • Kilohertz	Raw Counts	Unit of the period specified above
Output > Custom Waveform > GTIOA > Initial Output Level	• Pin Level Low • Pin Level High	Pin Level Low	Set the initial output level of GTIOCxA.
Output > Custom Waveform > GTIOA > Cycle End Output Level	• Pin Level Retain • Pin Level Low • Pin Level High • Pin Level Toggle	Pin Level Retain	Set the output level of GTIOCxA at cycle end.
Output > Custom Waveform > GTIOA > Compare Match Output Level	• Pin Level Retain • Pin Level Low • Pin Level High • Pin Level Toggle	Pin Level Retain	Set the output level of GTIOCxA at compare match.
Output > Custom Waveform > GTIOA > Retain Output Level at Count Stop	• Disabled • Enabled	Disabled	Retain the current GTIOxA output level when counting is stopped.
Output > Custom Waveform > GTIOB > Initial Output Level	• Pin Level Low • Pin Level High	Pin Level Low	Set the initial output level of GTIOCxB.
Output > Custom Waveform > GTIOB > Cycle End Output Level	• Pin Level Retain • Pin Level Low • Pin Level High • Pin Level Toggle	Pin Level Retain	Set the output level of GTIOCxB at cycle end.
Output > Custom Waveform > GTIOB > Compare Match Output Level	• Pin Level Retain • Pin Level Low • Pin Level High • Pin Level Toggle	Pin Level Retain	Set the output level of GTIOCxB at compare match.
Output > Custom Waveform > GTIOB > Retain Output Level at Count Stop	• Disabled • Enabled	Disabled	Retain the current GTIOxB output level when counting is stopped.

Output > Custom Waveform > Custom Waveform Enable	• Disabled • Enabled	Disabled	Enable custom waveform configuration.
Output > Duty Cycle Percent (only applicable in PWM mode)	Value must be between 0 and 100	50	Specify the timer duty cycle percent. Only used in PWM mode.
Output > GTIOCA Output Enabled	• True • False	False	Enable the output of GTIOCA on a pin.
Output > GTIOCA Stop Level	• Pin Level Low • Pin Level High	Pin Level Low	Select the behavior of the output pin when the timer is stopped.
Output > GTIOCB Output Enabled	• True • False	False	Enable the output of GTIOCB on a pin.
Output > GTIOCB Stop Level	• Pin Level Low • Pin Level High	Pin Level Low	Select the behavior of the output pin when the timer is stopped.
Input > Count Up Source	MCU Specific Options		Select external source that will increment the counter. If any count up source is selected, the timer will count the external sources only. It will not count PCLKD cycles.
Input > Count Down Source	MCU Specific Options		Select external source that will decrement the counter. If any count down source is selected, the timer will count the external sources only. It will not count PCLKD cycles.
Input > Start Source	MCU Specific Options		Select external source that will start the timer. For pulse width measurement, set the Start Source and the Clear Source to the trigger edge (the edge to start the measurement), and set the Stop Source and Capture Source (either A or B) to the opposite edge (the edge to stop the measurement). For pulse period

			measurement, set the Start Source, the Clear Source, and the Capture Source (either A or B) to the trigger edge (the edge to start the measurement).
Input > Stop Source	MCU Specific Options		Select external source that will stop the timer.
Input > Clear Source	MCU Specific Options		Select external source that will clear the timer.
Input > Capture A Source	MCU Specific Options		Select external source that will trigger a capture A event.
Input > Capture B Source	MCU Specific Options		Select external source that will trigger a capture B event.
Input > Noise Filter A Sampling Clock Select	• No Filter • Filter PCLKD / 1 • Filter PCLKD / 4 • Filter PCLKD / 16 • Filter PCLKD / 64	No Filter	Select the input filter for GTIOCA.
Input > Noise Filter B Sampling Clock Select	• No Filter • Filter PCLKD / 1 • Filter PCLKD / 4 • Filter PCLKD / 16 • Filter PCLKD / 64	No Filter	Select the input filter for GTIOCB.
Interrupts > Callback	Name must be a valid C symbol	NULL	A user callback function can be specified here. If this callback function is provided, it will be called from the interrupt service routine (ISR) each time the timer period elapses
Interrupts > Overflow/Crest Interrupt Priority	MCU Specific Options		Select the overflow interrupt priority. This is the crest interrupt for triangle-wave PWM.
Interrupts > Capture A Interrupt Priority	MCU Specific Options		Select the interrupt priority for capture A.
Interrupts > Capture B	MCU Specific Options		Select the interrupt

Interrupt Priority			priority for capture B.
Interrupts > Underflow/Trough Interrupt Priority	MCU Specific Options		Select the interrupt priority for the trough interrupt (triangle-wave PWM only).
Extra Features > Output Disable > POEG Link	• POEG Channel 0 • POEG Channel 1 • POEG Channel 2 • POEG Channel 3	POEG Channel 0	Select which POEG to link this GPT channel to.
Extra Features > Output Disable > Output Disable POEG Trigger	• Dead Time Error • GTIOCA and GTIOCB High Level • GTIOCA and GTIOCB Low Level		Select which errors send an output disable trigger to POEG. Dead time error is only available on GPT32E and GPT32EH variants.
Extra Features > Output Disable > GTIOCA Disable Setting	• Disable Prohibited • Set Hi Z • Level Low • Level High	Disable Prohibited	Select the disable setting for GTIOCA.
Extra Features > Output Disable > GTIOCB Disable Setting	• Disable Prohibited • Set Hi Z • Level Low • Level High	Disable Prohibited	Select the disable setting for GTIOCB.
Extra Features > ADC Trigger > Start Event Trigger (GPTE/GPTEH only)	• Trigger Event A/D Converter Start Request A During Up Counting • Trigger Event A/D Converter Start Request A During Down Counting • Trigger Event A/D Converter Start Request B During Up Counting • Trigger Event A/D Converter Start Request B During Down Counting		Select which A/D converter start request interrupts to generate and at which point in the cycle to generate them. This value only applies to the GPT32E and GPT32EH variants.

Extra Features > Dead Time > Dead Time Count Up (Raw Counts)	Must be a valid non-negative integer with a maximum configurable value of 4294967295 (0xffffffff).	0	Select the dead time to apply during up counting. This value also applies during down counting for the GPT32 and GPT16 variants.
Extra Features > Dead Time > Dead Time Count Down (Raw Counts) (GPTE/GPTEH only)	Must be a valid non-negative integer with a maximum configurable value of 4294967295 (0xffffffff).	0	Select the dead time to apply during down counting. This value only applies to the GPT32E and GPT32EH variants.
Extra Features > ADC Trigger (GPTE/GPTEH only) > ADC A Compare Match (Raw Counts)	Must be a valid non-negative integer with a maximum configurable value of 4294967295 (0xffffffff).	0	Select the compare match value that generates a GPTn AD TRIG A event. This value only applies to the GPT32E and GPT32EH variants.
Extra Features > ADC Trigger (GPTE/GPTEH only) > ADC B Compare Match (Raw Counts)	Must be a valid non-negative integer with a maximum configurable value of 4294967295 (0xffffffff).	0	Select the compare match value that generates a GPTn AD TRIG B event. This value only applies to the GPT32E and GPT32EH variants.
Extra Features > Interrupt Skipping (GPTE/GPTEH only) > Interrupt to Count	• None • Overflow and Underflow (sawtooth) • Crest (triangle) • Trough (triangle)	None	Select the count source for interrupt skipping. The interrupt skip counter increments after each source event. All crest/overflow and trough/underflow interrupts are skipped when the interrupt skip counter is non-zero. This value only applies to the GPT32E and GPT32EH variants.
Extra Features > Interrupt Skipping (GPTE/GPTEH only) > Interrupt Skip Count	• 0 • 1 • 2 • 3 • 4 • 5 • 6 • 7	0	Select the number of interrupts to skip. This value only applies to the GPT32E and GPT32EH variants.
Extra Features > Interrupt Skipping	• None • ADC A Compare	module.driver.timer.interrupt_skip.adc.none	Select ADC events to suppress when the

(GPTE/GPTEH only) > Skip ADC Events	Match • ADC B Compare Match • ADC A and B Compare Match		interrupt skip count is not zero. This value only applies to the GPT32E and GPT32EH variants.
Extra Features > Extra Features	• Enabled • Disabled	Disabled	Select whether to enable extra features on this channel.

Clock Configuration

The GPT clock is based on the PCLKD frequency. You can set the PCLKD frequency using the **Clocks** tab of the RA Configuration editor or by using the CGC Interface at run-time.

Pin Configuration

This module can use GTETRGA, GTETRGB, GTETRGC, GTETRGD, GTIOCA and GTIOCB pins as count sources.

This module can use GTIOCA and GTIOCB pins as output pins for periodic or PWM signals.

This module can use GTIOCA and GTIOCB as input pins to measure input signals.

Usage Notes

Maximum Period for GPT32

The RA Configuration editor will automatically calculate the period count value and source clock divider based on the selected period time, units and clock speed.

When the selected period unit is "Raw counts", the maximum period setting is 0x40000000000 on a 32-bit timer or 0x0x4000000 on a 16-bit timer. This will configure the timer with the maximum period and a count clock divisor of 128.

Note

When manually changing the timer period counts the maximum value for a 32-bit GPT is 0x100000000. This number overflows the 32-bit value for timer_cfg_t::period_counts. To configure the timer for the maximum period, set timer_cfg_t::period_counts to 0.

Updating Period and Duty Cycle

The period and duty cycle are updated after the next counter overflow after calling R_GPT_PeriodSet() or R_GPT_DutyCycleSet(). To force them to update before the next counter overflow, call R_GPT_Reset() while the counter is running.

One-Shot Mode

The GPT timer does not support one-shot mode natively. One-shot mode is achieved by stopping the timer in the interrupt service routine before the callback is called. If the interrupt is not serviced before the timer period expires again, the timer generates more than one event. The callback is only called once in this case, but multiple events may be generated if the timer is linked to the Data Transfer Controller (r_dtc).

One-Shot Mode Output

The output waveform in one-shot mode is one PCLKD cycle less than the configured period. The configured period must be at least 2 counts to generate an output pulse.

Examples of one-shot signals that can be generated by this module are shown below:

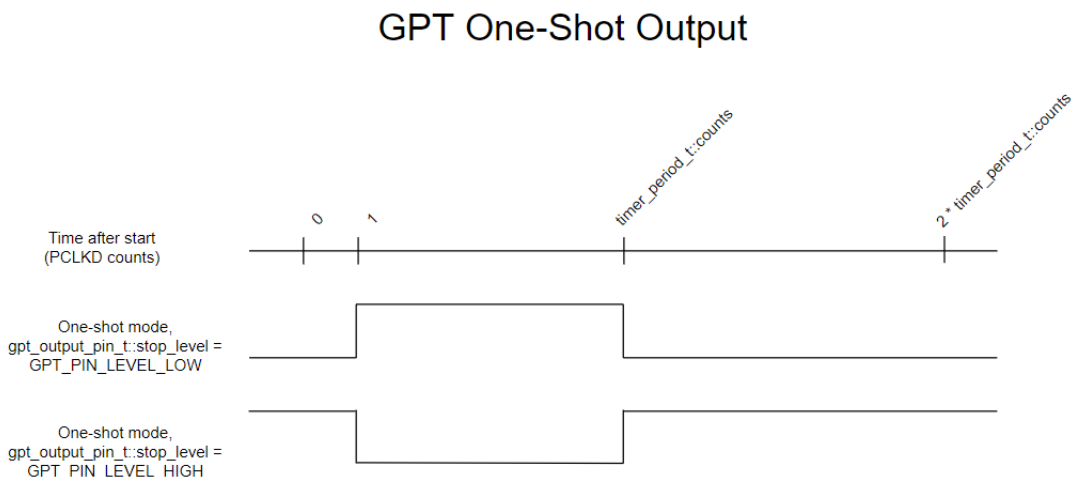

Figure 167: GPT One-Shot Output

Periodic Output

The GTIOC pin toggles twice each time the timer expires in periodic mode. This is achieved by defining a PWM wave at a 50 percent duty cycle so that the period of the resulting square wave (from rising edge to rising edge) matches the period of the GPT timer. Since the periodic output is actually a PWM output, the time at the stop level is one cycle shorter than the time opposite the stop level for odd period values.

Examples of periodic signals that can be generated by this module are shown below:

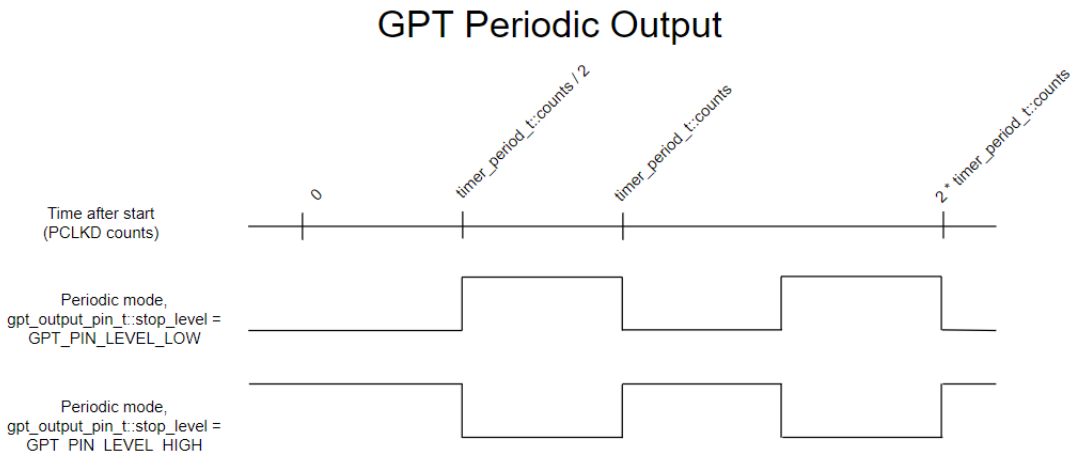

Figure 168: GPT Periodic Output

PWM Output

The PWM output signal is high at the beginning of the cycle and low at the end of the cycle.

Examples of PWM signals that can be generated by this module are shown below:

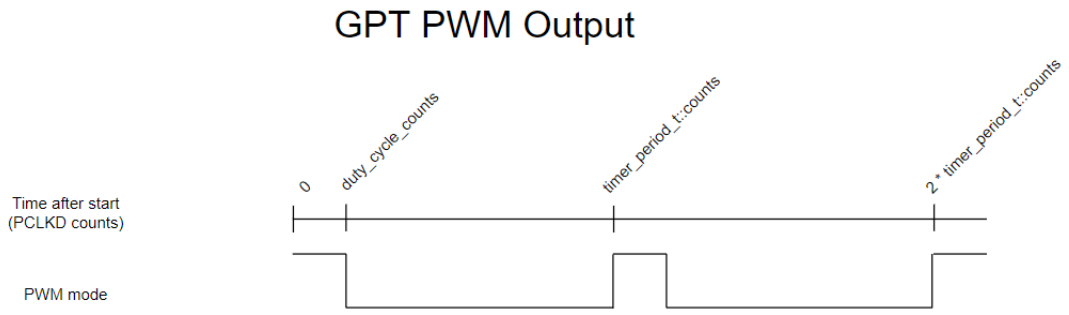

Figure 169: GPT PWM Output

Triangle-Wave PWM Output

Examples of PWM signals that can be generated by this module are shown below. The duty_cycle_counts can be modified using R_GPT_DutyCycleSet() in the crest interrupt and updated at the following trough for symmetric PWM or modified in both the crest/trough interrupts and updated at the following trough/crest for asymmetric PWM.

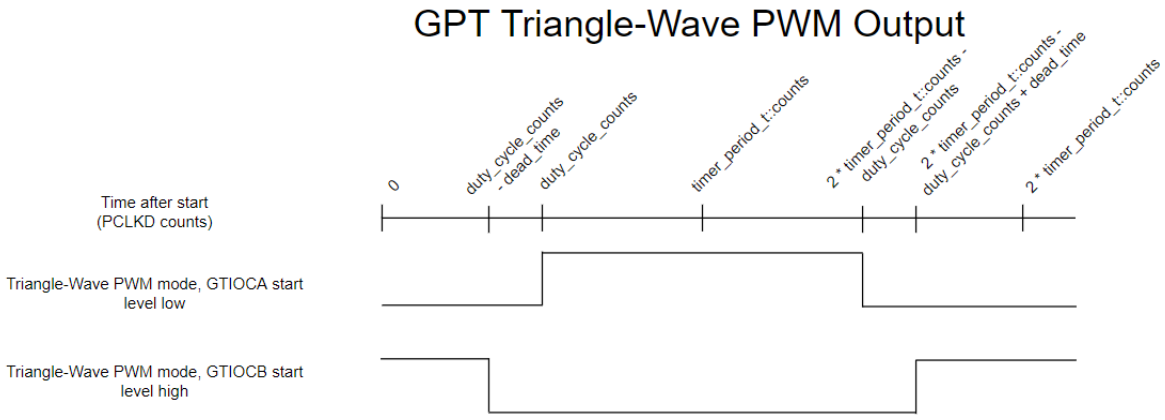

Figure 170: GPT Triangle-Wave PWM Output

PWM Output Delay Circuit

On select MCUs, an additional PWM output delay circuit can be configured in order to fine tune the rising and falling edge delays in increments of 1/32 times the period of the GPT core clock. The PWM output delay function must be configured prior to initializing the GPT channels using R_GPT_PwmOutputDelayInitialize.

Note

1. In Saw-wave PWM mode, the output delay setting cannot be changed while the capture compare setting (GTCCRn) is greater than or equal the period setting (GTPR) - 2.
2. In Triangle PWM modes, the output delay setting cannot be changed while the counter is counting down, and the capture compare setting (GTCCRn) is less than or equal to 2.
3. When the PWM Output Delay Circuit is enabled, the PWM signal is delayed by 3 GPT core clock cycles.
4. When the GPTCLK is used as the GPT core clock, the following delay is required between writes to the rising or falling edge output delay setting for a given pin: Write_Interval[ns] = Period_of_PCLKA [ns] × 6 + Period_of_GPTCLK [ns] × 4).

Event Counting

Event counting can be done by selecting up or down counting sources from GTETRG pins, ELC events, or GTIOC pins. In event counting mode, the GPT counter is not affected by PCLKD.

Note

In event counting mode, the application must call R_GPT_Start() to enable event counting. The counter will not change after calling R_GPT_Start() until an event occurs.

Pulse Measurement

If the capture edge occurs before the start edge in pulse measurement, the first capture is invalid (0).

Controlling GPT with GTETRG Edges

The GPT timer can be configured to stop, start, clear, count up, or count down when a GTETRG rising or falling edge occurs.

Note

The GTETRG pins are shared by all GPT channels.
GTETRG pins require POEG to be on (example code for this is provided in GPT Free Running Counter Example).
If input filtering is required on the GTETRG pins, that must also be handled outside this module.

Controlling GPT with ELC Events

The GPT timer can be configured to stop, start, clear, count up, or count down when an ELC event occurs.

Note

The configurable ELC GPT sources are shared by all GPT channels.
The event links for the ELC must be configured outside this module.

Triggering ELC Events with GPT

The GPT timer can trigger the start of other peripherals. The Event Link Controller (r_elc) guide provides a list of all available peripherals.

Enabling External Sources for Start, Stop, Clear, or Capture

R_GPT_Enable() must be called when external sources are used for start, stop, clear, or capture.

Interrupt Skipping

When an interrupt skipping source is selected a hardware counter will increment each time the selected event occurs. Each interrupt past the first (up to the specified skip count) will be suppressed. If ADC events are selected for skipping they will also be suppressed except during the timer period leading to the selected interrupt skipping event (see below diagram).

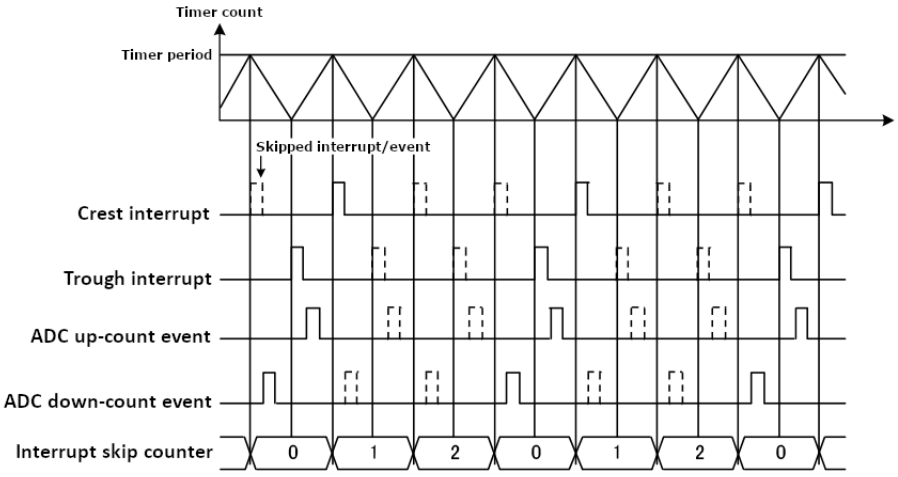

Figure 171: Crest interrupt skipping in triangle-wave PWM modes (skip count 2)

Complementary Output

By using the Custom Waveform option the output pins can be made to output complementary waveforms. To ensure these waveforms stay in sync, the duty cycle for both pins can be set simultaneously by calling R_GPT_DutyCycleSet once with a pin parameter of GPT_IO_PIN_GTIOCA_AND_GTIOCB.

Note

The pin level for 0% and 100% duty cycle is determined by the Cycle End Output Level in normal PWM mode and the Initial Output Level in triangle PWM modes. 100% duty will output the configured level and 0% will output the opposite. Do not use Pin Level Toggle or Pin Level Retain for the Cycle End Output Level if normal PWM waveforms are desired.

Examples

GPT Basic Example

This is a basic example of minimal use of the GPT in an application.

```
void gpt_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = R_GPT_Open(&g_timer0_ctrl, &g_timer0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Start the timer. */
    (void) R_GPT_Start(&g_timer0_ctrl);
}
```

GPT Callback Example

This is an example of a timer callback.

```
/* Example callback called when timer expires. */
void timer_callback (timer_callback_args_t * p_args)
{
 if (TIMER_EVENT_CYCLE_END == p_args->event)
    {
 /* Add application code to be called periodically here. */
    }
}
```

GPT Free Running Counter Example

To use the GPT as a free running counter, select periodic mode and set the the Period to 0xFFFFFFFF for a 32-bit timer or 0xFFFF for a 16-bit timer.

```
void gpt_counter_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* (Optional) If event count mode is used to count edges on a GTETRG pin, POEG must
be started to use GTETRG.
  * Reference Note 1 of Table 23.2 "GPT functions" in the RA6M3 manual
R01UH0886EJ0100. */
 R_BSP_MODULE_START(FSP_IP_POEG, 0U);
 /* Initializes the module. */
    err = R_GPT_Open(&g_timer0_ctrl, &g_timer0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Start the timer. */
    (void) R_GPT_Start(&g_timer0_ctrl);
 /* (Optional) Stop the timer. */
    (void) R_GPT_Stop(&g_timer0_ctrl);
```

```
 /* Read the current counter value. Counter value is in status.counter. */
 timer_status_t status;
    (void) R_GPT_StatusGet(&g_timer0_ctrl, &status);
}
```

GPT Input Capture Example

This is an example of using the GPT to capture pulse width or pulse period measurements.

```
/* Example callback called when a capture occurs. */
uint64_t g_captured_time    = 0U;
uint32_t g_capture_overflows = 0U;
void timer_capture_callback (timer_callback_args_t * p_args)
{
 if ((TIMER_EVENT_CAPTURE_A == p_args->event) || (TIMER_EVENT_CAPTURE_B ==
p_args->event))
    {
 /* (Optional) Get the current period if not known. */
 timer_info_t info;
       (void) R_GPT_InfoGet(&g_timer0_ctrl, &info);
       uint64_t period = info.period_counts;
 /* The maximum period is one more than the maximum 32-bit number, but will be
reflected as 0 in
  * timer_info_t::period_counts. */
 if (0U == period)
      {
            period = UINT32_MAX + 1U;
      }
       g_captured_time    = (period * g_capture_overflows) + p_args->capture;
       g_capture_overflows = 0U;
    }
 if (TIMER_EVENT_CYCLE_END == p_args->event)
    {
 /* An overflow occurred during capture. This must be accounted for at the
application layer. */
```

```
       g_capture_overflows++;
    }
}
void gpt_capture_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = R_GPT_Open(&g_timer0_ctrl, &g_timer0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Enable captures. Captured values arrive in the interrupt. */
    (void) R_GPT_Enable(&g_timer0_ctrl);
 /* (Optional) Disable captures. */
    (void) R_GPT_Disable(&g_timer0_ctrl);
}
```

GPT Period Update Example

This an example of updating the period.

```
#define GPT_EXAMPLE_MSEC_PER_SEC (1000)
#define GPT_EXAMPLE_DESIRED_PERIOD_MSEC (20)
/* This example shows how to calculate a new period value at runtime. */
void gpt_period_calculation_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = R_GPT_Open(&g_timer0_ctrl, &g_timer0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Start the timer. */
    (void) R_GPT_Start(&g_timer0_ctrl);
 /* Get the source clock frequency (in Hz). There are 3 ways to do this in FSP:
  * - If the PCLKD frequency has not changed since reset, the source clock frequency
is
```

```
  * BSP_STARTUP_PCLKD_HZ >> timer_cfg_t::source_div
  * - Use the R_GPT_InfoGet function (it accounts for the divider).
  * - Calculate the current PCLKD frequency using
R_FSP_SystemClockHzGet(FSP_PRIV_CLOCK_PCLKD) and right shift
  * by timer_cfg_t::source_div.
  *
  * This example uses the 3rd option (R_FSP_SystemClockHzGet).
  */
    uint32_t pclkd_freq_hz = R_FSP_SystemClockHzGet(FSP_PRIV_CLOCK_PCLKD) >>
g_timer0_cfg.source_div;
 /* Calculate the desired period based on the current clock. Note that this
calculation could overflow if the
  * desired period is larger than UINT32_MAX / pclkd_freq_hz. A cast to uint64_t is
used to prevent this. */
    uint32_t period_counts =
       (uint32_t) (((uint64_t) pclkd_freq_hz * GPT_EXAMPLE_DESIRED_PERIOD_MSEC) /
GPT_EXAMPLE_MSEC_PER_SEC);
 /* Set the calculated period. */
    err = R_GPT_PeriodSet(&g_timer0_ctrl, period_counts);
    assert(FSP_SUCCESS == err);
}
```

GPT Duty Cycle Update Example

This an example of updating the duty cycle.

```
#define GPT_EXAMPLE_DESIRED_DUTY_CYCLE_PERCENT (25)
#define GPT_EXAMPLE_MAX_PERCENT (100)
/* This example shows how to calculate a new duty cycle value at runtime. */
void gpt_duty_cycle_calculation_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = R_GPT_Open(&g_timer0_ctrl, &g_timer0_cfg);
 /* Handle any errors. This function should be defined by the user. */
```

```
    assert(FSP_SUCCESS == err);
 /* Start the timer. */
    (void) R_GPT_Start(&g_timer0_ctrl);
 /* Get the current period setting. */
 timer_info_t info;
    (void) R_GPT_InfoGet(&g_timer0_ctrl, &info);
    uint32_t current_period_counts = info.period_counts;
 /* Calculate the desired duty cycle based on the current period. Note that if the
period could be larger than
  * UINT32_MAX / 100, this calculation could overflow. A cast to uint64_t is used to
prevent this. The cast is
  * not required for 16-bit timers. */
    uint32_t duty_cycle_counts =
       (uint32_t) (((uint64_t) current_period_counts *
GPT_EXAMPLE_DESIRED_DUTY_CYCLE_PERCENT) /
                   GPT_EXAMPLE_MAX_PERCENT);
 /* Set the calculated duty cycle. */
    err = R_GPT_DutyCycleSet(&g_timer0_ctrl, duty_cycle_counts, GPT_IO_PIN_GTIOCB);
    assert(FSP_SUCCESS == err);
}
```

GPT A/D Converter Start Request Example

This is an example of using the GPT to start the ADC at a configurable A/D converter compare match value.

```
#if ((1U << GPT_EXAMPLE_CHANNEL) & (BSP_FEATURE_GPTEH_CHANNEL_MASK |
BSP_FEATURE_GPTE_CHANNEL_MASK))
/* This example shows how to configure the GPT to generate an A/D start request at an
A/D start request compare
 * match value. This example can only be used with GPTE or GPTEH variants. */
void gpt_adc_start_request_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initialize and configure the ELC. */
```

```
    err = R_ELC_Open(&g_elc_ctrl, &g_elc_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Configure the ELC to start a scan on ADC unit 0 when GPT channel 0. Note: This is
typically configured in
  * g_elc_cfg and already set during R_ELC_Open. */
    err = R_ELC_LinkSet(&g_elc_ctrl, ELC_PERIPHERAL_ADC0, ELC_EVENT_GPT0_AD_TRIG_A);
    assert(FSP_SUCCESS == err);
 /* Globally enable ELC events. */
    err = R_ELC_Enable(&g_elc_ctrl);
    assert(FSP_SUCCESS == err);
 /* Initialize the ADC to start a scan based on an ELC event trigger. Set
adc_cfg_t::trigger to
  * ADC_TRIGGER_SYNC_ELC. */
    err = R_ADC_Open(&g_adc0_ctrl, &g_adc0_cfg);
    assert(FSP_SUCCESS == err);
    err = R_ADC_ScanCfg(&g_adc0_ctrl, &g_adc0_channel_cfg);
    assert(FSP_SUCCESS == err);
 /* Enable ELC triggers by calling R_ADC_ScanStart(). */
    (void) R_ADC_ScanStart(&g_adc0_ctrl);
 /* Initializes the GPT module. Configure gpt_extended_pwm_cfg_t::adc_trigger to set
when the A/D start request
  * is generated. Set gpt_extended_pwm_cfg_t::adc_a_compare_match to set the desired
compare match value. */
    err = R_GPT_Open(&g_timer0_ctrl, &g_timer0_cfg);
    assert(FSP_SUCCESS == err);
 /* Start the timer. A/D converter start request events are generated each time the
counter is equal to the
  * A/D start request compare match value. */
    (void) R_GPT_Start(&g_timer0_ctrl);
}
#endif
```

Data Structure Documentation

◆ gpt_output_pin_t

struct gpt_output_pin_t		
Configurations for output pins.		
Data Fields		
bool	output_enabled	Set to true to enable output, false to disable output.

gpt_pin_level_t	stop_level	Select a stop level from gpt_pin_level_t.

◆ gpt_gtior_setting_t

struct gpt_gtior_setting_t
Custom GTIOR settings used for configuring GTIOCxA and GTIOCxB pins.

◆ gpt_instance_ctrl_t

struct gpt_instance_ctrl_t
Channel control block. DO NOT INITIALIZE. Initialization occurs when timer_api_t::open is called.

◆ gpt_extended_pwm_cfg_t

struct gpt_extended_pwm_cfg_t		
GPT extension for advanced PWM features.		
Data Fields		
uint8_t	trough_ipl	Trough interrupt priority.
IRQn_Type	trough_irq	Trough interrupt.
gpt_poeg_link_t	poeg_link	Select which POEG channel controls output disable for this GPT channel.
gpt_output_disable_t	output_disable	Select which trigger sources request output disable from POEG.
gpt_adc_trigger_t	adc_trigger	Select trigger sources to start A/D conversion.
uint32_t	dead_time_count_up	Set a dead time value for counting up.
uint32_t	dead_time_count_down	Set a dead time value for counting down (available on GPT32E and GPT32EH only)
uint32_t	adc_a_compare_match	Select the compare match value used to trigger an A/D conversion start request using ELC_EVENT_GPT<channel>_AD_TRIG_A.
uint32_t	adc_b_compare_match	Select the compare match value used to trigger an A/D conversion start request using ELC_EVENT_GPT<channel>_AD_TRIG_B.
gpt_interrupt_skip_source_t	interrupt_skip_source	Interrupt source to count for interrupt skipping.

gpt_interrupt_skip_count_t	interrupt_skip_count	Number of interrupts to skip between events.
gpt_interrupt_skip_adc_t	interrupt_skip_adc	ADC events to skip when interrupt skipping is enabled.
gpt_gtioc_disable_t	gtioca_disable_setting	DEPRECATED - Select how to configure GTIOCA when output is disabled.
gpt_gtioc_disable_t	gtiocb_disable_setting	DEPRECATED - Select how to configure GTIOCB when output is disabled.

◆ gpt_extended_cfg_t

struct gpt_extended_cfg_t		
GPT extension configures the output pins for GPT.		
Data Fields		
gpt_output_pin_t	gtioca	DEPRECATED - Configuration for GPT I/O pin A.
gpt_output_pin_t	gtiocb	DEPRECATED - Configuration for GPT I/O pin B.
gpt_source_t	start_source	Event sources that trigger the timer to start.
gpt_source_t	stop_source	Event sources that trigger the timer to stop.
gpt_source_t	clear_source	Event sources that trigger the timer to clear.
gpt_source_t	capture_a_source	Event sources that trigger capture of GTIOCA.
gpt_source_t	capture_b_source	Event sources that trigger capture of GTIOCB.
gpt_source_t	count_up_source	Event sources that trigger a single up count. If GPT_SOURCE_NONE is selected for both count_up_source and count_down_source, then the timer count source is PCLK.
gpt_source_t	count_down_source	Event sources that trigger a single down count. If GPT_SOURCE_NONE is selected for both count_up_source and count_down_source, then the timer count source is PCLK.
gpt_capture_filter_t	capture_filter_gtioca	
gpt_capture_filter_t	capture_filter_gtiocb	

uint8_t	capture_a_ipl	Capture A interrupt priority.
uint8_t	capture_b_ipl	Capture B interrupt priority.
IRQn_Type	capture_a_irq	Capture A interrupt.
IRQn_Type	capture_b_irq	Capture B interrupt.
gpt_extended_pwm_cfg_t const *	p_pwm_cfg	Advanced PWM features, optional.
gpt_gtior_setting_t	gtior_setting	Custom GTIOR settings used for configuring GTIOCxA and GTIOCxB pins.

Enumeration Type Documentation

◆ gpt_io_pin_t

enum gpt_io_pin_t	
Input/Output pins, used to select which duty cycle to update in R_GPT_DutyCycleSet().	
Enumerator	
GPT_IO_PIN_GTIOCA	GTIOCA.
GPT_IO_PIN_GTIOCB	GTIOCB.
GPT_IO_PIN_GTIOCA_AND_GTIOCB	GTIOCA and GTIOCB.
GPT_IO_PIN_TROUGH	Used in R_GPT_DutyCycleSet when Triangle-wave PWM Mode 3 is selected.
GPT_IO_PIN_CREST	Used in R_GPT_DutyCycleSet when Triangle-wave PWM Mode 3 is selected.

◆ gpt_pin_level_t

enum gpt_pin_level_t	
Level of GPT pin	
Enumerator	
GPT_PIN_LEVEL_LOW	Pin level low.
GPT_PIN_LEVEL_HIGH	Pin level high.

◆ gpt_source_t

enum gpt_source_t	
Sources can be used to start the timer, stop the timer, count up, or count down. These enumerations represent a bitmask. Multiple sources can be ORed together.	
Enumerator	
GPT_SOURCE_NONE	No active event sources.
GPT_SOURCE_GTETRGA_RISING	Action performed on GTETRGA rising edge.
GPT_SOURCE_GTETRGA_FALLING	Action performed on GTETRGA falling edge.
GPT_SOURCE_GTETRGB_RISING	Action performed on GTETRGB rising edge.
GPT_SOURCE_GTETRGB_FALLING	Action performed on GTETRGB falling edge.
GPT_SOURCE_GTETRGC_RISING	Action performed on GTETRGC rising edge.
GPT_SOURCE_GTETRGC_FALLING	Action performed on GTETRGC falling edge.
GPT_SOURCE_GTETRGD_RISING	Action performed on GTETRGB rising edge.
GPT_SOURCE_GTETRGD_FALLING	Action performed on GTETRGB falling edge.
GPT_SOURCE_GTIOCA_RISING_WHILE_GTIOCB_LOW	Action performed when GTIOCA input rises while GTIOCB is low.
GPT_SOURCE_GTIOCA_RISING_WHILE_GTIOCB_HIGH	Action performed when GTIOCA input rises while GTIOCB is high.
GPT_SOURCE_GTIOCA_FALLING_WHILE_GTIOCB_LOW	Action performed when GTIOCA input falls while GTIOCB is low.
GPT_SOURCE_GTIOCA_FALLING_WHILE_GTIOCB_HIGH	Action performed when GTIOCA input falls while GTIOCB is high.
GPT_SOURCE_GTIOCB_RISING_WHILE_GTIOCA_LOW	Action performed when GTIOCB input rises while GTIOCA is low.
GPT_SOURCE_GTIOCB_RISING_WHILE_GTIOCA_HIGH	Action performed when GTIOCB input rises while GTIOCA is high.
GPT_SOURCE_GTIOCB_FALLING_WHILE_GTIOCA_LOW	Action performed when GTIOCB input falls while GTIOCA is low.
GPT_SOURCE_GTIOCB_FALLING_WHILE_GTIOCA_HIGH	Action performed when GTIOCB input falls while GTIOCA is high.

GPT_SOURCE_GPT_A	Action performed on ELC GPTA event.
GPT_SOURCE_GPT_B	Action performed on ELC GPTB event.
GPT_SOURCE_GPT_C	Action performed on ELC GPTC event.
GPT_SOURCE_GPT_D	Action performed on ELC GPTD event.
GPT_SOURCE_GPT_E	Action performed on ELC GPTE event.
GPT_SOURCE_GPT_F	Action performed on ELC GPTF event.
GPT_SOURCE_GPT_G	Action performed on ELC GPTG event.
GPT_SOURCE_GPT_H	Action performed on ELC GPTH event.

◆ gpt_capture_filter_t

enum gpt_capture_filter_t

Input capture signal noise filter (debounce) setting. Only available for input signals GTIOCxA and GTIOCxB. The noise filter samples the external signal at intervals of the PCLK divided by one of the values. When 3 consecutive samples are at the same level (high or low), then that level is passed on as the observed state of the signal. See "Noise Filter Function" in the hardware manual, GPT section.

Enumerator	
GPT_CAPTURE_FILTER_NONE	None - no filtering.
GPT_CAPTURE_FILTER_PCLKD_DIV_1	PCLK/1 - fast sampling.
GPT_CAPTURE_FILTER_PCLKD_DIV_4	PCLK/4.
GPT_CAPTURE_FILTER_PCLKD_DIV_16	PCLK/16.
GPT_CAPTURE_FILTER_PCLKD_DIV_64	PCLK/64 - slow sampling.

◆ gpt_adc_trigger_t

enum gpt_adc_trigger_t	
Trigger options to start A/D conversion.	
Enumerator	
GPT_ADC_TRIGGER_NONE	None - no output disable request.
GPT_ADC_TRIGGER_UP_COUNT_START_ADC_A	Request A/D conversion from ADC unit 0 at up counting compare match of gpt_extended_pwm_cfg_t::adc_a_compare_match.
GPT_ADC_TRIGGER_DOWN_COUNT_START_ADC_A	Request A/D conversion from ADC unit 0 at down counting compare match of gpt_extended_pwm_cfg_t::adc_a_compare_match.
GPT_ADC_TRIGGER_UP_COUNT_START_ADC_B	Request A/D conversion from ADC unit 1 at up counting compare match of gpt_extended_pwm_cfg_t::adc_b_compare_match.
GPT_ADC_TRIGGER_DOWN_COUNT_START_ADC_B	Request A/D conversion from ADC unit 1 at down counting compare match of gpt_extended_pwm_cfg_t::adc_b_compare_match.

◆ gpt_poeg_link_t

enum gpt_poeg_link_t	
POEG channel to link to this channel.	
Enumerator	
GPT_POEG_LINK_POEG0	Link this GPT channel to POEG channel 0 (GTETRGA)
GPT_POEG_LINK_POEG1	Link this GPT channel to POEG channel 1 (GTETRGB)
GPT_POEG_LINK_POEG2	Link this GPT channel to POEG channel 2 (GTETRGC)
GPT_POEG_LINK_POEG3	Link this GPT channel to POEG channel 3 (GTETRGD)

◆ gpt_output_disable_t

enum gpt_output_disable_t	
Select trigger to send output disable request to POEG.	
Enumerator	
GPT_OUTPUT_DISABLE_NONE	None - no output disable request.
GPT_OUTPUT_DISABLE_DEAD_TIME_ERROR	Request output disable if a dead time error occurs.
GPT_OUTPUT_DISABLE_GTIOCA_GTIOCB_HIGH	Request output disable if GTIOCA and GTIOCB are high at the same time.
GPT_OUTPUT_DISABLE_GTIOCA_GTIOCB_LOW	Request output disable if GTIOCA and GTIOCB are low at the same time.

◆ gpt_gtioc_disable_t

enum gpt_gtioc_disable_t	
Disable level options for GTIOC pins.	
Enumerator	
GPT_GTIOC_DISABLE_PROHIBITED	Do not allow output disable.
GPT_GTIOC_DISABLE_SET_HI_Z	Set GTIOC to high impedance when output is disabled.
GPT_GTIOC_DISABLE_LEVEL_LOW	Set GTIOC level low when output is disabled.
GPT_GTIOC_DISABLE_LEVEL_HIGH	Set GTIOC level high when output is disabled.

◆ gpt_adc_compare_match_t

enum gpt_adc_compare_match_t	
Trigger options to start A/D conversion.	
Enumerator	
GPT_ADC_COMPARE_MATCH_ADC_A	Set A/D conversion start request value for GPT A/D converter start request A.
GPT_ADC_COMPARE_MATCH_ADC_B	Set A/D conversion start request value for GPT A/D converter start request B.

◆ gpt_interrupt_skip_source_t

enum gpt_interrupt_skip_source_t	
Interrupt skipping modes	
Enumerator	
GPT_INTERRUPT_SKIP_SOURCE_NONE	Do not skip interrupts.
GPT_INTERRUPT_SKIP_SOURCE_OVERFLOW_UNDERFLOW	Count and skip overflow and underflow interrupts.
GPT_INTERRUPT_SKIP_SOURCE_CREST	Count crest interrupts for interrupt skipping. Skip the number of crest and trough interrupts configured in gpt_interrupt_skip_count_t. When the interrupt does fire, the trough interrupt fires before the crest interrupt.
GPT_INTERRUPT_SKIP_SOURCE_TROUGH	Count trough interrupts for interrupt skipping. Skip the number of crest and trough interrupts configured in gpt_interrupt_skip_count_t. When the interrupt does fire, the crest interrupt fires before the trough interrupt.

◆ gpt_interrupt_skip_count_t

enum gpt_interrupt_skip_count_t	
Number of interrupts to skip between events	
Enumerator	
GPT_INTERRUPT_SKIP_COUNT_0	Do not skip interrupts.
GPT_INTERRUPT_SKIP_COUNT_1	Skip one interrupt.
GPT_INTERRUPT_SKIP_COUNT_2	Skip two interrupts.
GPT_INTERRUPT_SKIP_COUNT_3	Skip three interrupts.
GPT_INTERRUPT_SKIP_COUNT_4	Skip four interrupts.
GPT_INTERRUPT_SKIP_COUNT_5	Skip five interrupts.
GPT_INTERRUPT_SKIP_COUNT_6	Skip six interrupts.
GPT_INTERRUPT_SKIP_COUNT_7	Skip seven interrupts.

◆ gpt_interrupt_skip_adc_t

enum gpt_interrupt_skip_adc_t	
ADC events to skip during interrupt skipping	
Enumerator	
GPT_INTERRUPT_SKIP_ADC_NONE	Do not skip ADC events.
GPT_INTERRUPT_SKIP_ADC_A	Skip ADC A events.
GPT_INTERRUPT_SKIP_ADC_B	Skip ADC B events.
GPT_INTERRUPT_SKIP_ADC_A_AND_B	Skip ADC A and B events.

◆ gpt_pwm_output_delay_setting_t

enum gpt_pwm_output_delay_setting_t	
Delay setting for the PWM Delay Generation Circuit (PDG).	
Enumerator	
GPT_PWM_OUTPUT_DELAY_SETTING_0_32	Delay is not applied.
GPT_PWM_OUTPUT_DELAY_SETTING_1_32	Delay of 1 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_2_32	Delay of 2 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_3_32	Delay of 3 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_4_32	Delay of 4 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_5_32	Delay of 5 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_6_32	Delay of 6 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_7_32	Delay of 7 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_8_32	Delay of 8 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_9_32	Delay of 9 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_10_32	Delay of 10 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_11_32	Delay of 11 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_12_32	Delay of 12 / 32 GTCLK period applied.

GPT_PWM_OUTPUT_DELAY_SETTING_13_32	Delay of 13 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_14_32	Delay of 14 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_15_32	Delay of 15 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_16_32	Delay of 16 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_17_32	Delay of 17 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_18_32	Delay of 18 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_19_32	Delay of 19 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_20_32	Delay of 20 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_21_32	Delay of 21 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_22_32	Delay of 22 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_23_32	Delay of 23 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_24_32	Delay of 24 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_25_32	Delay of 25 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_26_32	Delay of 26 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_27_32	Delay of 27 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_28_32	Delay of 28 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_29_32	Delay of 29 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_30_32	Delay of 30 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_31_32	Delay of 31 / 32 GTCLK period applied.
GPT_PWM_OUTPUT_DELAY_SETTING_BYPASS	Bypass the PWM Output Delay Circuit.

◆ gpt_pwm_output_delay_edge_t

enum gpt_pwm_output_delay_edge_t	
Select which PWM Output Delay setting to apply.	
Enumerator	
GPT_PWM_OUTPUT_DELAY_EDGE_RISING	Configure the PWM Output Delay setting for rising edge.
GPT_PWM_OUTPUT_DELAY_EDGE_FALLING	Configure the PWM Output Delay setting for falling edge.

Function Documentation

◆ R_GPT_Open()

fsp_err_t R_GPT_Open (timer_ctrl_t *const *p_ctrl*, timer_cfg_t const *const *p_cfg*)

Initializes the timer module and applies configurations. Implements timer_api_t::open.

GPT hardware does not support one-shot functionality natively. When using one-shot mode, the timer will be stopped in an ISR after the requested period has elapsed.

The GPT implementation of the general timer can accept a gpt_extended_cfg_t extension parameter.

Example:

```
/* Initializes the module. */
   err = R_GPT_Open(&g_timer0_ctrl, &g_timer0_cfg);
```

Return values

FSP_SUCCESS	Initialization was successful and timer has started.
FSP_ERR_ASSERTION	A required input pointer is NULL or the source divider is invalid.
FSP_ERR_ALREADY_OPEN	Module is already open.
FSP_ERR_IRQ_BSP_DISABLED	timer_cfg_t::mode is TIMER_MODE_ONE_SHOT or timer_cfg_t::p_callback is not NULL, but ISR is not enabled. ISR must be enabled to use one-shot mode or callback.
FSP_ERR_INVALID_MODE	Triangle wave PWM is only supported if GPT_CFG_OUTPUT_SUPPORT_ENABLE is 2. Selected channel does not support external count sources.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	The channel requested in the p_cfg parameter is not available on this device.

◆ R_GPT_Stop()

fsp_err_t R_GPT_Stop (timer_ctrl_t *const *p_ctrl*)

Stops timer. Implements timer_api_t::stop.

Example:

```
/* (Optional) Stop the timer. */
   (void) R_GPT_Stop(&g_timer0_ctrl);
```

Return values

FSP_SUCCESS	Timer successfully stopped.
FSP_ERR_ASSERTION	p_ctrl was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

◆ R_GPT_Start()

fsp_err_t R_GPT_Start (timer_ctrl_t *const *p_ctrl*)

Starts timer. Implements timer_api_t::start.

Example:

```
/* Start the timer. */
   (void) R_GPT_Start(&g_timer0_ctrl);
```

Return values

FSP_SUCCESS	Timer successfully started.
FSP_ERR_ASSERTION	p_ctrl was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

◆ R_GPT_Reset()

fsp_err_t R_GPT_Reset (timer_ctrl_t *const *p_ctrl*)

Resets the counter value to 0. Implements timer_api_t::reset.

Note

This function also updates to the new period if no counter overflow has occurred since the last call to R_GPT_PeriodSet().

Return values

FSP_SUCCESS	Counter value written successfully.
FSP_ERR_ASSERTION	p_ctrl was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

◆ R_GPT_Enable()

fsp_err_t R_GPT_Enable (timer_ctrl_t *const *p_ctrl*)

Enables external event triggers that start, stop, clear, or capture the counter. Implements timer_api_t::enable.

Example:

```
/* Enable captures. Captured values arrive in the interrupt. */
   (void) R_GPT_Enable(&g_timer0_ctrl);
```

Return values

FSP_SUCCESS	External events successfully enabled.
FSP_ERR_ASSERTION	p_ctrl was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

◆ R_GPT_Disable()

fsp_err_t R_GPT_Disable (timer_ctrl_t *const *p_ctrl*)

Disables external event triggers that start, stop, clear, or capture the counter. Implements timer_api_t::disable.

Note

The timer could be running after R_GPT_Disable(). To ensure it is stopped, call R_GPT_Stop().

Example:

```
/* (Optional) Disable captures. */
   (void) R_GPT_Disable(&g_timer0_ctrl);
```

Return values

FSP_SUCCESS	External events successfully disabled.
FSP_ERR_ASSERTION	p_ctrl was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

◆ R_GPT_PeriodSet()

fsp_err_t R_GPT_PeriodSet (timer_ctrl_t *const *p_ctrl*, uint32_t const *period_counts*)

Sets period value provided. If the timer is running, the period will be updated after the next counter overflow. If the timer is stopped, this function resets the counter and updates the period. Implements timer_api_t::periodSet.

Warning

If periodic output is used, the duty cycle buffer registers are updated after the period buffer register. If this function is called while the timer is running and a GPT overflow occurs during processing, the duty cycle will not be the desired 50% duty cycle until the counter overflow after processing completes.

Example:

```
 /* Get the source clock frequency (in Hz). There are 3 ways to do this in FSP:
  * - If the PCLKD frequency has not changed since reset, the source clock frequency
is
  * BSP_STARTUP_PCLKD_HZ >> timer_cfg_t::source_div
  * - Use the R_GPT_InfoGet function (it accounts for the divider).
  * - Calculate the current PCLKD frequency using
R_FSP_SystemClockHzGet(FSP_PRIV_CLOCK_PCLKD) and right shift
  * by timer_cfg_t::source_div.
  *
```

```
  * This example uses the 3rd option (R_FSP_SystemClockHzGet).
  */
    uint32_t pclkd_freq_hz = R_FSP_SystemClockHzGet(FSP_PRIV_CLOCK_PCLKD) >>
g_timer0_cfg.source_div;
 /* Calculate the desired period based on the current clock. Note that this
calculation could overflow if the
  * desired period is larger than UINT32_MAX / pclkd_freq_hz. A cast to uint64_t is
used to prevent this. */
    uint32_t period_counts =
       (uint32_t) (((uint64_t) pclkd_freq_hz * GPT_EXAMPLE_DESIRED_PERIOD_MSEC) /
GPT_EXAMPLE_MSEC_PER_SEC);
 /* Set the calculated period. */
    err = R_GPT_PeriodSet(&g_timer0_ctrl, period_counts);
    assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Period value written successfully.
FSP_ERR_ASSERTION	p_ctrl was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

◆ R_GPT_DutyCycleSet()

fsp_err_t R_GPT_DutyCycleSet (timer_ctrl_t *const *p_ctrl*, uint32_t const *duty_cycle_counts*, uint32_t const *pin*)

Sets duty cycle on requested pin. Implements timer_api_t::dutyCycleSet.

Duty cycle is updated in the buffer register. The updated duty cycle is reflected after the next cycle end (counter overflow).

Example:

```
 /* Get the current period setting. */
 timer_info_t info;
    (void) R_GPT_InfoGet(&g_timer0_ctrl, &info);
    uint32_t current_period_counts = info.period_counts;
 /* Calculate the desired duty cycle based on the current period. Note that if the
period could be larger than
  * UINT32_MAX / 100, this calculation could overflow. A cast to uint64_t is used to
```

```
prevent this. The cast is
  * not required for 16-bit timers. */
    uint32_t duty_cycle_counts =
       (uint32_t) (((uint64_t) current_period_counts *
GPT_EXAMPLE_DESIRED_DUTY_CYCLE_PERCENT) /
                   GPT_EXAMPLE_MAX_PERCENT);
 /* Set the calculated duty cycle. */
    err = R_GPT_DutyCycleSet(&g_timer0_ctrl, duty_cycle_counts, GPT_IO_PIN_GTIOCB);
    assert(FSP_SUCCESS == err);
```

Parameters

[in]	p_ctrl	Pointer to instance control block.
[in]	duty_cycle_counts	Duty cycle to set in counts.
[in]	pin	Use gpt_io_pin_t to select GPT_IO_PIN_GTIOCA or GPT_IO_PIN_GTIOCB

Return values

FSP_SUCCESS	Duty cycle updated successfully.
FSP_ERR_ASSERTION	p_ctrl was NULL or the pin is not one of gpt_io_pin_t
FSP_ERR_NOT_OPEN	The instance is not opened.
FSP_ERR_INVALID_ARGUMENT	Duty cycle is larger than period.
FSP_ERR_INVALID_MODE	GPT_IO_PIN_TROUGH, and GPT_IO_PIN_CREST settings are invalid in the this mode.
FSP_ERR_UNSUPPORTED	GPT_CFG_OUTPUT_SUPPORT_ENABLE is 0.

◆ R_GPT_InfoGet()

fsp_err_t R_GPT_InfoGet (timer_ctrl_t *const *p_ctrl*, timer_info_t *const *p_info*)

Get timer information and store it in provided pointer p_info. Implements timer_api_t::infoGet.

Example:

```
/* (Optional) Get the current period if not known. */
timer_info_t info;
      (void) R_GPT_InfoGet(&g_timer0_ctrl, &info);
      uint64_t period = info.period_counts;
/* The maximum period is one more than the maximum 32-bit number, but will be
reflected as 0 in
 * timer_info_t::period_counts. */
if (0U == period)
    {
          period = UINT32_MAX + 1U;
    }
```

Return values

FSP_SUCCESS	Period, count direction, frequency, and ELC event written to caller's structure successfully.
FSP_ERR_ASSERTION	p_ctrl or p_info was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

◆ R_GPT_StatusGet()

fsp_err_t R_GPT_StatusGet (timer_ctrl_t *const *p_ctrl*, timer_status_t *const *p_status*)

Get current timer status and store it in provided pointer p_status. Implements timer_api_t::statusGet.

Example:

```
/* Read the current counter value. Counter value is in status.counter. */
timer_status_t status;
   (void) R_GPT_StatusGet(&g_timer0_ctrl, &status);
```

Return values

FSP_SUCCESS	Current timer state and counter value set successfully.
FSP_ERR_ASSERTION	p_ctrl or p_status was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

◆ R_GPT_CounterSet()

fsp_err_t R_GPT_CounterSet (timer_ctrl_t *const *p_ctrl*, uint32_t *counter*)

Set counter value.

Note

Do not call this API while the counter is counting. The counter value can only be updated while the counter is stopped.

Return values

FSP_SUCCESS	Counter value updated.
FSP_ERR_ASSERTION	p_ctrl or p_status was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.
FSP_ERR_IN_USE	The timer is running. Stop the timer before calling this function.

◆ R_GPT_OutputEnable()

fsp_err_t R_GPT_OutputEnable (timer_ctrl_t *const *p_ctrl*, gpt_io_pin_t *pin*)

Enable output for GTIOCA and/or GTIOCB.

Return values

FSP_SUCCESS	Output is enabled.
FSP_ERR_ASSERTION	p_ctrl or p_status was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

◆ R_GPT_OutputDisable()

fsp_err_t R_GPT_OutputDisable (timer_ctrl_t *const *p_ctrl*, gpt_io_pin_t *pin*)

Disable output for GTIOCA and/or GTIOCB.

Return values

FSP_SUCCESS	Output is disabled.
FSP_ERR_ASSERTION	p_ctrl or p_status was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

◆ R_GPT_AdcTriggerSet()

fsp_err_t R_GPT_AdcTriggerSet (timer_ctrl_t *const *p_ctrl*, gpt_adc_compare_match_t *which_compare_match*, uint32_t *compare_match_value*)

Set A/D converter start request compare match value.

Return values

FSP_SUCCESS	Counter value updated.
FSP_ERR_ASSERTION	p_ctrl or p_status was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

◆ R_GPT_PwmOutputDelaySet()

fsp_err_t R_GPT_PwmOutputDelaySet (timer_ctrl_t *const *p_ctrl*, gpt_pwm_output_delay_edge_t *edge*, gpt_pwm_output_delay_setting_t *delay_setting*, uint32_t const *pin*)

Set the Output Delay setting for the PWM output pin.

Return values

FSP_SUCCESS	The output delay was set.
FSP_ERR_ASSERTION	An input parameter was invalid.
FSP_ERR_NOT_OPEN	The instance is not opened.
FSP_ERR_INVALID_CHANNEL	The channel does not support this feature.
FSP_ERR_NOT_INITIALIZED	The PWM Output Delay Circuit has not been initialized.
FSP_ERR_INVALID_STATE	The PWM Output Delay setting cannot be updated in the current state.
FSP_ERR_UNSUPPORTED	This feature is not supported on this MCU.

◆ R_GPT_CallbackSet()

fsp_err_t R_GPT_CallbackSet (timer_ctrl_t *const *p_api_ctrl*, void(*)(timer_callback_args_t *) *p_callback*, void const *const *p_context*, timer_callback_args_t *const *p_callback_memory*)

Updates the user callback with the option to provide memory for the callback argument structure. Implements timer_api_t::callbackSet.

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

◆ R_GPT_Close()

fsp_err_t R_GPT_Close (timer_ctrl_t *const *p_ctrl*)
Stops counter, disables output pins, and clears internal driver data. Implements timer_api_t::close. **Return values** FSP_SUCCESS — Successful close. FSP_ERR_ASSERTION — p_ctrl was NULL. FSP_ERR_NOT_OPEN — The instance is not opened.

◆ R_GPT_PwmOutputDelayInitialize()

fsp_err_t R_GPT_PwmOutputDelayInitialize ( )
Initialize the PWM Delay Generation Circuit (PDG). This function must be called before calling R_GPT_PwmOutputDelaySet. ***Note*** *This function will delay for 20 microseconds.* **Return values** FSP_SUCCESS — Initialization sequence completed successfully. FSP_ERR_INVALID_STATE — The source clock frequnecy is out of the required range for the PDG. FSP_ERR_UNSUPPORTED — This feature is not supported.

4.2.30 General PWM Timer Three-Phase Motor Control Driver (r_gpt_three_phase)

fsp_err_t	R_GPT_THREE_PHASE_Close (three_phase_ctrl_t *const p_ctrl)

Detailed Description

Driver for 3-phase motor control using the GPT peripheral on RA MCUs. This module implements the Three-Phase Interface.

Overview

The General PWM Timer (GPT) Three-Phase driver provides basic functionality for synchronously starting and stopping three PWM channels for use in 3-phase motor control applications. A function is additionally provided to allow setting duty cycle values for all three channels, optionally with double-buffering.

Features

The GPT Three-Phase driver provides the following functions:

- Synchronize configuration of three GPT channels
- Synchronously start, stop and reset all three GPT channels
- Set duty cycle on all three channels with one function

Configuration

Build Time Configurations for r_gpt_three_phase

The following build time configurations are defined in fsp_cfg/r_gpt_three_phase_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Timers > Three-Phase PWM (r_gpt_three_phase)

This module can be added to the Stacks tab via New Stack > Timers > Three-Phase PWM (r_gpt_three_phase). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
General > Name	Name must be a valid	g_three_phase0	Module name.

	C symbol		
General > Mode	• Triangle-Wave Symmetric PWM • Triangle-Wave Asymmetric PWM • Triangle-Wave Asymmetric PWM (Mode 3)	Triangle-Wave Symmetric PWM	Mode selection. Triangle-Wave Symmetric PWM: Generates symmetric PWM waveforms with duty cycle determined by compare match set during a crest interrupt and updated at the next trough. Triangle-Wave Asymmetric PWM: Generates asymmetric PWM waveforms with duty cycle determined by compare match set during a crest/trough interrupt and updated at the next trough/crest.
General > Period	Value must be a non-negative integer less than or equal to 0x40000000000	15	Specify the timer period in units selected below. Setting the period to 0x100000000 raw counts results in the maximum period. Set the period to 0x100000000 raw counts for a free running timer or an input capture configuration. The period can be set up to 0x40000000000, which will use a divider of 1024 with the maximum period. If the requested period cannot be achieved, the settings with the largest possible period that is less than or equal to the requested period are used. The theoretical calculated period is printed in a comment in the generated timer_cfg_t structures for each timer.
General > Period Unit	• Raw Counts	Kilohertz	Unit of the period

	• Nanoseconds • Microseconds • Milliseconds • Seconds • Hertz • Kilohertz		specified above
General > GPT U-Channel	Value must be an integer greater than or equal to 0	0	Specify the GPT channel for U signal output.
General > GPT V-Channel	Value must be an integer greater than or equal to 0	1	Specify the GPT channel for V signal output.
General > GPT W-Channel	Value must be an integer greater than or equal to 0	2	Specify the GPT channel for W signal output.
General > Callback Channel	• U-Channel • V-Channel • W-Channel	U-Channel	Specify the GPT channel to set a callback for when using R_GPT_THREE_PHASE_CallbackSet.
General > Buffer Mode	• Single Buffer • Double Buffer	Single Buffer	When Double Buffer is selected the 'duty_buffer' array in three_phase_duty_cycle_t is used as a buffer for the 'duty' array. This allows setting the duty cycle for the next two crest/trough events in asymmetric mode with only one call to R_GPT_THREE_PHASE_DutyCycleSet.
General > GTIOCA Stop Level	• Pin Level Low • Pin Level High	Pin Level Low	Select the behavior of the output pin when the timer is stopped.
General > GTIOCB Stop Level	• Pin Level Low • Pin Level High	Pin Level Low	Select the behavior of the output pin when the timer is stopped.
Extra Features > Dead Time > Dead Time Count Up (Raw Counts)	Must be a valid non-negative integer with a maximum configurable value of 4294967295 (0xffffffff).	0	Select the dead time to apply during up counting. This value also applies during down counting for the GPT32 and GPT16 variants.
Extra Features > Dead Time > Dead Time Count Down (Raw	Must be a valid non-negative integer with a maximum configurable	0	Select the dead time to apply during down counting. This value

Counts) (GPTE/GPTEH only)	value of 4294967295 (0xffffffff).	only applies to the GPT32E and GPT32EH variants.

Clock Configuration

Please refer to the General PWM Timer (r_gpt) section for more information.

Pin Configuration

Please refer to the General PWM Timer (r_gpt) section for more information.

Usage Notes

Warning

Be sure the GTIOCA/B stop level and dead time values are set appropriately for your application before attempting to drive a motor. Failure to do so may result in damage to the motor drive circuitry and/or the motor itself if the timer is stopped by software.

Initial Setup

The following should be configured once the GPT Three-Phase module has been added to a project:

1. Set "Pin Output Support" in one of the GPT submodules to "Enabled with Extra Features"
2. Configure common settings in the GPT Three-Phase module properties
3. Set the crest and trough interrupt priority and callback function in **one** of the three GPT submodules (if desired)
4. Set the "Extra Features -> Output Disable" settings in each GPT submodule as needed for your application

Note

Because all three modules are operated synchronously with the same period interrupts only need to be enabled in one of the three GPT modules.

Buffer Modes

There are two buffering modes available for duty cycle values - single- and double-buffered. In single buffer mode only the values specified in the duty array element of three_phase_duty_cycle_t are used by R_GPT_THREE_PHASE_DutyCycleSet. At the next trough or crest event the output duty cycle will be internally updated to the set values.

In double buffer mode the duty_buffer array values are used as buffer values for the duty elements. Once passed to R_GPT_THREE_PHASE_DutyCycleSet, the next trough or crest event will update the output duty cycle to the values specified in duty as before. However, at the following crest or trough event the output duty cycle will be updated to the values in duty_buffer. This allows the duty cycle for both sides of an asymmetric PWM waveform to be set at only one trough or crest event per period instead of at every event.

Examples

GPT Three-Phase Basic Example

This is a basic example of minimal use of the GPT Three-Phase module in an application. The duty cycle is updated at every timer trough with the previously loaded buffer value, then the duty cycle

buffer is reloaded in the trough interrupt callback.

```
void gpt_callback (timer_callback_args_t * p_args)
{
 fsp_err_t                err;
 three_phase_duty_cycle_t duty_cycle;
 if (TIMER_EVENT_TROUGH == p_args->event)
    {
 /* Update duty cycle values (example) */
       duty_cycle.duty[THREE_PHASE_CHANNEL_U] =
get_duty_counts(THREE_PHASE_CHANNEL_U);
       duty_cycle.duty[THREE_PHASE_CHANNEL_V] =
get_duty_counts(THREE_PHASE_CHANNEL_V);
       duty_cycle.duty[THREE_PHASE_CHANNEL_W] =
get_duty_counts(THREE_PHASE_CHANNEL_W);
 /* Update duty cycle values */
       err = R_GPT_THREE_PHASE_DutyCycleSet(&g_gpt_three_phase_ctrl, &duty_cycle);
       assert(FSP_SUCCESS == err);
    }
 else
    {
 /* Handle crest event. */
    }
}
void gpt_three_phase_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the module. */
    err = R_GPT_THREE_PHASE_Open(&g_gpt_three_phase_ctrl, &g_gpt_three_phase_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Start the timer. */
    (void) R_GPT_THREE_PHASE_Start(&g_gpt_three_phase_ctrl);
}
```

Data Structures

struct	gpt_three_phase_instance_ctrl_t

Data Structure Documentation

◆ gpt_three_phase_instance_ctrl_t

struct gpt_three_phase_instance_ctrl_t
Channel control block. DO NOT INITIALIZE. Initialization occurs when three_phase_api_t::open is called.

Function Documentation

◆ R_GPT_THREE_PHASE_Open()

fsp_err_t R_GPT_THREE_PHASE_Open (three_phase_ctrl_t *const *p_ctrl*, three_phase_cfg_t const *const *p_cfg*)

Initializes the 3-phase timer module (and associated timers) and applies configurations. Implements three_phase_api_t::open.

Example:

```
/* Initializes the module. */
   err = R_GPT_THREE_PHASE_Open(&g_gpt_three_phase_ctrl, &g_gpt_three_phase_cfg);
```

Return values

FSP_SUCCESS	Initialization was successful.
FSP_ERR_ASSERTION	A required input pointer is NULL.
FSP_ERR_ALREADY_OPEN	Module is already open.

◆ R_GPT_THREE_PHASE_Stop()

fsp_err_t R_GPT_THREE_PHASE_Stop (three_phase_ctrl_t *const *p_ctrl*)

Stops all timers synchronously. Implements three_phase_api_t::stop.

Return values

FSP_SUCCESS	Timers successfully stopped.
FSP_ERR_ASSERTION	p_ctrl was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

◆ R_GPT_THREE_PHASE_Start()

fsp_err_t R_GPT_THREE_PHASE_Start (three_phase_ctrl_t *const *p_ctrl*)

Starts all timers synchronously. Implements three_phase_api_t::start.

Example:

```
/* Start the timer. */
   (void) R_GPT_THREE_PHASE_Start(&g_gpt_three_phase_ctrl);
```

Return values

FSP_SUCCESS	Timers successfully started.
FSP_ERR_ASSERTION	p_ctrl was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

◆ R_GPT_THREE_PHASE_Reset()

fsp_err_t R_GPT_THREE_PHASE_Reset (three_phase_ctrl_t *const *p_ctrl*)

Resets the counter values to 0. Implements three_phase_api_t::reset.

Return values

FSP_SUCCESS	Counters were reset successfully.
FSP_ERR_ASSERTION	p_ctrl was NULL.
FSP_ERR_NOT_OPEN	The instance is not opened.

◆ R_GPT_THREE_PHASE_DutyCycleSet()

fsp_err_t R_GPT_THREE_PHASE_DutyCycleSet (three_phase_ctrl_t *const *p_ctrl*, three_phase_duty_cycle_t *const *p_duty_cycle*)

Sets duty cycle for all three timers. Implements three_phase_api_t::dutyCycleSet.

In symmetric PWM mode duty cycle values are reflected after the next trough. In asymmetric PWM mode values are reflected at the next trough OR crest, whichever comes first.

When double-buffering is enabled the values in three_phase_duty_cycle_t::duty_buffer are set to the double-buffer registers. When values are reflected the first time the single buffer values (three_phase_duty_cycle_t::duty) are used. On the second reflection the duty_buffer values are used. In asymmetric PWM mode this enables both count-up and count-down PWM values to be set at trough (or crest) exclusively.

Note

It is recommended to call this function in a high-priority callback to ensure that it is not interrupted and that no GPT events occur during setting that would result in a duty cycle buffer load operation.

Example:

```
/* Update duty cycle values */
      err = R_GPT_THREE_PHASE_DutyCycleSet(&g_gpt_three_phase_ctrl, &duty_cycle);
      assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Duty cycle updated successfully.
FSP_ERR_ASSERTION	p_ctrl was NULL
FSP_ERR_NOT_OPEN	The instance is not opened.
FSP_ERR_INVALID_ARGUMENT	One or more duty cycle count values was outside the range 0..(period - 1).

◆ R_GPT_THREE_PHASE_CallbackSet()

fsp_err_t R_GPT_THREE_PHASE_CallbackSet (three_phase_ctrl_t *const *p_ctrl*, void(*)(timer_callback_args_t *) *p_callback*, void const *const *p_context*, timer_callback_args_t *const *p_callback_memory*)

Updates the user callback for the GPT U-channel with the option to provide memory for the callback argument structure. Implements three_phase_api_t::callbackSet.

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.

◆ R_GPT_THREE_PHASE_Close()

fsp_err_t R_GPT_THREE_PHASE_Close (three_phase_ctrl_t *const *p_ctrl*)
Stops counters, disables output pins, and clears internal driver data. Implements three_phase_api_t::close. **Return values** FSP_SUCCESS — Successful close. FSP_ERR_ASSERTION — p_ctrl was NULL. FSP_ERR_NOT_OPEN — The instance is not opened.

4.2.31 I3C Bus Interface (r_i3c)

Modules

Functions

fsp_err_t	R_I3C_IbiWrite (i3c_ctrl_t *const p_api_ctrl, i3c_ibi_type_t ibi_type, uint8_t const *const p_data, uint32_t length)
fsp_err_t	R_I3C_IbiRead (i3c_ctrl_t *const p_api_ctrl, uint8_t *const p_data, uint32_t length)
fsp_err_t	R_I3C_Close (i3c_ctrl_t *const p_api_ctrl)

Detailed Description

Driver for the I3C peripheral on RA MCUs. This module implements the I3C Interface.

Overview

I3C is a communication protocol defined by MIPI that aims to improve on I2C by increasing the maximum transfer rate, as well as providing other features like "In-band Interrupts", "Dynamic Address Assignment", and a set of standard "Common Command Codes".

Features

- I3C Master Mode
- I3C Slave Mode
- Dynamic Address Assignment (ENTDAA/SETDASA)
- SDR Read/Write transfers
- I2C Legacy Read/Write transfers
- In-Band Interrupts (Interrupt Requests, Hot-Join Requests)
- Common Command Codes
- Clock Stalling
- Timeout Detection

Master Mode

On an I3C bus, only one device may operate in master mode at a time. The current master is responsible for initiating I2C Legacy transfers, SDR transfers, Common Command Codes, and handling IBIs (Interrupt Requests, Hot-Join Requests). In order to perform these operations, the driver has an internal device table that is used for storing configuration information for each device on the bus (See i3c_device_table_cfg_t). Each entry in the device table contains the static or dynamic address of the device, and IBI permissions for accepting or rejecting IBI requests from the device. The device table has four entries as well as one extended device entry that only contains the static or dynamic address of a device (See below).

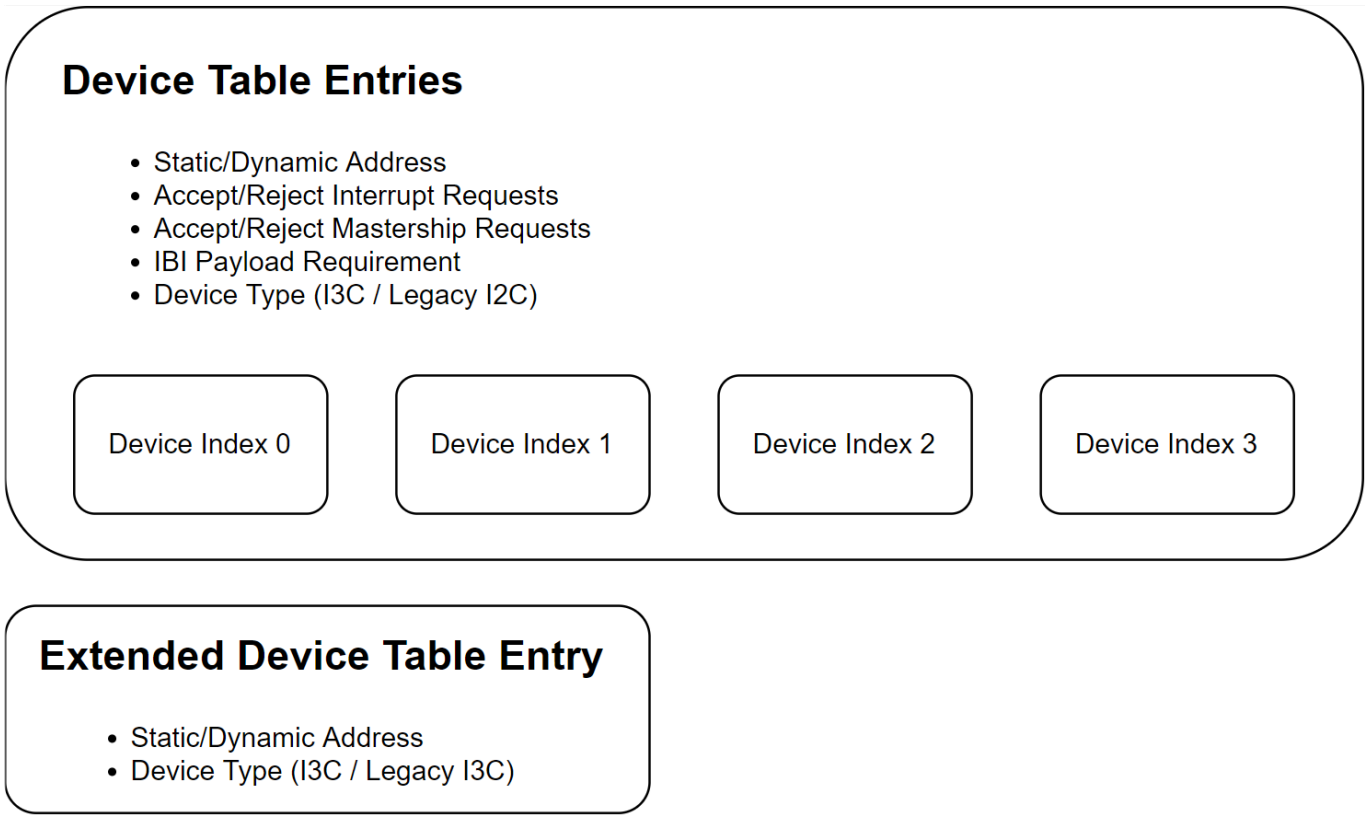

Figure 172: Master Device Table

In order to initiate I2C Legacy transfers, SDR transfers, or Common Command Codes, the master must select a device entry from the device table using i3c_api_t::deviceSelect. Once a device has been selected, all subsequent operations will be directed to the selected device until a new device is selected using i3c_api_t::deviceSelect.

The master may also receive IBI requests that are initiated by slave devices on the bus. If there is a payload, then the driver will write the data into a buffer that is provided by the application by calling i3c_api_t::ibiRead. If the application has not provided an IBI buffer prior to receiving an IBI, then the it will get a callback requesting an IBI buffer. Once the IBI is completed, the application will be notified by a callback.

Note

1. Even though there are only four device table entries and one extended device table entry, the application can operate on more devices by maintaining its own list of devices and updating the extended device entry as needed. Note however that devices defined in the extended device table entry will not be able to initiate IBI requests.

Main Master

The main master is responsible for configuring the dynamic address of all devices on the bus. The driver initiates this procedure by calling i3c_api_t::dynamicAddressAssignmentStart. Before starting address assignment, the application must configure the device table using i3c_api_t::masterDeviceTableSet.

Enter Dynamic Address Assignment (ENTDAA):

The application initiates the ENTDAA operation by calling i3c_api_t::dynamicAddressAssignmentStart

with a starting index into the master device table and a count specifying the number of devices to configure. The master starts by sending the ENTDAA command. Every I3C device on the bus that has not already been initialized will acknowledge the command and attempt to write its Provisional ID, DCR, and BCR registers. The device with the smallest value in these registers will win arbitration and be assigned with the first dynamic address defined in the master device table. The master will then increment the index and repeat the process by assigning the dynamic address to the next device. The process continues until the specified number of devices have been initialized or until there are no more devices to configure.

Note

1. The IBI payload setting will automatically be updated in the master device table based on the BCR setting that was read during ENTDAA.
2. After each device successfully writes its Provisional ID, DCR, and BCR registers, the application will get a callback that will provide the value of the registers.
3. If the starting index is set to the extended device entry, then the device count must be set to 1.
4. The main master assigns its own dynamic address with i3c_api_t::deviceCfgSet.

Set Dynamic Address from Static Address (SETDASA):

The application initiates the SETDASA operation by calling i3c_api_t::dynamicAddressAssignmentStart with an index into the master device table. The master sends the SETDASA command to the static address defined in the given device table entry, and then assigns the associated dynamic address.

Note

1. Set the count to 0 when using SETDASA.

Slave Mode

In slave mode, the device configures its static address, Provisional ID, BCR, and DCR registers using i3c_api_t::deviceCfgSet, and then waits for the master to initiate communication. Prior to being assigned a dynamic address, the slave will operate as an I2C device using its static address. The application will receive a callback when the master assigns it a dynamic address, after which point, the slave will operate as an I3C device until it receives the RSTDAA command.

Depending on the capabilities defined in its BCR register, the slave may also initiate IBI Interrupt Requests, and Hot-Join Requests using i3c_api_t::ibiWrite

Configuration

Build Time Configurations for r_i3c

The following build time configurations are defined in fsp_cfg/r_i3c_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Unaligned Buffer Support	• Enabled • Disabled	Enabled	Unaligned buffer support may be optionally disabled for

			improved performance.
Master Support	• Enabled • Disabled	Enabled	If only slave mode is required, disable master support to decrease code size.
Slave Support	• Enabled • Disabled	Enabled	If only master mode is required, disable slave support to decrease code size.

Configurations for Connectivity > I3C (r_i3c)

This module can be added to the Stacks tab via New Stack > Connectivity > I3C (r_i3c).

Configuration	Options	Default	Description
Bitrate Settings > Standard Mode > Open-Drain > Logic High Period (ns)	Must be an integer greater than 0.	167	The Logic High period of SCL during Standard Mode Open Drain transfers.
Bitrate Settings > Standard Mode > Open-Drain > Frequency	Must be an integer greater than 0.	1000000	The Frequency of SCL during Standard Mode Open Drain transfers.
Bitrate Settings > Standard Mode > Push-Pull > Logic High Period (ns)	Must be an integer greater than 0.	167	The Logic High period of SCL during Standard Mode Push Pull transfers.
Bitrate Settings > Standard Mode > Push-Pull > Frequency	Push-Pull frequency must be greater than or equal to 10000 Hz.	3400000	The Frequency of SCL during Standard Mode Push-Pull transfers.
Bitrate Settings > Extended Mode > Open-Drain > Logic High Period (ns)	Must be an integer greater than 0.	167	The Logic High period of SCL during Extended Mode Open Drain transfers.
Bitrate Settings > Extended Mode > Open-Drain > Frequency	Must be an integer greater than 0.	1000000	The Frequency of SCL during Extended Mode Open Drain transfers.
Bitrate Settings > Extended Mode > Push-Pull > Logic High Period (ns)	Must be an integer greater than 0.	167	The Logic High period of SCL during Extended Mode Push Pull transfers.
Bitrate Settings > Extended Mode > Push-Pull > Frequency	Push-Pull frequency must be greater than or equal to 10000 Hz.	3400000	The Frequency of SCL during Extended Mode Push-Pull transfers.
Bitrate Settings > Bus Timing > Open Drain Rising Time (ns)	Rising time must be greater than or equal to 0 nanoseconds.	0	The Open Drain rising time in nanoseconds.
Bitrate Settings > Bus	Falling time must be	0	The Open Drain falling

Timing > Open Drain Falling Time (ns)	greater than or equal to 0 nanoseconds.		time in nanoseconds.
Bitrate Settings > Bus Timing > Push-Pull Rising Time (ns)	Rising time must be greater than or equal to 0 nanoseconds.	0	The Push-Pull rising time in nanoseconds.
Bitrate Settings > Bus Timing > Push-Pull Falling Time (ns)	Falling time must be greater than or equal to 0 nanoseconds.	0	The Push-Pull rising time in nanoseconds.
Bitrate Settings > Clock Stalling > Address Assignment Phase	• Enabled • Disabled	Disabled	Enable clock stalling during the Address Assignment Phase of ENTDAA.
Bitrate Settings > Clock Stalling > Transition Phase	• Enabled • Disabled	Disabled	Enable clock stalling during the Transition Bit of a read transfer.
Bitrate Settings > Clock Stalling > Parity Phase	• Enabled • Disabled	Disabled	Enable clock stalling during the Parity Bit of a write transfer.
Bitrate Settings > Clock Stalling > Ack Phase	• Enabled • Disabled	Disabled	Enable clock stalling during the ACK phase of a transfer.
Bitrate Settings > Clock Stalling > Time (us)	Must be greater than or equal to 0.	0	The amount of time to stall the clock during the Address Assignment Phase, Transition Phase, Parity Phase, and ACK Phase.
Master Mode > ACK Hot-Join Requests	• Enabled • Disabled	Disabled	If enabled, the I3C instance will ACK Hot-Join Requests and notify the application.
Master Mode > Notify Rejected Hot-Join Requests.	• Enabled • Disabled	Disabled	If enabled, the application will get a callback when an IBI Hot-Join Request is rejected.
Master Mode > Notify Rejected Mastership Requests.	• Enabled • Disabled	Disabled	If enabled, the application will get a callback when an IBI Mastership Request is rejected.
Master Mode > Notify Rejected Interrupt Requests.	• Enabled • Disabled	Disabled	If enabled, the application will get a callback when an IBI Interrupt Request is rejected.
Slave Mode >	• Enabled	Disabled	Configure whether the

Command Response Info > ENEC/DISEC > In-Band Interrupts	• Disabled		slave can issue IBI requests.
Slave Mode > Command Response Info > ENEC/DISEC > Hot-Join Requests	• Enabled • Disabled	Disabled	Configure whether the slave can issue Hot-Join requests.
Slave Mode > Command Response Info > ENTASn > Activity State	• Activity State 0 • Activity State 1 • Activity State 2 • Activity State 3	Activity State 0	Configure the starting activity state of the slave.
Slave Mode > Command Response Info > SETMWL/GETMWL > Max Write Length	Write length must be in the range of [8, 65535].	65535	Set the max write length.
Slave Mode > Command Response Info > SETMRL/GETMRL > Max Read Length	Read length must be in the range of [16, 65535].	65535	Set the max read length.
Slave Mode > Command Response Info > SETMRL/GETMRL > Max IBI Payload Length	Read length must be in the range of [0, 255].	0	Set the max IBI payload length, or set it to 0 for unlimited.
Slave Mode > Command Response Info > GETMXDS > Write Data Rate	• FSCL_MAX • 8Mhz • 6Mhz • 4Mhz • 2Mhz	2Mhz	Set the max write data rate.
Slave Mode > Command Response Info > GETMXDS > Read Data Rate	• FSCL_MAX • 8Mhz • 6Mhz • 4Mhz • 2Mhz	2Mhz	Set the max read data rate.
Slave Mode > Command Response Info > GETMXDS > Clock to Data Turnaround Time	• 8 Nanoseconds • 9 Nanoseconds • 10 Nanoseconds • 11 Nanoseconds • 12 Nanoseconds • Greater than 12 Nanoseconds	8 Nanoseconds	Set the clock to data turnaround time.
Slave Mode > Command Response Info > GETMXDS > Include Max Read	• Enabled • Disabled	Disabled	Configure whether the Max Read Turnaround time will be transmitted.

Turnaround Time			
Slave Mode > Command Response Info > GETMXDS > Max Read Turnaround Time	Value must be in the range [0, 255].	0	Set max read turnaround time.
Slave Mode > Command Response Info > GETXTIME > Frequency Byte	Value must be in the range [0, 255].	0	Set the internal oscillator frequency in increments of 0.5 Mhz.
Slave Mode > Command Response Info > GETXTIME > Inaccuracy Byte	Value must be in the range [0, 255].	0	Set the oscillator inaccuracy byte in increments of 0.5%
Interrupts > Interrupt Priority	MCU Specific Options		The interrupt priority of the RX, TX, RESPONSE, RCV_STATUS, and IBI ISRs.
Interrupts > Error and Event Interrupt Priority	MCU Specific Options		The interrupt priority of the EEI ISR which is used to notify the application when an Internal Error, HDR Exit Pattern, or Timeout is detected.
Interrupts > Receive Status ICU Group 3	MCU Specific Options		The Receive Status IRQ can use ICU Group 3 or Group 5.
Interrupts > Receive Status ICU Group 5	MCU Specific Options		The Receive Status IRQ can use ICU Group 3 or Group 5.
Name	Name must be a valid C symbol	g_i3c0	Module name.
Callback	Name must be a valid C symbol	g_i3c0_callback	A user callback function must be provided. This will be called in order to notify the application of I3C events and provide status information.
Callback Context	Name must be a valid C symbol	NULL	A pointer to additional application specific information that is provided to the callback.
Device Type	• Main Master • Slave	Slave	The role that the I3C instance will take on the I3C bus.

Bus Free Condition Detection Time (ns)	Must be greater than or equal to 38.4 nanoseconds.	38.4	The minimum period occurring after a STOP and before a START.
Bus Available Condition Detection Time (us)	Must be greater than or equal to 1 microsecond.	1	The minimum period occurring after the Bus Free Condition when Slaves can initiate IBI requests.
Bus Idle Condition Detection Time (us)	Must be greater than or equal to 1000 microseconds.	1000	The minimum period occurring after the Bus Available Condition when Slaves can initiate Hot-Join requests.
Timeout Detection	• Enabled • Disabled	Disabled	If enabled, the application will get a callback if SCL is stuck at a logic high or logic low level for more than 65535 cycles of the I3C source clock.

Clock Configuration

The I3C peripheral is clocked off of PCLKB and PCLKD. The SCL clock is generated by the I3C internal clock which is derived from PCLKD.

The following settings are used to configure SCL.

- Frequency of PCLKD
- Standard Mode
  - Open Drain High Period (T_{HIGH})
  - Open Drain Frequency
  - Push-Pull High Period (T_{HIGH})
  - Push-Pull Frequency
- Extended Mode
  - Open Drain High Period (T_{HIGH})
  - Open Drain Frequency
  - Push-Pull High Period (T_{HIGH})
  - Push-Pull Frquency
- i3c_bitrate_mode_t (Set during i3c_api_t::deviceSelect)

The Standard and Extended Mode settings define two seperate SCL configurations that can be selected at run-time using i3c_api_t::deviceSelect.

In addition to selecting between the Standard and Extended Mode settings, the base SCL period can also be multiplied using the following options:

- I3C_BITRATE_MODE_I3C_SDR2_STDBR_X2: Multiple the base Standard Open Drain and Push-Pull period by 2.
- I3C_BITRATE_MODE_I3C_SDR3_EXTBR_X2: Multiple the base Extended Open Drain and Push-Pull period by 2.
- I3C_BITRATE_MODE_I3C_SDR4_EXTBR_X4: Multiple the base Extended Open Drain and Push-

Pull period by 4.

In order to get accurate frequency calculations, the Rising and Falling edges must be input into the calculation. These values will depend on the topology the I3C bus that will be different for every application.

Note

1. The Standard and Extended Open Drain period settings define the period to use during legacy I2C transfers (Only use the following i3c_bitrate_mode_t settings with I2C transfers: I3C_BITRATE_MODE_I2C_STDBR, I3C_BITRATE_MODE_I2C_EXTBR).
2. The clock frequency ratio of PCLKD and PCLKB must be 2:1 or 1:1 when using the I3C module. Operation is not guaranteed for other settings.
3. T_{HIGH} is defined in Figure 31 in the MIPI I3C Specification v1.0 and describe the Logic High period.

Pin Configuration

The I3C peripheral module uses pins on the MCU to communicate to external devices. I/O pins must be selected and configured as required by the external device. An I3C channel would consist of two pins - SDA and SCL for data/address and clock respectively.

Usage Notes

Read and Write in Slave Mode

In slave mode, calling read or write does not start a transfer. Instead, calling read or write will configure the driver to perform the next read or write transfer using the user provided buffer.

Provided that a transfer is not already in progress, i3c_api_t::read and i3c_api_t::write can be called to update the internal buffers even if the transfer has not been completed yet. Both the read and write buffers can be configured at the same time in order to prepare the driver for when the master initiates a read or a write transfer.

If there is no space remaining in a user configured read buffer, the application will get a I3C_EVENT_READ_BUFFER_FULL callback requesting for a new read buffer to be provided.

Event Status

When a write, read, ibiWrite, ibiRead or commandSend, operation is completed, the i3c_callback_args_t::event_status should be checked. The event_status will provide information about the success or failure of the operation.

The following are possible statuses:

- I3C_EVENT_STATUS_SUCCESS
- I3C_EVENT_STATUS_PARITY
- I3C_EVENT_STATUS_FRAME
- I3C_EVENT_STATUS_ADDRESS_HEADER
- I3C_EVENT_STATUS_NACK
- I3C_EVENT_STATUS_OVERFLOW
- I3C_EVENT_STATUS_ABORTED_TO_MASTER
- I3C_EVENT_STATUS_ABORTED

Note

In master mode, if the master issues a stop condition before the slave ends the transfer via the 'T' bit, the status will

be I3C_EVENT_STATUS_ABORTED.
In slave mode, if the master issues a stop condition before the slave ends the transfer via the 'T' bit, the status will be I3C_EVENT_STATUS_ABORTED_TO_MASTER.

Direct Get Common Command Codes in Slave Mode

When an I3C slave receives a Command Code of type Direct Get, the response is automatically sent from the device Special Function Registers (SFR). The SFR contains information for each command code and can be configured during open (See i3c_extended_cfg_t::slave_command_response_info). This allows the slave to respond to Direct Get Command Codes much faster, and removes the burden of responding to these commands from the application.

The response to the GETSTATUS command can be configured at run-time using i3c_api_t::slaveStatusSet.

Disabling Unaligned Buffer Support

Support for performing read and write operations on unaligned buffers can be disabled in order to improve performance. When unaligned buffer support is disabled, all buffers passed to read, ibiRead, write, ibiWrite, and commandSend must be aligned to 4 bytes and the size of the buffers must be a multiple of 4 bytes.

In master mode, the value of the length passed to i3c_api_t::read and i3c_api_t::write sets the total length of the operation in bytes. During the read or write operation, the driver may read or write to the last word of memory during the operation. This means that the allocated memory for the buffer passed to read and write needs to be a multiple of 4 bytes even though the transfer length is not a multiple of 4 bytes.

In slave mode, the length passed to i3c_api_t::read must be a multiple of 4 bytes. The length passed to i3c_api_t::write sets the number of bytes that the slave will write. The size of the buffer passed to write still needs to be a multiple of 4 bytes.

Max Data Speed Limitation

In Slave Mode, it is highly reccomended that BCR[0] be set to '1' in order to indicate to the master that the device doesn't support the max data speed. The master is then required to use the GETMXDS command to get the device specific data speed limitations.

This will alow the slave to specify its Maximum Supported Data Rate for read/write transfers and the Maximum Read Turnaround Time (See GETMXDS in the MIPI I3C Specification v1.0).

Mixed Fast Bus

The MIPI I3C Specification v1.0 defines a Mixed Fast Bus as a bus that has legacy I2C devices that all have a 50ns Spike Filter.

On Mixed Fast Buses, SCL has the following constraints during I3C SDR transfers:

- SCL High Period: $t_{DIG_H_MIXED(MIN)}$ to $t_{DIG_H_MIXED(MAX)}$
- SCL Low Period: Up to $t_{DIG_L(MAX)}$

In this case, configure the Extended Bitrate settings for I3C SDR transfers, and use the Standard Bitrate settings for I2C transfers.

Note

1. See section 5.1.2.4 in the MIPI I3C Specification v1.0.

Mixed Slow Bus

The MIPI I3C Specification v1.0 defines a Mixed Slow Bus as a bus that has legacy I2C devices that do not have a 50ns Spike Filter.

In this case, the SCL frequency is limited to I2C Fast Mode or I2C Fast Mode Plus.

Note

1. See section 5.1.2.4 in the MIPI I3C Specification v1.0.

Limitations

Developers should be aware of the following limitations when using the I3C:

- The I3C peripheral on the RA2E2 has a hardware defect related to using ENTDAA in slave mode. When the ENTDAA command is received, the peripheral will continue driving its PID, DCR, and BCR registers even after its dynamic address has been configured. This will prevent any other devices from being configured on the bus. One workaround for this limitation is to configure the device Provisional ID to all '1's in order to ensure that the device is initialized last. If more than one device with this limitation is present on the same bus, consider initializing them using another method (Eg. SETDASA).
- The MIPI Reserved area and Vendor Extension area of Command Codes are not supported.
- Mixed Fast Bus topology has the following limitation on RA2E2 MCUs. The minimum SCL high period (T_{DIG_H}) is 156 nanoseconds when PCLKD is 48 Mhz, and 120 nanoseconds when PCLKD is 64 Mhz. On a Mixed Fast Bus, the high period $T_{DIG_HIGH_MIXED}$ must be less than 45 nanoseconds in order to ensure that Legacy I2C devices do not interpret I3C signaling as valid I2C signaling (See Table 111 Push-Pull-Timing Parameters in the MIPI I3C Specification v1.1). This required high period cannot be achievable with RA2E2 MCUs.
- Secondary Master device role is not currently supported.

Examples

I3C Master Basic Example

This is a basic example of minimal use of the I3C Master in an application.

```
void i3c_master_basic_example (void)
{
 /* Initializes the module. */
 fsp_err_t status = R_I3C_Open(&g_i3c_ctrl, &g_i3c_cfg);
    assert(FSP_SUCCESS == status);
 static i3c_device_cfg_t master_device_cfg =
    {
 /* This is the Static I3C / I2C Legacy address defined by the device manufacturer.
*/
       .static_address = EXAMPLE_MASTER_STATIC_ADDRESS,
```

```
 /* If the device is a main master, it must configure its own dynamic address. */
       .dynamic_address = EXAMPLE_MASTER_DYNAMIC_ADDRESS,
    };
    status = R_I3C_DeviceCfgSet(&g_i3c_ctrl, &master_device_cfg);
    assert(FSP_SUCCESS == status);
 static i3c_device_table_cfg_t device_table_cfg =
    {
 /* This is the Static I3C / I2C Legacy address defined by the device manufacturer.
*/
       .static_address       = EXAMPLE_STATIC_ADDRESS,
 /* Dynamic address is not used in I2C. */
       .dynamic_address       = EXAMPLE_DYNAMIC_ADDRESS,
 /* This is the type of device. It may be either an I2C device or an I3C device. */
       .device_protocol       = I3C_DEVICE_PROTOCOL_I3C,
       .ibi_accept            = false,
 /* Depending on the device the IBI requests may have a data payload.
  * Note that this field will be automatically updated if the device is configured
using ENTDAA.
  */
       .ibi_payload          = false,
 /* Master requests cannot be accepted because Secondary Master is not supported. */
       .master_request_accept = false,
    };
 /* Set the device configuration in the master device table. */
    status = R_I3C_MasterDeviceTableSet(&g_i3c_ctrl, 0, &device_table_cfg);
    assert(FSP_SUCCESS == status);
 /* Enable the I3C device. */
    status = R_I3C_Enable(&g_i3c_ctrl);
    assert(FSP_SUCCESS == status);
 /* Start assigning dynamic addresses to devices on the bus using the ENTDAA command.
*/
    status = R_I3C_DynamicAddressAssignmentStart(&g_i3c_ctrl,
I3C_ADDRESS_ASSIGNMENT_MODE_ENTDAA, 0, 1);
    assert(FSP_SUCCESS == status);
```

```
 /* Wait for dynamic address assignment to complete. */
    i3c_app_event_wait(I3C_EVENT_ADDRESS_ASSIGNMENT_COMPLETE);
 /* Select the configured device and bitrate mode for the following operations. */
    status = R_I3C_DeviceSelect(&g_i3c_ctrl, 0, I3C_BITRATE_MODE_I3C_SDR0_STDBR);
    assert(FSP_SUCCESS == status);
 /* Start a write transfer. */
 static uint8_t p_write_buffer[] = {1, 2, 3, 4, 5};
    status = R_I3C_Write(&g_i3c_ctrl, p_write_buffer, sizeof(p_write_buffer), false);
    assert(FSP_SUCCESS == status);
 /* Wait for the write transfer to complete. */
    i3c_app_event_wait(I3C_EVENT_WRITE_COMPLETE);
 /* Start a read transfer. */
 static uint8_t p_read_buffer[16];
    status = R_I3C_Read(&g_i3c_ctrl, p_read_buffer, sizeof(p_read_buffer), false);

```

I3C Slave In-band Interrupts Example

This is a basic example of writing In-band Interrupts in I3C Slave mode.

```
void i3c_slave_ibi_write_basic_example (void)
{
    uint8_t ibi_write_buffer[EXAMPLE_WRITE_BUFFER_SIZE];
 /* Initiate an In-band interrupt in slave mode.
  * Note: If the slave does not have an IBI payload or if it is a Hot-Join request,
the write buffer should be set
  * to NULL and the write length should be set to 0. */
```

```
 fsp_err_t status = R_I3C_IbiWrite(&g_i3c_ctrl, I3C_IBI_TYPE_INTERRUPT,
ibi_write_buffer, sizeof(ibi_write_buffer));
    assert(FSP_SUCCESS == status);
 /* Wait for the ibiWrite transfer to complete. */
    i3c_app_event_wait(I3C_EVENT_IBI_WRITE_COMPLETE);
}
void i3c_slave_ibi_write_basic_example_callback (i3c_callback_args_t const * const
p_args)
{
 switch (p_args->event)
    {
 case I3C_EVENT_IBI_WRITE_COMPLETE:
      {
 /* Notify the application that the IBI write is complete. */
           i3c_app_event_notify(I3C_EVENT_IBI_WRITE_COMPLETE);
 break;
       }
 default:
      {
 break;
       }
    }
}
```

I3C Master Common Command Codes Example

This is a basic example of sending Common Command Codes in I3C Master mode.

```
void i3c_master_ccc_example (void)
{
 static uint8_t command_buffer[EXAMPLE_READ_BUFFER_SIZE];
 /* Setup the command descriptor. */
 static i3c_command_descriptor_t command_descriptor =
    {
       .command_code = I3C_CCC_DIRECT_GETSTATUS,
```

```
 /* Set a buffer for storing the data read by the command. */
       .p_buffer    = command_buffer,
 /* The length for a GETSTATUS command is 2 bytes. */
       .length       = 2,
 /* Terminate the transfer with a STOP condition. */
       .restart      = false,
 /* The GETSTATUS command is a Direct Get Command so rnw should be true. */
       .rnw          = true,
    };
 /* Send the command. */
 fsp_err_t status = R_I3C_CommandSend(&g_i3c_ctrl, &command_descriptor);
    assert(FSP_SUCCESS == status);
 /* Wait for the command to complete. */
    i3c_app_event_wait(I3C_EVENT_COMMAND_COMPLETE);
 /* The command_buffer will have the status info that was read from the slave device.
*/
}
void i3c_master_ccc_example_callback (i3c_callback_args_t const * const p_args)
{
 switch (p_args->event)
    {
 case I3C_EVENT_COMMAND_COMPLETE:
      {
 /* Notify the application that the command is complete. */
            i3c_app_event_notify(I3C_EVENT_COMMAND_COMPLETE);
 break;
       }
 default:
      {
 break;
       }
    }
}
```

I3C Slave Common Command Codes Example

This is a basic example of receiving Common Command Codes in I3C Slave mode.

```
void i3c_slave_ccc_example (void)
{
 static uint8_t read_buffer[EXAMPLE_READ_BUFFER_SIZE];
 /* Broadcast and Direct Set commands will be read into the read_buffer the same way
that
  * a normal SDR Master Write / Slave Read transfer is read. */
 fsp_err_t status = R_I3C_Read(&g_i3c_ctrl, read_buffer, sizeof(read_buffer), false);
    assert(FSP_SUCCESS == status);
 /* Wait for the command to complete. */
    i3c_app_event_wait(I3C_EVENT_COMMAND_COMPLETE);
}
void i3c_slave_ccc_example_callback (i3c_callback_args_t const * const p_args)
{
 switch (p_args->event)
    {
 case I3C_EVENT_COMMAND_COMPLETE:
     {
 /* The command code and transfer size will be available in p_args.
  * If the command code is a Broadcast or Direct Set, then data will
  * be stored in the read buffer provided by i3c_api_t::read.
  * If the command code is a Direct Get, then the data will be automatically
  * sent from device SFR. */
           i3c_app_event_notify(I3C_EVENT_COMMAND_COMPLETE);
 break;
      }
 default:
     {
 break;
      }
    }
}
```

enum	i3c_clock_data_turnaround_t

Data Structure Documentation

◆ i3c_clock_stalling_t

struct i3c_clock_stalling_t		
Clock stalling settings.		
Data Fields		
uint32_t	assigned_address_phase_enable: 1	Enable Clock Stalling during the address phase of the ENTDAA command.
uint32_t	transition_phase_enable: 1	Enable Clock Stalling during the transition bit in read transfers.
uint32_t	parity_phase_enable: 1	Enable Clock Stalling during the parity bit period in write transfers.
uint32_t	ack_phase_enable: 1	Enable Clock Stalling during the ACK/NACK phase.
uint16_t	clock_stalling_time	The amount of time to stall the clock in I3C source clock ticks.

◆ i3c_bitrate_settings_t

struct i3c_bitrate_settings_t		
Bitrate settings for configuring the SCL clock frequency.		
Data Fields		
uint32_t	stdbr	The standard bitrate settings.
uint32_t	extbr	The extended bitrate settings.
i3c_clock_stalling_t	clock_stalling	Clock Stalling settings (See

		Master Clock Stalling in the MIPI I3C Specification v1.0).

◆ i3c_ibi_control_t

struct i3c_ibi_control_t		
Settings for controlling the drivers behavior in response to IBIs.		
Data Fields		
uint32_t	hot_join_acknowledge: 1	If false, NACK all Hot Join requests.
uint32_t	notify_rejected_hot_join_requests: 1	Notify the application when an IBI Hot-Join request has been NACK'd.
uint32_t	notify_rejected_mastership_requests: 1	Notify the application when an IBI Mastership request has been NACK'd.
uint32_t	notify_rejected_interrupt_requests: 1	Notify the application when an IBI Interrupt request has been NACK'd.

◆ i3c_slave_command_response_info_t

struct i3c_slave_command_response_info_t		
Default configuration settings for the slave response to Direct Get Common Command Codes.		
Data Fields		
bool	inband_interrupt_enable	Enable IBI interrupts. Slave Event Settings (See ENEC and DISEC in the MIPI I3C Specification v1.0).
bool	mastership_request_enable	Enable Mastership requests.
bool	hotjoin_request_enable	Enable Hot-Join requests.
i3c_activity_state_t	activity_state	Starting Activity State (See ENTASn in the MIPI I3C Specification v1.0).
uint16_t	write_length	Max Write Length (See SETMWL and GETMWL in the MIPI I3C Specification v1.0).
uint16_t	read_length	Max Read Length (See SETMRL and GETMRL in the MIPI I3C Specification v1.0).
uint8_t	ibi_payload_length	Number of bytes that will be written by an IBI (See SETMRL and GETMRL in the MIPI I3C Specification v1.0).

i3c_data_rate_setting_t	write_data_rate	Max Write Data Rate. Max Data Rate Settings (See GETMXDS in the MIPI I3C Specification v1.0).
i3c_data_rate_setting_t	read_data_rate	Max Read Data Rate.
i3c_clock_data_turnaround_t	clock_data_turnaround	Max Data Speed Turnaround.
bool	read_turnaround_time_enable	Enable transmission of the of the Max Read Max Read Turnaround Time.
uint32_t	read_turnaround_time	Max Read Turnaround Time.
uint8_t	oscillator_frequency	This byte represents the Slave's internal oscillator frequency in increments of 0.5 MHz (500kHz), up to 127.5 MHz. (See GETXTIME in the MIPI I3C Specification v1.1).
uint8_t	oscillator_inaccuracy	Oscillator inaccuracy in 0.5% increments of 0% up to 25.5% (See GETXTIME in the MIPI I3C Specification v1.1).

◆ i3c_instance_ctrl_t

struct i3c_instance_ctrl_t	
Channel control block. DO NOT INITIALIZE. Initialization occurs when i3c_api_t::open is called.	
Public Member Functions	
i3c_slave_info_t current_slave_info	BSP_ALIGN_VARIABLE (4)
	The last i3c_slave_info_t read during ENTDAA.
Data Fields	
uint32_t	open
	Indicates whether the open() API has been successfully called.
R_I3C0_Type *	p_reg
	Base register for this channel.
volatile uint32_t	internal_state
	Used to track the current state of the driver.

uint8_t	current_command_code
	The current Common Command Code that is being transferred.
uint32_t	device_index
	The device index selected using i3c_api_t::deviceSelect.
i3c_bitrate_mode_t	device_bitrate_mode
	Runtime bitrate settings to use for the next transfer.
uint32_t	next_word
	The next word that will be written to the FIFO.
uint32_t	ibi_next_word
	The next word that will be written to the IBI FIFO.
i3c_write_buffer_descriptor_t	write_buffer_descriptor
	Buffer descriptor for keeping track of a write transfer.
i3c_read_buffer_descriptor_t	read_buffer_descriptor
	Buffer descriptor for keeping track of a read transfer.
i3c_read_buffer_descriptor_t	ibi_buffer_descriptor
	Buffer descriptor for keeping track of an IBI read/write transfer.
volatile uint32_t	read_transfer_count_final
	The total number of bytes read during a read transfer.

volatile uint32_t	ibi_transfer_count_final
	The total number of bytes read during an IBI transfer.
i3c_cfg_t const *	p_cfg
	A pointer to the configuration structure provided during open.

◆ i3c_extended_cfg_t

struct i3c_extended_cfg_t		
Extended configuration for r_i3c.		
Data Fields		
i3c_bitrate_settings_t	bitrate_settings	Bitrate settings configuring the frequency and duty cycle for SCL.
i3c_ibi_control_t	ibi_control	Configure the driver's behavior in response to IBIs.
uint32_t	bus_free_detection_time	The time in I3C reference clock ticks needed in order to detect the bus free condition (See "Bus Free Condition" in the MIPI I3C Specification v1.0).
uint32_t	bus_available_detection_time	The time in I3C reference clock ticks needed in order to detect the bus available condition (See "Bus Available Condition" in the MIPI I3C Specification v1.0).
uint32_t	bus_idle_detection_time	The time in I3C reference clock ticks needed in order to detect the bus idle condition (See "Bus Idle Condition" in the MIPI I3C Specification v1.0).
bool	timeout_detection_enable	Notify the application if SCL is stuck high or low.
i3c_slave_command_response_info_t	slave_command_response_info	Initial settings for configuring the slave's responses to received commands.
IRQn_Type	resp_irq	Response Queue Full IRQ number.
IRQn_Type	rx_irq	Receive FIFO Full IRQ number.
IRQn_Type	tx_irq	Transmit FIFO Empty IRQ

		number.
IRQn_Type	rcv_irq	Receive Status Queue Full IRQ number.
IRQn_Type	ibi_irq	IBI IRQ number.
IRQn_Type	eei_irq	EEI IRQ number.
uint8_t	ipl	Interrupt Priority for Resp, Rx, Tx, and RCV IRQs.
uint8_t	eei_ipl	Error and Event Interrupt Priority.

Macro Definition Documentation

◆ I3C_DEVICE_INDEX_EXTENDED_DEVICE

```
#define I3C_DEVICE_INDEX_EXTENDED_DEVICE
```

Index for selecting the device defined in the extended address table.

◆ I3C_EVENT_STATUS_SUCCESS

```
#define I3C_EVENT_STATUS_SUCCESS
```

The transfer was completed as expected.

Event Status Provided by the callback.

Enumeration Type Documentation

◆ i3c_bitrate_mode_t

enum i3c_bitrate_mode_t	
Bitrate settings that can be selected at run-time using i3c_api_t::deviceSelect.	
Enumerator	
I3C_BITRATE_MODE_I2C_STDBR	Use the period settings defined in STDBRH/L.
I3C_BITRATE_MODE_I2C_EXTBR	Use the period settings defined in EXTBRH/L.
I3C_BITRATE_MODE_I3C_SDR0_STDBR	Use the period settings defined in STDBRH/L (I3C Devices only).
I3C_BITRATE_MODE_I3C_SDR1_EXTBR	Use the period settings defined in EXTBRH/L (I3C Devices only).
I3C_BITRATE_MODE_I3C_SDR2_STDBR_X2	Use the period settings defined in STDBRH/L x 2 (I3C Devices only).
I3C_BITRATE_MODE_I3C_SDR3_EXTBR_X2	Use the period settings defined in EXTBRH/L x 2 (I3C Devices only).
I3C_BITRATE_MODE_I3C_SDR4_EXTBR_X4	Use the period settings defined in EXTBRH/L x 4 (I3C Devices only).

◆ i3c_activity_state_t

enum i3c_activity_state_t	
Supported activity states for ENTASn Command (See ENTASn in the MIPI I3C Specification v1.0).	
Enumerator	
I3C_ACTIVITY_STATE_ENTAS0	Activity Interval (1 microsecond).
I3C_ACTIVITY_STATE_ENTAS1	Activity Interval (100 microseconds).
I3C_ACTIVITY_STATE_ENTAS2	Activity Interval (2 milliseconds).
I3C_ACTIVITY_STATE_ENTAS3	Activity Interval (50 milliseconds).

◆ i3c_data_rate_setting_t

enum i3c_data_rate_setting_t	
Maximum Sustained Data Rate for non-CCC messages sent by Master Device to Slave Device (See GETMXDS in the MIPI I3C Specification v1.0).	
Enumerator	
I3C_DATA_RATE_SETTING_FSCL_MAX	There is no data rate limit.
I3C_DATA_RATE_SETTING_8MHZ	The max sustained data rate is 8 Mhz.
I3C_DATA_RATE_SETTING_6MHZ	The max sustained data rate is 6 Mhz.
I3C_DATA_RATE_SETTING_4MHZ	The max sustained data rate is 4 Mhz.
I3C_DATA_RATE_SETTING_2MHZ	The max sustained data rate is 2 Mhz.

◆ i3c_clock_data_turnaround_t

enum i3c_clock_data_turnaround_t	
Clock to Data Turnaround Time (See GETMXDS in the MIPI I3C Specification v1.0).	
Enumerator	
I3C_CLOCK_DATA_TURNAROUND_8NS	Clock to turnaround time is 8 nanoseconds or less.
I3C_CLOCK_DATA_TURNAROUND_9NS	Clock to turnaround time is 9 nanoseconds or less.
I3C_CLOCK_DATA_TURNAROUND_10NS	Clock to turnaround time is 10 nanoseconds or less.
I3C_CLOCK_DATA_TURNAROUND_11NS	Clock to turnaround time is 11 nanoseconds or less.
I3C_CLOCK_DATA_TURNAROUND_12NS	Clock to turnaround time is 12 nanoseconds or less.
I3C_CLOCK_DATA_TURNAROUND_EXTENDED	Clock to turnaround time is greater than 12 nanoseconds.

Function Documentation

◆ R_I3C_Open()

fsp_err_t R_I3C_Open (i3c_ctrl_t *const *p_api_ctrl*, i3c_cfg_t const *const *p_cfg*)

Configure an I3C instance. Implements i3c_api_t::open.

Return values

FSP_SUCCESS	Open successful.
FSP_ERR_ASSERTION	An argument was invalid.
FSP_ERR_ALREADY_OPEN	Open has already been called for this instance.
FSP_ERR_UNSUPPORTED	A selected feature is not supported with the current configuration.

◆ R_I3C_Enable()

fsp_err_t R_I3C_Enable (i3c_ctrl_t *const *p_api_ctrl*)

Enable the I3C device.

Return values

FSP_SUCCESS	Open successful.
FSP_ERR_ASSERTION	An argument was NULL.
FSP_ERR_NOT_OPEN	This instance has not been opened yet.
FSP_ERR_INVALID_MODE	This instance is already enabled.

◆ R_I3C_DeviceCfgSet()

fsp_err_t R_I3C_DeviceCfgSet (i3c_ctrl_t *const *p_api_ctrl*, i3c_device_cfg_t const *const *p_device_cfg*)

Set the configuration for this device.

Return values

FSP_SUCCESS	Open successful.
FSP_ERR_ASSERTION	An argument was NULL.
FSP_ERR_NOT_OPEN	This instance has not been opened yet.
FSP_ERR_UNSUPPORTED	The device cannot be a secondary master if master support is disabled.

◆ R_I3C_MasterDeviceTableSet()

fsp_err_t R_I3C_MasterDeviceTableSet (i3c_ctrl_t *const *p_api_ctrl*, uint32_t *device_index*, i3c_device_table_cfg_t const *const *p_device_table_cfg*)

Configure an entry in the master device table. This function is called in master mode in order to configure the devices on the I3C bus. It may also be called in slave mode when the slave receives the DEFSVLS command.

Return values

FSP_SUCCESS	Open successful.
FSP_ERR_ASSERTION	An argument was NULL.
FSP_ERR_NOT_OPEN	This instance has not been opened yet.
FSP_ERR_UNSUPPORTED	Mastership requests must be rejected is slave support is disabled.

◆ R_I3C_SlaveStatusSet()

fsp_err_t R_I3C_SlaveStatusSet (i3c_ctrl_t *const *p_api_ctrl*, i3c_device_status_t *status*)

Set the status returned to the master in response to a GETSTATUS command.

Return values

FSP_SUCCESS	Open successful.
FSP_ERR_ASSERTION	An argument was NULL.
FSP_ERR_NOT_OPEN	This instance has not been opened yet.
FSP_ERR_INVALID_MODE	The instance is not in slave mode.
FSP_ERR_UNSUPPORTED	Slave support is disabled.

◆ R_I3C_DeviceSelect()

fsp_err_t R_I3C_DeviceSelect (i3c_ctrl_t *const *p_api_ctrl*, uint32_t *device_index*, uint32_t *bitrate_mode*)

In master mode, select the device for the next transfer. This function is not used in slave mode.

Return values

FSP_SUCCESS	Open successful.
FSP_ERR_ASSERTION	An argument was NULL.
FSP_ERR_NOT_OPEN	This instance has not been opened yet.
FSP_ERR_INVALID_MODE	This operation is prohibited in slave mode.
FSP_ERR_UNSUPPORTED	Master support is disabled.

◆ R_I3C_DynamicAddressAssignmentStart()

fsp_err_t R_I3C_DynamicAddressAssignmentStart (i3c_ctrl_t *const *p_api_ctrl*, i3c_address_assignment_mode_t *address_assignment_mode*, uint32_t *starting_device_index*, uint32_t *device_count*)

Start the Dynamic Address Assignment Process. Implements i3c_api_t::dynamicAddressAssignmentStart.

Return values

FSP_SUCCESS	Open successful.
FSP_ERR_ASSERTION	An argument was NULL or invalid.
FSP_ERR_NOT_OPEN	This instance has not been opened yet.
FSP_ERR_INVALID_MODE	This operation is prohibited in slave mode.
FSP_ERR_IN_USE	The operation could not be completed because the driver is busy.
FSP_ERR_UNSUPPORTED	Master support is disabled.

◆ R_I3C_CommandSend()

fsp_err_t R_I3C_CommandSend (i3c_ctrl_t *const *p_api_ctrl*, i3c_command_descriptor_t * *p_command_descriptor*)

Send a broadcast or direct command to slave devices on the bus. Implements i3c_api_t::commandSend.

Return values

FSP_SUCCESS	Open successful.
FSP_ERR_ASSERTION	An argument was NULL.
FSP_ERR_NOT_OPEN	This instance has not been opened yet.
FSP_ERR_IN_USE	The operation could not be completed because the driver is busy.
FSP_ERR_INVALID_MODE	This driver is not in master mode.
FSP_ERR_INVALID_ALIGNMENT	The buffer must be aligned to 4 bytes. If it is a read operation, the length also be a multiple of 4 bytes.
FSP_ERR_UNSUPPORTED	Master support must be enabled to call this function. Slave support must be enabled when sending the GETACCMST command.

◆ R_I3C_Write()

fsp_err_t R_I3C_Write (i3c_ctrl_t *const *p_api_ctrl*, uint8_t const *const *p_data*, uint32_t *length*, bool *restart*)

Set the write buffer for the transfer. In master mode, start the transfer. When the transfer is completed send a stop condition or a repeated-start. Implements i3c_api_t::write.

Return values

FSP_SUCCESS	Open successful.
FSP_ERR_ASSERTION	An argument was NULL.
FSP_ERR_NOT_OPEN	This instance has not been opened yet.
FSP_ERR_IN_USE	The operation could not be completed because the driver is busy.
FSP_ERR_INVALID_MODE	This driver is disabled.
FSP_ERR_INVALID_ALIGNMENT	The buffer must be aligned to 4 bytes.

◆ R_I3C_Read()

fsp_err_t R_I3C_Read (i3c_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_data*, uint32_t *length*, bool *restart*)

Set the read buffer for the transfer. In master mode, start the transfer. When the transfer is completed send a stop condition or a repeated-start. Implements i3c_api_t::read.

Return values

FSP_SUCCESS	Open successful.
FSP_ERR_ASSERTION	An argument was NULL.
FSP_ERR_NOT_OPEN	This instance has not been opened yet.
FSP_ERR_IN_USE	The operation could not be completed because the driver is busy.
FSP_ERR_INVALID_MODE	This driver is disabled.
FSP_ERR_INVALID_ALIGNMENT	The buffer must be aligned to 4 bytes and the length must be a multiple of 4 bytes.

◆ R_I3C_IbiWrite()

fsp_err_t R_I3C_IbiWrite (i3c_ctrl_t *const *p_api_ctrl*, i3c_ibi_type_t *ibi_type*, uint8_t const *const *p_data*, uint32_t *length*)

Initiate an IBI write operation (This function is only used in slave mode).

Return values

FSP_SUCCESS	Open successful.
FSP_ERR_ASSERTION	An argument was NULL.
FSP_ERR_NOT_OPEN	This instance has not been opened yet.
FSP_ERR_IN_USE	The operation could not be completed because the driver is busy.
FSP_ERR_INVALID_MODE	This function is only called in slave mode.
FSP_ERR_INVALID_ALIGNMENT	The buffer must be aligned to 4 bytes.
FSP_ERR_UNSUPPORTED	Slave supoprt is disabled.

◆ R_I3C_IbiRead()

fsp_err_t R_I3C_IbiRead (i3c_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_data*, uint32_t *length*)
Set the read buffer for storing received IBI data (This function is only used in master mode). **Return values** FSP_SUCCESS — Open successful. FSP_ERR_ASSERTION — An argument was NULL. FSP_ERR_NOT_OPEN — This instance has not been opened yet. FSP_ERR_INVALID_MODE — This function is only called in master mode. FSP_ERR_INVALID_ALIGNMENT — The buffer must be aligned to 4 bytes and the length must be a multiple of 4 bytes. FSP_ERR_UNSUPPORTED — Master support is disabled.

◆ R_I3C_Close()

fsp_err_t R_I3C_Close (i3c_ctrl_t *const *p_api_ctrl*)
Close the I3C instance. Implements i3c_api_t::close. **Return values** FSP_SUCCESS — Open successful. FSP_ERR_ASSERTION — An argument was NULL. FSP_ERR_NOT_OPEN — This instance has not been opened yet.

4.2.32 Interrupt Controller Unit (r_icu)

Modules

Functions

fsp_err_t	R_ICU_ExternalIrqOpen (external_irq_ctrl_t *const p_api_ctrl, external_irq_cfg_t const *const p_cfg)
fsp_err_t	R_ICU_ExternalIrqEnable (external_irq_ctrl_t *const p_api_ctrl)
fsp_err_t	R_ICU_ExternalIrqDisable (external_irq_ctrl_t *const p_api_ctrl)
fsp_err_t	R_ICU_ExternalIrqCallbackSet (external_irq_ctrl_t *const p_api_ctrl, void(*p_callback)(external_irq_callback_args_t *), void const *const

	p_context, external_irq_callback_args_t *const p_callback_memory)
fsp_err_t	R_ICU_ExternalIrqClose (external_irq_ctrl_t *const p_api_ctrl)

Detailed Description

Driver for the ICU peripheral on RA MCUs. This module implements the External IRQ Interface.

Overview

The Interrupt Controller Unit (ICU) controls which event signals are linked to the NVIC, DTC, and DMAC modules. The R_ICU software module only implements the External IRQ Interface. The external_irq interface is for configuring interrupts to fire when a trigger condition is detected on an external IRQ pin.

Note

Multiple instances are used when more than one external interrupt is needed. Configure each instance with different channels and properties as needed for the specific interrupt.

Features

- Supports configuring interrupts for IRQ pins on the target MCUs
  - Enabling and disabling interrupt generation.
  - Configuring interrupt trigger on rising edge, falling edge, both edges, or low level signal.
  - Enabling and disabling the IRQ noise filter.
- Supports configuring a user callback function, which will be invoked by the HAL module when an external pin interrupt is generated.

Configuration

Build Time Configurations for r_icu

The following build time configurations are defined in fsp_cfg/r_icu_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Input > External IRQ (r_icu)

This module can be added to the Stacks tab via New Stack > Input > External IRQ (r_icu). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description

Name	Name must be a valid C symbol	g_external_irq0	Module name.
Channel	Value must be an integer between 0 and 15	0	Specify the hardware channel.
Trigger	• Falling • Rising • Both Edges • Low Level	Rising	Select the signal edge or state that triggers an interrupt.
Digital Filtering	• Enabled • Disabled	Disabled	Select if the digital noise filter should be enabled.
Digital Filtering Sample Clock (Only valid when Digital Filtering is Enabled)	• PCLK / 1 • PCLK / 8 • PCLK / 32 • PCLK / 64	PCLK / 64	Select the clock divider for the digital noise filter.
Callback	Name must be a valid C symbol	NULL	A user callback function can be provided here. If this callback function is provided, it is called from the interrupt service routine (ISR) each time the IRQn triggers
Pin Interrupt Priority	MCU Specific Options		Select the PIN interrupt priority.

Clock Configuration

The ICU peripheral module doesn't require any specific clock settings.

Note

The digital filter uses PCLKB as the clock source for sampling the IRQ pin.

Pin Configuration

The pin for the external interrupt channel must be configured as an input with IRQ Input Enabled.

Usage Notes

Digital Filter

The digital filter is used to reject trigger conditions that are too short. The trigger condition must be longer than three periods of the filter clock. The filter clock frequency is determined by PCLKB and the external_irq_pclk_div_t setting.

MIN_PULSE_WIDTH = EXTERNAL_IRQ_PCLKB_DIV / PCLKB_FREQUENCY * 3

DMAC/DTC

When using an External IRQ pin to trigger a DMAC/DTC transfer, the External IRQ pin must be opened before the transfer instance is opened.

Examples

Basic Example

This is a basic example of minimal use of the ICU in an application.

```
#define ICU_IRQN_PIN BSP_IO_PORT_02_PIN_06
#define ICU_IRQN 6
/* Called from icu_irq_isr */
void external_irq_callback (external_irq_callback_args_t * p_args)
{
    (void) p_args;
    g_external_irq_complete = 1;
}
void simple_example ()
{
 /* Example Configuration */
 external_irq_cfg_t icu_cfg =
    {
       .channel       = ICU_IRQN,
       .trigger       = EXTERNAL_IRQ_TRIG_RISING,
       .filter_enable = false,
       .pclk_div      = EXTERNAL_IRQ_PCLK_DIV_BY_1,
       .p_callback    = external_irq_callback,
       .p_context    = 0,
       .ipl          = 0,
       .irq          = (IRQn_Type) 0,
    };
 /* Configure the external interrupt. */
 fsp_err_t err = R_ICU_ExternalIrqOpen(&g_icu_ctrl, &icu_cfg);
    assert(FSP_SUCCESS == err);
 /* Enable the external interrupt. */
 /* Enable not required when used with ELC or DMAC. */
    err = R_ICU_ExternalIrqEnable(&g_icu_ctrl);
```

```
    assert(FSP_SUCCESS == err);
 while (0 == g_external_irq_complete)
    {
 /* Wait for interrupt. */
    }
}
```

Data Structures

struct	icu_instance_ctrl_t

Data Structure Documentation

◆ icu_instance_ctrl_t

struct icu_instance_ctrl_t	
ICU private control block. DO NOT MODIFY. Initialization occurs when R_ICU_ExternalIrqOpen is called.	
Data Fields	
uint32_t	open
	Used to determine if channel control block is in use.
IRQn_Type	irq
	NVIC interrupt number.
uint8_t	channel
	Channel.
void const *	p_context

Field Documentation

◆ p_context

void const* icu_instance_ctrl_t::p_context
Placeholder for user data. Passed to the user callback in external_irq_callback_args_t.

Function Documentation

◆ R_ICU_ExternalIrqOpen()

fsp_err_t R_ICU_ExternalIrqOpen (external_irq_ctrl_t *const *p_api_ctrl*, external_irq_cfg_t const *const *p_cfg*)

Configure an IRQ input pin for use with the external interrupt interface. Implements external_irq_api_t::open.

The Open function is responsible for preparing an external IRQ pin for operation.

Return values

FSP_SUCCESS	Open successful.
FSP_ERR_ASSERTION	One of the following is invalid: • p_ctrl or p_cfg is NULL
FSP_ERR_ALREADY_OPEN	The channel specified has already been opened. No configurations were changed. Call the associated Close function to reconfigure the channel.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	The channel requested in p_cfg is not available on the device selected in r_bsp_cfg.h.
FSP_ERR_INVALID_ARGUMENT	p_cfg->p_callback is not NULL, but ISR is not enabled. ISR must be enabled to use callback function.

Note

This function is reentrant for different channels. It is not reentrant for the same channel.

◆ R_ICU_ExternalIrqEnable()

fsp_err_t R_ICU_ExternalIrqEnable (external_irq_ctrl_t *const *p_api_ctrl*)

Enable external interrupt for specified channel at NVIC. Implements external_irq_api_t::enable.

Return values

FSP_SUCCESS	Interrupt Enabled successfully.
FSP_ERR_ASSERTION	The p_ctrl parameter was null.
FSP_ERR_NOT_OPEN	The channel is not opened.
FSP_ERR_IRQ_BSP_DISABLED	Requested IRQ is not defined in this system

◆ R_ICU_ExternalIrqDisable()

fsp_err_t R_ICU_ExternalIrqDisable (external_irq_ctrl_t *const *p_api_ctrl*)

Disable external interrupt for specified channel at NVIC. Implements external_irq_api_t::disable.

Return values

FSP_SUCCESS	Interrupt disabled successfully.
FSP_ERR_ASSERTION	The p_ctrl parameter was null.
FSP_ERR_NOT_OPEN	The channel is not opened.
FSP_ERR_IRQ_BSP_DISABLED	Requested IRQ is not defined in this system

◆ R_ICU_ExternalIrqCallbackSet()

fsp_err_t R_ICU_ExternalIrqCallbackSet (external_irq_ctrl_t *const *p_api_ctrl*, void(*)(external_irq_callback_args_t *) *p_callback*, void const *const *p_context*, external_irq_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements external_irq_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

◆ R_ICU_ExternalIrqClose()

fsp_err_t R_ICU_ExternalIrqClose (external_irq_ctrl_t *const *p_api_ctrl*)

Close the external interrupt channel. Implements external_irq_api_t::close.

Return values

FSP_SUCCESS	Successfully closed.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	The channel is not opened.

4.2.33 I2C Master on IIC/I3C (r_iic_b_master)

Modules

Functions

fsp_err_t	R_IIC_B_MASTER_Open (i2c_master_ctrl_t *const p_api_ctrl, i2c_master_cfg_t const *const p_cfg)
fsp_err_t	R_IIC_B_MASTER_Read (i2c_master_ctrl_t *const p_api_ctrl, uint8_t *const p_dest, uint32_t const bytes, bool const restart)
fsp_err_t	R_IIC_B_MASTER_Write (i2c_master_ctrl_t *const p_api_ctrl, uint8_t *const p_src, uint32_t const bytes, bool const restart)
fsp_err_t	R_IIC_B_MASTER_Abort (i2c_master_ctrl_t *const p_api_ctrl)
fsp_err_t	R_IIC_B_MASTER_SlaveAddressSet (i2c_master_ctrl_t *const p_api_ctrl, uint32_t const slave, i2c_master_addr_mode_t const addr_mode)
fsp_err_t	R_IIC_B_MASTER_Close (i2c_master_ctrl_t *const p_api_ctrl)
fsp_err_t	R_IIC_B_MASTER_CallbackSet (i2c_master_ctrl_t *const p_api_ctrl, void(*p_callback)(i2c_master_callback_args_t *), void const *const p_context, i2c_master_callback_args_t *const p_callback_memory)
fsp_err_t	R_IIC_B_MASTER_StatusGet (i2c_master_ctrl_t *const p_api_ctrl, i2c_master_status_t *p_status)

Detailed Description

I2C Driver for the IIC/I3C peripheral on RA MCUs. This module implements the I2C Master Interface.

Overview

The I2C master on IIC/I3C HAL module supports transactions with an I2C Slave device. Callbacks must be provided which are invoked when a transmit or receive operation has completed. The callback argument will contain information about the transaction status, bytes transferred and a pointer to the user defined context.

Features

- Supports multiple transmission rates
  - Standard Mode Support with up to 100-kHz transaction rate.
  - Fast Mode Support with up to 400-kHz transaction rate.
  - Fast Mode Plus Support with up to 1-MHz transaction rate.
- I2C Master Read from a slave device.
- I2C Master Write to a slave device.
- Abort any in-progress transactions.

- Set the address of the slave device.
- Non-blocking behavior is achieved by the use of callbacks.
- Additional build-time features
    - Optional (build time) DTC support for read and write respectively.
    - Optional (build time) support for 10-bit slave addressing.

Configuration

Build Time Configurations for r_iic_b_master

The following build time configurations are defined in fsp_cfg/r_iic_b_master_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
DTC on Transmission and Reception	• Enabled • Disabled	Disabled	If enabled, DTC instances will be included in the build for both transmission and reception.
10-bit slave addressing	• Enabled • Disabled	Disabled	If enabled, the driver will support 10-bit slave addressing mode along with the default 7-bit slave addressing mode.

Configurations for Connectivity > I2C Master (r_iic_b_master)

This module can be added to the Stacks tab via New Stack > Connectivity > I2C Master (r_iic_b_master). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_i2c_master0	Module name.
Channel	Value must be a non-negative integer	0	Specify the IIC channel.
Rate	• Standard • Fast-mode • Fast-mode plus	Standard	Select the transfer rate. If the requested transfer rate cannot be achieved, the settings with the largest possible transfer rate that is less than or equal to the requested transfer rate are used.

			The theoretical calculated transfer rate and duty cycle are printed in a comment in the generated iic_b_master_extended_cfg_t structure.
Rise Time (ns)	Value must be a non-negative integer	120	Set the rise time (tr) in nanoseconds.
Fall Time (ns)	Value must be a non-negative integer	120	Set the fall time (tf) in nanoseconds.
Duty Cycle (%)	Value must be an integer between 0 and 100	50	Set the SCL duty cycle.
Slave Address	Value must be non-negative	0x00	Specify the slave address.
Address Mode	• 7-Bit • 10-Bit	7-Bit	Select the slave address mode. Ensure 10-bit slave addressing is enabled in the configuration to use 10-Bit setting here.
Timeout Mode	• Short Mode • Long Mode	Short Mode	Select the timeout mode to detect bus hang.
Timeout during SCL Low	• Enabled • Disabled	Enabled	Select if the timeout can occur when SCL is held low for a duration longer than what is set in the timeout mode.
Callback	Name must be a valid C symbol	g_iic_b_master0_callback	A user callback function must be provided. This will be called from the interrupt service routine (ISR) upon IIC transaction completion reporting the transaction status.
Interrupt Priority Level	MCU Specific Options		Select the interrupt priority level. This is set for TXI, RXI, TEI and ERI interrupts.

Clock Configuration

The I3C peripheral module uses the IICCLK or PCLKD (based on the MCU) as its clock source for the bus clock. The actual I2C transfer rate will be calculated and set by the tooling depending on the selected transfer rate. If the clocks are configured in such a manner that the selected internal rate

cannot be achieved, an error will be returned.

Pin Configuration

The I3C peripheral module uses pins on the MCU to communicate to external devices. I/O pins must be selected and configured as required by the external device. An I2C channel would consist of two pins - SDA and SCL for data/address and clock respectively.

Usage Notes

Interrupt Configuration

- The IIC error (EEI), receive buffer full (RXI), transmit buffer empty (TXI) and transmit end (TEI) interrupts for the selected channel used must be enabled in the properties of the selected device.
- Set equal priority levels for all the interrupts mentioned above. Setting the interrupts to different priority levels could result in improper operation.

IIC Master Rate Calculation

- The RA Configuration editor calculates the internal baud-rate setting based on the configured transfer rate. The closest possible baud-rate that can be achieved (less than or equal to the requested rate) at the current IICCLK/PCLKD (based on the MCU) settings is calculated and used.
- If a valid clock rate could not be calculated, an error is returned by the tool.

Enabling DTC with the IIC

- DTC transfer support is configurable and is disabled from the build by default. IIC driver provides two DTC instances for transmission and reception respectively. The DTC instances can be enabled individually during configuration.
- DTC is helpful for minimizing interrupts during large transactions. Many I2C applications have shorter transactions. These applications will likely not see any improvement with DTC. I2C often runs at a much slower speed than the CPU core clock. Some applications with longer transactions may prefer servicing the interrupts at the I2C bitrate to the overhead of bringing in the DTC driver.
- For further details on DTC please refer Data Transfer Controller (r_dtc)

Multiple Devices on the Bus

- A single IIC instance can be used to communicate with multiple slave devices on the same channel by using the SlaveAddressSet API.

Multi-Master Support

- If multiple masters are connected on the same bus, the I2C Master is capable of detecting bus busy state before initiating the communication.

Restart

- IIC master can hold the the bus after an I2C transaction by issuing a repeated start condition.

Examples

Basic Example

This is a basic example of minimal use of the r_iic_master in an application. This example shows how this driver can be used for basic read and write operations.

```
iic_b_master_instance_ctrl_t g_i2c_device_ctrl_1;
i2c_master_cfg_t g_i2c_device_cfg_1 =
{
    .channel       = I2C_CHANNEL,
    .rate          = I2C_MASTER_RATE_FAST,
    .slave         = I2C_SLAVE_EEPROM,
    .addr_mode    = I2C_MASTER_ADDR_MODE_7BIT,
    .p_callback    = i2c_callback,    // Callback
    .p_context    = &g_i2c_device_ctrl_1,
    .p_transfer_tx = NULL,
    .p_transfer_rx = NULL,
    .p_extend      = &g_iic_b_master_cfg_extend
};
void i2c_callback (i2c_master_callback_args_t * p_args)

Multiple Slave devices on the same channel (bus)

This example demonstrates how a single IIC driver can be used to communicate with different slave devices which are on the same channel.

Note

The callback function from the first example applies to this example as well.

```
iic_b_master_instance_ctrl_t g_i2c_device_ctrl_2;
i2c_master_cfg_t g_i2c_device_cfg_2 =
{
    .channel       = I2C_CHANNEL,
    .rate          = I2C_MASTER_RATE_STANDARD,
    .slave         = I2C_SLAVE_TEMP_SENSOR,
    .addr_mode    = I2C_MASTER_ADDR_MODE_7BIT,
    .p_callback    = i2c_callback,    // Callback
    .p_context    = &g_i2c_device_ctrl_2,
    .p_transfer_tx = NULL,
    .p_transfer_rx = NULL,
    .p_extend      = &g_iic_b_master_cfg_extend
};
void single_channel_multi_slave (void)
{
 fsp_err_t err;
    uint32_t timeout_ms = I2C_TRANSACTION_BUSY_DELAY;
    err = R_IIC_B_MASTER_Open(&g_i2c_device_ctrl_2, &g_i2c_device_cfg_2);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Clear the recieve buffer */

Data Structure Documentation

◆ iic_b_master_clock_settings_t

struct iic_b_master_clock_settings_t		
I2C clock settings		
Data Fields		
uint8_t	cks_value	Internal Reference Clock Select.
uint8_t	brh_value	High-level period of SCL clock.
uint8_t	brl_value	Low-level period of SCL clock.

◆ iic_b_master_instance_ctrl_t

struct iic_b_master_instance_ctrl_t
I2C control structure. DO NOT INITIALIZE.

◆ iic_b_master_extended_cfg_t

struct iic_b_master_extended_cfg_t		
R_IIC_B extended configuration		
Data Fields		
iic_b_master_timeout_mode_t	timeout_mode	Timeout Detection Time Select: Long Mode = 0 and Short Mode = 1.
iic_b_master_timeout_scl_low_t	timeout_scl_low	Allows timeouts to occur when SCL is held low.
iic_b_master_clock_settings_t	clock_settings	I2C Clock settings.
uint32_t	iic_clock_freq	I2C Clock frequency in Hz.

Enumeration Type Documentation

◆ iic_b_master_timeout_mode_t

enum iic_b_master_timeout_mode_t	
I2C Timeout mode parameter definition	
Enumerator	
IIC_B_MASTER_TIMEOUT_MODE_LONG	Timeout Detection Time Select: Long Mode -> TMOS = 0.
IIC_B_MASTER_TIMEOUT_MODE_SHORT	Timeout Detection Time Select: Short Mode -> TMOS = 1.

◆ iic_b_master_timeout_scl_low_t

enum iic_b_master_timeout_scl_low_t	
Enumerator	
IIC_B_MASTER_TIMEOUT_SCL_LOW_DISABLED	Timeout detection during SCL low disabled.
IIC_B_MASTER_TIMEOUT_SCL_LOW_ENABLED	Timeout detection during SCL low enabled.

Function Documentation

◆ R_IIC_B_MASTER_Open()

fsp_err_t R_IIC_B_MASTER_Open (i2c_master_ctrl_t *const *p_api_ctrl*, i2c_master_cfg_t const *const *p_cfg*)

Opens the I2C device.

Return values

FSP_SUCCESS	Requested clock rate was set exactly.
FSP_ERR_ALREADY_OPEN	Module is already open.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	Channel is not available on this MCU.
FSP_ERR_ASSERTION	Parameter check failure due to one or more reasons below: 1. p_api_ctrl or p_cfg is NULL. 2. extended parameter is NULL. 3. Callback parameter is NULL. 4. Set the rate to fast mode plus on a channel which does not support it. 5. Invalid IRQ number assigned

◆ R_IIC_B_MASTER_Read()

fsp_err_t R_IIC_B_MASTER_Read (i2c_master_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_dest*, uint32_t const *bytes*, bool const *restart*)

Performs a read from the I2C device. The caller will be notified when the operation has completed (successfully) by an I2C_MASTER_EVENT_RX_COMPLETE in the callback.

Return values

FSP_SUCCESS	Function executed without issue.
FSP_ERR_ASSERTION	p_api_ctrl, p_dest or bytes is NULL.
FSP_ERR_INVALID_SIZE	Provided number of bytes more than uint16_t size (65535) while DTC is used for data transfer.
FSP_ERR_IN_USE	Bus busy condition. Another transfer was in progress.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_IIC_B_MASTER_Open to initialize the control block.

◆ R_IIC_B_MASTER_Write()

fsp_err_t R_IIC_B_MASTER_Write (i2c_master_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_src*, uint32_t const *bytes*, bool const *restart*)

Performs a write to the I2C device. The caller will be notified when the operation has completed (successfully) by an I2C_MASTER_EVENT_TX_COMPLETE in the callback.

Return values

FSP_SUCCESS	Function executed without issue.
FSP_ERR_ASSERTION	p_api_ctrl or p_src is NULL.
FSP_ERR_INVALID_SIZE	Provided number of bytes more than uint16_t size (65535) while DTC is used for data transfer.
FSP_ERR_IN_USE	Bus busy condition. Another transfer was in progress.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_IIC_B_MASTER_Open to initialize the control block.

◆ R_IIC_B_MASTER_Abort()

fsp_err_t R_IIC_B_MASTER_Abort (i2c_master_ctrl_t *const *p_api_ctrl*)

Safely aborts any in-progress transfer and forces the IIC peripheral into ready state.

Return values

FSP_SUCCESS	Channel was reset successfully.
FSP_ERR_ASSERTION	p_api_ctrl is NULL.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_IIC_B_MASTER_Open to initialize the control block.

Note

A callback will not be invoked in case an in-progress transfer gets aborted by calling this API.

◆ R_IIC_B_MASTER_SlaveAddressSet()

fsp_err_t R_IIC_B_MASTER_SlaveAddressSet (i2c_master_ctrl_t *const *p_api_ctrl*, uint32_t const *slave*, i2c_master_addr_mode_t const *addr_mode*)

Sets address and addressing mode of the slave device. This function is used to set the device address and addressing mode of the slave without reconfiguring the entire bus.

Return values

FSP_SUCCESS	Address of the slave is set correctly.
FSP_ERR_ASSERTION	Pointer to control structure is NULL.
FSP_ERR_IN_USE	Another transfer was in-progress.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_IIC_B_MASTER_Open to initialize the control block.

◆ R_IIC_B_MASTER_Close()

fsp_err_t R_IIC_B_MASTER_Close (i2c_master_ctrl_t *const *p_api_ctrl*)

Closes the I2C device. May power down IIC peripheral. This function will safely terminate any in-progress I2C transfers.

Return values

FSP_SUCCESS	Device closed without issue.
FSP_ERR_ASSERTION	p_api_ctrl is NULL.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_IIC_B_MASTER_Open to initialize the control block.

Note

A callback will not be invoked in case an in-progress transfer gets aborted by calling this API.

◆ R_IIC_B_MASTER_CallbackSet()

fsp_err_t R_IIC_B_MASTER_CallbackSet (i2c_master_ctrl_t *const *p_api_ctrl*, void(*)(i2c_master_callback_args_t *) *p_callback*, void const *const *p_context*, i2c_master_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements i2c_master_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

◆ R_IIC_B_MASTER_StatusGet()

fsp_err_t R_IIC_B_MASTER_StatusGet (i2c_master_ctrl_t *const *p_api_ctrl*, i2c_master_status_t * *p_status*)

Provides driver status.

Return values

FSP_SUCCESS	Status stored in p_status.
FSP_ERR_ASSERTION	NULL pointer.

4.2.34 I2C Slave on IIC/I3C (r_iic_b_slave)

Modules

Functions

fsp_err_t	R_IIC_B_SLAVE_Open (i2c_slave_ctrl_t *const p_api_ctrl, i2c_slave_cfg_t const *const p_cfg)

fsp_err_t	R_IIC_B_SLAVE_Close (i2c_slave_ctrl_t *const p_api_ctrl)
fsp_err_t	R_IIC_B_SLAVE_CallbackSet (i2c_slave_ctrl_t *const p_api_ctrl, void(*p_callback)(i2c_slave_callback_args_t *), void const *const p_context, i2c_slave_callback_args_t *const p_callback_memory)

Detailed Description

Driver for the IIC/I3C peripheral on RA MCUs. This module implements the I2C Slave Interface.

Overview

Features

- Supports multiple transmission rates
  - Standard Mode Support with up to 100-kHz transaction rate.
  - Fast Mode Support with up to 400-kHz transaction rate.
  - Fast Mode Plus Support with up to 1-MHz transaction rate.
- Reads data written by master device.
- Write data which is read by master device.

- Can accept 0x00 as slave address.
- Can be assigned a 10-bit address.
- Clock stretching is supported and can be implemented via callbacks.
- Provides Transmission/Reception transaction size in the callback.
- I2C Slave can notify the following events via callbacks: Transmission/Reception Request, Transmission/Reception Request for more data, Transmission/Reception Completion, Error Condition.

Configuration

Build Time Configurations for r_iic_b_slave

The following build time configurations are defined in fsp_cfg/r_iic_b_slave_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Connectivity > I2C Slave (r_iic_b_slave)

This module can be added to the Stacks tab via New Stack > Connectivity > I2C Slave (r_iic_b_slave). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Interrupt Priority Level > Transmit, Receive, and Transmit End	MCU Specific Options		Select the interrupt priority level. This is set for TXI, RXI, and TEI interrupts.
Interrupt Priority Level > Error	MCU Specific Options		Select the interrupt priority level. This is set for ERI interrupt.
Name	Name must be a valid C symbol	g_i2c_slave0	Module name.
Channel	Value must be a non-negative integer	0	Specify the IIC channel.
Rate	• Standard • Fast-mode • Fast-mode plus	Standard	Select the transfer rate. If the delay for the requested transfer rate cannot be achieved, the settings with the largest possible transfer rate that is less than or equal to the requested transfer rate are used. The theoretical calculated

			delay is printed in a comment in the generated iic_b_slave_extended_cfg_t structure.
Internal Reference Clock	• I2C Clock / 1 • I2C Clock / 2 • I2C Clock / 4 • I2C Clock / 8 • I2C Clock / 16 • I2C Clock / 32 • I2C Clock / 64 • I2C Clock / 128	I2C Clock / 1	Select the internal reference clock for IIC slave. The internal reference clock is used only to determine the clock frequency of the noise filter samples. I2C Clock can be either IICCLK or PCLKD based on the MCU.
Digital Noise Filter Stage Select	• Disabled • Single-stage filter • 2-stage filter • 3-stage filter • 4-stage filter	3-stage filter	Select the number of digital filter stages for IIC Slave.
Slave Address	Value must be non-negative	0x00	Specify the slave address.
General Call	• Enabled • Disabled	Disabled	Allows the slave to respond to general call address: 0x00.
Address Mode	• 7-Bit • 10-Bit	7-Bit	Select the slave address mode.
Clock Stretching	• Enabled • Disabled	Disabled	Configure Clock Stretching.
Callback	Name must be a valid C symbol	g_iic_b_slave0_callback	A user callback function must be provided. This will be called from the interrupt service routine (ISR) to report I2C Slave transaction events and status.

Clock Configuration

The IIC/I3C peripheral module uses the IICCLK or PCLKD (based on the MCU) as its clock source for the bus clock. The actual I2C transfer rate will be calculated and set by the tooling depending on the selected transfer rate. If the clocks are configured in such a manner that the selected internal rate cannot be achieved, an error will be returned.

Pin Configuration

The IIC/I3C peripheral module uses pins on the MCU to communicate to external devices. I/O pins must be selected and configured as required by the external device. An I2C channel would consist of two pins - SDA and SCL for data/address and clock respectively.

Usage Notes

Interrupt Configuration

- The IIC error (EEI), receive buffer full (RXI), transmit buffer empty (TXI) and transmit end (TEI) interrupts for the selected channel must be enabled in the properties of the selected device.
- The interrupt priority of ERI can be set higher than or equal to the interrupt priorities of RXI, TXI and TEI.
  Note
  : During master-write slave-read type of operations if the slave device requires to perform clock stretching after the last data byte is received, a higher priority ERI will ensure that the ongoing transaction is completed (by accepting the Stop/Restart condition from the master) before the next transaction is initiated.
  : To support clock stretching (Holding SCL low after the falling edge of the 9th clock cycle), 'Clock Stretching' configuration must be enabled.

Callback

- A callback function must be provided which will be invoked for the cases below:
  - An I2C Master initiates a transmission or reception: I2C_SLAVE_EVENT_TX_REQUEST; I2C_SLAVE_EVENT_RX_REQUEST
  - A Transmission or reception has been completed: I2C_SLAVE_EVENT_TX_COMPLETE; I2C_SLAVE_EVENT_RX_COMPLETE
  - An I2C Master is requesting to read or write more data: I2C_SLAVE_EVENT_TX_MORE_REQUEST; I2C_SLAVE_EVENT_RX_MORE_REQUEST
  - Error conditions: I2C_SLAVE_EVENT_ABORTED
  - An I2C Master initiates a general call by passing 0x00 as slave address: I2C_SLAVE_EVENT_GENERAL_CALL
- The callback arguments will contain information about the transaction status/events, bytes transferred and a pointer to the user defined context.
- Clock stretching is enabled by the use of callbacks. This means that the IIC slave can hold the clock line SCL LOW to force the I2C Master into a wait state.
- The table below shows I2C Slave event handling expected in user code:

IIC Slave Callback Event	IIC Slave API expected to be called
I2C_SLAVE_EVENT_ABORTED	Handle event based on application
I2C_SLAVE_EVENT_RX_COMPLETE	Handle event based on application
I2C_SLAVE_EVENT_TX_COMPLETE	Handle event based on application
I2C_SLAVE_EVENT_RX_REQUEST	R_IIC_B_SLAVE_Read API. If the slave is a Write Only device call this API with 0 bytes to send a NACK to the master.
I2C_SLAVE_EVENT_TX_REQUEST	R_IIC_B_SLAVE_Write API
I2C_SLAVE_EVENT_RX_MORE_REQUEST	R_IIC_B_SLAVE_Read API. If the slave cannot read any more data call this API with 0 bytes to send a NACK to the master.
I2C_SLAVE_EVENT_TX_MORE_REQUEST	R_IIC_B_SLAVE_Write API

I2C_SLAVE_EVENT_GENERAL_CALL	R_IIC_B_SLAVE_Read

- If parameter checking is enabled and R_IIC_B_SLAVE_Read API is not called for I2C_SLAVE_EVENT_RX_REQUEST and/or I2C_SLAVE_EVENT_RX_MORE_REQUEST, the slave will send a NACK to the master and would eventually timeout.
- R_IIC_B_SLAVE_Write API is not called for I2C_SLAVE_EVENT_TX_REQUEST and/or I2C_SLAVE_EVENT_TX_MORE_REQUEST:
  - Slave timeout is less than Master timeout: The slave will timeout and release the bus causing the master to read 0xFF for every remaining byte.
  - Slave timeout is more than Master timeout: The master will timeout first followed by the slave.

IIC Slave Rate Calculation

- The RA Configuration editor calculates the internal baud-rate setting based on the configured transfer rate. The closest possible baud-rate that can be achieved (less than or equal to the requested rate) at the current I2C Clock (IICCLK or PCLKD based on the MCU) settings is calculated and used.

Limitations

- When 'Clock Stretching' configuration is enabled, the receive operation will not utilize the double buffer arrangement in hardware for a continuous read. This means that the read operation would happen in single byte units such that the active master would send the next byte only when the slave has read the current byte of data.

Examples

Basic Example

This is a basic example of minimal use of the R_IIC_B_SLAVE in an application. This example shows how this driver can be used for basic read and write operations.

```
iic_b_master_instance_ctrl_t g_i2c_master_ctrl;
i2c_master_cfg_t g_i2c_master_cfg =
{
    .channel       = I2C_MASTER_CHANNEL_2,
    .rate          = I2C_MASTER_RATE_STANDARD,
    .slave         = I2C_7BIT_ADDR_IIC_SLAVE,
    .addr_mode    = I2C_MASTER_ADDR_MODE_7BIT,
    .p_callback    = i2c_master_callback, // Callback
    .p_context    = &g_i2c_master_ctrl,
    .p_transfer_tx = NULL,
    .p_transfer_rx = NULL,
    .p_extend      = &g_iic_master_cfg_extend_standard_mode
};
```

```
iic_b_slave_instance_ctrl_t g_i2c_slave_ctrl;
i2c_slave_cfg_t g_i2c_slave_cfg =
{
    .channel    = I2C_SLAVE_CHANNEL_0,
    .rate       = I2C_SLAVE_RATE_STANDARD,
    .slave      = I2C_7BIT_ADDR_IIC_SLAVE,
    .addr_mode = I2C_SLAVE_ADDR_MODE_7BIT,
    .p_callback = i2c_slave_callback, // Callback
    .p_context = &g_i2c_slave_ctrl,
    .p_extend   = &g_iic_slave_cfg_extend_standard_mode
};

Data Structures

struct	iic_b_slave_clock_settings_t
struct	iic_b_slave_extended_cfg_t

Data Structure Documentation

◆ iic_b_slave_clock_settings_t

struct iic_b_slave_clock_settings_t		
I2C clock settings		
Data Fields		
uint8_t	cks_value	Internal Reference Clock Select.
uint8_t	brl_value	Low-level period of SCL clock.
uint8_t	digital_filter_stages	Number of digital filter stages based on brl_value.

◆ iic_b_slave_extended_cfg_t

struct iic_b_slave_extended_cfg_t		
R_IIC_SLAVE extended configuration		
Data Fields		
iic_b_slave_clock_settings_t	clock_settings	I2C Clock settings.

Function Documentation

◆ R_IIC_B_SLAVE_Open()

fsp_err_t R_IIC_B_SLAVE_Open (i2c_slave_ctrl_t *const *p_api_ctrl*, i2c_slave_cfg_t const *const *p_cfg*)

Opens the I2C slave device.

Return values

FSP_SUCCESS	I2C slave device opened successfully.
FSP_ERR_ALREADY_OPEN	Module is already open.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	Channel is not available on this MCU.
FSP_ERR_INVALID_ARGUMENT	Error interrupt priority is lower than Transmit, Receive and Transmit End interrupt priority
FSP_ERR_ASSERTION	Parameter check failure due to one or more reasons below: 1. p_api_ctrl or p_cfg is NULL. 2. extended parameter is NULL. 3. Callback parameter is NULL. 4. Set the rate to fast mode plus on a channel which does not support it. 5. Invalid IRQ number assigned

◆ R_IIC_B_SLAVE_Read()

fsp_err_t R_IIC_B_SLAVE_Read (i2c_slave_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_dest*, uint32_t const *bytes*)

Performs a read from the I2C Master device.

This function will fail if there is already an in-progress I2C transfer on the associated channel. Otherwise, the I2C slave read operation will begin. The caller will be notified when the operation has finished by an I2C_SLAVE_EVENT_RX_COMPLETE in the callback. In case the master continues to write more data, an I2C_SLAVE_EVENT_RX_MORE_REQUEST will be issued via callback. In case of errors, an I2C_SLAVE_EVENT_ABORTED will be issued via callback.

Return values

FSP_SUCCESS	Function executed without issue
FSP_ERR_ASSERTION	p_api_ctrl, bytes or p_dest is NULL.
FSP_ERR_IN_USE	Another transfer was in progress.
FSP_ERR_NOT_OPEN	Device is not open.

◆ R_IIC_B_SLAVE_Write()

fsp_err_t R_IIC_B_SLAVE_Write (i2c_slave_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_src*, uint32_t const *bytes*)

Performs a write to the I2C Master device.

This function will fail if there is already an in-progress I2C transfer on the associated channel. Otherwise, the I2C slave write operation will begin. The caller will be notified when the operation has finished by an I2C_SLAVE_EVENT_TX_COMPLETE in the callback. In case the master continues to read more data, an I2C_SLAVE_EVENT_TX_MORE_REQUEST will be issued via callback. In case of errors, an I2C_SLAVE_EVENT_ABORTED will be issued via callback.

Return values

FSP_SUCCESS	Function executed without issue.
FSP_ERR_ASSERTION	p_api_ctrl or p_src is NULL.
FSP_ERR_IN_USE	Another transfer was in progress.
FSP_ERR_NOT_OPEN	Device is not open.

◆ R_IIC_B_SLAVE_Close()

fsp_err_t R_IIC_B_SLAVE_Close (i2c_slave_ctrl_t *const *p_api_ctrl*)

Closes the I2C device.

Return values

FSP_SUCCESS	Device closed successfully.
FSP_ERR_NOT_OPEN	Device not opened.
FSP_ERR_ASSERTION	p_api_ctrl is NULL.

◆ R_IIC_B_SLAVE_CallbackSet()

fsp_err_t R_IIC_B_SLAVE_CallbackSet (i2c_slave_ctrl_t *const *p_api_ctrl*, void(*)(i2c_slave_callback_args_t *) *p_callback*, void const *const *p_context*, i2c_slave_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements i2c_slave_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

Detailed Description

Driver for the IIC peripheral on RA MCUs. This module implements the I2C Master Interface.

Overview

The I2C master on IIC HAL module supports transactions with an I2C Slave device. Callbacks must be provided which are invoked when a transmit or receive operation has completed. The callback argument will contain information about the transaction status, bytes transferred and a pointer to the user defined context.

Features

- Supports multiple transmission rates
  - Standard Mode Support with up to 100-kHz transaction rate.
  - Fast Mode Support with up to 400-kHz transaction rate.
  - Fast Mode Plus Support with up to 1-MHz transaction rate.
- I2C Master Read from a slave device.
- I2C Master Write to a slave device.
- Abort any in-progress transactions.
- Set the address of the slave device.
- Non-blocking behavior is achieved by the use of callbacks.
- Additional build-time features
  - Optional (build time) DTC support for read and write respectively.
  - Optional (build time) support for 10-bit slave addressing.

Configuration

Build Time Configurations for r_iic_master

The following build time configurations are defined in fsp_cfg/r_iic_master_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
DTC on Transmission and Reception	• Enabled • Disabled	Disabled	If enabled, DTC instances will be included in the build for both transmission and reception.
10-bit slave addressing	• Enabled • Disabled	Disabled	If enabled, the driver will support 10-bit slave addressing mode along with the default 7-bit slave addressing mode.

Configurations for Connectivity > I2C Master (r_iic_master)

This module can be added to the Stacks tab via New Stack > Connectivity > I2C Master (r_iic_master). Non-secure callable guard functions can be generated for this module by right clicking

the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_i2c_master0	Module name.
Channel	Value must be a non-negative integer	0	Specify the IIC channel.
Rate	• Standard • Fast-mode • Fast-mode plus	Standard	Select the transfer rate. If the requested transfer rate cannot be achieved, the settings with the largest possible transfer rate that is less than or equal to the requested transfer rate are used. The theoretical calculated transfer rate and duty cycle are printed in a comment in the generated iic_master_extended_cfg_t structure.
Rise Time (ns)	Value must be a non-negative integer	120	Set the rise time (tr) in nanoseconds.
Fall Time (ns)	Value must be a non-negative integer	120	Set the fall time (tf) in nanoseconds.
Duty Cycle (%)	Value must be an integer between 0 and 100	50	Set the SCL duty cycle.
Slave Address	Value must be non-negative	0x00	Specify the slave address.
Address Mode	• 7-Bit • 10-Bit	7-Bit	Select the slave address mode. Ensure 10-bit slave addressing is enabled in the configuration to use 10-Bit setting here.
Timeout Mode	• Short Mode • Long Mode	Short Mode	Select the timeout mode to detect bus hang.
Timeout during SCL Low	• Enabled • Disabled	Enabled	Select if the timeout can occur when SCL is held low for a duration longer than what is set in the timeout mode.

Callback	Name must be a valid C symbol	NULL	A user callback function must be provided. This will be called from the interrupt service routine (ISR) upon IIC transaction completion reporting the transaction status.
Interrupt Priority Level	MCU Specific Options		Select the interrupt priority level. This is set for TXI, RXI, TEI and ERI interrupts.

Clock Configuration

The IIC peripheral module uses the PCLKB as its clock source. The actual I2C transfer rate will be calculated and set by the tooling depending on the selected transfer rate. If the PCLKB is configured in such a manner that the selected internal rate cannot be achieved, an error will be returned.

Pin Configuration

The IIC peripheral module uses pins on the MCU to communicate to external devices. I/O pins must be selected and configured as required by the external device. An I2C channel would consist of two pins - SDA and SCL for data/address and clock respectively.

Usage Notes

Interrupt Configuration

- The IIC error (EEI), receive buffer full (RXI), transmit buffer empty (TXI) and transmit end (TEI) interrupts for the selected channel used must be enabled in the properties of the selected device.
- Set equal priority levels for all the interrupts mentioned above. Setting the interrupts to different priority levels could result in improper operation.

IIC Master Rate Calculation

- The RA Configuration editor calculates the internal baud-rate setting based on the configured transfer rate. The closest possible baud-rate that can be achieved (less than or equal to the requested rate) at the current PCLKB settings is calculated and used.
- If a valid clock rate could not be calculated, an error is returned by the tool.

Enabling DTC with the IIC

- DTC transfer support is configurable and is disabled from the build by default. IIC driver provides two DTC instances for transmission and reception respectively. The DTC instances can be enabled individually during configuration.
- DTC is helpful for minimizing interrupts during large transactions. Many I2C applications have shorter transactions. These applications will likely not see any improvement with DTC. I2C often runs at a much slower speed than the CPU core clock. Some applications with longer transactions may prefer servicing the interrupts at the I2C bitrate to the overhead of bringing in the DTC driver.
- For further details on DTC please refer Data Transfer Controller (r_dtc)

Multiple Devices on the Bus

- A single IIC instance can be used to communicate with multiple slave devices on the same channel by using the SlaveAddressSet API.

Multi-Master Support

- If multiple masters are connected on the same bus, the I2C Master is capable of detecting bus busy state before initiating the communication.

Restart

- IIC master can hold the the bus after an I2C transaction by issuing a repeated start condition.

Examples

Basic Example

This is a basic example of minimal use of the r_iic_master in an application. This example shows how this driver can be used for basic read and write operations.

```
iic_master_instance_ctrl_t g_i2c_device_ctrl_1;
i2c_master_cfg_t g_i2c_device_cfg_1 =
{
    .channel       = I2C_CHANNEL,
    .rate          = I2C_MASTER_RATE_FAST,
    .slave         = I2C_SLAVE_EEPROM,
    .addr_mode    = I2C_MASTER_ADDR_MODE_7BIT,
    .p_callback    = i2c_callback,    // Callback
    .p_context    = &g_i2c_device_ctrl_1,
    .p_transfer_tx = NULL,
    .p_transfer_rx = NULL,
    .p_extend      = &g_iic_master_cfg_extend
};
void i2c_callback (i2c_master_callback_args_t * p_args)
{
    g_i2c_callback_event = p_args->event;
}
void basic_example (void)
{
 fsp_err_t err;
```

```
    uint32_t i;
    uint32_t timeout_ms = I2C_TRANSACTION_BUSY_DELAY;
 /* Initialize the IIC module */
    err = R_IIC_MASTER_Open(&g_i2c_device_ctrl_1, &g_i2c_device_cfg_1);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Write some data to the transmit buffer */
 for (i = 0; i < I2C_BUFFER_SIZE_BYTES; i++)
    {
       g_i2c_tx_buffer[i] = (uint8_t) i;
    }
 /* Send data to I2C slave */
    g_i2c_callback_event = I2C_MASTER_EVENT_ABORTED;
    err = R_IIC_MASTER_Write(&g_i2c_device_ctrl_1, &g_i2c_tx_buffer[0],
I2C_BUFFER_SIZE_BYTES, false);
    assert(FSP_SUCCESS == err);
 /* Since there is nothing else to do, block until Callback triggers*/
 while ((I2C_MASTER_EVENT_TX_COMPLETE != g_i2c_callback_event) && timeout_ms)
    {
 R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
       timeout_ms--;;
    }
 if (I2C_MASTER_EVENT_ABORTED == g_i2c_callback_event)
    {
       __BKPT(0);
    }
 /* Read data back from the I2C slave */
    g_i2c_callback_event = I2C_MASTER_EVENT_ABORTED;
    timeout_ms           = I2C_TRANSACTION_BUSY_DELAY;
    err = R_IIC_MASTER_Read(&g_i2c_device_ctrl_1, &g_i2c_rx_buffer[0],
I2C_BUFFER_SIZE_BYTES, false);
    assert(FSP_SUCCESS == err);
 /* Since there is nothing else to do, block until Callback triggers*/
 while ((I2C_MASTER_EVENT_RX_COMPLETE != g_i2c_callback_event) && timeout_ms)
```

```
    {
 R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
        timeout_ms--;;
    }
 if (I2C_MASTER_EVENT_ABORTED == g_i2c_callback_event)
    {
        __BKPT(0);
    }
 /* Verify the read data */
 if (0U != memcmp(g_i2c_tx_buffer, g_i2c_rx_buffer, I2C_BUFFER_SIZE_BYTES))
    {
        __BKPT(0);
    }
}
```

Multiple Slave devices on the same channel (bus)

This example demonstrates how a single IIC driver can be used to communicate with different slave devices which are on the same channel.

Note

The callback function from the first example applies to this example as well.

```
iic_master_instance_ctrl_t g_i2c_device_ctrl_2;
i2c_master_cfg_t g_i2c_device_cfg_2 =
{
    .channel       = I2C_CHANNEL,
    .rate          = I2C_MASTER_RATE_STANDARD,
    .slave         = I2C_SLAVE_TEMP_SENSOR,
    .addr_mode    = I2C_MASTER_ADDR_MODE_7BIT,
    .p_callback    = i2c_callback,    // Callback
    .p_context    = &g_i2c_device_ctrl_2,
    .p_transfer_tx = NULL,
    .p_transfer_rx = NULL,
    .p_extend      = &g_iic_master_cfg_extend
};
void single_channel_multi_slave (void)
```

```
{
 fsp_err_t err;
    uint32_t timeout_ms = I2C_TRANSACTION_BUSY_DELAY;
    err = R_IIC_MASTER_Open(&g_i2c_device_ctrl_2, &g_i2c_device_cfg_2);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Clear the recieve buffer */
    memset(g_i2c_rx_buffer, '0', I2C_BUFFER_SIZE_BYTES);
 /* Read data from I2C slave */
    g_i2c_callback_event = I2C_MASTER_EVENT_ABORTED;
    err = R_IIC_MASTER_Read(&g_i2c_device_ctrl_2, &g_i2c_rx_buffer[0],
I2C_BUFFER_SIZE_BYTES, false);
    assert(FSP_SUCCESS == err);
 while ((I2C_MASTER_EVENT_RX_COMPLETE != g_i2c_callback_event) && timeout_ms)
    {
 R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
       timeout_ms--;;
    }
 if (I2C_MASTER_EVENT_ABORTED == g_i2c_callback_event)
    {
       __BKPT(0);
    }
 /* Send data to I2C slave on the same channel */
    err = R_IIC_MASTER_SlaveAddressSet(&g_i2c_device_ctrl_2,
I2C_SLAVE_DISPLAY_ADAPTER, I2C_MASTER_ADDR_MODE_7BIT);
    assert(FSP_SUCCESS == err);
    g_i2c_tx_buffer[0]   = 0xAA;       // NOLINT
    g_i2c_tx_buffer[1]   = 0xBB;       // NOLINT
    g_i2c_callback_event = I2C_MASTER_EVENT_ABORTED;
    timeout_ms           = I2C_TRANSACTION_BUSY_DELAY;
    err = R_IIC_MASTER_Write(&g_i2c_device_ctrl_2, &g_i2c_tx_buffer[0], 2U, false);
    assert(FSP_SUCCESS == err);
 while ((I2C_MASTER_EVENT_TX_COMPLETE != g_i2c_callback_event) && timeout_ms)
    {
```

```
R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
      timeout_ms--;;
   }
if (I2C_MASTER_EVENT_ABORTED == g_i2c_callback_event)
   {
      __BKPT(0);
   }
}
```

Function Documentation

◆ R_IIC_MASTER_Open()

fsp_err_t R_IIC_MASTER_Open (i2c_master_ctrl_t *const *p_api_ctrl*, i2c_master_cfg_t const *const *p_cfg*)

Opens the I2C device.

Return values

FSP_SUCCESS	Requested clock rate was set exactly.
FSP_ERR_ALREADY_OPEN	Module is already open.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	Channel is not available on this MCU.
FSP_ERR_ASSERTION	Parameter check failure due to one or more reasons below: 1. p_api_ctrl or p_cfg is NULL. 2. extended parameter is NULL. 3. Callback parameter is NULL. 4. Set the rate to fast mode plus on a channel which does not support it. 5. Invalid IRQ number assigned

◆ R_IIC_MASTER_Read()

fsp_err_t R_IIC_MASTER_Read (i2c_master_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_dest*, uint32_t const *bytes*, bool const *restart*)

Performs a read from the I2C device. The caller will be notified when the operation has completed (successfully) by an I2C_MASTER_EVENT_RX_COMPLETE in the callback.

Return values

FSP_SUCCESS	Function executed without issue.
FSP_ERR_ASSERTION	p_api_ctrl, p_dest or bytes is NULL.
FSP_ERR_INVALID_SIZE	Provided number of bytes more than uint16_t size (65535) while DTC is used for data transfer.
FSP_ERR_IN_USE	Bus busy condition. Another transfer was in progress.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_IIC_MASTER_Open to initialize the control block.

◆ R_IIC_MASTER_Write()

fsp_err_t R_IIC_MASTER_Write (i2c_master_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_src*, uint32_t const *bytes*, bool const *restart*)

Performs a write to the I2C device. The caller will be notified when the operation has completed (successfully) by an I2C_MASTER_EVENT_TX_COMPLETE in the callback.

Return values

FSP_SUCCESS	Function executed without issue.
FSP_ERR_ASSERTION	p_api_ctrl or p_src is NULL.
FSP_ERR_INVALID_SIZE	Provided number of bytes more than uint16_t size (65535) while DTC is used for data transfer.
FSP_ERR_IN_USE	Bus busy condition. Another transfer was in progress.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_IIC_MASTER_Open to initialize the control block.

◆ R_IIC_MASTER_Abort()

fsp_err_t R_IIC_MASTER_Abort (i2c_master_ctrl_t *const *p_api_ctrl*)

Safely aborts any in-progress transfer and forces the IIC peripheral into ready state.

Return values

FSP_SUCCESS	Channel was reset successfully.
FSP_ERR_ASSERTION	p_api_ctrl is NULL.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_IIC_MASTER_Open to initialize the control block.

Note

A callback will not be invoked in case an in-progress transfer gets aborted by calling this API.

◆ R_IIC_MASTER_SlaveAddressSet()

fsp_err_t R_IIC_MASTER_SlaveAddressSet (i2c_master_ctrl_t *const *p_api_ctrl*, uint32_t const *slave*, i2c_master_addr_mode_t const *addr_mode*)

Sets address and addressing mode of the slave device. This function is used to set the device address and addressing mode of the slave without reconfiguring the entire bus.

Return values

FSP_SUCCESS	Address of the slave is set correctly.
FSP_ERR_ASSERTION	Pointer to control structure is NULL.
FSP_ERR_IN_USE	Another transfer was in-progress.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_IIC_MASTER_Open to initialize the control block.

◆ R_IIC_MASTER_Close()

fsp_err_t R_IIC_MASTER_Close (i2c_master_ctrl_t *const *p_api_ctrl*)

Closes the I2C device. May power down IIC peripheral. This function will safely terminate any in-progress I2C transfers.

Return values

FSP_SUCCESS	Device closed without issue.
FSP_ERR_ASSERTION	p_api_ctrl is NULL.
FSP_ERR_NOT_OPEN	Handle is not initialized. Call R_IIC_MASTER_Open to initialize the control block.

Note

A callback will not be invoked in case an in-progress transfer gets aborted by calling this API.

◆ R_IIC_MASTER_CallbackSet()

fsp_err_t R_IIC_MASTER_CallbackSet (i2c_master_ctrl_t *const *p_api_ctrl*, void(*)(i2c_master_callback_args_t *) *p_callback*, void const *const *p_context*, i2c_master_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements i2c_master_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

◆ R_IIC_MASTER_StatusGet()

fsp_err_t R_IIC_MASTER_StatusGet (i2c_master_ctrl_t *const *p_api_ctrl*, i2c_master_status_t * *p_status*)

Provides driver status.

Return values

FSP_SUCCESS	Status stored in p_status.
FSP_ERR_ASSERTION	NULL pointer.

4.2.36 I2C Slave on IIC (r_iic_slave)

Detailed Description

Driver for the IIC peripheral on RA MCUs. This module implements the I2C Slave Interface.

Overview

Features

- Supports multiple transmission rates
  - Standard Mode Support with up to 100-kHz transaction rate.
  - Fast Mode Support with up to 400-kHz transaction rate.
  - Fast Mode Plus Support with up to 1-MHz transaction rate.
- Reads data written by master device.
- Write data which is read by master device.
- Can accept 0x00 as slave address.
- Can be assigned a 10-bit address.
- Clock stretching is supported and can be implemented via callbacks.
- Provides Transmission/Reception transaction size in the callback.
- I2C Slave can notify the following events via callbacks: Transmission/Reception Request, Transmission/Reception Request for more data, Transmission/Reception Completion, Error Condition.

Configuration

Build Time Configurations for r_iic_slave

The following build time configurations are defined in fsp_cfg/r_iic_slave_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Connectivity > I2C Slave (r_iic_slave)

This module can be added to the Stacks tab via New Stack > Connectivity > I2C Slave (r_iic_slave). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Interrupt Priority Level > Transmit, Receive, and Transmit End	MCU Specific Options		Select the interrupt priority level. This is set for TXI, RXI, and TEI interrupts.

Interrupt Priority Level > Error	MCU Specific Options		Select the interrupt priority level. This is set for ERI interrupt.
Name	Name must be a valid C symbol	g_i2c_slave0	Module name.
Channel	Value must be a non-negative integer	0	Specify the IIC channel.
Rate	• Standard • Fast-mode • Fast-mode plus	Standard	Select the transfer rate. If the delay for the requested transfer rate cannot be achieved, the settings with the largest possible transfer rate that is less than or equal to the requested transfer rate are used. The theoretical calculated delay is printed in a comment in the generated iic_slave_extended_cfg_t structure.
Internal Reference Clock	• PCLKB / 1 • PCLKB / 2 • PCLKB / 4 • PCLKB / 8 • PCLKB / 16 • PCLKB / 32 • PCLKB / 64 • PCLKB / 128	PCLKB / 1	Select the internal reference clock for IIC slave. The internal reference clock is used only to determine the clock frequency of the noise filter samples.
Digital Noise Filter Stage Select	• Disabled • Single-stage filter • 2-stage filter • 3-stage filter • 4-stage filter	3-stage filter	Select the number of digital filter stages for IIC Slave.
Slave Address	Value must be non-negative	0x00	Specify the slave address.
General Call	• Enabled • Disabled	Disabled	Allows the slave to respond to general call address: 0x00.
Address Mode	• 7-Bit • 10-Bit	7-Bit	Select the slave address mode.
Clock Stretching	• Enabled • Disabled	Disabled	Configure Clock Stretching.
Callback	Name must be a valid	NULL	A user callback

	C symbol	function must be provided. This will be called from the interrupt service routine (ISR) to report I2C Slave transaction events and status.

Clock Configuration

The IIC peripheral module uses the PCLKB as its clock source. The actual I2C transfer rate will be calculated and set by the tooling depending on the selected transfer rate. If the PCLKB is configured in such a manner that the selected transfer rate cannot be achieved, an error will be returned.

Pin Configuration

The IIC peripheral module uses pins on the MCU to communicate to external devices. I/O pins must be selected and configured as required by the external device. An I2C channel would consist of two pins - SDA and SCL for data/address and clock respectively.

Usage Notes

Interrupt Configuration

- The IIC error (EEI), receive buffer full (RXI), transmit buffer empty (TXI) and transmit end (TEI) interrupts for the selected channel must be enabled in the properties of the selected device.
- The interrupt priority of ERI can be set higher than or equal to the interrupt priorities of RXI, TXI and TEI.
  Note
  : During master-write slave-read type of operations if the slave device requires to perform clock stretching after the last data byte is received, a higher priority ERI will ensure that the ongoing transaction is completed (by accepting the Stop/Restart condition from the master) before the next transaction is initiated.
  : To support clock stretching (Holding SCL low after the falling edge of the 9th clock cycle), 'Clock Stretching' configuration must be enabled.

Callback

- A callback function must be provided which will be invoked for the cases below:
  - An I2C Master initiates a transmission or reception: I2C_SLAVE_EVENT_TX_REQUEST; I2C_SLAVE_EVENT_RX_REQUEST
  - A Transmission or reception has been completed: I2C_SLAVE_EVENT_TX_COMPLETE; I2C_SLAVE_EVENT_RX_COMPLETE
  - An I2C Master is requesting to read or write more data: I2C_SLAVE_EVENT_TX_MORE_REQUEST; I2C_SLAVE_EVENT_RX_MORE_REQUEST
  - Error conditions: I2C_SLAVE_EVENT_ABORTED
  - An I2C Master initiates a general call by passing 0x00 as slave address: I2C_SLAVE_EVENT_GENERAL_CALL
- The callback arguments will contain information about the transaction status/events, bytes transferred and a pointer to the user defined context.
- Clock stretching is enabled by the use of callbacks. This means that the IIC slave can hold the clock line SCL LOW to force the I2C Master into a wait state.
- The table below shows I2C Slave event handling expected in user code:

IIC Slave Callback Event	IIC Slave API expected to be called
I2C_SLAVE_EVENT_ABORTED	Handle event based on application
I2C_SLAVE_EVENT_RX_COMPLETE	Handle event based on application
I2C_SLAVE_EVENT_TX_COMPLETE	Handle event based on application
I2C_SLAVE_EVENT_RX_REQUEST	R_IIC_SLAVE_Read API. If the slave is a Write Only device call this API with 0 bytes to send a NACK to the master.
I2C_SLAVE_EVENT_TX_REQUEST	R_IIC_SLAVE_Write API
I2C_SLAVE_EVENT_RX_MORE_REQUEST	R_IIC_SLAVE_Read API. If the slave cannot read any more data call this API with 0 bytes to send a NACK to the master.
I2C_SLAVE_EVENT_TX_MORE_REQUEST	R_IIC_SLAVE_Write API
I2C_SLAVE_EVENT_GENERAL_CALL	R_IIC_SLAVE_Read

- If parameter checking is enabled and R_IIC_SLAVE_Read API is not called for I2C_SLAVE_EVENT_RX_REQUEST and/or I2C_SLAVE_EVENT_RX_MORE_REQUEST, the slave will send a NACK to the master and would eventually timeout.
- R_IIC_SLAVE_Write API is not called for I2C_SLAVE_EVENT_TX_REQUEST and/or I2C_SLAVE_EVENT_TX_MORE_REQUEST:
  - Slave timeout is less than Master timeout: The slave will timeout and release the bus causing the master to read 0xFF for every remaining byte.
  - Slave timeout is more than Master timeout: The master will timeout first followed by the slave.

IIC Slave Rate Calculation

- The RA Configuration editor calculates the internal baud-rate setting based on the configured transfer rate. The closest possible baud-rate that can be achieved (less than or equal to the requested rate) at the current PCLKB settings is calculated and used.

Limitations

- When 'Clock Stretching' configuration is enabled, the receive operation will not utilize the double buffer arrangement in hardware for a continuous read. This means that the read operation would happen in single byte units such that the active master would send the next byte only when the slave has read the current byte of data.

Examples

Basic Example

This is a basic example of minimal use of the R_IIC_SLAVE in an application. This example shows how this driver can be used for basic read and write operations.

```
iic_master_instance_ctrl_t g_i2c_master_ctrl;

i2c_master_cfg_t g_i2c_master_cfg =
```

```
{
    .channel       = I2C_MASTER_CHANNEL_2,
    .rate          = I2C_MASTER_RATE_STANDARD,
    .slave         = I2C_7BIT_ADDR_IIC_SLAVE,
    .addr_mode    = I2C_MASTER_ADDR_MODE_7BIT,
    .p_callback    = i2c_master_callback, // Callback
    .p_context    = &g_i2c_master_ctrl,
    .p_transfer_tx = NULL,
    .p_transfer_rx = NULL,
    .p_extend      = &g_iic_master_cfg_extend_standard_mode
};
iic_slave_instance_ctrl_t g_i2c_slave_ctrl;
i2c_slave_cfg_t g_i2c_slave_cfg =
{
    .channel    = I2C_SLAVE_CHANNEL_0,
    .rate       = I2C_SLAVE_RATE_STANDARD,
    .slave      = I2C_7BIT_ADDR_IIC_SLAVE,
    .addr_mode = I2C_SLAVE_ADDR_MODE_7BIT,
    .p_callback = i2c_slave_callback, // Callback
    .p_context = &g_i2c_slave_ctrl,
    .p_extend   = &g_iic_slave_cfg_extend_standard_mode
};

```

Data Structures

struct	iic_slave_clock_settings_t
struct	iic_slave_extended_cfg_t

Data Structure Documentation

◆ iic_slave_clock_settings_t

struct iic_slave_clock_settings_t
I2C clock settings
Data Fields

uint8_t	cks_value	Internal Reference Clock Select.
uint8_t	brl_value	Low-level period of SCL clock.
uint8_t	digital_filter_stages	Number of digital filter stages based on brl_value.

◆ iic_slave_extended_cfg_t

struct iic_slave_extended_cfg_t		
R_IIC_SLAVE extended configuration		
Data Fields		
iic_slave_clock_settings_t	clock_settings	I2C Clock settings.

Function Documentation

◆ R_IIC_SLAVE_Open()

fsp_err_t R_IIC_SLAVE_Open (i2c_slave_ctrl_t *const *p_api_ctrl*, i2c_slave_cfg_t const *const *p_cfg*)

Opens the I2C slave device.

Return values

FSP_SUCCESS	I2C slave device opened successfully.
FSP_ERR_ALREADY_OPEN	Module is already open.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	Channel is not available on this MCU.
FSP_ERR_INVALID_ARGUMENT	Error interrupt priority is lower than Transmit, Receive and Transmit End interrupt priority
FSP_ERR_ASSERTION	Parameter check failure due to one or more reasons below: 1. p_api_ctrl or p_cfg is NULL. 2. extended parameter is NULL. 3. Callback parameter is NULL. 4. Set the rate to fast mode plus on a channel which does not support it. 5. Invalid IRQ number assigned

◆ R_IIC_SLAVE_Read()

fsp_err_t R_IIC_SLAVE_Read (i2c_slave_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_dest*, uint32_t const *bytes*)

Performs a read from the I2C Master device.

This function will fail if there is already an in-progress I2C transfer on the associated channel. Otherwise, the I2C slave read operation will begin. The caller will be notified when the operation has finished by an I2C_SLAVE_EVENT_RX_COMPLETE in the callback. In case the master continues to write more data, an I2C_SLAVE_EVENT_RX_MORE_REQUEST will be issued via callback. In case of errors, an I2C_SLAVE_EVENT_ABORTED will be issued via callback.

Return values

FSP_SUCCESS	Function executed without issue
FSP_ERR_ASSERTION	p_api_ctrl, bytes or p_dest is NULL.
FSP_ERR_IN_USE	Another transfer was in progress.
FSP_ERR_NOT_OPEN	Device is not open.

◆ R_IIC_SLAVE_Write()

fsp_err_t R_IIC_SLAVE_Write (i2c_slave_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_src*, uint32_t const *bytes*)

Performs a write to the I2C Master device.

This function will fail if there is already an in-progress I2C transfer on the associated channel. Otherwise, the I2C slave write operation will begin. The caller will be notified when the operation has finished by an I2C_SLAVE_EVENT_TX_COMPLETE in the callback. In case the master continues to read more data, an I2C_SLAVE_EVENT_TX_MORE_REQUEST will be issued via callback. In case of errors, an I2C_SLAVE_EVENT_ABORTED will be issued via callback.

Return values

FSP_SUCCESS	Function executed without issue.
FSP_ERR_ASSERTION	p_api_ctrl or p_src is NULL.
FSP_ERR_IN_USE	Another transfer was in progress.
FSP_ERR_NOT_OPEN	Device is not open.

◆ R_IIC_SLAVE_Close()

fsp_err_t R_IIC_SLAVE_Close (i2c_slave_ctrl_t *const *p_api_ctrl*)

Closes the I2C device.

Return values

FSP_SUCCESS	Device closed successfully.
FSP_ERR_NOT_OPEN	Device not opened.
FSP_ERR_ASSERTION	p_api_ctrl is NULL.

◆ R_IIC_SLAVE_CallbackSet()

fsp_err_t R_IIC_SLAVE_CallbackSet (i2c_slave_ctrl_t *const *p_api_ctrl*,
void(*)(i2c_slave_callback_args_t *) *p_callback*, void const *const *p_context*,
i2c_slave_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements i2c_slave_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

fsp_err_t	R_IIRFA_Close (iir_ctrl_t *const p_api_ctrl)

Detailed Description

Driver for the IIRFA peripheral on RA MCUs. This module implements the IIR Interface.

Overview

The IIR Filter Accelerator (IIRFA) provides hardware acceleration for calculation of single-precision floating point direct form 2 biquad IIR filters. Up to 32 biquad stages can be configured at a time.

Features

The IIRFA module supports the following features:

- Up to 16 different concurrent configurations/channels
- 32 biquad filter stages (shared between all channels)
- Runtime filter configuration
- ECC error detection for coefficient and delay data
    - 1-bit error correction, 2-bit error detection

Configuration

Build Time Configurations for r_iirfa

The following build time configurations are defined in fsp_cfg/r_iirfa_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Polling Mode	• Enabled • Disabled	Enabled	When enabled the IIRFA driver will poll for completion before reading the output register. This prevents IIRFA operations from delaying global interrupt processing at the cost of slower filter performance.
Software Loop Unroll Depth	Refer to the RA Configuration tool for	1 Sample	Select the number of samples to process for

	available options.		every loop. This setting generally only affects filters that use 1 biquad stage.
ECC Support	• Disabled • Enabled • Enabled (no writeback)	Enabled	Select whether to detect ECC errors. When set to 'Enabled (no writeback)' 1-bit ECC errors will not be corrected.
Rounding Mode	• Nearest • Toward zero	Nearest	Select how to round calculation results.

Configurations for DSP > IIR Filter Accelerator (r_iirfa)

This module can be added to the Stacks tab via New Stack > DSP > IIR Filter Accelerator (r_iirfa). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_iirfa0	Module name.
Channel	Value must be a non-negative integer	0	Select the IIRFA channel.

Clock Configuration

The clock source for the IIRFA peripheral is ICLK.

Pin Configuration

IIRFA does not have any pin connections.

Filter Configuration

Before using IIRFA to filter data the coefficients and state variables must be initialized. See the Filter Configuration example for how to initialize an iir_filter_cfg_t struct to pass to R_IIRFA_Configure.

Note

There are 32 total biquad stages in the peripheral shared across all channels. Channels may not select the same stages, so it is important to choose iir_filter_cfg_t::stage_base and iir_filter_cfg_t::stage_num carefully to ensure no overlap.

Usage Notes

Maximizing Performance

The optimum configuration for IIRFA is dependent on the application. It is recommended to consider the following in regards to your project to determine what settings may be ideal.

Regardless of configuration, each filter stage takes 7 ICLK cycles to process per sample. Additional overhead cycles are required to load and store each sample. The following suggestions may improve

performance:

- Process more data at a time
- Use the unrolled software loop option
    - Provide data in a multiple of the unroll depth
- Disable polling (see warning)

Polling Mode

By default, the driver will poll a status flag for completion after writing input data to IIRFA. Disabling polling significantly improves performance when using a low number of stages, but may cause higher global interrupt latency during processing.

Note

If only one stage is used it is recommended to disable polling as IIRFA will typically execute faster than code resulting in no wait cycles. If polling must be used in this scenario, it is recommended to use the ARM CMSIS DSP Library functions arm_biquad_cascade_df2T_init_f32 and arm_biquad_cascade_df2T_f32 instead of IIRFA to improve performance. Regardless of configuration, it is up to the user to evaluate performance within their own project.

Warning

When polling is disabled, filter operation works by writing a value to IIRCHnINP then immediately reading IIRCHnOUT. While this maximizes performance, the core will wait for output data to become available before continuing execution. **While execution waits for IIRCHnOUT no interrupts will be processed by the core.** The maximum wait time may be up to approximately 224 ICLK cycles for a 32-stage filter (decreasing linearly with the number of stages used).

Single Sample Processing

In applications such as motor control where each sample needs immediate processing, the inline function R_IIRFA_SingleFilter is provided. This function has no parameter checking, takes one sample, and returns a filtered sample. Polling is supported by this function (if configured).

ECC Errors

If configured, R_IIRFA_Filter will return an error if a 1- or 2-bit ECC error has occurred.

1-bit errors are automatically corrected unless writeback is disabled. 2-bit errors cannot be automatically corrected. Reset the coefficient and filter data by calling R_IIRFA_Configure if a non-correctable ECC error is reported.

Limitations

- A total of 32 stages may be configured at any one time across all channels.
- When polling is disabled core execution is halted while waiting for data to become available. (See warning)

Examples

Filter Configuration

Below is an example of how to initialize a filter configuration to pass to R_IIRFA_Configure.

```
#define FILTER_STAGE_NUM (2)
/* Biquad coefficients (4th order Butterworth 200Hz lowpass on 44.1KHz input) */
iir_filter_coeffs_t gp_iirfa0_filter_coeffs[FILTER_STAGE_NUM] =
{
    {
       .b0 = 1.000000000F,
       .b1 = 2.000000000F,
       .b2 = 1.000000000F,
       .a1 = -1.947914029F,
       .a2 = 0.948705125F,
    },
    {
       .b0 = 1.000000000F,
       .b1 = 2.000000000F,
       .b2 = 1.000000000F,
       .a1 = -1.977625722F,
       .a2 = 0.978428884F,
    },
};
/* Biquad state data (clear to start) */
iir_filter_state_t gp_iirfa0_filter_state[FILTER_STAGE_NUM] = {0};
/* Filter configuration */
iir_filter_cfg_t g_iirfa0_filter_cfg =
{
    .p_filter_coeffs = gp_iirfa0_filter_coeffs, // Pointer to filter coefficient
array
    .p_filter_state = gp_iirfa0_filter_state, // Pointer to filter state data array
    .stage_base      = 0,                     // Which hardware biquad stage to
start allocation from (0-31)
    .stage_num       = 2,                     // Number of stages to allocate
};
```

Software Example

The following is a basic example of configuring and using a filter with IIRFA.

```
#define NUM_SAMPLES (128)
#define TWO_PI (2.0F * (float) M_PI)
float gp_data_in[NUM_SAMPLES];
float gp_data_out[NUM_SAMPLES];
void iirfa_filter_example (void)
{
 fsp_err_t err;
 /* Initialize the IIRFA module */
    err = R_IIRFA_Open(&g_iirfa0_ctrl, &g_iirfa0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Initialize filter coefficients and state variables */
    err = R_IIRFA_Configure(&g_iirfa0_ctrl, &g_iirfa0_filter_cfg);
    assert(FSP_SUCCESS == err);
 /* Get input data to be filtered */
    get_input_data(gp_data_in);
 /* Filter data */
    err = R_IIRFA_Filter(&g_iirfa0_ctrl, gp_data_in, gp_data_out, NUM_SAMPLES);
 /* R_IIRFA_Filter will return FSP_ERR_INVALID_RESULT when one or more calculations
results in infinity. */
 if (FSP_ERR_INVALID_RESULT == err)
    {
 /* Handle error */
    }
 else
    {
      assert(FSP_SUCCESS == err);
    }
}
```

Data Structures

struct	iirfa_instance_ctrl_t

Data Structure Documentation

◆ iirfa_instance_ctrl_t

struct iirfa_instance_ctrl_t
IIRFA instance control block.

Function Documentation

◆ R_IIRFA_SingleFilter()

__STATIC_INLINE float R_IIRFA_SingleFilter (iir_ctrl_t *const *p_api_ctrl*, float *data_in*)
Perform a single inline filter operation. ***Note*** *This function is intended to be used in performance-critical applications. As such, no parameter checking or error validation is provided.*

◆ R_IIRFA_Open()

fsp_err_t R_IIRFA_Open (iir_ctrl_t *const *p_api_ctrl*, iir_cfg_t const *const *p_cfg*)
Prepare an IIR channel for filtering. **Return values**

FSP_SUCCESS	The channel was successfully opened.
FSP_ERR_ASSERTION	One or both of the parameters was NULL.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	An invalid channel was selected.
FSP_ERR_ALREADY_OPEN	The instance is already opened.

◆ R_IIRFA_Configure()

fsp_err_t R_IIRFA_Configure (iir_ctrl_t *const *p_api_ctrl*, iir_filter_cfg_t const *const *p_filter_cfg*)

Configure filter coefficients and state values.

Return values

FSP_SUCCESS	Configuration successful.
FSP_ERR_ASSERTION	p_api_ctrl is NULL.
FSP_ERR_NOT_OPEN	Instance is not open.
FSP_ERR_INVALID_ARGUMENT	Invalid filter stage selection.
FSP_ERR_IN_USE	One or more requested filter stages are currently in use.

◆ R_IIRFA_Filter()

fsp_err_t R_IIRFA_Filter (iir_ctrl_t *const *p_api_ctrl*, float const * *p_data_in*, float * *p_data_out*, uint16_t const *num_samples*)

Start a filter operation on the specified data.

Return values

FSP_SUCCESS	Data is successfully written to the D/A Converter.
FSP_ERR_ASSERTION	One of the provided pointers is NULL.
FSP_ERR_NOT_OPEN	Instance is not open.
FSP_ERR_INVALID_ARGUMENT	num_samples is zero.
FSP_ERR_INVALID_RESULT	The result of one or more calculations was +/- infinity.
FSP_ERR_NOT_INITIALIZED	The filter is not configured.
FSP_ERR_IIRFA_ECC_1BIT	A 1-bit ECC error was detected.
FSP_ERR_IIRFA_ECC_2BIT	A 2-bit ECC error was detected.

◆ R_IIRFA_StatusGet()

fsp_err_t R_IIRFA_StatusGet (iir_ctrl_t *const *p_api_ctrl*, iir_status_t *const *p_status*)

Read the current filter state variables.

Return values

FSP_SUCCESS	Information read successfully.
FSP_ERR_ASSERTION	p_api_ctrl is NULL.
FSP_ERR_NOT_OPEN	Instance is not open.

◆ R_IIRFA_Close()

fsp_err_t R_IIRFA_Close (iir_ctrl_t *const *p_api_ctrl*)

Stop filter operations and close the channel instance.

Return values

FSP_SUCCESS	The channel is successfully closed.
FSP_ERR_ASSERTION	p_api_ctrl is NULL.
FSP_ERR_NOT_OPEN	Instance is not open.

fsp_err_t	R_IOPORT_PortEventOutputWrite (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t event_data, ioport_size_t mask_value)
fsp_err_t	R_IOPORT_PortRead (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t *p_port_value)
fsp_err_t	R_IOPORT_PortWrite (ioport_ctrl_t *const p_ctrl, bsp_io_port_t port, ioport_size_t value, ioport_size_t mask)

Detailed Description

Driver for the I/O Ports peripheral on RA MCUs. This module implements the I/O Port Interface.

Overview

The I/O port pins operate as general I/O port pins, I/O pins for peripheral modules, interrupt input pins, analog I/O, port group function for the ELC, or bus control pins.

Features

The IOPORT HAL module can configure the following pin settings:

- Pin direction
- Default output state
- Pull-up
- NMOS/PMOS
- Drive strength
- Event edge trigger (falling, rising or both)
- Whether the pin is to be used as an IRQ pin
- Whether the pin is to be used as an analog pin
- Peripheral connection

The module also provides the following functionality:

- Read/write GPIO pins/ports
- Sets event output data

- Reads event input data

Configuration

The I/O PORT HAL module must be configured by the user for the desired operation. The operating state of an I/O pin can be set via the RA Configuraton tool. When the project is built a pin configuration file is created. The BSP will automatically configure the MCU IO ports accordingly at startup using the same API functions mentioned in this document.

Build Time Configurations for r_ioport

The following build time configurations are defined in fsp_cfg/r_ioport_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for System > I/O Port (r_ioport)

This module can be added to the Stacks tab via New Stack > System > I/O Port (r_ioport).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_ioport	Module name.
Port 1 ELC Trigger Source	MCU Specific Options		ELC source that will trigger PORT1
Port 2 ELC Trigger Source	MCU Specific Options		ELC source that will trigger PORT2
Port 3 ELC Trigger Source	MCU Specific Options		ELC source that will trigger PORT3
Port 4 ELC Trigger Source	MCU Specific Options		ELC source that will trigger PORT4
Port B ELC Trigger Source	MCU Specific Options		ELC source that will trigger PORTB
Port C ELC Trigger Source	MCU Specific Options		ELC source that will trigger PORTC
Port D ELC Trigger Source	MCU Specific Options		ELC source that will trigger PORTD
Port E ELC Trigger Source	MCU Specific Options		ELC source that will trigger PORTE
Pin Configuration Name	Name must be a valid C symbol	g_bsp_pin_cfg	Name for pin configuration structure

Clock Configuration

The I/O PORT HAL module does not require a specific clock configuration.

Pin Configuration

The IOPORT module is used for configuring pins.

Usage Notes

Port Group Function for ELC

Depending on pin configuration, the IOPORT module can perform automatic reads and writes on ports 1-4 on receipt of an ELC event.

When an event is received by a port, the state of the input pins on the port is saved in a hardware register. Simultaneously, the state of output pins on the port is set or cleared based on settings configured by the user. The functions R_IOPORT_PinEventInputRead and R_IOPORT_PortEventInputRead allow reading the last event input state of a pin or port, and event-triggered pin output can be configured through R_IOPORT_PinEventOutputWrite and R_IOPORT_PortEventOutputWrite.

In addition, each pin on ports 1-4 can be configured to trigger an ELC event on rising, falling or both edges. This event can be used to activate other modules when the pin changes state.

Note

The number of ELC-aware ports vary across MCUs. Refer to the Hardware User's Manual for your device for more details.

Examples

Basic Example

This is a basic example of minimal use of the IOPORT in an application.

```
void basic_example ()
{
 bsp_io_level_t readLevel;
 fsp_err_t      err;
 /* Initialize the IOPORT module and configure the pins
  * Note: The default pin configuration name in the RA Configuraton tool is
g_bsp_pin_cfg */
    err = R_IOPORT_Open(&g_ioport_ctrl, &g_bsp_pin_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Call R_IOPORT_PinsCfg if the configuration was not part of initial configurations
made in open */
    err = R_IOPORT_PinsCfg(&g_ioport_ctrl, &g_runtime_pin_cfg);
```

```
    assert(FSP_SUCCESS == err);
 /* Set Pin 00 of Port 06 to High */
    err = R_IOPORT_PinWrite(&g_ioport_ctrl, BSP_IO_PORT_06_PIN_00, BSP_IO_LEVEL_HIGH
);
    assert(FSP_SUCCESS == err);
 /* Read Pin 00 of Port 06*/
    err = R_IOPORT_PinRead(&g_ioport_ctrl, BSP_IO_PORT_06_PIN_00, &readLevel);
    assert(FSP_SUCCESS == err);
}
```

Blinky Example

This example uses IOPORT to configure and toggle a pin to blink an LED.

```
void blinky_example ()
{
 fsp_err_t err;
 /* Initialize the IOPORT module and configure the pins */
    err = R_IOPORT_Open(&g_ioport_ctrl, &g_bsp_pin_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Configure Pin as output
  * Call the R_IOPORT_PinCfg if the configuration was not part of initial
configurations made in open */
    err = R_IOPORT_PinCfg(&g_ioport_ctrl, BSP_IO_PORT_06_PIN_00,
IOPORT_CFG_PORT_DIRECTION_OUTPUT);
    assert(FSP_SUCCESS == err);
 bsp_io_level_t level = BSP_IO_LEVEL_LOW;
 while (1)
    {
 /* Determine the next state of the LEDs */
 if (BSP_IO_LEVEL_LOW == level)
     {
           level = BSP_IO_LEVEL_HIGH;
      }
```

```
 else
      {
            level = BSP_IO_LEVEL_LOW;
       }
 /* Update LED on RA6M3-PK */
       err = R_IOPORT_PinWrite(&g_ioport_ctrl, BSP_IO_PORT_06_PIN_00, level);
      assert(FSP_SUCCESS == err);
 /* Delay */
 R_BSP_SoftwareDelay(100, BSP_DELAY_UNITS_MILLISECONDS); // NOLINT
    }
}
```

ELC Example

This is an example of using IOPORT with ELC events. The ELC event system allows the captured data to be stored when it occurs and then read back at a later time.

```
static elc_instance_ctrl_t g_elc_ctrl;
static elc_cfg_t g_elc_cfg;
void ioport_elc_example ()
{
 bsp_io_level_t eventValue;
 fsp_err_t      err;
 /* Initializes the software and sets the links defined in the control structure. */
    err = R_ELC_Open(&g_elc_ctrl, &g_elc_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Create or modify a link between a peripheral function and an event source. */
    err = R_ELC_LinkSet(&g_elc_ctrl, (elc_peripheral_t) ELC_PERIPHERAL_IOPORT2,
ELC_EVENT_ELC_SOFTWARE_EVENT_0);
    assert(FSP_SUCCESS == err);
 /* Globally enable event linking in the ELC. */
    err = R_ELC_Enable(&g_elc_ctrl);
    assert(FSP_SUCCESS == err);
 /* Initialize the IOPORT module and configure the pins */
```

```
    err = R_IOPORT_Open(&g_ioport_ctrl, &g_bsp_pin_cfg);
    assert(FSP_SUCCESS == err);
 /* Call the R_IOPORT_PinCfg if the configuration was not part of initial
configurations made in open */
    err = R_IOPORT_PinCfg(&g_ioport_ctrl, BSP_IO_PORT_02_PIN_00,
IOPORT_CFG_PORT_DIRECTION_INPUT);
    assert(FSP_SUCCESS == err);
 /* Generate an event signal through software to the linked peripheral. */
    err = R_ELC_SoftwareEventGenerate(&g_elc_ctrl, ELC_SOFTWARE_EVENT_0);
    assert(FSP_SUCCESS == err);
 /* Read Pin Event Input. The data(BSP_IO_LEVEL_HIGH/ BSP_IO_LEVEL_LOW) from
BSP_IO_PORT_02_PIN_00 is read into the
  * EIDR bit */
    err = R_IOPORT_PinEventInputRead(&g_ioport_ctrl, BSP_IO_PORT_02_PIN_00,
&eventValue);
    assert(FSP_SUCCESS == err);
}
```

Function Documentation

◆ R_IOPORT_Open()

fsp_err_t R_IOPORT_Open (ioport_ctrl_t *const *p_ctrl*, const ioport_cfg_t * *p_cfg*)

Initializes internal driver data, then calls pin configuration function to configure pins.

Return values

FSP_SUCCESS	Pin configuration data written to PFS register(s)
FSP_ERR_ASSERTION	NULL pointer
FSP_ERR_ALREADY_OPEN	Module is already open.

◆ R_IOPORT_Close()

fsp_err_t R_IOPORT_Close (ioport_ctrl_t *const *p_ctrl*)

Resets IOPORT registers. Implements ioport_api_t::close

Return values

FSP_SUCCESS	The IOPORT was successfully uninitialized
FSP_ERR_ASSERTION	p_ctrl was NULL
FSP_ERR_NOT_OPEN	The module has not been opened

◆ R_IOPORT_PinsCfg()

fsp_err_t R_IOPORT_PinsCfg (ioport_ctrl_t *const *p_ctrl*, const ioport_cfg_t * *p_cfg*)

Configures the functions of multiple pins by loading configuration data into pin PFS registers. Implements ioport_api_t::pinsCfg.

This function initializes the supplied list of PmnPFS registers with the supplied values. This data can be generated by the Pins tab of the RA Configuration editor or manually by the developer. Different pin configurations can be loaded for different situations such as low power modes and testing.

Return values

FSP_SUCCESS	Pin configuration data written to PFS register(s)
FSP_ERR_NOT_OPEN	The module has not been opened
FSP_ERR_ASSERTION	NULL pointer

◆ R_IOPORT_PinCfg()

fsp_err_t R_IOPORT_PinCfg (ioport_ctrl_t *const *p_ctrl*, bsp_io_port_pin_t *pin*, uint32_t *cfg*)

Configures the settings of a pin. Implements ioport_api_t::pinCfg.

Return values

FSP_SUCCESS	Pin configured
FSP_ERR_NOT_OPEN	The module has not been opened
FSP_ERR_ASSERTION	NULL pointer

Note

This function is re-entrant for different pins. This function will change the configuration of the pin with the new configuration. For example it is not possible with this function to change the drive strength of a pin while leaving all the other pin settings unchanged. To achieve this the original settings with the required change will need to be written using this function.

◆ R_IOPORT_PinEventInputRead()

fsp_err_t R_IOPORT_PinEventInputRead (ioport_ctrl_t *const *p_ctrl*, bsp_io_port_pin_t *pin*, bsp_io_level_t * *p_pin_event*)

Reads the value of the event input data of a specific pin. Implements ioport_api_t::pinEventInputRead.

The pin event data is captured in response to a trigger from the ELC. This function enables this data to be read. Using the event system allows the captured data to be stored when it occurs and then read back at a later time.

Return values

FSP_SUCCESS	Pin read
FSP_ERR_ASSERTION	NULL pointer
FSP_ERR_NOT_OPEN	The module has not been opened
FSP_ERR_INVALID_ARGUMENT	Port is not valid ELC PORT.

Note

This function is re-entrant.

◆ R_IOPORT_PinEventOutputWrite()

fsp_err_t R_IOPORT_PinEventOutputWrite (ioport_ctrl_t *const *p_ctrl*, bsp_io_port_pin_t *pin*, bsp_io_level_t *pin_value*)

This function writes the event output data value to a pin. Implements ioport_api_t::pinEventOutputWrite.

Using the event system enables a pin state to be stored by this function in advance of being output on the pin. The output to the pin will occur when the ELC event occurs.

Return values

FSP_SUCCESS	Pin event data written
FSP_ERR_INVALID_ARGUMENT	Port or Pin or value not valid
FSP_ERR_NOT_OPEN	The module has not been opened
FSP_ERR_ASSERTION	NULL pointer

Note

This function is re-entrant for different ports.

◆ R_IOPORT_PinRead()

fsp_err_t R_IOPORT_PinRead (ioport_ctrl_t *const *p_ctrl*, bsp_io_port_pin_t *pin*, bsp_io_level_t * *p_pin_value*)

Reads the level on a pin. Implements ioport_api_t::pinRead.

Return values

FSP_SUCCESS	Pin read
FSP_ERR_ASSERTION	NULL pointer
FSP_ERR_NOT_OPEN	The module has not been opened

Note

This function is re-entrant for different pins.

◆ R_IOPORT_PinWrite()

fsp_err_t R_IOPORT_PinWrite (ioport_ctrl_t *const *p_ctrl*, bsp_io_port_pin_t *pin*, bsp_io_level_t *level*)

Sets a pin's output either high or low. Implements ioport_api_t::pinWrite.

Return values

FSP_SUCCESS	Pin written to
FSP_ERR_INVALID_ARGUMENT	The pin and/or level not valid
FSP_ERR_NOT_OPEN	The module has not been opene
FSP_ERR_ASSERTION	NULL pointerd

Note

This function is re-entrant for different pins. This function makes use of the PCNTR3 register to atomically modify the level on the specified pin on a port.

◆ R_IOPORT_PortDirectionSet()

fsp_err_t R_IOPORT_PortDirectionSet (ioport_ctrl_t *const *p_ctrl*, bsp_io_port_t *port*, ioport_size_t *direction_values*, ioport_size_t *mask*)

Sets the direction of individual pins on a port. Implements ioport_api_t::portDirectionSet().

Multiple pins on a port can be set to inputs or outputs at once. Each bit in the mask parameter corresponds to a pin on the port. For example, bit 7 corresponds to pin 7, bit 6 to pin 6, and so on. If a bit is set to 1 then the corresponding pin will be changed to an input or an output as specified by the direction values. If a mask bit is set to 0 then the direction of the pin will not be changed.

Return values

FSP_SUCCESS	Port direction updated
FSP_ERR_INVALID_ARGUMENT	The port and/or mask not valid
FSP_ERR_NOT_OPEN	The module has not been opened
FSP_ERR_ASSERTION	NULL pointer

Note

This function is re-entrant for different ports.

◆ R_IOPORT_PortEventInputRead()

fsp_err_t R_IOPORT_PortEventInputRead (ioport_ctrl_t *const *p_ctrl*, bsp_io_port_t *port*, ioport_size_t * *p_event_data*)

Reads the value of the event input data. Implements ioport_api_t::portEventInputRead().

The event input data for the port will be read. Each bit in the returned value corresponds to a pin on the port. For example, bit 7 corresponds to pin 7, bit 6 to pin 6, and so on.

The port event data is captured in response to a trigger from the ELC. This function enables this data to be read. Using the event system allows the captured data to be stored when it occurs and then read back at a later time.

Return values

FSP_SUCCESS	Port read
FSP_ERR_INVALID_ARGUMENT	Port not a valid ELC port
FSP_ERR_ASSERTION	NULL pointer
FSP_ERR_NOT_OPEN	The module has not been opened

Note

This function is re-entrant for different ports.

◆ R_IOPORT_PortEventOutputWrite()

fsp_err_t R_IOPORT_PortEventOutputWrite (ioport_ctrl_t *const *p_ctrl*, bsp_io_port_t *port*, ioport_size_t *event_data*, ioport_size_t *mask_value*)

This function writes the set and reset event output data for a port. Implements ioport_api_t::portEventOutputWrite.

Using the event system enables a port state to be stored by this function in advance of being output on the port. The output to the port will occur when the ELC event occurs.

The input value will be written to the specified port when an ELC event configured for that port occurs. Each bit in the value parameter corresponds to a bit on the port. For example, bit 7 corresponds to pin 7, bit 6 to pin 6, and so on. Each bit in the mask parameter corresponds to a pin on the port.

Return values

FSP_SUCCESS	Port event data written
FSP_ERR_INVALID_ARGUMENT	Port or Mask not valid
FSP_ERR_NOT_OPEN	The module has not been opened
FSP_ERR_ASSERTION	NULL pointer

Note

This function is re-entrant for different ports.

◆ R_IOPORT_PortRead()

fsp_err_t R_IOPORT_PortRead (ioport_ctrl_t *const *p_ctrl*, bsp_io_port_t *port*, ioport_size_t * *p_port_value*)

Reads the value on an IO port. Implements ioport_api_t::portRead.

The specified port will be read, and the levels for all the pins will be returned. Each bit in the returned value corresponds to a pin on the port. For example, bit 7 corresponds to pin 7, bit 6 to pin 6, and so on.

Return values

FSP_SUCCESS	Port read
FSP_ERR_ASSERTION	NULL pointer
FSP_ERR_NOT_OPEN	The module has not been opened

Note

This function is re-entrant for different ports.

◆ R_IOPORT_PortWrite()

fsp_err_t R_IOPORT_PortWrite (ioport_ctrl_t *const *p_ctrl*, bsp_io_port_t *port*, ioport_size_t *value*, ioport_size_t *mask*)

Writes to multiple pins on a port. Implements ioport_api_t::portWrite.

The input value will be written to the specified port. Each bit in the value parameter corresponds to a bit on the port. For example, bit 7 corresponds to pin 7, bit 6 to pin 6, and so on. Each bit in the mask parameter corresponds to a pin on the port.

Only the bits with the corresponding bit in the mask value set will be updated. For example, value = 0xFFFF, mask = 0x0003 results in only bits 0 and 1 being updated.

Return values

FSP_SUCCESS	Port written to
FSP_ERR_INVALID_ARGUMENT	The port and/or mask not valid
FSP_ERR_NOT_OPEN	The module has not been opened
FSP_ERR_ASSERTION	NULL pointerd

Note

This function is re-entrant for different ports. This function makes use of the PCNTR3 register to atomically modify the levels on the specified pins on a port.

4.2.39 Independent Watchdog Timer (r_iwdt)

Modules

Functions

fsp_err_t	R_IWDT_Refresh (wdt_ctrl_t *const p_api_ctrl)

Detailed Description

Driver for the IWDT peripheral on RA MCUs. This module implements the WDT Interface.

Overview

The independent watchdog timer is used to recover from unexpected errors in an application. The timer must be refreshed periodically in the permitted count window by the application. If the count is allowed to underflow or refresh occurs outside of the valid refresh period, the IWDT resets the device or generates an NMI.

Features

The IWDT HAL module has the following key features:

- When the IWDT underflows or is refreshed outside of the permitted refresh window, one of the following events can occur:
  - Resetting of the device
  - Generation of an NMI
- The IWDT begins counting at reset.

Selecting a Watchdog

RA MCUs have two watchdog peripherals: the watchdog timer (WDT) and the independent watchdog timer (IWDT). When selecting between them, consider these factors:

	WDT	IWDT

Start Mode	The WDT can be started from the application (register start mode) or configured by hardware to start automatically (auto start mode).	The IWDT can only be configured by hardware to start automatically.
Clock Source	The WDT runs off a peripheral clock.	The IWDT has its own clock source which improves safety.

Configuration

Build Time Configurations for r_iwdt

The following build time configurations are defined in fsp_cfg/r_iwdt_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Monitoring > Independent Watchdog (r_iwdt)

This module can be added to the Stacks tab via New Stack > Monitoring > Independent Watchdog (r_iwdt). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_wdt0	Module name.
NMI callback	Name must be a valid C symbol	NULL	A user callback function can be provided here. If this callback function is provided, it is called from the interrupt service routine (ISR) when the watchdog triggers.

Note

*The IWDT has additional configurable settings in the OFS0 register in the **BSP** tab properties window. These settings include the following:*

- *Start Mode*
- *Timeout Period*
- *Dedicated Clock Frequency Divisor*
- *Window End Position*
- *Window Start Position*
- *Reset Interrupt Request Select*
- *Stop Control*

Review the OFS0 properties window to see additional details.

Clock Configuration

The IWDT clock is based on the IWDTCLK frequency. You can set the IWDTCLK frequency divider using the **BSP** tab of the RA Configuration editor.

Pin Configuration

This module does not use I/O pins.

Usage Notes

NMI Interrupt

The independent watchdog timer uses the NMI, which is enabled by default. No special configuration is required. When the NMI is triggered, the callback function registered during open is called.

Period Calculation

The IWDT operates from IWDTCLK. With a IWDTCLK of 15000 Hz, the maximum time from the last refresh to device reset or NMI generation will be just below 35 seconds as detailed below.

IWDTCLK = 15000 Hz
Clock division ratio = IWDTCLK / 256
Timeout period = 2048 cycles
WDT clock frequency = 15000 Hz / 256 = 58.59 Hz
Cycle time = 1 / 58.59 Hz = 17.067 ms
Timeout = 17.067 ms x 2048 cycles = 34.95 seconds

Limitations

Developers should be aware of the following limitations when using the IWDT:

- When using a J-Link debugger the IWDT counter does not count and therefore will not reset the device or generate an NMI. To enable the watchdog to count and generate a reset or NMI while debugging, add this line of code in the application:

```
/* (Optional) Enable the IWDT to count and generate NMI or reset when the
 * debugger is connected. */
  R_DEBUG->DBGSTOPCR_b.DBGSTOP_IWDT = 0;
```

- If the IWDT is configured to stop the counter in low power mode, then your application must restart the watchdog by calling R_IWDT_Refresh() after the MCU wakes from low power mode.

Examples

IWDT Basic Example

This is a basic example of minimal use of the IWDT in an application.

```
void iwdt_basic_example (void)
```

```
{
 fsp_err_t err = FSP_SUCCESS;
 /* In auto start mode, the IWDT starts counting immediately when the MCU is powered
on. */
 /* Initializes the module. */
    err = R_IWDT_Open(&g_iwdt0_ctrl, &g_iwdt0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 while (true)
    {
 /* Application work here. */
 /* Refresh before the counter underflows to prevent reset or NMI based on the
setting. */
       (void) R_IWDT_Refresh(&g_iwdt0_ctrl);
    }
}
```

IWDT Advanced Example

This example demonstrates using a start window and gives an example callback to handle an NMI generated by an underflow or refresh error.

```
#define IWDT_TIMEOUT_COUNTS (2048U)
#define IWDT_MAX_COUNTER (IWDT_TIMEOUT_COUNTS - 1U)
#define IWDT_START_WINDOW_75 ((IWDT_MAX_COUNTER * 3) / 4)
/* Example callback called when a watchdog NMI occurs. */
void iwdt_callback (wdt_callback_args_t * p_args)
{
 FSP_PARAMETER_NOT_USED(p_args);
 fsp_err_t err = FSP_SUCCESS;
 /* (Optional) Determine the source of the NMI. */
 wdt_status_t status = WDT_STATUS_NO_ERROR;
    err = R_IWDT_StatusGet(&g_iwdt0_ctrl, &status);
    assert(FSP_SUCCESS == err);
 /* (Optional) Log source of NMI and any other debug information. */
```

```
 /* (Optional) Clear the error flags. */
    err = R_IWDT_StatusClear(&g_iwdt0_ctrl, status);
    assert(FSP_SUCCESS == err);
 /* (Optional) Issue a software reset to reset the MCU. */
    __NVIC_SystemReset();
}
void iwdt_advanced_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* (Optional) Enable the IWDT to count and generate NMI or reset when the
  * debugger is connected. */
    R_DEBUG->DBGSTOPCR_b.DBGSTOP_IWDT = 0;
 /* (Optional) Check if the IWDTRF flag is set to know if the system is
  * recovering from a IWDT reset. */
 if (R_SYSTEM->RSTSR1_b.IWDTRF)
    {
 /* Clear the flag. */
       R_SYSTEM->RSTSR1 = 0U;
    }
 /* Open the module. */
    err = R_IWDT_Open(&g_iwdt0_ctrl, &g_iwdt0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Initialize other application code. */
 /* Do not call R_IWDT_Refresh() in auto start mode unless the
  * counter is in the acceptable refresh window. */
    (void) R_IWDT_Refresh(&g_iwdt0_ctrl);
 while (true)
    {
 /* Application work here. */
 /* (Optional) If there is a chance the application takes less time than
  * the start window, verify the IWDT counter is past the start window
  * before refreshing the IWDT. */
       uint32_t iwdt_counter = 0U;
```

```
do
     {
/* Read the current IWDT counter value. */
           err = R_IWDT_CounterGet(&g_iwdt0_ctrl, &iwdt_counter);
     assert(FSP_SUCCESS == err);
     } while (iwdt_counter >= IWDT_START_WINDOW_75);
/* Refresh before the counter underflows to prevent reset or NMI. */
      (void) R_IWDT_Refresh(&g_iwdt0_ctrl);
   }
}
```

Data Structures

struct	iwdt_instance_ctrl_t

Data Structure Documentation

◆ iwdt_instance_ctrl_t

struct iwdt_instance_ctrl_t	
IWDT control block. DO NOT INITIALIZE. Initialization occurs when wdt_api_t::open is called.	
Data Fields	
uint32_t	wdt_open
	Indicates whether the open() API has been successfully called.
void const *	p_context
	Placeholder for user data. Passed to the user callback in wdt_callback_args_t.
R_IWDT_Type *	p_reg
	Pointer to register base address.
void(*	p_callback)(wdt_callback_args_t *p_args)
	Callback provided when a WDT NMI ISR occurs.

Function Documentation

◆ R_IWDT_Refresh()

fsp_err_t R_IWDT_Refresh (wdt_ctrl_t *const *p_api_ctrl*)

Refresh the Independent Watchdog Timer. If the refresh fails due to being performed outside of the permitted refresh period the device will either reset or trigger an NMI ISR to run.

Example:

```
/* Refresh before the counter underflows to prevent reset or NMI based on the
setting. */
      (void) R_IWDT_Refresh(&g_iwdt0_ctrl);
```

Return values

FSP_SUCCESS	IWDT successfully refreshed.
FSP_ERR_ASSERTION	One or more parameters are NULL pointers.
FSP_ERR_NOT_OPEN	The driver has not been opened. Perform R_IWDT_Open() first.

◆ R_IWDT_Open()

fsp_err_t R_IWDT_Open (wdt_ctrl_t *const *p_api_ctrl*, wdt_cfg_t const *const *p_cfg*)

Register the IWDT NMI callback.

Example:

```
/* Initializes the module. */
   err = R_IWDT_Open(&g_iwdt0_ctrl, &g_iwdt0_cfg);
```

Return values

FSP_SUCCESS	IWDT successfully configured.
FSP_ERR_ASSERTION	Null Pointer.
FSP_ERR_NOT_ENABLED	An attempt to open the IWDT when the OFS0 register is not configured for auto-start mode.
FSP_ERR_ALREADY_OPEN	Module is already open. This module can only be opened once.
FSP_ERR_INVALID_STATE	The security state of the NMI and the module do not match.

◆ R_IWDT_StatusClear()

fsp_err_t R_IWDT_StatusClear (wdt_ctrl_t *const *p_api_ctrl*, const wdt_status_t *status*)

Clear the IWDT status and error flags. Implements wdt_api_t::statusClear.

Example:

```
/* (Optional) Clear the error flags. */
   err = R_IWDT_StatusClear(&g_iwdt0_ctrl, status);
   assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	IWDT flag(s) successfully cleared.
FSP_ERR_ASSERTION	Null pointer as a parameter.
FSP_ERR_NOT_OPEN	The driver has not been opened. Perform R_IWDT_Open() first.

◆ R_IWDT_StatusGet()

fsp_err_t R_IWDT_StatusGet (wdt_ctrl_t *const *p_api_ctrl*, wdt_status_t *const *p_status*)

Read the IWDT status flags. When the IWDT is configured to output a reset on underflow or refresh error reading the status and error flags can be read after reset to establish if the IWDT caused the reset. Reading the status and error flags in NMI output mode indicates whether the IWDT generated the NMI interrupt.

Indicates both status and error conditions.

Example:

```
/* (Optional) Determine the source of the NMI. */
wdt_status_t status = WDT_STATUS_NO_ERROR;
   err = R_IWDT_StatusGet(&g_iwdt0_ctrl, &status);
   assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	IWDT status successfully read.
FSP_ERR_ASSERTION	Null pointer as a parameter.
FSP_ERR_NOT_OPEN	The driver has not been opened. Perform R_IWDT_Open() first.

◆ R_IWDT_CounterGet()

fsp_err_t R_IWDT_CounterGet (wdt_ctrl_t *const *p_api_ctrl*, uint32_t *const *p_count*)

Read the current count value of the IWDT. Implements wdt_api_t::counterGet.

Example:

```
/* Read the current IWDT counter value. */
            err = R_IWDT_CounterGet(&g_iwdt0_ctrl, &iwdt_counter);
     assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	IWDT current count successfully read.
FSP_ERR_ASSERTION	Null pointer passed as a parameter.
FSP_ERR_NOT_OPEN	The driver has not been opened. Perform R_IWDT_Open() first.

◆ R_IWDT_TimeoutGet()

fsp_err_t R_IWDT_TimeoutGet (wdt_ctrl_t *const *p_api_ctrl*, wdt_timeout_values_t *const *p_timeout*)

Read timeout information for the watchdog timer. Implements wdt_api_t::timeoutGet.

Return values

FSP_SUCCESS	IWDT timeout information retrieved successfully.
FSP_ERR_ASSERTION	One or more parameters are NULL pointers.
FSP_ERR_NOT_OPEN	The driver has not been opened. Perform R_IWDT_Open() first.

◆ R_IWDT_CallbackSet()

fsp_err_t R_IWDT_CallbackSet (wdt_ctrl_t *const *p_ctrl*, void(*)(wdt_callback_args_t *) *p_callback*, void const *const *p_context*, wdt_callback_args_t *const *p_callback_memory*)
Updates the user callback and has option of providing memory for callback structure. Implements wdt_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

4.2.40 JPEG Codec (r_jpeg)

Detailed Description

Driver for the JPEG peripheral on RA MCUs. This module implements the JPEG Codec Interface.

Overview

The JPEG Codec is a hardware block providing accelerated JPEG image encode and decode functionality independent of the CPU. Images can optionally be partially processed facilitating streaming applications.

Features

The JPEG Codec provides a number of options useful in a variety of applications:

- Basic encoding and decoding
- Streaming input and/or output
- Decoding JPEGs of unknown size
- Shrink (sub-sample) an image during the decoding process
- Rearrange input and output byte order (byte, word and/or longword swap)
- JPEG error detection

The specifications for the codec are as follows:

Feature	Options
Decompression input formats	Baseline JPEG Y'CbCr 4:4:4, 4:2:2, 4:2:0 and 4:1:1
Decompression output formats	ARGB8888, RGB565
Compression input formats	Raw Y'CbCr 4:2:2 only
Compression output formats	Baseline JPEG Y'CbCr 4:2:2 only
Byte reordering	Byte, halfword and/or word swapping on input and output
Interrupt sources	Image size acquired, input/output data pause, decode complete, error
Compatible image sizes	See Minimum Coded Unit (MCU) below

Configuration

Build Time Configurations for r_jpeg

The following build time configurations are defined in fsp_cfg/r_jpeg_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected, code for parameter checking is included in the build.
Decode Support	• Enabled • Disabled	Enabled	If selected, code for decoding JPEG images is included in the build.
Encode Support	• Enabled • Disabled	Disabled	If selected, code for encoding JPEG images is included in the build.

Configurations for Graphics > JPEG Codec (r_jpeg)

This module can be added to the Stacks tab via New Stack > Graphics > JPEG Codec (r_jpeg).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_jpeg0	Module name.
General > Default mode	• Decode • Encode	Decode	Set the mode to use when calling R_JPEG_Open. This parameter is only used when both Encode and Decode support are enabled.
Decode > Input byte order	MCU Specific Options		Select the byte order of the input data for decoding.
Decode > Output byte order	MCU Specific Options		Select the byte order of the output data for decoding.
Decode > Output color format	• ARGB8888 (32-bit) • RGB565 (16-bit)	RGB565 (16-bit)	Select the output pixel format for decode operations.
Decode > Output alpha (ARGB8888 only)	Value must be an 8-bit integer (0-255)	255	Specify the alpha value to apply to each output pixel when ARGB8888 format is chosen.
Decode > Callback	Name must be a valid C symbol	NULL	If a callback function is provided it will be called from the

			interrupt service routine (ISR) each time a related IRQ triggers.
Encode > Horizontal resolution	Value cannot be greater than 65535 and must be a non-negative integer divisible by 16	480	Horizontal resolution of the raw image (in pixels). This value can be configured at runtime via R_JPEG_ImageSizeSet.
Encode > Vertical resolution	Value cannot be greater than 65535 and must be a non-negative integer divisible by 8	272	Vertical resolution of the raw image. This value can be configured at runtime via R_JPEG_ImageSizeSet.
Encode > Horizontal stride	Value cannot be greater than 65535 and must be a non-negative integer	480	Horizontal stride of the raw image buffer (in pixels). This value can be configured at runtime via R_JPEG_ImageSizeSet.
Encode > Input byte order	MCU Specific Options		Select the byte order of the input data for encoding.
Encode > Output byte order	MCU Specific Options		Select the byte order of the output data for encoding.
Encode > Reset interval	Value cannot be greater than 65535 and must be a non-negative integer	512	Set the number of MCUs between RST markers. A value of 0 will disable DRI and RST marker output.
Encode > Quality factor	Value must be between 1 and 100 and must be an integer	50	Set the quality factor for encoding (1-100). Lower values produce smaller images at the cost of image quality.
Encode > Callback	Name must be a valid C symbol	NULL	If a callback function is provided it will be called from the interrupt service routine (ISR) each time a related IRQ triggers.
Interrupts > Decode Process Interrupt Priority	MCU Specific Options		Select the decompression interrupt priority.
Interrupts > Data Transfer Interrupt Priority	MCU Specific Options		Select the data transfer interrupt priority.

Clock Configuration

The peripheral clock for this module is PCLKA. No clocks are provided by this module.

Pin Configuration

This module does not have any input or output pin connections.

Usage Notes

Overview

The JPEG Codec contains both decode and encode hardware. While these two functions are largely independent in configuration only one can be used at a time.

To switch from decode to encode mode (or vice versa) use R_JPEG_ModeSet while the JPEG Codec is idle.

Status

The status value (jpeg_status_t) provided by the callback and by R_JPEG_StatusGet is a bitfield that encompasses all potential status indication conditions. One or more statuses can be set simultaneously.

Decoding Process

JPEG decoding can be performed in several ways depending on the application:

- To perform the simplest decode operation where all dimensions are known:
  - Set the input buffer, stride and output buffer then wait for a callback with status JPEG_STATUS_OPERATION_COMPLETE.
- To pause after decoding the JPEG header (in order to acquire image dimensions and secure an output buffer):
  - Call R_JPEG_InputBufferSet before setting the output buffer and wait for a callback with status JPEG_STATUS_IMAGE_SIZE_READY.
- To decode a partial JPEG image then pause until the next chunk is available:
  - Specify a size smaller than the full JPEG data when calling R_JPEG_InputBufferSet.
- To pause decoding once an output buffer is filled:
  - Specify a size smaller than the full decoded image when calling R_JPEG_OutputBufferSet.

The flowchart below illustrates the steps necessary to handle any decode operation. The statuses given in blue are part of jpeg_status_t with the JPEG_DECODE_STATUS prefix omitted.

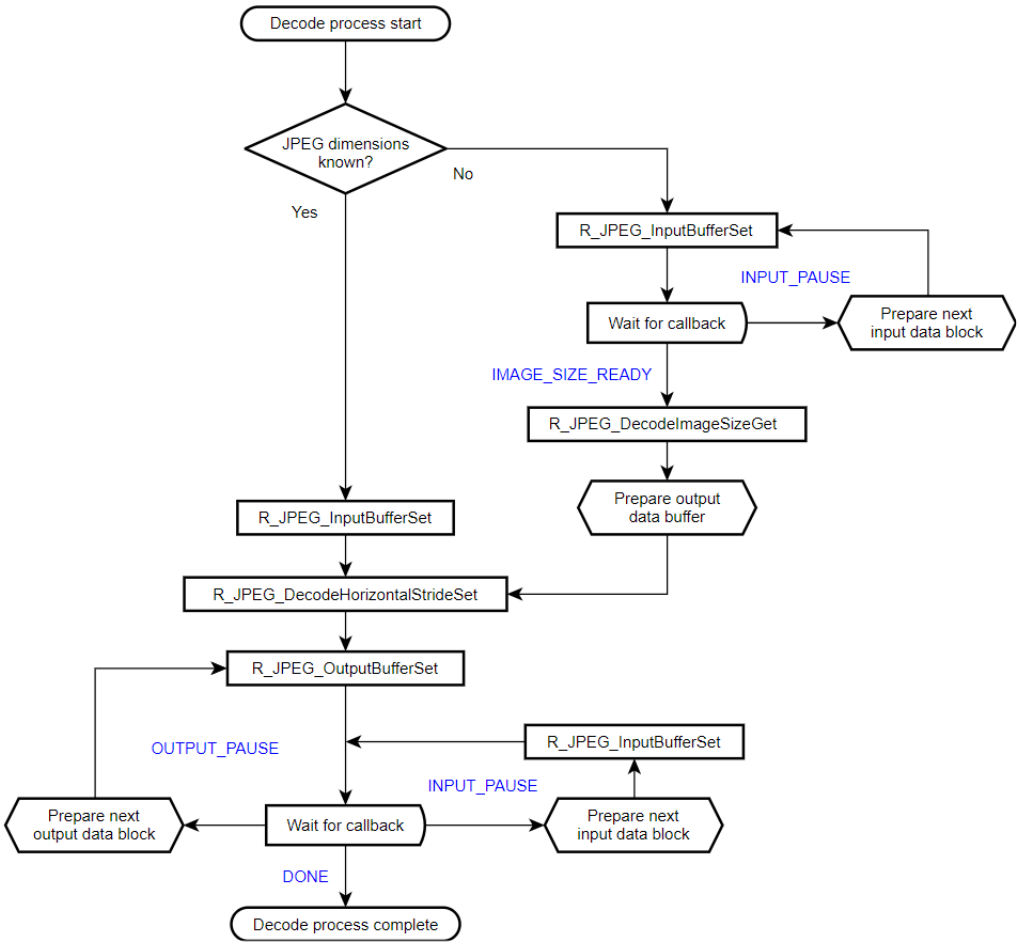

Figure 173: JPEG Decode Operational Flow

Encoding Process

As compared to decoding, encoding is fairly straightforward. The only option available is to stream input data if desired. The flowchart below details the steps needed to compress an image.

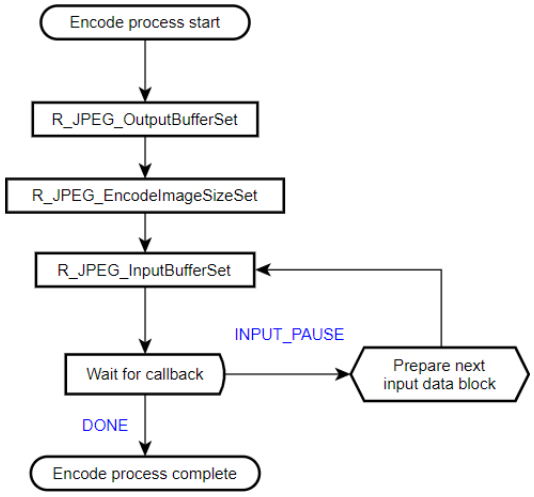

Figure 174: JPEG Encode Operational Flow

Handling Failed Operations

If an encode or decode operation fails or times out while the codec is running, the peripheral must be reset before it is used again. To reset the JPEG Codec simply close and re-open the module by calling R_JPEG_Close followed by R_JPEG_Open.

Limitations

Developers should be aware of the following limitations when using the JPEG API.

Minimum Coded Unit (MCU)

The JPEG Codec can only correctly process images that are an even increment of minimum coded units (MCUs). In other words, depending on the format the width and height of an image to be encoded or decoded must be divisible by the following:

Format	Horizontal	Vertical
Y'CbCr 4:4:4	8 pixels	8 lines
Y'CbCr 4:2:2	16 pixels	8 lines
Y'CbCr 4:1:1	32 pixels	8 lines
Y'CbCr 4:2:0	16 pixels	16 lines

Note

Because encoding is limited to Y'CbCr 4:2:2, raw pixel input data must always be in whole increments of 16x8 pixels.

Encoding Input Format

The encoding unit only supports Y'CbCr 4:2:2 input. Raw RGB888 data can be converted to this format as follows:

```
y =       (0.299000f * r) + (0.587000f * g) + (0.114000f * b);
cb = 128 - (0.168736f * r) - (0.331264f * g) + (0.500000f * b);
cr = 128 + (0.500000f * r) - (0.418688f * g) - (0.081312f * b);
```

While these equations are mathematically simple they do use the floating-point unit. To speed things up we can multiply the coefficients by 256 and divide the sum by 256...

```
y =       ((76.5440f * r) + (150.272f * g) + (29.1840f * b)) / 256;
cb = 128 - ((43.1964f * r) - (84.8036f * g) + (128.000f * b)) / 256;
cr = 128 + ((128.000f * r) - (107.184f * g) - (20.8159f * b)) / 256;
```

...which allows the formulas to be calculated entirely with shifts and addition (coefficients rounded to the nearest integer):

```
y =       (   (r << 6) + (r << 3) + (r << 2) + r
            + (g << 7) + (g << 4) + (g << 2) + (g << 1)
            + (b << 4) + (b << 3) + (b << 2) + b
           ) >> 8;
cb = 128 - (   (r << 5) + (r << 3) + (r << 1) + r
            + (g << 6) + (g << 4) + (g << 2) + g
            - (b << 7)
           ) >> 8;
cr = 128 + (   (r << 7)
            - (g << 6) - (g << 5) - (g << 3) - (g << 1) - g
            - (b << 4) - (b << 2) - b)
           ) >> 8;
```

To compose the final Y'CbCr 4:2:2 data the chroma of every two pixels must be averaged. **In addition, the JPEG Codec expects chrominance values to be in the range -127..127 instead of the standard 1..255.**

```
cb = (uint8_t) ((int8_t) ((cb0 + cb1 + 1) >> 1) - 128);
cr = (uint8_t) ((int8_t) ((cr0 + cr1 + 1) >> 1) - 128);
```

Finally, the below equation composes two 4:2:2 output pixels at a time with standard byte order (JPEG_DATA_ORDER_NORMAL):

```
out = y0 + (cb << 8) + (y1 << 16) + (cr << 24);
```

Note

RGB565 pixels must be upscaled to RGB888 before using the above formulas. Refer to the below example on Y'CbCr Conversion for implementation details.

Examples

Basic Decode Example

This is a basic example showing the minimum code required to initialize the JPEG Codec and decode an image.

```
void jpeg_decode_basic (void)
{
```

```
fsp_err_t err;
/* Open JPEG Codec */
   err = R_JPEG_Open(&g_jpeg_ctrl, &g_jpeg_cfg);
/* Handle any errors. This function should be defined by the user. */
   assert(FSP_SUCCESS == err);
/* Set input buffer */
   err = R_JPEG_InputBufferSet(&g_jpeg_ctrl, JPEG_PTR, JPEG_SIZE_BYTES);
   assert(FSP_SUCCESS == err);
/* Set horizontal stride of output buffer */
   err = R_JPEG_DecodeHorizontalStrideSet(&g_jpeg_ctrl, JPEG_HSIZE);
   assert(FSP_SUCCESS == err);
/* Set output buffer */
   err = R_JPEG_OutputBufferSet(&g_jpeg_ctrl, decode_buffer, sizeof(decode_buffer));
   assert(FSP_SUCCESS == err);
/* Wait for decode completion */
jpeg_status_t status = (jpeg_status_t) 0;
while (!(status & (JPEG_STATUS_OPERATION_COMPLETE | JPEG_STATUS_ERROR)))
   {
      err = R_JPEG_StatusGet(&g_jpeg_ctrl, &status);
     assert(FSP_SUCCESS == err);
   }
}
```

Streaming Input/Output Example

In this example JPEG data is read in 512-byte chunks. Decoding is paused when a chunk is read and once the JPEG header is decoded. The image is decoded 16 lines at a time.

Note

Streaming is always bypassed when a given buffer's size encompasses the entire input or output image, respectively. Though this example decodes via smaller chunks the input and output data are still contiguous for ease of demonstration. Refer to the comments for further insight as to how to implement streaming with different JPEG/output buffer size combinations.

```
#define JPEG_INPUT_SIZE_BYTES 512U
/* JPEG Codec status */
static volatile jpeg_status_t g_jpeg_status = JPEG_STATUS_NONE;
/* JPEG event flag */
```

```
static volatile uint8_t jpeg_event = 0;
/* Callback function for JPEG decode interrupts */
void jpeg_decode_callback (jpeg_callback_args_t * p_args)
{
 /* Get JPEG Codec status */
    g_jpeg_status = p_args->status;
 /* Set JPEG flag */
    jpeg_event = 1;
}
/* Simple wait that returns 1 if no event happened within the timeout period */
static uint8_t jpeg_event_wait (void)
{
    uint32_t timeout_timer = JPEG_EVENT_TIMEOUT;
 while (!jpeg_event && --timeout_timer)
    {
 /* Spin here until an event callback or timeout */
    }
    jpeg_event = 0;
 return timeout_timer ? 0 : 1;
}
/* Decode a JPEG image to a buffer using streaming input and output */
void jpeg_decode_streaming (void)
{
    uint8_t    * p_jpeg = (uint8_t *) JPEG_PTR;
 jpeg_status_t status = (jpeg_status_t) 0;
    uint8_t       timeout = 0;
 fsp_err_t    err;
 /* Number of input bytes to read at a time */
    uint32_t input_bytes = JPEG_INPUT_SIZE_BYTES;
 /* Open JPEG unit and start decode */
    err = R_JPEG_Open(&g_jpeg_ctrl, &g_jpeg_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 while (!(status & JPEG_STATUS_ERROR) && !timeout)
```

```
    {
 /* Set the input buffer to read `input_bytes` bytes at a time */
       err = R_JPEG_InputBufferSet(&g_jpeg_ctrl, p_jpeg, input_bytes);
      assert(FSP_SUCCESS == err);
 /* This delay is required for streaming input mode to function correctly.
  * (Without this delay the JPEG Codec will not correctly locate markers in the file
header.) */
 R_BSP_SoftwareDelay(10, BSP_DELAY_UNITS_MICROSECONDS);
 /* Wait for a callback */
       timeout = jpeg_event_wait();
 /* Get the status from the callback */
       status = g_jpeg_status;
 /* Break if the header has finished decoding */
 if (status & JPEG_STATUS_IMAGE_SIZE_READY)
      {
 break;
      }
 /* Move pointer to next block of input data (if needed) */
       p_jpeg = (uint8_t *) ((uint32_t) p_jpeg + input_bytes);
    }
 /* Get image size */
    uint16_t horizontal;
    uint16_t vertical;
    err = R_JPEG_DecodeImageSizeGet(&g_jpeg_ctrl, &horizontal, &vertical);
    assert(FSP_SUCCESS == err);
 /* Prepare output data buffer here if needed (already allocated in this example) */
    uint8_t * p_output = decode_buffer;
 /* Set horizontal stride */
    err = R_JPEG_DecodeHorizontalStrideSet(&g_jpeg_ctrl, horizontal);
    assert(FSP_SUCCESS == err);
 /* Calculate the number of bytes that will fit in the buffer (16 lines in this
example) */
    uint32_t output_size = horizontal * 16U * 4U;
 /* Start decoding by setting the output buffer */
```

```
   err = R_JPEG_OutputBufferSet(&g_jpeg_ctrl, p_output, output_size);
   assert(FSP_SUCCESS == err);
while (!(status & JPEG_STATUS_ERROR) && !timeout)
   {
/* Wait for a callback */
      timeout = jpeg_event_wait();
/* Get the status from the callback */
      status = g_jpeg_status;
/* Break if decoding is complete */
if (status & JPEG_STATUS_OPERATION_COMPLETE)
     {
break;
     }
if (status & JPEG_STATUS_OUTPUT_PAUSE)
     {
/* Draw the JPEG work buffer to the framebuffer here (if needed) */
/* Move pointer to next block of output data (if needed) */
           p_output += output_size;
/* Set the output buffer to the next 16-line block */
     err = R_JPEG_OutputBufferSet(&g_jpeg_ctrl, p_output, output_size);
     assert(FSP_SUCCESS == err);
     }
if (status & JPEG_STATUS_INPUT_PAUSE)
     {
/* Get next block of input data */
        p_jpeg = (uint8_t *) ((uint32_t) p_jpeg + input_bytes);
/* Set the new input buffer pointer */
        err = R_JPEG_InputBufferSet(&g_jpeg_ctrl, p_jpeg, input_bytes);
     assert(FSP_SUCCESS == err);
     }
   }
/* Close driver to allow encode operations if needed */
   err = R_JPEG_Close(&g_jpeg_ctrl);
   assert(FSP_SUCCESS == err);
```

```
}
```

Encode Example

This is a basic example showing the minimum code required to initialize the JPEG Codec and encode an image.

Note

This example assumes image dimensions are provided in the configuration. If this is not the case, R_JPEG_EncodeImageSizeSet must be used to set the size before calling R_JPEG_InputBufferSet.

```
void jpeg_encode_basic (void)
{
 fsp_err_t err;
 /* Open JPEG Codec */
    err = R_JPEG_Open(&g_jpeg_ctrl, &g_jpeg_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Set output buffer */
    err = R_JPEG_OutputBufferSet(&g_jpeg_ctrl, jpeg_buffer, sizeof(jpeg_buffer));
    assert(FSP_SUCCESS == err);
 /* Set input buffer */
    err = R_JPEG_InputBufferSet(&g_jpeg_ctrl, RAW_YCBCR_IMAGE_PTR, IMAGE_SIZE_BYTES);
    assert(FSP_SUCCESS == err);
 /* Wait for decode completion */
 jpeg_status_t status = (jpeg_status_t) 0;
 while (!(status & JPEG_STATUS_OPERATION_COMPLETE))
    {
       err = R_JPEG_StatusGet(&g_jpeg_ctrl, &status);
      assert(FSP_SUCCESS == err);
    }
}
```

Streaming Encode Example

In this example the raw input data is provided in smaller chunks. This can help significantly reduce buffer size and improve throughput when streaming in raw data from an outside source.

```
```

```
/* Callback function for JPEG encode interrupts */
void jpeg_encode_callback (jpeg_callback_args_t * p_args)
{
 /* Get JPEG Codec status */
    g_jpeg_status = p_args->status;
 /* Set JPEG flag */
    jpeg_event = 1;
}
void jpeg_encode_streaming (void)
{
    uint8_t   timeout = 0;
    uint8_t * p_chunk = (uint8_t *) RAW_YCBCR_IMAGE_PTR;
 fsp_err_t err;
 /* Open JPEG Codec */
    err = R_JPEG_Open(&g_jpeg_ctrl, &g_jpeg_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Set output buffer */
    err = R_JPEG_OutputBufferSet(&g_jpeg_ctrl, jpeg_buffer, sizeof(jpeg_buffer));
    assert(FSP_SUCCESS == err);
 /* Set the image size */
 jpeg_encode_image_size_t image_size;
    image_size.horizontal_resolution    = X_RESOLUTION;
    image_size.vertical_resolution      = Y_RESOLUTION;
    image_size.horizontal_stride_pixels = H_STRIDE;
    err = R_JPEG_EncodeImageSizeSet(&g_jpeg_ctrl, &image_size);
    assert(FSP_SUCCESS == err);
 /* Calculate the size of the input data chunk (16 lines in this example) */
    uint32_t chunk_size = H_STRIDE * 16U * YCBCR_BYTES_PER_PIXEL;
 while (!timeout)
    {
 /* Set the input buffer */
       err = R_JPEG_InputBufferSet(&g_jpeg_ctrl, p_chunk, chunk_size);
      assert(FSP_SUCCESS == err);
```

```
 /* Wait for a callback */
       timeout = jpeg_event_wait();
 if (g_jpeg_status & JPEG_STATUS_OPERATION_COMPLETE)
      {
 /* Encode complete */
 break;
      }
 if (g_jpeg_status & JPEG_STATUS_INPUT_PAUSE)
      {
 /* Load next block of input data here (if needed) */
            p_chunk += chunk_size;
      }
    }
}
```

Y'CbCr Conversion

The below function is provided as a reference for how to convert RGB values to Y'CbCr for use with the JPEG Codec.

Note

This function is only partially optimized for clarity. Further appllication-specific size- or speed-based optimizations should be considered when implementing in an actual project.

```
#define RGB565_G_MASK 0x07E0
#define RGB565_B_MASK 0x001F
#define C_0 128
typedef enum e_pixel_format
{
    PIXEL_FORMAT_ARGB8888,
    PIXEL_FORMAT_RGB565
} pixel_format_t;
/* 5-bit to 8-bit LUT */
const uint8_t lut_32[] =
{
    0,   8,   16, 25, 33, 41, 49, 58,
    66, 74, 82, 90, 99, 107, 115, 123,
```

```
    132, 140, 148, 156, 165, 173, 181, 189,
    197, 206, 214, 222, 230, 239, 247, 255
};
/* 6-bit to 8-bit LUT */
const uint8_t lut_64[] =
{
    0,   4,   8,   12, 16, 20, 24, 28,
    32, 36, 40, 45, 49, 53, 57, 61,

}
```

Data Structures

struct jpeg_instance_ctrl_t

Data Structure Documentation

◆ jpeg_instance_ctrl_t

struct jpeg_instance_ctrl_t		
JPEG Codec module control block. DO NOT INITIALIZE. Initialization occurs when jpep_api_t::open is called.		
Data Fields		
uint32_t	open	JPEG Codec driver status.
jpeg_status_t	status	JPEG Codec operational status.
fsp_err_t	error_code	JPEG Codec error code (if any).
jpeg_mode_t	mode	Current mode (decode or encode).
uint32_t	horizontal_stride_bytes	Horizontal Stride settings.
uint32_t	output_buffer_size	Output buffer size.
jpeg_cfg_t const *	p_cfg	JPEG Decode configuration struct.
void const *	p_extend	JPEG Codec hardware dependent configuration */.
jpeg_decode_pixel_format_t	pixel_format	Pixel format.
uint16_t	total_lines_decoded	Track the number of lines decoded so far.
jpeg_decode_subsample_t	horizontal_subsample	Horizontal sub-sample setting.
uint16_t	lines_to_encode	Number of lines to encode.
uint16_t	vertical_resolution	vertical size
uint16_t	total_lines_encoded	Number of lines encoded.

Function Documentation

◆ R_JPEG_Open()

fsp_err_t R_JPEG_Open (jpeg_ctrl_t *const *p_api_ctrl*, jpeg_cfg_t const *const *p_cfg*)

Initialize the JPEG Codec module.

Note

This function configures the JPEG Codec for operation and sets up the registers for data format and pixel format based on user-supplied configuration parameters. Interrupts are enabled to support callbacks.

Return values

FSP_SUCCESS	JPEG Codec module is properly configured and is ready to take input data.
FSP_ERR_ALREADY_OPEN	JPEG Codec is already open.
FSP_ERR_ASSERTION	Pointer to the control block or the configuration structure is NULL.
FSP_ERR_IRQ_BSP_DISABLED	JEDI interrupt does not have an IRQ number.
FSP_ERR_INVALID_ARGUMENT	(Encode only) Quality factor, horizontal resolution and/or vertical resolution are invalid.
FSP_ERR_INVALID_ALIGNMENT	(Encode only) The horizontal resolution (at 16bpp) is not divisible by 8 bytes.

◆ R_JPEG_OutputBufferSet()

fsp_err_t R_JPEG_OutputBufferSet (jpeg_ctrl_t * *p_api_ctrl*, void * *p_output_buffer*, uint32_t *output_buffer_size*)

Assign a buffer to the JPEG Codec for storing output data.

Note

In Decode mode, the number of image lines to be decoded depends on the size of the buffer and the horizontal stride settings. Once the output buffer size is known, the horizontal stride value is known, and the input pixel format is known (the input pixel format is obtained by the JPEG decoder from the JPEG headers), the driver automatically computes the number of lines that can be decoded into the output buffer. After these lines are decoded, the JPEG engine pauses and a callback function is triggered, so the application is able to provide the next buffer for the JPEG module to resume the operation.

The JPEG decoding operation automatically starts after both the input buffer and the output buffer are set and the output buffer is big enough to hold at least eight lines of decoded image data.

Return values

FSP_SUCCESS	The output buffer is properly assigned to JPEG codec device.
FSP_ERR_ASSERTION	Pointer to the control block or output_buffer is NULL or output_buffer_size is 0.
FSP_ERR_INVALID_ALIGNMENT	Buffer starting address is not 8-byte aligned.
FSP_ERR_NOT_OPEN	JPEG not opened.
FSP_ERR_JPEG_UNSUPPORTED_IMAGE_SIZE	The number of horizontal pixels exceeds horizontal memory stride.
FSP_ERR_JPEG_BUFFERSIZE_NOT_ENOUGH	Invalid buffer size.
FSP_ERR_IN_USE	The output buffer cannot be changed during codec operation.

◆ R_JPEG_InputBufferSet()

fsp_err_t R_JPEG_InputBufferSet (jpeg_ctrl_t *const *p_api_ctrl*, void * *p_data_buffer*, uint32_t *data_buffer_size*)

Assign an input data buffer to the JPEG codec for processing.

Note

After the amount of data is processed, the JPEG driver triggers a callback function with the flag JPEG_PRV_OPERATION_INPUT_PAUSE set. The application supplies the next chunk of data to the driver so processing can resume.
The JPEG decoding operation automatically starts after both the input buffer and the output buffer are set, and the output buffer is big enough to hold at least one line of decoded image data.

If zero is provided for the decode data buffer size the JPEG Codec will never pause for more input data and will continue to read until either an image has been fully decoded or an error condition occurs.

Note

When encoding images the minimum data buffer size is 8 lines by 16 Y'CbCr 4:2:2 pixels (256 bytes). This corresponds to one minimum coded unit (MCU) of the resulting JPEG output.

Return values

FSP_SUCCESS	The input data buffer is properly assigned to JPEG Codec device.
FSP_ERR_ASSERTION	Pointer to the control block is NULL, or the pointer to the input_buffer is NULL, or the input_buffer_size is 0.
FSP_ERR_INVALID_ALIGNMENT	Buffer starting address is not 8-byte aligned.
FSP_ERR_NOT_OPEN	JPEG not opened.
FSP_ERR_IN_USE	The input buffer cannot be changed while the codec is running.
FSP_ERR_INVALID_CALL	In encode mode the output buffer must be set first.
FSP_ERR_JPEG_IMAGE_SIZE_ERROR	The buffer size is smaller than the minimum coded unit (MCU).

◆ R_JPEG_StatusGet()

fsp_err_t R_JPEG_StatusGet (jpeg_ctrl_t * *p_api_ctrl*, jpeg_status_t * *p_status*)

Get the status of the JPEG codec. This function can also be used to poll the device.

Return values

FSP_SUCCESS	The status information is successfully retrieved.
FSP_ERR_ASSERTION	Pointer to the control block or p_status is NULL.
FSP_ERR_NOT_OPEN	JPEG is not opened.

◆ R_JPEG_Close()

fsp_err_t R_JPEG_Close (jpeg_ctrl_t * *p_api_ctrl*)

Cancel an outstanding JPEG codec operation and close the device.

Return values

FSP_SUCCESS	The JPEG unit is stopped and the driver is closed.
FSP_ERR_ASSERTION	Pointer to the control block is NULL.
FSP_ERR_NOT_OPEN	JPEG not opened.

◆ R_JPEG_EncodeImageSizeSet()

fsp_err_t R_JPEG_EncodeImageSizeSet (jpeg_ctrl_t *const *p_api_ctrl*, jpeg_encode_image_size_t * *p_image_size*)

Set the image dimensions for an encode operation.

Note

Image dimensions must be set before setting the input buffer.

Return values

FSP_SUCCESS	Image size was successfully written to the JPEG Codec.
FSP_ERR_ASSERTION	Pointer to the control block or p_image_size is NULL.
FSP_ERR_INVALID_ALIGNMENT	Horizontal stride is not 8-byte aligned.
FSP_ERR_INVALID_ARGUMENT	Horizontal or vertical resolution is invalid or zero.
FSP_ERR_NOT_OPEN	JPEG not opened.
FSP_ERR_IN_USE	Image parameters cannot be changed while the codec is running.

◆ R_JPEG_DecodeLinesDecodedGet()

fsp_err_t R_JPEG_DecodeLinesDecodedGet (jpeg_ctrl_t * *p_api_ctrl*, uint32_t * *p_lines*)

Returns the number of lines decoded into the output buffer.

Note

Use this function to retrieve the number of image lines written to the output buffer after a partial decode operation. Combined with the horizontal stride settings and the output pixel format the application can compute the amount of data to read from the output buffer.

Return values

FSP_SUCCESS	Line count successfully returned.
FSP_ERR_ASSERTION	Pointer to the control block or p_lines is NULL.
FSP_ERR_NOT_OPEN	JPEG not opened.

◆ R_JPEG_DecodeHorizontalStrideSet()

fsp_err_t R_JPEG_DecodeHorizontalStrideSet (jpeg_ctrl_t * *p_api_ctrl*, uint32_t *horizontal_stride*)

Configure horizontal stride setting for decode operations.

Note

If the image size is known prior to the open call and/or the output buffer stride is constant, pass the horizontal stride value in the jpeg_cfg_t structure. Otherwise, after the image size becomes available use this function to set the output buffer horizontal stride value.

Return values

FSP_SUCCESS	Horizontal stride value is properly configured.
FSP_ERR_ASSERTION	Pointer to the control block is NULL.
FSP_ERR_INVALID_ALIGNMENT	Horizontal stride is zero or is not 8-byte aligned.
FSP_ERR_NOT_OPEN	JPEG not opened.

◆ R_JPEG_DecodeImageSizeGet()

fsp_err_t R_JPEG_DecodeImageSizeGet (jpeg_ctrl_t * *p_api_ctrl*, uint16_t * *p_horizontal_size*, uint16_t * *p_vertical_size*)

Obtain the size of an image being decoded.

Return values

FSP_SUCCESS	The image size is available and the horizontal and vertical values are stored in the memory pointed to by p_horizontal_size and p_vertical_size.
FSP_ERR_ASSERTION	Pointer to the control block is NULL and/or size is not ready.
FSP_ERR_NOT_OPEN	JPEG is not opened.

◆ R_JPEG_DecodeImageSubsampleSet()

fsp_err_t R_JPEG_DecodeImageSubsampleSet (jpeg_ctrl_t *const *p_api_ctrl*, jpeg_decode_subsample_t *horizontal_subsample*, jpeg_decode_subsample_t *vertical_subsample*)

Configure horizontal and vertical subsampling.

Note

This function can be used to scale the output of decoded image data.

Return values

FSP_SUCCESS	Horizontal subsample value is properly configured.
FSP_ERR_ASSERTION	Pointer to the control block is NULL.
FSP_ERR_NOT_OPEN	JPEG not opened.

◆ R_JPEG_DecodePixelFormatGet()

fsp_err_t R_JPEG_DecodePixelFormatGet (jpeg_ctrl_t * *p_api_ctrl*, jpeg_color_space_t * *p_color_space*)

Get the color format of the JPEG being decoded.

Return values

FSP_SUCCESS	The color format was successfully retrieved.
FSP_ERR_ASSERTION	Pointer to the control block is NULL.
FSP_ERR_NOT_OPEN	JPEG is not opened.

◆ R_JPEG_ModeSet()

fsp_err_t R_JPEG_ModeSet (jpeg_ctrl_t *const *p_api_ctrl*, jpeg_mode_t *mode*)

Switch between encode and decode mode (or vice-versa).

Note

The codec must not be idle in order to switch modes.

Return values

FSP_SUCCESS	Mode changed successfully.
FSP_ERR_ASSERTION	p_api_ctrl is NULL.
FSP_ERR_NOT_OPEN	Module is not open.
FSP_ERR_IN_USE	JPEG Codec is currently in use.
FSP_ERR_INVALID_ARGUMENT	(Encode only) Quality factor, horizontal resolution and/or vertical resolution are invalid.
FSP_ERR_INVALID_ALIGNMENT	(Encode only) The horizontal resolution (at 16bpp) is not divisible by 8 bytes.

4.2.41 Key Interrupt (r_kint)

Modules

Functions

fsp_err_t	R_KINT_Open (keymatrix_ctrl_t *const p_api_ctrl, keymatrix_cfg_t const *const p_cfg)
fsp_err_t	R_KINT_Enable (keymatrix_ctrl_t *const p_api_ctrl)
fsp_err_t	R_KINT_Disable (keymatrix_ctrl_t *const p_api_ctrl)
fsp_err_t	R_KINT_Close (keymatrix_ctrl_t *const p_api_ctrl)

Detailed Description

Driver for the KINT peripheral on RA MCUs. This module implements the Key Matrix Interface.

Overview

The KINT module configures the Key Interrupt (KINT) peripheral to detect rising or falling edges on any of the KINT channels. When such an event is detected on any of the configured pins, the module generates an interrupt.

Features

- Detect rising or falling edges on KINT channels
- Callback for notifying the application when edges are detected on the configured channels

Configuration

Build Time Configurations for r_kint

The following build time configurations are defined in fsp_cfg/r_kint_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Input > Key Matrix (r_kint)

This module can be added to the Stacks tab via New Stack > Input > Key Matrix (r_kint).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_kint0	Module name.
Input > Key Interrupt Flag Mask	• Channel 0 • Channel 1 • Channel 2 • Channel 3 • Channel 4 • Channel 5 • Channel 6 • Channel 7		Select channels to enable.
Interrupts > Trigger Type	• Falling Edge • Rising Edge	Rising Edge	Specifies if the enabled channels detect a rising edge or a falling edge. NOTE: either all channels detecting a rising edge or all channels detecting a falling edge.
Interrupts > Callback	Name must be a valid C symbol	kint_callback	A user callback function can be provided. If this callback function is provided, it will be called from the interrupt service routine (ISR) each time the IRQ triggers.

Interrupts > Key Interrupt Priority	MCU Specific Options	Select the key interrupt priority.

Clock Configuration

The KINT peripheral runs on PCLKB.

Pin Configuration

The KRn pins are key switch matrix row input pins.

Usage Notes

Connecting a Switch Matrix

The KINT module is designed to scan the rows of a switch matrix where each row is connected to a number of columns through switches. A periodic timer (or other mechanism) sets one column pin high at a time. Any switches that are pressed on the driven column cause a rising (or falling) edge on the row pin (KRn) causing an interrupt.

Note

In applications where multiple keys may be pressed at the same time it is recommended to put a diode inline with each switch to prevent ghosting.

Handling Multiple Pins

When an edge is detected on multiple pins at the same time, a single IRQ will be generated. A mask of all the pins that detected an edge will be passed to the callback.

Examples

Basic Example

This is a basic example of minimal use of the KINT in an application.

```
static volatile uint32_t g_channel_mask;
static volatile uint32_t g_kint_edge_detected = 0U;
/* Called from key_int_isr */
void r_kint_callback (keymatrix_callback_args_t * p_args)
{
    g_channel_mask       = p_args->channel_mask;
    g_kint_edge_detected = 1U;
}
void r_kint_example ()
{
 /* Configure the KINT. */
 fsp_err_t err = R_KINT_Open(&g_kint_ctrl, &g_kint_cfg);
```

```
/* Handle any errors. This function should be defined by the user. */
   assert(FSP_SUCCESS == err);
/* Enable the KINT. */
   err = R_KINT_Enable(&g_kint_ctrl);
   assert(FSP_SUCCESS == err);
while (0 == g_kint_edge_detected)
   {
/* Wait for interrupt. */
   }
}
```

Data Structures

struct	kint_instance_ctrl_t

Data Structure Documentation

◆ kint_instance_ctrl_t

struct kint_instance_ctrl_t
Channel instance control block. DO NOT INITIALIZE. Initialization occurs when keymatrix_api_t::open is called.

Function Documentation

◆ R_KINT_Open()

fsp_err_t R_KINT_Open (keymatrix_ctrl_t *const *p_api_ctrl*, keymatrix_cfg_t const *const *p_cfg*)
Configure all the Key Input (KINT) channels and provides a handle for use with the rest of the KINT API functions. Implements keymatrix_api_t::open.

Return values

FSP_SUCCESS	Initialization was successful.
FSP_ERR_ASSERTION	One of the following parameters may be NULL: p_cfg, or p_ctrl or the callback.
FSP_ERR_ALREADY_OPEN	The module has already been opened.
FSP_ERR_IP_CHANNEL_NOT_PRESENT	The channel mask is invalid.

◆ R_KINT_Enable()

fsp_err_t R_KINT_Enable (keymatrix_ctrl_t *const *p_api_ctrl*)

This function enables interrupts for the KINT peripheral after clearing any pending requests. Implements keymatrix_api_t::enable.

Return values

FSP_SUCCESS	Interrupt enabled successfully.
FSP_ERR_ASSERTION	The p_ctrl parameter was null.
FSP_ERR_NOT_OPEN	The peripheral is not opened.

◆ R_KINT_Disable()

fsp_err_t R_KINT_Disable (keymatrix_ctrl_t *const *p_api_ctrl*)

This function disables interrupts for the KINT peripheral. Implements keymatrix_api_t::disable.

Return values

FSP_SUCCESS	Interrupt disabled successfully.
FSP_ERR_ASSERTION	The p_ctrl parameter was null.
FSP_ERR_NOT_OPEN	The channel is not opened.

◆ R_KINT_Close()

fsp_err_t R_KINT_Close (keymatrix_ctrl_t *const *p_api_ctrl*)

Clear the KINT configuration and disable the KINT IRQ. Implements keymatrix_api_t::close.

Return values

FSP_SUCCESS	Successful close.
FSP_ERR_ASSERTION	The parameter p_ctrl is NULL.
FSP_ERR_NOT_OPEN	The module is not opened.

4.2.42 Low Power Modes (r_lpm)

Modules

Functions

fsp_err_t	R_LPM_Open (lpm_ctrl_t *const p_api_ctrl, lpm_cfg_t const *const p_cfg)
fsp_err_t	R_LPM_Close (lpm_ctrl_t *const p_api_ctrl)
fsp_err_t	R_LPM_LowPowerReconfigure (lpm_ctrl_t *const p_api_ctrl, lpm_cfg_t const *const p_cfg)
fsp_err_t	R_LPM_LowPowerModeEnter (lpm_ctrl_t *const p_api_ctrl)
fsp_err_t	R_LPM_IoKeepClear (lpm_ctrl_t *const p_api_ctrl)

Detailed Description

Driver for the LPM peripheral on RA MCUs. This module implements the Low Power Modes Interface.

Overview

The low power modes driver is used to configure and place the device into the desired low power mode. Various sources can be configured to wake from standby, request snooze mode, end snooze mode or end deep standby mode.

Features

The LPM HAL module has the following key features:

- Supports the follwowing low power modes:
  - Deep Software Standby mode (On supported MCUs)
  - Software Standby mode
  - Sleep mode
  - Snooze mode
- Supports reducing power consumption when in deep software standby mode through internal power supply control and by resetting the states of I/O ports.
- Supports disabling and enabling the MCU's other hardware peripherals

Configuration

Build Time Configurations for r_lpm

The following build time configurations are defined in fsp_cfg/r_lpm_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
Standby Limit	• Enabled • Disabled	Disabled	If enabled, standby configuration only applies in R_LPM_LowPowerModeEnter. Otherwise, standby

			configuration applies to any WFI call.

Configurations for Power > Low Power Modes (r_lpm)

This module can be added to the Stacks tab via New Stack > Power > Low Power Modes (r_lpm). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_lpm0	Module name.
General > Low Power Mode	MCU Specific Options		Power mode to be entered.
General > Output port state in standby and deep standby	MCU Specific Options		Select the state of output pins during standby. Applies to address output, data output, and other bus control output pins.
Standby Options > Wake Sources	MCU Specific Options		Enable wake from standby from these Sources.
Standby Options > Snooze Request Source	MCU Specific Options		Select the event that will enter snooze.
Standby Options > Snooze End Sources	MCU Specific Options		Enable wake from snooze from these sources.
Standby Options > DTC state in Snooze Mode	• Disabled • Enabled	Disabled	Enable wake from snooze from this source.
Standby Options > Snooze Cancel Source	MCU Specific Options		Select an interrupt source to cancel snooze.
Deep Standby Options > I/O Port Retention	MCU Specific Options		Select the state of the IO Pins after exiting deep standby mode.
Deep Standby Options > Power-Supply Control	MCU Specific Options		Select the state of the internal power supply in deep standby mode.
Deep Standby Options > Cancel Sources	MCU Specific Options		Enable wake from deep standby using these sources.
Deep Standby Options > Cancel Edges	MCU Specific Options		Falling edge trigger is default. Select sources to enable wake from deep standby with

rising edge.

Clock Configuration

This module does not have any selectable clock sources.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Sleep Mode

At power on, by default sleep is set as the low-power mode. Sleep mode is the most convenient low-power mode available, as it does not require any special configuration (other than configuring and enabling a suitable interrupt or event to wake the MCU from sleep) to return to normal program-execution mode. The states of the SRAM, the processor registers, and the hardware peripherals are all maintained in sleep mode, and the time needed to enter and wake from sleep is minimal. Any interrupt causes the MCU device to wake from sleep mode, including the Systick interrupt used by the RTOS scheduler.

Software Standby Mode

In software-standby mode, the CPU, as well as most of the on-chip peripheral functions and all of the internal oscillators, are stopped. The contents of the CPU internal registers and SRAM data, the states of on-chip peripheral functions, and I/O Ports are all retained. Software-standby mode allows significant reduction in power consumption, because most of the oscillators are stopped in this mode. Like sleep mode, standby mode requires an interrupt or event be configured and enabled to wake up.

Snooze Mode

Snooze mode can be used with some MCU peripherals to execute basic tasks while keeping the MCU in a low-power state. Many core peripherals and all clocks can be selected to run during Snooze, allowing for more flexible low-power configuration than Software Standby mode. To enable Snooze, select "Software Standby mode with Snooze mode enabled" for the "Low Power Mode" configuration option. Snooze mode settings (including entry/exit sources) are available under "Standby Options".

Deep Software Standby Mode

Deep Software Standby Mode is only available on some MCU devices. The MCU always wakes from Deep Software Standby Mode by going through reset, either by the negation of the reset pin or by one of the wakeup sources configurable in the "Deep Standby Options" configuration group.

The Reset Status Registers can be used to determine if the reset occured after coming out of deep sofware standby. For example, R_SYSTEM->RSTSR0_b.DPSRSTF is set to 1 after a deep software standby reset.

I/O Port Retention can be enabled to maintain I/O port configuration across a deep software standby reset. Retention can be cancelled through the R_LPM_IoKeepClear API.

Limitations

Developers should be aware of the following limitations when using the LPM:

- Flash stop (code flash disable) is not supported. See the section "Flash Operation Control Register (FLSTOP)" of the RA2/RA4 Family Hardware User's Manual.
- Reduced SRAM retention area in software standby mode is not supported. See the section "Power Save Memory Control Register (PSMCR)" of the RA4 Hardware User's Manual.
- Only one Snooze Request Source can be used at a time.
- When using Snooze mode with SCI0 RXD as the snooze source the system clock must be HOCO and the MOCO, Main Oscillator and PLL clocks must be turned off.
- If the main oscillator or PLL with main oscillator source is used for the system clock, the wake time from standby mode can be affected by the Main Oscillator Wait Time Setting in the MOSCWTCR register. This register setting is available to be changed through the Main Oscillator Wait Time setting in the CGC module properties. See the "Wakeup Timing and Duration" table in Electrical Characteristics for more information.
- When using the DC-DC regulator (where available), the MCU will temporarily switch to the LDO if Software Standby or Snooze is requested and back again when it is cancelled. Switching to the LDO incurs a 60 microsecond critical section wherein all interrupts AND peripherals are stopped. Switching back to DCDC from the LDO incurs an additional 22 microsecond critical section (peripherals running).

Examples

LPM Sleep Example

This is a basic example of minimal use of the LPM in an application. The LPM instance is opened and the configured low-power mode is entered.

```
void r_lpm_sleep (void)
{
 fsp_err_t err = R_LPM_Open(&g_lpm_ctrl, &g_lpm_cfg_sleep);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
    err = R_LPM_LowPowerModeEnter(&g_lpm_ctrl);
    assert(FSP_SUCCESS == err);
}
```

LPM Deep Software Standby Example

```
void r_lpm_deep_software_standby (void)
{
 fsp_err_t err;
    err = R_LPM_Open(&g_lpm_ctrl, &g_lpm_cfg_deep_software_standby);
 /* Handle any errors. This function should be defined by the user. */
```

```
    assert(FSP_SUCCESS == err);
 /* Check the Deep Software Standby Reset Flag. */
 if (1U == R_SYSTEM->RSTSR0_b.DPSRSTF)
    {
 /* Clear the IOKEEP bit to allow I/O Port use. */
       err = R_LPM_IoKeepClear(&g_lpm_ctrl);
      assert(FSP_SUCCESS == err);
    }
 /* Add user code here. */
 /* Reconfigure the module to set the IOKEEP bit before entering deep software
standby. */
    err = R_LPM_LowPowerReconfigure(&g_lpm_ctrl, &g_lpm_cfg_deep_software_standby);
    assert(FSP_SUCCESS == err);
    err = R_LPM_LowPowerModeEnter(&g_lpm_ctrl);
 /* Code after R_LPM_LowPowerModeEnter when using Deep Software Standby never be
executed.
  * Deep software standby exits by resetting the MCU. */
    assert(FSP_SUCCESS == err);
}
```

Data Structures

struct	lpm_instance_ctrl_t

Data Structure Documentation

◆ lpm_instance_ctrl_t

struct lpm_instance_ctrl_t
LPM private control block. DO NOT MODIFY. Initialization occurs when R_LPM_Open() is called.

Function Documentation

◆ R_LPM_Open()

fsp_err_t R_LPM_Open (lpm_ctrl_t *const *p_api_ctrl*, lpm_cfg_t const *const *p_cfg*)

Perform any necessary initialization

Return values

FSP_SUCCESS	LPM instance opened
FSP_ERR_ASSERTION	Null Pointer
FSP_ERR_ALREADY_OPEN	LPM instance is already open
FSP_ERR_UNSUPPORTED	This MCU does not support Deep Software Standby
FSP_ERR_INVALID_ARGUMENT	One of the following: • Invalid snooze entry source • Invalid snooze end sources
FSP_ERR_INVALID_MODE	One of the following: • Invalid low power mode • Invalid DTC option for snooze mode • Invalid deep standby end sources • Invalid deep standby end sources edges • Invalid power supply option for deep standby • Invalid IO port option for deep standby • Invalid output port state setting for standby or deep standby • Invalid sources for wake from standby mode • Invalid power supply option for standby • Invalid IO port option for standby • Invalid standby end sources • Invalid standby end sources edges

◆ R_LPM_Close()

fsp_err_t R_LPM_Close (lpm_ctrl_t *const *p_api_ctrl*)

Close the LPM Instance

Return values

FSP_SUCCESS	LPM driver closed
FSP_ERR_NOT_OPEN	LPM instance is not open
FSP_ERR_ASSERTION	Null Pointer

◆ R_LPM_LowPowerReconfigure()

fsp_err_t R_LPM_LowPowerReconfigure (lpm_ctrl_t *const *p_api_ctrl*, lpm_cfg_t const *const *p_cfg*)

Configure a low power mode

NOTE: This function does not enter the low power mode, it only configures parameters of the mode. Execution of the WFI instruction is what causes the low power mode to be entered.

Return values

FSP_SUCCESS	Low power mode successfuly applied
FSP_ERR_ASSERTION	Null Pointer
FSP_ERR_NOT_OPEN	LPM instance is not open
FSP_ERR_UNSUPPORTED	This MCU does not support Deep Software Standby
FSP_ERR_INVALID_ARGUMENT	One of the following: • Invalid snooze entry source • Invalid snooze end sources
FSP_ERR_INVALID_MODE	One of the following: • Invalid low power mode • Invalid DTC option for snooze mode • Invalid deep standby end sources • Invalid deep standby end sources edges • Invalid power supply option for deep standby • Invalid IO port option for deep standby • Invalid output port state setting for standby or deep standby • Invalid sources for wake from standby mode • Invalid power supply option for standby • Invalid IO port option for standby • Invalid standby end sources • Invalid standby end sources edges

◆ R_LPM_LowPowerModeEnter()

fsp_err_t R_LPM_LowPowerModeEnter (lpm_ctrl_t *const *p_api_ctrl*)

Enter low power mode (sleep/standby/deep standby) using WFI macro.

Function will return after waking from low power mode.

Return values

FSP_SUCCESS	Successful.
FSP_ERR_ASSERTION	Null pointer.
FSP_ERR_NOT_OPEN	LPM instance is not open
FSP_ERR_INVALID_MODE	One of the following: • HOCO was not system clock when using snooze mode with SCI0/RXD0. • HOCO was not stable when using snooze mode with SCI0/RXD0. • MOCO was running when using snooze mode with SCI0/RXD0. • MAIN OSCILLATOR was running when using snooze mode with SCI0/RXD0. • PLL was running when using snooze mode with SCI0/RXD0. • Unable to disable ocillator stop detect when using standby or deep standby.

◆ R_LPM_IoKeepClear()

fsp_err_t R_LPM_IoKeepClear (lpm_ctrl_t *const *p_api_ctrl*)

Clear the IOKEEP bit after deep software standby

Return values

FSP_SUCCESS	DPSBYCR_b.IOKEEP bit cleared Successfully.
FSP_ERR_UNSUPPORTED	Deep standby mode not supported on this MCU.

4.2.43 Low Voltage Detection (r_lvd)

Modules

Functions

fsp_err_t	R_LVD_Open (lvd_ctrl_t *const p_api_ctrl, lvd_cfg_t const *const p_cfg)
fsp_err_t	R_LVD_Close (lvd_ctrl_t *const p_api_ctrl)
fsp_err_t	R_LVD_StatusGet (lvd_ctrl_t *const p_api_ctrl, lvd_status_t *p_lvd_status)
fsp_err_t	R_LVD_StatusClear (lvd_ctrl_t *const p_api_ctrl)
fsp_err_t	R_LVD_CallbackSet (lvd_ctrl_t *const p_api_ctrl, void(*p_callback)(lvd_callback_args_t *), void const *const p_context, lvd_callback_args_t *const p_callback_memory)

Detailed Description

Driver for the LVD peripheral on RA MCUs. This module implements the Low Voltage Detection Interface.

Overview

The Low Voltage Detection module configures the voltage monitors to detect when V_{CC} crosses a specified threshold.

Features

The LVD HAL module supports the following functions:

- Two run-time configurable voltage monitors (Voltage Monitor 1, Voltage Monitor 2)
  - Configurable voltage threshold
  - Digital filter (Available on specific MCUs)
  - Support for both interrupt or polling
    - NMI or maskable interrupt can be configured
  - Rising, falling, or both edge event detection
  - Support for resetting the MCU when V_{CC} falls below configured threshold.

Configuration

Build Time Configurations for r_lvd

The following build time configurations are defined in fsp_cfg/r_lvd_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Monitoring > Low Voltage Detection (r_lvd)

This module can be added to the Stacks tab via New Stack > Monitoring > Low Voltage Detection (r_lvd). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_lvd	Module name.
Monitor Number	MCU Specific Options		Select the LVD monitor.
Digital Filter	MCU Specific Options		Enable the digital filter and select the digital filter clock divider.
Voltage Threshold	MCU Specific Options		Select the low voltage detection threshold.
Detection Response	• Maskable interrupt • Non-maskable interrupt • Reset MCU (Only available for falling edge) • No response (Voltage monitor status will be polled)	No response (Voltage monitor status will be polled)	Select what happens when the voltage crosses the threshold voltage.
Voltage Slope	• Falling voltage • Rising voltage • Rising or falling voltage	Falling voltage	Select detection on rising voltage, falling voltage or both.
Negation Delay	• Delay from reset • Delay from voltage returning to normal range	Delay from reset	Negation of the monitor signal can either be delayed from the reset event or from voltage returning to normal range.
Monitor Interrupt Callback	Name must be a valid C symbol.	NULL	A user callback function can be provided. If this callback function is provided, it will be called from the interrupt service routine (ISR) each time the IRQ triggers.
LVD Monitor Interrupt Priority	MCU Specific Options		Select the LVD Monitor interrupt priority.

Clock Configuration

The LOCO clock must be enabled in order to use the digital filter.

Pin Configuration

This module does not use I/O pins.

Usage Notes

Startup Edge Detection

If V_{CC} is below the threshold prior to configuring the voltage monitor for falling edge detection, the monitor will immediately detect the a falling edge condition. If V_{CC} is above the threshold prior to configuring the monitor for rising edge detection, the monitor will not detect a rising edge condition until V_{CC} falls below the threshold and then rises above it again.

Voltage Monitor 0

The LVD HAL module only supports configuring voltage monitor 1 and voltage monitor 2. Voltage monitor 0 can be configured by setting the appropriate bits in the OFS1 register. This means that voltage monitor 0 settings cannot be changed at runtime.

Voltage monitor 0 supports the following features

- Configurable Voltage Threshold (V_{DET0})
- Reset the device when V_{CC} falls below V_{DET0}

Limitations

- The digital filter must be disabled when using voltage monitors in Software Standby or Deep Software Standby.
- Deep Software Standby mode is not possible if the voltage monitor is configured to reset the MCU.
- When the detection response is set to reset, only voltage falling edge detection is possible.

Examples

Basic Example

This is a basic example of minimal use of the LVD in an application.

```
void basic_example (void)
{
 fsp_err_t err = R_LVD_Open(&g_lvd_ctrl, &g_lvd_cfg);
    assert(FSP_SUCCESS == err);
 while (1)
    {
 lvd_status_t status;
```

```
      err = R_LVD_StatusGet(&g_lvd_ctrl, &status);
     assert(FSP_SUCCESS == err);
 if (LVD_THRESHOLD_CROSSING_DETECTED == status.crossing_detected)
     {
           err = R_LVD_StatusClear(&g_lvd_ctrl);
     assert(FSP_SUCCESS == err);
 /* Do something */
      }
   }
}
```

Interrupt Example

This is a basic example of using a LVD instance that is configured to generate an interrupt.

```
void interrupt_example (void)
{
 fsp_err_t err = R_LVD_Open(&g_lvd_ctrl, &g_lvd_cfg);
 /* Handle any errors. This function should be defined by the user. */
   assert(FSP_SUCCESS == err);
 while (1)
   {
 /* Application Process */
 /* Application will be interrupted when Vcc crosses the configured threshold. */
   }
}
/* Called when Vcc crosses configured threshold. */
void lvd_callback (lvd_callback_args_t * p_args)
{
 if (LVD_CURRENT_STATE_BELOW_THRESHOLD == p_args->current_state)
   {
 /* Do Something */
   }
}
```

Reset Example

This is a basic example of using a LVD instance that is configured to reset the MCU.

```
void reset_example (void)
{
 if (1U == R_SYSTEM->RSTSR0_b.LVD1RF)
    {
 /* The system is coming out of reset because Vcc crossed configured voltage
threshold. */
 /* Clear Voltage Monitor 1 Reset Detect Flag. */
       R_SYSTEM->RSTSR0_b.LVD1RF = 0;
    }
 fsp_err_t err = R_LVD_Open(&g_lvd_ctrl, &g_lvd_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 while (1)
    {
 /* Application Process */
 /* Application will reset when Vcc crosses the configured threshold. */
    }
}
```

Data Structures

struct	lvd_instance_ctrl_t

Data Structure Documentation

◆ lvd_instance_ctrl_t

struct lvd_instance_ctrl_t
LVD instance control structure

Function Documentation

◆ R_LVD_Open()

fsp_err_t R_LVD_Open (lvd_ctrl_t *const *p_api_ctrl*, lvd_cfg_t const *const *p_cfg*)

Initializes a voltage monitor and detector according to the passed-in configuration structure.

Parameters

[in]	p_api_ctrl	Pointer to the control structure for the driver instance
[in]	p_cfg	Pointer to the configuration structure for the driver instance

Note

Digital filter is not to be used with standby modes.
Startup time can take on the order of milliseconds for some configurations.

Example:

```
fsp_err_t err = R_LVD_Open(&g_lvd_ctrl, &g_lvd_cfg);
```

Return values

FSP_SUCCESS	Successful
FSP_ERR_ASSERTION	Requested configuration was invalid
FSP_ERR_ALREADY_OPEN	The instance was already opened
FSP_ERR_IN_USE	Another instance is already using the desired monitor
FSP_ERR_UNSUPPORTED	Digital filter was enabled on a device that does not support it

◆ R_LVD_Close()

fsp_err_t R_LVD_Close (lvd_ctrl_t *const *p_api_ctrl*)

Disables the LVD peripheral. Closes the driver instance.

Parameters

[in]	p_api_ctrl	Pointer to the control block structure for the driver instance

Return values

FSP_SUCCESS	Successful
FSP_ERR_ASSERTION	An argument was NULL
FSP_ERR_NOT_OPEN	Driver is not open

◆ R_LVD_StatusGet()

fsp_err_t R_LVD_StatusGet (lvd_ctrl_t *const *p_api_ctrl*, lvd_status_t * *p_lvd_status*)

Get the current state of the monitor (threshold crossing detected, voltage currently above or below threshold).

Parameters

[in]	p_api_ctrl	Pointer to the control structure for the driver instance
[out]	p_lvd_status	Pointer to status structure

Example:

```
      err = R_LVD_StatusGet(&g_lvd_ctrl, &status);
```

Return values

FSP_SUCCESS	Successful
FSP_ERR_ASSERTION	An argument was NULL
FSP_ERR_NOT_OPEN	Driver is not open

◆ R_LVD_StatusClear()

fsp_err_t R_LVD_StatusClear (lvd_ctrl_t *const *p_api_ctrl*)

Clears the latched status of the monitor.

Parameters

[in]	p_api_ctrl	Pointer to the control structure for the driver instance

Return values

FSP_SUCCESS	Successful
FSP_ERR_ASSERTION	An argument was NULL
FSP_ERR_NOT_OPEN	Driver is not open

◆ R_LVD_CallbackSet()

fsp_err_t R_LVD_CallbackSet (lvd_ctrl_t *const *p_api_ctrl*, void(*)(lvd_callback_args_t *) *p_callback*, void const *const *p_context*, lvd_callback_args_t *const *p_callback_memory*)

Updates the user callback and has option of providing memory for callback structure. Implements lvd_api_t::callbackSet

Return values

FSP_SUCCESS	Callback updated successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	The control block has not been opened.
FSP_ERR_NO_CALLBACK_MEMORY	p_callback is non-secure and p_callback_memory is either secure or NULL.

4.2.44 Operational Amplifier (r_opamp)

Modules

Functions

fsp_err_t	R_OPAMP_Open (opamp_ctrl_t *const p_api_ctrl, opamp_cfg_t const *const p_cfg)
fsp_err_t	R_OPAMP_InfoGet (opamp_ctrl_t *const p_api_ctrl, opamp_info_t

	*const p_info)
fsp_err_t	R_OPAMP_Start (opamp_ctrl_t *const p_api_ctrl, uint32_t const channel_mask)
fsp_err_t	R_OPAMP_Stop (opamp_ctrl_t *const p_api_ctrl, uint32_t const channel_mask)
fsp_err_t	R_OPAMP_StatusGet (opamp_ctrl_t *const p_api_ctrl, opamp_status_t *const p_status)
fsp_err_t	R_OPAMP_Trim (opamp_ctrl_t *const p_api_ctrl, opamp_trim_cmd_t const cmd, opamp_trim_args_t const *const p_args)
fsp_err_t	R_OPAMP_Close (opamp_ctrl_t *const p_api_ctrl)

Detailed Description

Driver for the OPAMP peripheral on RA MCUs. This module implements the OPAMP Interface.

Overview

The OPAMP HAL module provides a high level API for signal amplification applications and supports the OPAMP peripheral available on RA MCUs.

Features

- Low power or high-speed mode
- Start by software or AGT compare match
- Stop by software or ADC conversion end (stop by ADC conversion end only supported on op-amp channels configured to start by AGT compare match)
- Trimming available on some MCUs (see hardware manual)

Configuration

Build Time Configurations for r_opamp

The following build time configurations are defined in fsp_cfg/r_opamp_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Analog > Operational Amplifier (r_opamp)

This module can be added to the Stacks tab via New Stack > Analog > Operational Amplifier (r_opamp).

Configuration	Options	Default	Description
Name	Name must be a valid C symbol	g_opamp0	Module name.
AGT Start Trigger Configuration (N/A unless AGT Start Trigger is Selected for the Channel)	• AGT1 Compare Match Starts OPAMPs 0 and 2 if configured for AGT Start, AGT0 Compare Match Starts OPAMPs 1 and 3 if configured for AGT Start • AGT1 Compare Match Starts OPAMPs 0 and 1 if configured for AGT Start, AGT0 Compare Match Starts OPAMPs 2 and 3 if configured for AGT Start • AGT1 Compare Match Starts all OPAMPs configured for AGT Start	AGT1 Compare Match Starts all OPAMPs configured for AGT Start	Configure which AGT channel event triggers which op-amp channel. The AGT compare match event only starts the op-amp channel if the AGT Start trigger is selected in the Trigger configuration for the channel.
Power Mode	MCU Specific Options		Configure the op-amp based on power or speed requirements. This setting affects the minimum required stabilization time. Middle speed is not available for all MCUs.
Trigger Channel 0	MCU Specific Options		Select the event triggers to start or stop op-amp channel 0. If the event trigger is selected for start, the start() API enables the event trigger for this channel. If the event trigger is selected for stop, the stop() API disables the event trigger for this channel.
Trigger Channel 1	MCU Specific Options		Select the event triggers to start or stop op-amp channel 1. If the event trigger is

			selected for start, the start() API enables the event trigger for this channel. If the event trigger is selected for stop, the stop() API disables the event trigger for this channel.
Trigger Channel 2	• Software Start Software Stop • AGT Start Software Stop • AGT Start ADC Stop	Software Start Software Stop	Select the event triggers to start or stop op-amp channel 2. If the event trigger is selected for start, the start() API enables the event trigger for this channel. If the event trigger is selected for stop, the stop() API disables the event trigger for this channel.
Trigger Channel 3	MCU Specific Options		Select the event triggers to start or stop op-amp channel 3. If the event trigger is selected for start, the start() API enables the event trigger for this channel. If the event trigger is selected for stop, the stop() API disables the event trigger for this channel.
OPAMP AMP0OS	MCU Specific Options		Select output to connect to AMP0O pin
OPAMP AMP0PS	MCU Specific Options		Select input to connect to AMP0+ pin
OPAMP AMP0MS	MCU Specific Options		Select input to connect to AMP0- pin
OPAMP AMP1PS	MCU Specific Options		Select input to connect to AMP1+ pin
OPAMP AMP1MS	MCU Specific Options		Select input to connect to AMP1- pin
OPAMP AMP2PS	MCU Specific Options		Select input to connect to AMP2+ pin
OPAMP AMP2MS	MCU Specific Options		Select input to connect to AMP2- pin

Clock Configuration

The OPAMP runs on PCLKB.

Pin Configuration

To use the OPAMP HAL module, the port pins for the channels receiving the analog input must be set as inputs on the **Pins** tab of the RA Configuration editor.

Refer to the most recent FSP Release Notes for any additional operational limitations for this module.

Usage Notes

Trimming the OPAMP

- On MCUs that support trimming, the op-amp trim register is set to the factory default after the Open API is called.
- This function allows the application to trim the operational amplifier to a user setting, which overwrites the factory default trim values.
- Supported on selected MCUs. See hardware manual for details.
- Not supported if configured for low power mode (OPAMP_MODE_LOW_POWER).
- This function is not reentrant. Only one side of one op-amp can be trimmed at a time. Complete the procedure for one side of one channel before calling the trim API with the command OPAMP_TRIM_CMD_START again.
    - The trim procedure works as follows:
    - Call trim() for the Pch (+) side input with command OPAMP_TRIM_CMD_START.
    - Connect a fixed voltage to the Pch (+) input.
    - Connect the Nch (-) input to the op-amp output to create a voltage follower.
    - Ensure the op-amp is operating and stabilized.
    - Call trim() for the Pch (+) side input with command OPAMP_TRIM_CMD_START.
    - Measure the fixed voltage connected to the Pch (+) input using the SAR ADC and save the value (referred to as A later in this procedure).
    - Iterate over the following loop 5 times:
        - Call trim() for the Pch (+) side input with command OPAMP_TRIM_CMD_NEXT_STEP.
        - Measure the op-amp output using the SAR ADC (referred to as B in the next step).
        - If A <= B, call trim() for the Pch (+) side input with command OPAMP_TRIM_CMD_CLEAR_BIT.
    - Call trim() for the Nch (-) side input with command OPAMP_TRIM_CMD_START.
    - Measure the fixed voltage connected to the Pch (+) input using the SAR ADC and save the value (referred to as A later in this procedure).
    - Iterate over the following loop 5 times:
        - Call trim() for the Nch (-) side input with command OPAMP_TRIM_CMD_NEXT_STEP.
        - Measure the op-amp output using the SAR ADC (referred to as B in the next step).
        - If A <= B, call trim() for the Nch (-) side input with command OPAMP_TRIM_CMD_CLEAR_BIT.

Examples

Basic Example

This is a basic example of minimal use of the R_OPAMP in an application. The example demonstrates configuring OPAMP channel 0 for high speed mode, starting the OPAMP and reading the status of the OPAMP channel running. It also verifies that the stabilization wait time is the expected time for

selected power mode

```
#define OPAMP_EXAMPLE_CHANNEL (0U)
void basic_example (void)
{
 fsp_err_t err;
 /* Initialize the OPAMP module. */
    err = R_OPAMP_Open(&g_opamp_ctrl, &g_opamp_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Start the OPAMP module. */
    err = R_OPAMP_Start(&g_opamp_ctrl, 1 << OPAMP_EXAMPLE_CHANNEL);
    assert(FSP_SUCCESS == err);
 /* Look up the required stabilization wait time. */
 opamp_info_t info;
    err = R_OPAMP_InfoGet(&g_opamp_ctrl, &info);
    assert(FSP_SUCCESS == err);
 /* Wait for the OPAMP to stabilize. */
 R_BSP_SoftwareDelay(info.min_stabilization_wait_us, BSP_DELAY_UNITS_MICROSECONDS);
}
```

Trim Example

This example demonstrates the typical trimming procedure for opamp channel 0 using R_OPAMP_Trim() API.

```
#ifndef OPAMP_EXAMPLE_CHANNEL
 #define OPAMP_EXAMPLE_CHANNEL (0U)
#endif
#ifndef OPAMP_EXAMPLE_ADC_CHANNEL
 #define OPAMP_EXAMPLE_ADC_CHANNEL (ADC_CHANNEL_2)
#endif
#define ADC_SCAN_END_DELAY (100U)
#define OPAMP_TRIM_LOOP_COUNT (5)
#define ADC_SCAN_END_MAX_TIMEOUT (0xFFFF)
uint32_t          g_callback_event_counter = 0;
```

```
opamp_trim_args_t trim_args_ch =
{
    .channel = OPAMP_EXAMPLE_CHANNEL,
    .input   = OPAMP_TRIM_INPUT_PCH
};
/* This callback is called when ADC Scan Complete event is generated. */
void adc_callback (adc_callback_args_t * p_args)
{
 FSP_PARAMETER_NOT_USED(p_args);
    g_callback_event_counter++;
}
void trimming_example (void)
{

Data Structure Documentation

◆ opamp_extended_cfg_t

struct opamp_extended_cfg_t		
OPAMP configuration extension. This extension is required and must be provided in opamp_cfg_t::p_extend.		
Data Fields		
opamp_agt_link_t	agt_link	Configure which AGT links are paired to which channel. Only applies to channels if OPAMP_TRIGGER_AGT_START_SOFTWARE_STOP or OPAMP_TRIGGER_AGT_START_ADC_STOP is selected for the channel.
opamp_mode_t	mode	Low power, middle speed, or high speed mode.
opamp_trigger_t	trigger_channel_0	Start and stop triggers for

		channel 0.
opamp_trigger_t	trigger_channel_1	Start and stop triggers for channel 1.
opamp_trigger_t	trigger_channel_2	Start and stop triggers for channel 2.
opamp_trigger_t	trigger_channel_3	Start and stop triggers for channel 3.
opamp_plus_input_t	plus_input_select_opamp0	OPAMP0+ connection.
opamp_minus_input_t	minus_input_select_opamp0	OPAMP0- connection.
opamp_output_t	output_select_opamp0	OPAMP0O connection.
opamp_plus_input_t	plus_input_select_opamp1	OPAMP1+ connection.
opamp_minus_input_t	minus_input_select_opamp1	OPAMP1- connection.
opamp_plus_input_t	plus_input_select_opamp2	OPAMP2+ connection.
opamp_minus_input_t	minus_input_select_opamp2	OPAMP2- connection.

◆ opamp_instance_ctrl_t

struct opamp_instance_ctrl_t
OPAMP instance control block. DO NOT INITIALIZE. Initialized in opamp_api_t::open().

Macro Definition Documentation

◆ OPAMP_MASK_CHANNEL_0

#define OPAMP_MASK_CHANNEL_0
Version of code that implements the API defined in this file

Enumeration Type Documentation

◆ opamp_trigger_t

enum opamp_trigger_t	
Start and stop trigger for the op-amp.	
Enumerator	
OPAMP_TRIGGER_SOFTWARE_START_SOFTWARE_STOP	Start and stop with APIs.
OPAMP_TRIGGER_AGT_START_SOFTWARE_STOP	Start by AGT compare match and stop with API.
OPAMP_TRIGGER_AGT_START_ADC_STOP	Start by AGT compare match and stop after ADC conversion.

◆ opamp_agt_link_t

enum opamp_agt_link_t	
Which AGT timer starts the op-amp. Only applies to channels if OPAMP_TRIGGER_AGT_START_SOFTWARE_STOP or OPAMP_TRIGGER_AGT_START_ADC_STOP is selected for the channel. If OPAMP_TRIGGER_SOFTWARE_START_SOFTWARE_STOP is selected for a channel, then no AGT compare match event will start that op-amp channel.	
Enumerator	
OPAMP_AGT_LINK_AGT1_OPAMP_0_2_AGT0_OPAMP_1_3	OPAMP channel 0 and 2 are started by AGT1 compare match. OPAMP channel 1 and 3 are started by AGT0 compare match.
OPAMP_AGT_LINK_AGT1_OPAMP_0_1_AGT0_OPAMP_2_3	OPAMP channel 0 and 1 are started by AGT1 compare match. OPAMP channel 2 and 3 are started by AGT0 compare match.
OPAMP_AGT_LINK_AGT1_OPAMP_0_1_2_3	All OPAMP channels are started by AGT1 compare match.

◆ opamp_mode_t

enum opamp_mode_t	
Op-amp mode.	
Enumerator	
OPAMP_MODE_LOW_POWER	Low power mode.
OPAMP_MODE_MIDDLE_SPEED	Middle speed mode (not supported on all MCUs)
OPAMP_MODE_HIGH_SPEED	High speed mode.

◆ opamp_plus_input_t

enum opamp_plus_input_t	
Options to connect AMPnPS pins.	
Enumerator	
OPAMP_PLUS_INPUT_NONE	No Connection.
OPAMP_PLUS_INPUT_AMPPS0	Set AMPPS0. See hardware manual for channel specific options.
OPAMP_PLUS_INPUT_AMPPS1	Set AMPPS1. See hardware manual for channel specific options.
OPAMP_PLUS_INPUT_AMPPS2	Set AMPPS2. See hardware manual for channel specific options.
OPAMP_PLUS_INPUT_AMPPS3	Set AMPPS3. See hardware manual for channel specific options.
OPAMP_PLUS_INPUT_AMPPS7	Set AMPPS7. See hardware manual for channel specific options.

◆ opamp_minus_input_t

enum opamp_minus_input_t	
Options to connect AMPnMS pins.	
Enumerator	
OPAMP_MINUS_INPUT_NONE	No Connection.
OPAMP_MINUS_INPUT_AMPMS0	Set AMPMS0. See hardware manual for channel specific options.
OPAMP_MINUS_INPUT_AMPMS1	Set AMPMS1. See hardware manual for channel specific options.
OPAMP_MINUS_INPUT_AMPMS2	Set AMPMS2. See hardware manual for channel specific options.
OPAMP_MINUS_INPUT_AMPMS3	Set AMPMS3. See hardware manual for channel specific options.
OPAMP_MINUS_INPUT_AMPMS4	Set AMPMS4. See hardware manual for channel specific options.
OPAMP_MINUS_INPUT_AMPMS7	Set AMPMS7. See hardware manual for channel specific options.

◆ opamp_output_t

enum opamp_output_t	
Options to connect AMP0OS pin.	
Enumerator	
OPAMP_OUTPUT_NONE	No Connection.
OPAMP_OUTPUT_AMPOS0	Set AMPOS0. See hardware manual for channel specific options.
OPAMP_OUTPUT_AMPOS1	Set AMPOS1. See hardware manual for channel specific options.
OPAMP_OUTPUT_AMPOS2	Set AMPOS2. See hardware manual for channel specific options.
OPAMP_OUTPUT_AMPOS3	Set AMPOS3. See hardware manual for channel specific options.

Function Documentation

◆ R_OPAMP_Open()

fsp_err_t R_OPAMP_Open (opamp_ctrl_t *const *p_api_ctrl*, opamp_cfg_t const *const *p_cfg*)

Applies power to the OPAMP and initializes the hardware based on the user configuration. Implements opamp_api_t::open.

The op-amp is not operational until the opamp_api_t::start is called. If the op-amp is configured to start after AGT compare match, the op-amp is not operational until opamp_api_t::start and the associated AGT compare match event occurs.

Some MCUs have switches that must be set before starting the op-amp. These switches must be set in the application code after opamp_api_t::open and before opamp_api_t::start.

Example:

```
/* Initialize the OPAMP module. */
   err = R_OPAMP_Open(&g_opamp_ctrl, &g_opamp_cfg);
```

Return values

FSP_SUCCESS	Configuration successful.
FSP_ERR_ASSERTION	An input pointer is NULL.
FSP_ERR_ALREADY_OPEN	Control block is already opened.
FSP_ERR_INVALID_ARGUMENT	An attempt to configure OPAMP in middle speed mode on MCU that does not support middle speed mode.

◆ R_OPAMP_InfoGet()

fsp_err_t R_OPAMP_InfoGet (opamp_ctrl_t *const *p_api_ctrl*, opamp_info_t *const *p_info*)

Provides the minimum stabilization wait time in microseconds. Implements opamp_api_t::infoGet.

- Example:

```
/* Look up the required stabilization wait time. */
opamp_info_t info;
   err = R_OPAMP_InfoGet(&g_opamp_ctrl, &info);
   assert(FSP_SUCCESS == err);
/* Wait for the OPAMP to stabilize. */
R_BSP_SoftwareDelay(info.min_stabilization_wait_us,
BSP_DELAY_UNITS_MICROSECONDS);
```

Return values

FSP_SUCCESS	information on opamp_power_mode stored in p_info.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_NOT_OPEN	Instance control block is not open.

◆ R_OPAMP_Start()

fsp_err_t R_OPAMP_Start (opamp_ctrl_t *const *p_api_ctrl*, uint32_t const *channel_mask*)

If the OPAMP is configured for hardware triggers, enables hardware triggers. Otherwise, starts the op-amp. Implements opamp_api_t::start.

Some MCUs have switches that must be set before starting the op-amp. These switches must be set in the application code after opamp_api_t::open and before opamp_api_t::start.

Example:

```
/* Start the OPAMP module. */
   err = R_OPAMP_Start(&g_opamp_ctrl, 1 << OPAMP_EXAMPLE_CHANNEL);
   assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Op-amp started or hardware triggers enabled successfully.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_NOT_OPEN	Instance control block is not open.
FSP_ERR_INVALID_ARGUMENT	channel_mask includes a channel that does not exist on this MCU.

◆ R_OPAMP_Stop()

fsp_err_t R_OPAMP_Stop (opamp_ctrl_t *const *p_api_ctrl*, uint32_t const *channel_mask*)

Stops the op-amp. If the OPAMP is configured for hardware triggers, disables hardware triggers. Implements opamp_api_t::stop.

Return values

FSP_SUCCESS	Op-amp stopped or hardware triggers disabled successfully.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_NOT_OPEN	Instance control block is not open.
FSP_ERR_INVALID_ARGUMENT	channel_mask includes a channel that does not exist on this MCU.

◆ R_OPAMP_StatusGet()

fsp_err_t R_OPAMP_StatusGet (opamp_ctrl_t *const *p_api_ctrl*, opamp_status_t *const *p_status*)

Provides the operating status for each op-amp in a bitmask. This bit is set when operation begins, before the stabilization wait time has elapsed. Implements opamp_api_t::statusGet.

Return values

FSP_SUCCESS	Operating status of each op-amp provided in p_status.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_NOT_OPEN	Instance control block is not open.

◆ R_OPAMP_Trim()

fsp_err_t R_OPAMP_Trim (opamp_ctrl_t *const *p_api_ctrl*, opamp_trim_cmd_t const *cmd*, opamp_trim_args_t const *const *p_args*)

On MCUs that support trimming, the op-amp trim register is set to the factory default after open(). This function allows the application to trim the operational amplifier to a user setting, which overwrites the factory default factory trim values.

Not supported on all MCUs. See hardware manual for details. Not supported if configured for low power mode (OPAMP_MODE_LOW_POWER).

This function is not reentrant. Only one side of one op-amp can be trimmed at a time. Complete the procedure for one side of one channel before calling trim() with command OPAMP_TRIM_CMD_START again.

Implements opamp_api_t::trim.

Reference: Section 37.9 "User Offset Trimming" RA2A1 hardware manual R01UM0008EU0130. The trim procedure works as follows:

- Call trim() for the Pch (+) side input with command OPAMP_TRIM_CMD_START.
- Connect a fixed voltage to the Pch (+) input.
- Connect the Nch (-) input to the op-amp output to create a voltage follower.
- Ensure the op-amp is operating and stabilized.
- Call trim() for the Pch (+) side input with command OPAMP_TRIM_CMD_START.
- Measure the fixed voltage connected to the Pch (+) input using the SAR ADC and save the value (referred to as A later in this procedure).
- Iterate over the following loop 5 times:
    - Call trim() for the Pch (+) side input with command OPAMP_TRIM_CMD_NEXT_STEP.
    - Measure the op-amp output using the SAR ADC (referred to as B in the next step).
    - If A <= B, call trim() for the Pch (+) side input with command OPAMP_TRIM_CMD_CLEAR_BIT.
- Call trim() for the Nch (-) side input with command OPAMP_TRIM_CMD_START.
- Measure the fixed voltage connected to the Pch (+) input using the SAR ADC and save the value (referred to as A later in this procedure).
- Iterate over the following loop 5 times:
    - Call trim() for the Nch (-) side input with command OPAMP_TRIM_CMD_NEXT_STEP.

- Measure the op-amp output using the SAR ADC (referred to as B in the next step).
- If A <= B, call trim() for the Nch (-) side input with command OPAMP_TRIM_CMD_CLEAR_BIT.

Return values

FSP_SUCCESS	Conversion result in p_data.
FSP_ERR_UNSUPPORTED	Trimming is not supported on this MCU.
FSP_ERR_INVALID_STATE	The command is not valid in the current state of the trim state machine.
FSP_ERR_INVALID_ARGUMENT	The requested channel is not operating or the trim procedure is not in progress for this channel/input combination.
FSP_ERR_INVALID_MODE	Trim is not allowed in low power mode.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_NOT_OPEN	Instance control block is not open.

◆ R_OPAMP_Close()

fsp_err_t R_OPAMP_Close (opamp_ctrl_t *const *p_api_ctrl*)

Stops the op-amps. Implements opamp_api_t::close.

Return values

FSP_SUCCESS	Instance control block closed successfully.
FSP_ERR_ASSERTION	An input pointer was NULL.
FSP_ERR_NOT_OPEN	Instance control block is not open.

Variable Documentation

◆ g_opamp_on_opamp

const opamp_api_t g_opamp_on_opamp

OPAMP Implementation of OPAMP interface.

fsp_err_t	R_OSPI_AutoCalibrate (spi_flash_ctrl_t *p_ctrl)

Detailed Description

Driver for the OSPI peripheral on RA MCUs. This module implements the SPI Flash Interface.

Overview

The OSPI peripheral interfaces with an external OctaFlash and/or OctaRAM chip(s) to perform data I/O Operations. When both OctaFlash and OctaRAM devices are interfaced, they must be connected to their own chip-select lines. The devices cannot share a single chip-select line.

Features

The OSPI driver has the following key features to support the **OctaFlash** device:

- Perform data I/O Operation in both SPI and OPI modes
- Can be configured with OctaFlash device on either of the 2 channels

- Memory mapped read access to the OctaFlash
- Programming the OctaFlash device using single continuous write
- Erasing the OctaFlash device
- Sending device specific commands and reading back responses
- Entering and exiting XIP (Single Continuous Read) mode
- 3 byte addressing for SPI
- 4 byte addressing for SPI and OPI
- Auto-calibration for OPI mode (SOPI and DOPI)

The OSPI driver has the following key features to support the **OctaRAM** device:

- Perform data I/O Operation in DOPI mode
- Can be configured with OctaRAM device on either of the 2 channels
- Memory mapped read amd write access to the OctaRAM using single continuous mode
- Sending device specific commands and reading back responses
- Auto-calibration for DOPI mode
- Uninitialized global variables or buffers can be allocated in the OSPI RAM address space.

Additional build-time features:

- Optional (build-time) DMAC support for data transmission when used with OctaFlash.

Note

For OctaFlash, use of DMAC for data transmission is strongly recommended. Without the use of DMAC, due to the high-speed hardware design of the OSPI peripheral, data transmission can be sensitive to timing variance, which could cause software-based memory-mapped operations to fail unexpectedly.

Configuration

OSPI Flash:

Build Time Configurations for r_ospi

The following build time configurations are defined in driver/r_ospi_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.
DMAC Support	• Enable • Disable	Disable	Enable DMAC support for the OSPI module.

Configurations for Storage > OSPI Flash (r_ospi)

This module can be added to the Stacks tab via New Stack > Storage > OSPI Flash (r_ospi).

Configuration	Options	Default	Description
General > Single Continuous Mode > Read Idle Time	Must be an integer greater than 0 with maximum configurable value of 127	100	Specify the read idle time.
General > Single	Must be an integer	100	Specify the write idle

Continuous Mode > Write Idle Time	greater than 0 with maximum configurable value of 127		time.
General > Name	Name must be a valid C symbol	g_ospi0	Module name.
General > Channel	Channel should be 0 or 1	0	Specify the OSPI chip select line to use.
General > Flash Size	Must be an integer greater than 0 with maximum configurable value of 0x3FFFFFFF	0x04000000	Specify the OctaFlash size in bytes.
General > SPI Protocol	• SPI • Single data rate OPI • Dual data rate OPI	SPI	Select the initial SPI protocol. SPI protocol can be changed on the OctaFlash using R_OSPI_DirectTransfer( ).
General > Address Bytes	• 3 • 4	4	Select the number of address bytes.
OPI Mode > Auto-Calibration > Data latching delay	Must be a valid non-negative integer with maximum configurable value of 0xFF	0x80	Set this to 0 to enable auto-calibration. 0x80 is the default value calculated at 3.3V and 25°C
OPI Mode > Auto-Calibration > Auto-Calibration Address	Must be a valid non-negative integer with maximum configurable value of 0xFFFFFFFF	0x00	Set the address of the read/write destination to be performed for auto-calibration.
OPI Mode > Command Definitions > Page Program Command	Must be a 16-bit OSPI Page Program Command under OPI Mode|Command Definitions	0x12ED	The command to program a page in OPI mode.
OPI Mode > Command Definitions > Read Command	Must be a 16-bit OSPI Read Command under OPI Mode|Command Definitions	0xEC13	The command to read in SOPI mode (8READ).
OPI Mode > Command Definitions > Dual Read Command	Must be a 16-bit OSPI Dual Read Command under OPI Mode|Command Definitions	0xEE11	The command to read in DOPI mode (8DTRD).
OPI Mode > Command Definitions > Write Enable Command	Must be a 16-bit OSPI Write Enable Command under OPI Mode|Command Definitions	0x06F9	The command to enable write in OPI mode.

OPI Mode > Command Definitions > Status Command	Must be a 16-bit OSPI Status Command under OPI Mode|Command Definitions	0x05FA	The command to query the status of a write or erase command in OPI mode.
OPI Mode > OM_DQS Enable Counter > SOPI	Must be an integer between 0 and 255	9	OM_DQS enable counter for memory access. Setting for SOPI mode.
OPI Mode > OM_DQS Enable Counter > DOPI	Must be an integer between 0 and 255	6	OM_DQS enable counter for memory access. Setting for DOPI mode.
OPI Mode > Command Length Bytes	Must be an integer between 1 and 2	2	Command length in bytes
OPI Mode > Memory Read Dummy Cycles	Must be an integer between 6 and 10	10	Memory read dummy cycles
OPI Mode > DOPI Byte Order	• Byte0, Byte1, Byte2, Byte3 • Byte1, Byte0, Byte3, Byte2	Byte0, Byte1, Byte2, Byte3	Byte order on the external bus
SPI Mode > Command Definitions > Page Program Command	Must be a 8-bit OSPI Page Program Command under SPI Mode|Command Definitions	0x12	The command to program a page in SPI mode.
SPI Mode > Command Definitions > Read Command	Must be a 8-bit OSPI Read Command under SPI Mode|Command Definitions	0x13	The command to read in SPI mode.
SPI Mode > Command Definitions > Write Enable Command	Must be a 16-bit OSPI Write Enable Command under SPI Mode|Command Definitions	0x06	The command to enable write in SPI mode.
SPI Mode > Command Definitions > Status Command	Must be a 16-bit OSPI Status Command under SPI Mode|Command Definitions	0x05	The command to query the status of a write or erase command in SPI mode.
Common Command Definitions > Sector Erase Command	Must be a value greater than or equal to 0	0x21DE	The command to erase a sector. Set Sector Erase Size to 0 if unused.
Common Command Definitions > Block Erase Command	Must be a value greater than or equal to 0	0xDC23	The command to erase a block. Set Block Erase Size to 0 if unused.
Common Command	Must be a value	0xC738	The command to erase

Definitions > Chip Erase Command	greater than or equal to 0		the entire chip. Set Chip Erase Command to 0 if unused.
Common Command Definitions > Write Status Bit	Must be an integer between 0 and 7	0	Which bit contains the write in progress status returned from the Write Status Command.
Common Command Definitions > Write Enable Bit	Must be an integer between 0 and 7	1	Which bit contains the write enable status returned from the Write Enable Command.
Common Command Definitions > Sector Erase Size	Must be an integer greater than or equal to 0	4096	The sector erase size. Set Sector Erase Size to 0 if Sector Erase is not supported.
Common Command Definitions > Block Erase Size	Must be an integer greater than or equal to 0	65536	The block erase size. Set Block Erase Size to 0 if Block Erase is not supported.
Chip Select Timing Setting > Memory Mapped Read Command Interval	• 2 • 5 • 7 • 9 • 11 • 13 • 15 • 17	2	Memory mapped read command execution interval setting in OCTACLK units
Chip Select Timing Setting > Memory Mapped Write Command Interval	• 2 • 5 • 7 • 9 • 11 • 13 • 15 • 17	2	Memory mapped write command execution interval setting in OCTACLK units
Chip Select Timing Setting > Command Interval	• 2 • 5 • 7 • 9 • 11 • 13 • 15 • 17	2	Command execution interval setting in OCTACLK units

Note

The user is expected to modify the command definitions based on the OctaFlash chip and SPI communication mode. The default mode is SPI mode and default erase commands are set for OPI mode based on Macronix OctaFlash MX25LM51245G.

OSPI RAM:

Build Time Configurations for r_ospi

The following build time configurations are defined in driver/r_ospi_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Storage > OSPI RAM (r_ospi)

This module can be added to the Stacks tab via New Stack > Storage > OSPI RAM (r_ospi).

Configuration	Options	Default	Description
General > Single Continuous Mode > Read Idle Time	Must be an integer greater than 0 with maximum configurable value of 127	127	Specify the read idle time.
General > Single Continuous Mode > Write Idle Time	Must be an integer greater than 0 with maximum configurable value of 127	127	Specify the write idle time.
General > Name	Name must be a valid C symbol	g_ospi_ram0	Module name.
General > Channel	Channel should be 0 or 1 [Channel 0 recommended]	0	Specify the OSPI chip select line to use.
General > RAM Size	Must be an integer greater than 0 with maximum configurable value of 0x00800000	0x00800000	Specify the OctaRam size in bytes.
General > SPI Protocol	Dual data rate OPI	Dual data rate OPI	Select the initial SPI protocol. OctaRAM only supports DOPI mode.
General > Address Bytes	4	4	Select the number of address bytes. OctaRAM only supports 4 byte addresses in DOPI mode.
Auto-Calibration > Data latching delay	Must be a valid non-negative integer with maximum configurable value of 0xFF	0x80	Set this to 0 to enable auto-calibration. 0x80 is the default value calculated at 3.3V and 25°C
Auto-Calibration > Auto-Calibration Address	Must be a valid non-negative integer with maximum configurable value of 0xFFFFFFFF	0x00	Set the address of the read/write destination to be performed for auto-calibration.

Command Definitions > Memory Read Command	Must be a 16-bit OSPI Dual Read Command under Command Definitions	0xA000	The command to read in DOPI mode.
Command Definitions > Memory Write Command	Must be a 16-bit OSPI Write Command under Command Definitions	0x2000	The command to write in DOPI mode.
OM_DQS Enable Counter > DOPI	Must be an integer between 0 and 255	3	OM_DQS enable counter for memory access. Setting for DOPI mode.
Chip Select Timing Setting > Memory Mapped Read Command Interval	• 2 • 5 • 7 • 9 • 11 • 13 • 15 • 17	2	Memory mapped read command execution interval setting in OCTACLK units
Chip Select Timing Setting > Memory Mapped Write Command Interval	• 2 • 5 • 7 • 9 • 11 • 13 • 15 • 17	2	Memory mapped write command execution interval setting in OCTACLK units
Chip Select Timing Setting > Command Interval	• 2 • 5 • 7 • 9 • 11 • 13 • 15 • 17	2	Command execution interval setting in OCTACLK units
Chip Select Timing Setting > Memory Mapped Read Pull-up Timing	• 6.5 DOPI • 7.5 DOPI • 8.5 DOPI	6.5 DOPI	Memory mapped read signal pull-up timing setting in OCTACLK units
Chip Select Timing Setting > Memory Mapped Write Pull-up Timing	• 1.5 DOPI • 2.5 DOPI • 3.5 DOPI • 4.5 DOPI • 5.5 DOPI • 6.5 DOPI • 7.5 DOPI • 8.5 DOPI	1.5 DOPI	Memory mapped write signal pull-up timing setting in OCTACLK units
Chip Select Timing Setting > Pull-up Timing	• 6.5 DOPI • 7.5 DOPI • 8.5 DOPI	6.5 DOPI	Signal pull-up timing setting in OCTACLK units

Chip Select Timing Setting > Memory Mapped Read Pull-down Timing	• 2.5 DOPI • 3.5 DOPI • 4.5 DOPI	2.5 DOPI	Memory mapped read signal pull-down timing setting in OCTACLK units
Chip Select Timing Setting > Memory Mapped Write Pull-down Timing	• 2.5 DOPI • 3.5 DOPI • 4.5 DOPI	2.5 DOPI	Memory mapped write signal pull-down timing setting in OCTACLK units
Chip Select Timing Setting > Pull-down Timing	• 2.5 DOPI • 3.5 DOPI • 4.5 DOPI	2.5 DOPI	Signal pull-down timing setting in OCTACLK units
Command Length Bytes	Must be an integer between 1 and 2	2	Command length in bytes
Memory Read Dummy Cycles	Must be an integer between 3 and 8	4	Memory read dummy cycles
Memory Write Dummy Cycles	Must be an integer between 3 and 8	4	Memory write dummy cycles
DOPI Byte Order	• Byte0, Byte1, Byte2, Byte3 • Byte1, Byte0, Byte3, Byte2	Byte1, Byte0, Byte3, Byte2	Byte order on the external bus
Chip Select Maximum Low Time (us)	Must be an integer greater than or equal to 0	4	Chip Select Maximum Low Time (tCSM).

Clock Configuration

PCLKB is the Octal-SPI bus interface, and PCLKA is used to set OSPI registers.

The signals to the OSPI device are derived from OCTASPICLK. The OMSCLK signal is OCTASPICLK / 2. Data can be output at the OCTASPICLK rate if SPI Protocol is set to Dual Data Rate OPI.

The PCLKB, PCLKA, and OCTASPICLK frequencies can be set on the **Clocks** tab of the RA Configuration editor.

Pin Configuration

The following pins are available to connect to an external OSPI device:

- OMSCLK: OSPI clock output (OCTASPICLK / 2)
- OMDQS: OSPI data strobe signal
- OMCS0: OSPI device 0 select
- OMCS1: OSPI device 1 select
- OMSIO0: Data 0 I/O
- OMSIO1: Data 1 I/O
- OMSIO2: Data 2 I/O
- OMSIO3: Data 3 I/O
- OMSIO4: Data 4 I/O
- OMSIO5: Data 5 I/O
- OMSIO6: Data 6 I/O
- OMSIO7: Data 7 I/O

Note

Data pins must be configured with IOPORT_CFG_DRIVE_HS_HIGH.
Chip Select pins should be configured with at least IOPORT_CFG_DRIVE_MEDIUM.

Usage Notes

Usage Notes for OctaFlash support

Enabling DMAC

DMAC data transmission support is configurable for OSPI Flash and is disabled from the build by default. Use of a high-priority (low channel number) DMAC for data transmission is strongly recommended.

For further details on DMAC please refer Direct Memory Access Controller (r_dmac).

OSPI Memory Mapped Access

After R_OSPI_Open() completes successfully, the OctaFlash device contents are mapped to address 0x68000000 (channel 0) or 0x70000000 (channel 1) based on the channel configured and can be read like on-chip flash. Channel 0 supports 128 MB while Channel 1 supports 256 MB of address space.

Auto-calibration

Auto-calibration procedure is triggered automatically when the 'Data latching delay' field in the configurator properties is set to 0. The user application is responsible for setting the appropriate preamble pattern before calling R_OSPI_Open() with SOPI/DOPI mode or changing the SPI protocol to SOPI/DOPI using R_OSPI_SpiProtocolSet() API. The appropriate preamble pattern can be written to the desired address using the R_OSPI_Write() API while in the SPI mode (recommended). Ensure that the same address is passed through the configurator. If the OctaFlash chip is already in SOPI/DOPI mode, the preamble pattern must be programmed using the debugger before calling R_OSPI_Open().

Chip Select Latencies

Chip select latencies can be set through the configurator. The default settings support SOPI and SPI at minimum latency. In case the driver is opened in SPI mode and will be switched to DOPI mode later using R_OSPI_SpiProtocolSet(), please select latencies required for DOPI before calling R_OSPI_Open().

OctaFlash Commands

- Set the erase commands based on intended mode of operation (SPI or OPI). These commands cannot be changed during run-time.
- Read, Write and Status commands for both SPI and OPI are configured allowing switching between the modes at run-time.

Usage Notes for OctaRAM support

OSPI Memory Mapped Access

After R_OSPI_Open() completes successfully, the OctaRAM device contents are mapped to address 0x68000000 (channel 0) or 0x70000000 (channel 1) based on the channel configured and can be written to or read from like on-chip RAM. Channel 0 and 1 support 8 MB of address space.

Auto-calibration

Since the OctaRAM only supports DOPI mode, the driver allows the user to call R_OSPI_Open() without performing the auto-calibration procedure automatically when 'Data latching delay' field is set to 0 in the configurator properties. This is done so that the user can write the appropriate preamble pattern to the desired address using memory mapped writes while in DOPI mode. Ensure that the same address is passed through the configurator. R_OSPI_AutoCalibrate() should be then called to perform auto-calibration.

Chip Select Latencies

Chip select latencies can be set through the configurator. The default settings support DOPI at minimum latency.

Limitations

Developers should be aware of the following limitations when using the OSPI driver:

OctaFlash

- Single continuous read in SPI mode is not supported by the peripheral. The maximum amount of data that can be read using a single read command is 4-bytes (When doing a 32-bit access).
- Fast Reads would be slower than regular reads as the SPI mode cannot be operated with an OMSCLK greater than 50MHz.

Examples

OSPI Flash:

Basic Example

This is a basic example of minimal use of the OSPI in an application with OctaFlash.

```
#define OSPI_EXAMPLE_DATA_LENGTH (1024)
uint8_t g_dest[OSPI_EXAMPLE_DATA_LENGTH];
/* Place data in the .ospi_flash section to flash it during programming. */
const uint8_t g_src[OSPI_EXAMPLE_DATA_LENGTH] BSP_PLACE_IN_SECTION(".ospi_flash") =
"ABCDEFGHIJKLMNOPQRSTUVWXYZ";
/* Place code in the .code_in_ospi section to flash it during programming. */
void r_ospi_example_function(void) BSP_PLACE_IN_SECTION(".code_in_ospi")
__attribute__((noinline));
void r_ospi_example_function (void)
{
 /* Add code here. */
}
void r_ospi_basic_example (void)
```

```
{
 /* Open the OSPI instancee */
 fsp_err_t err = R_OSPI_Open(&g_ospi0_ctrl, &g_ospi0_cfg);
    assert(FSP_SUCCESS == err);
 /* (Optional) Change SPI to DOPI mode */
    r_ospi_example_spi_to_dopi();
 /* After R_OSPI_Open() and any required device specific intiialization, data can be
read directly from the OSPI flash. */
    memcpy(&g_dest[0], &g_src[0], OSPI_EXAMPLE_DATA_LENGTH);
 /* After R_OSPI_Open() and any required device specific intiialization, functions in
the OSPI flash can be called. */
    r_ospi_example_function();
}
```

Reading Status Register Example (R_OSPI_DirectTransfer)

This is an example of using R_OSPI_DirectWrite followed by R_OSPI_DirectRead to send the read status register command and read back the status register from the device.

```
#define OSPI_COMMAND_READ_STATUS_REGISTER (0x05U)
void r_ospi_direct_example (void)
{
 spi_flash_direct_transfer_t ospi_test_direct_transfer =
    {
       .command       = OSPI_TEST_READ_STATUS_COMMAND_SPI_MODE,
       .address       = 0U,
       .data          = 0U,
       .command_length = 1U,
       .address_length = 0U,
       .data_length    = 0U,
       .dummy_cycles   = 0U
    };
 /* Open the OSPI instance. */
 fsp_err_t err = R_OSPI_Open(&g_ospi0_ctrl, &g_ospi0_cfg);
    assert(FSP_SUCCESS == err);
```

```
 /* Write Enable */
    err = R_OSPI_DirectTransfer(&g_ospi0_ctrl, &ospi_test_direct_transfer,
SPI_FLASH_DIRECT_TRANSFER_DIR_WRITE);
    assert(FSP_SUCCESS == err);
 /* Read Status Register */
    ospi_test_direct_transfer.command    = OSPI_TEST_READ_STATUS_COMMAND_SPI_MODE;
    ospi_test_direct_transfer.data_length = 1U;
    err = R_OSPI_DirectTransfer(&g_ospi0_ctrl, &ospi_test_direct_transfer,
SPI_FLASH_DIRECT_TRANSFER_DIR_READ);
    assert(FSP_SUCCESS == err);
 /* Check if Write Enable is set */
 if (OSPI_WEN_BIT_MASK != (ospi_test_direct_transfer.data & OSPI_WEN_BIT_MASK))
    {
       __BKPT(0);
    }
}
```

Auto-calibration Example (R_OSPI_DirectTransfer, R_OSPI_Write, R_OSPI_SpiProtocolSet)

This is an example of using R_OSPI_SpiProtocolSet to change the operating mode from SPI to SOPI and allow the driver to initiate auto-calibration.

```
#define OSPI_DOPI_PREAMBLE_PATTERN_LENGTH_BYTES (16U)
#define OSPI_EXAMPLE_PREAMBLE_ADDRESS (0x68000000U) /* Device connected to CS0 */
const uint8_t g_preamble_bytes[OSPI_DOPI_PREAMBLE_PATTERN_LENGTH_BYTES] =
{
    0x00, 0x00, 0xFF, 0xFF, 0xFF, 0x00, 0x08, 0x00, 0x00, 0xF7, 0xFF, 0x00, 0x08,
0xF7, 0x00, 0xF7
};
void ospi_example_wait_until_wip (void)
{
 fsp_err_t          err = FSP_SUCCESS;
 spi_flash_status_t status;
    status.write_in_progress = true;
    uint32_t timeout = UINT32_MAX;
```

```
 while ((status.write_in_progress) && (--timeout))
    {
       err = R_OSPI_StatusGet(&g_ospi0_ctrl, &status);
      assert(FSP_SUCCESS == err);
    }
 if (0 == timeout)
    {
      assert(FSP_SUCCESS == err);
    }
}
void r_ospi_auto_calibrate_example (void)
{
 /* Open the OSPI instance. */
 /* Set data_latch_delay_clocks to 0x0 to enable auto-calibration */
 fsp_err_t err = R_OSPI_Open(&g_ospi0_ctrl, &g_ospi0_cfg);
    assert(FSP_SUCCESS == err);
    uint8_t * preamble_pattern_addr = (uint8_t *) OSPI_EXAMPLE_PREAMBLE_ADDRESS;
    err = R_OSPI_Write(&g_ospi0_ctrl, g_preamble_bytes, preamble_pattern_addr,
OSPI_EXAMPLE_PREAMBLE_ADDRESS);
    assert(FSP_SUCCESS == err);
 /* Wait until write has been completed */
    ospi_example_wait_until_wip();
 /* Change from SPI to DOPI mode */
    r_ospi_example_spi_to_dopi();
}
```

Octaclk Update Example (R_OSPI_SpiProtocolSet)

This is an example of using R_BSP_OctaclkUpdate to change the Octal-SPI clock frequency during run time. The OCTACLK frequency must be updated before calling the R_OSPI_SpiProtocolSet with appropriate clock source and divider settings required to be set for the new SPI protocol mode. Ensure that the clock source selected is started.

```
static void ospi_example_change_omclk (void)
{
 /* Ensure clock source (PLL2 in this example) is running before changing the OCTACLK
```

```
frequency */
    bsp_octaclk_settings_t octaclk_settings;
    octaclk_settings.source_clock = BSP_CLOCKS_CLOCK_PLL2;
    octaclk_settings.divider      = BSP_CLOCKS_OCTACLK_DIV_2;
    R_BSP_OctaclkUpdate(&octaclk_settings);
}
```

OSPI Data and IAR

When using the IAR compiler, OSPI data must be const qualified to be downloaded by the debugger.

OSPI RAM:

Basic Example

This is a basic example of minimal use of the OSPI in an application with OctaRAM.

```
#define OSPI_RAM_EXAMPLE_DATA_LENGTH (1024)
uint8_t g_dest[OSPI_RAM_EXAMPLE_DATA_LENGTH];
/* Place uninitialized data buffers in the ospi_device_0_no_load section.
 * Use ospi_device_1_no_load section if the OctaRAM is configured on channel 1.
 */
uint8_t g_src_1[OSPI_RAM_EXAMPLE_DATA_LENGTH]
BSP_PLACE_IN_SECTION(".ospi_device_0_no_load");
uint8_t g_src_2[OSPI_RAM_EXAMPLE_DATA_LENGTH]
BSP_PLACE_IN_SECTION(".ospi_device_0_no_load");
void r_ospi_ram_basic_example (void)
{
 /* Open the OSPI instancee.
  * Ensure valid setting of the 'Data latching delay' field in the configurator.
  * To successfully perform OSPI RAM reads this value must not be 0.
  */
 fsp_err_t err = R_OSPI_Open(&g_ospi_ram0_ctrl, &g_ospi_ram0_cfg);
    assert(FSP_SUCCESS == err);
 /* After R_OSPI_Open() and any required device specific intiialization, data can be
read from or written to directly from the OSPI RAM. */
    memcpy(&g_dest[0], &g_src_1[0], OSPI_RAM_EXAMPLE_DATA_LENGTH);
    memcpy(&g_src_2[0], &g_src_1[0], OSPI_RAM_EXAMPLE_DATA_LENGTH);
```

```
}
```

Auto-calibration Example (R_OSPI_DirectTransfer, R_OSPI_AutoCalibrate)

This is an example of using R_OSPI_AutoCalibrate to calibrate OSPI peripheral to read data from the OctaRAM device.

```
#define OSPI_RAM_EXAMPLE_PREAMBLE_ADDRESS (0x68000000U) /* Device connected to CS0 */
#define OSPI_RAM_EXAMPLE_OCTARAM_CR_LATENCY_COUNTER_MASK (0x00F0U)
#define OSPI_RAM_EXAMPLE_OCTARAM_CR_LATENCY_COUNTER_POS (4U)
#define OSPI_RAM_EXAMPLE_OCTARAM_100MHZ_4CLOCKS_CR_SETTING (1U)
void r_ospi_ram_auto_calibrate_example (void)
{
 /* Open the OSPI instancee */
 fsp_err_t err = R_OSPI_Open(&g_ospi_ram0_ctrl, &g_ospi_ram0_cfg);
    assert(FSP_SUCCESS == err);
 /* OctaRAM Configuration Register (cr) read and write command definition */
 spi_flash_direct_transfer_t read_cr =
    {
       .command       = 0xC000U,    // NOLINT(readability-magic-numbers)
       .address       = 0x00040000U, // NOLINT(readability-magic-numbers)
       .data          = 0U,
       .command_length = 2U,
       .address_length = 4U,
       .data_length    = 2U,
 /* Dummy Cycles set to the default value specified in the OctaRAM device
Configuration Register */
       .dummy_cycles   = 5U
    };
 spi_flash_direct_transfer_t write_cr =
    {
       .command       = 0x4000U,    // NOLINT(readability-magic-numbers)
       .address       = 0x00040000U, // NOLINT(readability-magic-numbers)
       .data          = 0U,
       .command_length = 2U,
```

```
       .address_length = 4U,
       .data_length    = 2U,
       .dummy_cycles   = 0U
    };
 /* Read OctaRAM device Configuration Register */
    err = R_OSPI_DirectTransfer(&g_ospi_ram0_ctrl, &read_cr,
SPI_FLASH_DIRECT_TRANSFER_DIR_READ);
    assert(FSP_SUCCESS == err);
    uint16_t config_reg = (uint16_t) (((uint16_t) (read_cr.data) &
~OSPI_RAM_EXAMPLE_OCTARAM_CR_LATENCY_COUNTER_MASK) |
                                      ((uint16_t)
(OSPI_RAM_EXAMPLE_OCTARAM_100MHZ_4CLOCKS_CR_SETTING <<
                                                          OSPI_RAM_EXAMPLE_OCTARAM_CR_LATENC
Y_COUNTER_POS) &
                                        OSPI_RAM_EXAMPLE_OCTARAM_CR_LATENCY_COUNTER_MA
SK));
 /* Write Configuration Register */
    write_cr.data = (uint32_t) config_reg;
    err          = R_OSPI_DirectTransfer(&g_ospi_ram0_ctrl, &write_cr,
SPI_FLASH_DIRECT_TRANSFER_DIR_WRITE);
    assert(FSP_SUCCESS == err);
    read_cr.data = 0;
 /* Set Dummy Clocks to value configured above (4 Clocks) */
    read_cr.dummy_cycles = 4U;
 /* Read Configuration Register */
    err = R_OSPI_DirectTransfer(&g_ospi_ram0_ctrl, &read_cr,
SPI_FLASH_DIRECT_TRANSFER_DIR_READ);
    assert(FSP_SUCCESS == err);
 /* Confirm the intended Configuration Register value */
    assert(config_reg == (uint16_t) (read_cr.data & UINT16_MAX));
 volatile uint32_t * ram_addr = (uint32_t *) OSPI_RAM_EXAMPLE_PREAMBLE_ADDRESS;
 /* Write the auto-calibration preamble pattern for DOPI mode as specified by the
Hardware Manual */
    ram_addr[0] = 0xFFFF0000;          // NOLINT(readability-magic-numbers)
```

```
    ram_addr[1] = 0x0800FF00;          // NOLINT(readability-magic-numbers)
    ram_addr[2] = 0xFF0000F7;          // NOLINT(readability-magic-numbers)
    ram_addr[3] = 0x00F708F7;          // NOLINT(readability-magic-numbers)
    err = R_OSPI_AutoCalibrate(&g_ospi_ram0_ctrl);
    assert(FSP_SUCCESS == err);
 /* After Auto-calibration data can be read from or written to directly from the OSPI
RAM. */
    memcpy(&g_dest[0], &g_src_1[0], OSPI_RAM_EXAMPLE_DATA_LENGTH);
    memcpy(&g_src_2[0], &g_src_1[0], OSPI_RAM_EXAMPLE_DATA_LENGTH);
}
```

◆ ospi_dopi_byte_order_t

enum ospi_dopi_byte_order_t	
Enumerator	
OSPI_DOPI_BYTE_ORDER_0123	DOPI byte order byte 0, byte 1, byte 2, byte 3.
OSPI_DOPI_BYTE_ORDER_1032	DOPI byte order byte 1, byte 0, byte 3, byte 2.

Function Documentation

◆ R_OSPI_Open()

fsp_err_t R_OSPI_Open (spi_flash_ctrl_t * *p_ctrl*, spi_flash_cfg_t const *const *p_cfg*)

Open the OSPI driver module. After the driver is open, the OSPI can be accessed like internal flash memory.

Implements spi_flash_api_t::open.

Example:

```
/* Open the OSPI instancee */
fsp_err_t err = R_OSPI_Open(&g_ospi0_ctrl, &g_ospi0_cfg);
```

Return values

FSP_SUCCESS	Configuration was successful.
FSP_ERR_ASSERTION	The parameter p_ctrl or p_cfg is NULL.
FSP_ERR_ALREADY_OPEN	Driver has already been opened with the same p_ctrl.
FSP_ERR_CALIBRATE_FAILED	Failed to perform auto-calibrate.
FSP_ERR_INVALID_ARGUMENT	Attempting to open the driver with an invalid SPI protocol for OctaRAM.

◆ R_OSPI_Close()

fsp_err_t R_OSPI_Close (spi_flash_ctrl_t * *p_ctrl*)

Close the OSPI driver module.

Implements spi_flash_api_t::close.

Return values

FSP_SUCCESS	Configuration was successful.
FSP_ERR_ASSERTION	p_instance_ctrl is NULL.
FSP_ERR_NOT_OPEN	Driver is not opened.

◆ R_OSPI_DirectWrite()

fsp_err_t R_OSPI_DirectWrite (spi_flash_ctrl_t * *p_ctrl*, uint8_t const *const *p_src*, uint32_t const *bytes*, bool const *read_after_write*)

Writes raw data directly to the OctaFlash. API not supported. Use R_OSPI_DirectTransfer

Implements spi_flash_api_t::directWrite.

Return values

FSP_ERR_UNSUPPORTED	API not supported by OSPI.

◆ R_OSPI_DirectRead()

fsp_err_t R_OSPI_DirectRead (spi_flash_ctrl_t * *p_ctrl*, uint8_t *const *p_dest*, uint32_t const *bytes*)

Reads raw data directly from the OctaFlash. API not supported. Use R_OSPI_DirectTransfer.

Implements spi_flash_api_t::directRead.

Return values

FSP_ERR_UNSUPPORTED	API not supported by OSPI.

◆ R_OSPI_DirectTransfer()

fsp_err_t R_OSPI_DirectTransfer (spi_flash_ctrl_t * *p_ctrl*, spi_flash_direct_transfer_t *const *p_transfer*, spi_flash_direct_transfer_dir_t *direction*)

Read/Write raw data directly with the OctaFlash/OctaRAM device.

Implements spi_flash_api_t::directTransfer.

Example:

```
 /* Write Enable */
    err = R_OSPI_DirectTransfer(&g_ospi0_ctrl, &ospi_test_direct_transfer,
SPI_FLASH_DIRECT_TRANSFER_DIR_WRITE);
    assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	The flash was programmed successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	Driver is not opened.

◆ R_OSPI_SpiProtocolSet()

fsp_err_t R_OSPI_SpiProtocolSet (spi_flash_ctrl_t * *p_ctrl*, spi_flash_protocol_t *spi_protocol*)

Sets the SPI protocol.

Implements spi_flash_api_t::spiProtocolSet.

Return values

FSP_SUCCESS	SPI protocol updated on MCU peripheral.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	Driver is not opened.
FSP_ERR_CALIBRATE_FAILED	Failed to perform auto-calibrate.
FSP_ERR_INVALID_ARGUMENT	Attempting to set an invalid SPI protocol for OctaRAM.

◆ R_OSPI_XipEnter()

fsp_err_t R_OSPI_XipEnter (spi_flash_ctrl_t * *p_ctrl*)

Enters Single Continuous Read/Write mode.

Implements spi_flash_api_t::xipEnter.

Return values

FSP_SUCCESS	The flash was programmed successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	Driver is not opened.
FSP_ERR_UNSUPPORTED	API not supported by OSPI - OctaRAM.

◆ R_OSPI_XipExit()

fsp_err_t R_OSPI_XipExit (spi_flash_ctrl_t * *p_ctrl*)

Exits XIP (execute in place) mode.

Implements spi_flash_api_t::xipExit.

Return values

FSP_SUCCESS	The flash was programmed successfully.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	Driver is not opened.
FSP_ERR_UNSUPPORTED	API not supported by OSPI - OctaRAM.

◆ R_OSPI_Write()

fsp_err_t R_OSPI_Write (spi_flash_ctrl_t * *p_ctrl*, uint8_t const *const *p_src*, uint8_t *const *p_dest*, uint32_t *byte_count*)

Program a page of data to the flash.

Implements spi_flash_api_t::write.

Example:

```
    err = R_OSPI_Write(&g_ospi0_ctrl, g_preamble_bytes, preamble_pattern_addr,
OSPI_EXAMPLE_PREAMBLE_ADDRESS);
    assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	The flash was programmed successfully.
FSP_ERR_ASSERTION	p_instance_ctrl, p_dest or p_src is NULL, or byte_count crosses a page boundary.
FSP_ERR_NOT_OPEN	Driver is not opened.
FSP_ERR_DEVICE_BUSY	Another Write/Erase transaction is in progress.
FSP_ERR_INVALID_SIZE	Write operation crosses page-boundary.
FSP_ERR_UNSUPPORTED	API not supported by OSPI - OctaRAM.
FSP_ERR_WRITE_FAILED	The write enable bit was not set.

◆ R_OSPI_Erase()

fsp_err_t R_OSPI_Erase (spi_flash_ctrl_t * *p_ctrl*, uint8_t *const *p_device_address*, uint32_t *byte_count*)

Erase a block or sector of flash. The byte_count must exactly match one of the erase sizes defined in spi_flash_cfg_t. For chip erase, byte_count must be SPI_FLASH_ERASE_SIZE_CHIP_ERASE.

Implements spi_flash_api_t::erase.

Return values

FSP_SUCCESS	The command to erase the flash was executed successfully.
FSP_ERR_ASSERTION	p_instance_ctrl or p_device_address is NULL, byte_count doesn't match an erase size defined in spi_flash_cfg_t, or byte_count is set to 0.
FSP_ERR_NOT_OPEN	Driver is not opened.
FSP_ERR_DEVICE_BUSY	The device is busy.
FSP_ERR_UNSUPPORTED	API not supported by OSPI - OctaRAM.
FSP_ERR_WRITE_FAILED	The write enable bit was not set.

◆ R_OSPI_StatusGet()

fsp_err_t R_OSPI_StatusGet (spi_flash_ctrl_t * *p_ctrl*, spi_flash_status_t *const *p_status*)

Gets the write or erase status of the flash.

Implements spi_flash_api_t::statusGet.

Example:

```
      err = R_OSPI_StatusGet(&g_ospi0_ctrl, &status);
     assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	The write status is in p_status.
FSP_ERR_ASSERTION	p_instance_ctrl or p_status is NULL.
FSP_ERR_NOT_OPEN	Driver is not opened.
FSP_ERR_UNSUPPORTED	API not supported by OSPI - OctaRAM.

◆ R_OSPI_BankSet()

fsp_err_t R_OSPI_BankSet (spi_flash_ctrl_t * *p_ctrl*, uint32_t *bank*)

Selects the bank to access.

Implements spi_flash_api_t::bankSet.

Return values

FSP_ERR_UNSUPPORTED	API not supported by OSPI.

◆ R_OSPI_AutoCalibrate()

fsp_err_t R_OSPI_AutoCalibrate (spi_flash_ctrl_t * *p_ctrl*)

Auto-calibrate the OctaRAM device using the preamble pattern.

Note

The preamble pattern must be written to the configured address before calling this API. Implements spi_flash_api_t::autoCalibrate.

Return values

FSP_SUCCESS	SPI protocol updated on MCU peripheral.
FSP_ERR_ASSERTION	A required pointer is NULL.
FSP_ERR_NOT_OPEN	Driver is not opened.
FSP_ERR_CALIBRATE_FAILED	Failed to perform auto-calibrate.
FSP_ERR_UNSUPPORTED	API not supported by OSPI - OctaFlash.

4.2.46 Parallel Data Capture (r_pdc)

Detailed Description

Driver for the PDC peripheral on RA MCUs. This module implements the PDC Interface.

Overview

The PDC peripheral supports interfacing with external cameras by accepting timing and data signals in order to capture incoming data. A callback is invoked every time a frame of data is accepted.

Features

- Capture incoming data into a user defined buffer
- Data bytes per pixel can be configured
- Endianess of the incoming data can be specified
- Supports configuring capture width and height
- Supports configuring vertical and horizontal sync polarity
- Horizontal and Vertical position for image/data capture can be specified
- External clock to the camera module can be adjusted
- Choice between DMA and DTC to transfer out the captured data
- The specified user callback is invoked when a data frame is captured

Configuration

Build Time Configurations for r_pdc

The following build time configurations are defined in fsp_cfg/r_pdc_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Graphics > Parallel Data Capture (r_pdc)

This module can be added to the Stacks tab via New Stack > Graphics > Parallel Data Capture (r_pdc).

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_pdc0	Module name.
Input > Signal polarity > HSYNC	• High • Low	High	Specify the active polarity of the HSYNC signal.

Input > Signal polarity > VSYNC	• High • Low	High	Specify the active polarity of the VSYNC signal.
Input > Capture Specifications > Number of pixels to capture horizontally	Value must be an integer greater than 0	640	Specify the number of horizontal pixels to capture.
Input > Capture Specifications > Number of lines to capture vertically	Value must be an integer greater than 0	480	Specify the number of vertical pixels to capture.
Input > Capture Specifications > Horizontal pixel to start capture from	Value must be an integer	0	Specify the horizontal pixel to start capturing image data from. Allows an image smaller than the native resolution of a camera to be captured.
Input > Capture Specifications > Line to start capture from	Value must be an integer	0	Specify the vertical line to start capturing image data from. Allows an image smaller than the native resolution of a camera to be captured.
Input > Bytes per pixel	Value must be an integer greater than 0	2	Specify the number of bytes per pixel of the captured image data.
Input > Clock divider	• CLK/2 • CLK/4 • CLK/6 • CLK/8 • CLK/10 • CLK/12 • CLK/14 • CLK/16	CLK/2	Specify the clock divider of the clock input to the PDC peripheral.
Input > Endianess	• Little • Big	Little	Specify the endianness of the captured image data.
Output > Buffer > Image buffer name	Name must be a valid C symbol	g_user_buffer	Specify the name of the data buffer to create or set to NULL, if it is to be created by the user external to the PDC driver.
Output > Buffer > Image buffer section	This property must be a valid section name	.bss	Specify the RAM section for the image data buffer. Typically .bss (internal RAM) or

			.sdram. When Arm Compiler 6 is used to place this memory in on-chip SRAM, the section name must be .bss or start with .bss. to avoid consuming unnecessary ROM space.
Output > Buffer > Number of image buffers	Value must be an integer greater than 0	1	Specify the number of buffers to create.
Interrupts > Callback	Name must be a valid C symbol	g_pdc_user_callback	A user callback function must be provided. This callback is invoked for every successful frame capture and any error conditions
Interrupts > PDC Interrupt Priority	MCU Specific Options		Select the PDC interrupt priority.
Interrupts > DTC Interrupt Priority	MCU Specific Options		Select the DTC interrupt priority.

Clock Configuration

The PDC peripheral module uses the PCLKB as its clock source. The maximum clock to the camera module is PCLKB / 2.

Pin Configuration

The PCKO pin is a clock output and should be connected to the clock input of the camera. The PIXCLK pin is a clock input and should be connected to the output pixel clock of the camera. Likewise, the HSYNC and VSYNC pins must be connected to the horizontal and vertical sync signals of the camera, respectively. The PIXD0-PIXD7 pins are the 8-bit data bus input and should be connected to the relevant output pins of the camera.

Note

Camera control and serial communication pins must be configured separately and are not controlled by this module.

Usage Notes

Interrupt Configuration

- PDC error interrupts are used by this module for reporting errors such as overrun, underrun, vertical line number setting and horizontal byte number setting errors.
- In addition to the PDC error interrupts, DMA or DTC interrupts are also used internally to perform data transfer from this peripheral to the specified image buffer.
- Receive data ready interrupt is used as activation source for DMA and DTC trigger.

Enabling Transfer Modules

- An option to select between DMAC or DTC is provided with DMA as the default transfer choice.
- For further details on DMA please refer Direct Memory Access Controller (r_dmac)
- For further details on DTC please refer Data Transfer Controller (r_dtc)

PDC setup with external camera

- Before configuring the external camera device the PDC Open API must be called in order to start clock output.
- Ensure that the memory pointed to by p_buffer is both valid and large enough to store a complete image.
- The amount of space required (in bytes) can be calculated as: size (bytes) = image width (pixels) * image height (lines) * number of bytes per pixel
- Ensure that the size above is divisible by and aligned to 32 bytes.

Examples

Basic Example

This is a basic example of minimal use of the PDC in an application. This example shows how this driver can be used for capturing data from an external I/O device such as an image sensor.

```
void g_pdc_user_callback (pdc_callback_args_t * p_args)
{
 if (PDC_EVENT_TRANSFER_COMPLETE == p_args->event)
    {
       g_capture_ready = true;
    }
}
void basic_example (void)
{
 fsp_err_t err;
 /* Initialize the PDC module */
    err = R_PDC_Open(&g_pdc0_ctrl, &g_pdc0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
 /* Initialize the camera module at this point. This implementation is camera vendor
specific. */
    camera_module_initialization();
 /* Initialize capture ready flag to false. This gets set to true in PDC callback
upon successful frame capture. */
    g_capture_ready = false;
```

```
    err = R_PDC_CaptureStart(&g_pdc0_ctrl, g_user_buffer);
    assert(FSP_SUCCESS == err);
    uint32_t timeout_ms = PDC_DELAY_MS;
 /* Since there is nothing else to do, block until Callback triggers*/
 while ((true != g_capture_ready) && timeout_ms)
    {
 R_BSP_SoftwareDelay(1U, BSP_DELAY_UNITS_MILLISECONDS);
       timeout_ms--;;
    }
 if (0U == timeout_ms)
    {
       __BKPT(0);
    }
}
static void camera_module_initialization (void)
{
 /* Camera vendor specific initialization to be done here */
}
```

Data Structures

struct	pdc_instance_ctrl_t

Data Structure Documentation

◆ pdc_instance_ctrl_t

struct pdc_instance_ctrl_t
PDC instance control block. DO NOT INITIALIZE.

Function Documentation

◆ R_PDC_Open()

fsp_err_t R_PDC_Open (pdc_ctrl_t *const *p_api_ctrl*, pdc_cfg_t const *const *p_cfg*)

Powers on PDC, handles required initialization described in the hardware manual.

Implements pdc_api_t::open.

The Open function provides initial configuration for the PDC module. It powers on the module and enables the PCLKO output and the PIXCLK input. Further initialization requires the PIXCLK input to be running in order to be able to reset the PDC as part of its initialization. This clock is input from a camera module and so the reset and further initialization is performed in pdc_api_t::captureStart. This function should be called once prior to calling any other PDC API functions. After the PDC is opened the Open function should not be called again without first calling the Close function.

Example:

```
/* Initialize the PDC module */
   err = R_PDC_Open(&g_pdc0_ctrl, &g_pdc0_cfg);
```

Return values

FSP_SUCCESS	Initialization was successful.
FSP_ERR_ASSERTION	One or more of the following parameters is NULL 1. p_cfg is NULL 2. p_api_ctrl is NULL 3. The pointer to the transfer interface in the p_cfg parameter is NULL 4. Callback parameter is NULL. 5. Invalid IRQ number assigned
FSP_ERR_INVALID_ARGUMENT	One or more of the following parameters is incorrect 1. bytes_per_pixel is zero 2. x_capture_pixels is zero 3. y_capture_pixels is zero 4. x_capture_start_pixel + x_capture_pixels is greater than 4095, OR 5. y_capture_start_pixel + y_capture_pixels is greater than 4095
FSP_ERR_ALREADY_OPEN	Module is already open.

◆ R_PDC_Close()

fsp_err_t R_PDC_Close (pdc_ctrl_t *const *p_api_ctrl*)

Stops and closes the transfer interface, disables and powers off the PDC, clears internal driver data and disables interrupts.

Implements pdc_api_t::close.

Return values

FSP_SUCCESS	Successful close.
FSP_ERR_ASSERTION	p_api_ctrl is NULL
FSP_ERR_NOT_OPEN	Open has not been successfully called.

◆ R_PDC_CaptureStart()

fsp_err_t R_PDC_CaptureStart (pdc_ctrl_t *const *p_api_ctrl*, uint8_t *const *p_buffer*)

Starts a capture. Enables interrupts.

Implements pdc_api_t::captureStart.

Sets up the transfer interface to transfer data from the PDC into the specified buffer. Configures the PDC settings as previously set by the pdc_api_t::open API. These settings are configured here as the PIXCLK input must be active for the PDC reset operation. When a capture is complete the callback registered during pdc_api_t::open API call will be called.

Example:

```
err = R_PDC_CaptureStart(&g_pdc0_ctrl, g_user_buffer);

assert(FSP_SUCCESS == err);
```

Return values

FSP_SUCCESS	Capture start successful.
FSP_ERR_ASSERTION	One or more of the following parameters is NULL 1. p_api_ctrl is NULL 2. p_buffer is NULL while p_buffer field of the control structure is NULL
FSP_ERR_NOT_OPEN	Open has not been successfully called.
FSP_ERR_IN_USE	PDC transfer is already in progress.
FSP_ERR_TIMEOUT	Reset operation timed out.

4.2.47 Port Output Enable for GPT (r_poeg)

Modules

Functions

fsp_err_t	R_POEG_Open (poeg_ctrl_t *const p_ctrl, poeg_cfg_t const *const p_cfg)
fsp_err_t	R_POEG_StatusGet (poeg_ctrl_t *const p_ctrl, poeg_status_t *const p_status)
fsp_err_t	R_POEG_CallbackSet (poeg_ctrl_t *const p_ctrl, void(*p_callback)(poeg_callback_args_t *), void const *const p_context, poeg_callback_args_t *const p_callback_memory)
fsp_err_t	R_POEG_OutputDisable (poeg_ctrl_t *const p_ctrl)
fsp_err_t	R_POEG_Reset (poeg_ctrl_t *const p_ctrl)
fsp_err_t	R_POEG_Close (poeg_ctrl_t *const p_ctrl)

Detailed Description

Driver for the POEG peripheral on RA MCUs. This module implements the POEG Interface.

Overview

The POEG module can be used to configure events to disable GPT GTIOC output pins.

Features

The POEG module has the following features:

- Supports disabling GPT output pins based on GTETRG input pin level.
- Supports disabling GPT output pins based on comparator crossing events (configurable in the High-Speed Analog Comparator (r_acmphs) driver).
- Supports disabling GPT output pins when GTIOC pins are the same level (configurable in the General PWM Timer (r_gpt) driver).
- Supports disabling GPT output pins when main oscillator stop is detected.
- Supports disabling GPT output pins by software API.
- Supports notifying the application when GPT output pins are disabled by POEG.
- Supports resetting POEG status.

Configuration

Build Time Configurations for r_poeg

The following build time configurations are defined in fsp_cfg/r_poeg_cfg.h:

Configuration	Options	Default	Description
Parameter Checking	• Default (BSP) • Enabled • Disabled	Default (BSP)	If selected code for parameter checking is included in the build.

Configurations for Timers > Port Output Enable for GPT (r_poeg)

This module can be added to the Stacks tab via New Stack > Timers > Port Output Enable for GPT (r_poeg). Non-secure callable guard functions can be generated for this module by right clicking the module in the RA Configuration tool and checking the "Non-secure Callable" box.

Configuration	Options	Default	Description
General > Name	Name must be a valid C symbol	g_poeg0	Module name.
General > Channel	Must be a valid POEG channel	0	Specify the hardware channel.
General > Trigger	MCU Specific Options		Select the trigger sources that will enable POEG. Software disable is always supported. This configuration can only be set once after reset. It cannot be modified after the initial setting.
Input > GTETRG Polarity	• Active High • Active Low	Active High	Select the polarity of the GTETRG pin. Only applicable if GTETRG pin is selected under Trigger.
Input > GTETRG Noise Filter	• Disabled • PCLKB/1 • PCLKB/8 • PCLKB/32 • PCLKB/128	Disabled	Configure the noise filter for the GTETRG pin. Only applicable if GTETRG pin is selected under Trigger.
Interrupts > Callback	Name must be a valid C symbol	NULL	A user callback function can be specified here. If this callback function is provided, it will be called from the interrupt service routine (ISR) when GPT output pins are disabled by POEG.
Interrupts > Interrupt Priority	MCU Specific Options		Select the POEG interrupt priority.

Clock Configuration

The POEG clock is based on the PCLKB frequency.

Pin Configuration

This module can use GTETRGA, GTETRGB, GTETRGC, or GTETRGD as an input signal to disable GPT output pins.

Usage Notes

POEG GTETRG Pin and Channel

The POEG channel number corresponds to the GTETRG input pin that can be used with the channel. GTETRGA must be used with POEG channel 0, GTETRGB must be used with POEG channel 1, etc.

Limitations

The user should be aware of the following limitations when using POEG:

- The POEG trigger source can only be set once per channel. Modifying the POEG trigger source after it is set is not allowed by the hardware.
- The POEG cannot be disabled using this API. The interrupt is disabled in R_POEG_Close(), but the POEG will still disable the GPT output pins if a trigger is detected even if the module is closed.

Examples

POEG Basic Example

This is a basic example of minimal use of the POEG in an application.

```
void poeg_basic_example (void)
{
 fsp_err_t err = FSP_SUCCESS;
 /* Initializes the POEG. */
    err = R_POEG_Open(&g_poeg0_ctrl, &g_poeg0_cfg);
 /* Handle any errors. This function should be defined by the user. */
    assert(FSP_SUCCESS == err);
}
```

POEG Callback Example

This is an example of a using the POEG callback to restore GPT output operation.

```
/* Example callback called when POEG disables GPT output pins. */
void poeg_callback (poeg_callback_args_t * p_args)
{
```

```
FSP_PARAMETER_NOT_USED(p_args);
/* (Optional) Determine the cause of the POEG event. */
poeg_status_t status;
   (void) R_POEG_StatusGet(&g_poeg0_ctrl, &status);
/* Correct the cause of the POEG event before resetting POEG. */
/* Reset the POEG before exiting the callback. */
   (void) R_POEG_Reset(&g_poeg0_ctrl);
/* Wait for the status to clear after reset before exiting the callback to ensure
the interrupt does not fire
 * again. */
do
   {
     (void) R_POEG_StatusGet(&g_poeg0_ctrl, &status);
   } while (POEG_STATE_NO_DISABLE_REQUEST != status.state);
/* Alternatively, if the POEG cannot be reset, disable the POEG interrupt to prevent
it from firing continuously.
 * Update the 0 in the macro below to match the POEG channel number. */
   NVIC_DisableIRQ(VECTOR_NUMBER_POEG0_EVENT);
}
```

Data Structures
