

SLG47011V Demo Board

The SLG47011V Demo Board # is a compact, easy-to-use, USB Type-C powered hardware tool for measuring voltage, current, power, and temperature. The SLG47011 IC performs the measurements using PGA/ADC, and the Renesas MCU RL78G13 handles the operation of the display.

Specifications

The SLG47011V Demo Board #1 operates under the following conditions:

- USB Type-C up to 3.2 Gen 2
- (5 V...28 V, 5 A (max))

Features

- Power Delivery compatible (up to 28 V, 5 A)
- Voltage, Current, Power, and Temperature measurements
- Measurements in both directions (plug and receptacle connection)
- 128 x 32 OLED monochrome display
- Button for flipping display and changing screen.

1. Functional Description

The SLG47011V Demo Board #1 is a Type-C power meter based on the GreenPAK SLG47011V IC. It features plug/receptacle Type-C connectors and provides measurements in both directions. The information is displayed on a 128 x 32 OLED display and can show five different screens: all measurements, voltage, current, temperature, and power. You can change the screen by pressing the “MODE/FLIP” button or flip the display by holding the button for more than 1 second.

A simplified functional diagram is shown in [Figure 2](#).

Figure 2. Functional Block Diagram of SLG47011V Demo Board #1 R1.0

2. Electrical Characteristics

Table 1. Demo Board Electrical Characteristics

Parameter	Test Conditions	Min.	Typ.	Max.	Unit
Input Voltage [1]	Plug and Receptacle Connection to Host Device	5	--	28	V
Output Current [1]	Plug Connection to Host Device	0	--	5	A
	Receptacle Connection to Host Device	0	--	4	A
Power Ratings [1]	Plug Connection to Host Device	0	--	140	W
	Receptacle Connection to Host Device	0	--	80	W

[1] The plug and receptacle connections to the host device are shown in [Figure 3](#) and [Figure 4](#).

3. USB Type-C Specification

Table 2. USB Specification

USB Parameters	
USB-C Version	up to USB 3.2 Gen 2
Data Transfer Speed	up to 10 Gbps
USB Power Delivery 2.0/3.0 ^[2]	28 V, 5 A

[2] Requires specially rated 140 W USB-C charging cable.

4. Measurement Accuracy

Voltage and current measurements were performed on three different boards to gather statistics on accuracy (see [Table 3](#) and [Table 4](#)).

Table 3. Voltage Measurements Data

Demo Board #1		Demo Board #2		Demo Board #3	
Applied Voltage, V	Measured Voltage, V	Applied Voltage, V	Measured Voltage, V	Applied Voltage, V	Measured Voltage, V
4.989	4.99	4.985	4.99	4.988	4.98
8.986	9.00	8.985	9.00	8.987	8.99
11.987	12.02	11.986	12.01	11.987	12.00
19.990	20.06	19.987	20.05	19.990	20.03

Table 4. Current Measurements Data

Demo Board #1		Demo Board #2		Demo Board #3	
Applied Current, A	Measured Current, A	Applied Current, A	Measured Current, A	Applied Current, A	Measured Current, A
0.1	0.098	0.100	0.098	0.100	0.099
0.3	0.302	0.300	0.302	0.300	0.302
0.5	0.503	0.500	0.504	0.500	0.499
1	1.010	1.000	1.002	1.000	1.006
3	3.039	3.000	3.018	3.000	3.030

5. Connection of SLG47011V Demo Board #1 to the Host Device

You could connect the Demo Board to the host device in two ways: plug or receptacle connection:

Figure 3. Plug Connection to Host Device

Figure 4. Receptacle Connection to Host Device

To start using the SLG47011V Demo Board #1, please connect the board to a USB-C power supply (for example, by plugging it into the Type-C port of a laptop) and to the Device Under Test (DUT).

Figure 5. Connection of SLG47011V Demo Board #1 to the Type-C Port

Figure 6. Connection of SLG47011V Demo Board #1 to the DUT

Note: The board will start operating only after the DUT with pull-down resistors on the CC pins is connected.

After connecting the DUT, the start-up Renesas screen will appear for two seconds. Then, you will see the initial screen:

Figure 7. Start-up Renesas Screen

Figure 8. Initial Screen

To flip the screen, press and hold the “MODE/FLIP” button for more than one second:

Figure 9. Flipping the Screen by Pressing the Button

To change the screen, please make a short press of the “MODE/FLIP” button. You can cycle through five screens by pressing the button five times.

Initial Screen

Voltage Screen (One Press)

Current Screen (Two Presses)

Power Screen (Three Presses)

Temperature Screen (Four Presses)

Initial Screen (Five Presses)

6. Overvoltage Protection

The board has overvoltage protection: if the voltage exceeds 30 V, the board shuts off and the red LED indicating overvoltage lights up. Once the voltage returns to operating limits, the board will start up again.
