Variables

const tdes_api_t	g_tdes192ecb_on_sce

Detailed Description

Primitive cryptographic functions.

Triple DES encryption and decryption functions

Function Documentation

◆ R_SCE_TDES_192CbcDecrypt()

uint32_t R_SCE_TDES_192CbcDecrypt (tdes_ctrl_t *const *p_ctrl*, const uint32_t * *p_key*, uint32_t * *p_iv*, uint32_t *num_words*, uint32_t * *p_source*, uint32_t * *p_dest*)

Triple DES Decryption with CBC mode.

Decrypt num_words words of input data from buffer p_source using the 192-bit TDES key from buffer key and initialization vector from buffer iv. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for atleast num_words words of data.

Return values

SSP_ERR_ASSERTION	One of the input parameters is NULL or invalid.
SF_CRYPTO_SUCCESS	Function returned successfully.
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty.
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	Resource conflict occurred.

Precondition

SCE module must have been initialized.

Note

p_dest must have space to hold at least num_words words of data.
The key buffer must contain 24 bytes of TDES key data and
the iv buffer must have 8 bytes of random data.

◆ R_SCE_TDES_192CbcEncrypt()

uint32_t R_SCE_TDES_192CbcEncrypt (tdes_ctrl_t *const *p_ctrl*, const uint32_t * *p_key*, uint32_t * *p_iv*, uint32_t *num_words*, uint32_t * *p_source*, uint32_t * *p_dest*)

Triple DES Encryption with CBC mode.

Encrypt num_words words of input data from buffer p_source using the 192-bit TDES key from buffer key and initialization vector from buffer iv. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for at least num_words words of data.

Return values

SSP_ERR_ASSERTION	One of the input parameters is NULL or invalid.
SF_CRYPTO_SUCCESS	Function returned successfully.
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty.
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	Resource conflict occurred.

Precondition

SCE module must have been initialized.

Note

p_dest must have space to hold at least num_words words of data.
The key buffer must contain 24 bytes of TDES key data and
the iv buffer must have 8 bytes of random data.

◆ R_SCE_TDES_192CtrEncrypt()

uint32_t R_SCE_TDES_192CtrEncrypt (tdes_ctrl_t *const *p_ctrl*, const uint32_t * *p_key*, uint32_t * *p_iv*, uint32_t *num_words*, uint32_t * *p_source*, uint32_t * *p_dest*)

Triple DES Encryption with CTR mode.

Encrypt num_words words of input data from buffer p_source using the 192-bit TDES key from buffer key and initialization vector from buffer iv. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for at least num_words words of data.

Return values

SSP_ERR_ASSERTION	One of the input parameters is NULL or invalid.
SF_CRYPTO_SUCCESS	Function returned successfully.
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty.
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	Resource conflict occurred.

Precondition

SCE module must have been initialized.

Note

p_dest must have space to hold at least num_words words of data.
The key buffer must contain 24 bytes of TDES key data and
the iv buffer must have 8 bytes of random data.

◆ R_SCE_TDES_192EcbDecrypt()

uint32_t R_SCE_TDES_192EcbDecrypt (tdes_ctrl_t *const *p_ctrl*, const uint32_t * *p_key*, uint32_t * *p_iv*, uint32_t *num_words*, uint32_t * *p_source*, uint32_t * *p_dest*)

Triple DES Decryption with ECB mode. Decrypt num_words words of input data from buffer p_source using the 192-bit TDES key from buffer key and initialization vector from buffer iv. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for atleast num_words words of data.

Return values

SSP_ERR_ASSERTION	One of the input parameters is NULL or invalid.
SF_CRYPTO_SUCCESS	Function returned successfully.
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty.
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	Resource conflict occurred.

Precondition

SCE module must have been initialized.

Note

p_dest must have space to hold at least num_words words of data.
The key buffer must contain 24 bytes of TDES key data and
The contents of iv buffer are ignored in ECB chaining mode.

To prevent compiler warning for unused parameter.

◆ R_SCE_TDES_192EcbEncrypt()

uint32_t R_SCE_TDES_192EcbEncrypt (tdes_ctrl_t *const *p_ctrl*, const uint32_t * *p_key*, uint32_t * *p_iv*, uint32_t *num_words*, uint32_t * *p_source*, uint32_t * *p_dest*)

Triple DES Encryption with ECB mode.

Encrypt num_words words of input data from buffer p_source using the 192-bit TDES key from buffer key and initialization vector from buffer iv. The result will be written to the output buffer from p_dest. The p_dest array is assumed to have space for atleast num_words words of data.

Return values

SSP_ERR_ASSERTION	One of the input parameters is NULL or invalid.
SF_CRYPTO_SUCCESS	Function returned successfully.
SSP_ERR_CRYPTO_SCE_FAIL	Internal I/O buffer is not empty.
SSP_ERR_CRYPTO_SCE_RESOURCE_CONFLICT	Resource conflict occurred.

Precondition

SCE module must have been initialized.

Note

Block size for TDES is 64-bits (8 bytes or 2 words). Hence num_words must be a multiple of 2.
p_dest must have space to hold at least num_words words of data.
The key buffer must contain 24 bytes of TDES key data.
The contents of iv buffer are ignored in ECB chaining mode.

To prevent compiler warning for unused parameter.

◆ R_SCE_TDES_Close()

uint32_t R_SCE_TDES_Close (tdes_ctrl_t *const *p_ctrl*)

Close TDES module.

Return values

SF_CRYPTO_SUCCESS	Module closed successfully.
SSP_ERR_ASSERTION	The parameter p_ctrl is NULL.

◆ R_SCE_TDES_Open()

uint32_t R_SCE_TDES_Open (tdes_ctrl_t *const *p_ctrl*, tdes_cfg_t const *const *p_cfg*)

TDES Initialization.

Return values

SF_CRYPTO_SUCCESS	Module opened successfully.
SSP_ERR_ASSERTION	One of the input parameter is NULL.
SSP_ERR_CRYPTO_NOT_OPEN	Crypto HAL Common module is not Opened.

Get status of Crypto HAL common module

Return error code of Crypto HAL common module is not open

◆ R_SCE_TDES_VersionGet()

uint32_t R_SCE_TDES_VersionGet (ssp_version_t *const *p_version*)

Sets driver version based on compile time macros.

Return values

SF_CRYPTO_SUCCESS	Returned the driver version successfully.
SSP_ERR_ASSERTION	The parameter p_version is NULL.

Variable Documentation

◆ g_tdes192ecb_on_sce

const tdes_api_t g_tdes192ecb_on_sce

```
=
{
    .open       = R_SCE_TDES_Open,
    .encrypt    = R_SCE_TDES_192EcbEncrypt,
    .decrypt    = R_SCE_TDES_192EcbDecrypt,
    .close      = R_SCE_TDES_Close,
    .versionGet = R_SCE_TDES_VersionGet
}
```

SCE/TDES implementation of TDES API.

SCE_TRNG

Renesas Synergy Software Package Reference » HAL Layer » SCE Module

Primitive cryptographic functions. More...

Functions

uint32_t	R_SCE_TRNG_Open (trng_ctrl_t *const p_ctrl, trng_cfg_t const *const p_cfg)
uint32_t	R_SCE_TRNG_VersionGet (ssp_version_t *const p_version) Sets driver version based on compile time macros. More...
uint32_t	R_SCE_TRNG_Read (trng_ctrl_t *const p_ctrl, uint32_t *const p_dest, uint32_t nwords)
uint32_t	R_SCE_TRNG_Close (trng_ctrl_t *const p_ctrl)

Variables

const trng_api_t	g_trng_on_sce

Detailed Description

Primitive cryptographic functions.

random number generation functions

Function Documentation

◆ R_SCE_TRNG_Close()

uint32_t R_SCE_TRNG_Close (trng_ctrl_t *const *p_ctrl*)

Close the TRNG interface driver

Return values

SF_CRYPTO_SUCCESS	TRNG module was closed successfully.
SSP_ERR_ASSERTION	NULL input parameter(s).

◆ R_SCE_TRNG_Open()

uint32_t R_SCE_TRNG_Open (trng_ctrl_t *const *p_ctrl*, trng_cfg_t const *const *p_cfg*)

SCE_TRNG example: extern const r_sce_t g_<interface>_on_sce;

Open the TRNG driver for reading random data from the hardware TRNG module TRNG Initialization

Return values

SF_CRYPTO_SUCCESS	random number generation successful
SF_CRPYTO_ERR_CRYPTO_RESOURCE_CONFLICT	SCE resource is busy
SF_CRYPTO_ERR_CRYPTO_SCEFAIL	SCE internal I/O is not empty
SSP_ERR_ASSERTION	NULL input parameter(s).
SSP_ERR_CRYPTO_NOT_OPEN	Crypto HAL Common module is not Opened.

Get status of Crypto HAL common module

Return error code of Crypto HAL common module is not open

◆ R_SCE_TRNG_Read()

uint32_t R_SCE_TRNG_Read (trng_ctrl_t *const *p_ctrl*, uint32_t *const *p_rngbuf*, uint32_t *nwords*)

Generate nwords of random number words (4-bytes each) and store them in p_rngbuf buffer SCE hardware TRNG module will be used for generating the random data.

Return values

SF_CRYPTO_SUCCESS	random number generation successful
SSP_ERR_CRYPTO_RNG_FATAL_ERROR	HW_SCE_RNG_Read failed to generate 128-bit (16-byte) random number in p_ctrl->nattempts number of attempts.
SF_CRPYTO_ERR_CRYPTO_RESOURCE_CONFLICT	SCE resource is busy
SF_CRYPTO_ERR_CRYPTO_SCEFAIL	SCE internal I/O is not empty
SSP_ERR_ASSERTION	NULL input parameter(s).

◆ R_SCE_TRNG_VersionGet()

uint32_t R_SCE_TRNG_VersionGet (ssp_version_t *const *p_version*)

Sets driver version based on compile time macros.

Return values

SSP_SUCCESS	Successful close.
SSP_ERR_ASSERTION	The parameter p_version is NULL.

Variable Documentation

◆ g_trng_on_sce

const trng_api_t g_trng_on_sce

```
=
{
    .open       = R_SCE_TRNG_Open,
    .read       = R_SCE_TRNG_Read,
    .close      = R_SCE_TRNG_Close,
    .versionGet = R_SCE_TRNG_VersionGet
}
```

SCE/TRNG implementation of RNG API.

SCE_INTERFACE_GET

Renesas Synergy Software Package Reference » HAL Layer » SCE Module

Get Interface for Crypto HAL modules. More...

Functions

uint32_t R_SCE_InterfaceGet (crypto_interface_get_param_t *const interface_info, void *const p_interface)

Get the HAL interface global object based on the service/algorithm requested. More...

Detailed Description

Get Interface for Crypto HAL modules.

Function Documentation

◆ R_SCE_InterfaceGet()

uint32_t R_SCE_InterfaceGet (crypto_interface_get_param_t *const *interface_info*, void *const *p_interface*)

Get the HAL interface global object based on the service/algorithm requested.

Return values

SSP_SUCCESS	Valid interface has been returned.
SSP_ERR_ASSERTION	One or more invalid input parameters.
SSP_ERR_INVALID_ARGUMENT	Invalid request. Input parameters could not be resolved into a valid HAL interface.

5.2 Board Support Package

Common BSP includes. More...

Modules

	Supported MCUs Supported MCUs in this version of the BSP.
	Common BSP Code Code common to all BSPs.

Detailed Description

Common BSP includes.

The BSP is responsible for getting the MCU from reset to the user application (i.e. the main function). Before reaching the user application the BSP sets up the stacks, heap, clocks, interrupts, and C runtime environment. The BSP is configurable to allow users to modify the process to meet design requirements.

5.2.1 Supported MCUs

Board Support Package

Supported MCUs in this version of the BSP. More...

Modules

	S124 Code that is common to S124 MCUs.
	S128 Code that is common to S128 MCUs.
	S1JA Code that is common to S1JA MCUs.
	S3A1 Code that is common to S3A1 MCUs.
	S3A3 Code that is common to S3A3 MCUs.
	S3A6 Code that is common to S3A6 MCUs.
	S3A7 Code that is common to S3A7 MCUs.
	S5D3 Code that is common to S5D3 MCUs.
	S5D5 Code that is common to S5D5 MCUs.

	S5D9 Code that is common to S5D9 MCUs.
	S7G2 Code that is common to S7G2 MCUs.

Functions

ssp_err_t	R_SSP_VersionGet (ssp_pack_version_t *const p_version) Set SSP version based on compile time macros. More...

Detailed Description

Supported MCUs in this version of the BSP.

The BSP has code specific to a MCU and a board. The code that is specific to a MCU can be shared amongst boards that use the MCU.

Function Documentation

◆ R_SSP_VersionGet()

ssp_err_t R_SSP_VersionGet (ssp_pack_version_t *const *p_version*)

Set SSP version based on compile time macros.

Parameters

[out]	p_version	Memory address to return version information to.

Return values

SSP_SUCCESS	Version information stored.
SSP_ERR_ASSERTION	The parameter p_version is NULL.

5.2.1.1 S124

Board Support Package » Supported MCUs

Code that is common to S124 MCUs. More...

Modules

	Analog Connections
	Cache Functions
	Clock Initialization
	Hardware Locks
	Module Start and Stop
	ROM Registers

Enumerations

enum	elc_peripheral_t
enum	elc_event_t

Detailed Description

Code that is common to S124 MCUs.

Implements functions that are common to S124 MCUs.

Enumeration Type Documentation

◆ elc_event_t

enum elc_event_t
Sources of event signals to be linked to other peripherals or the CPU1 ***Note*** *This list may change based on device. This list is for S124.*

◆ elc_peripheral_t

enum elc_peripheral_t
Possible peripherals to be linked to event signals

Analog Connections

Board Support Package » Supported MCUs » S124

Detailed Description

This group contains a list of enumerations that can be used with the Analog Connect Interface.

Enumeration Type Documentation

◆ analog_connect_t

enum analog_connect_t

List of analog connections that can be made on S124

Note

This list may change based on device. This list is for S124.

Enumerator	
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P012	Connect ACMPHS0 IVREF to PORT0 P012.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC80_DA	Connect ACMPHS1 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P000	Connect ACMPHS2 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT0_P001	Connect ACMPHS2 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC80_DA	Connect ACMPHS2 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC82_DA	Connect ACMPHS2 IVREF to DAC82 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.

ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP0 IVCMP to OPAMP1 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP2_AMPO	Connect ACMPLP1 IVCMP to OPAMP2 AMPO.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P500	Connect ACMPHS0 IVCMP to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT1_P100	Connect ACMPHS0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT1_P101	Connect ACMPHS0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P109	Connect ACMPLP0 IVREF0 to PORT1 P109.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.

ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P110	Connect ACMPLP1 IVREF1 to PORT1 P110.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT4_P400	Connect ACMPLP0 IVCMP to PORT4 P400.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP0_AMPO	Connect ACMPLP0 IVCMP to OPAMP0 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT4_P408	Connect ACMPLP1 IVCMP to PORT4 P408.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP1 IVCMP to OPAMP1 AMPO.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_OPAMP0_AMPO_BREAK	Break all connections to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P014	Connect OPAMP0 AMPO to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P013	Connect OPAMP0 AMPO to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P003	Connect OPAMP0 AMPO to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P002	Connect OPAMP0 AMPO to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPM_BREAK	Break all connections to OPAMP0 AMPM.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P501	Connect OPAMP0 AMPM to PORT5 P501.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P500	Connect OPAMP0 AMPM to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P014	Connect OPAMP0 AMPM to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P013	Connect OPAMP0 AMPM to PORT0 P013.

ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P003	Connect OPAMP0 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPM_TO_OPAMP0_AMPO	Connect OPAMP0 AMPM to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPP_BREAK	Break all connections to OPAMP0 AMPP.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT5_P500	Connect OPAMP0 AMPP to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P014	Connect OPAMP0 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P013	Connect OPAMP0 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P002	Connect OPAMP0 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPP_TO_DAC120_DA	Connect OPAMP0 AMPP to DAC120 DA.
ANALOG_CONNECT_OPAMP1_AMPM_BREAK	Break all connections to OPAMP1 AMPM.
ANALOG_CONNECT_OPAMP1_AMPM_TO_PORT0_P014	Connect OPAMP1 AMPM to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPM_TO_OPAMP1_AMPO	Connect OPAMP1 AMPM to OPAMP1 AMPO.
ANALOG_CONNECT_OPAMP1_AMPP_BREAK	Break all connections to OPAMP1 AMPP.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P014	Connect OPAMP1 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P013	Connect OPAMP1 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P003	Connect OPAMP1 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P002	Connect OPAMP1 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP1_AMPP_TO_DAC80_DA	Connect OPAMP1 AMPP to DAC80 DA.
ANALOG_CONNECT_OPAMP2_AMPM_BREAK	Break all connections to OPAMP2 AMPM.
ANALOG_CONNECT_OPAMP2_AMPM_TO_PORT0_P003	Connect OPAMP2 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPM_TO_OPAMP2_AMPO	Connect OPAMP2 AMPM to OPAMP2 AMPO.
ANALOG_CONNECT_OPAMP2_AMPP_BREAK	Break all connections to OPAMP2 AMPP.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P	Connect OPAMP2 AMPP to PORT0 P003.

003	
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P002	Connect OPAMP2 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP2_AMPP_TO_DAC81_DA	Connect OPAMP2 AMPP to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1	

_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.

ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P004	Connect ACMPHS0 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P007	Connect ACMPHS0 IVCMP to PORT0 P007.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P015	Connect ACMPHS0 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ANALOG0_VREF	Connect ACMPHS0 IVCMP to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P005	Connect ACMPHS0 IVREF to PORT0 P005.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P006	Connect ACMPHS0 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P000	Connect ACMPHS1 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P002	Connect ACMPHS1 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P003	Connect ACMPHS1 IVCMP to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P007	Connect ACMPHS1 IVCMP to PORT0 P007.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P000	Connect ACMPHS1 IVREF to PORT0 P000.

ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P001	Connect ACMPHS1 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P002	Connect ACMPHS1 IVREF to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P003	Connect ACMPHS1 IVREF to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P006	Connect ACMPHS1 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.

ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.

ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.

ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.

ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.

ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.

ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.

ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.

ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.

Cache Functions

Board Support Package » Supported MCUs » S124

Enumerations

enum	bsp_cache_state_t

Detailed Description

This module implements cache functions.

Enumeration Type Documentation

◆ bsp_cache_state_t

enum bsp_cache_state_t
Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

Clock Initialization

Board Support Package » Supported MCUs » S124

Functions

void	bsp_clock_init (void) Sets up system clocks. More...
uint32_t	bsp_cpu_clock_get (void)

	Returns frequency of CPU clock in Hz. More...

Detailed Description

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Function Documentation

◆ bsp_clock_init()

void bsp_clock_init (void)
Sets up system clocks. MOCO is default clock out of reset. Enable new clock if chosen. S124 has no PLL. If the system clock has failed to start call the unrecoverable error handler. MOCO, LOCO, and subclock do not have stabilization flags that can be checked. Wait for clock source to stabilize Set which clock to use for system clock and divisors for all system clocks. If the system clock has failed to be configured properly call the unrecoverable error handler.

◆ bsp_cpu_clock_get()

uint32_t bsp_cpu_clock_get (void)
Returns frequency of CPU clock in Hz. **Return values** Frequency — of the CPU in Hertz

Hardware Locks

Board Support Package » Supported MCUs » S124

Functions

	SSP_HW_LOCK_DEFINE (ADC, 0U, 0U)
	SSP_HW_LOCK_DEFINE (AES, 0U, 0U)

SSP_HW_LOCK_DEFINE (TRNG, 0U, 0U)

	SSP_HW_LOCK_DEFINE (TSN, 0U, 0U)
	SSP_HW_LOCK_DEFINE (USB, 0U, 0U)
	SSP_HW_LOCK_DEFINE (WDT, 0U, 0U)

Detailed Description

This file allocates hardware locks used in Atomic Locking.

Function Documentation

◆ SSP_HW_LOCK_DEFINE() [1/31]

SSP_HW_LOCK_DEFINE (ADC , 0U , 0U)
Used to allocated hardware locks. Parameters are as follows: 1. IP name (ssp_ip_t enum without the SSP_IP_ prefix). 2. Unit number (used for blocks with variations like USB, not to be confused with ADC unit). 3. Channel numberADC

◆ SSP_HW_LOCK_DEFINE() [2/31]

SSP_HW_LOCK_DEFINE (AES , 0U , 0U)
AES

◆ SSP_HW_LOCK_DEFINE() [3/31]

SSP_HW_LOCK_DEFINE (AGT , 0U , 0U)
AGT

◆ SSP_HW_LOCK_DEFINE() [4/31]

SSP_HW_LOCK_DEFINE (BSC , 0U , 1U)
BSC

◆ SSP_HW_LOCK_DEFINE() [5/31]

SSP_HW_LOCK_DEFINE (CAC , 0U , 0U)
CAC

◆ SSP_HW_LOCK_DEFINE() [6/31]

SSP_HW_LOCK_DEFINE (CAN , 0U , 0U)
CAN

◆ SSP_HW_LOCK_DEFINE() [7/31]

SSP_HW_LOCK_DEFINE (COMP_HS , 0U , 0U)
COMP_HS

◆ SSP_HW_LOCK_DEFINE() [8/31]

SSP_HW_LOCK_DEFINE (COMP_LP , 0U , 0U)
COMP_LP

◆ SSP_HW_LOCK_DEFINE() [9/31]

SSP_HW_LOCK_DEFINE (CRC , 0U , 0U)
CRC

◆ SSP_HW_LOCK_DEFINE() [10/31]

SSP_HW_LOCK_DEFINE (CTSU , 0U , 0U)
CTSU

◆ SSP_HW_LOCK_DEFINE() [11/31]

SSP_HW_LOCK_DEFINE (DAC , 0U , 0U)
DAC

◆ SSP_HW_LOCK_DEFINE() [12/31]

SSP_HW_LOCK_DEFINE (DOC , 0U , 0U)
DOC

◆ SSP_HW_LOCK_DEFINE() [13/31]

SSP_HW_LOCK_DEFINE (DTC , 0U , 0U)
DTC

◆ SSP_HW_LOCK_DEFINE() [14/31]

SSP_HW_LOCK_DEFINE (ELC , 0U , 0U)
ELC

◆ SSP_HW_LOCK_DEFINE() [15/31]

SSP_HW_LOCK_DEFINE (FCU , 0U , 0U)
FCU

◆ SSP_HW_LOCK_DEFINE() [16/31]

SSP_HW_LOCK_DEFINE (GPT , 0U , 0U)
GPT

◆ SSP_HW_LOCK_DEFINE() [17/31]

SSP_HW_LOCK_DEFINE (ICU , 0U , 0U)
ICU

◆ SSP_HW_LOCK_DEFINE() [18/31]

SSP_HW_LOCK_DEFINE (IIC , 0U , 0U)
IIC

◆ SSP_HW_LOCK_DEFINE() [19/31]

SSP_HW_LOCK_DEFINE (IWDT , 0U , 0U)
IWDT

◆ SSP_HW_LOCK_DEFINE() [20/31]

SSP_HW_LOCK_DEFINE (KEY , 0U , 0U)
KEY

◆ SSP_HW_LOCK_DEFINE() [21/31]

SSP_HW_LOCK_DEFINE (LPM , 1U , 0U)
LPM

◆ SSP_HW_LOCK_DEFINE() [22/31]

SSP_HW_LOCK_DEFINE (LVD , 0U , 0U)
LVD

◆ SSP_HW_LOCK_DEFINE() [23/31]

SSP_HW_LOCK_DEFINE (OPS , 0U , 0U)
OPS

◆ SSP_HW_LOCK_DEFINE() [24/31]

SSP_HW_LOCK_DEFINE (POEG , 0U , 0U)
POEG

◆ SSP_HW_LOCK_DEFINE() [25/31]

SSP_HW_LOCK_DEFINE (SPI , 0U , 0U)
SPI

◆ SSP_HW_LOCK_DEFINE() [26/31]

SSP_HW_LOCK_DEFINE (RTC , 0U , 0U)
RTC

◆ SSP_HW_LOCK_DEFINE() [27/31]

SSP_HW_LOCK_DEFINE (SCI , 0U , 0U)
SCI

◆ SSP_HW_LOCK_DEFINE() [28/31]

SSP_HW_LOCK_DEFINE (TRNG , 0U , 0U)
TRNG

◆ SSP_HW_LOCK_DEFINE() [29/31]

SSP_HW_LOCK_DEFINE (TSN , 0U , 0U)
TSN

◆ SSP_HW_LOCK_DEFINE() [30/31]

SSP_HW_LOCK_DEFINE (USB , 0U , 0U)
USB

◆ SSP_HW_LOCK_DEFINE() [31/31]

SSP_HW_LOCK_DEFINE (WDT , 0U , 0U)
WDT

Module Start and Stop

Board Support Package » Supported MCUs » S124

Macros

#define	BSP_COMPILE_TIME_ASSERT(e) ((void) sizeof(char[1 - 2 * !(e)]))

Functions

ssp_err_t	R_BSP_ModuleStop (ssp_feature_t const *const p_feature) Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power. More...

ssp_err_t	R_BSP_ModuleStopAlways (ssp_feature_t const *const p_feature) Stop module (enter module stop) even if the module is used for multiple channels. More...
ssp_err_t	R_BSP_ModuleStart (ssp_feature_t const *const p_feature) Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set. More...
ssp_err_t	R_BSP_ModuleStateGet (ssp_feature_t const *const p_feature, bool *const p_stop)

Detailed Description

Module start and stop functions are provided to enable or disable peripherals.

Macro Definition Documentation

◆ BSP_COMPILE_TIME_ASSERT

```
#define BSP_COMPILE_TIME_ASSERT ( e) ((void) sizeof(char[1 - 2 * !(e)]))
```

Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

Function Documentation

◆ R_BSP_ModuleStart()

ssp_err_t R_BSP_ModuleStart (ssp_feature_t const *const *p_feature*)

Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

◆ R_BSP_ModuleStateGet()

ssp_err_t R_BSP_ModuleStateGet (ssp_feature_t const *const *p_feature*, bool *const *p_stop*)
The g_bsp_module_stop array must have entries for each ssp_ip_t enum value. Save the current module state

◆ R_BSP_ModuleStop()

ssp_err_t R_BSP_ModuleStop (ssp_feature_t const *const *p_feature*)
Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power. ***Note*** *Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.* **Parameters** [in] p_feature Pointer to definition of the feature, defined by ssp_feature_t. **Return values** SSP_SUCCESS Module is stopped SSP_ERR_ASSERTION p_feature::id is invalid SSP_ERR_INVALID_ARGUMENT Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

◆ R_BSP_ModuleStopAlways()

ssp_err_t R_BSP_ModuleStopAlways (ssp_feature_t const *const *p_feature*)
Stop module (enter module stop) even if the module is used for multiple channels. **Parameters** [in] p_feature Pointer to definition of the feature, defined by ssp_feature_t. **Return values** SSP_SUCCESS Module is stopped SSP_ERR_ASSERTION p_feature::id is invalid

ROM Registers

Board Support Package » Supported MCUs » S124

Macros

#define	BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))

Detailed Description

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Macro Definition Documentation

◆ **BSP_ROM_REG_OFS1_SETTING**

```
#define BSP_ROM_REG_OFS1_SETTING   (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))
```

OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

5.2.1.2 S128

Board Support Package » Supported MCUs

Code that is common to S128 MCUs. More...

Modules

Analog Connections
Cache Functions
Clock Initialization
Hardware Locks
Module Start and Stop
ROM Registers

Detailed Description

Code that is common to S128 MCUs.

Implements functions that are common to S128 MCUs.

Analog Connections

Board Support Package » Supported MCUs » S128

Detailed Description

This group contains a list of enumerations that can be used with the Analog Connect Interface.

Enumeration Type Documentation

◆ analog_connect_t

enum analog_connect_t

List of analog connections that can be made on S128

Note

This list may change based on device. This list is for S128.

Enumerator	
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P012	Connect ACMPHS0 IVREF to PORT0 P012.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC80_DA	Connect ACMPHS1 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P000	Connect ACMPHS2 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT0_P001	Connect ACMPHS2 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC80_DA	Connect ACMPHS2 IVREF to DAC80 DA.

ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC82_DA	Connect ACMPHS2 IVREF to DAC82 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP0 IVCMP to OPAMP1 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP2_AMPO	Connect ACMPLP1 IVCMP to OPAMP2 AMPO.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P500	Connect ACMPHS0 IVCMP to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT1_P100	Connect ACMPHS0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT1_P101	Connect ACMPHS0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.

ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P109	Connect ACMPLP0 IVREF0 to PORT1 P109.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P110	Connect ACMPLP1 IVREF1 to PORT1 P110.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT4_P400	Connect ACMPLP0 IVCMP to PORT4 P400.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP0_AMPO	Connect ACMPLP0 IVCMP to OPAMP0 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT4_P408	Connect ACMPLP1 IVCMP to PORT4 P408.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP1 IVCMP to OPAMP1 AMPO.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_OPAMP0_AMPO_BREAK	Break all connections to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P014	Connect OPAMP0 AMPO to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P013	Connect OPAMP0 AMPO to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P003	Connect OPAMP0 AMPO to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P002	Connect OPAMP0 AMPO to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPM_BREAK	Break all connections to OPAMP0 AMPM.

ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P501	Connect OPAMP0 AMPM to PORT5 P501.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P500	Connect OPAMP0 AMPM to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P014	Connect OPAMP0 AMPM to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P013	Connect OPAMP0 AMPM to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P003	Connect OPAMP0 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPM_TO_OPAMP0_AMPO	Connect OPAMP0 AMPM to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPP_BREAK	Break all connections to OPAMP0 AMPP.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT5_P500	Connect OPAMP0 AMPP to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P014	Connect OPAMP0 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P013	Connect OPAMP0 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P002	Connect OPAMP0 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPP_TO_DAC120_DA	Connect OPAMP0 AMPP to DAC120 DA.
ANALOG_CONNECT_OPAMP1_AMPM_BREAK	Break all connections to OPAMP1 AMPM.
ANALOG_CONNECT_OPAMP1_AMPM_TO_PORT0_P014	Connect OPAMP1 AMPM to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPM_TO_OPAMP1_AMPO	Connect OPAMP1 AMPM to OPAMP1 AMPO.
ANALOG_CONNECT_OPAMP1_AMPP_BREAK	Break all connections to OPAMP1 AMPP.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P014	Connect OPAMP1 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P013	Connect OPAMP1 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P003	Connect OPAMP1 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P002	Connect OPAMP1 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP1_AMPP_TO_DAC80_DA	Connect OPAMP1 AMPP to DAC80 DA.

ANALOG_CONNECT_OPAMP2_AMPM_BREAK	Break all connections to OPAMP2 AMPM.
ANALOG_CONNECT_OPAMP2_AMPM_TO_PORT0_P003	Connect OPAMP2 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPM_TO_OPAMP2_AMPO	Connect OPAMP2 AMPM to OPAMP2 AMPO.
ANALOG_CONNECT_OPAMP2_AMPP_BREAK	Break all connections to OPAMP2 AMPP.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P003	Connect OPAMP2 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P002	Connect OPAMP2 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP2_AMPP_TO_DAC81_DA	Connect OPAMP2 AMPP to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.

ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.

ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P004	Connect ACMPHS0 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P007	Connect ACMPHS0 IVCMP to PORT0 P007.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P015	Connect ACMPHS0 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ANALOG0_VREF	Connect ACMPHS0 IVCMP to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P005	Connect ACMPHS0 IVREF to PORT0 P005.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P006	Connect ACMPHS0 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P000	Connect ACMPHS1 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P002	Connect ACMPHS1 IVCMP to PORT0 P002.

ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P003	Connect ACMPHS1 IVCMP to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P007	Connect ACMPHS1 IVCMP to PORT0 P007.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P000	Connect ACMPHS1 IVREF to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P001	Connect ACMPHS1 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P002	Connect ACMPHS1 IVREF to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P003	Connect ACMPHS1 IVREF to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P006	Connect ACMPHS1 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.

ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.

ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.

ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.

ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.

ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.

ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.

ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.

ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.

Cache Functions

Board Support Package » Supported MCUs » S128

Enumerations

enum bsp_cache_state_t

Detailed Description

This module implements cache functions.

Enumeration Type Documentation

◆ bsp_cache_state_t

enum bsp_cache_state_t
Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

Clock Initialization

Board Support Package » Supported MCUs » S128

Functions

void	bsp_clock_init (void) Sets up system clocks. More...
uint32_t	bsp_cpu_clock_get (void) Returns frequency of CPU clock in Hz. More...

Detailed Description

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Function Documentation

◆ bsp_clock_init()

void bsp_clock_init (void)

Sets up system clocks.

MOCO is default clock out of reset. Enable new clock if chosen. S124 has no PLL.

If the system clock has failed to start call the unrecoverable error handler.

MOCO, LOCO, and subclock do not have stabilization flags that can be checked.

Wait for clock source to stabilize

Set which clock to use for system clock and divisors for all system clocks.

If the system clock has failed to be configured properly call the unrecoverable error handler.

◆ bsp_cpu_clock_get()

uint32_t bsp_cpu_clock_get (void)

Returns frequency of CPU clock in Hz.

Return values

Frequency	of the CPU in Hertz

Hardware Locks

SSP_HW_LOCK_DEFINE (USB, 0U, 0U)
SSP_HW_LOCK_DEFINE (WDT, 0U, 0U)

Detailed Description

This file allocates hardware locks used in Atomic Locking.

Function Documentation

◆ SSP_HW_LOCK_DEFINE() [1/32]

SSP_HW_LOCK_DEFINE (ADC , 0U , 0U)
Used to allocated hardware locks. Parameters are as follows: 1. IP name (ssp_ip_t enum without the SSP_IP_ prefix). 2. Unit number (used for blocks with variations like USB, not to be confused with ADC unit). 3. Channel numberADC

◆ SSP_HW_LOCK_DEFINE() [2/32]

SSP_HW_LOCK_DEFINE (AES , 0U , 0U)
AES

◆ SSP_HW_LOCK_DEFINE() [3/32]

SSP_HW_LOCK_DEFINE (AGT , 0U , 0U)
AGT

◆ SSP_HW_LOCK_DEFINE() [4/32]

SSP_HW_LOCK_DEFINE (BSC , 0U , 1U)
BSC

◆ SSP_HW_LOCK_DEFINE() [5/32]

SSP_HW_LOCK_DEFINE (CAC , 0U , 0U)
CAC

◆ SSP_HW_LOCK_DEFINE() [6/32]

SSP_HW_LOCK_DEFINE (CAN , 0U , 0U)
CAN

◆ SSP_HW_LOCK_DEFINE() [7/32]

SSP_HW_LOCK_DEFINE (COMP_HS , 0U , 0U)
COMP_HS

◆ SSP_HW_LOCK_DEFINE() [8/32]

SSP_HW_LOCK_DEFINE (COMP_LP , 0U , 0U)
COMP_LP

◆ SSP_HW_LOCK_DEFINE() [9/32]

SSP_HW_LOCK_DEFINE (CRC , 0U , 0U)
CRC

◆ SSP_HW_LOCK_DEFINE() [10/32]

SSP_HW_LOCK_DEFINE (CTSU , 0U , 0U)
CTSU

◆ SSP_HW_LOCK_DEFINE() [11/32]

SSP_HW_LOCK_DEFINE (DAC , 1U , 0U)
DAC

◆ SSP_HW_LOCK_DEFINE() [12/32]

SSP_HW_LOCK_DEFINE (DOC , 0U , 0U)
DOC

◆ SSP_HW_LOCK_DEFINE() [13/32]

SSP_HW_LOCK_DEFINE (DTC , 0U , 0U)
DTC

◆ SSP_HW_LOCK_DEFINE() [14/32]

SSP_HW_LOCK_DEFINE (ELC , 0U , 0U)
ELC

◆ SSP_HW_LOCK_DEFINE() [15/32]

SSP_HW_LOCK_DEFINE (FCU , 0U , 0U)
FCU

◆ SSP_HW_LOCK_DEFINE() [16/32]

SSP_HW_LOCK_DEFINE (GPT , 0U , 0U)
GPT

◆ SSP_HW_LOCK_DEFINE() [17/32]

SSP_HW_LOCK_DEFINE (ICU , 0U , 0U)
ICU

◆ SSP_HW_LOCK_DEFINE() [18/32]

SSP_HW_LOCK_DEFINE (IIC , 0U , 0U)
IIC

◆ SSP_HW_LOCK_DEFINE() [19/32]

SSP_HW_LOCK_DEFINE (IWDT , 0U , 0U)
IWDT

◆ SSP_HW_LOCK_DEFINE() [20/32]

SSP_HW_LOCK_DEFINE (KEY , 0U , 0U)
KEY

◆ SSP_HW_LOCK_DEFINE() [21/32]

SSP_HW_LOCK_DEFINE (LPM , 1U , 0U)
LPM

◆ SSP_HW_LOCK_DEFINE() [22/32]

SSP_HW_LOCK_DEFINE (LVD , 0U , 0U)
LVD

◆ SSP_HW_LOCK_DEFINE() [23/32]

SSP_HW_LOCK_DEFINE (OPAMP , 0U , 0U)
OPAMP

◆ SSP_HW_LOCK_DEFINE() [24/32]

SSP_HW_LOCK_DEFINE (OPS , 0U , 0U)
OPS

◆ SSP_HW_LOCK_DEFINE() [25/32]

SSP_HW_LOCK_DEFINE (POEG , 0U , 0U)
POEG

◆ SSP_HW_LOCK_DEFINE() [26/32]

SSP_HW_LOCK_DEFINE (SPI , 0U , 0U)

Module Start and Stop

Board Support Package » Supported MCUs » S128

Macros

#define	BSP_COMPILE_TIME_ASSERT(e) ((void) sizeof(char[1 - 2 * !(e)]))

Functions

ssp_err_t	R_BSP_ModuleStop (ssp_feature_t const *const p_feature) Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power. More...
ssp_err_t	R_BSP_ModuleStopAlways (ssp_feature_t const *const p_feature) Stop module (enter module stop) even if the module is used for multiple channels. More...
ssp_err_t	R_BSP_ModuleStart (ssp_feature_t const *const p_feature) Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set. More...
ssp_err_t	R_BSP_ModuleStateGet (ssp_feature_t const *const p_feature, bool *const p_stop)

Detailed Description

Module start and stop functions are provided to enable or disable peripherals.

Macro Definition Documentation

◆ BSP_COMPILE_TIME_ASSERT

#define BSP_COMPILE_TIME_ASSERT (e) ((void) sizeof(char[1 - 2 * !(e)]))
Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

Function Documentation

◆ R_BSP_ModuleStart()

ssp_err_t R_BSP_ModuleStart (ssp_feature_t const *const *p_feature*)

Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

◆ R_BSP_ModuleStateGet()

ssp_err_t R_BSP_ModuleStateGet (ssp_feature_t const *const *p_feature*, bool *const *p_stop*)

The g_bsp_module_stop array must have entries for each ssp_ip_t enum value.

Save the current module state

◆ R_BSP_ModuleStop()

ssp_err_t R_BSP_ModuleStop (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Note

Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

◆ R_BSP_ModuleStopAlways()

ssp_err_t R_BSP_ModuleStopAlways (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop) even if the module is used for multiple channels.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid

ROM Registers

Board Support Package » Supported MCUs » S128

Macros

#define	BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))
#define	BSP_ROM_REG_MPU_CONTROL_SETTING

Detailed Description

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Macro Definition Documentation

◆ BSP_ROM_REG_MPU_CONTROL_SETTING

#define BSP_ROM_REG_MPU_CONTROL_SETTING

```
((0xFFFFFCF0U) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_PC0_ENABL
E << 8) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_PC1_ENABL
E << 9) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION0_E
NABLE) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION1_E
NABLE << 1) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION2_E
NABLE << 2) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION3_E
NABLE << 3))
```

Build up SECMPUAC register based on MPU settings.

◆ BSP_ROM_REG_OFS1_SETTING

#define BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))

OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

5.2.1.3 S1JA

Board Support Package » Supported MCUs

Detailed Description

This group contains a list of enumerations that can be used with the Analog Connect Interface.

Enumeration Type Documentation

◆ analog_connect_t

enum analog_connect_t

List of analog connections that can be made on S1JA

Note
This list may change based on device. This list is for S1JA.

Enumerator	
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.

ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P012	Connect ACMPHS0 IVREF to PORT0 P012.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC80_DA	Connect ACMPHS1 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P000	Connect ACMPHS2 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT0_P001	Connect ACMPHS2 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC80_DA	Connect ACMPHS2 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC82_DA	Connect ACMPHS2 IVREF to DAC82 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP0 IVCMP to OPAMP1 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP2_AMPO	Connect ACMPLP1 IVCMP to OPAMP2 AMPO.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.

ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P500	Connect ACMPHS0 IVCMP to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT1_P100	Connect ACMPHS0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT1_P101	Connect ACMPHS0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P109	Connect ACMPLP0 IVREF0 to PORT1 P109.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P110	Connect ACMPLP1 IVREF1 to PORT1 P110.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT4_P400	Connect ACMPLP0 IVCMP to PORT4 P400.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP0_AMPO	Connect ACMPLP0 IVCMP to OPAMP0 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT4_P408	Connect ACMPLP1 IVCMP to PORT4 P408.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP1 IVCMP to OPAMP1 AMPO.

ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_OPAMP0_AMPO_BREAK	Break all connections to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P014	Connect OPAMP0 AMPO to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P013	Connect OPAMP0 AMPO to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P003	Connect OPAMP0 AMPO to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P002	Connect OPAMP0 AMPO to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPM_BREAK	Break all connections to OPAMP0 AMPM.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P501	Connect OPAMP0 AMPM to PORT5 P501.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P500	Connect OPAMP0 AMPM to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P014	Connect OPAMP0 AMPM to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P013	Connect OPAMP0 AMPM to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P003	Connect OPAMP0 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPM_TO_OPAMP0_AMPO	Connect OPAMP0 AMPM to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPP_BREAK	Break all connections to OPAMP0 AMPP.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT5_P500	Connect OPAMP0 AMPP to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P014	Connect OPAMP0 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P013	Connect OPAMP0 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P002	Connect OPAMP0 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPP_TO_DAC120_DA	Connect OPAMP0 AMPP to DAC120 DA.

ANALOG_CONNECT_OPAMP1_AMPM_BREAK	Break all connections to OPAMP1 AMPM.
ANALOG_CONNECT_OPAMP1_AMPM_TO_PORT0_P014	Connect OPAMP1 AMPM to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPM_TO_OPAMP1_AMPO	Connect OPAMP1 AMPM to OPAMP1 AMPO.
ANALOG_CONNECT_OPAMP1_AMPP_BREAK	Break all connections to OPAMP1 AMPP.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P014	Connect OPAMP1 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P013	Connect OPAMP1 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P003	Connect OPAMP1 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P002	Connect OPAMP1 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP1_AMPP_TO_DAC80_DA	Connect OPAMP1 AMPP to DAC80 DA.
ANALOG_CONNECT_OPAMP2_AMPM_BREAK	Break all connections to OPAMP2 AMPM.
ANALOG_CONNECT_OPAMP2_AMPM_TO_PORT0_P003	Connect OPAMP2 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPM_TO_OPAMP2_AMPO	Connect OPAMP2 AMPM to OPAMP2 AMPO.
ANALOG_CONNECT_OPAMP2_AMPP_BREAK	Break all connections to OPAMP2 AMPP.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P003	Connect OPAMP2 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P002	Connect OPAMP2 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP2_AMPP_TO_DAC81_DA	Connect OPAMP2 AMPP to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5	Connect ACMPLP1 IVREF1 to PORT5 P500.

_P500	
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_	

P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P004	Connect ACMPHS0 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P007	Connect ACMPHS0 IVCMP to PORT0 P007.

ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P015	Connect ACMPHS0 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ANALOG0_VREF	Connect ACMPHS0 IVCMP to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P005	Connect ACMPHS0 IVREF to PORT0 P005.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P006	Connect ACMPHS0 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P000	Connect ACMPHS1 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P002	Connect ACMPHS1 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P003	Connect ACMPHS1 IVCMP to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P007	Connect ACMPHS1 IVCMP to PORT0 P007.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P000	Connect ACMPHS1 IVREF to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P001	Connect ACMPHS1 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P002	Connect ACMPHS1 IVREF to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P003	Connect ACMPHS1 IVREF to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P006	Connect ACMPHS1 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.

ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.

ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.

ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.

ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.

ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.

ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.

Cache Functions

Board Support Package » Supported MCUs » S1JA

Enumerations

enum	bsp_cache_state_t

Detailed Description

This module implements cache functions.

Enumeration Type Documentation

◆ bsp_cache_state_t

enum bsp_cache_state_t
Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

Clock Initialization

Board Support Package » Supported MCUs » S1JA

Functions

void	bsp_clock_init (void) Sets up system clocks. More...
uint32_t	bsp_cpu_clock_get (void) Returns frequency of CPU clock in Hz. More...

ssp_err_t	bsp_clock_set_callback (bsp_clock_set_callback_args_t *p_args)

Detailed Description

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Function Documentation

◆ bsp_clock_init()

void bsp_clock_init (void)
Sets up system clocks. MOCO is default clock out of reset. Enable new clock if chosen. S1JA has no PLL. If the system clock has failed to start call the unrecoverable error handler. MOCO, LOCO, and subclock do not have stabilization flags that can be checked. Wait for clock source to stabilize Set which clock to use for system clock and divisors for all system clocks. If the system clock has failed to be configured properly call the unrecoverable error handler.

◆ bsp_clock_set_callback()

ssp_err_t bsp_clock_set_callback (bsp_clock_set_callback_args_t * *p_args*)
The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0. < No MEMWAIT cycles

◆ bsp_clocks_mem_wait_get()

__STATIC_INLINE uint32_t bsp_clocks_mem_wait_get (void)
This function gets the value of the MEMWAIT register. **Return values** MEMWAIT: setting

◆ bsp_clocks_mem_wait_set()

__STATIC_INLINE void bsp_clocks_mem_wait_set (uint32_t *setting*)
This function sets the value of the MEMWAIT register which controls wait cycles for flash read access.

Parameters

[in]	setting	

Return values

none	

◆ bsp_cpu_clock_get()

uint32_t bsp_cpu_clock_get (void)
Returns frequency of CPU clock in Hz.

Return values

Frequency	of the CPU in Hertz

Hardware Locks

Detailed Description

This file allocates hardware locks used in Atomic Locking.

Function Documentation

◆ SSP_HW_LOCK_DEFINE() [1/33]

SSP_HW_LOCK_DEFINE (ADC , 0U , 0U)
Used to allocated hardware locks. Parameters are as follows: 1. IP name (ssp_ip_t enum without the SSP_IP_ prefix). 2. Unit number (used for blocks with variations like USB, not to be confused with ADC unit). 3. Channel numberADC

◆ SSP_HW_LOCK_DEFINE() [2/33]

SSP_HW_LOCK_DEFINE (AES , 0U , 0U)
AES

◆ SSP_HW_LOCK_DEFINE() [3/33]

SSP_HW_LOCK_DEFINE (AGT , 0U , 0U)
AGT

◆ SSP_HW_LOCK_DEFINE() [4/33]

SSP_HW_LOCK_DEFINE (BSC , 0U , 1U)
BSC

◆ SSP_HW_LOCK_DEFINE() [5/33]

SSP_HW_LOCK_DEFINE (CAC , 0U , 0U)
CAC

◆ SSP_HW_LOCK_DEFINE() [6/33]

SSP_HW_LOCK_DEFINE (CAN , 0U , 0U)
CAN

◆ SSP_HW_LOCK_DEFINE() [7/33]

SSP_HW_LOCK_DEFINE (COMP_HS , 0U , 0U)
COMP_HS

◆ SSP_HW_LOCK_DEFINE() [8/33]

SSP_HW_LOCK_DEFINE (COMP_LP , 0U , 0U)
COMP_LP

◆ SSP_HW_LOCK_DEFINE() [9/33]

SSP_HW_LOCK_DEFINE (CRC , 0U , 0U)
CRC

ssp_err_t	R_BSP_ModuleStart (ssp_feature_t const *const p_feature) Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set. More...
ssp_err_t	R_BSP_ModuleStateGet (ssp_feature_t const *const p_feature, bool *const p_stop)

Detailed Description

Module start and stop functions are provided to enable or disable peripherals.

Macro Definition Documentation

◆ BSP_COMPILE_TIME_ASSERT

```
#define BSP_COMPILE_TIME_ASSERT ( e) ((void) sizeof(char[1 - 2 * !(e)]))
```

Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

Function Documentation

◆ R_BSP_ModuleStart()

ssp_err_t R_BSP_ModuleStart (ssp_feature_t const *const *p_feature*)

Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

◆ R_BSP_ModuleStateGet()

ssp_err_t R_BSP_ModuleStateGet (ssp_feature_t const *const *p_feature*, bool *const *p_stop*)

The g_bsp_module_stop array must have entries for each ssp_ip_t enum value.

Save the current module state

◆ R_BSP_ModuleStop()

ssp_err_t R_BSP_ModuleStop (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Note

Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

◆ R_BSP_ModuleStopAlways()

ssp_err_t R_BSP_ModuleStopAlways (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop) even if the module is used for multiple channels.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid

ROM Registers

Board Support Package » Supported MCUs » S1JA

Macros

#define	BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))
#define	BSP_ROM_REG_MPU_CONTROL_SETTING

Detailed Description

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Macro Definition Documentation

◆ BSP_ROM_REG_MPU_CONTROL_SETTING

#define BSP_ROM_REG_MPU_CONTROL_SETTING

```
((0xFFFFFCF0U) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_PC0_ENABL
E << 8) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_PC1_ENABL
E << 9) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION0_E
NABLE) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION1_E
NABLE << 1) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION2_E
NABLE << 2) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION3_E
NABLE << 3))
```

Build up SECMPUAC register based on MPU settings.

◆ BSP_ROM_REG_OFS1_SETTING

#define BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))

OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

5.2.1.4 S3A1

Board Support Package » Supported MCUs

Code that is common to S3A1 MCUs. More...

Modules

	Analog Connections
	Cache Functions
	Clock Initialization
	Hardware Locks
	Module Start and Stop
	ROM Registers

Enumerations

enum	elc_peripheral_t
enum	elc_event_t

Detailed Description

Code that is common to S3A1 MCUs.

Implements functions that are common to S3A1 MCUs.

Enumeration Type Documentation

◆ elc_event_t

enum elc_event_t

Sources of event signals to be linked to other peripherals or the CPU1

Note
This list may change based on device. This list is for S3A7.

◆ elc_peripheral_t

enum elc_peripheral_t

Possible peripherals to be linked to event signals

Analog Connections

Board Support Package » Supported MCUs » S3A1

Detailed Description

This group contains a list of enumerations that can be used with the Analog Connect Interface.

Enumeration Type Documentation

◆ analog_connect_t

enum analog_connect_t

List of analog connections that can be made on S3A1

Note

This list may change based on device. This list is for S3A1.

Enumerator	
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P012	Connect ACMPHS0 IVREF to PORT0 P012.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC80_DA	Connect ACMPHS1 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P000	Connect ACMPHS2 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT0_P001	Connect ACMPHS2 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC80_DA	Connect ACMPHS2 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC82_DA	Connect ACMPHS2 IVREF to DAC82 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80	Connect ACMPLP0 IVREF0 to DAC80 DA.

_DA	
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP0 IVCMP to OPAMP1 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP2_AMPO	Connect ACMPLP1 IVCMP to OPAMP2 AMPO.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P500	Connect ACMPHS0 IVCMP to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT1_P100	Connect ACMPHS0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT1_P101	Connect ACMPHS0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1	

_P109	Connect ACMPLP0 IVREF0 to PORT1 P109.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P110	Connect ACMPLP1 IVREF1 to PORT1 P110.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT4_P400	Connect ACMPLP0 IVCMP to PORT4 P400.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP0_AMPO	Connect ACMPLP0 IVCMP to OPAMP0 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT4_P408	Connect ACMPLP1 IVCMP to PORT4 P408.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP1 IVCMP to OPAMP1 AMPO.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_OPAMP0_AMPO_BREAK	Break all connections to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P014	Connect OPAMP0 AMPO to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P013	Connect OPAMP0 AMPO to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P003	Connect OPAMP0 AMPO to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P002	Connect OPAMP0 AMPO to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPM_BREAK	Break all connections to OPAMP0 AMPM.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P501	Connect OPAMP0 AMPM to PORT5 P501.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P500	Connect OPAMP0 AMPM to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P	Connect OPAMP0 AMPM to PORT0 P014.

014	
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P013	Connect OPAMP0 AMPM to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P003	Connect OPAMP0 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPM_TO_OPAMP0_AMPO	Connect OPAMP0 AMPM to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPP_BREAK	Break all connections to OPAMP0 AMPP.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT5_P500	Connect OPAMP0 AMPP to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P014	Connect OPAMP0 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P013	Connect OPAMP0 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P002	Connect OPAMP0 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPP_TO_DAC120_DA	Connect OPAMP0 AMPP to DAC120 DA.
ANALOG_CONNECT_OPAMP1_AMPM_BREAK	Break all connections to OPAMP1 AMPM.
ANALOG_CONNECT_OPAMP1_AMPM_TO_PORT0_P014	Connect OPAMP1 AMPM to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPM_TO_OPAMP1_AMPO	Connect OPAMP1 AMPM to OPAMP1 AMPO.
ANALOG_CONNECT_OPAMP1_AMPP_BREAK	Break all connections to OPAMP1 AMPP.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P014	Connect OPAMP1 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P013	Connect OPAMP1 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P003	Connect OPAMP1 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P002	Connect OPAMP1 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP1_AMPP_TO_DAC80_DA	Connect OPAMP1 AMPP to DAC80 DA.
ANALOG_CONNECT_OPAMP2_AMPM_BREAK	Break all connections to OPAMP2 AMPM.
ANALOG_CONNECT_OPAMP2_AMPM_TO_PORT0_P003	Connect OPAMP2 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPM_TO_OPAMP2_AMPO	Connect OPAMP2 AMPM to OPAMP2 AMPO.

ANALOG_CONNECT_OPAMP2_AMPP_BREAK	Break all connections to OPAMP2 AMPP.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P003	Connect OPAMP2 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P002	Connect OPAMP2 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP2_AMPP_TO_DAC81_DA	Connect OPAMP2 AMPP to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.

ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.

ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P004	Connect ACMPHS0 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P007	Connect ACMPHS0 IVCMP to PORT0 P007.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P015	Connect ACMPHS0 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ANALOG0_VREF	Connect ACMPHS0 IVCMP to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P005	Connect ACMPHS0 IVREF to PORT0 P005.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P006	Connect ACMPHS0 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P000	Connect ACMPHS1 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P002	Connect ACMPHS1 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P003	Connect ACMPHS1 IVCMP to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P007	Connect ACMPHS1 IVCMP to PORT0 P007.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.

ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P000	Connect ACMPHS1 IVREF to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P001	Connect ACMPHS1 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P002	Connect ACMPHS1 IVREF to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P003	Connect ACMPHS1 IVREF to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P006	Connect ACMPHS1 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.

ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.

ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.

ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.

ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.

ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.

ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.

ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.

ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.

Cache Functions

Board Support Package » Supported MCUs » S3A1

Enumerations

enum	bsp_cache_state_t

Detailed Description

This module implements cache functions.

Enumeration Type Documentation

◆ bsp_cache_state_t

enum bsp_cache_state_t
Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

Clock Initialization

Board Support Package » Supported MCUs » S3A1

Functions

void	bsp_clock_init (void) Sets up system clocks. More...

uint32_t	bsp_cpu_clock_get (void) Returns frequency of CPU clock in Hz. More...
__STATIC_INLINE void	bsp_clocks_mem_wait_set (uint32_t setting) This function sets the value of the MEMWAIT register which controls wait cycles for flash read access. More...
__STATIC_INLINE uint32_t	bsp_clocks_mem_wait_get (void) This function gets the value of the MEMWAIT register. More...
ssp_err_t	bsp_clock_set_callback (bsp_clock_set_callback_args_t *p_args)

Detailed Description

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Function Documentation

◆ bsp_clock_init()

void bsp_clock_init (void)
Sets up system clocks. MOCO is default clock out of reset. Enable new clock if chosen. PLL Source clock is always the main oscillator. Need to start PLL source clock and let it stabilize before starting PLL Set PLL Divider. Set PLL Multiplier. PLL Source clock is always the main oscillator. Wait for PLL clock source to stabilize If the system clock has failed to start call the unrecoverable error handler. MOCO, LOCO, and subclock do not have stabilization flags that can be checked. Wait for clock source to stabilize Set which clock to use for system clock and divisors for all system clocks. If the system clock has failed to be configured properly call the unrecoverable error handler. If the USB clock source requested is HOCO set the corresponding bit in the USBCKCR register

◆ bsp_clock_set_callback()

ssp_err_t bsp_clock_set_callback (bsp_clock_set_callback_args_t * *p_args*)
The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0. < No MEMWAIT cycles

◆ bsp_clocks_mem_wait_get()

__STATIC_INLINE uint32_t bsp_clocks_mem_wait_get (void)
This function gets the value of the MEMWAIT register. **Return values** MEMWAIT: setting

◆ bsp_clocks_mem_wait_set()

__STATIC_INLINE void bsp_clocks_mem_wait_set (uint32_t *setting*)
This function sets the value of the MEMWAIT register which controls wait cycles for flash read access. **Parameters** [in] setting **Return values** none

◆ bsp_cpu_clock_get()

uint32_t bsp_cpu_clock_get (void)
Returns frequency of CPU clock in Hz. **Return values** Frequency: of the CPU in Hertz

Hardware Locks

SSP_HW_LOCK_DEFINE (USB, 0U, 0U)
SSP_HW_LOCK_DEFINE (WDT, 0U, 0U)

Detailed Description

This file allocates hardware locks used in Atomic Locking.

Function Documentation

◆ SSP_HW_LOCK_DEFINE() [1/38]

SSP_HW_LOCK_DEFINE (ADC , 0U , 0U)
Used to allocated hardware locks. Parameters are as follows: 1. IP name (ssp_ip_t enum without the SSP_IP_ prefix). 2. Unit number (used for blocks with variations like USB, not to be confused with ADC unit). 3. Channel numberADC

◆ SSP_HW_LOCK_DEFINE() [2/38]

SSP_HW_LOCK_DEFINE (AGT , 0U , 0U)
AGT

◆ SSP_HW_LOCK_DEFINE() [3/38]

SSP_HW_LOCK_DEFINE (BSC , 0U , 1U)
BSC

◆ SSP_HW_LOCK_DEFINE() [4/38]

SSP_HW_LOCK_DEFINE (CAC , 0U , 0U)
CAC

◆ SSP_HW_LOCK_DEFINE() [5/38]

SSP_HW_LOCK_DEFINE (CAN , 0U , 0U)
CAN

◆ SSP_HW_LOCK_DEFINE() [6/38]

SSP_HW_LOCK_DEFINE (COMP_LP , 0U , 0U)
COMP_LP

◆ SSP_HW_LOCK_DEFINE() [7/38]

SSP_HW_LOCK_DEFINE (CRC , 0U , 0U)
CRC

◆ SSP_HW_LOCK_DEFINE() [8/38]

SSP_HW_LOCK_DEFINE (CTSU , 0U , 0U)
CTSU

◆ SSP_HW_LOCK_DEFINE() [9/38]

SSP_HW_LOCK_DEFINE (DAAD , 0U , 0U)
DAAD

◆ SSP_HW_LOCK_DEFINE() [10/38]

SSP_HW_LOCK_DEFINE (DAC , 0U , 0U)
DAC

◆ SSP_HW_LOCK_DEFINE() [11/38]

SSP_HW_LOCK_DEFINE (DOC , 0U , 0U)
DOC

◆ SSP_HW_LOCK_DEFINE() [12/38]

SSP_HW_LOCK_DEFINE (DMAC , 0U , 0U)
DMAC

◆ SSP_HW_LOCK_DEFINE() [13/38]

SSP_HW_LOCK_DEFINE (DTC , 0U , 0U)
DTC

◆ SSP_HW_LOCK_DEFINE() [14/38]

SSP_HW_LOCK_DEFINE (ELC , 0U , 0U)

Module Start and Stop

Board Support Package » Supported MCUs » S3A1

Macros

#define	BSP_COMPILE_TIME_ASSERT(e) ((void) sizeof(char[1 - 2 * !(e)]))

Functions

ssp_err_t	R_BSP_ModuleStop (ssp_feature_t const *const p_feature) Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power. More...
ssp_err_t	R_BSP_ModuleStopAlways (ssp_feature_t const *const p_feature) Stop module (enter module stop) even if the module is used for multiple channels. More...
ssp_err_t	R_BSP_ModuleStart (ssp_feature_t const *const p_feature) Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set. More...
ssp_err_t	R_BSP_ModuleStateGet (ssp_feature_t const *const p_feature, bool *const p_stop)

Detailed Description

Module start and stop functions are provided to enable or disable peripherals.

Macro Definition Documentation

◆ BSP_COMPILE_TIME_ASSERT

#define BSP_COMPILE_TIME_ASSERT (e) ((void) sizeof(char[1 - 2 * !(e)]))
Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

Function Documentation

◆ R_BSP_ModuleStart()

ssp_err_t R_BSP_ModuleStart (ssp_feature_t const *const *p_feature*)
Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

◆ R_BSP_ModuleStateGet()

ssp_err_t R_BSP_ModuleStateGet (ssp_feature_t const *const *p_feature*, bool *const *p_stop*)
The g_bsp_module_stop array must have entries for each ssp_ip_t enum value. Save the current module state

◆ R_BSP_ModuleStop()

ssp_err_t R_BSP_ModuleStop (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Note

Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

◆ R_BSP_ModuleStopAlways()

ssp_err_t R_BSP_ModuleStopAlways (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop) even if the module is used for multiple channels.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid

ROM Registers

Board Support Package » Supported MCUs » S3A1

Macros

#define	BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))
#define	BSP_ROM_REG_MPU_CONTROL_SETTING

Detailed Description

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Macro Definition Documentation

◆ BSP_ROM_REG_MPU_CONTROL_SETTING

#define BSP_ROM_REG_MPU_CONTROL_SETTING

```
((0xFFFFFCF0U) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_PC0_ENABL
E << 8) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_PC1_ENABL
E << 9) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION0_E
NABLE) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION1_E
NABLE << 1) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION2_E
NABLE << 2) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION3_E
NABLE << 3))
```

Build up SECMPUAC register based on MPU settings.

◆ BSP_ROM_REG_OFS1_SETTING

#define BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))

OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

5.2.1.5 S3A3

Board Support Package » Supported MCUs

Code that is common to S3A3 MCUs. More...

Modules

	Analog Connections
	Cache Functions
	Clock Initialization
	Hardware Locks
	Module Start and Stop
	ROM Registers

Detailed Description

Code that is common to S3A3 MCUs.

Implements functions that are common to S3A3 MCUs.

Analog Connections

Detailed Description

This group contains a list of enumerations that can be used with the Analog Connect Interface.

Enumeration Type Documentation

◆ analog_connect_t

enum analog_connect_t	
List of analog connections that can be made on S3A3 ***Note*** *This list may change based on device. This list is for S3A3.*	
Enumerator	
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.

ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P012	Connect ACMPHS0 IVREF to PORT0 P012.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC80_DA	Connect ACMPHS1 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P000	Connect ACMPHS2 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT0_P001	Connect ACMPHS2 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC80_DA	Connect ACMPHS2 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC82_DA	Connect ACMPHS2 IVREF to DAC82 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP0 IVCMP to OPAMP1 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP2_AMPO	Connect ACMPLP1 IVCMP to OPAMP2 AMPO.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.

ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P500	Connect ACMPHS0 IVCMP to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT1_P100	Connect ACMPHS0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT1_P101	Connect ACMPHS0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P109	Connect ACMPLP0 IVREF0 to PORT1 P109.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P110	Connect ACMPLP1 IVREF1 to PORT1 P110.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT4_P400	Connect ACMPLP0 IVCMP to PORT4 P400.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP0_AMPO	Connect ACMPLP0 IVCMP to OPAMP0 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT4_P408	Connect ACMPLP1 IVCMP to PORT4 P408.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP1 IVCMP to OPAMP1 AMPO.

ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_OPAMP0_AMPO_BREAK	Break all connections to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P014	Connect OPAMP0 AMPO to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P013	Connect OPAMP0 AMPO to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P003	Connect OPAMP0 AMPO to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P002	Connect OPAMP0 AMPO to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPM_BREAK	Break all connections to OPAMP0 AMPM.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P501	Connect OPAMP0 AMPM to PORT5 P501.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P500	Connect OPAMP0 AMPM to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P014	Connect OPAMP0 AMPM to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P013	Connect OPAMP0 AMPM to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P003	Connect OPAMP0 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPM_TO_OPAMP0_AMPO	Connect OPAMP0 AMPM to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPP_BREAK	Break all connections to OPAMP0 AMPP.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT5_P500	Connect OPAMP0 AMPP to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P014	Connect OPAMP0 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P013	Connect OPAMP0 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P002	Connect OPAMP0 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPP_TO_DAC120_DA	Connect OPAMP0 AMPP to DAC120 DA.

ANALOG_CONNECT_OPAMP1_AMPM_BREAK	Break all connections to OPAMP1 AMPM.
ANALOG_CONNECT_OPAMP1_AMPM_TO_PORT0_P014	Connect OPAMP1 AMPM to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPM_TO_OPAMP1_AMPO	Connect OPAMP1 AMPM to OPAMP1 AMPO.
ANALOG_CONNECT_OPAMP1_AMPP_BREAK	Break all connections to OPAMP1 AMPP.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P014	Connect OPAMP1 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P013	Connect OPAMP1 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P003	Connect OPAMP1 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P002	Connect OPAMP1 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP1_AMPP_TO_DAC80_DA	Connect OPAMP1 AMPP to DAC80 DA.
ANALOG_CONNECT_OPAMP2_AMPM_BREAK	Break all connections to OPAMP2 AMPM.
ANALOG_CONNECT_OPAMP2_AMPM_TO_PORT0_P003	Connect OPAMP2 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPM_TO_OPAMP2_AMPO	Connect OPAMP2 AMPM to OPAMP2 AMPO.
ANALOG_CONNECT_OPAMP2_AMPP_BREAK	Break all connections to OPAMP2 AMPP.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P003	Connect OPAMP2 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P002	Connect OPAMP2 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP2_AMPP_TO_DAC81_DA	Connect OPAMP2 AMPP to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5	Connect ACMPLP1 IVREF1 to PORT5 P500.

_P500	
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_	

P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P004	Connect ACMPHS0 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P007	Connect ACMPHS0 IVCMP to PORT0 P007.

ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P015	Connect ACMPHS0 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ANALOG0_VREF	Connect ACMPHS0 IVCMP to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P005	Connect ACMPHS0 IVREF to PORT0 P005.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P006	Connect ACMPHS0 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P000	Connect ACMPHS1 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P002	Connect ACMPHS1 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P003	Connect ACMPHS1 IVCMP to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P007	Connect ACMPHS1 IVCMP to PORT0 P007.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P000	Connect ACMPHS1 IVREF to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P001	Connect ACMPHS1 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P002	Connect ACMPHS1 IVREF to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P003	Connect ACMPHS1 IVREF to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P006	Connect ACMPHS1 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.

ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.

ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.

ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.

ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.

ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.

ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.

Cache Functions

Board Support Package » Supported MCUs » S3A3

Enumerations

enum	bsp_cache_state_t

Detailed Description

This module implements cache functions.

Enumeration Type Documentation

◆ bsp_cache_state_t

enum bsp_cache_state_t
Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

Clock Initialization

Board Support Package » Supported MCUs » S3A3

Macros

#define	CGC_SRAM_ZERO_WAIT_CYCLES (0U) Specify zero wait states for SRAM.
#define	CGC_SRAM_ONE_WAIT_CYCLES (1U) Specify one wait states for SRAM.

Functions

void	bsp_clock_init (void) Sets up system clocks. More...
uint32_t	bsp_cpu_clock_get (void) Returns frequency of CPU clock in Hz. More...
__STATIC_INLINE void	bsp_clocks_mem_wait_set (uint32_t setting) This function sets the value of the MEMWAIT register which controls wait cycles for flash read access. More...

__STATIC_INLINE uint32_t	bsp_clocks_mem_wait_get (void) This function gets the value of the MEMWAIT register. More...
ssp_err_t	bsp_clock_set_callback (bsp_clock_set_callback_args_t *p_args)

Detailed Description

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Function Documentation

◆ bsp_clock_init()

void bsp_clock_init (void)

Sets up system clocks.

MOCO is default clock out of reset. Enable new clock if chosen.

PLL Source clock is always the main oscillator.

Need to start PLL source clock and let it stabilize before starting PLL

Set PLL Divider.

Set PLL Multiplier.

PLL Source clock is always the main oscillator.

Wait for PLL clock source to stabilize

If the system clock has failed to start call the unrecoverable error handler.

Enable ROM cache

MOCO, LOCO, and subclock do not have stabilization flags that can be checked.

Wait for clock source to stabilize

Set which clock to use for system clock and divisors for all system clocks.

If the system clock has failed to be configured properly call the unrecoverable error handler.

If the USB clock source requested is HOCO set the corresponding bit in the USBCKCR register

◆ bsp_clock_set_callback()

ssp_err_t bsp_clock_set_callback (bsp_clock_set_callback_args_t * *p_args*)

The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0.

◆ bsp_clocks_mem_wait_get()

__STATIC_INLINE uint32_t bsp_clocks_mem_wait_get (void)
This function gets the value of the MEMWAIT register. **Return values** MEMWAIT: setting

◆ bsp_clocks_mem_wait_set()

__STATIC_INLINE void bsp_clocks_mem_wait_set (uint32_t *setting*)
This function sets the value of the MEMWAIT register which controls wait cycles for flash read access. **Return values** none

◆ bsp_cpu_clock_get()

uint32_t bsp_cpu_clock_get (void)
Returns frequency of CPU clock in Hz. **Return values** Frequency: of the CPU in Hertz

Hardware Locks

SSP_HW_LOCK_DEFINE (USB, 0U, 0U)
SSP_HW_LOCK_DEFINE (WDT, 0U, 0U)

Detailed Description

This file allocates hardware locks used in Atomic Locking.

Function Documentation

◆ SSP_HW_LOCK_DEFINE() [1/40]

SSP_HW_LOCK_DEFINE (ADC , 0U , 0U)
Used to allocated hardware locks. Parameters are as follows: 1. IP name (ssp_ip_t enum without the SSP_IP_ prefix). 2. Unit number (used for blocks with variations like USB, not to be confused with ADC unit). 3. Channel numberADC

◆ SSP_HW_LOCK_DEFINE() [2/40]

SSP_HW_LOCK_DEFINE (AGT , 0U , 0U)
AGT

◆ SSP_HW_LOCK_DEFINE() [3/40]

SSP_HW_LOCK_DEFINE (BSC , 0U , 1U)
BSC

◆ SSP_HW_LOCK_DEFINE() [4/40]

SSP_HW_LOCK_DEFINE (CAC , 0U , 0U)
CAC

◆ SSP_HW_LOCK_DEFINE() [5/40]

SSP_HW_LOCK_DEFINE (CAN , 0U , 0U)
CAN

◆ SSP_HW_LOCK_DEFINE() [6/40]

SSP_HW_LOCK_DEFINE (COMP_HS , 0U , 0U)
COMP_HS

◆ SSP_HW_LOCK_DEFINE() [7/40]

SSP_HW_LOCK_DEFINE (COMP_LP , 0U , 0U)
COMP_LP

◆ SSP_HW_LOCK_DEFINE() [8/40]

SSP_HW_LOCK_DEFINE (CRC , 0U , 0U)
CRC

◆ SSP_HW_LOCK_DEFINE() [9/40]

SSP_HW_LOCK_DEFINE (CTSU , 0U , 0U)
CTSU

◆ SSP_HW_LOCK_DEFINE() [10/40]

SSP_HW_LOCK_DEFINE (DAAD , 0U , 0U)
DAAD

◆ SSP_HW_LOCK_DEFINE() [11/40]

SSP_HW_LOCK_DEFINE (DAC , 0U , 0U)
DAC

◆ SSP_HW_LOCK_DEFINE() [12/40]

SSP_HW_LOCK_DEFINE (DOC , 0U , 0U)
DOC

◆ SSP_HW_LOCK_DEFINE() [13/40]

SSP_HW_LOCK_DEFINE (DMAC , 0U , 0U)
DMAC

◆ SSP_HW_LOCK_DEFINE() [14/40]

SSP_HW_LOCK_DEFINE (DTC , 0U , 0U)
DTC

◆ SSP_HW_LOCK_DEFINE() [15/40]

SSP_HW_LOCK_DEFINE (ELC , 0U , 0U)
ELC

◆ SSP_HW_LOCK_DEFINE() [16/40]

SSP_HW_LOCK_DEFINE (FCU , 0U , 0U)
FCU

◆ SSP_HW_LOCK_DEFINE() [17/40]

SSP_HW_LOCK_DEFINE (GPT , 0U , 0U)
GPT

◆ SSP_HW_LOCK_DEFINE() [18/40]

SSP_HW_LOCK_DEFINE (ICU , 0U , 0U)
ICU

ssp_err_t	R_BSP_ModuleStopAlways (ssp_feature_t const *const p_feature) Stop module (enter module stop) even if the module is used for multiple channels. More...
ssp_err_t	R_BSP_ModuleStart (ssp_feature_t const *const p_feature) Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set. More...
ssp_err_t	R_BSP_ModuleStateGet (ssp_feature_t const *const p_feature, bool *const p_stop)

Detailed Description

Module start and stop functions are provided to enable or disable peripherals.

Macro Definition Documentation

◆ BSP_COMPILE_TIME_ASSERT

#define BSP_COMPILE_TIME_ASSERT (e) ((void) sizeof(char[1 - 2 * !(e)]))
Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

Function Documentation

◆ R_BSP_ModuleStart()

ssp_err_t R_BSP_ModuleStart (ssp_feature_t const *const *p_feature*)
Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

◆ R_BSP_ModuleStateGet()

ssp_err_t R_BSP_ModuleStateGet (ssp_feature_t const *const *p_feature*, bool *const *p_stop*)
The g_bsp_module_stop array must have entries for each ssp_ip_t enum value. Save the current module state

◆ R_BSP_ModuleStop()

ssp_err_t R_BSP_ModuleStop (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Note

Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

◆ R_BSP_ModuleStopAlways()

ssp_err_t R_BSP_ModuleStopAlways (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop) even if the module is used for multiple channels.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid

ROM Registers

Board Support Package » Supported MCUs » S3A3

Macros

#define	BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))
#define	BSP_ROM_REG_MPU_CONTROL_SETTING

Detailed Description

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Macro Definition Documentation

◆ BSP_ROM_REG_MPU_CONTROL_SETTING

#define BSP_ROM_REG_MPU_CONTROL_SETTING

```
((0xFFFFFCF0U) | \
                                        ((uint32_t)BSP_CFG_ROM_REG_MPU_PC0_ENABL
E << 8) | \
                                        ((uint32_t)BSP_CFG_ROM_REG_MPU_PC1_ENABL
E << 9) | \
                                        ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION0_E
NABLE) | \
                                        ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION1_E
NABLE << 1) | \
                                        ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION2_E

NABLE << 3)   \
                                    )
```

Build up SECMPUAC register based on MPU settings.

◆ BSP_ROM_REG_OFS1_SETTING

#define BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))

OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

5.2.1.6 S3A6

```

Detailed Description

This group contains a list of enumerations that can be used with the Analog Connect Interface.

Enumeration Type Documentation

◆ analog_connect_t

enum analog_connect_t

List of analog connections that can be made on S3A6

Note
This list may change based on device. This list is for S3A6.

Enumerator	
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_	Connect ACMPLP1 IVREF to PORT1 P103.

P103	
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P012	Connect ACMPHS0 IVREF to PORT0 P012.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC80_DA	Connect ACMPHS1 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P000	Connect ACMPHS2 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT0_P001	Connect ACMPHS2 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC80_DA	Connect ACMPHS2 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC82_DA	Connect ACMPHS2 IVREF to DAC82 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP0 IVCMP to OPAMP1 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP2_AMPO	Connect ACMPLP1 IVCMP to OPAMP2 AMPO.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALO	

G0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P500	Connect ACMPHS0 IVCMP to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT1_P100	Connect ACMPHS0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT1_P101	Connect ACMPHS0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P109	Connect ACMPLP0 IVREF0 to PORT1 P109.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P110	Connect ACMPLP1 IVREF1 to PORT1 P110.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT4_P400	Connect ACMPLP0 IVCMP to PORT4 P400.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP0_AMPO	Connect ACMPLP0 IVCMP to OPAMP0 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT4_P408	Connect ACMPLP1 IVCMP to PORT4 P408.

ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP1 IVCMP to OPAMP1 AMPO.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_OPAMP0_AMPO_BREAK	Break all connections to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P014	Connect OPAMP0 AMPO to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P013	Connect OPAMP0 AMPO to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P003	Connect OPAMP0 AMPO to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P002	Connect OPAMP0 AMPO to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPM_BREAK	Break all connections to OPAMP0 AMPM.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P501	Connect OPAMP0 AMPM to PORT5 P501.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P500	Connect OPAMP0 AMPM to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P014	Connect OPAMP0 AMPM to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P013	Connect OPAMP0 AMPM to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P003	Connect OPAMP0 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPM_TO_OPAMP0_AMPO	Connect OPAMP0 AMPM to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPP_BREAK	Break all connections to OPAMP0 AMPP.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT5_P500	Connect OPAMP0 AMPP to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P014	Connect OPAMP0 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P013	Connect OPAMP0 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P002	Connect OPAMP0 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPP_TO_DAC120_	

DA	Connect OPAMP0 AMPP to DAC120 DA.
ANALOG_CONNECT_OPAMP1_AMPM_BREAK	Break all connections to OPAMP1 AMPM.
ANALOG_CONNECT_OPAMP1_AMPM_TO_PORT0_P014	Connect OPAMP1 AMPM to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPM_TO_OPAMP1_AMPO	Connect OPAMP1 AMPM to OPAMP1 AMPO.
ANALOG_CONNECT_OPAMP1_AMPP_BREAK	Break all connections to OPAMP1 AMPP.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P014	Connect OPAMP1 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P013	Connect OPAMP1 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P003	Connect OPAMP1 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P002	Connect OPAMP1 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP1_AMPP_TO_DAC80_DA	Connect OPAMP1 AMPP to DAC80 DA.
ANALOG_CONNECT_OPAMP2_AMPM_BREAK	Break all connections to OPAMP2 AMPM.
ANALOG_CONNECT_OPAMP2_AMPM_TO_PORT0_P003	Connect OPAMP2 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPM_TO_OPAMP2_AMPO	Connect OPAMP2 AMPM to OPAMP2 AMPO.
ANALOG_CONNECT_OPAMP2_AMPP_BREAK	Break all connections to OPAMP2 AMPP.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P003	Connect OPAMP2 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P002	Connect OPAMP2 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP2_AMPP_TO_DAC81_DA	Connect OPAMP2 AMPP to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.

ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.

ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P004	Connect ACMPHS0 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P007	Connect ACMPHS0 IVCMP to PORT0 P007.

ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P015	Connect ACMPHS0 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ANALOG0_VREF	Connect ACMPHS0 IVCMP to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P005	Connect ACMPHS0 IVREF to PORT0 P005.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P006	Connect ACMPHS0 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P000	Connect ACMPHS1 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P002	Connect ACMPHS1 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P003	Connect ACMPHS1 IVCMP to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P007	Connect ACMPHS1 IVCMP to PORT0 P007.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P000	Connect ACMPHS1 IVREF to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P001	Connect ACMPHS1 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P002	Connect ACMPHS1 IVREF to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P003	Connect ACMPHS1 IVREF to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P006	Connect ACMPHS1 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.

ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.

ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.

ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.

ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.

ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.

ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.

Cache Functions

Board Support Package » Supported MCUs » S3A6

Enumerations

enum	bsp_cache_state_t

Detailed Description

This module implements cache functions.

Enumeration Type Documentation

◆ bsp_cache_state_t

enum bsp_cache_state_t
Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

Clock Initialization

Board Support Package » Supported MCUs » S3A6

Macros

#define	CGC_SRAM_ZERO_WAIT_CYCLES (0U) Specify zero wait states for SRAM.
#define	CGC_SRAM_ONE_WAIT_CYCLES (1U) Specify one wait states for SRAM.

Functions

void	bsp_clock_init (void) Sets up system clocks. More...
uint32_t	bsp_cpu_clock_get (void) Returns frequency of CPU clock in Hz. More...
__STATIC_INLINE void	bsp_clocks_mem_wait_set (uint32_t setting) This function sets the value of the MEMWAIT register which controls wait cycles for flash read access. More...

__STATIC_INLINE uint32_t	bsp_clocks_mem_wait_get (void) This function gets the value of the MEMWAIT register. More...
ssp_err_t	bsp_clock_set_callback (bsp_clock_set_callback_args_t *p_args)

Detailed Description

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Function Documentation

◆ bsp_clock_init()

void bsp_clock_init (void)

Sets up system clocks.

MOCO is default clock out of reset. Enable new clock if chosen.

PLL Source clock is always the main oscillator.

Need to start PLL source clock and let it stabilize before starting PLL

Set PLL Divider.

Set PLL Multiplier.

PLL Source clock is always the main oscillator.

Wait for PLL clock source to stabilize

If the system clock has failed to start call the unrecoverable error handler.

Enable ROM cache

MOCO, LOCO, and subclock do not have stabilization flags that can be checked.

Wait for clock source to stabilize

Set which clock to use for system clock and divisors for all system clocks.

If the system clock has failed to be configured properly call the unrecoverable error handler.

If the USB clock source requested is HOCO set the corresponding bit in the USBCKCR register

◆ bsp_clock_set_callback()

ssp_err_t bsp_clock_set_callback (bsp_clock_set_callback_args_t * *p_args*)

The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0.

◆ bsp_clocks_mem_wait_get()

__STATIC_INLINE uint32_t bsp_clocks_mem_wait_get (void)
This function gets the value of the MEMWAIT register. **Return values** MEMWAIT: setting

◆ bsp_clocks_mem_wait_set()

__STATIC_INLINE void bsp_clocks_mem_wait_set (uint32_t *setting*)
This function sets the value of the MEMWAIT register which controls wait cycles for flash read access. **Return values** none

◆ bsp_cpu_clock_get()

uint32_t bsp_cpu_clock_get (void)
Returns frequency of CPU clock in Hz. **Return values** Frequency: of the CPU in Hertz

Hardware Locks

Detailed Description

This file allocates hardware locks used in Atomic Locking.

Function Documentation

◆ SSP_HW_LOCK_DEFINE() [1/40]

SSP_HW_LOCK_DEFINE (ADC , 0U , 0U)
Used to allocated hardware locks. Parameters are as follows: 1. IP name (ssp_ip_t enum without the SSP_IP_ prefix). 2. Unit number (used for blocks with variations like USB, not to be confused with ADC unit). 3. Channel numberADC

◆ SSP_HW_LOCK_DEFINE() [2/40]

SSP_HW_LOCK_DEFINE (AGT , 0U , 0U)
AGT

◆ SSP_HW_LOCK_DEFINE() [3/40]

SSP_HW_LOCK_DEFINE (BSC , 0U , 1U)
BSC

◆ SSP_HW_LOCK_DEFINE() [4/40]

SSP_HW_LOCK_DEFINE (CAC , 0U , 0U)
CAC

◆ SSP_HW_LOCK_DEFINE() [5/40]

SSP_HW_LOCK_DEFINE (CAN , 0U , 0U)
CAN

◆ SSP_HW_LOCK_DEFINE() [6/40]

SSP_HW_LOCK_DEFINE (COMP_HS , 0U , 0U)
COMP_HS

◆ SSP_HW_LOCK_DEFINE() [7/40]

Module Start and Stop

Board Support Package » Supported MCUs » S3A6

Macros

#define	BSP_COMPILE_TIME_ASSERT(e) ((void) sizeof(char[1 - 2 * !(e)]))

Functions

ssp_err_t	R_BSP_ModuleStop (ssp_feature_t const *const p_feature) Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power. More...
ssp_err_t	R_BSP_ModuleStopAlways (ssp_feature_t const *const p_feature) Stop module (enter module stop) even if the module is used for multiple channels. More...
ssp_err_t	R_BSP_ModuleStart (ssp_feature_t const *const p_feature) Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set. More...
ssp_err_t	R_BSP_ModuleStateGet (ssp_feature_t const *const p_feature, bool *const p_stop)

Detailed Description

Module start and stop functions are provided to enable or disable peripherals.

Macro Definition Documentation

◆ BSP_COMPILE_TIME_ASSERT

#define BSP_COMPILE_TIME_ASSERT (e) ((void) sizeof(char[1 - 2 * !(e)]))
Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

Function Documentation

◆ R_BSP_ModuleStart()

ssp_err_t R_BSP_ModuleStart (ssp_feature_t const *const *p_feature*)
Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

◆ R_BSP_ModuleStateGet()

ssp_err_t R_BSP_ModuleStateGet (ssp_feature_t const *const *p_feature*, bool *const *p_stop*)
The g_bsp_module_stop array must have entries for each ssp_ip_t enum value. Save the current module state

◆ R_BSP_ModuleStop()

ssp_err_t R_BSP_ModuleStop (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Note

Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

◆ R_BSP_ModuleStopAlways()

ssp_err_t R_BSP_ModuleStopAlways (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop) even if the module is used for multiple channels.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid

ROM Registers

Board Support Package » Supported MCUs » S3A6

Macros

#define	BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))
#define	BSP_ROM_REG_MPU_CONTROL_SETTING

Detailed Description

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Macro Definition Documentation

◆ BSP_ROM_REG_MPU_CONTROL_SETTING

#define BSP_ROM_REG_MPU_CONTROL_SETTING

```
((0xFFFFFCF0U) | \
                                        ((uint32_t)BSP_CFG_ROM_REG_MPU_PC0_ENABL
E << 8) | \
                                        ((uint32_t)BSP_CFG_ROM_REG_MPU_PC1_ENABL
E << 9) | \
                                        ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION0_E
NABLE) | \
                                        ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION1_E
NABLE << 1) | \
                                        ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION2_E
NABLE << 2) | \
                                        ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION3_E
NABLE << 3)   \
                                    )
```

Build up SECMPUAC register based on MPU settings.

◆ BSP_ROM_REG_OFS1_SETTING

#define BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))

OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

5.2.1.7 S3A7

Board Support Package » Supported MCUs

Code that is common to S3A7 MCUs. More...

Modules

	Analog Connections
	Cache Functions
	Clock Initialization
	Hardware Locks
	Module Start and Stop
	ROM Registers

Enumerations

enum	elc_peripheral_t
enum	elc_event_t

Detailed Description

Code that is common to S3A7 MCUs.

Implements functions that are common to S3A7 MCUs.

Enumeration Type Documentation

◆ **elc_event_t**

enum elc_event_t

Sources of event signals to be linked to other peripherals or the CPU1

Note

This list may change based on device. This list is for S3A7.

◆ **elc_peripheral_t**

enum elc_peripheral_t

Possible peripherals to be linked to event signals

Analog Connections

Board Support Package » Supported MCUs » S3A7

Detailed Description

This group contains a list of enumerations that can be used with the Analog Connect Interface.

Enumeration Type Documentation

◆ analog_connect_t

enum analog_connect_t

List of analog connections that can be made on S3A7

Note

This list may change based on device. This list is for S3A7.

Enumerator	
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P012	Connect ACMPHS0 IVREF to PORT0 P012.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC80_DA	Connect ACMPHS1 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P000	Connect ACMPHS2 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT0_P001	Connect ACMPHS2 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC80_DA	Connect ACMPHS2 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC82_DA	Connect ACMPHS2 IVREF to DAC82 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80	Connect ACMPLP0 IVREF0 to DAC80 DA.

_DA	
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP0 IVCMP to OPAMP1 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP2_AMPO	Connect ACMPLP1 IVCMP to OPAMP2 AMPO.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P500	Connect ACMPHS0 IVCMP to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT1_P100	Connect ACMPHS0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT1_P101	Connect ACMPHS0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1	

_P109	Connect ACMPLP0 IVREF0 to PORT1 P109.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P110	Connect ACMPLP1 IVREF1 to PORT1 P110.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT4_P400	Connect ACMPLP0 IVCMP to PORT4 P400.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP0_AMPO	Connect ACMPLP0 IVCMP to OPAMP0 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT4_P408	Connect ACMPLP1 IVCMP to PORT4 P408.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP1 IVCMP to OPAMP1 AMPO.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_OPAMP0_AMPO_BREAK	Break all connections to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P014	Connect OPAMP0 AMPO to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P013	Connect OPAMP0 AMPO to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P003	Connect OPAMP0 AMPO to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P002	Connect OPAMP0 AMPO to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPM_BREAK	Break all connections to OPAMP0 AMPM.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P501	Connect OPAMP0 AMPM to PORT5 P501.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P500	Connect OPAMP0 AMPM to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P	Connect OPAMP0 AMPM to PORT0 P014.

014	
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P013	Connect OPAMP0 AMPM to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P003	Connect OPAMP0 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPM_TO_OPAMP0_AMPO	Connect OPAMP0 AMPM to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPP_BREAK	Break all connections to OPAMP0 AMPP.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT5_P500	Connect OPAMP0 AMPP to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P014	Connect OPAMP0 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P013	Connect OPAMP0 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P002	Connect OPAMP0 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPP_TO_DAC120_DA	Connect OPAMP0 AMPP to DAC120 DA.
ANALOG_CONNECT_OPAMP1_AMPM_BREAK	Break all connections to OPAMP1 AMPM.
ANALOG_CONNECT_OPAMP1_AMPM_TO_PORT0_P014	Connect OPAMP1 AMPM to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPM_TO_OPAMP1_AMPO	Connect OPAMP1 AMPM to OPAMP1 AMPO.
ANALOG_CONNECT_OPAMP1_AMPP_BREAK	Break all connections to OPAMP1 AMPP.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P014	Connect OPAMP1 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P013	Connect OPAMP1 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P003	Connect OPAMP1 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P002	Connect OPAMP1 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP1_AMPP_TO_DAC80_DA	Connect OPAMP1 AMPP to DAC80 DA.
ANALOG_CONNECT_OPAMP2_AMPM_BREAK	Break all connections to OPAMP2 AMPM.
ANALOG_CONNECT_OPAMP2_AMPM_TO_PORT0_P003	Connect OPAMP2 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPM_TO_OPAMP2_AMPO	Connect OPAMP2 AMPM to OPAMP2 AMPO.

ANALOG_CONNECT_OPAMP2_AMPP_BREAK	Break all connections to OPAMP2 AMPP.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P003	Connect OPAMP2 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P002	Connect OPAMP2 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP2_AMPP_TO_DAC81_DA	Connect OPAMP2 AMPP to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.

ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.

ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P004	Connect ACMPHS0 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P007	Connect ACMPHS0 IVCMP to PORT0 P007.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P015	Connect ACMPHS0 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ANALOG0_VREF	Connect ACMPHS0 IVCMP to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P005	Connect ACMPHS0 IVREF to PORT0 P005.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P006	Connect ACMPHS0 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P000	Connect ACMPHS1 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P002	Connect ACMPHS1 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P003	Connect ACMPHS1 IVCMP to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P007	Connect ACMPHS1 IVCMP to PORT0 P007.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.

ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P000	Connect ACMPHS1 IVREF to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P001	Connect ACMPHS1 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P002	Connect ACMPHS1 IVREF to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P003	Connect ACMPHS1 IVREF to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P006	Connect ACMPHS1 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.

ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.

ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.

ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.

ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.

ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.

ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.

ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.

ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.

Cache Functions

Board Support Package » Supported MCUs » S3A7

Enumerations

enum bsp_cache_state_t

Detailed Description

This module implements cache functions.

Enumeration Type Documentation

◆ bsp_cache_state_t

enum bsp_cache_state_t
Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

Clock Initialization

Board Support Package » Supported MCUs » S3A7

Macros

#define CGC_SRAM_ZERO_WAIT_CYCLES (0U)

Specify zero wait states for SRAM.

#define	CGC_SRAM_ONE_WAIT_CYCLES (1U) Specify one wait states for SRAM.

Functions

void	bsp_clock_init (void) Sets up system clocks. More...
uint32_t	bsp_cpu_clock_get (void) Returns frequency of CPU clock in Hz. More...
__STATIC_INLINE void	bsp_clocks_mem_wait_set (uint32_t setting) This function sets the value of the MEMWAIT register which controls wait cycles for flash read access. More...
__STATIC_INLINE uint32_t	bsp_clocks_mem_wait_get (void) This function gets the value of the MEMWAIT register. More...
ssp_err_t	bsp_clock_set_callback (bsp_clock_set_callback_args_t *p_args)

Detailed Description

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Function Documentation

◆ bsp_clock_init()

void bsp_clock_init (void)
Sets up system clocks. MOCO is default clock out of reset. Enable new clock if chosen. PLL Source clock is always the main oscillator. Need to start PLL source clock and let it stabilize before starting PLL Set PLL Divider. Set PLL Multiplier. PLL Source clock is always the main oscillator. Wait for PLL clock source to stabilize If the system clock has failed to start call the unrecoverable error handler. MOCO, LOCO, and subclock do not have stabilization flags that can be checked. Wait for clock source to stabilize Set which clock to use for system clock and divisors for all system clocks. If the system clock has failed to be configured properly call the unrecoverable error handler.

◆ bsp_clock_set_callback()

ssp_err_t bsp_clock_set_callback (bsp_clock_set_callback_args_t * *p_args*)
The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0. < No MEMWAIT cycles

◆ bsp_clocks_mem_wait_get()

__STATIC_INLINE uint32_t bsp_clocks_mem_wait_get (void)
This function gets the value of the MEMWAIT register. **Return values** MEMWAIT — setting

◆ bsp_clocks_mem_wait_set()

__STATIC_INLINE void bsp_clocks_mem_wait_set (uint32_t *setting*)
This function sets the value of the MEMWAIT register which controls wait cycles for flash read access.

Parameters

[in]	setting	

Return values

none	

◆ bsp_cpu_clock_get()

uint32_t bsp_cpu_clock_get (void)
Returns frequency of CPU clock in Hz.

Return values

Frequency	of the CPU in Hertz

Hardware Locks

Detailed Description

This file allocates hardware locks used in Atomic Locking.

Function Documentation

◆ SSP_HW_LOCK_DEFINE() [1/40]

SSP_HW_LOCK_DEFINE (ADC , 0U , 0U)

Used to allocated hardware locks. Parameters are as follows:

1. IP name (ssp_ip_t enum without the SSP_IP_ prefix).
2. Unit number (used for blocks with variations like USB, not to be confused with ADC unit).
3. Channel numberADC

◆ SSP_HW_LOCK_DEFINE() [2/40]

SSP_HW_LOCK_DEFINE (AGT , 0U , 0U)

AGT

◆ SSP_HW_LOCK_DEFINE() [3/40]

SSP_HW_LOCK_DEFINE (BSC , 0U , 1U)

BSC

◆ SSP_HW_LOCK_DEFINE() [4/40]

SSP_HW_LOCK_DEFINE (CAC , 0U , 0U)
CAC

◆ SSP_HW_LOCK_DEFINE() [5/40]

SSP_HW_LOCK_DEFINE (CAN , 0U , 0U)
CAN

◆ SSP_HW_LOCK_DEFINE() [6/40]

SSP_HW_LOCK_DEFINE (COMP_HS , 0U , 0U)
COMP_HS

◆ SSP_HW_LOCK_DEFINE() [7/40]

SSP_HW_LOCK_DEFINE (COMP_LP , 0U , 0U)
COMP_LP

◆ SSP_HW_LOCK_DEFINE() [8/40]

SSP_HW_LOCK_DEFINE (CRC , 0U , 0U)
CRC

◆ SSP_HW_LOCK_DEFINE() [9/40]

SSP_HW_LOCK_DEFINE (CTSU , 0U , 0U)
CTSU

◆ SSP_HW_LOCK_DEFINE() [10/40]

SSP_HW_LOCK_DEFINE (DAAD , 0U , 0U)
DAAD

◆ SSP_HW_LOCK_DEFINE() [11/40]

WDT

Module Start and Stop

Board Support Package » Supported MCUs » S3A7

Macros

#define	BSP_COMPILE_TIME_ASSERT(e) ((void) sizeof(char[1 - 2 * !(e)]))

Functions

ssp_err_t	R_BSP_ModuleStop (ssp_feature_t const *const p_feature) Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power. More...
ssp_err_t	R_BSP_ModuleStopAlways (ssp_feature_t const *const p_feature) Stop module (enter module stop) even if the module is used for multiple channels. More...
ssp_err_t	R_BSP_ModuleStart (ssp_feature_t const *const p_feature) Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set. More...
ssp_err_t	R_BSP_ModuleStateGet (ssp_feature_t const *const p_feature, bool *const p_stop)

Detailed Description

Module start and stop functions are provided to enable or disable peripherals.

Macro Definition Documentation

◆ BSP_COMPILE_TIME_ASSERT

#define BSP_COMPILE_TIME_ASSERT (e) ((void) sizeof(char[1 - 2 * !(e)]))
Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

Function Documentation

◆ R_BSP_ModuleStart()

ssp_err_t R_BSP_ModuleStart (ssp_feature_t const *const *p_feature*)
Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

◆ R_BSP_ModuleStateGet()

ssp_err_t R_BSP_ModuleStateGet (ssp_feature_t const *const *p_feature*, bool *const *p_stop*)
The g_bsp_module_stop array must have entries for each ssp_ip_t enum value. Save the current module state

◆ R_BSP_ModuleStop()

ssp_err_t R_BSP_ModuleStop (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Note

Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

◆ R_BSP_ModuleStopAlways()

ssp_err_t R_BSP_ModuleStopAlways (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop) even if the module is used for multiple channels.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid

ROM Registers

Board Support Package » Supported MCUs » S3A7

Macros

#define	BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))
#define	BSP_ROM_REG_MPU_CONTROL_SETTING

Detailed Description

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Macro Definition Documentation

◆ BSP_ROM_REG_MPU_CONTROL_SETTING

#define BSP_ROM_REG_MPU_CONTROL_SETTING

```
((0xFFFFFCFEU) | \
                                        ((uint32_t)BSP_CFG_ROM_REG_MPU_PC0_ENABL
E << 8) | \
                                        ((uint32_t)BSP_CFG_ROM_REG_MPU_PC1_ENABL
E << 9) | \
                                        ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION0_E
NABLE))
```

Build up SECMPUAC register based on MPU settings.

◆ BSP_ROM_REG_OFS1_SETTING

#define BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFF8FFFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 12))

OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

Detailed Description

This group contains a list of enumerations that can be used with the Analog Connect Interface.

Enumeration Type Documentation

◆ analog_connect_t

enum analog_connect_t

List of analog connections that can be made on S5D3

Note
This list may change based on device. This list is for S5D3.

Enumerator	
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P012	Connect ACMPHS0 IVREF to PORT0 P012.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0	Connect ACMPHS1 IVCMP to PORT0 P015.

_P015	
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC80_DA	Connect ACMPHS1 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P000	Connect ACMPHS2 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT0_P001	Connect ACMPHS2 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC80_DA	Connect ACMPHS2 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC82_DA	Connect ACMPHS2 IVREF to DAC82 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP0 IVCMP to OPAMP1 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP2_AMPO	Connect ACMPLP1 IVCMP to OPAMP2 AMPO.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P500	Connect ACMPHS0 IVCMP to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0	

_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT1_P100	Connect ACMPHS0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT1_P101	Connect ACMPHS0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P109	Connect ACMPLP0 IVREF0 to PORT1 P109.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P110	Connect ACMPLP1 IVREF1 to PORT1 P110.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT4_P400	Connect ACMPLP0 IVCMP to PORT4 P400.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP0_AMPO	Connect ACMPLP0 IVCMP to OPAMP0 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT4_P408	Connect ACMPLP1 IVCMP to PORT4 P408.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP1 IVCMP to OPAMP1 AMPO.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.

ANALOG_CONNECT_OPAMP0_AMPO_BREAK	Break all connections to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P014	Connect OPAMP0 AMPO to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P013	Connect OPAMP0 AMPO to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P003	Connect OPAMP0 AMPO to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P002	Connect OPAMP0 AMPO to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPM_BREAK	Break all connections to OPAMP0 AMPM.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P501	Connect OPAMP0 AMPM to PORT5 P501.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P500	Connect OPAMP0 AMPM to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P014	Connect OPAMP0 AMPM to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P013	Connect OPAMP0 AMPM to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P003	Connect OPAMP0 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPM_TO_OPAMP0_AMPO	Connect OPAMP0 AMPM to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPP_BREAK	Break all connections to OPAMP0 AMPP.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT5_P500	Connect OPAMP0 AMPP to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P014	Connect OPAMP0 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P013	Connect OPAMP0 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P002	Connect OPAMP0 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPP_TO_DAC120_DA	Connect OPAMP0 AMPP to DAC120 DA.
ANALOG_CONNECT_OPAMP1_AMPM_BREAK	Break all connections to OPAMP1 AMPM.
ANALOG_CONNECT_OPAMP1_AMPM_TO_PORT0_P014	Connect OPAMP1 AMPM to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPM_TO_OPAMP1_AMPO	Connect OPAMP1 AMPM to OPAMP1 AMPO.
ANALOG_CONNECT_OPAMP1_AMPP_BREAK	Break all connections to OPAMP1 AMPP.

ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P014	Connect OPAMP1 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P013	Connect OPAMP1 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P003	Connect OPAMP1 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P002	Connect OPAMP1 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP1_AMPP_TO_DAC80_DA	Connect OPAMP1 AMPP to DAC80 DA.
ANALOG_CONNECT_OPAMP2_AMPM_BREAK	Break all connections to OPAMP2 AMPM.
ANALOG_CONNECT_OPAMP2_AMPM_TO_PORT0_P003	Connect OPAMP2 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPM_TO_OPAMP2_AMPO	Connect OPAMP2 AMPM to OPAMP2 AMPO.
ANALOG_CONNECT_OPAMP2_AMPP_BREAK	Break all connections to OPAMP2 AMPP.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P003	Connect OPAMP2 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P002	Connect OPAMP2 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP2_AMPP_TO_DAC81_DA	Connect OPAMP2 AMPP to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.

ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.

ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P004	Connect ACMPHS0 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P007	Connect ACMPHS0 IVCMP to PORT0 P007.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P015	Connect ACMPHS0 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ANALOG0_VREF	Connect ACMPHS0 IVCMP to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P005	Connect ACMPHS0 IVREF to PORT0 P005.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P006	Connect ACMPHS0 IVREF to PORT0 P006.

ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P000	Connect ACMPHS1 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P002	Connect ACMPHS1 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P003	Connect ACMPHS1 IVCMP to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P007	Connect ACMPHS1 IVCMP to PORT0 P007.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P000	Connect ACMPHS1 IVREF to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P001	Connect ACMPHS1 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P002	Connect ACMPHS1 IVREF to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P003	Connect ACMPHS1 IVREF to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P006	Connect ACMPHS1 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.

ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.

ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.

ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.

ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.

ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.

ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.

ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.

ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.

Cache Functions

Board Support Package » Supported MCUs » S5D3

Enumerations

enum	bsp_cache_state_t

Detailed Description

This module implements cache functions.

Enumeration Type Documentation

◆ bsp_cache_state_t

enum bsp_cache_state_t
Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

Clock Initialization

Board Support Package » Supported MCUs » S5D3

Macros

#define	CGC_SYS_CLOCK_FREQ_NO_RAM_WAITS (60000000U)
#define	CGC_SYS_CLOCK_FREQ_ONE_ROM_WAITS (40000000U)
#define	CGC_SYS_CLOCK_FREQ_TWO_ROM_WAITS (80000000U)
#define	CGC_SRAM_ZERO_WAIT_CYCLES (0U) Specify zero wait states for SRAM.
#define	CGC_SRAM_ONE_WAIT_CYCLES (1U) Specify one wait states for SRAM.

ssp_err_t	bsp_clock_set_callback (bsp_clock_set_callback_args_t *p_args)

Detailed Description

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Macro Definition Documentation

◆ CGC_SYS_CLOCK_FREQ_NO_RAM_WAITS

```
#define CGC_SYS_CLOCK_FREQ_NO_RAM_WAITS   (60000000U)
```

SRAM requires 1 wait state be inserted at ICLK > 60 MHz. SRAMHS is always no wait state

◆ CGC_SYS_CLOCK_FREQ_ONE_ROM_WAITS

```
#define CGC_SYS_CLOCK_FREQ_ONE_ROM_WAITS   (40000000U)
```

FLASH requires 1 wait state be inserted when (40 MHz < ICLK <= 80 MHz)

◆ CGC_SYS_CLOCK_FREQ_TWO_ROM_WAITS

```
#define CGC_SYS_CLOCK_FREQ_TWO_ROM_WAITS   (80000000U)
```

FLASH requires 2 wait states be inserted when (80 MHz < ICLK <= 120 MHz)

Function Documentation

◆ bsp_clock_init()

void bsp_clock_init (void)
Sets up system clocks. MOCO is default clock out of reset. Enable new clock if chosen. Need to start PLL source clock and let it stabilize before starting PLL Set PLL Divider. Set PLL Multiplier. Set PLL Source clock. Wait for PLL clock source to stabilize If the system clock has failed to start call the unrecoverable error handler. MOCO, LOCO, and subclock do not have stabilization flags that can be checked. Wait for clock source to stabilize Set which clock to use for system clock and divisors for all system clocks. If the system clock has failed to be configured properly call the unrecoverable error handler. Set USB clock divisor. Configure BCLK Configure SDRAM Clock

◆ bsp_clock_set_callback()

ssp_err_t bsp_clock_set_callback (bsp_clock_set_callback_args_t * *p_args*)
Wait states for low speed RAM (SRAM0 and SRAM1) No wait: ICLK <= 60 MHz 1 wait: ICLK > 60 MHz Calculate the Wait states for ROM Set the wait state BEFORE we change iclk In this case we need to set the wait state AFTER we change iclk

◆ bsp_clocks_rom_wait_get()

__STATIC_INLINE uint32_t bsp_clocks_rom_wait_get (void)

This function gets the value of the ROMWT register.

Return values

MEMWAIT	setting

◆ bsp_clocks_rom_wait_set()

__STATIC_INLINE void bsp_clocks_rom_wait_set (uint8_t *setting*)

This function sets the value of the ROMWT register which is used to specify wait states required when accessing Flash ROM.

Parameters

[in]	setting	The number of wait states to be used.

Return values

none	

◆ bsp_clocks_sram_wait_set()

__STATIC_INLINE void bsp_clocks_sram_wait_set (uint32_t *setting*)

This function sets the RAM wait state settings for both the SRAM0 and SRAM0(ECC) RAM memory.

Parameters

[in]	setting	The number of wait states to be used.

Return values

none	

◆ bsp_cpu_clock_get()

uint32_t bsp_cpu_clock_get (void)
Returns frequency of CPU clock in Hz. **Return values** Frequency — of the CPU in Hertz

Hardware Locks

SSP_HW_LOCK_DEFINE (WDT, 0U, 0U)

Detailed Description

This file allocates hardware locks used in Atomic Locking.

Function Documentation

◆ SSP_HW_LOCK_DEFINE() [1/35]

SSP_HW_LOCK_DEFINE (ADC , 0U , 0U)
Used to allocated hardware locks. Parameters are as follows: 1. IP name (ssp_ip_t enum without the SSP_IP_ prefix). 2. Unit number (used for blocks with variations like USB, not to be confused with ADC unit). 3. Channel numberADC

◆ SSP_HW_LOCK_DEFINE() [2/35]

SSP_HW_LOCK_DEFINE (AGT , 0U , 0U)
AGT

◆ SSP_HW_LOCK_DEFINE() [3/35]

SSP_HW_LOCK_DEFINE (CAC , 0U , 0U)
CAC

◆ SSP_HW_LOCK_DEFINE() [4/35]

SSP_HW_LOCK_DEFINE (CAN , 0U , 0U)
CAN

◆ SSP_HW_LOCK_DEFINE() [5/35]

SSP_HW_LOCK_DEFINE (COMP_HS , 0U , 0U)
COMP_HS

◆ SSP_HW_LOCK_DEFINE() [6/35]

SSP_HW_LOCK_DEFINE (CRC , 0U , 0U)
CRC

◆ SSP_HW_LOCK_DEFINE() [7/35]

SSP_HW_LOCK_DEFINE (CTSU , 0U , 0U)
CTSU

◆ SSP_HW_LOCK_DEFINE() [8/35]

SSP_HW_LOCK_DEFINE (DAC , 0U , 0U)
DAC

◆ SSP_HW_LOCK_DEFINE() [9/35]

SSP_HW_LOCK_DEFINE (DOC , 0U , 0U)

Functions

ssp_err_t	R_BSP_ModuleStop (ssp_feature_t const *const p_feature) Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power. More...
ssp_err_t	R_BSP_ModuleStopAlways (ssp_feature_t const *const p_feature) Stop module (enter module stop) even if the module is used for multiple channels. More...
ssp_err_t	R_BSP_ModuleStart (ssp_feature_t const *const p_feature) Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set. More...
ssp_err_t	R_BSP_ModuleStateGet (ssp_feature_t const *const p_feature, bool *const p_stop)

Detailed Description

Module start and stop functions are provided to enable or disable peripherals.

Macro Definition Documentation

◆ BSP_COMPILE_TIME_ASSERT

#define BSP_COMPILE_TIME_ASSERT (e) ((void) sizeof(char[1 - 2 * !(e)]))
Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

Function Documentation

◆ R_BSP_ModuleStart()

ssp_err_t R_BSP_ModuleStart (ssp_feature_t const *const *p_feature*)

Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

◆ R_BSP_ModuleStateGet()

ssp_err_t R_BSP_ModuleStateGet (ssp_feature_t const *const *p_feature*, bool *const *p_stop*)

The g_bsp_module_stop array must have entries for each ssp_ip_t enum value.

Save the current module state

◆ R_BSP_ModuleStop()

ssp_err_t R_BSP_ModuleStop (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Note

Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

◆ R_BSP_ModuleStopAlways()

ssp_err_t R_BSP_ModuleStopAlways (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop) even if the module is used for multiple channels.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid

ROM Registers

Board Support Package » Supported MCUs » S5D3

Macros

#define	BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFFF9FFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 9))
#define	BSP_ROM_REG_MPU_CONTROL_SETTING

Detailed Description

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Macro Definition Documentation

◆ BSP_ROM_REG_MPU_CONTROL_SETTING

#define BSP_ROM_REG_MPU_CONTROL_SETTING

```
((0xFFFFFCF0U) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_PC0_ENABL
E << 8) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_PC1_ENABL
E << 9) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION0_E
NABLE) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION1_E
NABLE << 1) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION2_E
NABLE << 2) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION3_E
NABLE << 3))
```

Build up SECMPUAC register based on MPU settings.

◆ BSP_ROM_REG_OFS1_SETTING

#define BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFFF9FFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 9))

OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

5.2.1.9 S5D5

Board Support Package » Supported MCUs

}

Detailed Description

This group contains a list of enumerations that can be used with the Analog Connect Interface.

Enumeration Type Documentation

◆ analog_connect_t

enum analog_connect_t

List of analog connections that can be made on S5D5

Note
This list may change based on device. This list is for S5D5.

Enumerator	
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.

ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P012	Connect ACMPHS0 IVREF to PORT0 P012.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC80_DA	Connect ACMPHS1 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P000	Connect ACMPHS2 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT0_P001	Connect ACMPHS2 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC80_DA	Connect ACMPHS2 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC82_DA	Connect ACMPHS2 IVREF to DAC82 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP0 IVCMP to OPAMP1 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP2_AMPO	Connect ACMPLP1 IVCMP to OPAMP2 AMPO.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.

ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P500	Connect ACMPHS0 IVCMP to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT1_P100	Connect ACMPHS0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT1_P101	Connect ACMPHS0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P109	Connect ACMPLP0 IVREF0 to PORT1 P109.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P110	Connect ACMPLP1 IVREF1 to PORT1 P110.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT4_P400	Connect ACMPLP0 IVCMP to PORT4 P400.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP0_AMPO	Connect ACMPLP0 IVCMP to OPAMP0 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT4_P408	Connect ACMPLP1 IVCMP to PORT4 P408.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP1 IVCMP to OPAMP1 AMPO.

ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_OPAMP0_AMPO_BREAK	Break all connections to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P014	Connect OPAMP0 AMPO to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P013	Connect OPAMP0 AMPO to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P003	Connect OPAMP0 AMPO to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P002	Connect OPAMP0 AMPO to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPM_BREAK	Break all connections to OPAMP0 AMPM.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P501	Connect OPAMP0 AMPM to PORT5 P501.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P500	Connect OPAMP0 AMPM to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P014	Connect OPAMP0 AMPM to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P013	Connect OPAMP0 AMPM to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P003	Connect OPAMP0 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPM_TO_OPAMP0_AMPO	Connect OPAMP0 AMPM to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPP_BREAK	Break all connections to OPAMP0 AMPP.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT5_P500	Connect OPAMP0 AMPP to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P014	Connect OPAMP0 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P013	Connect OPAMP0 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P002	Connect OPAMP0 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPP_TO_DAC120_DA	Connect OPAMP0 AMPP to DAC120 DA.

ANALOG_CONNECT_OPAMP1_AMPM_BREAK	Break all connections to OPAMP1 AMPM.
ANALOG_CONNECT_OPAMP1_AMPM_TO_PORT0_P014	Connect OPAMP1 AMPM to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPM_TO_OPAMP1_AMPO	Connect OPAMP1 AMPM to OPAMP1 AMPO.
ANALOG_CONNECT_OPAMP1_AMPP_BREAK	Break all connections to OPAMP1 AMPP.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P014	Connect OPAMP1 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P013	Connect OPAMP1 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P003	Connect OPAMP1 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P002	Connect OPAMP1 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP1_AMPP_TO_DAC80_DA	Connect OPAMP1 AMPP to DAC80 DA.
ANALOG_CONNECT_OPAMP2_AMPM_BREAK	Break all connections to OPAMP2 AMPM.
ANALOG_CONNECT_OPAMP2_AMPM_TO_PORT0_P003	Connect OPAMP2 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPM_TO_OPAMP2_AMPO	Connect OPAMP2 AMPM to OPAMP2 AMPO.
ANALOG_CONNECT_OPAMP2_AMPP_BREAK	Break all connections to OPAMP2 AMPP.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P003	Connect OPAMP2 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P002	Connect OPAMP2 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP2_AMPP_TO_DAC81_DA	Connect OPAMP2 AMPP to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5	Connect ACMPLP1 IVREF1 to PORT5 P500.

_P500	
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_	

P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P004	Connect ACMPHS0 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P007	Connect ACMPHS0 IVCMP to PORT0 P007.

ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P015	Connect ACMPHS0 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ANALOG0_VREF	Connect ACMPHS0 IVCMP to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P005	Connect ACMPHS0 IVREF to PORT0 P005.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P006	Connect ACMPHS0 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P000	Connect ACMPHS1 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P002	Connect ACMPHS1 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P003	Connect ACMPHS1 IVCMP to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P007	Connect ACMPHS1 IVCMP to PORT0 P007.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P000	Connect ACMPHS1 IVREF to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P001	Connect ACMPHS1 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P002	Connect ACMPHS1 IVREF to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P003	Connect ACMPHS1 IVREF to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P006	Connect ACMPHS1 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.

ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.

ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.

ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.

ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.

ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.

ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.

Cache Functions

Board Support Package » Supported MCUs » S5D5

Enumerations

enum	bsp_cache_state_t

Detailed Description

This module implements cache functions.

Enumeration Type Documentation

◆ bsp_cache_state_t

enum bsp_cache_state_t
Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

Clock Initialization

Board Support Package » Supported MCUs » S5D5

Macros

#define	CGC_SYS_CLOCK_FREQ_NO_RAM_WAITS (60000000U)
#define	CGC_SYS_CLOCK_FREQ_ONE_ROM_WAITS (40000000U)
#define	CGC_SYS_CLOCK_FREQ_TWO_ROM_WAITS (80000000U)
#define	CGC_SRAM_ZERO_WAIT_CYCLES (0U) Specify zero wait states for SRAM.
#define	CGC_SRAM_ONE_WAIT_CYCLES (1U) Specify one wait states for SRAM.

Functions

void	bsp_clock_init (void) Sets up system clocks. More...
uint32_t	bsp_cpu_clock_get (void) Returns frequency of CPU clock in Hz. More...

ssp_err_t	bsp_clock_set_callback (bsp_clock_set_callback_args_t *p_args)

Detailed Description

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Macro Definition Documentation

◆ CGC_SYS_CLOCK_FREQ_NO_RAM_WAITS

```
#define CGC_SYS_CLOCK_FREQ_NO_RAM_WAITS   (60000000U)
```

SRAM requires 1 wait state be inserted at ICLK > 60 MHz. SRAMHS is always no wait state

◆ CGC_SYS_CLOCK_FREQ_ONE_ROM_WAITS

```
#define CGC_SYS_CLOCK_FREQ_ONE_ROM_WAITS   (40000000U)
```

FLASH requires 1 wait state be inserted when (40 MHz < ICLK <= 80 MHz)

◆ CGC_SYS_CLOCK_FREQ_TWO_ROM_WAITS

```
#define CGC_SYS_CLOCK_FREQ_TWO_ROM_WAITS   (80000000U)
```

FLASH requires 2 wait states be inserted when (80 MHz < ICLK <= 120 MHz)

Function Documentation

◆ bsp_clock_init()

void bsp_clock_init (void)
Sets up system clocks. MOCO is default clock out of reset. Enable new clock if chosen. Need to start PLL source clock and let it stabilize before starting PLL Set PLL Divider. Set PLL Multiplier. Set PLL Source clock. Wait for PLL clock source to stabilize If the system clock has failed to start call the unrecoverable error handler. Enable ROM cache MOCO, LOCO, and subclock do not have stabilization flags that can be checked. Wait for clock source to stabilize Set which clock to use for system clock and divisors for all system clocks. If the system clock has failed to be configured properly call the unrecoverable error handler. Set USB clock divisor. Configure BCLK Configure SDRAM Clock

◆ bsp_clock_set_callback()

ssp_err_t bsp_clock_set_callback (bsp_clock_set_callback_args_t * *p_args*)
Wait states for low speed RAM (SRAM0 and SRAM1) No wait: ICLK <= 60 MHz 1 wait: ICLK > 60 MHz Calculate the Wait states for ROM Set the wait state BEFORE we change iclk In this case we need to set the wait state AFTER we change iclk

◆ bsp_clocks_rom_wait_get()

__STATIC_INLINE uint32_t bsp_clocks_rom_wait_get (void)

This function gets the value of the ROMWT register.

Return values

MEMWAIT	setting

◆ bsp_clocks_rom_wait_set()

__STATIC_INLINE void bsp_clocks_rom_wait_set (uint8_t *setting*)

This function sets the value of the ROMWT register which is used to specify wait states required when accessing Flash ROM.

Parameters

[in]	setting	The number of wait states to be used.

Return values

none	

◆ bsp_clocks_sram_wait_set()

__STATIC_INLINE void bsp_clocks_sram_wait_set (uint32_t *setting*)

This function sets the RAM wait state settings for both the SRAM0 and SRAM0(ECC) RAM memory.

Parameters

[in]	setting	The number of wait states to be used.

Return values

none	

◆ bsp_cpu_clock_get()

uint32_t bsp_cpu_clock_get (void)
Returns frequency of CPU clock in Hz. **Return values** Frequency — of the CPU in Hertz

	SSP_HW_LOCK_DEFINE (WDT, 0U, 0U)

Detailed Description

This file allocates hardware locks used in Atomic Locking.

Function Documentation

◆ SSP_HW_LOCK_DEFINE() [1/44]

SSP_HW_LOCK_DEFINE (ADC , 0U , 0U)
Used to allocated hardware locks. Parameters are as follows: 1. IP name (ssp_ip_t enum without the SSP_IP_ prefix). 2. Unit number (used for blocks with variations like USB, not to be confused with ADC unit). 3. Channel numberADC

◆ SSP_HW_LOCK_DEFINE() [2/44]

SSP_HW_LOCK_DEFINE (AGT , 0U , 0U)
AGT

◆ SSP_HW_LOCK_DEFINE() [3/44]

SSP_HW_LOCK_DEFINE (BSC , 0U , 1U)
BSC

◆ SSP_HW_LOCK_DEFINE() [4/44]

SSP_HW_LOCK_DEFINE (CAC , 0U , 0U)
CAC

◆ SSP_HW_LOCK_DEFINE() [5/44]

SSP_HW_LOCK_DEFINE (CAN , 0U , 0U)
CAN

◆ SSP_HW_LOCK_DEFINE() [6/44]

SSP_HW_LOCK_DEFINE (COMP_HS , 0U , 0U)
COMP_HS

◆ SSP_HW_LOCK_DEFINE() [7/44]

SSP_HW_LOCK_DEFINE (CRC , 0U , 0U)
CRC

◆ SSP_HW_LOCK_DEFINE() [8/44]

SSP_HW_LOCK_DEFINE (CTSU , 0U , 0U)
CTSU

◆ SSP_HW_LOCK_DEFINE() [9/44]

SSP_HW_LOCK_DEFINE (DAAD , 0U , 0U)
DAAD

◆ SSP_HW_LOCK_DEFINE() [10/44]

SSP_HW_LOCK_DEFINE (DAC , 0U , 0U)
DAC

◆ SSP_HW_LOCK_DEFINE() [11/44]

SSP_HW_LOCK_DEFINE (DOC , 0U , 0U)
DOC

◆ SSP_HW_LOCK_DEFINE() [12/44]

SSP_HW_LOCK_DEFINE (DMAC , 0U , 0U)
DMAC

◆ SSP_HW_LOCK_DEFINE() [13/44]

SSP_HW_LOCK_DEFINE (DRW , 0U , 0U)
DRW

◆ SSP_HW_LOCK_DEFINE() [14/44]

SSP_HW_LOCK_DEFINE (DTC , 0U , 0U)
DTC

◆ SSP_HW_LOCK_DEFINE() [15/44]

SSP_HW_LOCK_DEFINE (ELC , 0U , 0U)
ELC

◆ SSP_HW_LOCK_DEFINE() [16/44]

SSP_HW_LOCK_DEFINE (EPTPC , 0U , 0U)
EPTPC

◆ SSP_HW_LOCK_DEFINE() [17/44]

SSP_HW_LOCK_DEFINE (ETHER , 0U , 0U)
ETHER

◆ SSP_HW_LOCK_DEFINE() [18/44]

SSP_HW_LOCK_DEFINE (FCU , 0U , 0U)
FCU

◆ SSP_HW_LOCK_DEFINE() [19/44]

SSP_HW_LOCK_DEFINE (GLCDC , 0U , 0U)
GLCDC

◆ SSP_HW_LOCK_DEFINE() [20/44]

SSP_HW_LOCK_DEFINE (GPT , 0U , 0U)
GPT

◆ SSP_HW_LOCK_DEFINE() [21/44]

SSP_HW_LOCK_DEFINE (ICU , 0U , 0U)
ICU

◆ SSP_HW_LOCK_DEFINE() [22/44]

SSP_HW_LOCK_DEFINE (IIC , 0U , 0U)
IIC

◆ SSP_HW_LOCK_DEFINE() [23/44]

SSP_HW_LOCK_DEFINE (IRDA , 0U , 0U)
IRDA

◆ SSP_HW_LOCK_DEFINE() [24/44]

SSP_HW_LOCK_DEFINE (IWDT , 0U , 0U)
IWDT

◆ SSP_HW_LOCK_DEFINE() [25/44]

SSP_HW_LOCK_DEFINE (JPEG , 0U , 0U)
JPEG

◆ SSP_HW_LOCK_DEFINE() [26/44]

SSP_HW_LOCK_DEFINE (KEY , 0U , 0U)
KEY

◆ SSP_HW_LOCK_DEFINE() [27/44]

SSP_HW_LOCK_DEFINE (LPM , 1U , 0U)
LPM

◆ SSP_HW_LOCK_DEFINE() [28/44]

SSP_HW_LOCK_DEFINE (LVD , 0U , 0U)
LVD

◆ SSP_HW_LOCK_DEFINE() [29/44]

SSP_HW_LOCK_DEFINE (MMF , 0U , 0U)
MMF

◆ SSP_HW_LOCK_DEFINE() [30/44]

SSP_HW_LOCK_DEFINE (MPU , 0U , 0U)
MPU

◆ SSP_HW_LOCK_DEFINE() [31/44]

SSP_HW_LOCK_DEFINE (OPS , 0U , 0U)
OPS

◆ SSP_HW_LOCK_DEFINE() [32/44]

SSP_HW_LOCK_DEFINE (PDC , 0U , 0U)
PDC

◆ SSP_HW_LOCK_DEFINE() [33/44]

SSP_HW_LOCK_DEFINE (POEG , 0U , 0U)
POEG

◆ SSP_HW_LOCK_DEFINE() [34/44]

SSP_HW_LOCK_DEFINE (QSPI , 0U , 0U)
QSPI

◆ SSP_HW_LOCK_DEFINE() [35/44]

SSP_HW_LOCK_DEFINE (SPI , 0U , 0U)
SPI

◆ SSP_HW_LOCK_DEFINE() [36/44]

SSP_HW_LOCK_DEFINE (RTC , 0U , 0U)
RTC

◆ SSP_HW_LOCK_DEFINE() [37/44]

SSP_HW_LOCK_DEFINE (SCE , 0U , 0U)
SCE

◆ SSP_HW_LOCK_DEFINE() [38/44]

SSP_HW_LOCK_DEFINE (SCI , 0U , 0U)
SCI

◆ SSP_HW_LOCK_DEFINE() [39/44]

SSP_HW_LOCK_DEFINE (SRC , 0U , 0U)
SRC

◆ SSP_HW_LOCK_DEFINE() [40/44]

SSP_HW_LOCK_DEFINE (SSI , 0U , 0U)
SSI

◆ SSP_HW_LOCK_DEFINE() [41/44]

SSP_HW_LOCK_DEFINE (SDHIMMC , 0U , 0U)
SDHIMMC

◆ SSP_HW_LOCK_DEFINE() [42/44]

SSP_HW_LOCK_DEFINE (TSN , 0U , 0U)
TSN

◆ SSP_HW_LOCK_DEFINE() [43/44]

SSP_HW_LOCK_DEFINE (USB , 0U , 0U)
USB

◆ SSP_HW_LOCK_DEFINE() [44/44]

SSP_HW_LOCK_DEFINE (WDT , 0U , 0U)
WDT

Module Start and Stop

Board Support Package » Supported MCUs » S5D5

Macros

#define	BSP_COMPILE_TIME_ASSERT(e) ((void) sizeof(char[1 - 2 * !(e)]))

Functions

ssp_err_t	R_BSP_ModuleStopAlways (ssp_feature_t const *const p_feature) Stop module (enter module stop) even if the module is used for multiple channels. More...
ssp_err_t	R_BSP_ModuleStart (ssp_feature_t const *const p_feature)

	Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set. More...
ssp_err_t	R_BSP_ModuleStateGet (ssp_feature_t const *const p_feature, bool *const p_stop)

Detailed Description

Module start and stop functions are provided to enable or disable peripherals.

Macro Definition Documentation

◆ BSP_COMPILE_TIME_ASSERT

```
#define BSP_COMPILE_TIME_ASSERT ( e) ((void) sizeof(char[1 - 2 * !(e)]))
```

Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

Function Documentation

◆ R_BSP_ModuleStart()

ssp_err_t R_BSP_ModuleStart (ssp_feature_t const *const *p_feature*)

Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

◆ R_BSP_ModuleStateGet()

ssp_err_t R_BSP_ModuleStateGet (ssp_feature_t const *const *p_feature*, bool *const *p_stop*)

The g_bsp_module_stop array must have entries for each ssp_ip_t enum value.

Save the current module state

◆ R_BSP_ModuleStop()

ssp_err_t R_BSP_ModuleStop (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Note

Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

◆ R_BSP_ModuleStopAlways()

ssp_err_t R_BSP_ModuleStopAlways (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop) even if the module is used for multiple channels.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid

ROM Registers

Board Support Package » Supported MCUs » S5D5

Macros

#define	BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFFF9FFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 9))
#define	BSP_ROM_REG_MPU_CONTROL_SETTING

Detailed Description

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Macro Definition Documentation

◆ BSP_ROM_REG_MPU_CONTROL_SETTING

#define BSP_ROM_REG_MPU_CONTROL_SETTING

```
((0xFFFFFCF0U) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_PC0_ENABL
E << 8) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_PC1_ENABL
E << 9) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION0_E
NABLE) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION1_E
NABLE << 1) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION2_E
NABLE << 2) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION3_E
NABLE << 3))
```

Build up SECMPUAC register based on MPU settings.

◆ BSP_ROM_REG_OFS1_SETTING

#define BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFFF9FFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 9))

OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

5.2.1.10 S5D9

Board Support Package » Supported MCUs

Code that is common to S5D9 MCUs. More...

Modules

	Analog Connections
	Cache Functions
	Clock Initialization
	Hardware Locks
	Module Start and Stop
	ROM Registers

Detailed Description

Code that is common to S5D9 MCUs.

Implements functions that are common to S5D9 MCUs.

Analog Connections

Board Support Package » Supported MCUs » S5D9

Detailed Description

This group contains a list of enumerations that can be used with the Analog Connect Interface.

Enumeration Type Documentation

◆ analog_connect_t

enum analog_connect_t

List of analog connections that can be made on S5D9

Note
This list may change based on device. This list is for S5D9.

Enumerator	
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.

ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P012	Connect ACMPHS0 IVREF to PORT0 P012.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC80_DA	Connect ACMPHS1 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P000	Connect ACMPHS2 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT0_P001	Connect ACMPHS2 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC80_DA	Connect ACMPHS2 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC82_DA	Connect ACMPHS2 IVREF to DAC82 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP0 IVCMP to OPAMP1 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP2_AMPO	Connect ACMPLP1 IVCMP to OPAMP2 AMPO.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.

ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P500	Connect ACMPHS0 IVCMP to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT1_P100	Connect ACMPHS0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT1_P101	Connect ACMPHS0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P109	Connect ACMPLP0 IVREF0 to PORT1 P109.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P110	Connect ACMPLP1 IVREF1 to PORT1 P110.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT4_P400	Connect ACMPLP0 IVCMP to PORT4 P400.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP0_AMPO	Connect ACMPLP0 IVCMP to OPAMP0 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT4_P408	Connect ACMPLP1 IVCMP to PORT4 P408.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP1 IVCMP to OPAMP1 AMPO.

ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_OPAMP0_AMPO_BREAK	Break all connections to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P014	Connect OPAMP0 AMPO to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P013	Connect OPAMP0 AMPO to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P003	Connect OPAMP0 AMPO to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P002	Connect OPAMP0 AMPO to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPM_BREAK	Break all connections to OPAMP0 AMPM.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P501	Connect OPAMP0 AMPM to PORT5 P501.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P500	Connect OPAMP0 AMPM to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P014	Connect OPAMP0 AMPM to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P013	Connect OPAMP0 AMPM to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P003	Connect OPAMP0 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPM_TO_OPAMP0_AMPO	Connect OPAMP0 AMPM to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPP_BREAK	Break all connections to OPAMP0 AMPP.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT5_P500	Connect OPAMP0 AMPP to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P014	Connect OPAMP0 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P013	Connect OPAMP0 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P002	Connect OPAMP0 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPP_TO_DAC120_DA	Connect OPAMP0 AMPP to DAC120 DA.

ANALOG_CONNECT_OPAMP1_AMPM_BREAK	Break all connections to OPAMP1 AMPM.
ANALOG_CONNECT_OPAMP1_AMPM_TO_PORT0_P014	Connect OPAMP1 AMPM to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPM_TO_OPAMP1_AMPO	Connect OPAMP1 AMPM to OPAMP1 AMPO.
ANALOG_CONNECT_OPAMP1_AMPP_BREAK	Break all connections to OPAMP1 AMPP.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P014	Connect OPAMP1 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P013	Connect OPAMP1 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P003	Connect OPAMP1 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P002	Connect OPAMP1 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP1_AMPP_TO_DAC80_DA	Connect OPAMP1 AMPP to DAC80 DA.
ANALOG_CONNECT_OPAMP2_AMPM_BREAK	Break all connections to OPAMP2 AMPM.
ANALOG_CONNECT_OPAMP2_AMPM_TO_PORT0_P003	Connect OPAMP2 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPM_TO_OPAMP2_AMPO	Connect OPAMP2 AMPM to OPAMP2 AMPO.
ANALOG_CONNECT_OPAMP2_AMPP_BREAK	Break all connections to OPAMP2 AMPP.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P003	Connect OPAMP2 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P002	Connect OPAMP2 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP2_AMPP_TO_DAC81_DA	Connect OPAMP2 AMPP to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5	Connect ACMPLP1 IVREF1 to PORT5 P500.

_P500	
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_	

P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P004	Connect ACMPHS0 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P007	Connect ACMPHS0 IVCMP to PORT0 P007.

ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P015	Connect ACMPHS0 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ANALOG0_VREF	Connect ACMPHS0 IVCMP to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P005	Connect ACMPHS0 IVREF to PORT0 P005.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P006	Connect ACMPHS0 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P000	Connect ACMPHS1 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P002	Connect ACMPHS1 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P003	Connect ACMPHS1 IVCMP to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P007	Connect ACMPHS1 IVCMP to PORT0 P007.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P000	Connect ACMPHS1 IVREF to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P001	Connect ACMPHS1 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P002	Connect ACMPHS1 IVREF to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P003	Connect ACMPHS1 IVREF to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P006	Connect ACMPHS1 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.

ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.

ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.

ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.

ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.

ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.

ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.

Cache Functions

Board Support Package » Supported MCUs » S5D9

Enumerations

enum	bsp_cache_state_t

Detailed Description

This module implements cache functions.

Enumeration Type Documentation

◆ bsp_cache_state_t

enum bsp_cache_state_t
Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

Clock Initialization

Board Support Package » Supported MCUs » S5D9

Macros

#define	CGC_SYS_CLOCK_FREQ_NO_RAM_WAITS (60000000U)
#define	CGC_SYS_CLOCK_FREQ_ONE_ROM_WAITS (40000000U)
#define	CGC_SYS_CLOCK_FREQ_TWO_ROM_WAITS (80000000U)
#define	CGC_SRAM_ZERO_WAIT_CYCLES (0U) Specify zero wait states for SRAM.
#define	CGC_SRAM_ONE_WAIT_CYCLES (1U) Specify one wait states for SRAM.

ssp_err_t	bsp_clock_set_callback (bsp_clock_set_callback_args_t *p_args)

Detailed Description

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Macro Definition Documentation

◆ CGC_SYS_CLOCK_FREQ_NO_RAM_WAITS

```
#define CGC_SYS_CLOCK_FREQ_NO_RAM_WAITS   (60000000U)
```

SRAM requires 1 wait state be inserted at ICLK > 60 MHz. SRAMHS is always no wait state

◆ CGC_SYS_CLOCK_FREQ_ONE_ROM_WAITS

```
#define CGC_SYS_CLOCK_FREQ_ONE_ROM_WAITS   (40000000U)
```

FLASH requires 1 wait state be inserted when (40 MHz < ICLK <= 80 MHz)

◆ CGC_SYS_CLOCK_FREQ_TWO_ROM_WAITS

```
#define CGC_SYS_CLOCK_FREQ_TWO_ROM_WAITS   (80000000U)
```

FLASH requires 2 wait states be inserted when (80 MHz < ICLK <= 120 MHz)

Function Documentation

◆ bsp_clock_init()

void bsp_clock_init (void)
Sets up system clocks. MOCO is default clock out of reset. Enable new clock if chosen. Need to start PLL source clock and let it stabilize before starting PLL Set PLL Divider. Set PLL Multiplier. Set PLL Source clock. Wait for PLL clock source to stabilize If the system clock has failed to start call the unrecoverable error handler. Enable ROM cache MOCO, LOCO, and subclock do not have stabilization flags that can be checked. Wait for clock source to stabilize Set which clock to use for system clock and divisors for all system clocks. If the system clock has failed to be configured properly call the unrecoverable error handler. Set USB clock divisor. Configure BCLK Configure SDRAM Clock

◆ bsp_clock_set_callback()

ssp_err_t bsp_clock_set_callback (bsp_clock_set_callback_args_t * *p_args*)
Wait states for low speed RAM (SRAM0 and SRAM1) No wait: ICLK <= 60 MHz 1 wait: ICLK > 60 MHz Calculate the Wait states for ROM Set the wait state BEFORE we change iclk In this case we need to set the wait state AFTER we change iclk

◆ bsp_clocks_rom_wait_get()

__STATIC_INLINE uint32_t bsp_clocks_rom_wait_get (void)

This function gets the value of the ROMWT register.

Return values

MEMWAIT	setting

◆ bsp_clocks_rom_wait_set()

__STATIC_INLINE void bsp_clocks_rom_wait_set (uint8_t *setting*)

This function sets the value of the ROMWT register which is used to specify wait states required when accessing Flash ROM.

Parameters

[in]	setting	The number of wait states to be used.

Return values

none	

◆ bsp_clocks_sram_wait_set()

__STATIC_INLINE void bsp_clocks_sram_wait_set (uint32_t *setting*)

This function sets the RAM wait state settings for the SRAM0, SRAM0 ECC and SRAM1 RAM memory.

Parameters

[in]	setting	The number of wait states to be used.

Return values

none	

◆ bsp_cpu_clock_get()

uint32_t bsp_cpu_clock_get (void)
Returns frequency of CPU clock in Hz. **Return values** Frequency — of the CPU in Hertz

Detailed Description

This file allocates hardware locks used in Atomic Locking.

Function Documentation

◆ SSP_HW_LOCK_DEFINE() [1/44]

SSP_HW_LOCK_DEFINE (ADC , 0U , 0U)
Used to allocated hardware locks. Parameters are as follows: 1. IP name (ssp_ip_t enum without the SSP_IP_ prefix). 2. Unit number (used for blocks with variations like USB, not to be confused with ADC unit). 3. Channel numberADC

◆ SSP_HW_LOCK_DEFINE() [2/44]

SSP_HW_LOCK_DEFINE (AGT , 0U , 0U)
AGT

◆ SSP_HW_LOCK_DEFINE() [3/44]

SSP_HW_LOCK_DEFINE (BSC , 0U , 1U)
BSC

◆ SSP_HW_LOCK_DEFINE() [4/44]

SSP_HW_LOCK_DEFINE (CAC , 0U , 0U)
CAC

◆ SSP_HW_LOCK_DEFINE() [5/44]

SSP_HW_LOCK_DEFINE (CAN , 0U , 0U)
CAN

◆ SSP_HW_LOCK_DEFINE() [6/44]

SSP_HW_LOCK_DEFINE (COMP_HS , 0U , 0U)
COMP_HS

◆ SSP_HW_LOCK_DEFINE() [7/44]

SSP_HW_LOCK_DEFINE (CRC , 0U , 0U)
CRC

◆ SSP_HW_LOCK_DEFINE() [8/44]

SSP_HW_LOCK_DEFINE (CTSU , 0U , 0U)
CTSU

◆ SSP_HW_LOCK_DEFINE() [9/44]

SSP_HW_LOCK_DEFINE (DAAD , 0U , 0U)
DAAD

◆ SSP_HW_LOCK_DEFINE() [10/44]

SSP_HW_LOCK_DEFINE (DAC , 0U , 0U)
DAC

Module Start and Stop

Board Support Package » Supported MCUs » S5D9

Macros

#define	BSP_COMPILE_TIME_ASSERT(e) ((void) sizeof(char[1 - 2 * !(e)]))

Functions

ssp_err_t	R_BSP_ModuleStop (ssp_feature_t const *const p_feature) Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power. More...
ssp_err_t	R_BSP_ModuleStopAlways (ssp_feature_t const *const p_feature) Stop module (enter module stop) even if the module is used for multiple channels. More...
ssp_err_t	R_BSP_ModuleStart (ssp_feature_t const *const p_feature)

	Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set. More...
ssp_err_t	R_BSP_ModuleStateGet (ssp_feature_t const *const p_feature, bool *const p_stop)

Detailed Description

Module start and stop functions are provided to enable or disable peripherals.

Macro Definition Documentation

◆ BSP_COMPILE_TIME_ASSERT

```
#define BSP_COMPILE_TIME_ASSERT ( e) ((void) sizeof(char[1 - 2 * !(e)]))
```

Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

Function Documentation

◆ R_BSP_ModuleStart()

ssp_err_t R_BSP_ModuleStart (ssp_feature_t const *const *p_feature*)

Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

◆ R_BSP_ModuleStateGet()

ssp_err_t R_BSP_ModuleStateGet (ssp_feature_t const *const *p_feature*, bool *const *p_stop*)

The g_bsp_module_stop array must have entries for each ssp_ip_t enum value.

Save the current module state

◆ R_BSP_ModuleStop()

ssp_err_t R_BSP_ModuleStop (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Note

Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

◆ R_BSP_ModuleStopAlways()

ssp_err_t R_BSP_ModuleStopAlways (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop) even if the module is used for multiple channels.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid

ROM Registers

Board Support Package » Supported MCUs » S5D9

Macros

#define	BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFFF9FFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 9))
#define	BSP_ROM_REG_MPU_CONTROL_SETTING

Detailed Description

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Macro Definition Documentation

◆ BSP_ROM_REG_MPU_CONTROL_SETTING

#define BSP_ROM_REG_MPU_CONTROL_SETTING

```
((0xFFFFFCF0U) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_PC0_ENABL
E << 8) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_PC1_ENABL
E << 9) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION0_E
NABLE) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION1_E
NABLE << 1) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION2_E
NABLE << 2) | \
                                       ((uint32_t)BSP_CFG_ROM_REG_MPU_REGION3_E
NABLE << 3))
```

Build up SECMPUAC register based on MPU settings.

◆ BSP_ROM_REG_OFS1_SETTING

#define BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFFF9FFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 9))

OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

```

Detailed Description

This group contains a list of enumerations that can be used with the Analog Connect Interface.

Enumeration Type Documentation

◆ analog_connect_t

enum analog_connect_t	
List of analog connections that can be made on S7G2 ***Note*** *This list may change based on device. This list is for S7G2.*	
Enumerator	
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P012	Connect ACMPHS0 IVREF to PORT0 P012.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC80_DA	Connect ACMPHS1 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P000	Connect ACMPHS2 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT0_P001	Connect ACMPHS2 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC80_DA	Connect ACMPHS2 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC82_DA	Connect ACMPHS2 IVREF to DAC82 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80	Connect ACMPLP0 IVREF0 to DAC80 DA.

_DA	
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP0 IVCMP to OPAMP1 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP2_AMPO	Connect ACMPLP1 IVCMP to OPAMP2 AMPO.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P500	Connect ACMPHS0 IVCMP to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P013	Connect ACMPHS0 IVCMP to PORT0 P013.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT1_P100	Connect ACMPHS0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT1_P101	Connect ACMPHS0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC80_DA	Connect ACMPHS0 IVREF to DAC80 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1	

_P109	Connect ACMPLP0 IVREF0 to PORT1 P109.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P110	Connect ACMPLP1 IVREF1 to PORT1 P110.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT4_P400	Connect ACMPLP0 IVCMP to PORT4 P400.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_OPAMP0_AMPO	Connect ACMPLP0 IVCMP to OPAMP0 AMPO.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT4_P408	Connect ACMPLP1 IVCMP to PORT4 P408.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_OPAMP1_AMPO	Connect ACMPLP1 IVCMP to OPAMP1 AMPO.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_OPAMP0_AMPO_BREAK	Break all connections to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P014	Connect OPAMP0 AMPO to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P013	Connect OPAMP0 AMPO to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P003	Connect OPAMP0 AMPO to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPO_TO_PORT0_P002	Connect OPAMP0 AMPO to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPM_BREAK	Break all connections to OPAMP0 AMPM.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P501	Connect OPAMP0 AMPM to PORT5 P501.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT5_P500	Connect OPAMP0 AMPM to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P	Connect OPAMP0 AMPM to PORT0 P014.

014	
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P013	Connect OPAMP0 AMPM to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPM_TO_PORT0_P003	Connect OPAMP0 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP0_AMPM_TO_OPAMP0_AMPO	Connect OPAMP0 AMPM to OPAMP0 AMPO.
ANALOG_CONNECT_OPAMP0_AMPP_BREAK	Break all connections to OPAMP0 AMPP.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT5_P500	Connect OPAMP0 AMPP to PORT5 P500.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P014	Connect OPAMP0 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P013	Connect OPAMP0 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP0_AMPP_TO_PORT0_P002	Connect OPAMP0 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP0_AMPP_TO_DAC120_DA	Connect OPAMP0 AMPP to DAC120 DA.
ANALOG_CONNECT_OPAMP1_AMPM_BREAK	Break all connections to OPAMP1 AMPM.
ANALOG_CONNECT_OPAMP1_AMPM_TO_PORT0_P014	Connect OPAMP1 AMPM to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPM_TO_OPAMP1_AMPO	Connect OPAMP1 AMPM to OPAMP1 AMPO.
ANALOG_CONNECT_OPAMP1_AMPP_BREAK	Break all connections to OPAMP1 AMPP.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P014	Connect OPAMP1 AMPP to PORT0 P014.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P013	Connect OPAMP1 AMPP to PORT0 P013.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P003	Connect OPAMP1 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP1_AMPP_TO_PORT0_P002	Connect OPAMP1 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP1_AMPP_TO_DAC80_DA	Connect OPAMP1 AMPP to DAC80 DA.
ANALOG_CONNECT_OPAMP2_AMPM_BREAK	Break all connections to OPAMP2 AMPM.
ANALOG_CONNECT_OPAMP2_AMPM_TO_PORT0_P003	Connect OPAMP2 AMPM to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPM_TO_OPAMP2_AMPO	Connect OPAMP2 AMPM to OPAMP2 AMPO.

ANALOG_CONNECT_OPAMP2_AMPP_BREAK	Break all connections to OPAMP2 AMPP.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P003	Connect OPAMP2 AMPP to PORT0 P003.
ANALOG_CONNECT_OPAMP2_AMPP_TO_PORT0_P002	Connect OPAMP2 AMPP to PORT0 P002.
ANALOG_CONNECT_OPAMP2_AMPP_TO_DAC81_DA	Connect OPAMP2 AMPP to DAC81 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.

ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT1_P101	Connect ACMPLP0 IVREF0 to PORT1 P101.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_DAC80_DA	Connect ACMPLP0 IVREF0 to DAC80 DA.
ANALOG_CONNECT_ACMPLP0_IVREF0_TO_PORT5_P502	Connect ACMPLP0 IVREF0 to PORT5 P502.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT1_P103	Connect ACMPLP1 IVREF1 to PORT1 P103.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_DAC81_DA	Connect ACMPLP1 IVREF1 to DAC81 DA.
ANALOG_CONNECT_ACMPLP1_IVREF1_TO_PORT5_P500	Connect ACMPLP1 IVREF1 to PORT5 P500.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT1_P100	Connect ACMPLP0 IVCMP to PORT1 P100.
ANALOG_CONNECT_ACMPLP0_IVCMP_TO_PORT5_P503	Connect ACMPLP0 IVCMP to PORT5 P503.

ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP0 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT1_P102	Connect ACMPLP1 IVCMP to PORT1 P102.
ANALOG_CONNECT_ACMPLP1_IVCMP_TO_PORT5_P501	Connect ACMPLP1 IVCMP to PORT5 P501.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP0_IVREF0	Connect ACMPLP1 IVREF to ACMPLP0 IVREF0.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ACMPLP1_IVREF1	Connect ACMPLP1 IVREF to ACMPLP1 IVREF1.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P004	Connect ACMPHS0 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P007	Connect ACMPHS0 IVCMP to PORT0 P007.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P015	Connect ACMPHS0 IVCMP to PORT0 P015.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ANALOG0_VREF	Connect ACMPHS0 IVCMP to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P005	Connect ACMPHS0 IVREF to PORT0 P005.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P006	Connect ACMPHS0 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT0_P014	Connect ACMPHS0 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P000	Connect ACMPHS1 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P002	Connect ACMPHS1 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P003	Connect ACMPHS1 IVCMP to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P007	Connect ACMPHS1 IVCMP to PORT0 P007.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P015	Connect ACMPHS1 IVCMP to PORT0 P015.

ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P000	Connect ACMPHS1 IVREF to PORT0 P000.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P001	Connect ACMPHS1 IVREF to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P002	Connect ACMPHS1 IVREF to PORT0 P002.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P003	Connect ACMPHS1 IVREF to PORT0 P003.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P006	Connect ACMPHS1 IVREF to PORT0 P006.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT0_P014	Connect ACMPHS1 IVREF to PORT0 P014.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_ANALOG0_VREF	Connect ACMPLP0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP0_IVREF_TO_PORT1_P101	Connect ACMPLP0 IVREF to PORT1 P101.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_ANALOG0_VREF	Connect ACMPLP1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPLP1_IVREF_TO_PORT1_P103	Connect ACMPLP1 IVREF to PORT1 P103.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.

ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.

ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.

ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.

ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.

ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.

ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.

ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT5_P502	Connect ACMPHS0 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_DAC121_DA	Connect ACMPHS0 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_PORT0_P000	Connect ACMPHS0 IVCMP to PORT0 P000.
ANALOG_CONNECT_ACMPHS0_IVCMP_TO_ADC0_PGA0	Connect ACMPHS0 IVCMP to ADC0 PGA0.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P500	Connect ACMPHS0 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_PORT5_P501	Connect ACMPHS0 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_ANALOG0_VREF	Connect ACMPHS0 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS0_IVREF_TO_DAC120_DA	Connect ACMPHS0 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT5_P502	Connect ACMPHS1 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_DAC121_DA	Connect ACMPHS1 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_PORT0_P001	Connect ACMPHS1 IVCMP to PORT0 P001.
ANALOG_CONNECT_ACMPHS1_IVCMP_TO_ADC0_PGA1	Connect ACMPHS1 IVCMP to ADC0 PGA1.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P500	Connect ACMPHS1 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_PORT5_P501	Connect ACMPHS1 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_ANALOG0_VREF	Connect ACMPHS1 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS1_IVREF_TO_DAC120_DA	Connect ACMPHS1 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT5_P502	Connect ACMPHS2 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_DAC121_DA	Connect ACMPHS2 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_PORT0_P002	Connect ACMPHS2 IVCMP to PORT0 P002.
ANALOG_CONNECT_ACMPHS2_IVCMP_TO_ADC0_PGA2	Connect ACMPHS2 IVCMP to ADC0 PGA2.

ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P500	Connect ACMPHS2 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_PORT5_P501	Connect ACMPHS2 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_ANALOG0_VREF	Connect ACMPHS2 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS2_IVREF_TO_DAC120_DA	Connect ACMPHS2 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT5_P502	Connect ACMPHS3 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_DAC121_DA	Connect ACMPHS3 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_PORT0_P004	Connect ACMPHS3 IVCMP to PORT0 P004.
ANALOG_CONNECT_ACMPHS3_IVCMP_TO_ADC1_PGA3	Connect ACMPHS3 IVCMP to ADC1 PGA3.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P500	Connect ACMPHS3 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_PORT5_P501	Connect ACMPHS3 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_ANALOG0_VREF	Connect ACMPHS3 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS3_IVREF_TO_DAC120_DA	Connect ACMPHS3 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT5_P502	Connect ACMPHS4 IVCMP to PORT5 P502.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_DAC121_DA	Connect ACMPHS4 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_PORT0_P005	Connect ACMPHS4 IVCMP to PORT0 P005.
ANALOG_CONNECT_ACMPHS4_IVCMP_TO_ADC1_PGA4	Connect ACMPHS4 IVCMP to ADC1 PGA4.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P500	Connect ACMPHS4 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_PORT5_P501	Connect ACMPHS4 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_ANALOG0_VREF	Connect ACMPHS4 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS4_IVREF_TO_DAC120_DA	Connect ACMPHS4 IVREF to DAC120 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT5_P502	Connect ACMPHS5 IVCMP to PORT5 P502.

ANALOG_CONNECT_ACMPHS5_IVCMP_TO_DAC121_DA	Connect ACMPHS5 IVCMP to DAC121 DA.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_PORT0_P006	Connect ACMPHS5 IVCMP to PORT0 P006.
ANALOG_CONNECT_ACMPHS5_IVCMP_TO_ADC1_PGA5	Connect ACMPHS5 IVCMP to ADC1 PGA5.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P500	Connect ACMPHS5 IVREF to PORT5 P500.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_PORT5_P501	Connect ACMPHS5 IVREF to PORT5 P501.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_ANALOG0_VREF	Connect ACMPHS5 IVREF to ANALOG0 VREF.
ANALOG_CONNECT_ACMPHS5_IVREF_TO_DAC120_DA	Connect ACMPHS5 IVREF to DAC120 DA.

Cache Functions

Board Support Package » Supported MCUs » S7G2

Enumerations

enum bsp_cache_state_t

Detailed Description

This module implements cache functions.

Enumeration Type Documentation

◆ bsp_cache_state_t

enum bsp_cache_state_t

Cache enum. Passed into cache functions such as R_BSP_CacheOff() and R_BSP_CacheSet.

Clock Initialization

Board Support Package » Supported MCUs » S7G2

Macros

#define CGC_SRAM_ZERO_WAIT_CYCLES (0U)

Specify zero wait states for SRAM.

#define	CGC_SRAM_ONE_WAIT_CYCLES (1U) Specify one wait states for SRAM.
#define	CGC_ROM_ZERO_WAIT_CYCLES (0U) Specify zero wait states for ROM.
#define	CGC_ROM_ONE_WAIT_CYCLES (1U) Specify one wait states for ROM.
#define	CGC_ROM_TWO_WAIT_CYCLES (2U) Specify two wait states for ROM.

Detailed Description

Functions in this file configure the system clocks based upon the macros in bsp_clock_cfg.h.

Function Documentation

◆ bsp_clock_init()

void bsp_clock_init (void)

Sets up system clocks.

MOCO is default clock out of reset. Enable new clock if chosen.

Need to start PLL source clock and let it stabilize before starting PLL

Set PLL Divider.

Set PLL Multiplier.

Set PLL Source clock.

Wait for PLL clock source to stabilize

If the system clock has failed to start call the unrecoverable error handler.

MOCO, LOCO, and subclock do not have stabilization flags that can be checked.

Wait for clock source to stabilize

Set which clock to use for system clock and divisors for all system clocks.

If the system clock has failed to be configured properly call the unrecoverable error handler.

Set USB clock divisor.

Configure BCLK

Configure SDRAM Clock

◆ bsp_clock_set_callback()

ssp_err_t bsp_clock_set_callback (bsp_clock_set_callback_args_t * *p_args*)

This function sets the ROM and RAM wait state settings for a requested system clock change (PRE) or a just updated system clock change (POST)

Parameters

[in]	p_args	Pre/Post request and clock frequency information

Return values

return	SSP_SUCCESS

The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0.

< No MEMWAIT cycles

The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0.

< No MEMWAIT cycles

The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0.

The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0.

The current frequency must be less than 32 MHz and the mcu must be in high speed mode, before changing wait cycles to 0.

< No MEMWAIT cycles

Wait states for low speed RAM (SRAM0 and SRAM1)

No wait: ICLK <= 60 MHz

1 wait: ICLK > 60 MHz

Calculate the Wait states for ROM

Set the wait state BEFORE we change iclk

In this case we need to set the wait state AFTER we change iclk

Wait states for low speed RAM (SRAM0 and SRAM1)

No wait: ICLK <= 60 MHz

1 wait: ICLK > 60 MHz

Calculate the Wait states for ROM

Set the wait state BEFORE we change iclk

In this case we need to set the wait state AFTER we change iclk

Wait states for low speed RAM (SRAM0 and SRAM1)

No wait: ICLK <= 60 MHz

1 wait: ICLK > 60 MHz

Calculate the Wait states for ROM

Set the wait state BEFORE we change iclk

In this case we need to set the wait state AFTER we change iclk

◆ bsp_clocks_hsram_wait_set()

__STATIC_INLINE void bsp_clocks_hsram_wait_set (uint32_t *setting*)

This function sets the RAM wait state settings for High Speed RAM memory.

Parameters

[in]	setting	The number of wait states to be used.

Return values

none	

◆ bsp_clocks_rom_wait_get()

__STATIC_INLINE uint32_t bsp_clocks_rom_wait_get (void)

This function gets the value of the ROMWT register.

Return values

MEMWAIT	setting

◆ bsp_clocks_rom_wait_set()

__STATIC_INLINE void bsp_clocks_rom_wait_set (uint8_t *setting*)

This function sets the value of the ROMWT register which is used to specify wait states required when accessing Flash ROM.

Parameters

[in]	setting	The number of wait states to be used.

Return values

none	

◆ bsp_clocks_sram_wait_set()

__STATIC_INLINE void bsp_clocks_sram_wait_set (uint32_t *setting*)

This function sets the RAM wait state settings for both the SRAM0 and SRAM1 RAM memory.

Parameters

[in]	setting	The number of wait states to be used.

Return values

none	

◆ bsp_cpu_clock_get()

uint32_t bsp_cpu_clock_get (void)

Returns frequency of CPU clock in Hz.

Return values

Frequency	of the CPU in Hertz

Function Documentation

◆ SSP_HW_LOCK_DEFINE() [1/44]

SSP_HW_LOCK_DEFINE (ADC , 0U , 0U)
Used to allocated hardware locks. Parameters are as follows: 1. IP name (ssp_ip_t enum without the SSP_IP_ prefix). 2. Unit number (used for blocks with variations like USB, not to be confused with ADC unit). 3. Channel numberADC

◆ SSP_HW_LOCK_DEFINE() [2/44]

SSP_HW_LOCK_DEFINE (AGT , 0U , 0U)
AGT

◆ SSP_HW_LOCK_DEFINE() [3/44]

SSP_HW_LOCK_DEFINE (BSC , 0U , 1U)
BSC

◆ SSP_HW_LOCK_DEFINE() [4/44]

SSP_HW_LOCK_DEFINE (CAC , 0U , 0U)
CAC

◆ SSP_HW_LOCK_DEFINE() [5/44]

SSP_HW_LOCK_DEFINE (CAN , 0U , 0U)
CAN

◆ SSP_HW_LOCK_DEFINE() [6/44]

SSP_HW_LOCK_DEFINE (COMP_HS , 0U , 0U)
COMP_HS

◆ SSP_HW_LOCK_DEFINE() [7/44]

SSP_HW_LOCK_DEFINE (CRC , 0U , 0U)
CRC

◆ SSP_HW_LOCK_DEFINE() [8/44]

SSP_HW_LOCK_DEFINE (CTSU , 0U , 0U)
CTSU

◆ SSP_HW_LOCK_DEFINE() [9/44]

SSP_HW_LOCK_DEFINE (DAAD , 0U , 0U)
DAAD

◆ SSP_HW_LOCK_DEFINE() [10/44]

SSP_HW_LOCK_DEFINE (DAC , 0U , 0U)
DAC

◆ SSP_HW_LOCK_DEFINE() [11/44]

SSP_HW_LOCK_DEFINE (DOC , 0U , 0U)
DOC

◆ SSP_HW_LOCK_DEFINE() [12/44]

SSP_HW_LOCK_DEFINE (DMAC , 0U , 0U)
DMAC

◆ SSP_HW_LOCK_DEFINE() [13/44]

SSP_HW_LOCK_DEFINE (DRW , 0U , 0U)
DRW

◆ SSP_HW_LOCK_DEFINE() [14/44]

SSP_HW_LOCK_DEFINE (DTC , 0U , 0U)
DTC

◆ SSP_HW_LOCK_DEFINE() [15/44]

SSP_HW_LOCK_DEFINE (ELC , 0U , 0U)
ELC

◆ SSP_HW_LOCK_DEFINE() [16/44]

SSP_HW_LOCK_DEFINE (EPTPC , 0U , 0U)
EPTPC

◆ SSP_HW_LOCK_DEFINE() [17/44]

SSP_HW_LOCK_DEFINE (ETHER , 0U , 0U)
ETHER

◆ SSP_HW_LOCK_DEFINE() [18/44]

SSP_HW_LOCK_DEFINE (FCU , 0U , 0U)
FCU

◆ SSP_HW_LOCK_DEFINE() [19/44]

SSP_HW_LOCK_DEFINE (GLCDC , 0U , 0U)
GLCDC

◆ SSP_HW_LOCK_DEFINE() [20/44]

SSP_HW_LOCK_DEFINE (GPT , 0U , 0U)
GPT

◆ SSP_HW_LOCK_DEFINE() [21/44]

SSP_HW_LOCK_DEFINE (ICU , 0U , 0U)
ICU

◆ SSP_HW_LOCK_DEFINE() [22/44]

SSP_HW_LOCK_DEFINE (IIC , 0U , 0U)
IIC

◆ SSP_HW_LOCK_DEFINE() [23/44]

SSP_HW_LOCK_DEFINE (IRDA , 0U , 0U)
IRDA

◆ SSP_HW_LOCK_DEFINE() [24/44]

SSP_HW_LOCK_DEFINE (IWDT , 0U , 0U)
IWDT

◆ SSP_HW_LOCK_DEFINE() [25/44]

SSP_HW_LOCK_DEFINE (JPEG , 0U , 0U)
JPEG

◆ SSP_HW_LOCK_DEFINE() [26/44]

SSP_HW_LOCK_DEFINE (KEY , 0U , 0U)
KEY

◆ SSP_HW_LOCK_DEFINE() [27/44]

SSP_HW_LOCK_DEFINE (LPM , 1U , 0U)
LPM

◆ SSP_HW_LOCK_DEFINE() [28/44]

SSP_HW_LOCK_DEFINE (LVD , 0U , 0U)
LVD

◆ SSP_HW_LOCK_DEFINE() [29/44]

SSP_HW_LOCK_DEFINE (MMF , 0U , 0U)
MMF

◆ SSP_HW_LOCK_DEFINE() [30/44]

SSP_HW_LOCK_DEFINE (MPU , 0U , 0U)
MPU

◆ SSP_HW_LOCK_DEFINE() [31/44]

SSP_HW_LOCK_DEFINE (OPS , 0U , 0U)
OPS

◆ SSP_HW_LOCK_DEFINE() [32/44]

SSP_HW_LOCK_DEFINE (PDC , 0U , 0U)
PDC

◆ SSP_HW_LOCK_DEFINE() [33/44]

SSP_HW_LOCK_DEFINE (POEG , 0U , 0U)
POEG

◆ SSP_HW_LOCK_DEFINE() [34/44]

SSP_HW_LOCK_DEFINE (QSPI , 0U , 0U)
QSPI

◆ SSP_HW_LOCK_DEFINE() [35/44]

SSP_HW_LOCK_DEFINE (SPI , 0U , 0U)
SPI

◆ SSP_HW_LOCK_DEFINE() [36/44]

SSP_HW_LOCK_DEFINE (RTC , 0U , 0U)
RTC

◆ SSP_HW_LOCK_DEFINE() [37/44]

SSP_HW_LOCK_DEFINE (SCE , 0U , 0U)
SCE

◆ SSP_HW_LOCK_DEFINE() [38/44]

SSP_HW_LOCK_DEFINE (SCI , 0U , 0U)
SCI

◆ SSP_HW_LOCK_DEFINE() [39/44]

SSP_HW_LOCK_DEFINE (SRC , 0U , 0U)
SRC

◆ SSP_HW_LOCK_DEFINE() [40/44]

SSP_HW_LOCK_DEFINE (SSI , 0U , 0U)
SSI

◆ SSP_HW_LOCK_DEFINE() [41/44]

SSP_HW_LOCK_DEFINE (SDHIMMC , 0U , 0U)
SDHIMMC

◆ SSP_HW_LOCK_DEFINE() [42/44]

SSP_HW_LOCK_DEFINE (TSN , 0U , 0U)
TSN

◆ SSP_HW_LOCK_DEFINE() [43/44]

SSP_HW_LOCK_DEFINE (USB , 0U , 0U)
USB

◆ SSP_HW_LOCK_DEFINE() [44/44]

SSP_HW_LOCK_DEFINE (WDT , 0U , 0U)
WDT

Module Start and Stop

Board Support Package » Supported MCUs » S7G2

Macros

#define	BSP_COMPILE_TIME_ASSERT(e) ((void) sizeof(char[1 - 2 * !(e)]))

Functions

ssp_err_t	R_BSP_ModuleStop (ssp_feature_t const *const p_feature) Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power. More...
ssp_err_t	R_BSP_ModuleStopAlways (ssp_feature_t const *const p_feature) Stop module (enter module stop) even if the module is used for multiple channels. More...
ssp_err_t	R_BSP_ModuleStart (ssp_feature_t const *const p_feature) Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set. More...
ssp_err_t	R_BSP_ModuleStateGet (ssp_feature_t const *const p_feature, bool *const p_stop)

Detailed Description

Module start and stop functions are provided to enable or disable peripherals.

Macro Definition Documentation

◆ BSP_COMPILE_TIME_ASSERT

#define BSP_COMPILE_TIME_ASSERT (e) ((void) sizeof(char[1 - 2 * !(e)]))
Used to generate a compiler error (divided by 0 error) if the assertion fails. This is used in place of "#error" for expressions that cannot be evaluated by the preprocessor like sizeof().

Function Documentation

◆ R_BSP_ModuleStart()

ssp_err_t R_BSP_ModuleStart (ssp_feature_t const *const *p_feature*)

Start module (cancel module stop). Starting a module enables clocks to the peripheral and allows registers to be set.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is started
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit.

◆ R_BSP_ModuleStateGet()

ssp_err_t R_BSP_ModuleStateGet (ssp_feature_t const *const *p_feature*, bool *const *p_stop*)

The g_bsp_module_stop array must have entries for each ssp_ip_t enum value.

Save the current module state

◆ R_BSP_ModuleStop()

ssp_err_t R_BSP_ModuleStop (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop). Stopping a module disables clocks to the peripheral to save power.

Note

Some module stop bits are shared between peripherals. Modules with shared module stop bits cannot be stopped to prevent unintentionally stopping related modules.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid
SSP_ERR_INVALID_ARGUMENT	Module has no module stop bit, or module stop bit is shared and entering module stop is not supported because it could affect other modules.

◆ R_BSP_ModuleStopAlways()

ssp_err_t R_BSP_ModuleStopAlways (ssp_feature_t const *const *p_feature*)

Stop module (enter module stop) even if the module is used for multiple channels.

Parameters

[in]	p_feature	Pointer to definition of the feature, defined by ssp_feature_t.

Return values

SSP_SUCCESS	Module is stopped
SSP_ERR_ASSERTION	p_feature::id is invalid

ROM Registers

Board Support Package » Supported MCUs » S7G2

Macros

#define	BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFFF9FFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 9))

Detailed Description

Defines MCU registers that are in ROM (e.g. OFS) and must be set at compile-time. All registers can be set using bsp_cfg.h.

Macro Definition Documentation

◆ BSP_ROM_REG_OFS1_SETTING

#define BSP_ROM_REG_OFS1_SETTING (((uint32_t)BSP_CFG_ROM_REG_OFS1 & 0xFFFFF9FFU) | ((uint32_t)BSP_CFG_HOCO_FREQUENCY << 9))
OR in the HOCO frequency setting from bsp_clock_cfg.h with the OFS1 setting from bsp_cfg.h.

5.2.2 Common BSP Code

Board Support Package

Code common to all BSPs. More...

Modules

	Common BSP LED Code and Types Common support for board LEDs.
	Compiler Support
	Software Delay Common function to implement a software delay.
	Error Checking
	Module specific feature overrides
	Grouped Interrupt Support
	Interrupt Initialization
	Atomic Locking

	Register Protection
	BSP_MCU_SBRK

Macros

#define	BSP_IRQ_DISABLED (0xFFU)
#define	SSP_ASSERT_FAIL
#define	SSP_ERROR_LOG(err, module, version)
#define	SSP_ASSERT(a)
#define	SSP_ERROR_RETURN(a, err, module, version)
#define	SSP_CRITICAL_SECTION_DEFINE uint32_t old_mask_level = 0U
#define	SSP_CRITICAL_SECTION_ENTER
#define	SSP_CRITICAL_SECTION_EXIT __set_PRIMASK(old_mask_level)

Functions

ssp_err_t	R_BSP_VersionGet (ssp_version_t *p_version) Set BSP version based on compile time macros. More...
ssp_err_t	R_SSP_VersionGet (ssp_pack_version_t *const p_version) Set SSP version based on compile time macros. More...
void	bsp_init_internal (void *p_args) Default initialization function, used only if bsp_init is not defined in the user application.

Detailed Description

Code common to all BSPs.

Implements functions that are common to all BSPs.

Macro Definition Documentation

◆ BSP_IRQ_DISABLED

#define BSP_IRQ_DISABLED (0xFFU)
Used to signify that an ELC event is not able to be used as an interrupt.

◆ SSP_ASSERT

#define SSP_ASSERT (a)

```
{ \
      if ((a))                      \
      {                            \
           (void) 0;/* Do nothing */ \
      }                            \
      else                         \
      {                            \
           SSP_ASSERT_FAIL;          \
           return SSP_ERR_ASSERTION; \
      }                            \
   }
```

Default assertion calls SSP_ASSERT_FAIL if condition "a" is false. Used to identify incorrect use of API's in SSP functions.

◆ SSP_ASSERT_FAIL

#define SSP_ASSERT_FAIL
Function call to insert before returning assertion error.

◆ SSP_CRITICAL_SECTION_DEFINE

#define SSP_CRITICAL_SECTION_DEFINE uint32_t old_mask_level = 0U
This check is performed to select suitable ASM API with respect to core This macro defines a variable for saving previous mask value

◆ SSP_CRITICAL_SECTION_ENTER

#define SSP_CRITICAL_SECTION_ENTER

```
old_mask_level = __get_PRIMASK(); \
      __set_PRIMASK(1U)
```

This macro defined to get the mask value

◆ SSP_CRITICAL_SECTION_EXIT

#define SSP_CRITICAL_SECTION_EXIT __set_PRIMASK(old_mask_level)

This macro defined to restore the old mask value

◆ SSP_ERROR_LOG

#define SSP_ERROR_LOG (err, module, version)

This function is called before returning an error code. To stop on a runtime error, define ssp_error_log in user code and do required debugging (breakpoints, stack dump, etc) in this function.

◆ SSP_ERROR_RETURN

#define SSP_ERROR_RETURN (a, err, module, version)

```
{ \
      if ((a))                                  \
      {                                        \
           (void) 0; /* Do nothing */           \
     } \
      else                                     \
      {                                        \
           SSP_ERROR_LOG((err), (module), (version)); \
           return (err);                         \
     } \
   }
```

All SSP error codes are returned using this macro. Calls SSP_ERROR_LOG function if condition "a" is false. Used to identify runtime errors in SSP functions.

Function Documentation

◆ R_BSP_VersionGet()

ssp_err_t R_BSP_VersionGet (ssp_version_t * *p_version*)

Set BSP version based on compile time macros.

Parameters

[out]	p_version	Memory address to return version information to.

Return values

SSP_SUCCESS	Version information stored.
SSP_ERR_ASSERTION	The parameter p_version is NULL.

◆ R_SSP_VersionGet()

ssp_err_t R_SSP_VersionGet (ssp_pack_version_t *const *p_version*)

Set SSP version based on compile time macros.

Parameters

[out]	p_version	Memory address to return version information to.

Return values

SSP_SUCCESS	Version information stored.
SSP_ERR_ASSERTION	The parameter p_version is NULL.

5.2.2.1 Common BSP LED Code and Types

Board Support Package » Common BSP Code

Common support for board LEDs. More...

Data Structures

struct	bsp_leds_t

ssp_err_t	R_BSP_LedsGet (bsp_leds_t *p_leds)

	Return information about the LEDs on the current board. More...

Detailed Description

Common support for board LEDs.

Contains types and functions that allow for common use of LEDs on boards

Function Documentation

◆ R_BSP_LedsGet()

ssp_err_t R_BSP_LedsGet (bsp_leds_t * *p_leds*)

Return information about the LEDs on the current board.

Structure with LED information.

Parameters

[out]	p_leds	Pointer to structure where LED info is stored.

bsp_leds_t Struct Reference

Board Support Package » Common BSP Code » Common BSP LED Code and Types

#include <bsp_common_leds.h>

Data Fields

uint16_t	led_count The number of LEDs on this board.
ioport_port_pin_t const *	p_leds Pointer to an array of IOPORT pins for controlling LEDs.

Detailed Description

Information on how many LEDs and what pins they are on.

The documentation for this struct was generated from the following file:

- bsp_common_leds.h

5.2.2.2 Compiler Support

Board Support Package » Common BSP Code

Detailed Description

The macros in this file are defined based upon which compiler is being used. The macros abstract common section names and gives a common way to place code in a particular section. Some macros have a version that ends in V2. These were created to unify the usage between compilers while retaining backwards compatibility in the existing macros and should be preferred in new code.

Description of macros:

- BSP_SECTION_STACK - Name of section where stack(s) are stored
- BSP_SECTION_HEAP - Name of section where heap(s) are stored
- BSP_SECTION_VECTOR - Name of section where vector table is stored
- BSP_SECTION_ROM_REGISTERS - Name of section where ROM registers are located
- BSP_PLACE_IN_SECTION - Macro for placing code in a particular section
- BSP_ALIGN_VARIABLE - Macro for specifiying a minimum alignment in bytes
- BSP_PACKED - Macro for setting a 1 byte alignment to remove padding
- BSP_DONT_REMOVE - Keyword to tell linker/compiler to not optimize out a variable or function

Note

Currently supported compilers are GCC and IAR

5.2.2.3 Software Delay

Board Support Package » Common BSP Code

Common function to implement a software delay. More...

Functions

void	R_BSP_SoftwareDelay (uint32_t delay, bsp_delay_units_t units) Delay the specified duration in units and return. More...

Detailed Description

Common function to implement a software delay.

Implements a software delay function for all BSPs.

Function Documentation

◆ R_BSP_SoftwareDelay()

void R_BSP_SoftwareDelay (uint32_t *delay*, bsp_delay_units_t *units*)

Delay the specified duration in units and return.

Parameters

[in]	delay	The number of 'units' to delay.
[in]	units	The 'base' (bsp_delay_units_t) for the units specified. Valid values are: BSP_DELAY_UNITS_SECONDS, BSP_DELAY_UNITS_MILLISECONDS, BSP_DELAY_UNITS_MICROSECONDS. For example: At 1 MHz one cycle takes 1 microsecond (.000001 seconds). At 12 MHz one cycle takes 1/12 microsecond or 83 nanoseconds. Therefore one run through software_delay_loop() takes: ~ (83 * DELAY_LOOP_CYCLES) or 332 ns. A delay of 2 us therefore requires 2000ns/332ns or 6 loops.

The 'theoretical' maximum delay that may be obtained is determined by a full 32 bit loop count and the system clock rate. @240MHz: ((0xFFFFFFFF loops * 4 cycles /loop) / 240000000) = 71 seconds. @32MHz: ((0xFFFFFFFF loops * 4 cycles /loop) / 32000000) = 536 seconds

Note that requests for very large delays will be affected by rounding in the calculations and the actual delay achieved may be slightly less. @32 MHz, for example, a request for 532 seconds will be closer to 536 seconds.

Note also that if the calculations result in a loop_cnt of zero, the software_delay_loop() function is not called at all. In this case the requested delay is too small (nanoseconds) to be carried out by the loop itself, and the overhead associated with executing the code to just get to this point has certainly satisfied the requested delay.

Note

This function calls bsp_cpu_clock_get() which ultimately calls R_CGC_SystemClockFreqGet() and therefore requires that the BSP has already initialized the CGC (which it does as part of the Sysinit). Care should be taken to ensure this remains the case if in the future this function were to be called as part of the BSP initialization.

Return values

None.	

Convert the requested time to microseconds.

Get the system clock frequency in Hz.

Get the # of nanoseconds/cycle.

Only delay if the supplied parameters constitute a delay.

5.2.2.4 Error Checking

Board Support Package » Common BSP Code

Macros

#define	BSP_STACK_ALIGNMENT (8)

Detailed Description

This file performs build time error checking where possible.

Macro Definition Documentation

◆ BSP_STACK_ALIGNMENT

#define BSP_STACK_ALIGNMENT (8)
Stacks (and heap) must be sized and aligned to an integer multiple of this number.

5.2.2.5 Module specific feature overrides

Board Support Package » Common BSP Code

void	R_BSP_FeatureLPMV2Get (bsp_feature_lpmv2_t *p_lpmv2_feature)
void	R_BSP_FeatureRIICGet (bsp_feature_riic_t *p_riic_feature)

Detailed Description

This group contains lookup functions that provide MCU specific feature information that is not available in the factory flash.

Function Documentation

◆ R_BSP_FeatureAcmphsGet()

void R_BSP_FeatureAcmphsGet (bsp_feature_acmphs_t * *p_acmphs_feature*)

Get MCU specific ACMPHS features

Parameters

[out]	p_acmphs_feature	Pointer to structure to store ACMPHS features.

◆ R_BSP_FeatureAdcGet()

void R_BSP_FeatureAdcGet (bsp_feature_adc_t * *p_adc_feature*)

Get MCU specific ADC features

Parameters

[out]	p_adc_feature	Pointer to structure to store ADC features.

◆ R_BSP_FeatureCanGet()

void R_BSP_FeatureCanGet (bsp_feature_can_t * *p_can_feature*)

Get MCU specific CAN features

Parameters

[out]	p_can_feature	Pointer to structure to store CAN features.

◆ R_BSP_FeatureCgcGet()

void R_BSP_FeatureCgcGet (bsp_feature_cgc_t const ** *pp_cgc_feature*)

Get MCU specific CGC features

Parameters

[out]	pp_cgc_feature	Pointer to structure to store pointer to CGC features.

◆ R_BSP_FeatureCtsuGet()

void R_BSP_FeatureCtsuGet (bsp_feature_ctsu_t * *p_ctsu_feature*)

Get MCU specific CTSU features

Parameters

[out]	p_ctsu_feature	Pointer to structure to store CTSU features.

◆ R_BSP_FeatureDacGet()

void R_BSP_FeatureDacGet (bsp_feature_dac_t * *p_dac_feature*)

Get MCU specific DAC features

Parameters

[out]	p_dac_feature	Pointer to structure to store DAC features.

◆ R_BSP_FeatureFlashLpGet()

void R_BSP_FeatureFlashLpGet (bsp_feature_flash_lp * *p_flash_lp_feature*)

Get MCU specific FLASH LP features

Parameters

[out]	p_flash_lp_feature	Pointer to structure to store Flash LP features.

S124 uses 1 macro of 128K and single access for Code Flash. It can therefore access 128K as a single macro and it's Code Flash memory is effectively organized as a single macro of 128K, yielding a total of 128K Code Flash.

S128 uses 1 macro of 256K and single access for Code Flash. It can therefore access 256K as a single macro and it's Code Flash memory is effectively organized as a single macro of 256K, yielding a total of 256K Code Flash.

S1JA uses 2 macros of 128K and double access for Code Flash. It can therefore access 256K as a single macro and it's Code Flash memory is effectively organized as 1 macro of 256K each, yielding a total of 256K Code Flash.

S3A1 uses 4 macros of 256K and double access for Code Flash. It can therefore access 512K as a single macro and it's Code Flash memory is effectively organized as 2 macros of 512K each, yielding a total of 1MB Code Flash. This generates a macro boundary at 512K which is important for blank checking.

S3A7 uses 4 macros of 256K and double access for Code Flash. It can therefore access 512K as a single macro and it's Code Flash memory is effectively organized as 2 macros of 512K each, yielding a total of 1MB Code Flash. This generates a macro boundary at 512K which is important for blank checking.

◆ R_BSP_FeatureICUGet()

void R_BSP_FeatureICUGet (bsp_feature_icu_t * *p_icu_feature*)

Get MCU specific DMAC features

Parameters

[out]	p_icu_feature	Pointer to structure to store DMAC features.

◆ R_BSP_FeatureIoportGet()

void R_BSP_FeatureIoportGet (bsp_feature_ioport_t * *p_ioport_feature*)

Get MCU specific I/O port features

Parameters

[out]	p_ioport_feature	Pointer to structure to store I/O port features.

◆ R_BSP_FeatureLPMV2Get()

void R_BSP_FeatureLPMV2Get (bsp_feature_lpmv2_t * *p_lpmv2_feature*)

Get MCU specific LPMV2 features

Parameters

[out]	p_lpmv2_feature	Pointer to structure to store LPMV2 features.

◆ R_BSP_FeatureLvdGet()

void R_BSP_FeatureLvdGet (bsp_feature_lvd_t * *p_lvd_feature*)

Get MCU specific LVD features.

Parameters

[out]	p_lvd_feature	Pointer to structure to store LVD features.

◆ R_BSP_FeatureOpampGet()

void R_BSP_FeatureOpampGet (bsp_feature_opamp_t *const *p_opamp_feature*)

Get MCU specific OPAMP features

Parameters

[out]	p_opamp_feature	Pointer to structure to store OPAMP features.

◆ R_BSP_FeatureRIICGet()

void R_BSP_FeatureRIICGet (bsp_feature_riic_t * *p_riic_feature*)

Get MCU specific RIIC features

Parameters

[out]	p_riic_feature	Pointer to structure to store RIIC features.

< Initialize the input rise time for standard and fast mode

< Initialize the input rise time for fastplus mode

< Initialize the input rise time for standard and fast mode

◆ R_BSP_FeatureRspiGet()

void R_BSP_FeatureRspiGet (bsp_feature_rspi_t * *p_rspi_feature*)

Get MCU specific RSPI features.

Parameters

[out]	p_rspi_feature	Pointer to structure to store RSPI features.

◆ R_BSP_FeatureSciGet()

void R_BSP_FeatureSciGet (bsp_feature_sci_t * *p_sci_feature*)

Get MCU specific SCI features.

Parameters

[out]	p_sci_feature	Pointer to structure to store SCI features.

◆ R_BSP_FeatureSdhiGet()

void R_BSP_FeatureSdhiGet (bsp_feature_sdhi_t * *p_sdhi_feature*)

Get MCU specific SDHI features

Parameters

[out]	p_sdhi_feature	Pointer to structure to store SDHI features.

◆ R_BSP_FeatureSsiGet()

void R_BSP_FeatureSsiGet (bsp_feature_ssi_t * *p_ssi_feature*)

Get MCU specific SSI features

Parameters

[out]	p_ssi_feature	Pointer to structure to store SSI features.

bsp_feature_sci_t Struct Reference

Board Support Package » Common BSP Code » Module specific feature overrides

#include <bsp_feature.h>

Data Fields

uint8_t	clock Which clock the SCI is connected to.

Detailed Description

SCI MCU specific features.

The documentation for this struct was generated from the following file:

- bsp_feature.h

bsp_feature_rspi_t Struct Reference

Board Support Package » Common BSP Code » Module specific feature overrides

#include <bsp_feature.h>

Data Fields

uint8_t	clock Which clock the RSPI is connected to.

Detailed Description

RSPI MCU specific features.

The documentation for this struct was generated from the following file:

- bsp_feature.h

bsp_feature_lvd_t Struct Reference

Board Support Package » Common BSP Code » Module specific feature overrides

#include <bsp_feature.h>

Data Fields

uint8_t	monitor_1_low_threshold Monitor 1 lowest valid voltage threshold.
uint8_t	monitor_1_hi_threshold Monitor 1 highest valid voltage threshold.
uint8_t	monitor_2_low_threshold Monitor 2 lowest valid voltage threshold.
uint8_t	monitor_2_hi_threshold Monitor 2 highest valid voltage threshold.
uint32_t	has_digital_filter: 1 Whether or not LVD has a digital filter.
uint32_t	negation_delay_clock Clock required for LVD signal negation delay after reset.

Detailed Description

LVD MCU specific features.

The documentation for this struct was generated from the following file:

Data Fields

uint8_t	has_ethernet: 1 Whether or not MCU has Ethernet port configurations.
uint8_t	has_vbatt_pins: 1 Whether or not MCU has pins on vbatt domain.

Detailed Description

I/O port MCU specific features.

The documentation for this struct was generated from the following file:

- bsp_feature.h

bsp_feature_cgc_t Struct Reference

Board Support Package » Common BSP Code » Module specific feature overrides

#include <bsp_feature.h>

Data Fields

uint32_t	high_speed_freq_hz Frequency above which high speed mode must be used.

uint32_t	middle_speed_max_freq_hz Max frequency for middle speed, 0 indicates not available.
uint32_t	low_speed_max_freq_hz Max frequency for low speed, 0 indicates not available.
uint32_t	low_voltage_max_freq_hz Max frequency for low voltage, 0 indicates not available.
uint32_t	low_speed_pclk_div_min Minimum divisor for peripheral clocks when using oscillator stop detect.
uint32_t	low_voltage_pclk_div_min Minimum divisor for peripheral clocks when using oscillator stop detect.
uint32_t	hoco_freq_hz HOCO frequency.
uint32_t	main_osc_freq_hz Main oscillator frequency.
uint8_t	modrv_mask Mask for MODRV in MOMCR.
uint8_t	modrv_shift Offset of lowest bit of MODRV in MOMCR.
uint8_t	sodrv_mask Mask for SODRV in SOMCR.
uint8_t	sodrv_shift Offset of lowest bit of SODRV in SOMCR.

uint8_t	pll_div_max Maximum PLL divisor.
uint8_t	pll_mul_min Minimum PLL multiplier.
uint8_t	pll_mul_max Maximum PLL multiplier.
uint8_t	mainclock_drive Main clock drive capacity.
uint32_t	iclk_div: 4 ICLK divisor.
uint32_t	pllccr_type: 2 0: No PLL, 1: PLLCCR, 2: PLLCCR2
uint32_t	pll_src_configurable: 1 Whether or not PLL clock source is configurable.
uint32_t	has_subosc_speed: 1 Whether or not MCU has subosc speed mode.
uint32_t	has_lcd_clock: 1 Whether or not MCU has LCD clock.
uint32_t	has_sdram_clock: 1 Whether or not MCU has SDRAM clock.
uint32_t	has_usb_clock_div: 1 Whether or not MCU has USB clock divisor.

uint32_t	has_pclka: 1 Whether or not MCU has PCLKA clock.
uint32_t	has_pclkb: 1 Whether or not MCU has PCLKB clock.
uint32_t	has_pclkc: 1 Whether or not MCU has PCLKC clock.
uint32_t	has_pclkd: 1 Whether or not MCU has PCLKD clock.
uint32_t	has_fclk: 1 Whether or not MCU has FCLK clock.
uint32_t	has_bclk: 1 Whether or not MCU has BCLK clock.
uint32_t	has_sdadc_clock: 1 Whether or not MCU has SDADC clock.
uint32_t	set_bck_with_pckb: 1 Whether or not BCK bits should be set with PCKB bits.

Detailed Description

CGC MCU specific features.

The documentation for this struct was generated from the following file:

- bsp_feature.h

bsp_feature_opamp_t Struct Reference

Board Support Package » Common BSP Code » Module specific feature overrides

#include <bsp_feature.h>

Data Fields

uint16_t	min_wait_time_lp_us Minimum wait time in low power mode.
uint16_t	min_wait_time_ms_us Minimum wait time in middle speed mode.
uint16_t	min_wait_time_hs_us Minimum wait time in high speed mode.

Detailed Description

OPAMP MCU specific features.

The documentation for this struct was generated from the following file:

- bsp_feature.h

5.2.2.6 Grouped Interrupt Support

Board Support Package » Common BSP Code

Functions

ssp_err_t	R_BSP_GroupIrqWrite (bsp_grp_irq_t irq, void(*p_callback)(bsp_grp_irq_t irq)) Register a callback function for supported interrupts. If NULL is passed for the callback argument then any previously registered callbacks are unregistered. More...
void	NMI_Handler (void) Non-maskable interrupt handler. This exception is defined by the BSP, unlike other system exceptions, because there are many sources that map to the NMI exception. More...

Detailed Description

Support for grouped interrupts. Grouped interrupts occur when multiple interrupt events trigger the same interrupt vector. When this common vector is triggered the activation source must be discovered. The functions in this file allow users to register a callback function for a single interrupt source in an interrupt group.

Function Documentation

◆ NMI_Handler()

void NMI_Handler (void)
Non-maskable interrupt handler. This exception is defined by the BSP, unlike other system exceptions, because there are many sources that map to the NMI exception. Determine what is the cause of this interrupt. IWDT underflow/refresh error interrupt is requested. Clear IWDT flag. WDT underflow/refresh error interrupt is requested. Clear WDT flag. ◆ R_BSP_GroupIrqWrite()

ssp_err_t R_BSP_GroupIrqWrite (bsp_grp_irq_t *irq*, void(*)(bsp_grp_irq_t irq) *p_callback*)

Register a callback function for supported interrupts. If NULL is passed for the callback argument then any previously registered callbacks are unregistered.

Parameters

[in]	irq	Interrupt for which to register a callback.
[in]	p_callback	Pointer to function to call when interrupt occurs.

Return values

SSP_SUCCESS	Callback registered

Check for valid address.

Callback was NULL. De-register callback.

Register callback.

Check for valid address.

Callback was NULL. De-register callback.

Register callback.

Check for valid address.

Callback was NULL. De-register callback.

Register callback.

5.2.2.7 Interrupt Initialization

Board Support Package » Common BSP Code

Functions

void	R_BSP_IrqStatusClear (IRQn_Type irq) Clear the interrupt status flag (IR) for a given interrupt. When an interrupt is triggered the IR bit is set. If it is not cleared in the ISR then the interrupt will trigger again immediately. More...
void	bsp_irq_cfg (void) Using the vector table information section that has been built by the linker and placed into ROM in the .vector_info. section, this function will initialize the ICU so that configured ELC events will trigger

	interrupts in the NVIC.

Detailed Description

This module configures certain ELC events so that they can trigger NVIC interrupts. Which events are used as interrupts depends on settings in bsp_irq_cfg.h.

Function Documentation

◆ R_BSP_IrqStatusClear()

void R_BSP_IrqStatusClear (IRQn_Type *irq*)

Clear the interrupt status flag (IR) for a given interrupt. When an interrupt is triggered the IR bit is set. If it is not cleared in the ISR then the interrupt will trigger again immediately.

Parameters

[in]	irq	Interrupt for which to clear the IR bit. Note that the enums listed for IRQn_Type are only those for the Cortex Processor Exceptions Numbers. In prior releases this list contained all of the interrupts enabled for the specfic MCU but enabled interrupts are now configured using the SSP_VECTOR_DEFINE macro.

Note

This does not work for system exceptions where the IRQn_Type value is < 0.

5.2.2.8 Atomic Locking

Board Support Package » Common BSP Code

Data Structures

struct	bsp_lock_t

Functions

ssp_err_t	R_BSP_SoftwareLock (bsp_lock_t *p_lock) Attempt to acquire the lock that has been sent in. More...
void	R_BSP_SoftwareUnlock (bsp_lock_t *p_lock)

	Release hold on lock. More...
ssp_err_t	R_BSP_HardwareLock (ssp_feature_t const *const p_feature) Attempt to reserve a hardware resource lock. More...
void	R_BSP_HardwareUnlock (ssp_feature_t const *const p_feature) Release hold on lock. More...
void	bsp_init_hardware_locks (void) Initialize all of the hardware locks to BSP_LOCK_UNLOCKED.
void	R_BSP_SoftwareLockInit (bsp_lock_t *p_lock) Initialize lock value to be unlocked. More...

Detailed Description

This module implements atomic locking mechanisms.

Function Documentation

◆ R_BSP_HardwareLock()

ssp_err_t R_BSP_HardwareLock (ssp_feature_t const *const *p_feature*)

Attempt to reserve a hardware resource lock.

Parameters

[in]	p_feature	Pointer to the module specific feature information.

Return values

SSP_SUCCESS	Lock was acquired
SSP_ERR_IN_USE	Lock was not acquired

◆ R_BSP_HardwareUnlock()

void R_BSP_HardwareUnlock (ssp_feature_t const *const *p_feature*)

Release hold on lock.

Parameters

[in]	p_feature	Pointer to the module specific feature information.

◆ R_BSP_SoftwareLock()

ssp_err_t R_BSP_SoftwareLock (bsp_lock_t * *p_lock*)

Attempt to acquire the lock that has been sent in.

Parameters

[in]	p_lock	Pointer to the structure which contains the lock to be acquired.

Return values

SSP_SUCCESS	Lock was acquired
SSP_ERR_IN_USE	Lock was not acquired

◆ R_BSP_SoftwareLockInit()

void R_BSP_SoftwareLockInit (bsp_lock_t * *p_lock*)

Initialize lock value to be unlocked.

Parameters

[in]	p_lock	Pointer to the structure which contains the lock to initialize.

◆ R_BSP_SoftwareUnlock()

void R_BSP_SoftwareUnlock (bsp_lock_t * *p_lock*)
Release hold on lock. **Parameters** [in] p_lock — Pointer to the structure which contains the lock to unlock.

bsp_lock_t Struct Reference

Board Support Package » Common BSP Code » Atomic Locking

#include <bsp_locking.h>

Data Fields

uint8_t	lock A uint8_t is used instead of a enum because the size must be 8-bits.

Detailed Description

Lock structure. Passed into software locking functions such as R_BSP_SoftwareLock() and R_BSP_SoftwareUnLock.

The documentation for this struct was generated from the following file:

- bsp_locking.h

5.2.2.9 Register Protection

Board Support Package » Common BSP Code

Functions

void	R_BSP_RegisterProtectEnable (bsp_reg_protect_t regs_to_protect) Enable register protection. Registers that are protected cannot be written to. Register protection is enabled by using the Protect Register (PRCR) and the MPC's Write-Protect Register (PWPR). More...

void	R_BSP_RegisterProtectDisable (bsp_reg_protect_t regs_to_unprotect) Disable register protection. Registers that are protected cannot be written to. Register protection is disabled by using the Protect Register (PRCR) and the MPC's Write-Protect Register (PWPR). More...
void	bsp_register_protect_open (void) Initializes variables needed for register protection functionality. More...

Detailed Description

Important registers are write protected. This module provides APIs for configuring the protection of these registers. Reference counters are used to ensure proper operation.

Function Documentation

◆ bsp_register_protect_open()

void bsp_register_protect_open (void)
Initializes variables needed for register protection functionality. Initialize reference counters to 0.

◆ R_BSP_RegisterProtectDisable()

void R_BSP_RegisterProtectDisable (bsp_reg_protect_t *regs_to_unprotect*)
Disable register protection. Registers that are protected cannot be written to. Register protection is disabled by using the Protect Register (PRCR) and the MPC's Write-Protect Register (PWPR). **Parameters** [in] regs_to_unprotect — Registers which have write protection disabled. Get/save the current state of interrupts Disable protection using PRCR register. When writing to the PRCR register the upper 8-bits must be the correct key. Set lower bits to 0 to disable writes. Increment the protect counter Restore the interrupt state

◆ R_BSP_RegisterProtectEnable()

void R_BSP_RegisterProtectEnable (bsp_reg_protect_t *regs_to_protect*)
Enable register protection. Registers that are protected cannot be written to. Register protection is enabled by using the Protect Register (PRCR) and the MPC's Write-Protect Register (PWPR). **Parameters** [in] regs_to_protect — Registers which have write protection enabled. Get/save the current state of interrupts Enable protection using PRCR register. When writing to the PRCR register the upper 8-bits must be the correct key. Set lower bits to 0 to disable writes. Restore the interrupt state

5.2.2.10 BSP_MCU_SBRK

Board Support Package » Common BSP Code

Functions

caddr_t _sbrk (int incr)

SSP implementation of the standard library _sbrk() function. More...

Detailed Description

Function Documentation

◆ _sbrk()

caddr_t _sbrk (int *incr*)

SSP implementation of the standard library _sbrk() function.

Parameters

[in]	incr	The number of bytes being asked for by malloc().

Note

This function overrides the _sbrk version that exists in the newlib library that is linked with. That version improperly relies on the SP as part of it's allocation strategy. This is bad in general and worse in an RTOS environment. This version insures that we allocate the byte pool requested by malloc() only from our allocated HEAP area. Also note that newlib is pre-built and forces the pagesize used by malloc() to be 4096. That requires that we have a HEAP of at least 4096 if we are to support malloc().

Return values

Address	of allocated area if successful, -1 otherwise.

< Defined by the linker.

< Defined by the linker.

Need to align heap to word boundary, else will get

hard faults on Cortex-M0. So we assume that heap starts on

word boundary, hence make sure we always add a multiple of

4 to it.

< align value to 4

Heap has overflowed

Chapter 6 Structure Index

This section lists SSP structures.

6.1 Data Structures

This section includes SSP structures and members.

RBLE_GATT_RELIABLE_WRITE	Reliable Structure
RBLE_GATT_SET_DATA	Set Data Structure
RBLE_GATT_SET_PERM	Set Permission Structure
RBLE_GATT_SVC_128_LIST	Data list for service result - 128bit
RBLE_GATT_SVC_LIST	Data list for service result
RBLE_GATT_SVC_RANGE_LIST	Service range
RBLE_GATT_UUID_TYPE	UUID with different length Structure
RBLE_GATT_WRITE_CHAR_REQ	Write Characteristic Request Structure
RBLE_GATT_WRITE_RELIABLE_REQ	Write Reliable Characteristic Request Structure
RBLE_GATT_WRITE_RESP	Write Response Structure
riic_extended_cfg	
riic_instance_ctrl_t	
riic_slave_instance_ctrl_t	
rsa_api_t	
rsa_cfg_t	
rsa_ctrl_t	
rsa_instance_t	
rsa_key_t	
rspi_access_delay_t	
rspi_clock_delay_t	
rspi_instance_ctrl_t	
rspi_loopback_t	
rspi_mosi_idle_t	
rspi_parity_t	
rspi_ssl_negation_delay_t	
rspi_ssl_polarity_t	
rtc_alarm_time_t	
rtc_api_t	
rtc_callback_args_t	
rtc_cfg_t	
rtc_error_adjustment_cfg_t	
rtc_error_adjustment_mode_cfg_t	
rtc_info_t	
rtc_instance_ctrl_t	

6.1.1 d1_device_synergy Struct Reference

#include <sf_tes_2d_drw_base.h>

Detailed Description

Device handle type definition for Synergy implementation.

The documentation for this struct was generated from the following file:

- sf_tes_2d_drw_base.h

6.1.2 NX_DES Struct Reference

#include <nx_des.h>

Detailed Description

NetX Component DES Encryption Standard (DES)

The documentation for this struct was generated from the following file:

- nx_des.h

6.1.3 NX_IPV6_HEADER Struct Reference

#include <nx_ipv6.h>

Detailed Description

NetX Component Internet Protocol version 6 (IPv6)

The documentation for this struct was generated from the following file:

- nx_ipv6.h

6.1.4 NX_MD5 Struct Reference

#include <nx_md5.h>

Detailed Description

NetX Component MD5 Digest Algorithm (MD5)

The documentation for this struct was generated from the following file:

- nx_md5.h

6.1.5 NX_SECURE_TLS_PHASH_SCE Struct Reference

#include <nx_crypto_phash_sce.h>

Detailed Description

NetX Secure Component Transport Layer Security (TLS)

The documentation for this struct was generated from the following file:

- nx_crypto_phash_sce.h

6.1.6 NX_SECURE_TLS_PRF_1_SCE Struct Reference

#include <nx_crypto_tls_prf_1_sce.h>

Detailed Description

NetX Secure Component Transport Layer Security (TLS)

The documentation for this struct was generated from the following file:

- nx_crypto_tls_prf_1_sce.h

6.1.7 NX_SECURE_TLS_PRF_SHA_256_SCE Struct Reference

#include <nx_crypto_tls_prf_sha256_sce.h>

Detailed Description

NetX Secure Component Transport Layer Security (TLS)

The documentation for this struct was generated from the following file:

- nx_crypto_tls_prf_sha256_sce.h

6.1.8 NX_SHA1 Struct Reference

#include <nx_sha1.h>

Detailed Description

NetX Component SHA1 Digest Algorithm (SHA1)

The documentation for this struct was generated from the following file:

- nx_sha1.h

6.1.9 RBLE_GATT_CHAR_128_LIST Struct Reference

Data list for characteristic result - 128bit. More...

#include <rble_api.h>

Data Fields

uint16_t	attr_hdl
uint8_t	prop
uint16_t	pointer_hdl
uint8_t	uuid [RBLE_GATT_128BIT_UUID_OCTET]

Detailed Description

Data list for characteristic result - 128bit.

Field Documentation

◆ attr_hdl

uint16_t RBLE_GATT_CHAR_128_LIST::attr_hdl
database element handle

◆ pointer_hdl

uint16_t RBLE_GATT_CHAR_128_LIST::pointer_hdl
pointer handle to UUID

◆ prop

uint8_t RBLE_GATT_CHAR_128_LIST::prop
properties

◆ uuid

uint8_t RBLE_GATT_CHAR_128_LIST::uuid[RBLE_GATT_128BIT_UUID_OCTET]
characteristic UUID

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.10 RBLE_GATT_CHAR_DESC_128_LIST Struct Reference

Special data list for descriptor result - 128bit. More...

#include <rble_api.h>

Data Fields

uint16_t	attr_hdl
uint8_t	uuid [RBLE_GATT_128BIT_UUID_OCTET]

Detailed Description

Special data list for descriptor result - 128bit.

Field Documentation

◆ attr_hdl

uint16_t RBLE_GATT_CHAR_DESC_128_LIST::attr_hdl
database element handle

◆ uuid

uint8_t RBLE_GATT_CHAR_DESC_128_LIST::uuid[RBLE_GATT_128BIT_UUID_OCTET]
128-bit descriptor UUID

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.11 RBLE_GATT_CHAR_DESC_LIST Struct Reference

Special data list for descriptor result. More...

#include <rble_api.h>

Data Fields

uint16_t	attr_hdl
uint16_t	desc_hdl

Detailed Description

Special data list for descriptor result.

Field Documentation

◆ attr_hdl

uint16_t RBLE_GATT_CHAR_DESC_LIST::attr_hdl
database element handle

◆ desc_hdl

uint16_t RBLE_GATT_CHAR_DESC_LIST::desc_hdl
descriptor UUID

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.12 RBLE_GATT_CHAR_LIST Struct Reference

Data list for characteristic result. More...

#include <rble_api.h>

Data Fields

uint16_t	attr_hdl
uint8_t	prop
uint16_t	pointer_hdl
uint16_t	uuid

Detailed Description

Data list for characteristic result.

Field Documentation

◆ attr_hdl

uint16_t RBLE_GATT_CHAR_LIST::attr_hdl
database element handle

◆ pointer_hdl

uint16_t RBLE_GATT_CHAR_LIST::pointer_hdl
pointer handle to UUID

◆ prop

uint8_t RBLE_GATT_CHAR_LIST::prop
properties

◆ uuid

uint16_t RBLE_GATT_CHAR_LIST::uuid
characteristic UUID

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.13 RBLE_GATT_DESIRED_TYPE Struct Reference

desired UUID More...

#include <rble_api.h>

Data Fields

uint16_t	value_size
uint8_t	value [RBLE_GATT_128BIT_UUID_OCTET]

Detailed Description

desired UUID

Field Documentation

◆ value

uint8_t RBLE_GATT_DESIRED_TYPE::value[RBLE_GATT_128BIT_UUID_OCTET]
actual UUID

◆ value_size

uint16_t RBLE_GATT_DESIRED_TYPE::value_size
Size of the UUID

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.14 RBLE_GATT_DISC_CHAR_DESC_REQ Struct Reference

Characteristic Descriptor Discovery Request Structure. More...

#include <rble_api.h>

Data Fields

uint16_t	conhdl
uint16_t	start_hdl
uint16_t	end_hdl

Detailed Description

Characteristic Descriptor Discovery Request Structure.

Parameters for RBLE_GATT_Discovery_Char_Descriptor_Request

Field Documentation

◆ conhdl

uint16_t RBLE_GATT_DISC_CHAR_DESC_REQ::conhdl
connection handle

◆ end_hdl

uint16_t RBLE_GATT_DISC_CHAR_DESC_REQ::end_hdl
end handle range

◆ start_hdl

uint16_t RBLE_GATT_DISC_CHAR_DESC_REQ::start_hdl
start handle range

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.15 RBLE_GATT_DISC_CHAR_REQ Struct Reference

Characteristic Discovery Request Structure. More...

#include <rble_api.h>

Data Fields

uint8_t	req_type
uint16_t	conhdl
uint16_t	start_hdl
uint16_t	end_hdl
RBLE_GATT_DESIRED_TYPE	desired_char

Detailed Description

Characteristic Discovery Request Structure.

Parameters for RBLE_GATT_Discovery_Char_Request

Field Documentation

◆ conhdl

uint16_t RBLE_GATT_DISC_CHAR_REQ::conhdl
connection handle

◆ desired_char

RBLE_GATT_DESIRED_TYPE RBLE_GATT_DISC_CHAR_REQ::desired_char
desired UUID in disc service char

◆ end_hdl

uint16_t RBLE_GATT_DISC_CHAR_REQ::end_hdl
end handle range

◆ req_type

uint8_t RBLE_GATT_DISC_CHAR_REQ::req_type
GATT request type

◆ start_hdl

uint16_t RBLE_GATT_DISC_CHAR_REQ::start_hdl
start handle range

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.16 RBLE_GATT_DISC_SVC_REQ Struct Reference

Service Discovery Request Structure. More...

#include <rble_api.h>

Data Fields

uint8_t	req_type
uint16_t	conhdl
uint16_t	start_hdl
uint16_t	end_hdl
RBLE_GATT_DESIRED_TYPE	desired_svc

Detailed Description

Service Discovery Request Structure.

Parameters for RBLE_GATT_Discovery_Service_Request

Field Documentation

◆ conhdl

uint16_t RBLE_GATT_DISC_SVC_REQ::conhdl
connection handle

◆ desired_svc

RBLE_GATT_DESIRED_TYPE RBLE_GATT_DISC_SVC_REQ::desired_svc
desired service: if 0x0000, discover all

◆ end_hdl

uint16_t RBLE_GATT_DISC_SVC_REQ::end_hdl
end handle range

◆ req_type

uint8_t RBLE_GATT_DISC_SVC_REQ::req_type
GATT request type

◆ start_hdl

uint16_t RBLE_GATT_DISC_SVC_REQ::start_hdl
start handle range

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.17 RBLE_GATT_EVENT Struct Reference

rBLE GATT Event Structure More...

#include <rble_api.h>

Data Fields

RBLE_GATT_EVENT_TYPE	type

Detailed Description

rBLE GATT Event Structure

Field Documentation

◆ type

RBLE_GATT_EVENT_TYPE RBLE_GATT_EVENT::type
type of GATT event

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.18 RBLE_GATT_EXE_WR_CHAR_REQ Struct Reference

execute write characteristic request Structure More...

#include <rble_api.h>

Data Fields

uint8_t	exe_wr_ena
uint16_t	conhdl

Detailed Description

execute write characteristic request Structure

Parameters for RBLE_GATT_Execute_Write_Char_Request

Field Documentation

◆ conhdl

uint16_t RBLE_GATT_EXE_WR_CHAR_REQ::conhdl
connection handle

◆ exe_wr_ena

uint8_t RBLE_GATT_EXE_WR_CHAR_REQ::exe_wr_ena
flag to describe if write or cancel

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.19 RBLE_GATT_INCL_128_LIST Struct Reference

Special data list for include result - 128bit. More...

#include <rble_api.h>

Data Fields

uint16_t	attr_hdl
uint16_t	start_hdl
uint16_t	end_hdl
uint8_t	uuid [RBLE_GATT_128BIT_UUID_OCTET]

Detailed Description

Special data list for include result - 128bit.

Field Documentation

◆ attr_hdl

uint16_t RBLE_GATT_INCL_128_LIST::attr_hdl
element handle

◆ end_hdl

uint16_t RBLE_GATT_INCL_128_LIST::end_hdl
end handle

◆ start_hdl

uint16_t RBLE_GATT_INCL_128_LIST::start_hdl
start handle

◆ uuid

uint8_t RBLE_GATT_INCL_128_LIST::uuid[RBLE_GATT_128BIT_UUID_OCTET]
included 128-bit service UUID

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.20 RBLE_GATT_INCL_LIST Struct Reference

Data list for include result. More...

#include <rble_api.h>

Data Fields

uint16_t	attr_hdl
uint16_t	start_hdl
uint16_t	end_hdl
uint16_t	uuid

Detailed Description

Data list for include result.

Field Documentation

◆ attr_hdl

uint16_t RBLE_GATT_INCL_LIST::attr_hdl
element handle

◆ end_hdl

uint16_t RBLE_GATT_INCL_LIST::end_hdl
end handle

◆ start_hdl

uint16_t RBLE_GATT_INCL_LIST::start_hdl
start handle

◆ uuid

uint16_t RBLE_GATT_INCL_LIST::uuid
included service UUID

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.21 RBLE_GATT_INDICATE_REQ Struct Reference

Indicate Request Structure. More...

#include <rble_api.h>

Data Fields

uint16_t	conhdl
uint16_t	charhdl

Detailed Description

Indicate Request Structure.

Parameters for RBLE_GATT_Indicate_Request

Field Documentation

◆ charhdl

uint16_t RBLE_GATT_INDICATE_REQ::charhdl
characteristic handle

◆ conhdl

uint16_t RBLE_GATT_INDICATE_REQ::conhdl
connection handle

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.22 RBLE_GATT_INFO_DATA Struct Reference

Attribute data holder. More...

#include <rble_api.h>

Data Fields

uint8_t	each_len
uint8_t	len
uint8_t	data [RBLE_GATT_MAX_VALUE]

Detailed Description

Attribute data holder.

Field Documentation

◆ data

uint8_t RBLE_GATT_INFO_DATA::data[RBLE_GATT_MAX_VALUE]
data

◆ each_len

uint8_t RBLE_GATT_INFO_DATA::each_len
each result length

◆ len

uint8_t RBLE_GATT_INFO_DATA::len
data length

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.23 RBLE_GATT_NOTIFY_REQ Struct Reference

notify request Structure More...

#include <rble_api.h>

Data Fields

uint16_t	conhdl
uint16_t	charhdl

Detailed Description

notify request Structure

Parameters for RBLE_GATT_Notify_Request

Field Documentation

◆ charhdl

uint16_t RBLE_GATT_NOTIFY_REQ::charhdl
characteristic handle

◆ conhdl

uint16_t RBLE_GATT_NOTIFY_REQ::conhdl
connection handle

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.24 RBLE_GATT_QUERY_RESULT Struct Reference

Query result for multiple responses. More...

#include <rble_api.h>

Data Fields

uint8_t	len
uint8_t	value [RBLE_GATT_MAX_VALUE]

Detailed Description

Query result for multiple responses.

Field Documentation

◆ len

uint8_t RBLE_GATT_QUERY_RESULT::len
length of value

◆ value

uint8_t RBLE_GATT_QUERY_RESULT::value[RBLE_GATT_MAX_VALUE]
data result from query

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.25 RBLE_GATT_READ_CHAR_REQ Struct Reference

Read Characteristic Values and Descriptor Request Structure. More...

#include <rble_api.h>

Data Fields

uint8_t	req_type
uint16_t	offset
uint16_t	conhdl
uint16_t	start_hdl
uint16_t	end_hdl
uint16_t	nb_uuid
RBLE_GATT_UUID_TYPE	uuid [RBLE_GATT_MAX_NB_HDLS]

Detailed Description

Read Characteristic Values and Descriptor Request Structure.

Parameters for RBLE_GATT_Read_Char_Request

Field Documentation

◆ conhdl

uint16_t RBLE_GATT_READ_CHAR_REQ::conhdl
connection handle

◆ end_hdl

uint16_t RBLE_GATT_READ_CHAR_REQ::end_hdl
end handle range

◆ nb_uuid

uint16_t RBLE_GATT_READ_CHAR_REQ::nb_uuid
number of UUID

◆ offset

uint16_t RBLE_GATT_READ_CHAR_REQ::offset
read offset

◆ req_type

uint8_t RBLE_GATT_READ_CHAR_REQ::req_type
request type

◆ start_hdl

uint16_t RBLE_GATT_READ_CHAR_REQ::start_hdl
start handle range

◆ uuid

RBLE_GATT_UUID_TYPE RBLE_GATT_READ_CHAR_REQ::uuid[RBLE_GATT_MAX_NB_HDLS]
characteristic UUID

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.26 RBLE_GATT_RELIABLE_WRITE Struct Reference

Reliable Structure. More...

#include <rble_api.h>

Data Fields

uint16_t	elmt_hdl
uint16_t	size
uint8_t	value [RBLE_GATT_MAX_RELIABLE_WRITE_CONTENTS]

Detailed Description

Reliable Structure.

Field Documentation

◆ elmt_hdl

uint16_t RBLE_GATT_RELIABLE_WRITE::elmt_hdl
characteristic handle

◆ size

uint16_t RBLE_GATT_RELIABLE_WRITE::size
value size

◆ value

uint8_t RBLE_GATT_RELIABLE_WRITE::value[RBLE_GATT_MAX_RELIABLE_WRITE_CONTENTS]
value holder

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.27 RBLE_GATT_SET_DATA Struct Reference

Set Data Structure. More...

#include <rble_api.h>

Data Fields

uint16_t	val_hdl
uint16_t	val_len
uint8_t	value [RBLE_GATT_MAX_LONG_VALUE]

Detailed Description

Set Data Structure.

Parameters for RBLE_GATT_Set_Data

Field Documentation

◆ val_hdl

uint16_t RBLE_GATT_SET_DATA::val_hdl
value handle

◆ val_len

uint16_t RBLE_GATT_SET_DATA::val_len
size of the value data

◆ value

uint8_t RBLE_GATT_SET_DATA::value[RBLE_GATT_MAX_LONG_VALUE]
value data

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.28 RBLE_GATT_SET_PERM Struct Reference

Set Permission Structure. More...

#include <rble_api.h>

Data Fields

uint16_t	start_hdl
uint16_t	end_hdl
uint16_t	perm

Detailed Description

Set Permission Structure.

Parameters for RBLE_GATT_Set_Permission

Field Documentation

◆ end_hdl

uint16_t RBLE_GATT_SET_PERM::end_hdl
end handle range

◆ perm

uint16_t RBLE_GATT_SET_PERM::perm
Permission of attr

◆ start_hdl

uint16_t RBLE_GATT_SET_PERM::start_hdl
start handle range

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.29 RBLE_GATT_SVC_128_LIST Struct Reference

Data list for service result - 128bit. More...

#include <rble_api.h>

Data Fields

uint16_t	start_hdl
uint16_t	end_hdl
uint8_t	attr_hdl [RBLE_GATT_128BIT_UUID_OCTET]

Detailed Description

Data list for service result - 128bit.

Field Documentation

◆ attr_hdl

uint8_t RBLE_GATT_SVC_128_LIST::attr_hdl[RBLE_GATT_128BIT_UUID_OCTET]
attribute handle

◆ end_hdl

uint16_t RBLE_GATT_SVC_128_LIST::end_hdl
end handle

◆ start_hdl

uint16_t RBLE_GATT_SVC_128_LIST::start_hdl
start handle

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.30 RBLE_GATT_SVC_LIST Struct Reference

Data list for service result. More...

#include <rble_api.h>

Data Fields

uint16_t	start_hdl
uint16_t	end_hdl
uint16_t	attr_hdl

Detailed Description

Data list for service result.

Field Documentation

◆ attr_hdl

uint16_t RBLE_GATT_SVC_LIST::attr_hdl
attribute handle

◆ end_hdl

uint16_t RBLE_GATT_SVC_LIST::end_hdl
end handle

◆ start_hdl

uint16_t RBLE_GATT_SVC_LIST::start_hdl
start handle

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.31 RBLE_GATT_SVC_RANGE_LIST Struct Reference

service range More...

#include <rble_api.h>

Data Fields

uint16_t	start_hdl
uint16_t	end_hdl

Detailed Description

service range

Field Documentation

◆ **end_hdl**

uint16_t RBLE_GATT_SVC_RANGE_LIST::end_hdl
end handle

◆ **start_hdl**

uint16_t RBLE_GATT_SVC_RANGE_LIST::start_hdl
start handle

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.32 RBLE_GATT_UUID_TYPE Struct Reference

UUID with different length Structure. More...

#include <rble_api.h>

Data Fields

uint8_t	value_size
uint8_t	expect_resp_size
uint8_t	value [RBLE_GATT_128BIT_UUID_OCTET]

Detailed Description

UUID with different length Structure.

Field Documentation

◆ **expect_resp_size**

uint8_t RBLE_GATT_UUID_TYPE::expect_resp_size
expected response size - read multiple

◆ value

uint8_t RBLE_GATT_UUID_TYPE::value[RBLE_GATT_128BIT_UUID_OCTET]
actual UUID

◆ value_size

uint8_t RBLE_GATT_UUID_TYPE::value_size
Size of the UUID

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.33 RBLE_GATT_WRITE_CHAR_REQ Struct Reference

Write Characteristic Request Structure. More...

#include <rble_api.h>

Data Fields

uint16_t	conhdl
uint16_t	charhdl
uint16_t	wr_offset
uint16_t	val_len
uint8_t	req_type
uint8_t	auto_execute
uint8_t	value [RBLE_GATT_MAX_LONG_VALUE]

Detailed Description

Write Characteristic Request Structure.

Parameters for RBLE_GATT_Write_Char_Request

Field Documentation

◆ auto_execute

uint8_t RBLE_GATT_WRITE_CHAR_REQ::auto_execute
execute write

◆ charhdl

uint16_t RBLE_GATT_WRITE_CHAR_REQ::charhdl
valid characteristic handle

◆ conhdl

uint16_t RBLE_GATT_WRITE_CHAR_REQ::conhdl
connection handle

◆ req_type

uint8_t RBLE_GATT_WRITE_CHAR_REQ::req_type
request type

◆ val_len

uint16_t RBLE_GATT_WRITE_CHAR_REQ::val_len
size of the value data

◆ value

uint8_t RBLE_GATT_WRITE_CHAR_REQ::value[RBLE_GATT_MAX_LONG_VALUE]
check, maybe union type is required

◆ wr_offset

uint16_t RBLE_GATT_WRITE_CHAR_REQ::wr_offset
offset to write

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.34 RBLE_GATT_WRITE_RELIABLE_REQ Struct Reference

Write Reliable Characteristic Request Structure. More...

#include <rble_api.h>

Data Fields

uint8_t	nb_writes
uint8_t	auto_execute
uint16_t	conhdl
RBLE_GATT_RELIABLE_WRITE	value [RBLE_GATT_MAX_RELIABLE_WRITE_NUM]

Detailed Description

Write Reliable Characteristic Request Structure.

Parameters for RBLE_GATT_Write_Reliable_Request

Field Documentation

◆ auto_execute

uint8_t RBLE_GATT_WRITE_RELIABLE_REQ::auto_execute
automatic execute write

◆ conhdl

uint16_t RBLE_GATT_WRITE_RELIABLE_REQ::conhdl
connection handle

◆ nb_writes

uint8_t RBLE_GATT_WRITE_RELIABLE_REQ::nb_writes
number of reliable writes

◆ value

RBLE_GATT_RELIABLE_WRITE RBLE_GATT_WRITE_RELIABLE_REQ::value[RBLE_GATT_MAX_RELIABLE_WRITE_NUM]
number of reliable

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.35 RBLE_GATT_WRITE_RESP Struct Reference

Write Response Structure. More...

#include <rble_api.h>

Data Fields

uint16_t	conhdl
uint16_t	att_hdl
uint8_t	att_code

Detailed Description

Write Response Structure.

Parameters for RBLE_GATT_Write_Response

Field Documentation

◆ att_code

uint8_t RBLE_GATT_WRITE_RESP::att_code
ATT code

◆ att_hdl

uint16_t RBLE_GATT_WRITE_RESP::att_hdl
Attribute handle

◆ conhdl

uint16_t RBLE_GATT_WRITE_RESP::conhdl
Connection handle

The documentation for this struct was generated from the following file:

- rble_api.h

6.1.36 sdmmc_priv_csd_reg_ext_t Struct Reference

#include <sdcard.h>

Detailed Description

SDMMC card specific data extended

The documentation for this struct was generated from the following file:

- sdcard.h

6.1.37 sdmmc_priv_csd_reg_t Struct Reference

#include <sdcard.h>

Detailed Description

SDMMC card specific data

The documentation for this struct was generated from the following file:

- sdcard.h

6.1.38 sf_cellular_circular_queue_cfg_t Struct Reference

#include <sf_cellular_common_api.h>

Data Fields

uint32_t *	p_circular_queue_buffer Circular Queue buffer.
ULONG	queue_size Circular Queue Size.
uint8_t	ok_check_index Variable to store index for data checking success string response.
uint8_t	error_check_index Variable to store index for data checking error string response.
TX_QUEUE *	p_circular_queue Circular Queue.

Detailed Description

Circular queue configuration

The documentation for this struct was generated from the following file:

- sf_cellular_common_api.h

6.1.39 sf_cellular_comms_extend_cfg_t Struct Reference

#include <sf_cellular_common_api.h>

Data Fields

sf_comms_instance_t const *	p_sf_comms_instance Lower level HAL driver instance.
TX_THREAD *	p_sf_comms_rx_thread Received data ThreadX ID.
uint8_t *	p_sf_comms_rx_thread_stack Receive data thread stack memory pointer.
ULONG	sf_comms_rx_thread_stack_size Receive data thread stack size.
UINT	rx_thread_priority Receive data thread priority.
uint8_t	do_run Thread running status.

Detailed Description

SF Communication framework configuration

The documentation for this struct was generated from the following file:

- sf_cellular_common_api.h

6.1.40 sf_cellular_extended_cfg_t Struct Reference

#include <sf_cellular_common_api.h>

Data Fields

sf_cellular_circular_queue_cfg_t *	p_circular_queue_cfg Circular Queue configuration.
sf_cellular_comms_extend_cfg_t *	p_sf_comms_cfg Lower level HAL interface configuration.
ioport_port_pin_t	pin_reset Port pin used for resetting cellular module.
ioport_level_t	reset_level Module reset level.
void *	p_module_extended_cfg Instance specific module configuration.

Detailed Description

SF Cellular framework extended configuration

The documentation for this struct was generated from the following file:

- sf_cellular_common_api.h

6.1.41 sf_cellular_instance_cfg_t Struct Reference

#include <sf_cellular_common_api.h>

Data Fields

uint8_t	init_done Status flag storing driver initialization status.

uint8_t	is_opened Status flag storing framework open status.
uint8_t	is_data_mode_on Status flag storing data mode status.
sf_cellular_cfg_t const *	p_cfg Instance configuration.
sf_cellular_provisioning_t	prov_info Provisioning information.
sf_cellular_stats_t	celr_stats Cellular Statistics information.
TX_MUTEX *	p_cellular_mutex Mutex for Framework API synchronization.
uint8_t *	p_socket_status_buffer Buffer to store the socket status information.
uint16_t	socket_status_buffer_length Size of Socket status buffer.

Detailed Description

SF Cellular framework instance configuration

The documentation for this struct was generated from the following file:

- sf_cellular_common_api.h

6.1.42 sf_cellular_qctlcatm1_socket_cfg_t Struct Reference

#include <sf_cellular_qctlcatm1_socket_private_api.h>

Data Fields

uint16_t	transpktsize
uint16_t	max_backoffs
uint16_t	max_rto

Detailed Description

Structure definition for socket parameter configuration

Field Documentation

◆ max_backoffs

uint16_t sf_cellular_qctlcatm1_socket_cfg_t::max_backoffs
Maximum Number of Retransmissions. The range is 3-20, and the default value is 8

◆ max_rto

uint16_t sf_cellular_qctlcatm1_socket_cfg_t::max_rto
The maximum interval time of TCP retransmission. The range is 5-1000, and the default value is 600. Unit: 100ms

◆ transpktsize

uint16_t sf_cellular_qctlcatm1_socket_cfg_t::transpktsize
The max length of the data packet to be sent. The range is 1 -1460, and the default value is 1024. Unit: byte

---

The documentation for this struct was generated from the following file:

- sf_cellular_qctlcatm1_socket_private_api.h

6.1.43 sf_cellular_socket_info_t Struct Reference

#include <sf_cellular_ryz014catm1_socket_private_api.h>

Data Fields

sf_cellular_qctlcatm1_socket_state_t	state Socket state.
uint8_t	local_ip [SF_CELLULAR_STR_LEN_16] Local IP address to which socket is bind.
uint16_t	local_port Local port to which socket is bind.
uint8_t	remote_ip [SF_CELLULAR_STR_LEN_16] Remote IP to which socket is connected. More...
uint16_t	remote_port Remote port with which socket is connected.
sf_cellular_qctlcatm1_socket_type_t	sock_type Socket type.
uint16_t	sin_port Port number to which socket need to bind.
uint8_t	data_state Data Received notification.
int8_t	new_conn_fd Socket descriptor of new incoming connection.
sf_cellular_ryz014catm1_socket_state_t	state Socket state.
sf_cellular_ryz014catm1_soc	sock_type

ket_type_t	Socket type.
uint16_t	timeout Timeout period.
uint16_t	pckt_size Packet size to be used.
uint16_t	tx_timeout Data sending timeout.
uint16_t	conn_timeout Connection timeout.

Detailed Description

Structure definition for socket details information

Field Documentation

◆ remote_ip

uint8_t sf_cellular_socket_info_t::remote_ip
Remote IP to which socket is connected. Remote ip to which socket is connected.

The documentation for this struct was generated from the following files:

- sf_cellular_qctlcatm1_socket_private_api.h
- sf_cellular_ryz014catm1_socket_private_api.h

6.1.44 ssp_pack_version_t Union Reference

#include <ssp_version.h>

Data Fields

uint32_t	version_id
struct {	
uint8_t build	
	Build version of SSP Pack.
uint8_t patch	
	Patch version of SSP Pack.
uint8_t minor	
	Minor version of SSP Pack.
uint8_t major	
	Major version of SSP Pack.
};	

Detailed Description

SSP Pack version structure

Field Documentation

◆ @42

struct { ... }
Code version parameters, little endian order.

◆ version_id

uint32_t ssp_pack_version_t::version_id
Version id

The documentation for this union was generated from the following file:

- ssp_version.h

6.1.45 ssp_version_t Union Reference

#include <ssp_common_api.h>

Data Fields

uint32_t	version_id
struct {	
uint8_t code_version_minor	
	Code minor version.
uint8_t code_version_major	
	Code major version.
uint8_t api_version_minor	
	API minor version.
uint8_t api_version_major	
	API major version.
};	

Detailed Description

Common version structure

Field Documentation

◆ **@38**

struct { ... }
Code version parameters

◆ version_id

uint32_t ssp_version_t::version_id
Version id

The documentation for this union was generated from the following file:

- ssp_common_api.h

6.3 Data Fields

This section lists SSP data fields.

6.3.1 All Data Fields

Here is a list of all documented struct and union fields with links to the struct/union documentation for each field:

- a -

- a : display_color_t
- absolute_start_addr : sf_el_lx_nor_memory_settings_t
- accept : sf_ble_bonding_response_t
- accept_addr : sf_ble_addr_verify_ind_t
- access_control : sf_wifi_cfg_t
- access_delay : spi_on_rspi_cfg_t
- access_ipl : sdmmc_cfg_t
- access_tech_name : sf_cellular_network_status_t

- accessWindowClear : flash_api_t
- accessWindowSet : flash_api_t
- accuracy : sf_ble_cts_ref_time_t
- ACLAdd : sf_wifi_api_t
- ACLDelete : sf_wifi_api_t
- activation_on_rxi : riic_instance_ctrl_t , sci_i2c_instance_ctrl_t
- activation_on_txi : riic_instance_ctrl_t , sci_i2c_instance_ctrl_t
- activation_source : transfer_cfg_t
- active : sf_thread_monitor_thread_counter_t
- active_band : sf_cellular_network_status_t
- actual_count : sf_el_fx_media_partition_info_t
- actual_hwErr_event : riic_instance_ctrl_t
- ad_da_synchronized : dac_cfg_t
- adc_calib_available : adc_instance_ctrl_t
- add_average_count : adc_cfg_t
- add_mask : adc_channel_cfg_t
- addAdditionalAuthenticationData : aes_api_t
- addition_supported : bsp_feature_adc_t
- addr : sf_ble_addr_t , sf_wifi_ip_addr_t , sf_wifi_qca4010_ip_addr_t
- addr_high : riic_instance_ctrl_t , sci_i2c_instance_ctrl_t
- addr_loaded : riic_instance_ctrl_t , sci_i2c_instance_ctrl_t
- addr_low : riic_instance_ctrl_t , sci_i2c_instance_ctrl_t
- addr_mode : i2c_cfg_t
- addr_remain : riic_instance_ctrl_t , sci_i2c_instance_ctrl_t
- addr_total : riic_instance_ctrl_t , sci_i2c_instance_ctrl_t
- addr_type : sf_ble_addr_verify_ind_t , sf_ble_connection_t , sf_ble_scan_t
- address : ptp_instance_ctrl_t
- address_restarted : riic_instance_ctrl_t
- address_type : sf_ble_scan_info_t
- adjust_reason : sf_ble_prf_cts_curr_time_t
- adjustment_mode : rtc_error_adjustment_mode_cfg_t
- adjustment_period : rtc_error_adjustment_mode_cfg_t
- adjustment_type : rtc_error_adjustment_cfg_t
- adjustment_value : rtc_error_adjustment_cfg_t
- adv_chnl_map : sf_ble_adv_info_t
- adv_data : sf_ble_adv_info_t
- adv_data_length : sf_ble_adv_data_t
- adv_filt_policy : sf_ble_adv_info_t
- adv_intv_max : sf_ble_adv_info_t
- adv_intv_min : sf_ble_adv_info_t
- adv_type : sf_ble_adv_info_t
- advertisementStart : sf_ble_api_t
- advertisementStop : sf_ble_api_t
- agt_link : opamp_on_opamp_cfg_t
- agtio_output_enabled : timer_on_agt_cfg_t
- agto_output_enabled : timer_on_agt_cfg_t
- agtoa_output_enable : timer_on_agt_cfg_t
- agtob_output_enable : timer_on_agt_cfg_t
- airplane_mode : sf_cellular_provisioning_t
- alarm_ipl : rtc_cfg_t
- alarm_irq : rtc_instance_ctrl_t
- alert : sf_ble_anp_api_unread_alert_ntf_t
- alert_lvl : sf_ble_prf_ias_alert_lvl_change_t
- alert_num : sf_ble_anp_api_new_alert_t
- alert_status : sf_ble_prf_alert_status_ntf_t

- aligned_buff : sdmmc_instance_ctrl_t
- alignment : adc_cfg_t , adc_instance_ctrl_t , sdadc_instance_ctrl_t
- alpha_value : jpeg_decode_cfg_t
- api_version_major : ssp_version_t
- api_version_minor : ssp_version_t
- apn : sf_cellular_provisioning_t
