

## Renesas RL78 Family

# RL78/L23 Fast Prototyping Board

### Introduction:

The RL78/L23 Fast Prototyping Board, featuring the RL78/L23 MCU, is ideal for various prototype development. This board has a USB-UART converter for COM port debug function, enabling programming and debugging without extra tools. It includes an LCD panel (8 digits x 16 segments) and two touch buttons, thus you can start evaluation of the LCD and capacitive touch immediately. In addition, it has high flexibility and expandability by supporting Arduino Uno, Pmod™, Grove interfaces, and through-holes with access to all MCU pins. It supports firmware updating, Wi-Fi, LoRa, and LoRaWAN-based wireless communication by sample code. Renesas also provides an Arduino library that supports creating various programs (sketches) on the Arduino IDE.

### 1. Getting Started Video:

[renesas.com/gs-fpb-rl78](https://renesas.com/gs-fpb-rl78)

This video guides first-time users of the Fast-Prototyping Board through the steps of installing a development environment, generating a project, and checking the operation to develop software.

### 3. Package Contents

- FPB-RL78L23
- RL78/L23 Fast Prototyping Board (RTK7RLL230S00001BJ)
- Quick Start Guide (this document)

## 4. Behavior When Power is Supplied

This board works as a 24-hour clock.

- After power on, "RL78/L23 CLK DEMO" is displayed sequentially on the LCD.
- When switch S1(User switch) is pressed after these letters disappear, the clock time set to "00 .00 .00" and start time counting.
- When switch S1 is pressed while the clock time displayed, the user can set the time data by touch buttons. When touch button 1 is touched, RL78/L23 increments the time data and turns on LED1. When touch button 2 is touched, RL78/L23 decrements the time data and turns on LED2. The setting target switches each time switch S1 is pressed.
- If 5 seconds have passed without touching each button, the clock time is displayed on the LCD.

For details, refer to the following application note:

## 5. Board Specifications

Item	Specification
Evaluation MCU RL78/L23	Part No.: R7F100LPL3CFB; package: 100-pin LFQFP 512-KB ROM, 32-KB RAM, 8-KB data flash memory
Push switches	Reset switch x 1; User switch x 1
LEDs	Power indicator: green x 1, User: green x 2
LCD	LCD panel x 1
Capacitive touch	Button x 2
USB connector	Connector: USB 2.0 Type-C™
Pmod™ connectors	Connectors: angle type, 12 pins x 2
Arduino® connectors	Arduino UNO R3: 6 pins x 1, 8 pins x 2, 10 pins x 1.

## 6. Parts Layout

## 7. Pmod

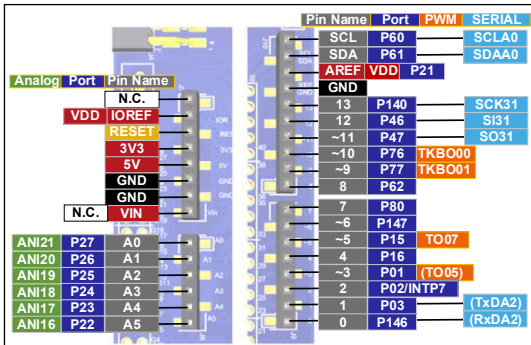

Pmod1(J3) Type 2A/3A

Pmod2(J4) Type 6A

# 8. Arduino
